10 Obsolete SCPI Commands and Parameters 5345

1 Introducing the 88xx/8xx SCPI Commands

The 88xx/8xx modules can be remotely controlled using SCPI commands. You can also use these commands directly on the unit to build scripts to automate test processes.

The SCPI commands described in this user guide cover the modules listed in the following table. However not all commands and options are available on all modules.

Application	Platform	Modules
Power Blazer	FTB-2 FTB-2 Pro FTB-4 Pro LTB-2 LTB-8	8870 8880 88200NGE 88260 88460 88480 88481 88482 88800
NetBlazer[a]	FTB-1v2 (modular back)	8870 8880 88200NGE 88260 88480 88481 88800
	FTB-1v2 (non-modular back)	720Gv2/730Gv2 870v2/870Q 880v2/880Q 890/890NGE

a. Operating the NetBlazer instrument uses the same amount of resources than the NetBlazer application that is, the same limitations are applicable. Refer to **Starting the Module Application** from the NetBlazer user guide for more information.

Conventions

Before using the product described in this guide, you should understand the following conventions:

WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in *death or serious injury*. Do not proceed unless you understand and meet the required conditions.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in *minor or moderate injury*. Do not proceed unless you understand and meet the required conditions.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in *component damage*. Do not proceed unless you understand and meet the required conditions.

IMPORTANT

Refers to information about this product you should not overlook.

2 *Getting Started*

This section contains a brief summary of the 88xx/8xx specific commands.

Following steps will give an idea about the command and sequence of commands to execute and perform a specific test.

To create a BERT test for example:

1. *CLS

   This command clears the register of module.

2. INST:CAT:FULL?

   This command will detect the module attached to the platform back panel and return the name of the module and its position with Unit number and Slot number.

   For example "FTB-88xxx-Power Blazer", 10. This information is added with LINS keyword before each and every SCPI command. Following SCPI commands describes the use of LINS.

3. LINS10:SOURce:DATA:TELecom:TEST:TYPE EBERT

   This command selects Ethernet Bert Test.

4. LINS10:SOURce:DATA:TELecom:ITYPe LANE4X10

   This command sets the interface type as 4X10.

5. LINS10:SOURce:DATA:TELecom:ITYPe?

   This query returns the interface type as 4X10.

6. LINS10:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver CFP

   This command selects the type of connector as CFP.

7. LINS10:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver?

   This query returns the type of connector.

8. LINS10:SOURce:DATA:TELecom:ETHernet:BERT:FRAMing FRAMEDLAYER2

   This command selects the framing type as FRAMEDLAYER2.

9. LINS10:SOURce:DATA:TELecom:ETHernet:BERT:FRAMing?

   This query returns the framing type.

10. LINS10:SENSe:DATA:TELecom:ALASer ON

    This command enables or disables the status of all lasers.

11. LINS10:SENSe:DATA:TELecom:ALASer?

    This query returns the current state of all lasers.

12. LINS10:SOURce:DATA:TELecom:PATTern:TYPE PRBs2E9

    This command selects the payload pattern type for the transmitter as PRBS2E9.

13. LINS10:SOURce:DATA:TELecom:PATTern:TYPE?

    This query returns the payload pattern type of the transmitter.

14. LINS10:SOURce:DATA:TELecom:TEST ON

    This command starts the manual test.

15. LINS10:SOURce:DATA:TELecom:TEST?

    This query returns the status of the manual test.

16. LINS10:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual: TYPE BIT

    This command sets the type of pattern error as BIT.

17. LINS10:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual: TYPE?

    This query returns the type of pattern error.

18. LINS10:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt 25

    This command sets the amount of pattern error to be injected into the instrument as 25.

19. LINS10:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt?

    This query returns the amount of pattern error injected into the instrument.

20. LINS10:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

This command injects the type of pattern error.

21. LINS10:SOURce:DATA:TELecom:TEST OFF

This command stops the manual test.

Note: *In User Interface, if "--" is displayed for any field, the related SCPI results will be according to the following table conditions:*

Data Type	Has Minimum Value	Command Result
<NR1 NUMERIC RESPONSE DATA> <NR2 NUMERIC RESPONSE DATA> <NR3 NUMERIC RESPONSE DATA> <HEXADECIMAL NUMERIC RESPONSE DATA>	Yes	[Minimum value]
<NR1 NUMERIC RESPONSE DATA> <NR2 NUMERIC RESPONSE DATA> <NR3 NUMERIC RESPONSE DATA> <HEXADECIMAL NUMERIC RESPONSE DATA>	No	This data does not yet have a value, it is pending.
<STRING RESPONSE DATA> <CHARACTER RESPONSE DATA>	No	This data does not yet have a value, it is pending.

Dual Port Topology and Multi-Port Test

Port Selection

For **Dual Port** topology or multi-port test (FlexE), it is required to first select the port using the following command, then the next commands will be addressed to the selected port:

LINS10:SOURce:DATA:TELecom:PORT P1,
LINS10:SOURce:DATA:TELecom:PORT P2, etc.

Specific port command example:

LINS10:SOURce:DATA:TELecom:PORT P1

LINS10:SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol TX

LINS10:SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol?

LINS10:SOURce:DATA:TELecom:ETHernet:PORT:DUPLex NONE

LINS10:SOURce:DATA:TELecom:ETHernet:PORT:DUPLex?

Port Direction

The SOURce:DATA:TELecom:PORT command should only be used for specific port commands which do not have direction as parameter. For commands which have direction as parameter, use P1TOP2 and P2TOP1.

Specific port direction in Dual Port topology examples:

LINS10:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:VALue 1, P1TOP2,99.0

LINS10:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:VALue 1, P2TOP1,99.0

3 *Communicating Through TCP/IP over Telnet*

Introducing TCP/IP over Telnet

The EXFO Instrument Control provides SCPI automation or remote control over Telnet through TCP/IP as a Windows Service that continuously listens to a port from a Telnet server (FTB/IQS/LTB) on which modules to be tested are connected.

TCP/IP protocols are used for communication.

Note: *Port 5024 is designated for sending SCPI commands over Telnet, and port 5025 for sending commands over a raw (socket) communication.*

Most of Windows versions include the Telnet client and the Telnet server components. With these components, you can create a remote command console session on a remote computer.

Commands can be executed simply by logging on the server using the Telnet interface.

There are two types of commands that can be sent over Telnet: SCPI commands and internal protocol commands of the TCP/IP over Telnet service. The internal commands allow you to perform certain actions such as send SCPI commands as a script instead of one by one, force the disconnection of an active session, view the status of modules and of connected clients, etc.

Features

➤ A client from any operating system (Windows, Linux, or Unix) can use the freely available Telnet components to connect to the service.

➤ A client can connect to multiple modules at a time.

➤ A user can connect to multiple modules through single/multiple sessions.

➤ A client can execute single commands or a batch of commands.

➤ A user can disconnect any client/session that is already connected.

Configuring Your Unit and Modules to Work With TCP/IP over Telnet

The TCP/IP over Telnet Service, which is part of the EXFO Instrument Control, is a mediator between the Telnet client and the test instrument.

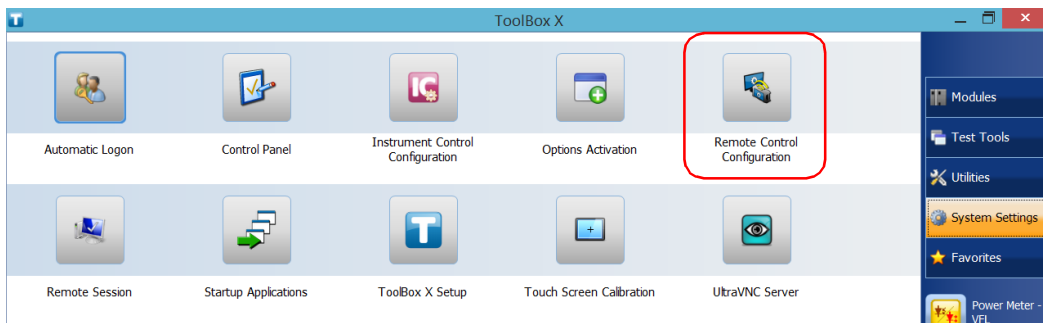
Once your unit is configured properly, any request from the Telnet client is transferred to the appropriate instrument. The instrument executes the request and returns the response to TCP/IP over Telnet accordingly.

IMPORTANT

If you are working with an FTB-1v2/FTB-1v2 Pro, an FTB-2/FTB-2 Pro/FTB-4 Pro, an LTB-1, an LTB-2, or an LTB-8 unit, before being able to control instruments with SCPI commands, you must first allow remote access to these instruments.

To allow remote access to your instruments (all units except IQS-600 and FTB-500):

1. From Mini ToolBox X or ToolBox X, tap or click the **System Settings** button.

2. Tap or click **Remote Control Configuration**.


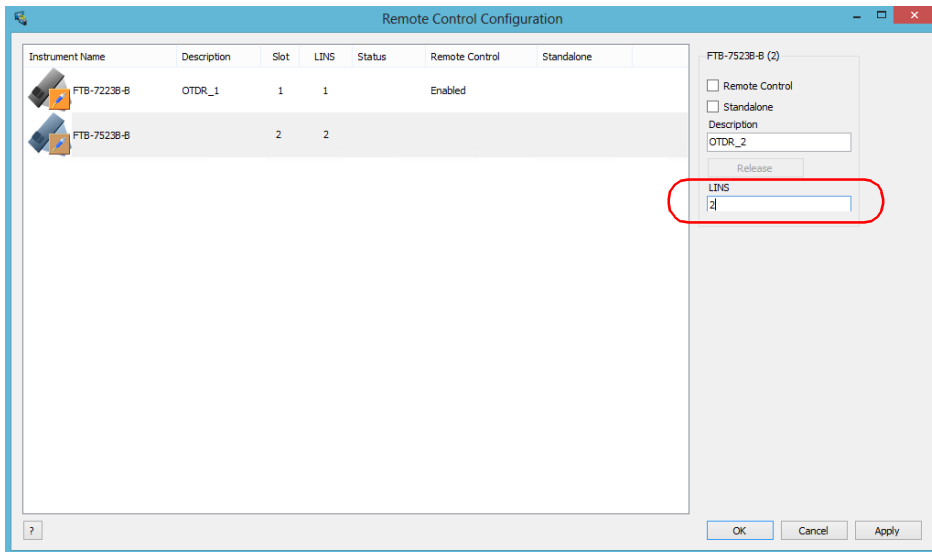
3. If necessary, tap or click **Change settings**, and then, when the application prompts you to authorize the changes to your unit (identified as "computer"), select **Yes**.
4. From the **Remote Control Configuration** window you will see all the inserted modules. Select the module for which you want to have remote access.

5. Set the parameters:

➤ Select **Remote Control** to be able to access the module remotely (via TCP/IP over Telnet or other).

➤ Select **Standalone** to leave the module active even if all users close their dedicated applications.

6. If desired, under **Description**, type a description that will help you identify the instrument.
Note: *You can enter up to 10 characters. The description can correspond to the test interface ID or to any other short text of your choice.*

7. If necessary, under **LINS**, modify the logical instrument number that you will use to access the instrument remotely.


Note: *If the **LINS** column is empty, it means that the corresponding module cannot be controlled using SCPI commands.*

8. Tap or click **Apply** to confirm your changes or **OK** to apply your changes and close the window.

Note: *This information will be updated the next time you start the module application, or set Instrument Control in remote mode. Refer to the corresponding module documentation for more details.*

To activate TCP/IP over Telnet on your unit:

1. Access the Instrument Control Configuration utility:

   ➤ On an IQS-600: From IQS Manager, click the **Utilities** function tab, and then click **Instrument Control Configuration**.

   ➤ On an FTB-500: From ToolBox, tap the **System Settings** button, then tap **Instrument Control Configuration**.

   ➤ On an FTB-1v2/FTB-1v2 Pro: From Mini ToolBox X, tap the **System Settings** button, then tap or click **Instrument Control Configuration**.

   ➤ On an FTB-2/FTB-2 Pro, an FTB-4 Pro, an LTB-1, an LTB-2, or an LTB-8: From ToolBox X, tap or click the **System Settings** button, then tap or click **Instrument Control Configuration**.

2. If necessary, tap or click **Change settings**, and then, when the application prompts you to authorize the changes to your unit, select **Yes**.

IQS-600 or FTB-500
All other platforms
3. Allow remote control:

➤ On an IQS-600 or FTB-500: Under **Platform Startup**, select **Remote**.
➤ On an FTB-1v2/FTB-1v2 Pro, FTB-2/FTB-2 Pro, FTB-4 Pro, LTB-1, LTB-2, or LTB-8: Select the **Allow automation on instruments** check box.
4. Under **Communication Type**, select **TCP/IP**.
5. Tap or click **Apply**, and then **OK**.

6. Depending on the unit you are using, restart either IQS Manager, ToolBox, Mini ToolBox X, or ToolBox X.

Executing SCPI Commands Over Telnet

You can remotely control the modules by executing SCPI commands through TCP/IP over Telnet. The commands are sent remotely from the Telnet client (on a computer) to the Telnet server (in this case, the IQS, FTB, or LTB unit).

You can connect from a remote Windows client or a Linux (or Unix) remote client.

Note: *The Telnet client is available on almost all units in case you intend to use these units as computers to connect to a Telnet server. However, on an FTB-1v2, FTB-2, or LTB-1 running Windows Embedded 8 Standard, the Telnet client is not available. With these units, you must use the PuTTY application to establish communication.*

Before being able to send SCPI commands, you must first establish a connection to the Telnet service.

To execute SCPI commands over Telnet from a remote Windows client:

1. Establish a connection to the Telnet service as follows:

1a. From your computer, start Windows.

1b. On the taskbar, click **Start** (Start button (⊞) under Windows 8.1 and Windows 10) and select **Run**.

Note: *Depending on the operating system,* Run *can sometimes be found under* Windows System.

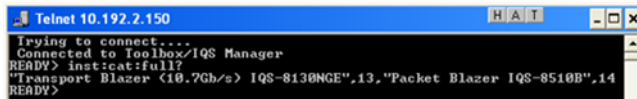
1c. In the **Open** box, type *telnet*, and then click **OK**.
Note: *If you receive an error message, it probably means that the Telnet client is not already activated on your computer. In this case, in the **Open** box, type* pkgmgr /iu:TelnetClient*, and then click **OK** to enable the client. Once it is done, perform step 3 again.*

1d. In the displayed Telnet editor window, type the
OPEN <IP_ADDRESS_OF_TELNET_SERVER> <PORT> command to
connect to the TCP/IP Telnet Service.

Example: *open 10.192.2.45 5024*

IP address of the IQS, FTB, or LTB unit ———

——— Port number
Note: *Port 5024 is designated for sending SCPI commands in the Telnet protocol.*

1e. Press ENTER to establish a connection with the Service.


Once the connection is established, the READY> prompt is displayed in
the Telnet editor window.
Note: *If the connection cannot be established, the **Connection to host lost** message is
displayed instead.*

2. Enter the desired SCPI commands as follows:

➤ For a single SCPI command: Type or copy the desired command in the Telnet editor window, and then press ENTER to execute it.

➤ For multiple SCPI commands: Copy the desired commands from any script file, enclose them in a BEGIN and END block in the Telnet editor window, and then press ENTER. For more information, see *Internal Commands of the TCP/IP over Telnet Protocol* on page 22.

3. Click ✕ to close the session.

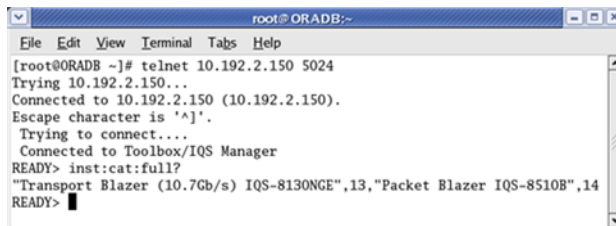
To execute SCPI commands over Telnet from a remote Linux client:

1. Establish a connection to the Telnet service as follows:

   1a. From your computer, right-click on the desktop, and then click **Open Terminal**.

   The command prompt is displayed in the Telnet editor window.

   1b. Connect to the TCP/IP Telnet Service by typing the *OPEN <IP_ADDRESS_OF_TELNET_SERVER> <PORT>* command:

   Example: *open 10.192.2.45 5024*


Note: *Port 5024 is designated for sending SCPI commands in the Telnet protocol.*

   The connection is established when the message **Connected to Toolbox/IQS Manager** is displayed in the Telnet editor window.
2. Enter the desired SCPI commands as follows:

➤ For a single SCPI command: Type or copy the desired command in the Telnet editor window, and then press ENTER to execute it.

```
root@ORADB:~

File   Edit   View   Terminal   Tabs   Help

[root@ORADB ~]# telnet 10.192.2.150 5024
Trying 10.192.2.150...
Connected to 10.192.2.150 (10.192.2.150).
Escape character is '^]'.
 Trying to connect....
 Connected to Toolbox/IQS Manager
READY> inst:cat:full?
"Transport Blazer (10.7Gb/s) IQS-8130NGE",13,"Packet Blazer IQS-8510B",14
READY>
```

➤ For multiple SCPI commands: Copy the desired commands from any script file, enclose them in a BEGIN and END block in the Telnet editor window, and then press ENTER. For more information, see *Internal Commands of the TCP/IP over Telnet Protocol* on page 22.

3. Click ✖ to close the session.

Accessing Modules

A session can directly access an instrument using valid LINS commands such as LINS10:SOURce:DATA:TELecom:CLEar.

However, in a context of multiple sessions, additional commands are available to inform other sessions that an instrument is currently in use.

When a session uses the CONNECT LINS command, another session using the same CONNECT LINS command will receive an error indicating that the instrument is already in use.

For example:

➤ SESSION 1 sends this command:
  CONNECT LINS10

  The command returns...OK

➤ SESSION 2 sends this command:
  CONNECT LINS10

  The commands returns...Error

At this moment, SESSION 2 knows that LINS10 is already in use by another session.

Note: *Both sessions must use these commands to ensure that they receive accurate information.*

A module is released by one of the following actions:

➤ Executing the CLOSE LINS command to disconnect the link with the module. For more information, see *CLOSE LINS* on page 26.

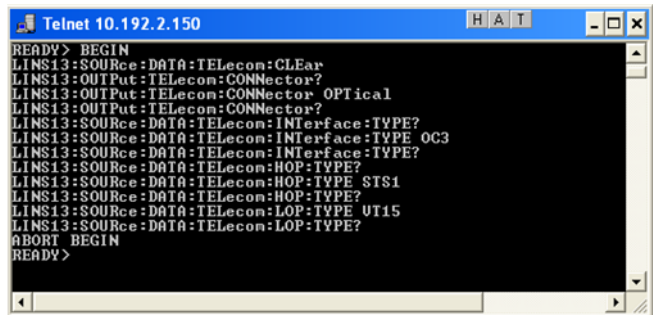
➤ Executing the CLOSE command to end the current session once the execution of all the desired commands has been completed. For more information, see *CLOSE* on page 25.

➤ Closing the current session by clicking the Close button on the Telnet editor windows' title bar.

➤ Shutting down and restarting the client computer.

➤ A network interruption.

A module can also be released when you terminate the communication by using the KILL LINS command. For more information, see *KILL LINS* on page 30.

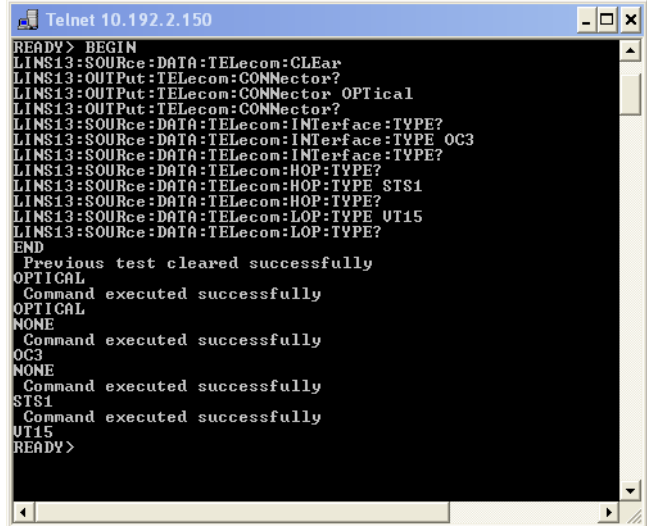
Internal Commands of the TCP/IP over Telnet Protocol


The internal commands allow you to perform certain actions such as send SCPI commands as a script instead of one by one, force the disconnection of an active session, view the status of modules and of connected clients, etc. The internal commands are not case-sensitive.

ABORT BEGIN

Description	The ABORT BEGIN command prevents the execution of the SCPI commands that are enclosed in a BEGIN and END block, and returns to the READY> prompt in the Telnet editor window.
Syntax	ABORT BEGIN
Examples	

```
Telnet 10.192.2.150                              H A T    _ □ ×
READY> BEGIN
LINS13:SOURce:DATA:TELecom:CLEar
LINS13:OUTPut:TELecom:CONNector?
LINS13:OUTPut:TELecom:CONNector OPTical
LINS13:OUTPut:TELecom:CONNector?
LINS13:SOURce:DATA:TELecom:INTerface:TYPE?
LINS13:SOURce:DATA:TELecom:INTerface:TYPE OC3
LINS13:SOURce:DATA:TELecom:INTerface:TYPE?
LINS13:SOURce:DATA:TELecom:HOP:TYPE?
LINS13:SOURce:DATA:TELecom:HOP:TYPE STS1
LINS13:SOURce:DATA:TELecom:HOP:TYPE?
LINS13:SOURce:DATA:TELecom:LOP:TYPE VT15
LINS13:SOURce:DATA:TELecom:LOP:TYPE?
ABORT BEGIN
READY>
```

BEGIN and END


Description	The BEGIN and END commands allow to define blocks of SCPI commands (script) in a Telnet editor window. The SCPI commands enclosed in BEGIN and END blocks will be executed in batch.
Syntax	BEGIN
	<SCPI_command>
	<SCPI_command>
	...
	END

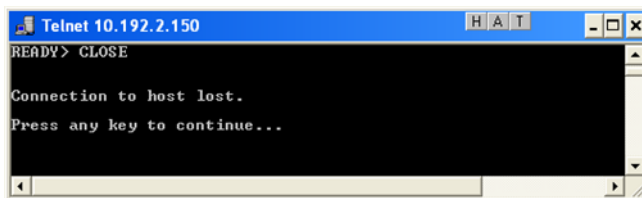
BEGIN and END

Examples

```
Telnet 10.192.2.150                                        _ □ ×
READY> BEGIN
LINS13:SOURce:DATA:TELecom:CLEar
LINS13:OUTPut:TELecom:CONNector?
LINS13:OUTPut:TELecom:CONNector OPTical
LINS13:OUTPut:TELecom:CONNector?
LINS13:SOURce:DATA:TELecom:INTerface:TYPE?
LINS13:SOURce:DATA:TELecom:INTerface:TYPE OC3
LINS13:SOURce:DATA:TELecom:INTerface:TYPE?
LINS13:SOURce:DATA:TELecom:HOP:TYPE?
LINS13:SOURce:DATA:TELecom:HOP:TYPE STS1
LINS13:SOURce:DATA:TELecom:HOP:TYPE?
LINS13:SOURce:DATA:TELecom:LOP:TYPE VT15
LINS13:SOURce:DATA:TELecom:LOP:TYPE?
END
 Previous test cleared successfully
OPTICAL
 Command executed successfully
OPTICAL
NONE
 Command executed successfully
OC3
NONE
 Command executed successfully
STS1
 Command executed successfully
VT15
READY>
```

Notes

➤ To execute a single command, simply type or paste the command in the Telnet editor window.

➤ You cannot enclose internal commands in a BEGIN and END block, except the ABORT BEGIN command.


CLOSE

Description	The CLOSE command terminates the current Telnet session.
Syntax	CLOSE
Examples	

CLOSE LINS

Description   This command allows to close any active connections that have been previously established with the CONNECT LINS command (see *CONNECT LINS* on page 28). You can send this command to close all client's connections to any module, including the current connection.

Syntax   The syntax of the command vary according to the type of platform you are using.

➤ For IQS-600 and FTB-500:

CLOSE LINS<Unit_Number><Slot_Number>

You must specify the unit number and the slot number identifying the module for which you want to close the connections.

➤ For LTB-1, LTB-2, LTB-8, FTB-1v2, FTB-1v2 Pro, FTB-2, FTB-2 Pro, and FTB-4 Pro:

CLOSE LINS<Logical_Instrument_Number>

You must specify the logical instrument number corresponding to the module for which you want to close the connections. This number is configurable from the Remote Control Configuration application.

CLOSE LINS

Examples

```
Telnet 10.192.3.13
Trying to connect....
Connected to Toolbox/IQS Manager.
READY> connect lins14
  Client: 10.192.2.218:2190 connected to Module at LINS14 now.
READY> close lins14
  LINS14 is closed by this client.
READY> _
```

Notes

➤ If the command is not executed successfully, a possible reason could be that the provided information does not correspond to a valid LINS.

➤ On all platforms except IQS-600 and FTB-500, CLOSE LINS does not prevent another session from accessing the instrument using a direct LINS command.

CONNECT LINS

Description   This command allows to inform other sessions that you are connected to one or more instruments.

Syntax   The syntax of the command vary according to the type of platform you are using.

➤ For IQS-600 and FTB-500:

CONNECT LINS<Unit_Number><Slot_Number>

You must specify the unit number and the slot number identifying the module to which the session will connect.

➤ For LTB-1, LTB-2, LTB-8, FTB-1v2, FTB-1v2 Pro, FTB-2, FTB-2 Pro, and FTB-4 Pro:

CONNECT LINS<Logical_Instrument_Number>

You must specify the logical instrument number corresponding to the module to which the session will connect. This number is configurable from the Remote Control Configuration application.

CONNECT LINS

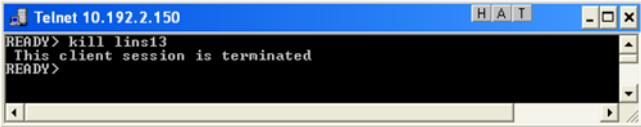
Examples

Notes

➤ On all platforms except IQS-600 and FTB-500, for compatibility reasons, you can connect to a module with a valid instrument command and a valid LINS (such as Lins10:SOURce:DATA:TELecom:CLEar). However, there will be no way for other sessions to know that you are connected to this instrument.

➤ If the command is not executed successfully, the possible reasons could be:

➤ The module is already connected to a different client session.

➤ The provided information does not correspond to a valid LINS.


KILL LINS

Description

This command allows any user to terminate the session that contains the specified connection (LINS), if this connection has been previously established with the CONNECT LINS command (see *CONNECT LINS* on page 28). This means that it will terminate all active connections that belong to a session if these connections have been previously established with CONNECT LINS.

Syntax

The syntax of the command vary according to the type of platform you are using.

➤ For IQS-600 and FTB-500:

KILL LINS<Unit_Number><Slot_Number>

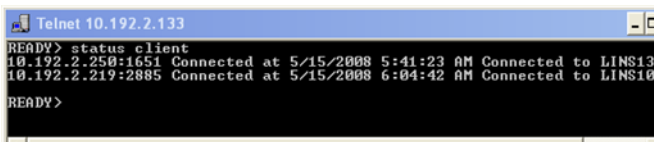
You must specify the unit number and the slot number identifying the module for which you want to terminate the session.

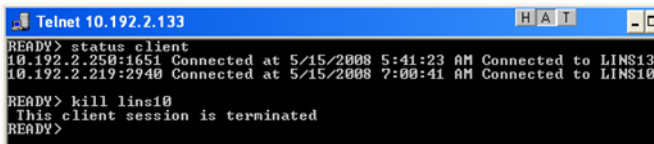
➤ For LTB-1, LTB-2, LTB-8, FTB-1v2, FTB-1v2 Pro, FTB-2, FTB-2 Pro, and FTB-4 Pro:

KILL LINS<Logical_Instrument_Number>

You must specify the logical instrument number corresponding to the module for which you want to terminate the session. This number is configurable from the Remote Control Configuration application.

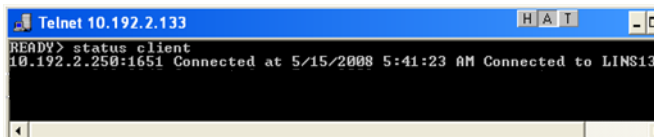
Examples

```
Telnet 10.192.2.150                          H A T    _ □ ×
READY> kill lins13
  This client session is terminated
READY>
```


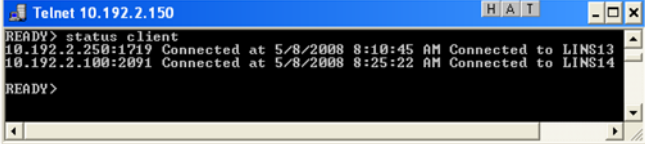


KILL LINS

Notes
➤ To know the status of the modules before terminating connections using the KILL LINS command, you can first enter the STATUS CLIENT command. For more information, see *STATUS CLIENT* on page 32.

In the example below, two modules are connected: LINS13 and LINS10.


➤ To disconnect the LINS10 module used by another session, enter the *kill lins10* command. A confirmation message is displayed once the module is disconnected.

➤ Enter again the STATUS CLIENT command to confirm the termination of the module (LINS10 in our example). Only the information of the remaining connected client is displayed.


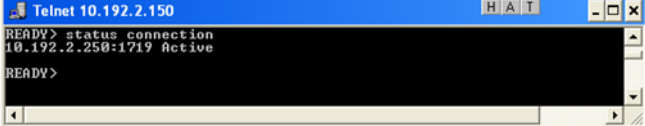
STATUS CLIENT

Description

This command lists out all clients with their connection time and modules.

Syntax

STATUS CLIENT

Examples


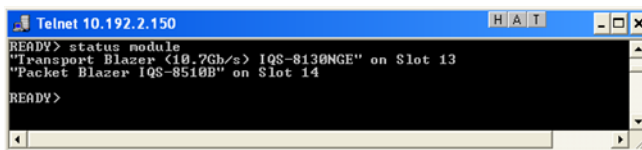
STATUS CONNECTION

Description

This command lists out all the connections with their *Idle* or *Active* status.

Syntax

STATUS CONNECTION

Examples


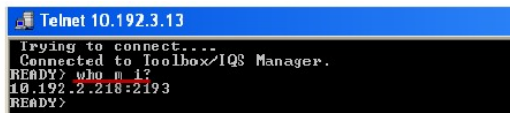
Notes

By default, any connection that is idle for 5 minutes or more is identified as *Idle*.

STATUS MODULE

Description   This command lists out all the modules with the slot numbers where they are located (IQS-600 and FTB-500), or with their LINS (all other platforms).

Syntax   STATUS MODULE

Examples


WHO M I?

Description   This command retrieves the IP address and the communication port of the current session.

Syntax   WHO M I?

Examples

4 *SCPI Command List - General*

Note: *The symbol || precedes a parallel interface command when a different command is used for a serial interface.*

Note: *For **Dual Port** topology or multi-port test (FlexE/FlexO) use the following command to select the port for subsequent commands/queries:*
:SOURce:DATA:TELecom:PORT

Note: *For multiple link interface (for example 2 x 100GE), use the following command to select the link for subsequent commands/queries:*
:SOURce:DATA:TELecom:LINK

Delay Between SCPI Commands

9 SCPI Command Reference

This chapter presents detailed information of the SCPI commands and queries supported by the 88xx/8xx.

> # ❗ IMPORTANT
>
> **Since the FTB-1v2, FTB-1v2 Pro, FTB-2, FTB-2 Pro, FTB-4 Pro, LTB-2, and LTB-8 can house many instruments, you must explicitly specify which instrument you want to remotely control.**
>
> **You must add the following mnemonic at the beginning of any command or query that you send to an instrument (except for IEEE 488.2 and platform commands):**
>
> **LINStrument<LogicalInstrumentPos>:**
>
> **where <LogicalInstrumentPos> corresponds to the LINS number given to the module.**
>
> **For information on modifying unit identification, refer to the platform user guide.**

> # ❗ IMPORTANT
>
> **For SCPI commands containing the ODU[1..n] key, use:**
> **ODU100 for ODU0**
> **ODU101 for ODUflex.**
>
> **For commands containing the OPU[1..n] key, use:**
> **OPU100 for OPU0**
> **OPU101 for OPUflex.**

Test Information and Control

:CONFig:DATA:TELecom:LOAD

Description	This command loads a previously saved test configuration settings.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test Control > Load
Syntax	:CONFig:DATA:TELecom:LOAD <wsp><Path>
Parameter(s)	**Path**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the file name.
Example(s)	CONF:DATA:TEL:LOAD C:/CONFig0.cfg
See Also	CONFig:DATA:TELecom:SAVE

:CONFig:DATA:TELecom:SAVE

Description	This command saves the current test configuration settings.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test Control > Save
Syntax	:CONFig:DATA:TELecom:SAVE <wsp><Path>
Parameter(s)	**Path**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the file name.
Example(s)	CONF:DATA:TEL:SAVE C:CONFig0.cfg
See Also	CONFig:DATA:TELecom:LOAD

:CONFig:TIMe:FORMat

Description	This command sets the current Date Time Format.
	At *RST condition, the default value is "12 Hours".
	Note: This command is used to change the date time format for other commands. Any other commands executed after this command will be using the current date time format selected by this command.
Syntax	:CONFig:TIMe:FORMat <wsp><Duration>
Parameter(s)	**Duration**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the current time format.
	12H: set the current time format to "AM / PM"
	24H: set the current time format to "24 hours"
Example(s)	CONF:TIME:FORMAT 24H
	SOUR:DATA:TEL:TIMER:START?

