Remote fiber testing and monitoring (RFTM) for faster network monetization

Accelerate. Automate. Assure.

Next-gen testing, monitoring and analytics

EXFO's RFTM solution for faster monetization

Automate fiber network QA

Prove your rollout with trusted data

Deploy faster and more reliably

Move smoothly from homes passed to homes connected with successful activation on the first try

Minimize QA manpower and truck rolls

Simplify fiber qualification with smart app and industry's fastest testing

---

FEATURED SOLUTIONS

ADAPTIVE SERVICE ASSURANCE

- **Full-stack visibility:** Monitors quality of experience of every service, device and subscriber
- **Actionable insight:** Stitches data across sources to provide unique, actionable insight
- **Customer understanding:** Correlates actual network performance and the lived customer experience in real time
- **Rapid deployment:** Configuration not code, with full orchestration in Kubernetes environments

REMOTE FIBER TESTING AND MONITORING

- **Automated:** Cloud-native FMS offering GIS mapping, powerful analytics, automated test configuration, execution and results, as well as open APIs
- **Smart:** Provides expert-level diagnosis: single-test baselining and on-demand testing for fault analysis, deviations, icon display and golden trace
- **Simple:** Triggered OTDR functions and preconfigured parameters eliminate complexity. Mobile app offers easy navigation, fast tests, pass-fail analysis and fiber ID.