:CONFig:TIMe:FORMat?

Description	This query returns the current Date Time Format.
	At *RST condition, the default value is "12 Hours".
Syntax	:CONFig:TIMe:FORMat?
Response Syntax	<Duration>
Response(s)	**Duration**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Gets the current time format.
	12H: the current time format is "AM / PM"
	24H: the current time format is "24 hours"
Example(s)	CONF:TIME:FORMAT 24H
	SOUR:DATA:TEL:TIMER:START?

:CONFig:WAIT:TIME

Description	This command is used to insert a delay between commands.
	Execution of this command after a command will delay the execution of the next command by the specified time.
	This command is an event and is not associated with an *RST condition or a query form.
Syntax	:CONFig:WAIT:TIME <wsp><Duration>
Parameter(s)	**Duration**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the wait time duration in milliseconds.
Response Syntax	<Duration>
Example(s)	SOUR:DATA:TEL:ITYP LANE4X10
	CONF:WAIT:TIME 3000
	SOUR:DATA:TEL:ITYP?

:FETCh:DATA:TELecom:AlarmERRor:CURRent?

Description	This query returns the list of currently active alarms and errors.
	At *RST condition, this value is set to device-dependent.
Syntax	:FETCh:DATA:TELecom:AlarmERRor:CURRent?
Response Syntax	<Alarms_Errors>
Response(s)	**Alarms_Errors**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the list of currently active alarms and errors.
Example(s)	FETC:DATA:TEL:AERR:CURR?

:FETCh:DATA:TELecom:AlarmERRor:HISTory?

Description	This query returns the status of history of global alarms and errors.
	At *RST condition, this value is set to device-dependent.
Syntax	:FETCh:DATA:TELecom:AlarmERRor:HISTory?
Response Syntax	<Alarms_Errors>
Response(s)	**Alarms_Errors**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the history status of the global alarm/error,
	PRESENT, indicates that at least one alarm/error has occurred.
	ABSENT, indicates that no alarm/error occurred.
Example(s)	FETC:DATA:TEL:AERR:HIST?

:FETCh:DATA:TELecom:MODule:DETails:AHRevision?

Description	This query returns the assembly hardware revision.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Application buttons > About button > Module Details > Assembly Hardware Revision
Syntax	:FETCh:DATA:TELecom:MODule:DETails:AHRevision?
Response Syntax	<Revision>
Response(s)	**Revision**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Assembly hardware revision.
Example(s)	FETC:DATA:TEL:MOD:DET:AHR?
See Also	FETCh:DATA:TELecom:MODule:DETails:MID?

:FETCh:DATA:TELecom:MODule:DETails:CDATe?

Description	This query returns the calibration date.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Application buttons > About button > Module Details > Calibration Date
Syntax	:FETCh:DATA:TELecom:MODule:DETails:CDATe?
Response Syntax	<DateTime>
Response(s)	**DateTime**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Calibration Date.
Example(s)	FETC:DATA:TEL:MOD:DET:CDAT?
See Also	FETCh:DATA:TELecom:MODule:DETails:CDATe?

:FETCh:DATA:TELecom:MODule:DETails:MID?

Description	This query returns the module ID.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Application buttons > About button > Module Details > Module ID
Syntax	:FETCh:DATA:TELecom:MODule:DETails:MID?
Response Syntax	<ModuleId>
Response(s)	**ModuleId**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Module Id.
Example(s)	FETC:DATA:TEL:MOD:DET:MID?
See Also	FETCh:DATA:TELecom:MODule:DETails:SPVersion?

:FETCh:DATA:TELecom:MODule:DETails:SNUMber?

Description	This query returns the module serial number.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Application buttons > About button > Module Details > Serial Number
Syntax	:FETCh:DATA:TELecom:MODule:DETails:SNUMber?
Response Syntax	<Serial Number>
Response(s)	**Serial Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Module serial number.
Example(s)	FETC:DATA:TEL:MOD:DET:SNUM?
See Also	FETCh:DATA:TELecom:MODule:DETails:AHRevision?

:FETCh:DATA:TELecom:MODule:DETails:SPVersion?

Description	This query returns the software product version.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Application buttons > About button > Module Details > Software Product Version
Syntax	:FETCh:DATA:TELecom:MODule:DETails:SPVersion?
Response Syntax	<Version>
Response(s)	**Version**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Software Product version.
Example(s)	FETC:DATA:TEL:MOD:DET:SPV?
See Also	FETCh:DATA:TELecom:MODule:DETails:SNUMber?

:FETCh:DATA:TELecom:OPTical:LIVE:POWer:STATus?

Description	This query returns the status of the optical receiver power.
	At *RST condition, this value is device dependent.
	Navigation Path: Status Bar
Syntax	:FETCh:DATA:TELecom:OPTical:LIVE:POWer:STATus?
Response Syntax	<PowerStatus>
Response(s)	**PowerStatus**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the receiver power.
	LOS: Loss Of Signal
	INRANGE: Power is in range
	OUTOFRANGE: Power is out of range
	CLOSETODAMAGE: Device is close to damage
Example(s)	FETC:DATA:TEL:OPT:LIVE:POW:STAT?
See Also	SOUR:DATA:TEL:OPT:ALAR:PORT:TYPE?

:FETCh:DATA:TELecom:OPTical:LIVE:POWer?

Description	This query returns the value of the optical receiver power.
	At *RST condition, this value is device dependent.
	Navigation Path: Status Bar
Syntax	:FETCh:DATA:TELecom:OPTical:LIVE:POWer?
Response Syntax	<Power>
Response(s)	**Power**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the value of the receiver power.
Example(s)	FETC:DATA:TEL:OPT:LIVE:POW?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:FETCh:DATA:TELecom:TEST:TIME?

Description	This query returns the time elapsed since the beginning of the test.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Global Indicator > Time
Syntax	:FETCh:DATA:TELecom:TEST:TIME?
Response Syntax	<Time>
Response(s)	**Time:**
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the time elapsed since the beginning of the test.
Example(s)	SOUR:DATA:TEL:TEST ON
	FETC:DATA:TEL:TEST:TIME?
See Also	FETCh:DATA:TELecom:LOGGer:EVENts?

:OUTPut:TELecom:LASer

Description	This command enables/disables the laser. Applies to all lanes for parallel interfaces.
	At *RST condition, this value is set to ON.
	Navigation Path: Test Control > Laser button
Syntax	:OUTPut:TELecom:LASer <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the laser.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Time>
Example(s)	OUTP:TEL:LAS ON
	OUTP:TEL:LAS?
	Returns: 1
See Also	SENSe:DATA:TELecom:ALASer

:OUTPut:TELecom:LASer?

Description	This query returns enable/disable status of the laser; for all lanes for parallel interfaces At *RST condition, this value is set to ON. Navigation Path: Test Control > Laser button
Syntax	:OUTPut:TELecom:LASer?
Response Syntax	<Set>
Response(s)	**Set:** The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the status of the laser. 1, laser is enabled. 0, laser is disabled.
Example(s)	OUTP:TEL:LAS ON OUTP:TEL:LAS? Returns: 1
See Also	OUTPut:TELecom:LASer SENSe:DATA:TELecom:ALASer

:SOURce:DATA:TELecom:ControlCHAracter:MODE

Description	This command selects the control character operation mode for all trace commands/queries.
	At *RST condition, this value is set to STANDARD.
Syntax	:SOURce:DATA:TELecom:ControlCHAracter:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the character operation mode:
	STANdard: follows the G.709 standard. For queries, it transforms 'nul' characters into spaces.
	LITEral: uses T.50 control characters. Control characters can be entered in commands and are displayed for queries.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:CCHA:MODE LITERAL
	SOUR:DATA:TEL:OTN:OTU4:SM:SAPI:B16 <NUL><NUL>testing
	SOUR:DATA:TEL:OTN:OTU4:SM:SAPI:B16?
	Returns: <NUL><NUL>testing<NUL><NUL><NUL><NUL><NUL><NUL><NUL>
See Also	LINS[1..n]:SOURce:DATA:TELecom:CCHA:MODE?

:SOURce:DATA:TELecom:ControlCHAracter:MODE?

Description	This query returns the control character operation mode for all trace commands/queries.
	At *RST condition, this value is set to STANDARD.
Syntax	:SOURce:DATA:TELecom:ControlCHAracter:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the character operation mode:
	STANdard: follows the G.709 standard. For queries, it transforms 'nul' characters into spaces.
	LITEral: uses T.50 control characters. Control characters can be entered in commands and are displayed for queries.
Example(s)	SOUR:DATA:TEL:CCHA:MODE LITERAL
	SOUR:DATA:TEL:OTN:OTU4:SM:SAPI:B16 <NUL><NUL>testing
	SOUR:DATA:TEL:OTN:OTU4:SM:SAPI:B16?
	Returns: <NUL><NUL>testing<NUL><NUL><NUL><NUL><NUL><NUL><NUL>
See Also	LINS[1..n]:SOURce:DATA:TELecom:CCHA:MODE

:SOURce:DATA:TELecom:ETHernet:STReam:STATus

Description	This command enables/disables the transmission for all streams/clients.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test Control > TX button
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:STATus <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the transmission:
	ON: Enables the transmission.
	OFF: Disables the transmission.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:STR:STAT ON
	SOUR:DATA:TEL:ETH:STR:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ENABled

:SOURce:DATA:TELecom:ETHernet:STReam:STATus?

Description	This query returns the enables/disables status of the transmission for all streams/clients.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test Control > TX button
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:STATus?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable transmission status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:STA ON
	SOUR:DATA:TEL:ETH:STR:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ENABled?

:SOURce:DATA:TELecom:RESet

Description	This command clears the results, statistics, and logger content.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test Control > Reset button
Syntax	:SOURce:DATA:TELecom:RESet
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:RES
See Also	SOURce:DATA:TELecom:RESTore:DEFault

:SOURce:DATA:TELecom:SONet:TEST:TYPE

Description	This command selects DSn/PDH BERT or NI/CSU Emulation test application. Note that for other test applications, the command SOURce:DATA:TELecom:TEST:TYPE must be used.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Applications
Syntax	:SOURce:DATA:TELecom:SONet:TEST:TYPE <wsp><Ttype>
Parameter(s)	**Ttype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the application type:
	DSNPDHBERT: DSn/PDH BERT
	NICSUemulation: NI/CSU Emulation
	SONETSDHBERT: SONET/SDH BERT (the command SOURce:DATA:TELecom:TEST:TYPE must be used)
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SON:TEST:TYPE DSNPDHBERT
	SOUR:DATA:TEL:SON:TEST:TYPE?
	Returns: DSNPDHBERT
See Also	SOURce:DATA:TELecom:TAPPlication:TEST:TYPE?
	SOURce:DATA:TELecom:TEST:TYPE

:SOURce:DATA:TELecom:SONet:TEST:TYPE?

Description	The query returns the selected application type which is either DSn/PDH BERT or NI/CSU Emulation. Note that for other test applications, the command SOURce:DATA:TELecom:TEST:TYPE? must be used.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Applications
Syntax	:SOURce:DATA:TELecom:SONet:TEST:TYPE?
Response Syntax	<Ttype>
Response(s)	**Ttype**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the application type:
	DSNPDHBERT: DSn/PDH BERT
	NICSUemulation: NI/CSU Emulation
	SONETSDHBERT: SONET/SDH BERT (the command SOURce:DATA:TELecom:TEST:TYPE? must be used)
Example(s)	SOUR:DATA:TEL:SON:TEST:TYPE DSNPDHBERT
	SOUR:DATA:TEL:SON:TEST:TYPE?
	Returns: DSNPDHBERT
See Also	SOURce:DATA:TELecom:TAPPlication:TEST:TYPE
	SOURce:DATA:TELecom:TEST:TYPE?

:SOURce:DATA:TELecom:TEST

Description	This command starts and stops the test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test Control > Start/Stop button
Syntax	:SOURce:DATA:TELecom:TEST <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts or stops the test.
	ON: Starts the test
	OFF: Stops the test
Response Syntax	<Ttype>
Example(s)	SOUR:DATA:TEL:TEST ON
	SOUR:DATA:TEL:TEST?
	Returns: 1
See Also	SOURce:DATA:TELecom:TEST?

:SOURce:DATA:TELecom:TEST:TYPE

Description

This command selects the test application. Note that for DSn/PDH BERT and NI/CSU Emulation, the command SOURce:DATA:TELecom:SONet:TEST:TYPE must be used.

At *RST condition, this value is set to EtherBERT.

Navigation Path: Setup > Test Applications

Syntax

:SOURce:DATA:TELecom:TEST:TYPE <wsp><Type>

Parameter(s)

Type:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Select the test type.

1588PTP: 1588 PTP

CABLetest: Cable Test

CPRI: CPRI/OBSAI BERT

EBERT: EtherBERT

ETHERSAM: EtherSAM (Y.1564)

FLEXEBERT: FlexE BERT

FLEXOBERT: FlexO BERT

FCBERT: FC BERT

ISAM: iSAM

MCOTN: Multi-Channel OTN

OAM: Carrier Ethernet OAM

OTNBERT: OTN BERT

OTNSONETSDHBERT: OTN SONET/SDH BERT

RFC2544: RFC 2544

RFC6349: RFC 6349

SLOopback: Smart Loopback

SONETSDHBERT: SONET/SDH BERT

SONETSDHDSNPDHBERT: SONET/SDH - DSn/PDH BERT

SYNCE: SyncE

TCPThroughput: TCP Throughput

THROUGHMODE: Through Mode

TMONGEN: Traffic Gen & Mon

IOPTICS: IOptics

:SOURce:DATA:TELecom:TEST:TYPE

Response Syntax	\<Ttype\>
Example(s)	SOUR:DATA:TEL:TEST:TYPE EBERT
	SOUR:DATA:TEL:TEST:TYPE?
	Returns: EBERT
See Also	SOURce:DATA:TELecom:TEST:TYPE?
	SOURce:DATA:TELecom:SONet:TEST:TYPE

:SOURce:DATA:TELecom:TEST:TYPE?

Description	The query returns the test application.
	At *RST condition, this value is set to EtherBERT.
	Navigation Path: Setup > Test Applications
Syntax	:SOURce:DATA:TELecom:TEST:TYPE?
Response Syntax	<Type>

:SOURce:DATA:TELecom:TEST:TYPE?

Response(s)

Type:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the test type.

15: DSn/PDH BERT

16: NI/CSU Emulation

1588PTP: 1588 PTP

CABLETEST: Cable Test

CPRI: CPRI/OBSAI BERT

EBERT: EtherBERT

Example(s)

SOUR:DATA:TEL:TEST:TYPE EBERT

SOUR:DATA:TEL:TEST:TYPE?

Returns: EBERT

:SOURce:DATA:TELecom:TEST:TYPE?

See Also	SOURce:DATA:TELecom:TEST:TYPE
	SOURce:DATA:TELecom:SONet:TEST:TYPE

:SOURce:DATA:TELecom:TEST?

Description	This query returns the enable/disable status of test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test Control > Start/Stop button
Syntax	:SOURce:DATA:TELecom:TEST?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the test.
	1: indicates the test is started.
	0: indicates the test is stoped.
Example(s)	SOUR:DATA:TEL:TEST ON
	SOUR:DATA:TEL:TEST?
	Returns: 1
See Also	SOURce:DATA:TELecom:TEST

Test Configurator

:FETCh:DATA:TELecom:OPTical:MODule:STATus?

Description	This query returns the status for the optical module validation for high rate interfaces.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator
Syntax	:FETCh:DATA:TELecom:OPTical:MODule:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the optical module validation:
	NOPTicalModule: No optical module
	VALidating: Validating
	POWerexceed: Power exceeded
	VALid: Valid transceiver
	INValid: Invalid transceiver
	UNABletovalidate: , Unable to validate the transceiver
	MAX: MAX is selected
	NoOpticalAdaptor: No optical adaptor
Example(s)	FETC:DATA:TEL:OPT:MOD:STAT?
See Also	FETCh:DATA:TELecom:MDIO:BULK:READ:INFormation?

:FETCh:DATA:TELecom:TRANsceiver:TFAult:STATus?

Description	This query returns the status of transaction faults seen on any transceiver involved in the test.
	At *RST condition, this value is set to ABSENT.
	Navigation Path: Setup > Test Configurator
Syntax	:FETCh:DATA:TELecom:TRANsceiver:TFAult:STATus?[<wsp><Direction>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For decoupled tests, this parameter specifies the direction for which the transaction faults are queried:
	RX: Receive direction
	TX: Transmit direction
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of transaction faults seen on any transceiver involved in the test:
	ABSENT: No transaction faults seen
	PRESENT: Some transaction faults seen
Example(s)	FETCH:DATA:TEL:TRAN:TFA:STAT?
See Also	SOURce:DATA:TELecom:TRANsceiver:TFAult:ENABle
	SOURce:DATA:TELecom:PORT

Modify Structure

:FETCh:DATA:TELecom:DSNPdh:CLIent?

Description	This query returns the DSn/PDH client type.
	At *RST condition, this value is set to Pattern.
	Navigation Path: Setup > Test Configurator > Modify Structure > Client
Syntax	:FETCh:DATA:TELecom:DSNPdh:CLIent?
Response Syntax	<Client>
Response(s)	**Client**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the client type for DSN/PDH BERT application.
	PATTERN, Returns PATTERN as client type.
Example(s)	FETC:DATA:TEL:DSNPdh:CLIent?
	Returns: PATTERN
See Also	FETCh:DATA:TELecom:SDHSonet:FRAMing?

:FETCh:DATA:TELecom:DSNPdh:TYPE?

Description	This query returns the DSn/PDH multiplexing for decoupled test.
	At *RST condition, this value is set to DS1.
	Navigation Path: Setup > Test Configurator > Modify Structure > RX > DSn/PDH Multiplexing
	Navigation Path: Setup > Test Configurator > Modify Structure > Embedded DSn/PDH
Syntax	:FETCh:DATA:TELecom:DSNPdh:TYPE?
Response Syntax	<Type>

:FETCh:DATA:TELecom:DSNPdh:TYPE?

Response(s)	Type:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the DSn/PDH Multiplexing or Embedded DSn/PDH.
	DSn/PDH Multiplexing:
	DS1: DS1
	DS3: DS3
	DS3DS1: DS3/DS1
	DS3E1: DS3/E1
	E1: E1
	E3: E3
	E3E2E1: E3/E2/E1
	E4: E4
	E4E3: E4/E3
	E4E3E2: E4/E3/E2
	E4E3E2E1: E4/E3/E2/E1
	Embedded DSn/PDH:
	DS1: DS1
	DS3: DS3
	E1: E1
	E3: E3
	E4: E4
Example(s)	FETC:DATA:TELecom:DSNPdh:TYPE?
See Also	SOURce:DATA:TELecom:OTN:FRAMing
	SOURce:DATA:TELecom:OTN:FRAMing?

:FETCh:DATA:TELecom:SDHSonet:CLIent?

Description	This query returns the SONET/SDH client type.
	At *RST condition, this value is set to Pattern.
	Navigation Path: Setup > Test Configurator > Modify Structure > Client
Syntax	:FETCh:DATA:TELecom:SDHSonet:CLIent?
Response Syntax	\<Client\>
Response(s)	**Client**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the client type for SONET/SDH BERT application.
	PATTERN, Returns PATTERN as client type.
Example(s)	FETC:DATA:TEL:SDHS:CLI?
	Returns: PATTERN
See Also	FETCh:DATA:TELecom:SDHSonet:FRAMing?

:FETCh:DATA:TELecom:SDHSonet:FRAMing?

Description	This query returns the SONET/SDH framing.
	At *RST condition, this value is set to Framed.
	Navigation Path: Setup > Test Configurator > Modify Structure > Framing
Syntax	:FETCh:DATA:TELecom:SDHSonet:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the framing.
	FRAMED
Example(s)	FETC:DATA:TEL:SDHS:FRAM?
	Returns: FRAMED
See Also	FETCh:DATA:TELecom:SONet:LINE:PM:STATus?

:SENSe:DATA:TELecom:ETHernet:PORT:TRANsceiver

Description	This command sets the RX interface/rate connector for Decoupled or Dual RX test.
	At *RST condition, this value is set to device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > RX > Connector
Syntax	:SENSe:DATA:TELecom:ETHernet:PORT:TRANsceiver <wsp><Connector>
Parameter(s)	**Connector**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the transceiver mode for the instrument.
	BANTAM
	BNC
	RJ48C: RJ48C
	SFPPLUS: SFP+ Port 2
	SFP28A1: SFP28 Port A1
	SFP28A2: SFP28 Port A2
	SFP28B1: SFP28 Port B1
	SFP28B2: SFP28 Port B2
Response Syntax	<Framing>
Example(s)	SENS:DATA:TEL:ETH:PORT:TRAN BNC
See Also	SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver?

:SENSe:DATA:TELecom:ETHernet:PORT:TRANsceiver?

Description	This query returns the RX interface/rate connector for Decoupled or Dual RX test.
	At *RST condition, this value is set to device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > RX > Connector
Syntax	:SENSe:DATA:TELecom:ETHernet:PORT:TRANsceiver?
Response Syntax	<Connector>
Response(s)	**Connector**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the interface/rate connector.
	BANTAM
	BNC
	RJ48C: RJ48C
	SFPPLUS: SFP+ Port 1
	SFP28A1: SFP28 Port A1
	SFP28A2: SFP28 Port A2
	SFP28B1: SFP28 Port B1
	SFP28B2: SFP28 Port B2
Example(s)	SENS:DATA:TEL:ETH:PORT:TRAN BNC
	SENS:DATA:TEL:ETH:PORT:TRAN?
	Returns: BNC
See Also	SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver

:SENSe:DATA:TELecom:ITYPe

Description	This command sets the RX interface/rate for Decoupled or Dual RX test.
	At *RST condition, this value is set to device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > RX > Interface/Rate
Syntax	:SENSe:DATA:TELecom:ITYPe <wsp><Interface>
Parameter(s)	**Interface**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the RX interface/rate.
	DS1, DS3
	E1, E2, E3, E4
	OC1, OC3, OC12, OC48, OC192: respectively OC-1, OC-3, OC-12, OC-48, OC-192
	STM0, STM0E, STM1, STM1E, STM4, STM16, STM64: respectively STM-0, STM-0e, STM-1, STM-1e, STM-4, STM-16, STM-64
	STS1E, STS3E: respectively STS-1e, STS-3e
Response Syntax	<Connector>
Example(s)	SENS:DATA:TEL:ITYP DS3
See Also	SOURce:DATA:TELecom:TEST

:SENSe:DATA:TELecom:ITYPe?

Description	This query returns the RX interface/rate for Decoupled or Dual RX test.
	At *RST condition, this value is set to device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > RX > Interface/Rate
Syntax	:SENSe:DATA:TELecom:ITYPe?
Response Syntax	<Interface>
Response(s)	**Interface**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the RX interface/rate.
	DS1, DS3
	E1, E2, E3, E4
	OC1, OC3, OC12, OC48, OC192: respectively OC-1, OC-3, OC-12, OC-48, OC-192
	STM0, STM0E, STM1, STM1E, STM4, STM16, STM64: respectively STM-0, STM-0e, STM-1, STM-1e, STM-4, STM-16, STM-64
	STS1E, STS3E: respectively STS-1e, STS-3e
Example(s)	SENS:DATA:TEL:ITYP DS3
	SENS:DATA:TEL:ITYP?
	Returns: DS3
See Also	SOURce:DATA:TELecom:TEST?

:SENSe:DATA:TELecom:SDHSonet:MULTiplex:TYPE

Description	This command select the SONET/SDH Multiplexing for both OTN-SONET/SDH BERT and SONET/SDH BERT test applications for RX component.
	Navigation Path: Setup > Text Configurator > Modify Structure > RX > SONET/SDH Multiplexing
Syntax	:SENSe:DATA:TELecom:SDHSonet:MULTiplex:TYPE <wsp><Type>

:SENSe:DATA:TELecom:SDHSonet:MULTiplex:TYPE

Parameter(s)	Type:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select SONET/SDH Multiplexing.

Returns: AU3TU12

:SOURce:DATA:TELecom:CPRI:EMULation:MODE

Description	This command sets the Emulation Mode.
	At *RST condition, this value is set to Base Station.
	Navigation Path: Setup > Test Configurator > Modify Structure > Emulation Mode
Syntax	:SOURce:DATA:TELecom:CPRI:EMULation:MODE[<wsp><Emulation Mode>]
Parameter(s)	**Emulation Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Emulation Mode Type value.
	BTS: Base station
	RRH: Remote Radio Head
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:CPRI:EMUL:MODE RRH
See Also	SOURce:DATA:TELecom:CPRI:FRAMing:TYPE

:SOURce:DATA:TELecom:CPRI:EMULation:MODE?

Description	This query returns the Emulation Mode.
	At *RST condition, this value is set to Base Station.
	Navigation Path: Setup > Test Configurator > Modify Structure > Emulation Mode
Syntax	:SOURce:DATA:TELecom:CPRI:EMULation:MODE?
Response Syntax	<Emulation Mode>
Response(s)	**Emulation Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Emulation Mode type.
	BTS: Base station
	RRH: Remote Radio Head
Example(s)	SOUR:DATA:TEL:CPRI:EMUL:MODE?
See Also	SOURce:DATA:TELecom:CPRI:FRAMing:TYPE?

:SOURce:DATA:TELecom:CPRI:FRAMing:TYPE

Description	This command sets the CPRI Framing type.
	At *RST condition, this value is set to Framed L2.
	Navigation Path: Setup > Test Configurator > Modify Structure > Framing
Syntax	:SOURce:DATA:TELecom:CPRI:FRAMing:TYPE[<wsp><Framing>]
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Framing Type value.
	For CPRI:
	FRAMEDL2: Framed L2
	UNFRAMED: Unframed
	For OBSAI:
	OBSAI_FRAMEDL2: Framed L2
	OBSAI_UNFRAMED: Unframed
Response Syntax	<Emulation Mode>
Example(s)	SOUR:DATA:TEL:CPRI:FRAM:TYPE FRAMEDL2
See Also	SOURce:DATA:TELecom:CPRI:EMULation:MODE

:SOURce:DATA:TELecom:CPRI:FRAMing:TYPE?

Description	This query returns the CPRI Framing type.
	At *RST condition, this value is set to Framed L2.
	Navigation Path: Setup > Test Configurator > Modify Structure > Framing
Syntax	:SOURce:DATA:TELecom:CPRI:FRAMing:TYPE?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Framing type.
	For CPRI:
	FRAMEDL2: Framed L2
	UNFRAMED: Unframed
	For OBSAI:
	OBSAI_FRAMEDL2: Framed L2
	OBSAI_UNFRAMED: Unframed
Example(s)	SOUR:DATA:TEL:CPRI:FRAM:TYPE?
See Also	SOURce:DATA:TELecom:CPRI:EMULation:MODE?

:SOURce:DATA:TELecom:CPRI:OBSai:VENDor:TYPE

Description	This command sets the Vendor.
	At *RST condition, this value is set to Generic.
	Nevigation Path: Setup > Test Configurator > Modify Structure > Vendor
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:VENDor:TYPE <wsp><Vendor>
Parameter(s)	**Vendor**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Vendor value.
	GENERIC : Generic
	ERICSSON : Ericsson
Response Syntax	<Framing>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:VEND:TYPE GENERIC
See Also	SOURce:DATA:TELecom:CPRI:FRAMing:TYPE

:SOURce:DATA:TELecom:CPRI:OBSai:VENDor:TYPE?

Description	This command sets the Vendor. At *RST condition, this value is set to Generic. Nevigation Path: Setup > Test Configurator > Modify Structure > Vendor
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:VENDor:TYPE?
Response Syntax	<Vendor>
Response(s)	**Vendor**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Sets the Vendor value. GENERIC : Generic ERICSSON : Ericsson
Example(s)	SOUR:DATA:TEL:CPRI:OBS:VEND:TYPE?
See Also	SOURce:DATA:TELecom:CPRI:FRAMing:TYPE?

:SOURce:DATA:TELecom:DSNPdh:TYPE

Description	This command selects the DSn/PDH multiplexing or embedded DSn/PDH.
	At *RST condition, this value is set to DS1.
	Navigation Path: Setup > Test Configurator > Modify Structure > DSn/PDH Multiplexing
	Navigation Path: Setup > Test Configurator > Modify Structure > Embedded DSn/PDH
Syntax	:SOURce:DATA:TELecom:DSNPdh:TYPE <wsp><Type>
Parameter(s)	**Type**:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the DSn/PDH Multiplexing or Embedded DSn/PDH.

DSn/PDH Multiplexing:
DS1: DS1
DS3: DS3
DS3DS1: DS3/DS1
DS3E1: DS3/E1
E1: E1
E3: E3
E3E2E1: E3/E2/E1
E4: E4
E4E3: E4/E3
E4E3E2: E4/E3/E2
E4E3E2E1: E4/E3/E2/E1

Embedded DSn/PDH:
DS1: DS1
DS3: DS3
E1: E1
E3: E3
E4: E4

:SOURce:DATA:TELecom:DSNPdh:TYPE

Response Syntax	\<Vendor\>
Example(s)	SOUR:DATA:TEL:DSNP:TYPE DS3E1
See Also	SOURce:DATA:TELecom:OTN:FRAMing
	SOURce:DATA:TELecom:OTN:FRAMing?

:SOURce:DATA:TELecom:DSNPdh:TYPE?

Description	This query returns the DSn/PDH mulitplexing or embedded DSn/PDH.
	At *RST condition, this value is set to DS1.
	Navigation Path: Setup > Test Configurator > Modify Structure > DSn/PDH Multiplexing
	Navigation Path: Setup > Test Configurator > Modify Structure > Embedded DSn/PDH
Syntax	:SOURce:DATA:TELecom:DSNPdh:TYPE?
Response Syntax	<DSnType>

:SOURce:DATA:TELecom:DSNPdh:TYPE?

Response(s)

DSnType:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the DSn/PDH Multiplexing or Embedded DSn/PDH.

DSn/PDH Multiplexing:
DS1: DS1
DS3: DS3
DS3DS1: DS3/DS1
DS3E1: DS3/E1
E1: E1
E3: E3
E3E2E1: E3/E2/E1
E4: E4
E4E3: E4/E3
E4E3E2: E4/E3/E2
E4E3E2E1: E4/E3/E2/E1

Embedded DSn/PDH:
DS1: DS1
DS3: DS3
E1: E1
E3: E3
E4: E4

Example(s)

SOUR:DATA:TEL:DSNP:TYPE DS3E1
SOUR:DATA:TEL:DSNP:TYPE?
Returns: DS3E1

:SOURce:DATA:TELecom:ETHernet:PHY:TYPE

Description	This command sets the PHY type.
	At *RST condition, this value is set to OTHERS.
	Navigation Path: Setup > Test Configurator > Modify Structure > PHY Type
Syntax	:SOURce:DATA:TELecom:ETHernet:PHY:TYPE <wsp><PhyType>
Parameter(s)	**PhyType**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	CLR4: CLR4
	CWDM4: CWDM4
	OTHERS: Other
	SR4: SR4
	LR4_ER4: LR4/ER4
	AOC: AOC
	DAC: DAC
	OPTICAL: Optical
	DR1_FR1_LR1: DR1/FR1/LR1
	SRBD: SRBD
Response Syntax	<Layer>
Example(s)	SOUR:DATA:TEL:ETH:PHY:TYPE SR4
	SOUR:DATA:TEL:ETH:PHY:TYPE?
	Returns: SR4
See Also	SOURce:DATA:TELecom:ETHernet:PHY:TYPE

:SOURce:DATA:TELecom:ETHernet:PHY:TYPE?

Description	This query returns the PHY type.
	At *RST condition, this value is set to OTHERS.
	Navigation Path: Setup > Test Configurator > Modify Structure > PHY Type
Syntax	:SOURce:DATA:TELecom:ETHernet:PHY:TYPE?
Response Syntax	<PhyType>
Response(s)	**PhyType**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the PHY type.
	CLR4: CLR4
	CWDM4: CWDM4
	OTHERS: Others
	SR4: SR4
	LR4_ER4: LR4/
	AOC: AOC
	DAC: DAC
	OPTICAL: Optical
	DR1_FR1_LR1: DR1/FR1/LR1
	SRBD: SRBD
Example(s)	SOUR:DATA:TEL:ETH:PHY:TYPE SR4
	SOUR:DATA:TEL:ETH:PHY:TYPE?
	Returns: SR4
See Also	SOURce:DATA:TELecom:ETHernet:PHY:TYPE?

:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver

Description	This command selects the physical connector port.
	At *RST condition, this value is set device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > Connector
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver <wsp><Connector>,[<OptionalConnectorInstance>]

:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver

Parameter(s)

Connector:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the physical port.

BANTAM

BNC

CFP4P1: CFP4 Port 1

CFP4A1: CFP4 Port A1

CFP4B1: CFP4 Port B1

CFP8P1: CFP8 Port 1

OSFPP1: OSFP Port 1

OSFPP2: OSFP Port 2 (Only applicable for modules 88481 and 88482)

QSFPP1, QSFPP2, QSPP3, QSFPP4: Respectively QSFP Port 1, Port 2, Port 3, and Port 4.

QSFP28A1, QSFP28A2: Respectively QSFP28 Port A1, and Port A2.

QSFP28B1, QSFP28B2: Respectively QSFP28 Port B1, and Port B2.

QSFP28P1, QSFP28P2, QSFP28P3, QSFP28P4: Respectively QSFP28 Port 1, Port 2, Port 3, and Port 4.

QSFP28ADAPTERP1, QSFP28ADAPTERP2, QSFP28ADAPTERP3, QSFP28ADAPTERP4: Respectively QSFP28 (With adapter) Port 1, Port 2, Port 3, and Port 4.

QSFP56DDP1, QSFP56DDP2: Respectively QSFP56-DD Port 1, and Port 2.

RJ45: RJ45 Port 1

RJ48C: RJ48C

SFPPLUS: SFP+ Port 1

SFPPLUSP2: SFP+ Port 2

SFP28A1, SFP28A2: Respectively SFP28 Port A1, and Port A2.

SFP28B1, SFP28B2: Respectively SFP28 Port B1, and Port B2.

SFP28RJ45A1, SFP28RJ45A2: Respectively SFP28RJ45 Port A1, and Port A2

SFP28RJ45B1, SFP28RJ45B2: Respectively SFP28RJ45 Port B1, and Port B2

:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver

Parameter(s)	**OptionalConnectorInstance**:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Used in FlexE only, selects the instance for which the connector is set.
	FIRST: First interface connector of the group from the top, in Modify Structure
	SECOND: Second interface connector of the group from the top, in Modify Structure
	THIRD: Third interface connector of the group from the top, in Modify Structure
	FOURTH: Fourth interface connector of the group from the top, in Modify Structure
Response Syntax	<PhyType>
Example(s)	SOUR:DATA:TEL:ETH:PORT:TRAN CFP4P1
	SOUR:DATA:TEL:ETH:PORT:TRAN?
	Returns: CFP4P1
	FlexE context:
	SOUR:DATA:TEL:ETH:PORT:TRAN QSFP28A2 FIRST
	SOUR:DATA:TEL:ETH:PORT:TRAN QSFP28B1 SECOND
	SOUR:DATA:TEL:ETH:PORT:TRAN? FIRST
	Returns: QSFP28A2
	SOUR:DATA:TEL:ETH:PORT:TRAN? SECOND
	Returns: QSFP28B1
See Also	SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver?

:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver?

Description	This query returns the selected physical connector port.
	At *RST condition, this value is set to device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > Connector
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver?[<wsp><OptionalConnectorInstance>]
Parameter(s)	**OptionalConnectorInstance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Used in FlexE only, selects the instance for which the connector is queried.
	FIRST: First interface connector of the group from the top, in Modify Structure
	SECOND: Second interface connector of the group from the top, in Modify Structure
	THIRD: Third interface connector of the group from the top, in Modify Structure
	FOURTH: Fourth interface connector of the group from the top, in Modify Structure
Response Syntax	<Connector>

:SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver?

Response(s)	Connector:

	Returns: QSFP28A2
	SOUR:DATA:TEL:ETH:PORT:TRAN? SECOND
	Returns: QSFP28B1
See Also	SOURce:DATA:TELecom:ETHernet:PORT:TRANsceiver

:SOURce:DATA:TELecom:ETHernet:SLOopback:TRANsparent: MODE:ENABle

Description	This command enables/disables the loopback mode type for Smart Loopback application.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Modify Structure > Transparent
Syntax	:SOURce:DATA:TELecom:ETHernet:SLOopback:TRANsparent:MODE:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Connector>
Example(s)	SOUR:DATA:TEL:ETH:SLO:TRAN:MODE:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:SLOopback:MODE?

:SOURce:DATA:TELecom:ETHernet:SLOopback:TRANsparent: MODE:ENABle?

Description	This query returns the status of the loopback mode type for Smart Loopback application.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Modify Structure > Transparent
Syntax	:SOURce:DATA:TELecom:ETHernet:SLOopback:TRANsparent:MODE:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:SLO:TRAN:MODE:ENAB?
See Also	SOURce:DATA:TELecom:ETHernet:SLOopback:MODE?

:SOURce:DATA:TELecom:FETHernet:GROup:PTYPe

Description	This command sets the PHY type for all port in the FlexE group.
	At *RST condition, this value is set to Others.
	Navigation Path: Setup > Test Configurator > Modify Structure > PHY Type
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:PTYPe <wsp><PhyType>
Parameter(s)	**PhyType**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	CLR4: CLR4
	CWDM4: CWDM4
	OTHERS: Others
	SR4: SR4
	LR4_ER4: LR4/ER4
	AOC: AOC
	DR1_FR1_LR1: DR1/FR1/LR1
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:GRO:PTYP SR4
	SOUR:DATA:TEL:FETH:GRO:PTYP?
	Returns: SR4
See Also	SOURce:DATA:TELecom:FETHernet:GROup:PTYPe?

:SOURce:DATA:TELecom:FETHernet:GROup:PTYPe?

Description	This query returns the PHY typ for all ports in the FlexE group..
	At *RST condition, this value is set to Others.
	Navigation Path: Setup > Test Configurator > Modify Structure > PHY Type
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:PTYPe?
Response Syntax	<PhyType>
Response(s)	**PhyType**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the PHY type:
	CLR4: CLR4
	CWDM4: CWDM4
	OTHERS: Others
	SR4: SR4
	LR4_ER4: LR4/ER4
	AOC: AOC
	DR1_FR1_LR1: DR1/FR1/LR1
Example(s)	SOUR:DATA:TEL:FETH:GRO:PTYP SR4
	SOUR:DATA:TEL:FETH:GRO:PTYP?
	Returns: SR4
See Also	SOURce:DATA:TELecom:FETHernet:GROup:PTYPe

:SOURce:DATA:TELecom:FETHernet:GROup:SIZE

Description	This command sets the Group Size in Modify Structure of FlexE.
	At *RST condition, this value is set to 100G.
	Navigation Path: Setup > Test Configurator > Modify Structure > Group Size
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:SIZE[<wsp><Group Size>]
Parameter(s)	**Group Size**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select Group Size as
	50G
	100G
	200G
	300G
	400G
Response Syntax	<PhyType>
Example(s)	SOUR:DATA:TEL:FETH:GRO:SIZE 100G
	SOUR:DATA:TEL:FETH:GRO:SIZE?
	Returns: 100G
See Also	SOUR:DATA:TEL:FETH:GRO:CAL CALENDARB

:SOURce:DATA:TELecom:FETHernet:GROup:SIZE?

Description	This command gets the Group Size in Modify Structure of FlexE.
	At *RST condition, this value is set to 100G.
	Navigation Path: Setup > Test Configurator > Modify Structure > Group Size
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:SIZE?
Response Syntax	<Group Size>
Response(s)	**Group Size**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Group Size currently in use
Example(s)	SOUR:DATA:TEL:FETH:GRO:SIZE 100G
	SOUR:DATA:TEL:FETH:GRO:SIZE?
	Returns: 100G
See Also	SOUR:DATA:TEL:FETH:GRO:CAL?

:SOURce:DATA:TELecom:FETHernet:PORT:SELection

Description	This command selects the ports to be assigned to a FlexE group.
	At *RST condition, this value is set to (PORT1, PORT2).
	Navigation Path: Setup > Test Configurator > Modify Structure > Connector(s)
Syntax	:SOURce:DATA:TELecom:FETHernet:PORT:SELection <wsp><Ports>
Parameter(s)	Ports:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Select port(s) to be assigned to a FlexE group by entering in paranthesis each active port separated by a comma as follows: "(FIRST, SECOND, THIRD, FOURTH)", where:
	FIRST: First interface connector of the group from the top, in Modify Structure
	SECOND: Second interface connector of the group from the top, in Modify Structure
	THIRD: Third interface connector of the group from the top, in Modify Structure
	FOURTH: Fourth interface connector of the group from the top, in Modify Structure
	Note that the list of active ports should be inclosed in double quotes
Response Syntax	<Group Size>
Example(s)	SOUR:DATA:TEL:FETH:PORT:SEL "(FIRST, SECOND)"
	SOUR:DATA:TEL:FETH:PORT:SEL?
	Returns: "(FIRST, SECOND)"
See Also	SOURce:DATA:TELecom:FETHernet:PORT:SELection?

:SOURce:DATA:TELecom:FETHernet:PORT:SELection?

Description	This query returns the ports assigned to a FlexE group.
	At *RST condition, this value is set to "(FIRST)".
	Navigation Path: Setup > Test Configurator > Modify Structure > Connector(s)
Syntax	:SOURce:DATA:TELecom:FETHernet:PORT:SELection?
Response Syntax	<Ports>
Response(s)	**Ports**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns port(s) assigned to a FlexE group: "(FIRST, SECOND, THIRD, FOURTH)", where:
	FIRST: First interface connector of the group from the top, in Modify Structure
	SECOND: Second interface connector of the group from the top, in Modify Structure
	THIRD: Third interface connector of the group from the top, in Modify Structure
	FOURTH: Fourth interface connector of the group from the top, in Modify Structure
Example(s)	SOUR:DATA:TEL:FETH:PORT:SEL "(FIRST, FOURTH)"
	SOUR:DATA:TEL:FETH:PORT:SEL?
	Returns: "(FIRST, FOURTH)"
See Also	SOURce:DATA:TELecom:FETHernet:PORT:SELection

:SOURce:DATA:TELecom:FOTN:GROup:RATE:SELection

Description	This command selects the Interface Rate, OTUC Rate and the physical ports to be assigned to a FlexO group.
	At *RST condition, this value is set to (LANE4X25, OTUC4, (PORT1, PORT2, PORT3, PORT4)).
	Navigation Path: Setup > Test Configurator > Modify Structure > OTN, Port #
Syntax	:SOURce:DATA:TELecom:FOTN:GROup:RATE:SELection <wsp><Interface>, <OTUC Rate>, <Ports>
Parameter(s)	**Interface**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	LANE4X25: _100GFlexORs (4 Lanes) [103.125 Gbit/s]
	LANE4X50: _200GFlexORs (4 Lanes) [212.500 Gbit/s]
	LANE8X50: _400GFlexORs (8 Lanes) [412.500 Gbit/s]
	OTUC Rate:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO OTUC Rate
	OTUC1: OTUC1
	OTUC2: OTUC2
	OTUC3: OTUC3
	OTUC4: OTUC4
	Ports:
	The program data syntax for the third parameter is defined as a <STRING PROGRAM DATA> element.
	Select all physical port(s) to be assigned to a FlexE group by entering in parantheses each port number separated by a comma as follows: (P1, P2, P3, P4) or (PORT1, PORT2, PORT3, PORT4).
Response Syntax	<Ports>
Example(s)	SOUR:DATA:TEL:FOTN:GROUP:RATE:SEL LANE4X25, OTUC1 (P1)
	SOUR:DATA:TEL:FOTN:GROUP:RATE:SEL?
	Returns: (LANE4X25, OTUC1, (PORT1))
See Also	SOURce:DATA:TELecom:FOTN:GROup:RATE:SELection?

:SOURce:DATA:TELecom:FOTN:GROup:RATE:SELection?

Description	This query returns the Interface Rate, OTUC Rate and the physical ports assigned to a FlexO group as a coma separated string containing: (Interface Rate, OTUC Rate, (List of Selected Ports))
	At *RST condition, this value is set to (LANE4X25, OTUC4, (PORT1, PORT2, PORT3, PORT4)).
	Navigation Path: Setup > Test Configurator > Modify Structure > OTN, Port #
Syntax	:SOURce:DATA:TELecom:FOTN:GROup:RATE:SELection?
Response Syntax	<Rate And Ports>
Response(s)	**Rate And Ports**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Return the OTUC Rate and the list of port assigned to a FlexO group.
Example(s)	SOUR:DATA:TEL:FOTN:GROUP:RATE:SEL LANE4X25, OTUC1 (P1)
	SOUR:DATA:TEL:FOTN:GROUP:RATE:SEL?
	Returns: (LANE4X25, OTUC1, (PORT1))
See Also	SOURce:DATA:TELecom:FOTN:GROup:RATE:SELection

:SOURce:DATA:TELecom:ITYPe

Description	This command sets the interface rate. At *RST condition, this value is device dependant. Navigation Path: Setup > Test Configurator > Modify Structure > Interface
Syntax	:SOURce:DATA:TELecom:ITYPe <wsp><Interface>

:SOURce:DATA:TELecom:ITYPe

Parameter(s)	Interface:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Sets the interface type.

:SOURce:DATA:TELecom:OPTical:PORT:LTYPe

Description	This command sets the host or media loopback type on optical modules that support it..
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > Test Configurator > Modify Structure > Host/Media Loopback
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:LTYPe <wsp><Loopback>
Parameter(s)	**Loopback**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	NONE: No loopback
	HOST_SIDE_INPUT: Host side input loopback
	MEDIA_SIDE_OUTPUT: Media side output loopback
Response Syntax	<ODUType>
Example(s)	SOUR:DATA:TEL:OPT:PORT:LTYP NONE
	SOUR:DATA:TEL:OPT:PORT:LTYP?
	Returns: NONE
See Also	SOURce:DATA:TELecom:OPTical:PORT:LTYPe?

:SOURce:DATA:TELecom:OTN:CLIent

Description	This command selects the client type for OTN test applications.
	At *RST condition, this value is set to PATTERN.
	Navigation Path: Setup > Test Configurator > Modify Structure > Client
Syntax	:SOURce:DATA:TELecom:OTN:CLIent <wsp><Client>
Parameter(s)	**Client**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the client type for OTN BERT application.
	1GBE: 1 GbE
	10GBE: 10 GbE
	100GBE: 100 GbE
	40GBE: 40GbE
	ETHERNETFLEX: Ethernet (flex/GFP-F)
	PATTERN: Pattern
Response Syntax	<Loopback>
Example(s)	SOUR:DATA:TEL:OTN:CLI ETHERNETFLEX
	SOUR:DATA:TEL:OTN:CLI?
	Returns: ETHERNETFLEX
See Also	SOURce:DATA:TELecom:OTN:FRAMing?

:SOURce:DATA:TELecom:OTN:CLIent?

Description	This query returns the client type for OTN test applications.
	At *RST condition, this value is set to PATTERN.
	Navigation Path: Setup > Test Configurator > Modify Structure > Client
Syntax	:SOURce:DATA:TELecom:OTN:CLIent?
Response Syntax	<Client>
Response(s)	**Client**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the client type for OTN BERT application.
	1GBE: 1 GbE
	10GBE: 10 GbE
	100GBE: 100 GbE
	40GBE: 40GbE
	ETHERNETFLEX: Ethernet (flex/GFP-F)
	PATTERN: Pattern
Example(s)	SOUR:DATA:TEL:OTN:CLI ETHERNETFLEX
	SOUR:DATA:TEL:OTN:CLI?
	Returns: ETHERNETFLEX
See Also	SOURce:DATA:TELecom:OTN:FRAMing

:SOURce:DATA:TELecom:OTN:FRAMing

Description	This command selects the framing for OTN BERT application.
	At *RST condition, this value is set to Framed.
	Navigation Path: Setup > Test Configurator > Modify Structure > Framing
Syntax	:SOURce:DATA:TELecom:OTN:FRAMing <wsp><Framing>
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the frame layer type for OTN BERT application.
	FRAMED
	4UPHLANE: 4 Unframed Physical Lanes
	20ULOGLANE: 20 Unframed Physical Lanes
Response Syntax	<Client>
Example(s)	SOUR:DATA:TEL:OTN:FRAM FRAMED
	SOUR:DATA:TEL:OTN:FRAM?
	Returns: FRAMED
See Also	SOURce:DATA:TELecom:TEST:TYPE

:SOURce:DATA:TELecom:OTN:FRAMing?

Description	This query returns the framing for OTN BERT application.
	At *RST condition, this value is set to Framed.
	Navigation Path: Setup > Test Configurator > Modify Structure > Framing
Syntax	:SOURce:DATA:TELecom:OTN:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the framing.
	FRAMED
	4UPHLANE: 4 Unframed Physical Lanes
	20ULOGLANE: 20 Unframed Physical Lane
Example(s)	SOUR:DATA:TEL:OTN:FRAM FRAMED
	SOUR:DATA:TEL:OTN:FRAM?
	Returns: FRAMED
See Also	SOURce:DATA:TELecom:TEST:TYPE?

:SOURce:DATA:TELecom:OTN:MULTiplex:ITYPe

Description	This command sets the embedded SONET/SDH signal for OTN-SONET/SDH BERT.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > Embedded SONET/SDH
Syntax	:SOURce:DATA:TELecom:OTN:MULTiplex:ITYPe <wsp><Interface>
Parameter(s)	**Interface**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the embedded SONET/SDH signal.
	OC12: OC-12
	OC192: OC-192
	OC3: OC-3
	OC48: OC-48
	OC768: OC-768
	STM1: STM-1
	STM16: STM-16
	STM256: STM-256
	STM4: STM-4
	STM64: STM-64
Response Syntax	<Framing>
Example(s)	SOUR:DATA:TEL:OTN:MULT:ITYP OC768
	SOUR:DATA:TEL:OTN:MULT:ITYP?
	Returns: OC768
See Also	SOURce:DATA:TELecom:HOP:TYPE

:SOURce:DATA:TELecom:OTN:MULTiplex:ITYPe?

Description	This query returns the embedded SONET/SDH signal for OTN-SONET/SDH BERT.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Modify Structure > Embedded SONET/SDH
Syntax	:SOURce:DATA:TELecom:OTN:MULTiplex:ITYPe?
Response Syntax	<Interface>
Response(s)	**Interface**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the embedded SONET/SDH signal:
	OC12: OC-12
	OC192: OC-192
	OC3: OC-3
	OC48: OC-48
	OC768: OC-768
	STM1: STM-1
	STM16: STM-16
	STM256: STM-256
	STM4: STM-4
	STM64: STM-64
Example(s)	SOUR:DATA:TEL:OTN:MULT:ITYP OC768
	SOUR:DATA:TEL:OTN:MULT:ITYP?
	Returns: OC768
See Also	SOURce:DATA:TELecom:HOP:TYPE?

:SOURce:DATA:TELecom:PACKetsync:PTP:EMODe

Description	This command sets the 1588 PTP Emulation Mode.
	At *RST condition, this value is set to Client.
	Navigation Path: Setup > Test Configurator > Modify Structure > Emulation Mode
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:EMODe <wsp><EmulationMode>
Parameter(s)	**EmulationMode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Emulation Mode.
	CLIENT: Client
	GM: Grand Master
Response Syntax	<Interface>
Example(s)	SOUR:DATA:TEL:PACK:PTP:EMOD CLIENT
	SOUR:DATA:TEL:PACK:PTP:EMOD?
	Return: CLIENT

:SOURce:DATA:TELecom:PACKetsync:PTP:EMODe?

Description	This query returns the 1588 PTP Emulation Mode.
	At *RST condition, this value is set to Client.
	Navigation Path: Setup > Test Configurator > Modify Structure > Emulation Mode,
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:EMODe?
Response Syntax	<EmulationMode>
Response(s)	**EmulationMode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Sets the Emulation Mode.
	CLIENT: Client
	GM: Grand Master
Example(s)	SOUR:DATA:TEL:PACK:PTP:EMOD CLIENT
	SOUR:DATA:TEL:PACK:PTP:EMOD?
	Return: CLIENT

:SOURce:DATA:TELecom:PACKetsync:PTP:TSOurce:ENABle

Description

This command enables/disables the Time Source for 1588 PTP GM Emulation Mode.

At *RST condition, this value is set to ON.

Navigation Path: Setup > Test Configurator > Modify Structure > Time Source

Syntax

:SOURce:DATA:TELecom:PACKetsync:PTP:TSOurce:ENABle <wsp><TimeSource>

Parameter(s)

TimeSource:

The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.

Enables/Disables:

OFF: Disables

ON: Enables

Response Syntax

<EmulationMode>

Example(s)

SOUR:DATA:TEL:PACK:PTP:TSO:ENAB ON

SOUR:DATA:TEL:PACK:PTP:TSO:ENAB?

Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:TSOurce:ENABle?

Description	This query returns the Time Source for 1588 PTP GM Emulation Mode.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Modify Structure > Time Source
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:TSOurce:ENABle?
Response Syntax	<TimeSource>
Response(s)	**TimeSource**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:TSO:ENAB ON
	SOUR:DATA:TEL:PACK:PTP:TSO:ENAB?
	Returns: 1

:SOURce:DATA:TELecom:PORT

Description	This command selects the port used for subsequent commands/queries for test applications using more than one test port.
	At *RST condition, this value is set to device-dependent.

Syntax

:SOURce:DATA:TELecom:PORT <wsp><PORT>

Parameter(s)

PORT:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

For test using two ports:

FIRST: The first or Primary port (for compatibility purposes, P1 is also accepted).
SECOND: The second or Secondary port (for compatibility purposes, P2 is also accepted).

For FlexE:
P1: Port #1
P2: Port #2
P3: Port #3
P4: Port #4
A1: A1
A2: A2
B1: B1
B2: B2

Response Syntax

<TimeSource>

Example(s)

SOUR:DATA:TEL:PORT FIRST
SOUR:DATA:TEL:PORT?
Returns: FIRST

:SOURce:DATA:TELecom:PORT?

Description	This query returns the port used for subsequent commands/queries for test applications using more than one test port.
	At *RST condition, this value is set to device-dependent.
Syntax	:SOURce:DATA:TELecom:PORT?
Response Syntax	\<Port No\>

Response(s)

Port No:

The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.

Returns the selected port.

For test using two ports:

FIRST or P1: The first or Primary port
SECOND or P2: The second or Secondary port

For FlexE:
P1: Port #1
P2: Port #2
P3: Port #3
P4: Port #4
A1: A1
A2: A2
B1: B1
B2; B2

Example(s)

SOUR:DATA:TEL:PORT FIRST
SOUR:DATA:TEL:PORT?
Returns: FIRST

:SOURce:DATA:TELecom:SDHSonet:MULTiplex:TYPE

Description	This command select the SONET/SDH Multiplexing for both OTN-SONET/SDH BERT and SONET/SDH BERT test applications.
	Navigation Path: Setup > Text Configurator > Modify Structure > SONET/SDH Multiplexing
Syntax	:SOURce:DATA:TELecom:SDHSonet:MULTiplex:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select SONET/SDH Multiplexing.
	AU3: AU-3

	STS768C: STS-768c
Example(s)	SOUR:DATA:TEL:SDHS:MULT:TYPE AU3
	SOUR:DATA:TEL:SDHS:MULT:TYPE?
	Returns: AU3

:SOURce:DATA:TELecom:SOAM:TYPE

Description	This command sets the OAM type.
	At *RST condition, this value is set to Ethernet OAM.
	Navigation Path: Setup > Test Configurator > Modify Structure > OAM Type
Syntax	:SOURce:DATA:TELecom:SOAM:TYPE[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects OAM type
	EOAM: the Ethernet OAM
	MOAM: the MPLS-TP OAM
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SOAM:TYPE MOAM
	SOUR:DATA:TEL:SOAM:TYPE?
	Returns: MOAM
See Also	SOURce:DATA:TELecom:SOAM:MODE

:SOURce:DATA:TELecom:SOAM:TYPE?

Description	This query returns the OAM type.
	At *RST condition, this value is set to Ethernet OAM.
	Navigation Path: Setup > Test Configurator > Modify Structure > OAM Type
Syntax	:SOURce:DATA:TELecom:SOAM:TYPE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the OAM type.
	EOAM, Ethernet OAM is selected.
	MOAM, MPLS-TP OAM is selected.
	LOAM, Link OAM is selected.
Example(s)	SOUR:DATA:TEL:SOAM:TYPE EOAM
	SOUR:DATA:TEL:SOAM:TYPE?
	Returns: EOAM
See Also	SOURce:DATA:TELecom:SOAM:MODE?

:SOURce:DATA:TELecom:TOPology

Description	This command selects the topology type.
	At *RST condition, this value is set to COUPLED.
	Navigation Path: Setup > Test Configurator > Modify structure > Topology
Syntax	:SOURce:DATA:TELecom:TOPology <wsp><TopologyType>
Parameter(s)	**TopologyType**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the topology type.
	COUPLED: Coupled (TX=RX)
	DECOUPLE: Decoupled
	DUALRX: Dual RX
	DUALPORT: Dual Port
	SINGLEPORT: Single Port
	THROUGH: Through
	THROUGHINTRUSIVE: Through Intrusive
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:TOP COUPLED
	SOUR:DATA:TEL:TOP?
	Returns: COUPLED
See Also	SOURce:DATA:TELecom:TAPPlication:TEST:TYPE?

:SOURce:DATA:TELecom:TOPology?

Description	The query returns the topology type.
	At *RST condition, this value is set to COUPLED.
	Navigation Path: Setup > Test Configurator > Modify structure > Topology
Syntax	:SOURce:DATA:TELecom:TOPology?
Response Syntax	<TopologyType>
Response(s)	**TopologyType**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the topology type.
	COUPLED: Coupled (TX=RX)
	DECOUPLE: Decoupled
	DUALRX: Dual RX
	DUALPORT: Dual Port
	SINGLEPORT: Single Port
	THROUGH: Through
	THROUGHINTRUSIVE: Through Intrusive
Example(s)	SOUR:DATA:TEL:TOP COUPLED
	SOUR:DATA:TEL:TOP?
	Returns: COUPLED
See Also	SOURce:DATA:TELecom:TAPPlication:TEST:TYPE

Clock

:INPut:TELecom:BACKplane:CLOCk

Description	This command sets the clock mode for synchronization at the input port.
	At *RST condition, this value is set to INTERNAL.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Clock Synchronization > Clock Mode
Syntax	:INPut:TELecom:BACKplane:CLOCk <wsp><Clock>
Parameter(s)	**Clock**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the clock mode for synchronization at the input port.
	INTernal: Internal clock of the unit (STRATUM 3)
	EXTernal: Clock received from an external clock signal
	BPLane: Backplane clock
	RECovered: Recovered clock
	EXT1PPS: External 1PPS
	INTGNSS: Internal GNSS
Response Syntax	<Status>
Example(s)	INP:TEL:BACK:CLOC REC
	INP:TEL:BACK:CLOC?
	Returns: RECOVERED
See Also	INPut:TELecom:BACKplane:CLOCk?

:INPut:TELecom:BACKplane:CLOCk?

Description	This query returns the clock mode for synchronization at the input port.
	At *RST condition, this value is set to INTERNAL.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Clock Synchronization > Clock Mode
Syntax	:INPut:TELecom:BACKplane:CLOCk?
Response Syntax	<Clock>
Response(s)	**Clock**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the clock mode for synchronization at the input port.
	INTernal: Internal clock of the unit (STRATUM 3)
	EXTernal: Clock received from an external clock signal
	BPLane: Backplane clock
	RECovered: Recovered clock
	EXT1PPS: External 1PPS
	INTGNSS: Internal GNSS
Example(s)	INP:TEL:BACK:CLOC REC
	INP:TEL:BACK:CLOC?
	Returns: RECOVERED
See Also	INPut:TELecom:BACKplane:CLOCk

:INPut:TELecom:BACKplane:STATus?

Description	This query returns the current state of the backplane.
	This command is not associated with any *RST value.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered Clock > Backplane > Backplane Clock
Syntax	:INPut:TELecom:BACKplane:STATus?
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current Backplane status.
	PRESENT, indicates that at least one error has occurred.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	INP:TEL:BACK:STAT?
	Returns: the status of the backplane.
See Also	INPut:TELecom:BCLock:ENABle?

:INPut:TELecom:BCLock:ENABle

Description	This command sets the backplane clock enabled status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered Clock > Backplane > Backplane Clock
Syntax	:INPut:TELecom:BCLock:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Current>
Example(s)	INP:TEL:BCL:ENAB ON
	INP:TEL:BCL:ENAB?
	Returns: 1
See Also	INPut:TELecom:BACKplane:STAtus?

:INPut:TELecom:BCLock:ENABle?

Description	This query returns the backplane clock value of the backplane.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered Clock > Backplane > Backplane Clock
Syntax	:INPut:TELecom:BCLock:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	INP:TEL:BCL:ENAB ON
	INP:TEL:BCL:ENAB?
	Returns: 1
See Also	INPut:TELecom:BACKplane:STAtus?

:INPut:TELecom:CLOCk:ALARm:STATus?

Description	This query returns the status Clock out.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator >External/Internal/Recovered Clock > Ext Clock Out > Ext Clock Out
Syntax	:INPut:TELecom:CLOCk:ALARm:STATus? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the status clock Out.
	LOC
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the status of Clock out.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	INP:TEL:CLOC:ALAR:STAT? LOC
See Also	OUTPut:TELecom:CLOCk:ALARm:STATus?

:INPut:TELecom:CODE

Description	This command sets the interface line coding for the input port.
	At *RST condition, this value is set to B8ZS.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > Line Coding
Syntax	:INPut:TELecom:CODE <wsp><Code>
Parameter(s)	**Code**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the interface line coding.
	B8ZS
	HDB3
	AMI
Response Syntax	<Status>
Example(s)	INP:TEL:LEV E1
	INP:TEL:CODE HDB3
	INP:TEL:CODE?
	Returns: HDB3
See Also	INPut:TELecom:CODE?

:INPut:TELecom:CODE?

Description	This query returns the interface line coding for the input port.
	At *RST condition, this value is set to B8ZS.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > Line Coding
Syntax	:INPut:TELecom:CODE?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the interface line coding.
	B8ZS, indicates the B8ZS as the interface line coding.
	HDB3, indicates the HDB3 as the interface line coding.
	AMI, indicates the AMI as the interface line coding.
Example(s)	INP:TEL:LEV E1
	INP:TEL:CODE HDB3
	INP:TEL:CODE?
	Returns: HDB3
See Also	INPut:TELecom:CODE

:INPut:TELecom:COUTput:FREQuency?

Description	This query returns the frequency of clock output.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ref Out > Frequency
Syntax	:INPut:TELecom:COUTput:FREQuency?
Response Syntax	<Frequency>
Response(s)	**Frequency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the offset value of the frequency.
Example(s)	INP:TEL:COUT:FREQ?
See Also	INPut:TELecom:COUTput:STAtus?

:INPut:TELecom:COUTput:SOURce

Description	This command sets the current state of the clock output source.
	At *RST condition, if connector is CFP4 then this value is set to TX_MCLK and if connector is QSFP then this value is set to INT_DIV160.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Internal Clock > Ref Out > Source
Syntax	:INPut:TELecom:COUTput:SOURce <wsp><Source>
Parameter(s)	Source:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the clock output source.
	INT_DIV8
	INT_DIV40
	INT_DIV160
	TX_MCLK
Response Syntax	<Frequency>
Example(s)	INP:TEL:COUT:SOUR INTERNAL
See Also	INPut:TELecom:COUTput:SOURce?

:INPut:TELecom:COUTput:SOURce?

Description	This query returns the current state of the clock output source.
	This query is not associated with any *RST value.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Internal Clock > Ref Out > Source
Syntax	:INPut:TELecom:COUTput:SOURce?
Response Syntax	<Source>
Response(s)	**Source**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the clock output source.
	INT_DIV8, indicates the clock output source is selected to internal 1/8 clock.
	INT_DIV40, indicates the clock output source is selected to internal 1/40 clock.
	INT_DIV160, indicates the clock output source is selected to internal 1/160 clock.
	TX_MCLK, indicates the clock output source is selected to TX MCLK.
Example(s)	INP:TEL:COUT:SOUR?
See Also	INPut:TELecom:COUTput:SOURce

:INPut:TELecom:COUTput:STATus?

Description	This query returns the current state of clock output.
	This query is not associated with any *RST value.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ref Out > Clock Out
Syntax	:INPut:TELecom:COUTput:STATus?
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current state of the clock out field.
	PRESENT, indicates that at least one error has occurred.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	INP:TEL:COUT:STAT?
See Also	INPut:TELecom:COUTput:FREQuency?

:INPut:TELecom:FRAMing

Description	This command selects the interface framing.
	At *RST condition, this value is set to ESF.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > Framing
Syntax	:INPut:TELecom:FRAMing <wsp><Framing>
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the interface framing.
	SF: SF (Superframe)
	ESF: ESF (Extended Superframe)
	PCM30: PCM30 (Pulse Code Modulation)
	PCM30C4: PCM30 (Pulse Code Modulation) CRC (Cyclic Redundancy Check)
	PCM31: PCM31 (Pulse Code Modulation)
	PCM31C4: PCM31(Pulse Code Modulation) CRC (Cyclic Redundancy Check)
	SLC96: SLC96
Response Syntax	<Current>
Example(s)	INP:TEL:LEV DS1
	INP:TEL:FRAM ESF
	INP:TEL:FRAM?
	Returns: ESF
See Also	INPut:TELecom:FRAMing?

:INPut:TELecom:FRAMing?

Description	This query returns the interface framing.
	At *RST condition, this value is set to ESF.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > Framing
Syntax	:INPut:TELecom:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the interface framing.
	SF, indicates SF (Superframe) as the interface framing.
	ESF, indicates ESF (Extended Superframe) as the interface framing.
	PCM30, indicates PCM30 (Pulse Code Modulation) as the interface framing.
	PCM30C4, indicates PCM30 (Pulse Code Modulation) CRC (Cyclic Redundancy Check) as the interface framing.
	PCM31, indicates PCM31 (Pulse Code Modulation) as the interface framing.
	PCM31C4, indicates PCM31(Pulse Code Modulation) CRC (Cyclic Redundancy Check) as the interface framing.
	SLC96, indicates SLC96 as the interface framing.
Example(s)	INP:TEL:LEV DS1
	INP:TEL:FRAM ESF
	INP:TEL:FRAM?
	Returns: ESF
See Also	INPut:TELecom:FRAMing

:INPut:TELecom:LBO

Description	This command sets the value for the Line Build Out interface.
	At *RST condition, this value is set to DSX133.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > LBO
Syntax	:INPut:TELecom:LBO <wsp><Lbo>
Parameter(s)	**Lbo**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the value for the Line Build Out interface.
	DSX655
	DSX533
	DSX399
	DSX266
	DSX133
Response Syntax	<Framing>
Example(s)	INP:TEL:LBO DSX266
	INP:TEL:LBO?
	Returns: DSX266
See Also	INPut:TELecom:LEVel

:INPut:TELecom:LBO?

Description	This query returns the value for the Line Build Out interface.
	At *RST condition, this value is set to DSX133.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > LBO
Syntax	:INPut:TELecom:LBO?
Response Syntax	<Clock>
Response(s)	**Clock**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value for the Line Build Out interface.
	DSX655, sets the value as DSX655.
	DSX533, sets the value as DSX533.
	DSX399, sets the value as DSX399.
	DSX266, sets the value as DSX266.
	DSX133, sets the value as DSX133.
Example(s)	INP:TEL:LBO?
	Returns: DSX133
See Also	INPut:TELecom:LEVel?

:INPut:TELecom:LEVel

Description	This command sets the internal timing interface input level for the input port.
	At *RST condition, this value is set to DS1.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > Interface
Syntax	:INPut:TELecom:LEVel <wsp><Level>
Parameter(s)	**Level**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the internal timing interface input level.
	2MHZ: 2 MHz
	DS1: DS1
	E1: E1
	NONE: None
Response Syntax	<Clock>
Example(s)	INP:TEL:LEV DS1
	INP:TEL:LEV?
	Returns: DS1
See Also	INPut:TELecom:LEVel?

:INPut:TELecom:LEVel?

Description	This query returns the internal timing interface input level for the input port.
	At *RST condition, this value is set to DS1.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock Out > Interface
Syntax	:INPut:TELecom:LEVel?
Response Syntax	<Level>
Response(s)	**Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the internal timing interface input level.
	2MHZ: 2 MHz
	DS1: DS1
	E1: E1
	NONE: None
Example(s)	INP:TEL:LEV DS1
	INP:TEL:LEV?
	Returns: DS1
See Also	INPut:TELecom:LBO?

:INPut:TELecom:TRIButary:CLOCk

Description	This command sets the Tributary Synchronization Clock Mode.
	At *RST condition, this value is set to INTERNAL.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Tributary Synchronization > Clock Mode
Syntax	:INPut:TELecom:TRIButary:CLOCk <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the tributary synchronization clock mode.
	INTernal: Internal clock of the unit (STRATUM 3)
	EXTernal: Clock received from an external clock signal
	BPLane: Backplane clock
	RECovered: Recovered clock
Response Syntax	<Level>
Example(s)	INP:TEL:TRIB:CLOC REC
	INP:TEL:TRIB:CLOC?
	Returns: RECOVERED
See Also	INPut:TELecom:TRIButary:CLOCk?

:INPut:TELecom:TRIButary:CLOCk?

Description	This query returns the Tributary Synchronization Clock Mode.
	At *RST condition, this value is set to INTERNAL.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Tributary Synchronization > Clock Mode
Syntax	:INPut:TELecom:TRIButary:CLOCk?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns tributary synchronization clock mode.
	INTernal: Internal clock of the unit (STRATUM 3)
	EXTernal: Clock received from an external clock signal
	BPLane: Backplane clock
	RECovered: Recovered clock
Example(s)	INP:TEL:TRIB:CLOC REC
	INP:TEL:TRIB:CLOC?
	Returns: RECOVERED
See Also	INPut:TELecom:TRIButary:CLOCk?

:OUTPut:TELecom:CLOCk:ALARm:STATus?

Description	This query returns the status Clock in.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered Clock > Ext Clock In > Ext Clock In
Syntax	:OUTPut:TELecom:CLOCk:ALARm:STATus? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the status clock in.
	LOS
	LOF
	AIS
	FREQuency
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the status of Clock out.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	OUTP:TEL:CLOC:ALAR:STAT? LOS
See Also	OUTPut:TELecom:BACKplane:STATus?

:OUTPut:TELecom:CLOCk:FREQuency:OFFSet?

Description	This query returns the positive or negative frequency offset between the standard rate specification and the rate from the received signal.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Frequency Offset
Syntax	:OUTPut:TELecom:CLOCk:FREQuency:OFFSet?
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frequency offset.
Example(s)	OUTP:TEL:LEV DS1
	OUTP:TEL:CLOC:FREQ:OFFS?
See Also	OUTPut:TELecom:CLOCk:FREQuency?

:OUTPut:TELecom:CLOCk:FREQuency?

Description	This query returns the received frequency signal rate (Hz).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Frequency
Syntax	:OUTPut:TELecom:CLOCk:FREQuency?
Response Syntax	<Frequency>
Response(s)	**Frequency**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the received clock rate.
Example(s)	OUTP:TEL:LEV DS1
	OUTP:TEL:CLOC:FREQ?
See Also	OUTPut:TELecom:CLOCk:FREQuency:OFFSet?

:OUTPut:TELecom:CODE

Description	This command sets the external timing line code for the output port.
	At *RST condition, this value is set to B8ZS.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Line Coding
Syntax	:OUTPut:TELecom:CODE <wsp><Code>
Parameter(s)	**Code**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the external timing line code.
	B8ZS
	HDB3
	AMI
Response Syntax	<Frequency>
Example(s)	OUTP:TEL:LEV E1
	OUTP:TEL:CODE HDB3
	OUTP:TEL:CODE?
	Returns: HDB3
See Also	OUTPut:TELecom:CODE?

:OUTPut:TELecom:CODE?

Description	This query returns the external timing line code for the output port.
	At *RST condition, this value is set to B8ZS.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Line Coding
Syntax	:OUTPut:TELecom:CODE?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the external timing line code.
	B8ZS, B8ZS external timing line code is selected.
	HDB3, HDB3 external timing line code is selected.
	AMI, AMI external timing line code is selected.
Example(s)	OUTP:TEL:LEV E1
	OUTP:TEL:CODE HDB3
	OUTP:TEL:CODE?
	Returns: HDB3
See Also	OUTPut:TELecom:CODE

:OUTPut:TELecom:FRAMing

Description	This command selects the interface framing.
	At *RST condition, this value is set to ESF.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Framing
Syntax	:OUTPut:TELecom:FRAMing <wsp><Framing>
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the interface framing.
	SF: SF (Superframe)
	ESF: ESF (Extended Superframe)
	PCM30: PCM30 (Pulse Code Modulation)
	PCM30C4: PCM30 (Pulse Code Modulation) CRC (Cyclic Redundancy Check)
	PCM31: PCM31 (Pulse Code Modulation)
	PCM31C4: PCM31(Pulse Code Modulation) CRC (Cyclic Redundancy Check)
	SLC96: SLC96
Response Syntax	<Code>
Example(s)	OUTP:TEL:LEV DS1
	OUTP:TEL:FRAM ESF
	OUTP:TEL:FRAM?
	Returns: ESF
See Also	OUTPut:TELecom:FRAMing?

:OUTPut:TELecom:FRAMing?

Description	This query returns the interface framing.
	At *RST condition, this value is set to ESF.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Framing
Syntax	:OUTPut:TELecom:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the interface framing.
	SF, indicates SF (Superframe) as the interface framing.
	ESF, indicates ESF (Extended Superframe) as the interface framing.
	PCM30, indicates PCM30 (Pulse Code Modulation) as the interface framing.
	PCM30C4, indicates PCM30 (Pulse Code Modulation) CRC (Cyclic Redundancy Check) as the interface framing.
	PCM31, indicates PCM31 (Pulse Code Modulation) as the interface framing.
	PCM31C4, indicates PCM31(Pulse Code Modulation) CRC (Cyclic Redundancy Check) as the interface framing.
	SLC96, indicates SLC96 as the interface framing.
Example(s)	OUTP:TEL:LEV DS1
	OUTP:TEL:FRAM ESF
	OUTP:TEL:FRAM?
	Returns: ESF
See Also	OUTPut:TELecom:FRAMing

:OUTPut:TELecom:LEVel

Description	This command sets the external timing interface output level for the output port.
	At *RST condition, this value is set to NONE if 25G interface is in use, DS1 otherwise.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Interface
Syntax	:OUTPut:TELecom:LEVel <wsp><Level>
Parameter(s)	**Level**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the external timing interface output level.
	10MHZ: 10 MHz
	2MHZ: 2 MHz
	DS1: DS1
	E1: E1
	NONE: None
Response Syntax	<Framing>
Example(s)	OUTP:TEL:LEV DS1
	OUTP:TEL:LEV?
	Returns: DS1
See Also	OUTPut:TELecom:LEVel?

:OUTPut:TELecom:LEVel?

Description	This query returns the external timing interface output level for the output port.
	At *RST condition, this value is set to DS1.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Interface
Syntax	:OUTPut:TELecom:LEVel?
Response Syntax	<Level>
Response(s)	**Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the external timing interface output level.
	10MHZ: 10 MHz
	2MHZ: 2 MHz
	DS1: DS1
	E1: E1
	NONE: None
Example(s)	OUTP:TEL:LEV DS1
	OUTP:TEL:LEV?
	Returns: DS1
See Also	OUTPut:TELecom:LEVel

:OUTPut:TELecom:TERMination

Description	This command sets the termination mode for the external timing. At *RST condition, this value is set to TERM. Navigation Path: Setup > Test Configurator > External/Internal/Recovered Clock/Backplane > Ext Clock In > Termination Mode
Syntax	:OUTPut:TELecom:TERMination <wsp><Termination>
Parameter(s)	**Termination**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the termination modes. BRIDge: Bridge MON: DSX-Monitor TERM: Terminal
Response Syntax	<Level>
Example(s)	OUTP:TERM? OUTP:TEL:TERM TERM OUTP:TEL:TERM? Returns: TERM
See Also	OUTPut:TELecom:LEVel?

:OUTPut:TELecom:TERMination?

Description	This query returns the value of the termination modes for the external timing.
	At *RST condition, this value is set to TERM.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > Ext Clock In > Termination Mode
Syntax	:OUTPut:TELecom:TERMination?
Response Syntax	\<Termination\>
Response(s)	**Termination**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the termination mode.
	BRID: Bridge
	MON: DSX-Monitor
	TERM: Terminal
Example(s)	OUTP:TEL:TERM
	OUTP:TEL:TERM TERM
	OUTP:TEL:TERM?
	Returns: TERM
See Also	OUTPut:TELecom:LEVel

CFP4/CFP8/QSFP/SFP/SFP+

:SENSe:DATA:TELecom:OPTical:CFP:CLEI:PRESence?

Description	This query returns the CLEI presence of the CFP Connector module. At *RST condition, this value is set to device-dependent. Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > CLEI Code
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:CLEI:PRESence?
Response Syntax	<CLEI>
Response(s)	**CLEI**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns the CLEI Presence of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:CLEI:PRES?
See Also	SENSe:DATA:TELecom:OPTical:CFP:MODule:ID?

:SENSe:DATA:TELecom:OPTical:CFP:CONNector:TYPE?

Description	This query returns the connector type of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Connector Type
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:CONNector:TYPE?
Response Syntax	<Connector_Type>
Response(s)	**Connector_Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the connector type of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:CONN:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:CFP:SPEed?

:SENSe:DATA:TELecom:OPTical:CFP:FIRMware:VERSion?

Description	This query returns the firmware version of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Firmware Version
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:FIRMware:VERSion?
Response Syntax	<Firmware_Version>
Response(s)	**Firmware_Version**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the firmware version of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:FIRM:VERS?
See Also	SENSe:DATA:TELecom:OPTical:CFP:CONNector:TYPE?

:SENSe:DATA:TELecom:OPTical:CFP:HLANe:SSPec?

Description	This query returns the Host Lane Signal Spec of the CFP module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Host Lane Signal Spec
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:HLANe:SSPec?
Response Syntax	<Host_Lane_Signal_Spec>
Response(s)	**Host_Lane_Signal_Spec**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Host Lane Signal Spec of the CFP module.
Example(s)	SENS:DATA:TEL:OPT:CFP:HLAN:SSP?
See Also	SENSe:DATA:TELecom:OPTical:CFP:SCODe:MODulation?

:SENSe:DATA:TELecom:OPTical:CFP:LRATio:TYPE?

Description	This query returns the lane ratio of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Lane Ratio Type
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:LRATio:TYPE?
Response Syntax	<Lane_Ratio>
Response(s)	**Lane_Ratio**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the lane ratio of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:LRAT:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:CFP:WDM:TYPE?

:SENSe:DATA:TELecom:OPTical:CFP:MODE?

Description	This query returns the mode value of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Mode Link Length
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the fiber mode of CFP.
Example(s)	SENS:DATA:TEL:OPT:CFP:MODE?
See Also	SENSe:DATA:TELecom:OPTical:CFP:MODule:ID?

:SENSe:DATA:TELecom:OPTical:CFP:MODule:ID?

Description	This query returns the Module ID of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Module ID
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:MODule:ID?
Response Syntax	<Module_ID>
Response(s)	**Module_ID**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the module id of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:MOD:ID?
See Also	SENSe:DATA:TELecom:OPTical:CFP:VENDor:NAMe?

:SENSe:DATA:TELecom:OPTical:CFP:PART:NUMBer?

Description	This query returns the part number of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Part Number
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:PART:NUMBer?
Response Syntax	<Part_Number>
Response(s)	**Part_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the part number of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:PART:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:CFP:SERial:NUMBer?

:SENSe:DATA:TELecom:OPTical:CFP:POWer:CLASs?

Description	This query returns the power class of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Power Class
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:POWer:CLASs?
Response Syntax	<Power_Class>
Response(s)	**Power_Class**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the power class of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:POW:CLAS?
See Also	SENSe:DATA:TELecom:OPTical:CFP:LRATio:TYPE?

:SENSe:DATA:TELecom:OPTical:CFP:REVision?

Description	This query returns the revision of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Hardware Revision
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:REVision?
Response Syntax	<Revision>
Response(s)	**Revision**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the revision of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:REV?
See Also	SENSe:DATA:TELecom:OPTical:CFP:CONNector:TYPE?

:SENSe:DATA:TELecom:OPTical:CFP:SCODe:CODing?

Description	This query returns the Signal Code - Coding of the CFP module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Signal Code - Coding
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:SCODe:CODing?
Response Syntax	<Signal_Code_Coding>
Response(s)	**Signal_Code_Coding**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Signal Code - Coding of the CFP module.
Example(s)	SENS:DATA:TEL:OPT:CFP:SCOD:COD?
See Also	SENSe:DATA:TELecom:OPTical:CFP:HLANe:SSPec?

:SENSe:DATA:TELecom:OPTical:CFP:SCODe:MODulation?

Description	This query returns the Signal Code - Modulation of the CFP module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Signal Code - Modulation
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:SCODe:MODulation?
Response Syntax	<Signal_Code_Modulation>
Response(s)	**Signal_Code_Modulation**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Signal Code - Modulation of the CFP module.
Example(s)	SENS:DATA:TEL:OPT:CFP:SCOD:MOD?
See Also	SENSe:DATA:TELecom:OPTical:CFP:SCODe:CODing?

:SENSe:DATA:TELecom:OPTical:CFP:SERial:NUMBer?

Description	This query returns the serial number of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Serial Number
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:SERial:NUMBer?
Response Syntax	<Serial_Number>
Response(s)	**Serial_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the serial number of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:SER:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:CFP:REVision?

:SENSe:DATA:TELecom:OPTical:CFP:SPEed?

Description	This query returns the speed of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Speed
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:SPEed?
Response Syntax	<Speed>
Response(s)	**Speed**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the speed of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:SPE?
See Also	SENSe:DATA:TELecom:OPTical:CFP:TYPE?

:SENSe:DATA:TELecom:OPTical:CFP:TYPE?

Description	This query returns the type of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Type Compliance Code
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the type of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:CFP:POWer:CLASs?

:SENSe:DATA:TELecom:OPTical:CFP:VENDor:NAMe?

Description	This query returns the vendor name of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > Vendor Name
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:VENDor:NAMe?
Response Syntax	<Vendor>
Response(s)	**Vendor**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the vendor name of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:VEND:NAME?
See Also	SENSe:DATA:TELecom:OPTical:CFP:PART:NUMBer?

:SENSe:DATA:TELecom:OPTical:CFP:WDM:TYPE?

Description	This query returns the WDM type of the CFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > CFP > WDM Type
Syntax	:SENSe:DATA:TELecom:OPTical:CFP:WDM:TYPE?
Response Syntax	<WDM_Type>
Response(s)	**WDM_Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the WDM Type of the CFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:WDM:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:CFP:CLEI:PRESence?

:SENSe:DATA:TELecom:OPTical:OSFP:CLEi:CODe?

Description	This query returns the CLEI presence of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > CLEI Code
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:CLEi:CODe?
Response Syntax	\<CLEI\>
Response(s)	**CLEI**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA\> element.
	Returns the CLEI Code of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:CLEI:CODE?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:MODule:ID?

:SENSe:DATA:TELecom:OPTical:OSFP:CONNector:TYPe?

Description	This query returns the connector type of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Connector Type
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:CONNector:TYPe?
Response Syntax	<Connector_Type>
Response(s)	**Connector_Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the connector type of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:CONN:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:SPEed?

:SENSe:DATA:TELecom:OPTical:OSFP:MODE?

Description	This query returns the mode value of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Mode Link Length
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:MODE?
Response Syntax	\<Mode\>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA\> element.
	Returns the fiber mode of OSFP.
Example(s)	SENS:DATA:TEL:OPT:QSFP:MODE?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:MODule:ID?

:SENSe:DATA:TELecom:OPTical:OSFP:MODule:ID?

Description	This query returns the module id of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator >Interface/Signal > OSFP > Module ID
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:MODule:ID?
Response Syntax	<Module_id>
Response(s)	**Module_id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the module id of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:MOD:ID?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:VENDor:NAMe?

:SENSe:DATA:TELecom:OPTical:OSFP:PART:NUMBer?

Description	This query returns the part number of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Part Number
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:PART:NUMBer?
Response Syntax	<Part_Number>
Response(s)	**Part_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the part number of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:PART:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:SERial:NUMBer?

:SENSe:DATA:TELecom:OPTical:OSFP:POWer:CLASs?

Description	This query returns the power class of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Power Class
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:POWer:CLASs?
Response Syntax	<Power_Class>
Response(s)	**Power_Class**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the power class of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:POW:CLAS?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:POWer:CLASs?

:SENSe:DATA:TELecom:OPTical:OSFP:REVision:COMPliance?

Description	This query returns the firmware version of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Revision Compliance
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:REVision:COMPliance?
Response Syntax	<Revision_Compliance>
Response(s)	**Revision_Compliance**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the firmware version of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:REV:COMP?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:CONNector:TYPE?

:SENSe:DATA:TELecom:OPTical:OSFP:REVision?

Description	This query returns the revision of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Hardware Revision
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:REVision?
Response Syntax	<Revision>
Response(s)	**Revision**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the revision of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:REV?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:CONNector:TYPE?

:SENSe:DATA:TELecom:OPTical:OSFP:SERial:NUMBer?

Description	This query returns the serial number of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Serial Number
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:SERial:NUMBer?
Response Syntax	<Serial_Number>
Response(s)	**Serial_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the serial number of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:SER:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:SERial:NUMBer?

:SENSe:DATA:TELecom:OPTical:OSFP:SPEed?

Description	This query returns the speed of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Speed
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:SPEed?
Response Syntax	<Speed>
Response(s)	**Speed**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the speed of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:SPE?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:TYPE?

:SENSe:DATA:TELecom:OPTical:OSFP:TYPe?

Description	This query returns the type of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Type Compliance Code
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:TYPe?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the type of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:POWer:CLASs?

:SENSe:DATA:TELecom:OPTical:OSFP:VENDor:NAMe?

Description	This query returns the vendor name of the OSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > OSFP > Vendor Name
Syntax	:SENSe:DATA:TELecom:OPTical:OSFP:VENDor:NAMe?
Response Syntax	<Vendor>
Response(s)	**Vendor**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the vendor name of the OSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:VEND:NAME?
See Also	SENSe:DATA:TELecom:OPTical:OSFP:PART:NUMBer?

:SENSe:DATA:TELecom:OPTical:QSFP:CLEI:CODE?

Description	This query returns the CLEI presence of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > CLEI Code
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:CLEI:CODE?
Response Syntax	<CLEI>
Response(s)	**CLEI**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the CLEI Code of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:CFP:CLEI:CODE?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:MODule:ID?

:SENSe:DATA:TELecom:OPTical:QSFP:CONNector:TYPE?

Description	This query returns the connector type of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Connector Type
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:CONNector:TYPE?
Response Syntax	<Connector_Type>
Response(s)	**Connector_Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the connector type of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:CONN:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:SPEed?

:SENSe:DATA:TELecom:OPTical:QSFP:MODE?

Description	This query returns the mode value of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Mode Link Length
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the fiber mode of QSFP.
Example(s)	SENS:DATA:TEL:OPT:CFP:MODE?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:MODule:ID?

:SENSe:DATA:TELecom:OPTical:QSFP:MODule:ID?

Description	This query returns the module id of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator >Interface/Signal > QSFP > Module ID
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:MODule:ID?
Response Syntax	<Module_id>
Response(s)	**Module_id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the module id of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:MOD:ID?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:VENDor:NAMe?

:SENSe:DATA:TELecom:OPTical:QSFP:PART:NUMBer?

Description	This query returns the part number of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Part Number
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:PART:NUMBer?
Response Syntax	<Part_Number>
Response(s)	**Part_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the part number of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:PART:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:SERial:NUMBer?

:SENSe:DATA:TELecom:OPTical:QSFP:POWer:CLASs?

Description	This query returns the power class of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Power Class
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:POWer:CLASs?
Response Syntax	<Power_Class>
Response(s)	**Power_Class**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the power class of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:POW:CLAS?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:POWer:CLASs?

:SENSe:DATA:TELecom:OPTical:QSFP:REVision:COMPliance?

Description	This query returns the firmware version of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Revision Compliance
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:REVision:COMPliance?
Response Syntax	<Revision_Compliance>
Response(s)	**Revision_Compliance**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the firmware version of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:REV:COMP?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:CONNector:TYPE?

:SENSe:DATA:TELecom:OPTical:QSFP:REVision?

Description	This query returns the revision of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Hardware Revision
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:REVision?
Response Syntax	<Revision>
Response(s)	**Revision**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the revision of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:REV?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:CONNector:TYPE?

:SENSe:DATA:TELecom:OPTical:QSFP:SERial:NUMBer?

Description	This query returns the serial number of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Serial Number
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:SERial:NUMBer?
Response Syntax	<Serial_Number>
Response(s)	**Serial_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the serial number of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:SER:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:SERial:NUMBer?

:SENSe:DATA:TELecom:OPTical:QSFP:SPEed?

Description	This query returns the speed of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Speed
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:SPEed?
Response Syntax	<Speed>
Response(s)	**Speed**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the speed of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:SPE?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:TYPE?

:SENSe:DATA:TELecom:OPTical:QSFP:TYPE?

Description	This query returns the type of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Type Compliance Code
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the type of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:POWer:CLASs?

:SENSe:DATA:TELecom:OPTical:QSFP:VENDor:NAMe?

Description	This query returns the vendor name of the QSFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > QSFP > Vendor Name
Syntax	:SENSe:DATA:TELecom:OPTical:QSFP:VENDor:NAMe?
Response Syntax	<Vendor>
Response(s)	**Vendor**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the vendor name of the QSFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:QSFP:VEND:NAME?
See Also	SENSe:DATA:TELecom:OPTical:QSFP:PART:NUMBer?

:SENSe:DATA:TELecom:OPTical:SFP:CONNector:TYPE?

Description	This query returns the connector type of the SFP Connector module. At *RST condition, this value is set to device-dependent. Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Connector Type
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:CONNector:TYPE?
Response Syntax	<Connector_Type>
Response(s)	**Connector_Type**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns the connector type of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:CONN:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:XFP:CONNector:TYPE?

:SENSe:DATA:TELecom:OPTical:SFP:MODE?

Description	This query returns the mode value of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Link Length
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the fiber mode of SFP.
Example(s)	SENS:DATA:TEL:OPT:SFP:MODE?
See Also	SENSe:DATA:TELecom:OPTical:XFP:MODE?

:SENSe:DATA:TELecom:OPTical:SFP:MODule:ID?

Description	This query returns the module id of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Module ID
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:MODule:ID?
Response Syntax	<Module_id>
Response(s)	**Module_id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the module id of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:MOD:ID?
See Also	SENSe:DATA:TELecom:OPTical:XFP:MODule:ID?

:SENSe:DATA:TELecom:OPTical:SFP:PART:NUMBer?

Description	This query returns the part number of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Part Number
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:PART:NUMBer?
Response Syntax	<Part_Number>
Response(s)	**Part_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the part number of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:PART:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:XFP:PART:NUMBer?

:SENSe:DATA:TELecom:OPTical:SFP:POWer:CLASs?

Description	This query returns the power class of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Power Class
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:POWer:CLASs?
Response Syntax	<Power Class>
Response(s)	**Power Class**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Power Class of SFP.
Example(s)	SENS:DATA:TEL:OPT:SFP:POW:CLAS?
See Also	SENSe:DATA:TELecom:OPTical:CFP:POWer:CLASs?

:SENSe:DATA:TELecom:OPTical:SFP:REVision?

Description	This query returns the revision of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Hardware Revision
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:REVision?
Response Syntax	<Revision>
Response(s)	**Revision**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the revision of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:REV?
See Also	SENSe:DATA:TELecom:OPTical:XFP:REVision?

:SENSe:DATA:TELecom:OPTical:SFP:SERial:NUMBer?

Description	This query returns the serial number of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Serial Number
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:SERial:NUMBer?
Response Syntax	<Serial_Number>
Response(s)	**Serial_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the serial number of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:SER:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:XFP:SERial:NUMBer?

:SENSe:DATA:TELecom:OPTical:SFP:SPEed?

Description	This query returns the speed of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Speed
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:SPEed?
Response Syntax	<Speed>
Response(s)	**Speed**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the speed of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:SPE?
See Also	SENSe:DATA:TELecom:OPTical:XFP:SPEed?

:SENSe:DATA:TELecom:OPTical:SFP:TYPE?

Description	This query returns the type of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Type Compliance Code
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the type of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:TYPE?
See Also	SENSe:DATA:TELecom:OPTical:XFP:TYPE?

:SENSe:DATA:TELecom:OPTical:SFP:VENDor:NAMe?

Description	This query returns the vendor name of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Vendor Name
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:VENDor:NAMe?
Response Syntax	<Vendor>
Response(s)	**Vendor**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the vendor name of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SFP:VEND:NAME?
See Also	SENSe:DATA:TELecom:OPTical:XFP:VENDor:NAMe?

:SENSe:DATA:TELecom:OPTical:SFP:WAVelength?

Description	This query returns the WAVelength value of the SFP Connector module.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > SFP > Wavelength
Syntax	:SENSe:DATA:TELecom:OPTical:SFP:WAVelength?
Response Syntax	<Wavelength>
Response(s)	**Wavelength**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Wavelength of SFP.
Example(s)	SENS:DATA:TEL:OPT:SFP:WAV?
See Also	SENSe:DATA:TELecom:OPTical:XFP:WAVelength?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:CONNector:TYPE?

Description	This query returns the connector type of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Connector Type
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:CONNector:TYPE?
Response Syntax	<Connector>
Response(s)	**Connector**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the connector type.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:CONN:TYPE?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:MODE?

Description	This query returns the mode of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Mode
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the SFP mode.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:MODE?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:MODule:ID?

Description	This query returns the module ID of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Module ID
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:MODule:ID?
Response Syntax	<Module_ID>
Response(s)	**Module_ID**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the module ID.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:MOD:ID?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:PART:NUMBer?

Description	This query returns the part number of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Part Number
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:PART:NUMBer?
Response Syntax	<Part_Number>
Response(s)	**Part_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the part number.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:PART:NUMB?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:REVision?

Description	This query returns the revision of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Hardware Revision.
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:REVision?
Response Syntax	<Revision>
Response(s)	**Revision**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the hardware revision.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:REV?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:SERial:NUMBer?

Description	This query returns the serial number of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Serial Number
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:SERial:NUMBer?
Response Syntax	<Serial_Number>
Response(s)	**Serial_Number**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the serial number.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:SER:NUMB?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:SPEed?

Description	This query returns the speed of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Speed
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:SPEed?
Response Syntax	<Speed>
Response(s)	**Speed**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the speed.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:SPE?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:TYPE?

Description	This query returns the type of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Type
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the type of the SFP Connector module.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:TYPE?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:VENDor:NAMe?

Description	This query returns the vendor name of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Vendor Name
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:VENDor:NAMe?
Response Syntax	<Vendor>
Response(s)	**Vendor**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the vendor name.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:VEND:NAM?

:SENSe:DATA:TELecom:OPTical:SLTool:SFP:WAVelength?

Description	This query returns the wavelengeth value of the SFP transceiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > SFP/SFP+ > Wavelengeth
Syntax	:SENSe:DATA:TELecom:OPTical:SLTool:SFP:WAVelength?
Response Syntax	<Wavelength>
Response(s)	**Wavelength**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Wavelength.
Example(s)	SENS:DATA:TEL:OPT:SLT:SFP:WAV?

Signal - Signal Configuration (DSn/PDH) - Modify DS0

:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:CONTent

Description	This command sets the payload content to given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > RX (1 - 24)
Syntax	:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:CONTent <wsp><Content>, <Payload>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the timeslots for payload content.
	Choices are 1 through 24.
	Payload:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the selection of the payload type.
	NONE: None
	PATTERN1: Pattern
Response Syntax	<Framing>
Example(s)	SENS:DATA:TEL:DS100:PAYL:CONT 1,PATTERN1
See Also	SENSe:DATA:TELecom:PDH:E:PAYLoad:CONTent

:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:CONTent?

Description	This query returns the payload content of given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > RX (1 - 24)
Syntax	:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:CONTent? <wsp><Content>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the timeslots for payload content.
	Choices are 1 through 24.
Response Syntax	<Payload>
Response(s)	**Payload**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the payload type.
	NONE, indicates the None as payload type.
	PATTERN1, indicates the Pattern as payload type.
Example(s)	SENS:DATA:TEL:DS100:PAYL:CONT 1,PATTERN1
	SENS:DATA:TEL:DS100:PAYL:CONT? 1
	Returns: PATTERN1
See Also	SENSe:DATA:TELecom:PDH:E:PAYLoad:CONTent?

:SENSe:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent

Description	This command sets the payload content to given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > RX (1-31)
Syntax	:SENSe:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent <wsp><Content>, <Payload>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the payload content.
	Choices are 1 through 31.
	Payload:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the selection of the payload type.
	NONE: None
	PATTERN1: Pattern
	SIGNALING: Signaling
	MFAS: Multiframe Alignment Signal
Response Syntax	<Payload>
Example(s)	SENS:DATA:TEL:PDH:E100:PAYL:CONT 1,PATTERN1
See Also	SENSe:DATA:TELecom:DS:PAYLoad:CONTent

:SENSe:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent?

Description	This query returns the payload content of given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > RX (1-31)
Syntax	:SENSe:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent? <wsp><Content>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the timeslots for payload content.
	Choices are 1 through 31.
Response Syntax	<Payload>
Response(s)	**Payload**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the payload type.
	NONE, indicates the None as as payload type.
	PATTERN1, indicates the Pattern as payload type.
	SIGNALING, indicates the Signaling as payload type.
	MFAS: Multiframe Alignment Signal.
Example(s)	SENS:DATA:TEL:PDH:E100:PAYL:CONT 1,PATTERN1
	SENS:DATA:TEL:PDH:E100:PAYL:CONT? 1
	Returns: PATTERN1
See Also	SENSe:DATA:TELecom:DS:PAYLoad:CONTent?

:SOURce:DATA:TELecom:DS[1..n]:MODE

Description	This command sets the channel timeslot data rate for the pattern payload content.
	At *RST condition, this value is set to E64K.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > DS0 Size
Syntax	:SOURce:DATA:TELecom:DS[1..n]:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the channel timeslot data rate for the pattern payload content.
	E64K: a timeslot data rate of E64 Kbps uses 8 bits to carry the payload information.
	E56K: a timeslot data rate of E56 Kbps uses 7 bits to carry the payload information.
Response Syntax	<Payload>
Example(s)	SOUR:DATA:TEL:DS:MODE E64K
See Also	SOURce:DATA:TELecom:PDH:E:MODE

:SOURce:DATA:TELecom:DS[1..n]:MODE?

Description	This query returns the channel timeslot data rate for the pattern payload content.
	At *RST condition, this value is set to E64K.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > DS0 Size
Syntax	:SOURce:DATA:TELecom:DS[1..n]:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the channel timeslot data rate for the pattern payload content.
	E64K, timeslot data rate of 64 Kbps uses 8 bits to carry the payload information is selected.
	E56K, timeslot data rate of 56 Kbps uses 7 bits to carry the payload information is selected.
Example(s)	SOUR:DATA:TEL:DS:MODE E64K
	SOUR:DATA:TEL:DS:MODE?
	Returns: E64K
See Also	SOURce:DATA:TELecom:PDH:E:MODE?

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent

Description	This command sets the payload content to given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > TX (1 - 24)
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent <wsp><Content>, <Payload>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the payload content.
	Choices are 1 through 24.
	Payload:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the selection of the payload type.
	PATTERN1: Pattern
	IDLE: Idle
	TONE: Tone
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:DS100:PAYL:CONT 1,PATTERN1
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:CONTent

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent:ALL

Description	This command sets the payload content of all timeslots to the selected payload content with its Pattern, Idle, or Tone value.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Set All
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent:ALL
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:DS:PAYL:CONT:ALL
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:CONTent:ALL

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent:TYPE

Description	This command selects the type of payload content.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Payload Content
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent:TYPE <wsp><Payload>
Parameter(s)	**Payload**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the payload content.
	IDLE: Idle
	PATTERN1: Pattern
	TONE: Tone
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:DS:PAYL:CONT:TYPE PATTERN1
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:CONTent:TYPE

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent:TYPE?

Description	This query returns the type of payload content.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Payload Content
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent:TYPE?
Response Syntax	<Content Type>
Response(s)	**Content Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the payload content type.
	IDLE: Idle
	PATTERN1: Pattern
	TONE: Tone
Example(s)	SOUR:DATA:TEL:DS:PAYL:CONT:TYPE PATTERN1
	SOUR:DATA:TEL:DS:PAYL:CONT:TYPE?
	Returns: PATTERN1
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:CONTent:TYPE?

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent?

Description	This query returns the payload content of given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > TX (1 - 24)
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:CONTent? <wsp><Content>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the timeslots for payload content.
	Choices are 1 through 24.
Response Syntax	<Payload>
Response(s)	**Payload**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the payload type.
	PATTERN1, Pattern is selected as payload type.
	IDLE, Idle is selected as payload type.
	TONE, Tone is selected as payload type.
Example(s)	SOUR:DATA:TEL:DS100:PAYL:CONT 1,PATTERN1
	SOUR:DATA:TEL:DS100:PAYL:CONT? 1
	Returns: PATTERN1
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:CONTent?

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:IDLE

Description	This command sets the idle code byte from the Idle field. The selected idle code applies to all timeslots set to Idle.
	At *RST condition, this value is set to #H7F.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Idle
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:IDLE <wsp><Idle>
Parameter(s)	**Idle**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the idle code byte from the idle field.
	The values are hexadecimal #H00 to #HFF.
Response Syntax	<Payload>
Example(s)	SOUR:DATA:TEL:DS:PAYL:IDLE #H1
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:IDLE

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:IDLE?

Description	This query returns the Idle code byte from the Idle field. The selected Idle code applies to all timeslots set to Idle.
	At *RST condition, this value is set to #H7F.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Idle
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:IDLE?
Response Syntax	<Idle>
Response(s)	**Idle**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the idle code byte from the idle field.
	The values are hexadecimal #H00 to #HFF.
Example(s)	SOUR:DATA:TEL:DS:PAYL:IDLE #H1
	SOUR:DATA:TEL:DS:PAYL:IDLE?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:IDLE?

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:TONE

Description	This command sets the tone for digital milli watt testing. The signal output power, when converted to analog, is 0 dBm. The selected tone applies to all timeslots set to tone.
	At *RST condition, this value is set to T1004.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Tone (Hz)
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:TONE <wsp><Tone>
Parameter(s)	**Tone**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the tone for digital milli watt testing.
	T1000: the 1000 Hz tone.
	T1004: the 1004 Hz tone.
Response Syntax	<Idle>
Example(s)	SOUR:DATA:TEL:DS:PAYL:TONE T1000
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:TONE

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:TONE?

Description	This query returns the tone for digital milli watt testing.
	At *RST condition, this value is set to T1004.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Tone (Hz)
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:TONE?
Response Syntax	<Tone>
Response(s)	**Tone**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the selection of a tone for digital milli watt testing.
	T1000, 1000 Hz is selected as tone.
	T1004, 1004 Hz is selected as tone.
Example(s)	SOUR:DATA:TEL:DS:PAYL:TONE T1000
	SOUR:DATA:TEL:DS:PAYL:TONE?
	Returns: T1000
See Also	SOURce:DATA:TELecom:PDH:E:PAYLoad:TONE?

:SOURce:DATA:TELecom:DS[1..n]:SYNC:TXRX

Description	This command sets enabled / disabled value for apply All Tx values to Rx.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Apply Channel TX to RX
Syntax	:SOURce:DATA:TELecom:DS[1..n]:SYNC:TXRX <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Tone>
Example(s)	SOUR:DATA:TEL:DS:SYNC:TXRX ON
See Also	SOURce:DATA:TELecom:PDH:E:SYNC:TXRX

:SOURce:DATA:TELecom:DS[1..n]:SYNC:TXRX?

Description	This query returns enabled / disabled value for apply All Tx values to Rx. At *RST condition, this value is set to ON. Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Apply Channel TX to RX
Syntax	:SOURce:DATA:TELecom:DS[1..n]:SYNC:TXRX?
Response Syntax	<Set>
Response(s)	Set: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Return Enable or disable value of Apply All Tx to RX. 1, Apply All Tx to RX is enabled. 0, Apply All Tx to RX is disabled.
Example(s)	SOUR:DATA:TEL:DS:SYNC:TXRX ON SOUR:DATA:TEL:DS:SYNC:TXRX? Returns: 1
See Also	SOURce:DATA:TELecom:PDH:E:SYNC:TXRX?

:SOURce:DATA:TELecom:DS[1..n]:ZCS

Description	This command sets the Zero Code Suppression (ZCS) method used to replace the all-zero bytes of the idle and tone payload contents.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Zero Code Suppression
Syntax	:SOURce:DATA:TELecom:DS[1..n]:ZCS <wsp><Zcs>
Parameter(s)	Zcs:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the selection of the ZCS (Zero Code Suppression) method used to replace the all-zero bytes of the idle and tone payload contents.
	NONE: no zero code suppression.
	JBIT8: every 8th (LSB) bit is forced to 1.
	GTE: bit 8 of an all zero channel byte is replaced by 1, except in signaling frames where bit 7 is forced to 1.
	ZBELl: bit 7 of an all zero channel byte is replaced by 1.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:DS:ZCS NONE
See Also	SOURce:DATA:TELecom:PDH:E:ZCS

:SOURce:DATA:TELecom:DS[1..n]:ZCS?

Description	This query returns the Zero Code Suppression (ZCS) method used to replace the all-zero bytes of the idle and tone payload contents.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > DSn/PDH BERT > DS3/DS1 > Modify DS0 > Zero Code Suppression
Syntax	:SOURce:DATA:TELecom:DS[1..n]:ZCS?
Response Syntax	<Zcs>
Response(s)	**Zcs**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the selection of the Zero Code Suppression (ZCS) method used to replace the all-zero bytes of the idle and tone payload contents.
	NONE, no zero code suppression is selected.
	JBIT8, every 8th (LSB) bit is forced to 1 is selected.
	GTE, bit 8 of an all zero channel byte is replaced by 1, except in signaling frames where bit 7 is forced to 1 is selected.
	ZBELL, bit 7 of an all zero channel byte is replaced by 1 is selected.
Example(s)	SOUR:DATA:TEL:DS:ZCS NONE
	SOUR:DATA:TEL:DS:ZCS?
	Returns: NONE
See Also	SOURce:DATA:TELecom:PDH:E:ZCS?

:SOURce:DATA:TELecom:PDH:E[1..n]:MODE

Description	This command selects the channel timeslot data rate for the transmitter.
	At *RST condition, this value is set to E64K.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > E0 Size
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the channel timeslot data rate for the transmitter.
	E64K: a timeslot data rate of 64 Kbps uses 8 bits to carry the payload information.
	E56K: a timeslot data rate of 56 Kbps uses 7 bits to carry the payload information.
Response Syntax	<Zcs>
Example(s)	SOUR:DATA:TEL:PDH:E:MODE E64K
See Also	SOURce:DATA:TELecom:DS:MODE

:SOURce:DATA:TELecom:PDH:E[1..n]:MODE?

Description	This query returns the channel timeslot data rate for the transmitter.
	At *RST condition, this value is set to E64K.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > E0 Size
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the channel timeslot data rate for the pattern payload content.
	E64K, timeslot data rate of 64 Kbps uses 8 bits to carry the payload information is selected.
	E56K, timeslot data rate of 56 Kbps uses 7 bits to carry the payload information is selected.
Example(s)	SOUR:DATA:TEL:PDH:E:MODE E64K
	SOUR:DATA:TEL:PDH:E:MODE?
	Returns: E64K
See Also	SOURce:DATA:TELecom:DS:MODE?

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent

Description	This command sets the payload content to given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > TX (1-31)
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent <wsp><Content>, <Payload>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the timeslots for payload content.
	Choices are 1 through 31.
	Payload:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the selection of the payload type.
	PATTERN1: Pattern
	IDLE: Idle
	TONE: Tone
	SIGNALING: Signaling
	MFAS: Multiframe Alignment Signal
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:PDH:E100:PAYL:CONT 1,PATTERN1
See Also	SOURce:DATA:TELecom:DS:PAYLoad:CONTent

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent:ALL

Description	This command sets the payload content of all timeslots to the selected payload content with its Pattern, Idle, or Tone value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Set All
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent:ALL
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:PDH:E:PAYL:CONT:ALL
See Also	SOURce:DATA:TELecom:DS:PAYLoad:CONTent:ALL

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent:TYPE

Description	This command sets the type of payload content.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Payload Content
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent:TYPE <wsp><Content>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the payload content.
	PATTERN1: Pattern
	IDLE: Idle
	TONE: Tone
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:PDH:E:PAYL:CONT:TYPE PATTERN1
See Also	SOURce:DATA:TELecom:DS:PAYLoad:CONTent:TYPE

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent:TYPE?

Description	This query returns the type of payload content.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Payload Content
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent:TYPE?
Response Syntax	<Content Type>
Response(s)	**Content Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the payload content type.
	PATTERN1, Pattern is selected as payload content type.
	IDLE, Idle is selected as payload content type.
	TONE, tone is selected as payload content type.
Example(s)	SOUR:DATA:TEL:PDH:E:PAYL:CONT:TYPE PATTERN1
	SOUR:DATA:TEL:PDH:E:PAYL:CONT:TYPE?
	Returns: PATTERN1
See Also	SOURce:DATA:TELecom:DS:PAYLoad:CONTent:TYPE?

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent?

Description	This query returns the payload content of given channel number.
	At *RST condition, this value is set to PATTERN1.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > TX (1-31)
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:CONTent? <wsp><Content>
Parameter(s)	**Content**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the timeslots for payload content.
	Choices are 1 through 31.
Response Syntax	<Payload>
Response(s)	**Payload**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the payload type.
	PATTERN1, Pattern is selected as payload type.
	IDLE, Idle is selected as payload type.
	TONE, Tone is selected as payload type.
	SIGNALING, Signaling is selected as payload type.
	MFAS, Multiframe Alignment Signal
Example(s)	SOUR:DATA:TEL:PDH:E100:PAYL:CONT 1,PATTERN1
	SOUR:DATA:TEL:PDH:E100:PAYL:CONT? 1
	Returns: PATTERN1
See Also	SOURce:DATA:TELecom:DS:PAYLoad:CONTent?

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:IDLE

Description	This command sets the idle code byte from the idle field. The selected idle code applies to all timeslots set to idle. At *RST condition, this value is set to #H7F. Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Idle
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:IDLE <wsp><Idle>
Parameter(s)	**Idle**: The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element. Sets the idle code byte from the idle field. The values are hexadecimal #H00 through #HFF.
Response Syntax	<Payload>
Example(s)	SOUR:DATA:TEL:PDH:E:PAYL:IDLE #H1
See Also	SOURce:DATA:TELecom:DS:PAYLoad:IDLE

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:IDLE?

Description	This query returns the idle code byte from the idle field.
	At *RST condition, this value is set to #H7F.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Idle
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:IDLE?
Response Syntax	<Idle>
Response(s)	**Idle**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the idle code byte from the idle field.
	The values are hexadecimal #H00 to #HFF.
Example(s)	SOUR:DATA:TEL:PDH:E:PAYL:IDLE #H1
	SOUR:DATA:TEL:PDH:E:PAYL:IDLE?
	Returns: 1
See Also	SOURce:DATA:TELecom:DS:PAYLoad:IDLE?

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:TONE

Description	This command sets the tone for digital milli watt testing. The signal output power, when converted to analog, is 0 dBm. The selected tone applies to all timeslots set to tone.
	At *RST condition, this value is set to T1004.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Tone (Hz)
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:TONE <wsp><Tone>
Parameter(s)	**Tone**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the selection of a tone for digital milli watt testing.
	T1000: 1000 Hz
	T1004: 1004 Hz
Response Syntax	<Idle>
Example(s)	SOUR:DATA:TEL:PDH:E:PAYL:TONE T1000
See Also	SOURce:DATA:TELecom:DS:PAYLoad:TONE

:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:TONE?

Description	This query returns the tone for digital milli watt testing.
	At *RST condition, this value is set to T1004.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Tone (Hz)
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:PAYLoad:TONE?
Response Syntax	<Tone>
Response(s)	**Tone**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the selection of a tone for digital milli watt testing.
	T1000, 1000 Hz is selected as tone.
	T1004, 1004 Hz is selected as tone.
Example(s)	SOUR:DATA:TEL:PDH:E:PAYL:TONE T1000
	SOUR:DATA:TEL:PDH:E:PAYL:TONE?
	Returns: T1000
See Also	SOURce:DATA:TELecom:DS:PAYLoad:TONE?

:SOURce:DATA:TELecom:PDH:E[1..n]:SYNC:TXRX

Description	This command sets enabled / disabled value for apply All Tx values to Rx.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Apply Channel TX to RX
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:SYNC:TXRX <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Tone>
Example(s)	SOUR:DATA:TEL:PDH:E:SYNC:TXRX ON
See Also	SOURce:DATA:TELecom:DS:SYNC:TXRX

:SOURce:DATA:TELecom:PDH:E[1..n]:SYNC:TXRX?

Description	This query returns enabled / disabled value for apply All Tx values to Rx.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Apply Channel TX to RX
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:SYNC:TXRX?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns Enable or disable value of Apply All Tx to RX.
	1, Apply All Tx to RX is enabled.
	0, Apply All Tx to RX is disabled.
Example(s)	SOUR:DATA:TEL:PDH:E:SYNC:TXRX ON
	SOUR:DATA:TEL:PDH:E:SYNC:TXRX?
	Returns: 1
See Also	SOURce:DATA:TELecom:DS:SYNC:TXRX?

:SOURce:DATA:TELecom:PDH:E[1..n]:ZCS

Description	This command sets the Zero Code Suppression (ZCS) method used to replace the all-zero bytes of the idle and tone payload contents.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Zero Code Suppression
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:ZCS <wsp><Zcs>
Parameter(s)	Zcs:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the selection of the Zero Code Suppression (ZCS) method.
	NONE: No zero Code Suppression.
	JBIT8: every 8th (LSB) bit is forced to 1.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:PDH:E:ZCS NONE
See Also	SOURce:DATA:TELecom:DS:ZCS

:SOURce:DATA:TELecom:PDH:E[1..n]:ZCS?

Description	This query returns the Zero Code Suppression (ZCS) method used to replace the all-zero bytes of the idle and tone payload contents.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > DSn/PDH BERT > E4/E3/E2/E1 > Modify E0 > Zero Code Suppression
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:ZCS?
Response Syntax	<Zcs>
Response(s)	Zcs:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the selection of the Zero Code Suppression (ZCS) method used to replace the all-zero bytes of the idle and tone payload contents.
	NONE, no zero code suppression is selected.
	JBIT8, every 8th (LSB) bit is forced to 1 is selected.
Example(s)	SOUR:DATA:TEL:PDH:E:ZCS NONE
	SOUR:DATA:TEL:PDH:E:ZCS?
	Returns: NONE
See Also	SOURce:DATA:TELecom:DS:ZCS?

Interface (Ethernet, Packet Sync, Fibre Channel, and Wireless)

:FETCh:DATA:TELecom:CPRI:OBSai:LINK:LIVE?

Description	This Query returns the OBSAI live Sync status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Sync status
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:LINK:LIVE?
Response Syntax	<Link Status>
Response(s)	**Link Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Return Live link status for State machine.
Example(s)	FETC:DATA:TEL:CPRI:OBS:LINK:LIVE?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FCBGen?

:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:PTARget?

Description	This Query returns the OBSAI RP3 Frame Peer Target Address.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RP3 Address > Peer Target
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:PTARget?
Response Syntax	<Peer Target Address>
Response(s)	**Peer Target Address**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Peer Target Address.
Example(s)	FETC:DATA:TEL:CPRI:OBS:RPFR:ADDR:PTAR?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet?

:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:KMG ?

Description	This Query returns the OBSAI RP3 Idle Message Per Group.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RP3 Message > Idle/Grp (K_MG)
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:KMG?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Number of idle messages per Group.
Example(s)	FETC:DATA:TEL:CPRI:OBS:RPFR:MESS:KMG?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:MESSages:SFN?

:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:MMG?

Description	This Query returns the OBSAI RP3 Messages Per Group.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RP3 Message > Msg/Grp (M_MG)
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:MMG?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Number of message per Group.
Example(s)	FETC:DATA:TEL:CPRI:OBS:RPFR:MESS:MMG?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:MESSages:SFN?

:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:NMG?

Description	This Query returns the OBSAI RP3 Message Group Per Frame.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RP3 Message > Msg Grp/Frame (N_MG)
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:NMG?
Response Syntax	<Message Group Per Frame>
Response(s)	**Message Group Per Frame**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Number of message Group per Frame.
Example(s)	FETC:DATA:TEL:CPRI:OBS:RPFR:MESS:NMG?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:MESSages:SFN?

:FETCh:DATA:TELecom:CPRI:OBSai:RXSeed?

Description	This Query returns the OBSAI RX Seed value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - RX Seed
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RXSeed?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return RX Seed Count.
Example(s)	FETC:DATA:TEL:CPRI:OBS:RXS?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:TYPE?

:FETCh:DATA:TELecom:CPRI:OBSai:STATe:RECeive:LIVE?

Description	This Query returns the OBSAI RX State Machine live status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK - Sync RX
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:STATe:RECeive:LIVE?
Response Syntax	<RX State machine>
Response(s)	**RX State machine**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return Live status for RX state machine.
Example(s)	FETC:DATA:TEL:CPRI:OBS:STAT:REC:LIVE?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:STATe:RECeive:LAST?

:FETCh:DATA:TELecom:CPRI:OBSai:STATe:TRANsmit:LIVE?

Description	This Query returns the OBSAI TX State Machine live status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK - Sync TX
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:STATe:TRANsmit:LIVE?
Response Syntax	<TX State machine>
Response(s)	**TX State machine**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return Live status for TX state machine.
Example(s)	FETC:DATA:TEL:CPRI:OBS:STAT:TRAN:LIVE?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:STATe:TRANsmit:LAST?

:FETCh:DATA:TELecom:CPRI:PORT:ETHernet:RATE?

Description	This query return the CPRI Ethernet Channel value.
	At *RST condition, this value is set to337.92.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > C&M Channel > Ethernet > Rate
	This Rate is configured with Sub channel value and its unit is Mbit/s.
Syntax	:FETCh:DATA:TELecom:CPRI:PORT:ETHernet:RATE?
Response Syntax	<Ethernet Rate>
Response(s)	**Ethernet Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Ethernet Rate.
Example(s)	FETC:DATA:TEL:CPRI:PORT:ETH:RATE?
	Returns the Ethernet Rate in Mbit/s
See Also	FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:PORT:FSYNc:STATus?

Description	This query return the CPRI Frame Sync Status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface CPRI > LINK > Sequence - Frame Sync
Syntax	:FETCh:DATA:TELecom:CPRI:PORT:FSYNc:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame Sequence Sate.
Example(s)	FETC:DATA:TEL:CPRI:PORT:FSYN:STAT?
See Also	FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:PORT:LINK:STATus?

Description	This query returns the CPRI Link Status shall report a Up/Down.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface CPRI > LINK
Syntax	:FETCh:DATA:TELecom:CPRI:PORT:LINK:STATus?
Response Syntax	<Status.>
Response(s)	**Status.:**
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the CPRI Link Status.
Example(s)	FETC:DATA:TEL:CPRI:PORT:LINK:STAT?
See Also	FETCh:DATA:TELecom:CPRI:PORT:SSTate?

:FETCh:DATA:TELecom:CPRI:PORT:SSTate?

Description	This query return the CPRI Sequence State.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > Sequence
Syntax	:FETCh:DATA:TELecom:CPRI:PORT:SSTate?
Response Syntax	<Sequence State>
Response(s)	**Sequence State**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Sequence State.
Example(s)	FETC:DATA:TEL:CPRI:PORT:SSTate?
See Also	FETCh:DATA:TELecom:CPRI:PORT:LINK:STATus?

:FETCh:DATA:TELecom:ETHernet:ALARm:LINK?

Description	This query returns the live status of Ethernet LINK alarm (parallel interfaces or serial interfaces 25G and up).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:LINK? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm type whose status is to be retrieved.
	- For parallel and serial interfaces:
	LFAR: Local Fault Received
	LFAD: Local Fault Detected
	RFAult: Remote Fault
	- For parallel interfaces:
	LDOWn: Link Down
	HIBer: HIBer
	LOA: Loss of Alignment
	INVM: Invalid Mapping
	HISer: Hi-SER
	LDSERD: Local Degraded SER Detected
	LDSERR: Local Degraded SER Received
	RDSER: Remote Degraded SER
Response Syntax	<Status>

:FETCh:DATA:TELecom:ETHernet:ALARm:LINK?

Response(s)	Status:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the status of the Ethernet alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ALAR:LINK? LFAR
See Also	SOURce:DATA:TELecom:PATTern:ALARm:SYNCh?

:FETCh:DATA:TELecom:ETHernet:FEC:ALARm:LINK?

Description	This query returns the live status of FEC Ethernet LINK alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK
Syntax	:FETCh:DATA:TELecom:ETHernet:FEC:ALARm:LINK? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm type whose status is to be retrieved.
	FECLOA: FEC-LOA Live alarm
	FECDESER: FEC Degraded SER
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the status of the Ethernet alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:FEC:ALAR:LINK? FECLOA
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:LINK?

:FETCh:DATA:TELecom:ETHernet:LINK:LRATe:GLOBal:STATus?

Description	This query returns the live LINK status for an Ethernet interface (rates up to 25G or FlexE client).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK
	Navigation Path: Setup > Test Configurator > FlexE Group > Link
Syntax	:FETCh:DATA:TELecom:ETHernet:LINK:LRATe:GLOBal:STATus?
Response Syntax	<Link Status>
Response(s)	**Link Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Gets the link status.
	1, indicates Link Up
	0, indicates Link Down
Example(s)	Under EtherBERT
	FETC:DATA:TEL:ETH:LINK:LRAT:GLOB:STAT?
	Under FlexEBert
	SOUR:DATA:TEL:FETH:CLI:ID?
	SOUR:DATA:TEL:FETH:CLI:ID 1
	FETC:DATA:TEL:ETH:LINK:LRAT:GLOB:STAT?
See Also	SOUR:DATA:TEL:FETH:CLI:ID?

:FETCh:DATA:TELecom:ETHernet:PORT:BANDwidth?

Description	This query returns the speed.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Speed
Syntax	:FETCh:DATA:TELecom:ETHernet:PORT:BANDwidth?
Response Syntax	<Speed>
Response(s)	**Speed**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the speed for the selected instrument port.
	B100MBPS, 100M speed is selected.
	B10MBPS,10M speed is selected.
	B1GBPS, 1GBPS speed is selected.
	AUTO, Speed selected is Auto.
Example(s)	FETCh:DATA:TELecom:ETHernet:PORT:BANDwidth?
See Also	FETCh:DATA:TELecom:ETHernet:PORT:FCONtrol?

:FETCh:DATA:TELecom:ETHernet:PORT:DUPLex?

Description	This query returns the duplex type.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Duplex
Syntax	:FETCh:DATA:TELecom:ETHernet:PORT:DUPLex?
Response Syntax	<Duplex>
Response(s)	**Duplex**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the duplex type for the selected instrument port.
	FULL, Full Duplex is selected as duplex type.
	HALF,Half Duplex is selected as duplex type.
Example(s)	FETCh:DATA:TELecom:ETHernet:PORT:DUPLex?
See Also	FETCh:DATA:TELecom:ETHernet:PORT:DUPLex?

:FETCh:DATA:TELecom:ETHernet:PORT:FCONtrol?

Description	This query returns the flow control.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Flow Control
Syntax	:FETCh:DATA:TELecom:ETHernet:PORT:FCONtrol?
Response Syntax	<Fcantrol>
Response(s)	**Fcantrol**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the flow control for the selected instrument port.
	TX, Tx is selected as flow control.
	RX, Rx is selected as flow control.
	RXANDTX, RX and TX is selected as flow control.
	NONE, None is selected as flow control.
Example(s)	FETCh:DATA:TELecom:ETHernet:PORT:FCONtrol?
See Also	FETCh:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?

:FETCh:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?

Description	This query returns type of Local Clock selected.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Local Clock.
Syntax	:FETCh:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?
Response Syntax	<Clock Type>
Response(s)	**Clock Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns clock type
	MASTER, Master clock type is selected.
	SLAVE,Slave clock type is selected.
	AUTO,Auto clock type is selected.
Example(s)	FETCh:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?
See Also	FETCh:DATA:TELecom:ETHernet:PORT:FCONtrol?

:FETCh:DATA:TELecom:ETHernet:WIS:ALARm:LINK?

Description	This query returns the WIS Link alarm status for 10GE WAN interface.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Test Configurator > Interface > LINK > WIS Link
Syntax	:FETCh:DATA:TELecom:ETHernet:WIS:ALARm:LINK? <wsp><LINK>
Parameter(s)	**LINK**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the WIS LINK.
	WLD,select WLD Link Type.
Response Syntax	<Link>
Response(s)	**Link**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the WIS LINK Alarm Status.
	PRESENT, indicates that at least one error has occurred in the last second.
	ABSENT, indicates that there is no error.
	INACTIVE, indicates that the test is not running.
	MASKED,Returns Masked Wis Link
Example(s)	FETCh:DATA:TELecom:ETHernet:WIS:ALARm:LINK? WLD
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:WIS:COUNt?

:FETCh:DATA:TELecom:FIBer:LINK?

Description	This query returns the status of the FC Primitive Sequence Protocol (PSP) link.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK
Syntax	:FETCh:DATA:TELecom:FIBer:LINK?
Response Syntax	<Link>
Response(s)	**Link**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Gets the link status.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
Example(s)	FETC:DATA:TEL:FIB:LINK?
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:FETCh:DATA:TELecom:LINK:GLOBal:STATus?

Description	This query returns the status of Link.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > 40/50/100/400GE > LINK
Syntax	:FETCh:DATA:TELecom:LINK:GLOBal:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the link status.
Example(s)	FETC:DATA:TEL:LINK:GLOB:STAT?
See Also	SOURce:DATA:TELecom:ETH:ERR:PHYS:AUT?

:SENSe:DATA:TELecom:CPRI:PORT:ETHernet:RATE?

Description	This query returns the CPRI Ethernet Rate.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > Ethernet Received > Rate
Syntax	:SENSe:DATA:TELecom:CPRI:PORT:ETHernet:RATE?
Response Syntax	<Ethernet Rate>
Response(s)	**Ethernet Rate**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Ethernet Rate.
Example(s)	SENS:DATa:TEL:CPRI:PORT:ETH:RATE?
See Also	SENSe:DATA:TELecom:CPRI:PORT:HDLC:RATE?

:SENSe:DATA:TELecom:CPRI:PORT:HDLC:RATE?

Description	This query returns the CPRI HDLC Rate.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > HDLC Received > Rate
Syntax	:SENSe:DATA:TELecom:CPRI:PORT:HDLC:RATE?
Response Syntax	<HDLC Rate>
Response(s)	**HDLC Rate**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the HDLC Rate.
Example(s)	SENS:DATa:TEL:CPRI:PORT:HDLC:RATE?
See Also	SENSe:DATA:TELecom:CPRI:PORT:ETHernet:RATE?

:SENSe:DATA:TELecom:CPRI:PORT:PROTocol:VERSion?

Description	This query returns the CPRI Protocol version received/negotiated.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > Protocol > Protocol Version Received/Negotiated
Syntax	:SENSe:DATA:TELecom:CPRI:PORT:PROTocol:VERSion?
Response Syntax	<Protocol Version>
Response(s)	**Protocol Version**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Protocol version.
Example(s)	SENS:DATa:TEL:CPRI:PORT:PROT:VERS?
See Also	SENSe:DATA:TELecom:CPRI:SUMMary:PROTocol:VERSion?

:SOURce:DATA:TELecom:CPRI:FEC:ENABle

Description	This command enables/disables RS-FEC.
	At *RST, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Interface > RS-FEC
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Protocol Version>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ENAB ON
	SOUR:DATA:TEL:CPRI:FEC:ENAB?
	Returns 1
See Also	SOURce:DATA:TELecom:CPRI:FEC:ENABle

:SOURce:DATA:TELecom:CPRI:FEC:ENABle?

Description	This query returns the enable/disable status of RS-FEC.
	At *RST, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Interface > RS-FEC
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1:Enabled
	0:Disabled
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ENAB ON
	SOUR:DATA:TEL:CPRI:FEC:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:CPRI:FEC:ENABle?

:SOURce:DATA:TELecom:CPRI:OBSai:FCBGen

Description	This command enables/disables the OBSAI Frame Clock Burst Generation.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - Frame Clock Burst Generation
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:FCBGen <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, enables the OBSAI Frame Clock Burst Generation.
	OFF, disables the OBSAI Frame Clock Burst Generation.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:FCBG ON
See Also	SOURce:DATA:TELecom:CPRI:OBSai:SCRamble

:SOURce:DATA:TELecom:CPRI:OBSai:FCBGen?

Description	This Query returns the OBSAI Frame Clock Burst Generation enable status.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - Frame Clock Burst Generation
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:FCBGen?
Response Syntax	<Frame Clock Burst Generation Status>
Response(s)	**Frame Clock Burst Generation Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Return FCB Generation enable status.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:FCBG?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:SCRamble?

:SOURce:DATA:TELecom:CPRI:OBSai:FTIDle

Description	This command sets the OBSAI Force TX Idle Status.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > interface OBSAI > Interface Page> Force TX Idle.
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:FTIDle <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, enables the Force TX Idle.
	OFF, disables the Force TX Idle.
Response Syntax	<Frame Clock Burst Generation Status>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:FTID ON
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FCBGen

:SOURce:DATA:TELecom:CPRI:OBSai:FTIDle?

Description	This Query returns the OBSAI Force TX Idle Status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - Force TX Idle.
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:FTIDle?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Return the Force TX Idle status.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:FTID?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FCBGen?

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:MIS Match

Description	This command enables/disables the OBSAI RP3 Address Mismatch check box.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > RP3 Address - Address Mismatch
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:MISMatch <wsp><Set>
Parameter(s)	Set:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, enables the OBSAI RP3 Address Mismatch.
	OFF, disables the OBSAI RP3 Address Mismatch.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:ADDR:MISM ON
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FTIDle

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:MISMatch?

Description	This Query returns the OBSAI RP3 Address Mismatch Status.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > RP3 Address - Address Mismatch
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:MISMatch?
Response Syntax	<AddressMismatch>
Response(s)	**AddressMismatch**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Return Address Mismatch enable/disable status.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:ADDR:MISM?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FTIDle?

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:SOURce

Description	This command sets the OBSAI RP3 Frame Source Address.
	At *RST condition, this value is set to 0x1234.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > RP3 Address - Source
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:SOURce[<wsp><Address>]
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets RP3 Source Address.
Response Syntax	<AddressMismatch>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:ADDR:SOUR #H1111
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:SOURce?

Description	This Query returns the OBSAI RP3 Frame Source Address.
	At *RST condition, this value is set to 0x1234.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > RP3 Address - Source
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:SOURce?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns RP3 Source Address.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:ADDR:SOUR?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet?

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet

Description	This command sets the OBSAI RP3 Frame Target Address.
	At *RST condition, this value is set to 0x1234.
	Navigation Path: Setup > Test Configurator > interface OBSAI > Interface Page>Target Address.
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet[<wsp><Address>]
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets Target Address.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:ADDR:TARG #H1111
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:SOURce

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet?

Description	This Query returns the OBSAI RP3 Frame Target Address.
	At *RST condition, this value is set to 0x1234.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > RP3 Address - Target
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns RP3 Target Address.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:ADDR:TARG?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:SOURce?

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:TYPE

Description	This command sets the OBSAI RP3 Message Type.
	At *RST condition, this value is set to WCDMA/FDD.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > RP3 Message > Type
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:TYPE[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets Message Type.
	WCDMA_FDD: WCDMA/FDD,
	LTE: LTE,
	GSM_EDGE: GSM/EDGE,
	802_16: 802.16
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:MESS:TYPE LTE
See Also	SOURce:DATA:TELecom:CPRI:OBSai:TXSeed

:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:TYPE?

Description	This Query returns the OBSAI RP3 Message Type.
	At *RST condition, this value is set to WCDMA/FDD.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > RP3 Message > Type
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns RP3 Message Type.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:RPFR:MESS:TYPE?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:TXSeed?

:SOURce:DATA:TELecom:CPRI:OBSai:SCRamble

Description	This command enables/disables the OBSAI Scrambling.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - Scrambling
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:SCRamble <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, Enables the OBSAI Scrambling.
	OFF, disables the OBSAI Scrambling.
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:SCR ON
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FCBGen

:SOURce:DATA:TELecom:CPRI:OBSai:SCRamble?

Description	This Query returns the OBSAI enable/disable scrambling status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - Scrambling
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:SCRamble?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns Scrambling enable/disable status.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:SCR?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FCBGen?

:SOURce:DATA:TELecom:CPRI:OBSai:TXSeed

Description	This command sets the OBSAI TX Seed value.
	At *RST condition, this value is set to 0x01.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - TX Seed.
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:TXSeed[<wsp><Set>]
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the TX Seed Hex value from below list.
	T_0X01: 0x01, T_0X03: 0x03, T_0X05: 0x05, T_0X07: 0x07, T_0X09: 0x09, T_0X0F: 0x0F, T_0X11: 0x11, T_0X15: 0x15, T_0X1A: 0x1A, T_0X1B: 0x1B, T_0X2D: 0x2D, T_0X2E: 0x2E, T_0X33: 0x33, T_0X3F: 0x3F, T_0X54: 0x54, T_0X73: 0X73, T_0X76: 0x76, T_0X7D: 0x7D
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:TXS T_0X01
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:TYPE

:SOURce:DATA:TELecom:CPRI:OBSai:TXSeed?

Description	This Query returns the OBSAI TX Seed value.
	At *RST condition, this value is set to 0x01.
	Navigation Path: Setup > Test Configurator > Interface OBSAI > LINK - TX Seed
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:TXSeed?
Response Syntax	<TX Seed Count>
Response(s)	**TX Seed Count**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return TX Seed Count.
Example(s)	SOUR:DATA:TEL:CPRI:OBS:TXS?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:MESSages:TYPE?

:SOURce:DATA:TELecom:CPRI:PORT:CMCHannel

Description	This command sets the CPRI C&M Channel Type.
	At *RST condition, this value is set to AUTO.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > C&M Channel
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:CMCHannel[<wsp><C&M Channel>]
Parameter(s)	**C&M Channel**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Protocol C&M Channel Type value.
	AUTO
	DISABLED
	ETHernet
	HDLC
Response Syntax	<TX Seed Count>
Example(s)	SOUR:DATA:TEL:CPRI:PORT:CMCH HDLC
See Also	SOURce:DATA:TELecom:CPRI:PORT:PROTocol

:SOURce:DATA:TELecom:CPRI:PORT:CMCHannel?

Description	This query returns the CPRI C&M Channel Type.
	At *RST condition, this value is set to AUTO.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > C&M Channel
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:CMCHannel?
Response Syntax	<C&M Channel>
Response(s)	**C&M Channel**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the C&M Channel type.
	Auto, Auto is selected.
	HDLC, HDLC is selected.
	Ethernet, Ethernet is selected.
Example(s)	SOUR:DATA:TEL:CPRI:PORT:CMCH?
See Also	SOURce:DATA:TELecom:CPRI:PORT:PROTocol?

:SOURce:DATA:TELecom:CPRI:PORT:HDLC:RATE

Description	This command sets the CPRI HDLC channel value.
	At *RST condition, this value is set to 7.680.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > C&M Channel > HDLC > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:HDLC:RATE[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the HDLC Rate.
	RATE240, get the 0.240 HDLC rate.
	RATE480, get the 0.480 HDLC rate.
	RATE960, get the 0.960 HDLC rate.
	RATE1920,get the 1.920 HDLC rate.
	RATE2400,get the 2.400 HDLC rate.
	RATE7680,get the 2.400 HDLC rate.
	RATEPROPRIETARY, get the Proprietary HDLC rate.
Response Syntax	<C&M Channel>
Example(s)	SOUR:DATA:TEL:CPRI:PORT:HDLC:RATE RATE1920
See Also	SOURce:DATA:TELecom:CPRI:PORT:PROTocol

:SOURce:DATA:TELecom:CPRI:PORT:HDLC:RATE?

Description	This query returns the HDLC Channel value.
	At *RST condition, this value is set to 7.680.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > C&M Channel > HDLC > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:HDLC:RATE?
Response Syntax	<HDLC>
Response(s)	**HDLC**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the HDLC Rate.
	RATE240, get the 0.240 HDLC rate.
	RATE480, get the 0.480 HDLC rate.
	RATE960, get the 0.960 HDLC rate.
	RATE1920, get the 1.920 HDLC rate.
	RATE2400, get the 2.400 HDLC rate.
	RATE7680, get the 2.400 HDLC rate.
	RATEPROPRIETARY, get the Proprietary HDLC rate.
Example(s)	SOUR:DATA:TEL:CPRI:PORT:HDLC:RATE RATE1920
	SOUR:DATA:TEL:CPRI:PORT:HDLC:RATE?
	Returns the HDLC RATE: RATE1920
See Also	SOURce:DATA:TELecom:CPRI:PORT:CMCHannel?

:SOURce:DATA:TELecom:CPRI:PORT:PROTocol

Description	This command sets the CPRI Protocol Version Type.
	At *RST condition, this value is set to AUTO.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > Protocol
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:PROTocol[<wsp><Protocol Version>]
Parameter(s)	**Protocol Version**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Protocol Version Type value.
	AUTO
	VERSION1
	VERSION2
Response Syntax	<HDLC>
Example(s)	SOUR:DATA:TEL:CPRI:PORT:PROT VERSION1
See Also	SOURce:DATA:TELecom:CPRI:PORT:CMCHannel

:SOURce:DATA:TELecom:CPRI:PORT:PROTocol?

Description	This query return the CPRI Protocol Version Type.
	At *RST condition, this value is set to AUTO.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > Protocol
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:PROTocol?
Response Syntax	<Protocol version>
Response(s)	**Protocol version**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Protocol Version type.
	Auto, Auto is selected.
	Verson1, Verson1, is selected.
Example(s)	SOUR:DATA:TEL:CPRI:PORT:PROT?
See Also	SOURce:DATA:TELecom:CPRI:PORT:CMCHannel?

:SOURce:DATA:TELecom:CPRI:PORT:SUBChannel

Description	This command sets the CPRI Ethernet Sub Channel rate by setting appropriate value.
	At *RST condition, this value is set to 20.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > C&M Channel > Ethernet > Subchannel
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:SUBChannel \<wsp>\<Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Sub channel Number.
	MAXimum, sets the Sub channel Number as maximum.
	MINimum, sets the Sub channel Number as minimum.
	DEFault, sets the Sub channel Number as default value.
Response Syntax	\<Protocol version>
Example(s)	SOUR:DATA:TEL:CPRI:PORT:SUBC 30
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:CPRI:PORT:SUBChannel?

Description	This query return the CPRI Ethernet Sub Channel rate by setting appropriate value.
	At *RST condition, this value is set to 20.
	Navigation Path: Setup > Test Configurator > interface CPRI > LINK > C&M Channel > Ethernet > Subchannel
Syntax	:SOURce:DATA:TELecom:CPRI:PORT:SUBChannel?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Get the Sub channel Number. Range: 20 to 63.
	MAXimum, get the Sub channel Number as maximum.
	MINimum, get the Sub channel Number as minimum.
	DEFault, get the Sub channel Number as default value.
Response Syntax	<SubChannel>
Response(s)	**SubChannel**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TX rate.
	MAXimum, Gets the frame size as maximum.
	MINimum, Gets the frame size as minimum.
Example(s)	SOUR:DATA:TEL:CPRI:PORT:SUBC 30
	SOUR:DATA:TEL:CPRI:PORT:SUBC?
	Returns 30
	SOUR:DATA:TEL:CPRI:PORT:SUBC? MIN
	SOUR:DATA:TEL:CPRI:PORT:SUBC? MAX
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt?

:SOURce:DATA:TELecom:CPRI:UNFRamed:SCRamble:ENABle

Description	This command enables CPRI Scrambling for unframed test.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > Interface CPRI > Scrambling
Syntax	:SOURce:DATA:TELecom:CPRI:UNFRamed:SCRamble:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<SubChannel>
Example(s)	SOUR:DATA:TEL:CPRI:UNFR:SCR:ENAB ON
See Also	SOURce:DATA:TELecom:CPRI:VERDict:ENABle

:SOURce:DATA:TELecom:CPRI:UNFRamed:SCRamble:ENABle ?

Description	This query returns the status of CPRI Scrambling for unframed test.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > Interface CPRI > Scrambling
Syntax	:SOURce:DATA:TELecom:CPRI:UNFRamed:SCRamble:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:UNFR:SCR:ENAB?
See Also	SOURce:DATA:TELecom:CPRI:VERDict:ENABle?

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:ENABle

Description	This command enables/disables FEC Degraded SER.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Interface > FEC Degraded SER
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:ENAB ON
	SOUR:DATA:TEL:ETH:FEC:DSER:ENAB?
	Returns 1
See Also	SOURce:DATA:TELecom:ETHernet:FEC:ENABle

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:ENABle?

Description	This query returns the FEC Degraded SER status.
	At *RST, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Interface > FEC Degraded SER
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:ENAB ON
	SOUR:DATA:TEL:ETH:FEC:DSER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:FEC:ENABle?

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate

Description	This command sets the value of FEC Degraded SER Activate Threshold.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > FEC Degraded SER > Thresholds > Activate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets value of Degraded SER Activate Threshold.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:ACTI 123
See Also	SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:DEACtivate

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate?

Description	This query returns the value of FEC Degraded SER Activate Threshold.
	Navigation Path: Setup > Test Configurator > Interface > FEC Degraded SER > Thresholds > Activate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate?[<wsp><Token>]
Parameter(s)	**Token**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum
	MINimum
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	This parameter is optional. If no token is specified, the current value of FEC Degraded SER Activate Threshold is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:ACTI 123
	SOUR:DATA:TEL:ETH:FEC:DSER:THR:ACTI?
	Returns: 123
See Also	SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:DEACtivate?

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:DEACtivate

Description	This command sets the value of FEC Degraded SER Deactivate Threshold.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > FEC degraded SER > Thresholds > Deactivate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:DEACtivate <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets value of Degraded SER Deactivate Threshold.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:DEAC 123
See Also	SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:DEACtivate?

Description	This query returns the value of FEC Degraded SER Deactivate Threshold.
	Navigation Path: Setup > Test Configurator > Interface > FEC degraded SER > Thresholds > Deactivate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:DEACtivate?[<wsp><Token>]
Parameter(s)	**Token**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum
	MINimum
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	This parameter is optional. If no token is specified, the current value of FEC Degraded SER Deactivate Threshold is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:DEAC 123
	SOUR:DATA:TEL:ETH:FEC:DSER:THR:DEAC?
	Returns: 123
See Also	SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate?

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:INTErval

Description	This command sets the value of FEC Degraded SER Interval.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > FEC degraded SER > Thresholds>Interval(CW)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:INTErval <wsp><Interval>
Parameter(s)	**Interval**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets value of Degraded SER Interval.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:INTE 123
See Also	SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate

:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:INTErval?

Description	This query returns the value of FEC Degraded SER Interval.
	Navigation Path: Setup > Test Configurator > Interface > FEC degraded SER > Threshold > Interval(CW)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:INTErval?[<wsp><Token>]
Parameter(s)	**Token**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum
	MINimum
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	This parameter is optional. If no token is specified, the current value of FEC Degraded SER Interval is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:INTE 123
	SOUR:DATA:TEL:ETH:FEC:DSER:THR:INTE?
	Returns: 123
See Also	SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate?

:SOURce:DATA:TELecom:ETHernet:FEC:ENABle

Description	This command enables/disables RS-FEC.
	At *RST, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Interface > RS-FEC (RX Only)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:ETH:FEC:ENAB ON
	SOUR:DATA:TEL:ETH:FEC:ENAB?
	Returns 1
See Also	SOURce:DATA:TELecom:ETHernet:FEC:ENABle

:SOURce:DATA:TELecom:ETHernet:FEC:ENABle?

Description	This query returns the enalbe/disable status of RS-FEC (RX Only).
	At *RST, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Interface > RS-FEC (RX Only)
Syntax	:SOURce:DATA:TELecom:ETHernet:FEC:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:FEC:ENAB ON
	SOUR:DATA:TEL:ETH:FEC:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:FEC:ENABle?

:SOURce:DATA:TELecom:ETHernet:HRATe:RFE:ENABle

Description	This command enables the configure Remote Fault Emulation for parallel interfaces.
	At *RST, this value is set to Disabled.
	Navigation Path: Setup > Test Configurator > Interface > Remote Fault Emulation
Syntax	:SOURce:DATA:TELecom:ETHernet:HRATe:RFE:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:HRAT:RFE:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:HRATe:RFE:ENABle?

:SOURce:DATA:TELecom:ETHernet:HRATe:RFE:ENABle?

Description	This query returns the Remote Fault Emulation status for parallel interfaces.
	At *RST, this value is set to Disabled.
	Navigation Path: Setup > Test Configurator > Interface > Remote Fault Emulation
Syntax	:SOURce:DATA:TELecom:ETHernet:HRATe:RFE:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:HRAT:RFE:ENAB ON
	SOUR:DATA:TEL:ETH:HRAT:RFE:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:HRATe:RFE:ENABle

:SOURce:DATA:TELecom:ETHernet:LRATe:RFE:ENABle

Description	This command enables the Remote Fault Emulation for serial interfaces.
	At *RST, this value is set to Disabled.
	Navigation Path: Setup > Test Configurator > Interface > Remote Fault Emulation
Syntax	:SOURce:DATA:TELecom:ETHernet:LRATe:RFE:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:LRAT:RFE:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:LRATe:RFE:ENABle?

:SOURce:DATA:TELecom:ETHernet:LRATe:RFE:ENABle?

Description	This query returns the Remote Fault Emulation status for serial interfaces.
	At *RST, this value is set to Disabled.
	Navigation Path: Setup > Test Configurator > Interface > Remote Fault Emulation
Syntax	:SOURce:DATA:TELecom:ETHernet:LRATe:RFE:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:LRAT:RFE:ENAB ON
	SOUR:DATA:TEL:ETH:LRAT:RFE:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:LRATe:RFE:ENABle

:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth

Description	This command sets the transmitted bandwidth when Auto-Negotiation is enabled.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Speed.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth <wsp><Bandwidth>
Parameter(s)	**Bandwidth**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the speed of the module.
	B10Mbps: 10 Mbit/s
	B100Mbps: 100 Mbit/s
	B1Gbps: 1 Gbit/s
	AUTO: Auto
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth AUTO
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth?
	Returns: AUTO
See Also	SOURce:DATA:TELecom:ETH:PORT:DUPL
	SOURce:DATA:TELecom:ETH:PORT:DUPL?

:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth?

Description	This query returns the value of transmitted bandwidth when Auto-Negotiation is enabled.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Speed.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth?
Response Syntax	\<Bandwidth\>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the value of transmitted bandwidth for the selected instrument when Autoneg is enabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth AUTO
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth?
	Returns: AUTO
See Also	SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol

:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex

Description	This command sets the duplex mode when Auto-Negotiation is enabled.
	At *RST condition, this value is set to FULL.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Duplex.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex <wsp><Duplex>
Parameter(s)	**Duplex**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the duplex mode for the instrument.
	FULL
	HALF
	AUTO
Response Syntax	<Bandwidth>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex FULL
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex?
	Returns: FULL
See Also	SOURce:DATA:TELecom:ETH:PORT:BAND
	SOURce:DATA:TELecom:ETH:PORT:BAND?

:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex?

Description	This query returns the duplex mode when Auto-Negotiation is enabled.
	At *RST condition, this value is set to FULL.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Duplex.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex?
Response Syntax	<Duplex>
Response(s)	**Duplex**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the duplex value.
	FULL, full duplex mode is selected.
	HALF, Half duplex mode is selected.
	AUTO,Auto duuplex mode is selected
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex FULL
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex?
	Returns: Full
See Also	SOURce:DATA:TELecom:ETH:PORT:DUPL
	SOURce:DATA:TELecom:ETH:PORT:DUPL?

:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol

Description	This command selects the flow control when Auto-Negotiation is enabled.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Flow Control
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol <wsp><Control>
Parameter(s)	**Control**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the flow control
	NONE: No flow control
	RX: Transmitter to receiver (Enable RX)
	TX: Receiver to transmitter (Enable TX)
	RXANDTX: RX and TX
	AUTO: Auto
Response Syntax	<Duplex>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol NONE
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol?
	Returns: NONE
See Also	SOURce:DATA:TELecom:ETH:PORT:BAND
	SOURce:DATA:TELecom:ETH:PORT:BAND?

:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol?

Description	This query returns the flow control when Auto-Negotiation is enabled.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Flow Control
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol?
Response Syntax	<Control>
Response(s)	**Control**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the flow control.
	NONE, Flow control is none.
	RX,Flow control is enable rx.
	TX,Flow control is enable tx.
	RXANDTX,Flow control is RXANDTX.
	AUTO,Flow control is Auto.
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol NONE
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol?
	Returns: NONE
See Also	SOURce:DATA:TELecom:ETH:PORT:BAND
	SOURce:DATA:TELecom:ETH:PORT:BAND?

:SOURce:DATA:TELecom:ETHernet:PORT:BANDwidth

Description	This command sets the transmitted bandwidth.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Speed.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:BANDwidth <wsp><Bandwidth>
Parameter(s)	**Bandwidth**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the speed of the module.
	B10Mbps: 10 Mbit/s
	B100Mbps: 100 Mbit/s
	B1Gbps: 1 Gbit/s
Response Syntax	<Control>
Example(s)	SOUR:DATA:TEL:ETH:PORT:BAND B1GBPS
	SOUR:DATA:TEL:ETH:PORT:BAND?
	Returns: B1GBPS
See Also	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex?

:SOURce:DATA:TELecom:ETHernet:PORT:BANDwidth?

Description	This query returns the value of transmitted bandwidth.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Speed.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:BANDwidth?
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the bandwidth in bps.
	B10Mbps, 10Mbps speed is selected.
	B100Mbps, 100Mbps speed is selected.
	B1Gbps, 1Gbps speed is selected.
Example(s)	SOUR:DATA:TEL:ETH:PORT:BAND B1GBPS
	SOUR:DATA:TEL:ETH:PORT:BAND?
	Returns: B1GBPS
See Also	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:FCONtrol?

:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE

Description	This command sets the cable mode.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Cable Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Cable mode.
	MANual
	AUTomatic
Response Syntax	<Bandwidth>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE MANUAL
	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE?
	Returns: MANUAL
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:LANE

:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus

Description	This command sets the cable type (MDI or MDIX).
	Navigation Path: Setup > Test Configurator > Interface > LINK > Cable Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the cable type.
	MDIX: Media Dependant Interface Crossover (crossover Ethernet cable)
	MDI: Media Dependant Interface (straight through Ethernet cable)
Response Syntax	<Bandwidth>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus MDIX
See Also	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE?

:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus?

Description	This query returns the cable type (MDI or MDIX).
	Navigation Path: Setup > Test Configurator > Interface > LINK > Cable Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the cable type.
	MDIX, Media Dependant Interface Crossover (crossover Ethernet cable) is selected as cable type.
	MDI, Media Dependant Interface (straight through Ethernet cable) is seleted as cable type
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus MDIX
	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus?
	Returns: MDIX
See Also	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE

:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE?

Description	This query returns the Cable mode.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Cable Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE?
Response Syntax	<Cable Mode>
Response(s)	**Cable Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the cable mode
	MANUAL, selected cable mode is Manual.
	AUTOMATIC, selected cable mode is Automatic.
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE MANUAL
	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE?
	Returns: MANUAL
See Also	SOURce:DATA:TELecom:PATTern:ALARm:SYNCh?

:SOURce:DATA:TELecom:ETHernet:PORT:DUPLex

Description	This command sets the duplex mode.
	At *RST condition, this value is set to FULL.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Duplex.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:DUPLex <wsp><Duplex>
Parameter(s)	**Duplex**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the duplex mode for the instrument.
	FULL
	HALF
Response Syntax	<Cable Mode>
Example(s)	SOUR:DATA:TEL:ETH:PORT:DUPL FULL
	SOUR:DATA:TEL:ETH:PORT:DUPL?
	Returns: FULL
See Also	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth?

:SOURce:DATA:TELecom:ETHernet:PORT:DUPLex?

Description	This query returns the duplex mode.
	At *RST condition, this value is set to FULL.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Duplex.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:DUPLex?
Response Syntax	<Duplex>
Response(s)	**Duplex**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the duplex value.
	FULL, full duplex mode is selected.
	HALF, Half duplex mode is selected.
Example(s)	SOUR:DATA:TEL:ETH:PORT:DUPL FULL
	SOUR:DATA:TEL:ETH:PORT:DUPL?
	Returns: FULL
See Also	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:DUPLex?

:SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol

Description	This command selects the flow control.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Flow Control
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol <wsp><Control>
Parameter(s)	**Control**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the flow control
	NONE: No flow control
	RX: Transmitter to receiver (Enable RX)
	TX: Receiver to transmitter (Enable TX)
	RXANDTX: RX and TX
Response Syntax	<Duplex>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol TX
	SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol?
	Returns: TX
See Also	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk
	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?

:SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol?

Description	This query returns the flow control.
	At *RST condition, this value is set to NONE.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Flow control
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol?
Response Syntax	<Control>
Response(s)	**Control**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the flow control.
	NONE, No flow control is selected.
	RX, Enable RX is selected.
	TX, Enable TX is selected.
	RXANDTX,Enable RXANDTX is selected.
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol TX
	SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol?
	Returns: TX
See Also	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth
	SOURce:DATA:TELecom:ETHernet:PORT:ANEGotiation:BANDwidth?

:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk

Description	This command sets the Local Clock Type.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Local Clock.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the clock type.
	MASTER, Master clock type is selected.
	SLAVE,Slave clock type is selected.
	AUTO, Auto clock type is selected.
Response Syntax	<Control>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk MASTER
	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?
	Returns: MASTER
See Also	SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol
	SOURce:DATA:TELecom:ETHernet:PORT:FCONtrol?

:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?

Description	This query returns type of Local Clock selected.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Local Clock.
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?
Response Syntax	<Clock Type>
Response(s)	**Clock Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns clock type
	MASTER, Master clock type is selected.
	SLAVE,Slave clock type is selected.
	AUTO,Auto clock type is selected.
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk MASTER
	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:CLOCk?
	Returns: MASTER
See Also	SOURce:DATA:TELecom:ETHernet:PORT:CABLe:MODE:STATus

:SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation

Description	This command enables Auto-Negotiation.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Auto-Negotioation check box
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the auto-negotiation for the selected instrument port status.
	ON,Enables auto-negotiation for the selected instrument port.
	OFF,Disables auto-negotiation for the selected instrument port.
Response Syntax	<Clock Type>
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation ON
	SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt

:SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation?

Description	This query returns the status of Auto-Negotiation.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > LINK > Auto-Negotioation check box
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation?
Response Syntax	<status>
Response(s)	**status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of auto-negotiation for the selected instrument port.
	1, Auto-negotiation for the selected instrument port is enabled.
	0, Auto-negotiation for the selected instrument port is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation ON
	SOURce:DATA:TELecom:ETHernet:PORT:NEGotiation?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt?

:SOURce:DATA:TELecom:ETHernet:RSFec

Description	This command enables RS-FEC.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface 100GE (4 lanes) > LINK > RS- FEC
Syntax	:SOURce:DATA:TELecom:ETHernet:RSFec <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the RS-FEC.
	ON, enables RS-FEC.
	OFF, disabled RS-FEC.
Response Syntax	<status>
Example(s)	SOUR:DATA:TEL:EHT:RSF ON
	SOUR:DATA:TEL:EHT:RSF?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RSFec

:SOURce:DATA:TELecom:ETHernet:RSFec?

Description	This query returns the status of RS-FEC.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface 100GE (4 lanes) > LINK > RS- FEC
Syntax	:SOURce:DATA:TELecom:ETHernet:RSFec?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of RS-FEC.
	1, RS-FEC is enabled.
	0, RS-FEC is disabled.
Example(s)	SOUR:DATA:TEL:EHT:RSF ON
	SOUR:DATA:TEL:EHT:RSF?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RSFec?

:SOURce:DATA:TELecom:ETHernet:WIS:PATH:LABel

Description	This command sets the path signal label (C2) for WAN.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > 10 GEWAN > WIS > Path Signal Label(C2) (10GEWAN)
Syntax	:SOURce:DATA:TELecom:ETHernet:WIS:PATH:LABel <wsp><Label>
Parameter(s)	**Label**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the path signal label.
	UNEQuipped: the unequipped path signal label.
	EQUipped: the equipped non-specific path signal label.
	M10ETHERNET: the 10 Gbps ethernet (IEEE 802.3) path signal label.
	TSIGnal: the test signal, ITU-T 0.181 specific mapping path signal label.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:WIS:PATH:LAB EQU
	SOUR:DATA:TEL:ETH:WIS:PATH:LAB?
	Returns: EQUIPPED
See Also	SOURce:DATA:TELecom:ETHernet:WIS:PATH:LABel

:SOURce:DATA:TELecom:ETHernet:WIS:PATH:LABel?

Description	This query returns the path signal label (C2) for WAN.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > 10 GEWAN > WIS > Path Signal Label(C2) (10GEWAN)
Syntax	:SOURce:DATA:TELecom:ETHernet:WIS:PATH:LABel?
Response Syntax	<Label>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label.
	UNEQUIPPED, Unequipped path signal label is selected.
	EQUIPPED, Equipped non-specific path signal label is selected.
	M10ETHERNET, 10 Gbps ethernet (IEEE 802.3) path signal label is selected.
	TSIGNAL, Test signal, ITU-T 0.181 specific mapping path signal label is selected.
Example(s)	SOUR:DATA:TEL:ETH:WIS:PATH:LAB EQU
	SOUR:DATA:TEL:ETH:WIS:PATH:LAB?
	Returns: EQUIPPED
See Also	SOURce:DATA:TELecom:ETHernet:WIS:PATH:LABel?

:SOURce:DATA:TELecom:ETHernet:WIS:TRACe

Description	This command sets the path trace string for the WAN Interface Sublayer (WIS) operation.
	At *RST condition, ASCii is selected as default type. The type length is device-dependent.
	Navigation Path: Setup > Test Configurator > 10 GEWAN > WIS > J0/J1 trace (10GEWAN)
Syntax	:SOURce:DATA:TELecom:ETHernet:WIS:TRACe \<wsp>\<Trace>, \<String>, \<Padding Type>
Parameter(s)	**Trace**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the trace.
	J0
	J1
	String:
	The program data syntax for the second parameter is defined as a \<STRING PROGRAM DATA> element.
	Select the string for specific path trace.
	Padding Type:
	The program data syntax for the third parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Select the padding type.
	SPACE
	NULL
Response Syntax	\<Label>
Example(s)	SOUR:DATA:TEL:ETH:WIS:TRAC J1, EXFO4GigE,SPACE
	SOUR:DATA:TEL:ETH:WIS:TRAC? J1 Returns: EXFO4GigE
See Also	SOURce:DATA:TELecom:ETHernet:WIS:PLMuneq?

:SOURce:DATA:TELecom:ETHernet:WIS:TRACe?

Description	This query returns the path trace string for the WAN Interface Sublayer (WIS) operation.
	At *RST condition, ASCii is selected as the default type. The type length is device-dependent.
	Navigation Path: Setup > Test Configurator > 10 GEWAN > WIS > J0/J1 trace (10GEWAN)
Syntax	:SOURce:DATA:TELecom:ETHernet:WIS:TRACe? <wsp><Trace>
Parameter(s)	**Trace**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the trace.
	J0
	J1
Response Syntax	<String>
Response(s)	**String**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the string for the specific path trace.
Example(s)	SOUR:DATA:TEL:ETH:WIS:TRAC J1, EXFO4GigE,NULL
	SOUR:DATA:TEL:ETH:WIS:TRAC? J1 Returns: EXFO4GigE
See Also	SOURce:DATA:TELecom:ETHernet:WIS:PLMuneq

:SOURce:DATA:TELecom:FETHernet:GROup:PNUMber

Description	This command sets the PHY Number associated for a specific port.
	At *RST condition, this value is set to 1 for the smallest port of the group and increasing by 1 subsequently.
	Navigation Path: Setup > Test Configurator > Interface > FlexE PHY Number
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:PNUMber <wsp><PortId>, <PHY Number>
Parameter(s)	**PortId**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port number to apply the FlexE PHY Number.
	P1 or PORT1: Port 1
	P2 or PORT2: Port 2
	P3 or PORT3: Port 3
	P4 or PORT4: Port 4
	A1: A1
	A2: A2
	B1: B1
	B2: B2
	PHY Number:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the PHY Number for the selected port.
	Value Range: 1 to 254.
Response Syntax	<String>
Example(s)	SOUR:DATA:TEL:FETH:GRO:PNUM P1, 10
	SOUR:DATA:TEL:FETH:GRO:PNUM? P1
	Returns: 10
See Also	SOURce:DATA:TELecom:FETHernet:GROup:PNUMber?

:SOURce:DATA:TELecom:FETHernet:GROup:PNUMber?

Description	This query retursn the PHY Number associated with the specified Port.
	At *RST condition, this value is set to 1 for the smallest port of the group and increasing by 1 subsequently.
	Navigation Path: Setup > Test Configurator > Interface > FlexE PHY Number
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 2 - PHY Number
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:PNUMber? <wsp><Port Id>
Parameter(s)	Port Id:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port number.
	P1 or PORT1: Port 1
	P2 or PORT2: Port 2
	P3 or PORT3: Port 3
	P4 or PORT4: Port 4
	A1: A1
	A2: A2
	B1: B1
	B2: B2
Response Syntax	<PHY Number>
Response(s)	PHY Number:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the PHY Number associated with the specified port.
	Value Range: 1 to 254
Example(s)	SOUR:DATA:TEL:FETH:GRO:PNUM P1, 10
	SOUR:DATA:TEL:FETH:GRO:PNUM? P1
	Returns: 10
See Also	SOURce:DATA:TELecom:FETHernet:GRO:PNUMber

:SOURce:DATA:TELecom:FETHernet:INSTances:STATus?

Description	This query returns the list of Equipped/Unequipped instances.
	At *RST condition, this value is device dependent.
Syntax	:SOURce:DATA:TELecom:FETHernet:INSTances:STATus?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns list of Instances with its status
Example(s)	SOURce:DATA:TELecom:FETHernet:INSTances:STATus?
	Returns: "0 Equipped, 1 Unequipped"
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:CONFig?

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:ENABle

Description	This command enables/disables Link Degraded Signaling.
	At *RST condition, this value is set to Disabled.
	Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:FIB:LINK:DSIG:ENAB ON
See Also	SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:ENABle?

Description	This query returns the Link Degraded Signaling status.
	At *RST, this value is set to Disabled.
	Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FIB:LINK:DSIG:ENAB ON
	SOUR:DATA:TEL:FIB:LINK:DSIG:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval?

:SOURce:DATA:TELecom:FIBer:PSP

Description	This command enables the FC Primitive Sequence Protocol (PSP) link.
	At *RST, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > LINK > PSP (Link Protocol)
Syntax	:SOURce:DATA:TELecom:FIBer:PSP <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FIB:PSP ON
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus

:SOURce:DATA:TELecom:FIBer:PSP?

Description	This query returns the status of FC Primitive Sequence Protocol (PSP) link.
	At *RST, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > LINK > PSP (Link Protocol)
Syntax	:SOURce:DATA:TELecom:FIBer:PSP?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Primitive Sequence Protocol (PSP) link.
Example(s)	SOUR:DATA:TEL:FIB:PSP ON
	SOUR:DATA:TEL:FIB:PSP?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus?

:SOURce:DATA:TELecom:FOTN:FEC

Description	This command enables/disables the FEC for FlexO.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Interface > FEC
Syntax	:SOURce:DATA:TELecom:FOTN:FEC <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FEC ON
See Also	SOURce:DATA:TELecom:FOTN:FEC:FCA

:SOURce:DATA:TELecom:FOTN:FEC?

Description	This query returns the status of the FEC for FlexO.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Interface > FEC
Syntax	:SOURce:DATA:TELecom:FOTN:FEC?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the FEC for FlexO.
	1: FEC is enabled.
	0: FEC is disabled.
Example(s)	SOUR:DATA:TEL:FOTN:FEC?
See Also	SOURce:DATA:TELecom:FOTN:FEC:FCA?

:SOURce:DATA:TELecom:FOTN:INSTance:IDentifier

Description	This command sets the FlexO instance ID associated for a specific port and offset.
	At *RST condition, this value is set to 1 for the smallest port/offset of the group and increasing by 1 subsequently.
	Navigation Path: Setup > Test Configurator > Interface > FlexO Instance ID
Syntax	:SOURce:DATA:TELecom:FOTN:INSTance:IDentifier <wsp><PortId>, <InstanceOffsetOnPort>, <FlexOInstanceId>
Parameter(s)	**PortId**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port on which the FlexO instance is transported:
	P1 or PORT1: Port 1
	P2 or PORT2: Port 2
	P3 or PORT3: Port 3
	P4 or PORT4: Port 4
	InstanceOffsetOnPort:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the offset on the port of the FlexO instance:
	0 for for 100GFlexORs interfaces
	FlexOInstanceId:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Configures the FlexO instance ID associated with the specified port/offset.:
	Value Range: 1 to 254.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:INST:ID P1, 0, 22
	SOUR:DATA:TEL:FETH:GRO:PNUM? P1, 0
	Returns: 22
See Also	SOURce:DATA:TELecom:FOTN:INSTance:IDentifier?

:SOURce:DATA:TELecom:FOTN:INSTance:IDentifier?

Description	This query returns the FlexO instance ID associated for a specific port and offset.
	At *RST condition, this value is set to 1 for the smallest port/offset of the group and increasing by 1 subsequently.
	Navigation Path: Setup > Test Configurator > Interface > FlexO Instance ID
Syntax	:SOURce:DATA:TELecom:FOTN:INSTance:IDentifier? <wsp><PortId>, <InstanceOffsetOnPort>
Parameter(s)	**PortId**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port on which the FlexO instance is transported:
	P1 or PORT1: Port 1
	P2 or PORT2: Port 2
	P3 or PORT3: Port 3
	P4 or PORT4: Port 4
	InstanceOffsetOnPort:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the offset on the port of the FlexO instance:
	0 for for 100GFlexORs interfaces
Response Syntax	<FlexOInstanceId>
Response(s)	**FlexOInstanceId**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the FlexO instance ID associated with the specified port/offset.
	Value Range: 1 to 254
Example(s)	SOUR:DATA:TEL:FOTN:INST:ID P1, 0, 22
	SOUR:DATA:TEL:FETH:GRO:PNUM? P1, 0
	Returns: 22
See Also	SOURce:DATA:TELecom:FOTN:INSTance:IDentifier

:SOURce:DATA:TELecom:LINK

Description	This command selects the link used for subsequent commands/queries for test applications using more than one test link.
	For example, the EtherBERT '2x100GE' test controls and monitors two links.
	At *RST condition, this value is device-dependent.
Syntax	:SOURce:DATA:TELecom:LINK <wsp><Link number>
Parameter(s)	**Link number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	1: Link #1
	2: Link #2
Response Syntax	<FlexOInstanceId>
Example(s)	SOUR:DATA:TEL:LINK 1
	SOUR:DATA:TEL:LINK?
	Returns: 1
	SOUR:DATA:TEL:LINK 2
	SOUR:DATA:TEL:LINK?
	Returns: 2

:SOURce:DATA:TELecom:LINK:ENABle

Description	This command enables/disables the selected link for test applications using more than one test link.
	For example, the EtherBERT '2x100GE' test controls and monitors two links.
	At *RST condition, this value is set to ON.
Syntax	:SOURce:DATA:TELecom:LINK:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<FlexOInstanceId>
Example(s)	SOUR:DATA:TEL:LINK 1
	SOUR:DATA:TEL:LINK:ENAB ON
	SOUR:DATA:TEL:LINK:ENAB?
	Returns: 1
	SOUR:DATA:TEL:LINK 2
	SOUR:DATA:TEL:LINK:ENAB OFF
	SOUR:DATA:TEL:LINK:ENAB?
	Returns: 0
See Also	SOURce:DATA:TEL:LINK
	SOURce:DATA:TEL:LINK:ENABle?

:SOURce:DATA:TELecom:LINK:ENABle?

Description	This query returns the enable/disable status of the selected link for test applications using more than one test link.
	For example, the EtherBERT '2x100GE' test controls and monitors two links.
	At *RST condition, this value is ON.
Syntax	:SOURce:DATA:TELecom:LINK:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:LINK 1
	SOUR:DATA:TEL:LINK:ENAB ON
	SOUR:DATA:TEL:LINK:ENAB?
	Returns: 1
	SOUR:DATA:TEL:LINK 2
	SOUR:DATA:TEL:LINK:ENAB OFF
	SOUR:DATA:TEL:LINK:ENAB?
	Returns: 0
See Also	SOURce:DATA:TEL:LINK?

:SOURce:DATA:TELecom:LINK?

Description	This query returns the port used for subsequent commands/queries for test applications using more than one test link.
	For example, the EtherBERT '2x100GE' test controls and monitors two links.
	At *RST condition, this value is device-dependent.
Syntax	:SOURce:DATA:TELecom:LINK?
Response Syntax	<Link number>
Response(s)	**Link number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	1: Link #1
	2: Link #2
Example(s)	SOUR:DATA:TEL:LINK 1
	SOUR:DATA:TEL:LINK?
	Returns: 1
	SOUR:DATA:TEL:LINK 2
	SOUR:DATA:TEL:LINK?
	Returns: 2

Signal (Transport)

:SENSe:DATA:TELecom:CODE

Description	This command sets the line code for the RX port. At *RST condition, this value is set to B8ZS. Navigation Path: Setup > TestConfigurator > Interface DSn/PDH > Physical Interface > Line Coding
Syntax	:SENSe:DATA:TELecom:CODE <wsp><Code>
Parameter(s)	**Code**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the external timing line code. B8ZS HDB3 AMI
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:CODE AMI
See Also	OUTPut:TELecom:CODE?

:SENSe:DATA:TELecom:CODE?

Description	This query returns the interface line coding for the RX port.
	At *RST condition, this value is set to B8ZS.
	Navigation Path: Setup > TestConfigurator > Interface DSn/PDH > Physical Interface > Line Coding
Syntax	:SENSe:DATA:TELecom:CODE?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the external timing line code.
	B8ZS, B8ZS external timing line code is selected.
	HDB3, HDB3 external timing line code is selected.
	AMI, AMI external timing line code is selected.
Example(s)	SENS:DATA:TEL:CODE AMI
	SENS:DATA:TEL:CODE?
	Returns: AMI
See Also	OUTPut:TELecom:CODE

:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency:NEGative?

Description	This query returns the RX maximum negative offset for electrical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RX Frequency > Max Negative Offset (PPM)
Syntax	:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency:NEGative?
Response Syntax	<Noffset>
Response(s)	**Noffset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the negative frequency of the input signal.
Example(s)	SENS:DATA:TEL:ELEC:PORT:FREQ:NEG?
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency:POSitive?

:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet:VALue?

Description	This query returns the RX frequency offset value for electrical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RX Frequency > Offset (PPM)
Syntax	:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet:VALue?
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frequency offset value for the receiver.
Example(s)	SENS:DATA:TEL:ELEC:PORT:FREQ:OFFS:VAL?
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?

:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency:POSitive?

Description	This query returns the maximum positive RX frequency offset for electrical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RX Frequency > Max Positive Offset (PPM)
Syntax	:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency:POSitive?
Response Syntax	<Poffset>
Response(s)	**Poffset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the positive frequency of the input signal.
Example(s)	SENS:DATA:TEL:ELEC:PORT:FREQ:POS?
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency:NEGative?

:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency?

Description	This query returns the RX frequency for electrical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > RX Frequency > Frequency (GHz)
Syntax	:SENSe:DATA:TELecom:ELECtrical:PORT:FREQuency?
Response Syntax	<Frequency>
Response(s)	**Frequency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the frequency of the input signal for the receiver.
Example(s)	SENS:DATA:TEL:ELEC:PORT:FREQ?
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency:POSitive?

:SENSe:DATA:TELecom:ELECtrical:RX:AMPLitude:MAXimum?

Description	This query returns the value of optical lanes receiver power MAXimum.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Max Amplitude(Vpp)
Syntax	:SENSe:DATA:TELecom:ELECtrical:RX:AMPLitude:MAXimum?
Response Syntax	<Maximum Amplitude>
Response(s)	**Maximum Amplitude**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the maximum receiver power.
Example(s)	SENS:DATA:TEL:ELEC:RX:AMPL:MAX?
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?

:SENSe:DATA:TELecom:ELECtrical:RX:AMPLitude:MINimum?

Description	This query returns the value of optical lanes receiver power Minimum.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Min Amplitude(Vpp)
Syntax	:SENSe:DATA:TELecom:ELECtrical:RX:AMPLitude:MINimum?
Response Syntax	<Minimum Amplitude>
Response(s)	**Minimum Amplitude**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the minimum receiver power.
Example(s)	SENS:DATA:TEL:ELEC:RX:AMPL:MIN?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SENSe:DATA:TELecom:ELECtrical:RX:AMPLitude?

Description	This query returns the value of the receiver power.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > RX Amplitude(Vpp)
Syntax	:SENSe:DATA:TELecom:ELECtrical:RX:AMPLitude?
Response Syntax	<Amplitude>
Response(s)	**Amplitude**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the receiver Amplitude.
Example(s)	SENS:DATA:TEL:ELEC:RX:AMPL?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SENSe:DATA:TELecom:ELECtrical:RX:POWer:MAXimum?

Description	This query returns the value of optical lanes receiver power MAXimum.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Max RX Power (dBm)
Syntax	:SENSe:DATA:TELecom:ELECtrical:RX:POWer:MAXimum?
Response Syntax	<Maximum Power>
Response(s)	**Maximum Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the maximum receiver power.
Example(s)	SENS:DATA:TEL:ELEC:RX:POW:MAX?
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?

:SENSe:DATA:TELecom:ELECtrical:RX:POWer:MINimum?

Description	This query returns the value of optical lanes receiver power Minimum.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Min RX Power (dBm)
Syntax	:SENSe:DATA:TELecom:ELECtrical:RX:POWer:MINimum?
Response Syntax	<Minimum Power>
Response(s)	**Minimum Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the minimum receiver power.
Example(s)	SENS:DATA:TEL:ELEC:RX:POW:MIN?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SENSe:DATA:TELecom:ELECtrical:RX:POWer?

Description	This query returns the value of the receiver power.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > RX Power (dBm)
Syntax	:SENSe:DATA:TELecom:ELECtrical:RX:POWer?
Response Syntax	<Power>
Response(s)	**Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the receiver power.
Example(s)	SENS:DATA:TEL:ELEC:RX:POW?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SENSe:DATA:TELecom:LOFF

Description	This command enables Laser OFF at Start-UP.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Laser OFF at Start-Up
Syntax	:SENSe:DATA:TELecom:LOFF <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the state of the Laser at startup.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Power>
Example(s)	SENS:DATA:TEL:LOFF ON
	SENS:DATA:TEL:LOFF?
	Returns: 1
See Also	SENSe:DATA:TELecom:LOFF
	SENSe:DATA:TELecom:LOFF?
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE

:SENSe:DATA:TELecom:LOFF?

Description	This query returns the status of Laser OFF at Start-UP.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Laser OFF at Start-Up
Syntax	:SENSe:DATA:TELecom:LOFF?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the laser Off at Startup.
	1, laser is enabled.
	0, laser is disabled.
Example(s)	SENS:DATA:TEL:LOFF ON
	SENS:DATA:TEL:LOFF?
	Returns: 1
See Also	SENSe:DATA:TELecom:LOFF
	SENSe:DATA:TELecom:LOFF?
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE

:SENSe:DATA:TELecom:OPTical:LASer:WAVelength?

Description	This query returns the detected laser wavelength.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Wavelength (nm)
Syntax	:SENSe:DATA:TELecom:OPTical:LASer:WAVelength?
Response Syntax	<Wavelength>
Response(s)	**Wavelength**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the detected lane/laser wavelength.
Example(s)	SENS:DATA:TEL:OPT:LAS:WAV?
See Also	SENSe:DATA:TELecom:OPTical:SFP:Wavelength?

:SENSe:DATA:TELecom:OPTical:POWer:RANGe?

Description	This query returns the range between the minimum and maximum power range.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Power Range (dBm)
Syntax	:SENSe:DATA:TELecom:OPTical:POWer:RANGe?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Power range>
Response(s)	**Power range**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the range between the minimum and maximum power range.
Example(s)	SENS:DATA:TEL:OPT:POW:RANG? 1
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer?

:SENSe:DATA:TELecom:OPTical:RX:POWer:MAXimum?

Description	This query returns the value of optical lanes receiver power maximum.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Max RX Power (dBm)
Syntax	:SENSe:DATA:TELecom:OPTical:RX:POWer:MAXimum?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the lane number.
Response Syntax	<Maximum Power>
Response(s)	**Maximum Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the maximum receiver power.
Example(s)	SENS:DATA:TEL:OPT:RX:POW:MAX? 1
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?

:SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?

Description	This query returns the value of optical lanes receiver power minimum.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Min RX Power (dBm)
Syntax	:SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the lane number.
Response Syntax	<Minimum Power>
Response(s)	**Minimum Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the minimum receiver power.
Example(s)	SENS:DATA:TEL:OPT:RX:POW:MIN? 1
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SENSe:DATA:TELecom:OPTical:RX:POWer?

Description	This query returns the value of the receiver power.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > RX Power (dBm)
Syntax	:SENSe:DATA:TELecom:OPTical:RX:POWer?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the lane number.
Response Syntax	<Power>
Response(s)	**Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the receiver power.
Example(s)	SENS:DATA:TEL:OPT:RX:POW? 1
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SENSe:DATA:TELecom:OPTical:TX:POWer?

Description	This query returns the value of the transmitter power.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > TX Power (dBm)
Syntax	:SENSe:DATA:TELecom:OPTical:TX:POWer?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Power>
Response(s)	**Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of the transmitter power.
Example(s)	SENS:DATA:TEL:OPT:TX:POW? 1
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer?

:SENSe:DATA:TELecom:OPTical:WAVelength?

Description	This query returns the detected lane wavelength.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface 40GE/100GE > Physical Interface > Wavelength (nm)
Syntax	:SENSe:DATA:TELecom:OPTical:WAVelength? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Wavelength>
Response(s)	**Wavelength**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the detected lane wavelength.
Example(s)	SENS:DATA:TEL:OPT:WAV? 1
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer?

:SENSe:DATA:TELecom:TERMination

Description	This command sets the RX Termination.
	At *RST condition, this value is set to TERM.
	Navigation Path: Setup > TestConfigurator > Physical Interface (DSn/PDH) > RX Termination
Syntax	:SENSe:DATA:TELecom:TERMination <wsp><TopologyType>
Parameter(s)	**TopologyType**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the termination
	BRIDge: Bridge
	MONitor: Monitor
	TERMinal: Terminal
Response Syntax	<Wavelength>
Example(s)	SENS:DATA:TEL:TERM TERMINAL

:SENSe:DATA:TELecom:TERMination?

Description	This query returns the Termination. At *RST condition, this value is set to TERM. Navigation Path: Setup > TestConfigurator > Physical Interface (DSn/PDH) > RX Termination
Syntax	:SENSe:DATA:TELecom:TERMination?
Response Syntax	<Termination>
Response(s)	**Termination**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the termination BRID: Bridge MON: Monitor TERM: Terminal
Example(s)	SENS:DATA:TEL:TERM TERMINAL SENS:DATA:TEL:TERM? Returns: TERMINAL

:SOURce:DATA:TELecom:CODE

Description	This command sets the interface line coding for the input port.
	At *RST condition, this value is set to B8ZS.
	Navigation Path: Setup > TestConfigurator > Interface DSn/PDH > Physical Interface > Line Coding
Syntax	:SOURce:DATA:TELecom:CODE <wsp><Code>
Parameter(s)	**Code**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the external timing line code.
	AMI
	B3ZS
	B8ZS
	CMI
	HDB3
Response Syntax	<Termination>
Example(s)	SOUR:DATA:TEL:CODE AMI
See Also	OUTPut:TELecom:CODE?

:SOURce:DATA:TELecom:CODE?

Description	This query returns the interface line coding for the input port.
	At *RST condition, this value is set to B8ZS.
	Navigation Path: Setup > DSn/PDH BERT > Test Configurator > Modify Structure > Topology(Decoupled) > Setup > TX > Physical Interface > Line Coding
Syntax	:SOURce:DATA:TELecom:CODE?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the external timing line code.
	B8ZS, B8ZS external timing line code is selected.
	HDB3, HDB3 external timing line code is selected.
	AMI, AMI external timing line code is selected.
Example(s)	SOUR:DATA:TEL:CODE AMI
	SOUR:DATA:TEL:CODE?
	Returns: AMI
See Also	OUTPut:TELecom:CODE

:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet

Description	This command enables the TX frequency offset for electrical interfaces/signals.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > TX Frequency > Offset
Syntax	:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet <wsp><Set>
Parameter(s)	Set:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the frequency offset generation.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS ON
	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS?
	Returns: 1
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?

:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet: VALue

Description	This command sets the TX frequency offset value for electrical interfaces/signals.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface > Frequency > Offset (PPM)
Syntax	:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet:VALue <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the offset value between the standard rate specification and the rate of input signal for the transmitter of the optical port.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS:VAL 15
	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS:VAL?
	Returns: 15
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?
	SENSe:DATA:TELecom:OPTical:PORT:FREQuency?

:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet:VALue?

Description	This query returns the TX frequency offset value for electrical interfaces/signals.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface > Frequency > Offset (PPM)
Syntax	:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet:VALue?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the offset value between the standard rate specification and the rate of input signal of the optical port.
	This parameter is optional. If no token is specified, the current frequency offset value is returned.
	MAXimum: Biggest value
	MINimum: Smallest value
	DEFault: Default value
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the offset value between the standard rate specification and the rate of input signal.
Example(s)	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS:VAL 15
	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS:VAL?
	Returns: 15
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue

:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet?

Description	This query returns the TX frequency offset for electrical interfaces/signals.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > TX Frequency > Offset
Syntax	:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency:OFFSet?
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the frequency offset generation status.
	1, Frequency offset generation of electrical port is enabled.
	0, Frequency offset generation of electrical port is disabled.
Example(s)	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS ON
	SOUR:DATA:TEL:ELEC:PORT:FREQ:OFFS?
	Returns: 1
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency?

:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency?

Description	This query returns the signal TX frequency for electrical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > TX frequency > Frequency
Syntax	:SOURce:DATA:TELecom:ELECtrical:PORT:FREQuency?
Response Syntax	<Frequency>
Response(s)	**Frequency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the input signal frequency for the electrical port transmitter.
Example(s)	SOUR:DATA:TEL:ELEC:PORT:FREQ?
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue

:SOURce:DATA:TELecom:LBO

Description	This command sets the value for the Line Build Out interface.
	At *RST condition, this value is set to DSX133.
	Navigation Path: Setup > TestConfigurator > Interface DSn/PDH > Physical Interface > LBO
Syntax	:SOURce:DATA:TELecom:LBO <wsp><Lbo>
Parameter(s)	**Lbo**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the value for the Line Build Out interface.
	DSX655
	DSX533
	DSX399
	DSX266
	DSX133
	LBO225TO450
	LBO0TO225
	LBOCABLESIM900
	LBO0
	LBONEG7DOT5
	LBONEG12
	LBONEG15
	LBONEG22DOT5
Response Syntax	<Frequency>
Example(s)	SOUR:DATA:TEL:LBO DSX266
See Also	INPut:TELecom:LEVel

:SOURce:DATA:TELecom:LBO?

Description	This query returns the value for the Line Build Out interface.
	At *RST condition, this value is set to DSX133.
	Navigation Path: Setup > TestConfigurator > Interface DSn/PDH > Physical Interface > LBO
Syntax	:SOURce:DATA:TELecom:LBO?
Response Syntax	<Clock>
Response(s)	**Clock**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value for the Line Build Out interface.
	DSX655, Returns the value as DSX655.
	DSX533, Returns the value as DSX533.
	DSX399, Returns the value as DSX399.
	DSX266, Returns the value as DSX266.
	DSX133, Returns the value as DSX133.
	Lbo225To450, Returns the value as Lbo225To450,
	Lbo0To225, Returns the value as Lbo0To225,
	LboCableSim900, Returns the value as LboCableSim900,
	LBO0, Returns the value as LBO0,
	LBONEG7DOT5, Returns the value as LBONEG7DOT5,
	LBONEG12, Returns the value as LBONEG12,
	LBONEG15, Returns the value as LBONEG15,
	LBONEG22DOT5, Returns the value as LBONEG22DOT5.
Example(s)	SOUR:DATA:TEL:LBO DSX266
	SOUR:DATA:TEL:LBO?
	Returns: DSX266
See Also	INPut:TELecom:LEVel?

:SOURce:DATA:TELecom:OTN:BTRaffic:PT[1..n]

Description	This command sets the background traffic for the instrument.
	At *RST condition, this value is set to PRBS31.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > Background Traffic (Mux Type PT20/Mux Type PT21)
Syntax	:SOURce:DATA:TELecom:OTN:BTRaffic:PT[1..n] <wsp><Traffic>
Parameter(s)	**Traffic**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the value of the background traffic.
	AIS
	NCLient, NULL Client
	PRBS31
	UNALlocated
Response Syntax	<Clock>
Example(s)	SOUR:DATA:TEL:OTN:BTR:PT21 PRBS31
	SOUR:DATA:TEL:OTN:BTR:PT21?
	Returns: PRBS31
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:FEC?

:SOURce:DATA:TELecom:OTN:BTRaffic:PT[1..n]?

Description	This query returns the background traffic for the instrument.
	At *RST condition, this value is set to PRBS31.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > Background Traffic (Mux Type PT20/Mux Type PT21)
Syntax	:SOURce:DATA:TELecom:OTN:BTRaffic:PT[1..n]?
Response Syntax	<Traffic>
Response(s)	**Traffic**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value of the background traffic.
	AIS
	NCLient, NULL Client
	PRBS31
	UNALlocated
Example(s)	SOUR:DATA:TEL:OTN:BTR:PT20 PRBS31
	SOUR:DATA:TEL:OTN:BTR:PT20?
	Returns: PRBS31
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:FEC

:SOURce:DATA:TELecom:OTN:FEC

Description	This command enables/disables the FEC for the Transmitter (TX) mode.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Signal Configuration > OTU > FEC
Syntax	:SOURce:DATA:TELecom:OTN:FEC <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Traffic>
Example(s)	SOUR:DATA:TEL:OTN:FEC ON
	SOUR:DATA:TEL:OTN:FEC?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:SCRambler

:SOURce:DATA:TELecom:OTN:FEC:FCA

Description	This command enables/disables the FEC-CORR Alarming.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Signal Configuration > FEC-CORR Alarming
Syntax	:SOURce:DATA:TELecom:OTN:FEC:FCA <wsp><Enable>
Parameter(s)	**Enable**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the Forward Error Correction (FEC) correctable alarming.
	ON, sets the FEC correctable alarming to ON.
	OFF, sets the FEC correctable alarming to OFF.
Response Syntax	<Traffic>
Example(s)	SOUR:DATA:TEL:OTN:FEC:FCA ON
	SOUR:DATA:TEL:OTN:FEC:FCA?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:FEC

:SOURce:DATA:TELecom:OTN:FEC:FCA?

Description	This query returns the enable/disable status of FEC-CORR Alarming.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Signal Configuration > FEC-CORR Alarming
Syntax	:SOURce:DATA:TELecom:OTN:FEC:FCA?
Response Syntax	<FecCorrectableAlarmingStatus>
Response(s)	**FecCorrectableAlarmingStatus**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Forward Error Correction (FEC) Correctable Alarming.
	1, FEC correctable alarming is enabled.
	0, FEC correctable alarming is disabled.
Example(s)	SOUR:DATA:TEL:OTN:FEC:FCA ON
	SOUR:DATA:TEL:OTN:FEC:FCA?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:FEC

:SOURce:DATA:TELecom:OTN:FEC?

Description	This query returns the enable/disable status of FEC for the Transmitter (TX) mode.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Signal Configuration > OTU > FEC
Syntax	:SOURce:DATA:TELecom:OTN:FEC?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Forward Error Correction (FEC) for the Transmitter (TX) mode.
	1, FEC for TX mode is enabled.
	0, FEC for TX mode is disabled.
Example(s)	SOUR:DATA:TEL:OTN:FEC ON
	SOUR:DATA:TEL:OTN:FEC?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:SCRambler?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler

Description	This command enables/disables the scrambler for overclocked rates OTU3e1/2 of the transmitter.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > OTU3e(1/2) > Scrambler
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SCR ON
	SOUR:DATA:TEL:OTN:OTU3:E1:SCR?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:FEC?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler?

Description	This query returns the status of scrambler for overclocked rates OTU3e1/2 of the transmitter.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > OTU3e(1/2) > Scrambler
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler?
Response Syntax	\<Set\>
Response(s)	Set:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the status of the scrambler for the transmitter.
	1, returns the scrambler as ON.
	0, returns the scrambler as OFF.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SCR ON
	SOUR:DATA:TEL:OTN:OTU3:E1:SCR?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:FEC

:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SCRambler

Description	This command enables/disables the scrambler for non-standard rates OTU1/2 f of the receiver.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > Scrambler
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SCRambler <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTU1:F:SCR ON
	SOUR:DATA:TEL:OTN:OTU1:F:SCR?
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E:SCRambler?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SCRambler?

Description	This query returns the status of the scrambler for non-standard rates OTU1e/2e of the receiver.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > Scrambler
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SCRambler?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the scrambler for the receiver.
	0, status of the scrambler for the receiver is disabled.
	1, status of the scrambler for the receiver is enabled.
Example(s)	SOUR:DATA:TEL:OTN:OTU1:F:SCR ON
	SOUR:DATA:TEL:OTN:OTU1:F:SCR?
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E:SCRambler

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SCRambler

Description	This command enables/disables the scrambler for the Transmitter (TX) mode.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > OTU > Scrambler
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SCRambler <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTU1:SCR ON
	SOUR:DATA:TEL:OTN:OTU1:SCR?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:FEC

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SCRambler?

Description	This query returns the status of scrambler for the Transmit (TX) mode.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Signal > Signal Configuration > OTU > Scrambler
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SCRambler?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the scrambler for the Transmitter (TX) mode.
	1, scrambler for TX mode is enabled.
	0, scrambler for TX mode is disabled.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SCR ON
	SOUR:DATA:TEL:OTN:OTU3:SCR?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:FEC?

Frequency

:FETCh:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet?

Description	This Query returns the live TX current frequency offset.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface Block > Frequency - Offset - Sweep
Syntax	:FETCh:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet?
Response Syntax	<Current Offset>
Response(s)	**Current Offset**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns live TX current frequency offset.
Example(s)	FETC:DATA:TEL:OPT:PORT:FREQ:OFFS?
See Also	FETCh:DATA:TELecom:SDHSonet:LOP:POINter:OFFSet?

:SENSe:DATA:TELecom:OPTical:PORT:FREQuency:NEGative?

Description	This query returns the maximum negative RX frequency offset for optical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > RX Frequency > Max Negative Offset (PPM)
Syntax	:SENSe:DATA:TELecom:OPTical:PORT:FREQuency:NEGative?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Noffset>
Response(s)	**Noffset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the negative frequency of the input signal.
Example(s)	SENS:DATA:TEL:OPT:PORT:FREQ:NEG? 0
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency:POSitive?

:SENSe:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?

Description	This query returns the RX frequency offset value for optical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > RX Frequency > Offset (PPM)
Syntax	:SENSe:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frequency offset value for the receiver.
Example(s)	SENS:DATA:TEL:OPT:PORT:FREQ:OFFS:VAL?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SENSe:DATA:TELecom:OPTical:PORT:FREQuency:POSitive?

Description	This query returns the maximum positive RX frequency offset for optical interfaces/signals. At *RST condition, this value is set to device-dependent. Navigation Path: Setup > Test Configurator > Interface/Frequency > RX Frequency > Max Positive Offset (PPM)
Syntax	:SENSe:DATA:TELecom:OPTical:PORT:FREQuency:POSitive?[<wsp><Lane>]
Parameter(s)	**Lane**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the lane number.
Response Syntax	<Poffset>
Response(s)	**Poffset**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the positive frequency of the input signal.
Example(s)	SENS:DATA:TEL:OPT:PORT:FREQ:POS? 0
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency:NEGative?

:SENSe:DATA:TELecom:OPTical:PORT:FREQuency?

Description	This query returns the RX frequency for optical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > RX Frequency > Frequency (GHz)
Syntax	:SENSe:DATA:TELecom:OPTical:PORT:FREQuency?[<wsp><Lane>]
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Frequency>
Response(s)	**Frequency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the frequency of the input signal for the receiver.
Example(s)	SENS:DATA:TEL:OPT:PORT:FREQ? 0
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency:POSitive?

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet

Description	This command enables the TX frequency offset for optical interfaces/signals.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > TX Frequency > Offset
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Frequency>
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:VAL 15
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS ON
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS?
	Returns: 1
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MAXimum

Description	This command sets the maximum TX frequency for Sweep offset. At *RST condition, this value is set to 100. Navigation Path: Setup > Test Configurator > Interface Block > Frequency - Offset Sweep > Range
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MAXimum <wsp><Offset>
Parameter(s)	**Offset**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Set the maximum TX frequency offset. MAXimum: Biggest supported value MINimum: Smallest supported value
Response Syntax	<Frequency>
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:MAX 20
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MINimum

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MAXimum?

Description	This query returns the maximum TX frequency for Sweep offset.
	At *RST condition, this value is set to 100.
	Navigation Path: Setup > Test Configurator > Interface Block > Frequency - Offset - Sweep > Range
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MAXimum?[<wsp><Offset>]
Parameter(s)	**Offset**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set the maximum TX frequency offset.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the maximum TX frequency offset
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:MAX 20
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:MAX?
	Returns: 20
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MINimum?

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:METHod

Description	This command sets the TX frequency offset method.
	At *RST condition, this value is set to Fixed.
	Navigation Path: Setup > Test Configurator > Interface Block > Frequency - Offset - Fixed/Sweep
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:METHod <wsp><Method>
Parameter(s)	**Method**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of TX frequency offset method.
	FIXED
	SWEEP
Response Syntax	<Offset>
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:METH FIXED
See Also	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:METHod?

Description	This query returns the TX Frequency Offset Method.
	At *RST condition, this value is set to Fixed.
	Navigation Path: Setup > Test Configurator > Interface Block >Frequency - Offset - Fixed/Sweep
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:METHod?
Response Syntax	<Method>
Response(s)	**Method**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the TX frequency offset method selected.
	FIXED
	SWEEP
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:METH FIXED
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:METH?
	Returns: FIXED
See Also	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet?

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MINimum

Description	This command sets the minimum TX frequency for Sweep offset.
	At *RST condition, this value is set to -100.
	Navigation Path: Setup > Test Configurator > Interface Block > Frequency - Offset - Sweep > Range
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MINimum <wsp><Offset>
Parameter(s)	**Offset**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the minimum TX frequency offset.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Method>
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:MIN 20
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MAXimum

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MINimum?

Description	This query returns the minimum TX frequency for Sweep offset.
	At *RST condition, this value is set to -100.
	Navigation Path: Setup > Test Configurator > Interface Block > Frequency - Offset - Sweep > Range
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MINimum?[<wsp><Offset>]
Parameter(s)	**Offset**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the minimum TX frequency offset.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the minimum TX frequency offset
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:MIN -20
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:MIN?
	Returns: -20
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:MAXimum?

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue

Description	This command sets the TX frequency offset value for optical interfaces/signals.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > Frequency > Offset (ppm)
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the offset value between the standard rate specification and the rate of input signal.
	MAXimum: Biggest supported offset value
	MINimum: Smalllest supported offset value
Response Syntax	<Offset>
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:VAL 15
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:VAL?
	Returns: 15
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?
	SENSe:DATA:TELecom:OPTical:PORT:FREQuency?

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?

Description	This query returns the TX frequency offset for optical interfaces/signals.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > Frequency > Offset (PPM)
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue?[<wsp><Offset>]
Parameter(s)	**Offset**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the offset value between the standard rate specification and the rate of input signal.
	This parameter is optional. If no token is specified, the current frequency offset value is returned.
	MAXimum: Biggest offset value
	MINimum: Smallest offset value
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the offset value between the standard rate specification and the rate of input signal.
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:VAL 15
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:VAL?
	Returns: 15
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet?

Description	This query returns the TX frequency offset status for optical interfaces/signals.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > TX Frequency > Offset
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet?
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the frequency offset generation status.
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS:VAL 15
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS ON
	SOUR:DATA:TEL:OPT:PORT:FREQ:OFFS?
	Returns: 1
See Also	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue

:SOURce:DATA:TELecom:OPTical:PORT:FREQuency?

Description	This query returns the TX frequency for optical interfaces/signals.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Frequency > TX frequency
Syntax	:SOURce:DATA:TELecom:OPTical:PORT:FREQuency?
Response Syntax	<Frequency>
Response(s)	**Frequency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the frequency of the input signal for the transmitter.
Example(s)	SOUR:DATA:TEL:OPT:PORT:FREQ?
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency?
	SOURce:DATA:TELecom:OPTical:PORT:FREQuency:OFFSet:VALue

Traces (OTN)

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI: DAPI:EXPected

Description	This command sets the ODU1e/2e/3e1/3e2 TCM DAPI Expected Message.
	At *RST condition, this value is set to EXFO TCMn DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Expected Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:DAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:DAPI:EXP EXFO TCM1 DAPI
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:DAPI:EXP?
	Returns: EXFO TCM1 DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI: DAPI:EXPected?

Description	This quere retruns the ODU1e/2e/3e1/3e2 TCM DAPI Expected Message.
	At *RST condition, this value is set to EXFO TCMn DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Expected Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:DAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the instrument.
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:DAPI:EXP EXFO TCM1 DAPI
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:DAPI:EXP?
	Returns: EXFO TCM1 DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:EXPected

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI: SAPI:EXPected

Description	This command sets the ODU1e/2e/3e1/3e2 TCM SAPI Expected Message.
	At *RST condition, this value is set to EXFO TCMn SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > SAPI - Expected Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:SAPI:EXP EXFO TCM1 SAPI
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:SAPI:EXP?
	Returns: EXFO TCM1 SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI: SAPI:EXPected?

Description	This query returns the ODU1e/2e/3e1/3e2 TCM SAPI Expected Message.
	At *RST condition, this value is set to EXFO TCMn SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > SAPI - Expected Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the instrument.
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:SAPI:EXP EXFO TCM1 SAPI
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:SAPI:EXP?
	Returns: EXFO TCM1 SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI: TIM

Description	This command enables/disables the ODU1e/2e/3e1/3e2 SAPI/DAPI TCM Trace Identifier Mismatch (TIM). At *RST condition, this value is set to ON. Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > SAPI/DAPI TCM-TIM Navigation Path: Results > Traces > OTN > ODUn > TCMn > SAPI/DAPI TCM-TIM NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:TIM <wsp><Etim>, <Set>
Parameter(s)	**Etim**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. enables/disables the TIM (Trace Identifier Mismatch). SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated. DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated. **Set**: The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element. enables/disables the Trace Identifier Mismatch (TIM) ON, enables the Trace Identifier Mismatch (TIM). OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM SAPI,ON SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM? SAPI Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:TIM?

Description	This query returns the state of the ODU3e1/e2 SAPI/DAPI TCM Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCM > SAPI/DAPI TCM-TIM
	Navigation Path: Results > Traces > OTN > ODUn > TCM > SAPI/DAPI TCM-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM).
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:DAPI:EXPected

Description	This command sets the ODU1e/2e/3e1/3e2 PM DAPI expected message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > DAPI - Expected Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:DAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TTI:DAPI:EXP EXFO ODU DAPI
	SENS:DATA:TEL:OTN:ODU3:E1:TTI:DAPI:EXP?
	Returns: EXFO ODU DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:TIM

Description	This command enables/disables the ODU3e1/e2 SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > ODU3e1/e2 > PM TTI Traces > SAPI/DAPI ODU-TIM
	Navigation Path: Results > Traces > OTN > ODU3e1/e2 > PM TTI Traces > SAPI/DAPI ODU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:TIM <wsp><Etim>, <Set>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM)
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:TIM?

Description	This query returns the state of the ODU3e1/e2 SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > ODU3e1/e2 > PM TTI Traces > SAPI/DAPI ODU-TIM
	Navigation Path: Results > Traces > OTN > ODU3e1/e2 > PM TTI Traces > SAPI/DAPI ODU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM).
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:E1:TTI:TIM? SAPI
	Returns: 1

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:DAPI: EXPected?

Description	This query returns the ODU1f/2f TCM DAPI expected message.
	At *RST condition, this value is set to EXFO TCMn DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCM > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:DAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the instrument.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:DAPI:EXP EXFO TCM1 DAPI
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:DAPI:EXP?
	Returns: EXFO TCM1 DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:EXPected

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:SAPI:EXPected

Description	This command sets the ODU1f/2f TCM SAPI expected message.
	At *RST condition, this value is set to EXFO TCMn SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCM > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:SAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:SAPI:EXP EXFO TCM1 SAPI
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:SAPI:EXP?
	Returns: EXFO TCM1 SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:SAPI:EXPected?

Description	This query returns the ODU1f/2f TCM SAPI expected message.
	At *RST condition, this value is set to EXFO TCMn SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCM > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:SAPI:EXPected?
Response Syntax	\<Message\>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA\> element.
	Returns the expected message.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:SAPI:EXP EXFO TCM1 SAPI
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:SAPI:EXP?
	Returns: EXFO TCM1 SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:TIM

Description	This command enables/disables the ODU1f/2f SAPI/DAPI TCM Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCM > SAPI/DAPI TCM-TIM
	Navigation Path: Results > Traces > OTN > ODUn > TCM > SAPI/DAPI TCM-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:TIM <wsp><Etim>, <Set>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM)
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:TIM?

Description	This query returns the state of the ODU1f/2f SAPI/DAPI TCM Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCM > SAPI/DAPI TCM-TIM
	Navigation Path: Results > Traces > OTN > ODUn > TCM > SAPI/DAPI TCM-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM).
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TCM1:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:DAPI:EXPected

Description	This command sets the ODU1f/2f PM DAPI expected message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > DAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:DAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TTI:DAPI:EXP EXFO ODU DAPI
	SENS:DATA:TEL:OTN:ODU1:F:TTI:DAPI:EXP?
	Returns: EXFO ODU DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:DAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:DAPI:EXPected?

Description	This query returns the ODU1f/2f PM DAPI expected message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > DAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:DAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TTI:DAPI:EXP EXFO ODU DAPI
	SENS:DATA:TEL:OTN:ODU1:F:TTI:DAPI:EXP?
	Returns: EXFO ODU DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:DAPI:EXPected

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:SAPI:EXPected

Description	This command sets the ODU1f/2f PM SAPI expected message.
	At *RST condition, this value is set to EXFO ODU SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:SAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TTI:SAPI:EXP EXFO ODU SAPI
	SENS:DATA:TEL:OTN:ODU1:F:TTI:SAPI:EXP?
	Returns: EXFO ODU SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:SAPI:EXPected?

Description	This query returns the ODU1f/2f PM SAPI expected message.
	At *RST condition, this value is set to EXFO ODU SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:SAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the instrument.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TTI:SAPI:EXP EXFO ODU SAPI
	SENS:DATA:TEL:OTN:ODU1:F:TTI:SAPI:EXP?
	Returns: EXFO ODU SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:SAPI:EXPected

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:TIM

Description	This command enables/disables the ODU1f/2f SAPI/DAPI PM Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI/DAPI TCM-TIM
	Navigation Path: Results > Traces > OTN > ODU1 > PM TTI Traces > SAPI/DAPI ODU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:TIM <wsp><TIM>, <Set>
Parameter(s)	**TIM**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables ODU-TIM for either:
	SAPI
	DAPI
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the Trace Identifier Mismatch (TIM)
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:TIM?

Description	This query returns the enable/disable status of the ODU1f/2f SAPI/DAPI PM Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI/DAPI TCM-TIM
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > SAPI/DAPI ODU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:TTI:TIM? <wsp><TIM>
Parameter(s)	**TIM**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sellects the TIM (Trace Identifier Mismatch).
	SAPI
	DAPI
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM).
	ON: enabled.
	OFF: disabled.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU1:F:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected

Description	This command sets the ODU TCM DAPI expected message.
	At *RST condition, this value is set to EXFO TCM DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:DAPI:EXP EXFO TCM1 DAPI
	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:DAPI:EXP?
	Returns: EXFO TCM1 DAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected?

Description	This query returns the ODU TCM DAPI expected message.
	At *RST condition, this value is set to EXFO TCM DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the instrument.
Example(s)	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:DAPI:EXP EXFO TCM1 DAPI
	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:DAPI:EXP?
	Returns: EXFO TCM1 DAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected

Description	This command sets the ODUn TCM SAPI expected message.
	At *RST condition, this value is set to EXFO TCM SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > SAPI - Expected Message
	Navigation Path: Results > Traces > OTUn > ODUn > OTUn TCM TTI Traces > TCMn > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:SAPI:EXP EXFO TCM1 SAPI
	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:SAPI:EXP?
	Returns: EXFO TCM1 SAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected?

Description	This query returns the ODUn TCM SAPI expected message.
	At *RST condition, this value is set to EXFO TCMn SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > TCMn > SAPI - Expected Message
	Navigation Path: Results > Traces > OTUn > ODUn > OTUn TCM TTI Traces > TCMn > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the instrument.
Example(s)	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:SAPI:EXP EXFO TCM1 SAPI
	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:SAPI:EXP?
	Returns: EXFO TCM1 SAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:EXPected?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:TIM

Description	This command enables/disables the ODU SAPI/DAPI TCM Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > TCM > SAPI/DAPI TCM-TIM
	Navigation Path: Results > Traces > OTN > ODU > TCM > SAPI/DAPI TCM-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:TIM <wsp><Etim>, <Set>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch) for ODU TCM TTI.
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM).
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIMer
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIMer?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:TIM?

Description	This query returns the state of the ODU SAPI/DAPI TCM Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > TCM > SAPI/DAPI TCM-TIM
	Navigation Path: Results > Traces > OTN > ODU > TCM > SAPI/DAPI TCM-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the expected message.
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM).
	1, enables the status of TIM.
	0, disables the status of TIM.
Example(s)	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:TCM1:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIMer
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIMer?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHAnnel

Description	This command forces the ODU TTI Traces commands/queries to be applied on all channels (ON) or a single channel (OFF) for Multi-Channel OTN test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > ODU Channels > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODU > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHAnnel <wsp><AllChannel>
Parameter(s)	**AllChannel**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Selects if the ODU TTI Traces commands/queries are applied on all channels (ON) or a single channel (OFF).
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:ODU100:TTI:ACHA ON
	SENS:DATA:TEL:OTN:ODU100:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP XFO ODU SAPI
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHAN
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHA?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHAnnel?

Description	This query returns if the ODU TTI Traces commands/queries are applied on all channels (ON) or a single channel (OFF) for Multi-Channel OTN test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > ODU Channels > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODU > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHAnnel?
Response Syntax	<AllChannel>
Response(s)	**AllChannel**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns an indication that the ODU TTI Traces commands/queries are to be applied on all channels.
	1, ODU TTI Trace commands/queries are applied on all channels.
	0, ODU TTI Trace commands/queries are applied on a specific channels determined by SENS:DATA:TEL:OTN:ODU[1..n]:TTI:CHAN.
Example(s)	SENS:DATA:TEL:OTN:ODU100:TTI:ACHA ON
	SENS:DATA:TEL:OTN:ODU100:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP XFO ODU SAPI
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHAN
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHA

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHANnel

Description	This command sets the value of the channel used by the ODU TTI Traces for Multi-Channel OTN test.
	At *RST condition, this value is set to 1.
	When setting a channel value, the following command is set to OFF: SENSe[1..n]:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHAnnel
	Navigation Path: Setup > Test Configurator > ODU Channels > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODU > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHANnel <wsp><Channel>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the channel used for ODU TTI Traces, when AllCHAnnel is not selected, in the Multi-Channel OTN test application.
Response Syntax	<AllChannel>
Example(s)	SENS:DATA:TEL:OTN:ODU100:TTI:CHAN 3
	SENS:DATA:TEL:OTN:ODU100:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP XFO ODU SAPI3
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI3
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHAN?
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHA

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHANnel?

Description	This query returns the value of the channel used by the ODU TTI Traces for Multi-Channel OTN test.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > ODU Channels > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODU > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHANnel?
Response Syntax	\<Channel\>
Response(s)	**Channel**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA\> element.
	Returns the channel used for the ODU TTI Trace, when AllCHAnnel is 'OFF', in the Multi-Channel OTN test application.
Example(s)	SENS:DATA:TEL:OTN:ODU100:TTI:CHAN 3
	SENS:DATA:TEL:OTN:ODU100:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP XFO ODU SAPI3
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI3
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHAN
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACHA

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected

Description	This command sets the ODUn PM DAPI expected message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > DAPI - Expected Message
	In Multi-Channel OTN, when accessing an ODU LO, the channel must be set using SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHANnel. The global expected DAPI can also be set for all channels by using SENS:DATA:TEL:OTN:ODU[1..n]:TTI:ACHAnnel.
	In FlexO BERT, when accessing an ODU LO, the client ID must be set using SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLient. The global expected DAPI can also be set for all clients by using SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLient
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Is the expected message for ODU TTI Trace

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected

Response Syntax	\<Channel\>
Example(s)	SENS:DATA:TEL:OTN:ODU3:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU3:TTI:DAPI:EXP EXFO ODU DAPI
	SENS:DATA:TEL:OTN:ODU3:TTI:DAPI:EXP?
	Returns: EXFO ODU DAPI
	For Multi-Channel OTN:
	SENS:DATA:TEL:OTN:ODU100:TTI:ACHA ON
	SENS:DATA:TEL:OTN:ODU100:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU100:TTI:DAPI:EXP "XFO ODU DAPI"
	SENS:DATA:TEL:OTN:ODU100:TTI:DAPI:EXP?
	Returns: XFO ODU DAPI
	For FlexO BERT:
	SENS:DATA:TEL:OTN:ODU101:TTI:ACL ON
	SENS:DATA:TEL:OTN:ODU101:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:ODU101:TTI:DAPI:EXP "XFO ODU DAPI"
	SENS:DATA:TEL:OTN:ODU101:TTI:DAPI:EXP?
	Returns: XFO ODU DAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:SAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:SAPI:EXPected?
	For Multi-Channel OTN
	SENSe:DATA:TELecom:OTN:ODU[1..n]:CHANnel
	SENSe:DATA:TELecom:OTN:ODU[1..n]:CHANnel?
	SENSe:DATA:TELecom:OTN:ODU[1..n]:ACHAnnel
	SENSe:DATA:TELecom:OTN:ODU[1..n]:ACHAnnel?
	For FlexO BERT:

	SENSe:DATA:TELecom:OTN:ODU[1..n]:CLIent?
	SENSe:DATA:TELecom:OTN:ODU[1..n]:ACLient
	SENSe:DATA:TELecom:OTN:ODU[1..n]:ACLient?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected?

Description	This qiuery returns the ODUn PM DAPI expected message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > DAPI - Expected Message
	In Multi-Channel OTN, when accessing an ODU LO, the channel must be set using SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CHANnel. The global expected DAPI can also be set for all channels by using SENS:DATA:TEL:OTN:ODU[1..n]:TTI:ACHAnnel.
	In FlexO BERT, when accessing an ODU LO, the client ID must be set using SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent. The global expected DAPI can also be set for all clients by using SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLient
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected?
Response Syntax	<Message>

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected?

Response(s)

Message:

The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.

Returns the expected message for the instrument.

Example(s)

SENS:DATA:TEL:OTN:ODU3:TTI:TIM DAPI,ON

SENS:DATA:TEL:OTN:ODU3:TTI:DAPI:EXP EXFO ODU DAPI

SENS:DATA:TEL:OTN:ODU3:TTI:DAPI:EXP?

Returns: EXFO ODU DAPI

For Multi-Channel OTN:

SENS:DATA:TEL:OTN:ODU100:TTI:ACHA ON

SENS:DATA:TEL:OTN:ODU100:TTI:TIM DAPI,ON

SENS:DATA:TEL:OTN:ODU100:TTI:DAPI:EXP "XFO ODU DAPI"

SENS:DATA:TEL:OTN:ODU100:TTI:DAPI:EXP?

Returns: XFO ODU DAPI

For FlexO BERT:

SENS:DATA:TEL:OTN:ODU101:TTI:ACL ON

SENS:DATA:TEL:OTN:ODU101:TTI:TIM DAPI,ON

SENS:DATA:TEL:OTN:ODU101:TTI:DAPI:EXP "XFO ODU DAPI"

SENS:DATA:TEL:OTN:ODU101:TTI:DAPI:EXP?

Returns: XFO ODU DAPI

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:GOVErwrite?

Description	This query returns if an expected DAPI ODU TTI Traces has been overwritten on at least one channel for Multi-Channel OTN test.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > DAPI - Expected Message - Overwritten icon
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:GOVErwrite?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	1: At least one expected DAPI ODU TTI Trace has been overwritten.
	0: All expected DAPI ODU TTI Traces are the same as the Global expected ODU TTI Trace.
Example(s)	SENS:DATA:TEL:OTN:ODU100:TTI:DAPI:GOVE?
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM

Description	This command enables/disables the ODU SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > PM TTI Traces > SAPI/DAPI ODU-TIM
	Navigation Path: Results > Traces > OTN > ODU > PM TTI Traces > SAPI/DAPI ODU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM <wsp><Etim>, <Set>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM).
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:ODU3:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM?

Description	This query returns the state of the ODU SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > PM TTI Traces > SAPI/DAPI ODU-TIM
	Navigation Path: Results > Traces > OTN > ODU > PM TTI Traces > SAPI/DAPI ODU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM).
	0, status of the Trace Identifier Mismatch (TIM) is disabled
	1, status of the Trace Identifier Mismatch (TIM) is enabled
Example(s)	SENS:DATA:TEL:OTN:ODU3:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU3:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM?

Description	This query returns the status of the OTU1e/2e / OTU3e1/e2 SM SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > SAPI/DAPI OTU-TIM
	Navigation Path: Results > Traces > OTN > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > SAPI/DAPI OTU-TIM
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM).
	SAPI: the SAPI which allows editing of the Source Access Point Identifier (SAPI) message to be generated.
	DAPI: the DAPI which allows editing of the Destination Access Point Identifier (DAPI) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Trace Identifier Mismatch (TIM).
	0, status of the Trace Identifier Mismatch (TIM) is disabled
	1, status of the Trace Identifier Mismatch (TIM) is enabled
Example(s)	SENS:DATA:TEL:OTN:OTU3:E1:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU3:E1:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:DAPI:EXPected

Description	This command sets the OTU1f/2f SM DAPI expected message. At *RST condition, this value is set to EXFO OTU DAPI. Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > DAPI - Expected Message Navigation Path: Results > Traces > OTN > OTU1f/2f > SM TTI Traces > DAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:DAPI:EXPected <wsp><Message>
Parameter(s)	**Message**: The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element. Sets the expected message.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM DAPI,ON SENS:DATA:TEL:OTN:OTU1:F:TTI:DAPI:EXP EXFO OTU DAPI SENS:DATA:TEL:OTN:OTU1:F:TTI:DAPI:EXP? Returns: EXFO OTU DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:DAPI:EXP?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:DAPI:EXPected?

Description	This query returns the OTU1f/2f SM DAPI expected message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > DAPI - Expected Message
	Navigation Path: Results > Traces > OTN > OTU1f/2f > SM TTI Traces > DAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:DAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message.
Example(s)	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:OTU1:F:TTI:DAPI:EXP EXFO OTU DAPI
	SENS:DATA:TEL:OTN:OTU1:F:TTI:DAPI:EXP?
	Returns: EXFO OTU DAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:DAPI:EXP

:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:SAPI:EXPected

Description	This command sets the OTU1f/2f SM SAPI expected message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > OTU1f/2f > SM TTI Traces > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:SAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU1:F:TTI:SAPI:EXP EXFO OTU SAPI
	SENS:DATA:TEL:OTN:OTU1:F:TTI:SAPI:EXP?
	Returns: EXFO OTU SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:SAPI:EXPected?

Description	This query returns the OTU1f/2f SM SAPI expected message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > SAPI - Expected Message
	Navigation Path: Results > Traces > OTN > OTU1f/2f > SM TTI Traces > SAPI - Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:SAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message.
Example(s)	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU1:F:TTI:SAPI:EXP EXFO OTU SAPI
	SENS:DATA:TEL:OTN:OTU1:F:TTI:SAPI:EXP?
	Returns: EXFO OTU SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:TIM

Description	This command enables/disables the OTU1f/2f SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > SAPI/DAPI OTU-TIM
	Navigation Path: Results > Traces > OTN > OTU1f/2f > SM TTI Traces > SAPI/DAPI OTU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:TIM <wsp><Etim>, <Set>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM).
	SAPI: the SAPI which allows editing of the Source Access Point Identifier (SAPI) message to be generated.
	DAPI: the DAPI which allows editing of the Destination Access Point Identifier (DAPI) message to be generated.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM).
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM? SAPI
	Returns: 0
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:TIM?

Description	This query returns the status of the OTU1f/2f SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > SAPI/DAPI OTU-TIM
	Navigation Path: Results > Traces > OTN > OTU1f/2f > SM TTI Traces > SAPI/DAPI OTU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:F:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM).
	SAPI: the SAPI which allows editing of the Source Access Point Identifier (SAPI) message to be generated.
	DAPI: the DAPI which allows editing of the Destination Access Point Identifier (DAPI) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Trace Identifier Mismatch (TIM).
	0, status of the Trace Identifier Mismatch (TIM) is disabled.
	1, status of the Trace Identifier Mismatch (TIM) is enabled.
Example(s)	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU1:F:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:TIM

:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:EXPected

Description	This command sets the OTU SM DAPI expected message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > DAPI Expected Message
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces > DAPI Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:OTU3:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:OTU3:TTI:DAPI:EXP EXFO OTU DAPI
	SENS:DATA:TEL:OTN:OTU3:TTI:DAPI:EXP?
	Returns: EXFO OTU DAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:SAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:EXPected?

Description	This query returns the OTU SM DAPI expected message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the OTU.
Example(s)	SENS:DATA:TEL:OTN:OTU3:TTI:TIM DAPI,ON
	SENS:DATA:TEL:OTN:OTU3:TTI:DAPI:EXP EXFO OTU DAPI
	SENS:DATA:TEL:OTN:OTU3:TTI:DAPI:EXP?
	Returns: EXFO OTU DAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:SAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected

Description	This command sets the OTU SM SAPI expected message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > SAPI Expected Message
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces > SAPI Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:OTU3:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU3:TTI:SAPI:EXP EXFO OTU SAPI
	SENS:DATA:TEL:OTN:OTU3:TTI:SAPI:EXP?
	Returns: EXFO OTU SAPI
See Also	SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:OTU[1..n][1..n]:TTI:SAPI:EXPected?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected?

Description	This query returns the OTU SM SAPI expected message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > SAPI Expected Message
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces > SAPI Expected Message
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for the OTU.
Example(s)	SENS:DATA:TEL:OTN:OTU3:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU3:TTI:SAPI:EXP EXFO OTU SAPI
	SENS:DATA:TEL:OTN:OTU3:TTI:SAPI:EXP?
	Returns: EXFO OTU SAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:DAPI:EXPected?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM

Description	This command enables/disables the OTU SM SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces > SAPI/DAPI OTU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM <wsp><Etim>, <Set>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Trace Identifier Mismatch (TIM).
	ON, enables the Trace Identifier Mismatch (TIM).
	OFF, disables the Trace Identifier Mismatch (TIM).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:OTU3:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU3:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM?

:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM?

Description	This query returns the state the OTU SM SAPI/DAPI Trace Identifier Mismatch (TIM).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces > SAPI/DAPI OTU-TIM
Syntax	:SENSe:DATA:TELecom:OTN:OTU[1..n]:TTI:TIM? <wsp><Etim>
Parameter(s)	**Etim**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	enables/disables the TIM (Trace Identifier Mismatch).
	SAPI: the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI: the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM).
	SAPI, indicates the SAPI which allows editing of the SAPI (Source Access Point Identifier) message to be generated.
	DAPI, indicates the DAPI which allows editing of the DAPI (Destination Access Point Identifier) message to be generated.
Example(s)	SENS:DATA:TEL:OTN:OTU3:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:OTU3:TTI:TIM? SAPI
	Returns: 1
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:TIM?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:PM:DAPI:B

Description	This command sets the ODU1e/2e/3e1/3e2 PM DAPI generated message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:PM:DAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:PM:DAPI:B EXFO ODU DAPI
	SOUR:DATA:TEL:OTN:ODU3:E1:PM:DAPI:B?
	Returns: EXFO ODU DAPI

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:OP
SPec:B

Description	This command sets the ODU1e/2e/3e1/3e2 TCM Operator Specific Generated Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:OPSPec:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:OPSP:B32 EXFO TCM1 OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:OPSP:B32?
	Returns: EXFO TCM1 OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B32?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:OP SPec:B?

Description	This query returns the ODU1e/2e/3e1/3e2 TCM Operator Specific Generated Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:OPSP:B32 EXFO TCM1 OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:OPSP:B32?
	Returns: EXFO TCM1 OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B32

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:SAPI:B

Description	This command sets the ODU3e1/e2 TCM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > ODU3e1/e2 > TCM > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:SAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:SAPI:B16 EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:SAPI:B16?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:SAPI:B?

Description	This query returns the ODU3e1/e2 TCM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > ODU3e1/e2 > TCM > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:SAPI:B16 EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:ODU3:E1:TCM1:SAPI:B16?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:OVERwrite:ENABled

Description	This command enables/disables ODU3e1/e2 PM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > ODU3e(1/2) > PM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:OVERwrite:ENABled \<wsp>\<Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	\<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:OVERwrite:ENABled?

Description	This query returns the status of ODU3e1/e2 PM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > ODU3e(1/2) > PM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:DAPI:B

Description	This command sets the ODU1f/2f PM DAPI generated message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:DAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:PM:DAPI:B EXFO ODU DAPI
	SOUR:DATA:TEL:OTN:ODU1:F:PM:DAPI:B?
	Returns: EXFO ODU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:DAPI:B?

Description	This query returns the ODU1f/2f PM DAPI generated message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:PM:DAPI:B EXFO ODU DAPI
	SOUR:DATA:TEL:OTN:ODU1:F:PM:DAPI:B?
	Returns: EXFO ODU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:OPSPec:B

Description	This command sets the ODU1f/2f PM Operator Specific.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:OPSPec:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:PM:OPSPec:B EXFO ODU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU1:F:PM:OPSPec:B?
	Returns: EXFO ODU OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OPSPec:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:OPSPec:B?

Description	This query returns the ODU1f/2f PM Operator Specific.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:PM:OPSPec:B EXFO ODU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU1:F:PM:OPSPec:B?
	Returns: EXFO ODU OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OPSPec:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:SAPI:B

Description	This command sets the ODU1f/2f PM SAPI generated message.
	At *RST condition, this value is set to EXFO ODU SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:SAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:PM:SAPI:B EXFO ODU SAPI
	SOUR:DATA:TEL:OTN:ODU1:F:PM:SAPI:B?
	Returns: EXFO ODU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:SAPI:B?

Description	This query returns the ODU1f/2f PM SAPI generated message.
	At *RST condition, this value is set to EXFO ODU SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:PM:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:PM:SAPI:B EXFO ODU SAPI
	SOUR:DATA:TEL:OTN:ODU1:F:PM:SAPI:B?
	Returns: EXFO ODU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:DAPI:B

Description	This command sets the ODU1f/2f TCM DAPI generated message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > ODU1f/2f > TCM > DAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:DAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:DAPI:B EXFO OTU DAPI
	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:DAPI:B?
	Returns: EXFO OTU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:DAPI:B?

Description	This query returns the ODU1f/2f TCM DAPI generated message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > ODU1f/2f > TCM > DAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:DAPI:B EXFO OTU DAPI
	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:DAPI:B?
	Returns: EXFO OTU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:OPSPec:B

Description	This command sets the ODU1f/2f TCM Operator Specific Generated Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:OPSPec:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:OPSP:B EXFO TCM1 OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:OPSP:B?
	Returns: EXFO TCM1 OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:OPSPec:B?

Description	This query returns the ODU1f/2f TCM Operator Specific Generated Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:OPSP:B EXFO TCM1 OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:OPSP:B?
	Returns: EXFO TCM1 OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:SAPI:B

Description	This command sets the ODU1f/2f TCM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > ODU1f/2f > TCM > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:SAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:SAPI:B EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:SAPI:B?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:SAPI:B?

Description	This query returns the ODU1f/2f TCM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > ODU1f/2f > TCM > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:SAPI:B EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:ODU1:F:TCM1:SAPI:B?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TTI:OVERwrite:ENABled

Description	This command enables/disables ODU1f/2f PM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > PM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TTI:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TTI:OVERwrite:ENA Bled?

Description	This query returns the status of ODU1f/2f PM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > PM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:TTI:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:TTI:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:DAPI:B

Description	This command sets the ODUn PM DAPI generated message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Generated Message
	NOTE: For ODU[1..n], use appropriate digit or use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:DAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:PM:DAPI:B EXFO ODU DAPI
	SOUR:DATA:TEL:OTN:ODU3:PM:DAPI:B?
	Returns: EXFO ODU DAPI
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:DAPI:B?

Description	This query returns the ODUn PM DAPI generated message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > DAPI - Generated Message
	NOTE: For ODU[1..n], use appropriate digit or use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:PM:DAPI:B EXFO ODU DAPI
	SOUR:DATA:TEL:OTN:ODU3:PM:DAPI:B?
	Returns: EXFO ODU DAPI
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:OPSPec:B

Description	This command sets the ODUn PM Operator Specific.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > Operator Specific - Generated Message
	NOTE: For ODU[1..n], use appropriate digit or use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:OPSPec:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:PM:OPSP:B EXFO ODU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU3:PM:OPSP:B?
	Returns: EXFO ODU OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:OPSPec:B?

Description	This query returns the ODUn PM Operator Specific.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > Operator Specific - Generated Message
	NOTE: For ODU[1..n], use appropriate digit or use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:PM:OPSP:B EXFO ODU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU3:PM:OPSP:B?
	Returns: EXFO ODU OPERATOR SPECIFIC

	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B

Description	This command sets the ODUn PM SAPI generated message.
	At *RST condition, this value is set to EXFO ODU SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI - Generated Message
	NOTE: For ODU[1..n], use appropriate digit or use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:PM:SAPI:B EXFO ODU SAPI
	SOUR:DATA:TEL:OTN:ODU3:PM:SAPI:B?
	Returns: EXFO ODU SAPI
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:DAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:DAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B?

Description	This query returns the ODUn PM SAPI generated message.
	At *RST condition, this value is set to EXFO ODU SAPI.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > PM TTI Traces > SAPI - Generated Message
	NOTE: For ODU[1..n], use appropriate digit or use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:PM:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:PM:SAPI:B EXFO ODU SAPI
	SOUR:DATA:TEL:OTN:ODU3:PM:SAPI:B?
	Returns: EXFO ODU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:DAPI:B

Description	This command sets the ODU TCM DAPI generated message.
	At *RST condition, this value is set to EXFO TCM DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > TCM > DAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:DAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TCM1:DAPI:B EXFO1
	SOUR:DATA:TEL:OTN:ODU3:TCM1:DAPI:B?
	Returns: EXFO1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:DAPI:B?

Description	This query returns the ODU TCM DAPI generated message.
	At *RST condition, this value is set to EXFO TCM DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > TCM > DAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TCM1:DAPI:B EXFO1
	SOUR:DATA:TEL:OTN:ODU3:TCM1:DAPI:B?
	Returns: EXFO1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:OPSPec:B

Description	This command sets the ODUn TCM Operator Specific Generated Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:OPSPec:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TCM1:OPSP:B EXFO TCM1 OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU3:TCM1:OPSP:B?
	Returns: EXFO TCM1 OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:OPSPec:B ?

Description	This query returns the ODU1f/2f TCM Operator Specific Generated Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTUn > Traces > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TCM1:OPSP:B EXFO TCM1 OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:ODU3:TCM1:OPSP:B?
	Returns: EXFO TCM1 OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B

Description	This command sets the ODU TCM SAPI generated message.
	At *RST condition, this value is set to EXFO TCM SAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > TCM > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TCM1:SAPI:B EXFO
	SOUR:DATA:TEL:OTN:ODU3:TCM1:SAPI:B?
	Returns: EXFO
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:DAPI:B

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B?

Description	This query returns the ODU TCM SAPI generated message.
	At *RST condition, this value is set to EXFO TCM SAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > TCM > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TCM1:SAPI:B EXFO
	SOUR:DATA:TEL:OTN:ODU3:TCM1:SAPI:B?
	Returns: EXFO
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:DAPI:B
	SOURce:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:DAPI:B?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled

Description	This command enables/disables ODU PM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > ODU > PM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TTI:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:TTI:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled?

Description	This query returns the status of ODU PM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Setup > Test Configurator > OTU > Traces > ODU > PM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ODU3:TTI:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:TTI:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B

Description	This command sets the OTU1e/2e/3e1/3e2 SM DAPI Generated Message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > DAPI Generated Message
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:DAPI:B EXFO OTU DAPI
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:DAPI:B?
	Returns: EXFO OTU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B?

Description	This query returns the OTU1e/2e/3e1/3e2 SM DAPI Generated Message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > DAPI Generated Message
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:DAPI:B EXFO OTU DAPI
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:DAPI:B?
	Returns: EXFO OTU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OPSPec:B

Description	This command sets the OTU1e/2e / OTU3e1/e2 SM Operator Specific generated message.
	At *RST condition, this value is set to EXFO OTU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > Operator Specific
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OPSPec:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OPSP:B EXFO OTU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OPSP:B?
	Returns: EXFO OTU OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OPSPec:B?

Description	This query returns the OTU1e/2e / OTU3e1/e2 SM Operator Specific generated message.
	At *RST condition, this value is set to EXFO OTU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > Operator Specific
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OPSP:B EXFO OTU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OPSP:B?
	Returns: EXFO OTU OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OVERwrite:ENABled

Description	This command enables/disables OTU1e/2e / OTU3e1/e2 SM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > Overwrite
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OVERwrite:ENABled?

Description	This query returns the status of OTU1e/2e / OTU3e1/e2 SM Overwrite
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > Overwrite
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B

Description	This command sets the OTU1e/2e / OTU3e1/e2 SM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > SAPI Generated Message
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:SAPI:B EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:SAPI:B?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B

:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B?

Description	This query returns the OTU1e/2e / OTU3e1/e2 SM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Traces > OTU1e/2e / OTU3e1/e2 > SM TTI Traces > SAPI Generated Message
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:SAPI:B EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:SAPI:B?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:DAPI:B?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:DAPI:B

Description	This command sets the OTU1f/2f SM DAPI Generated Message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > DAPI Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:DAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:OTU1:F:SM:DAPI:B EXFO OTU DAPI
	SOUR:DATA:TEL:OTN:OTU1:F:SM:DAPI:B?
	Returns: EXFO OTU DAPI

:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:OVERwrite:ENABled

Description	This command enables/disables OTU1f/2f SM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:OVERwrite:ENABled?

Description	This query returns the status of OTU1f/2f SM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OTU3:E1:SM:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:SAPI:B

Description	This command sets the OTU1f/2f SM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:SAPI:B <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:OTU1:F:SM:SAPI:B EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:OTU1:F:SM:SAPI:B?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:SAPI:B?

Description	This query returns the OTU1f/2f SM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Traces > OTU1f/2f > SM TTI Traces > SAPI - Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:F:SM:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	SOUR:DATA:TEL:OTN:OTU1:F:SM:SAPI:B EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:OTU1:F:SM:SAPI:B?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SM:SAPI:B

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B[1..n]

Description	This command sets the OTU SM DAPI Generated Message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > DAPI Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B[1..n] <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:DAPI:B16 EXFO OTU DAPI
	SOUR:DATA:TEL:OTN:OTU3:SM:DAPI:B16?
	Returns: EXFO OTU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B[1..n]?

Description	This query returns the OTU SM DAPI Generated Message.
	At *RST condition, this value is set to EXFO OTU DAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > DAPI Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B[1..n]?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:DAPI:B16 EXFO OTU DAPI
	SOUR:DATA:TEL:OTN:OTU3:SM:DAPI:B16?
	Returns: EXFO OTU DAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B[1..n]

Description	This command sets the OTU SM Operator Specific generated message.
	At *RST condition, this value is set to EXFO OTU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > Operator Specific
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B[1..n] <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:OPSP:B32 EXFO OTU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:OTU3:SM:OPSP:B32?
	Returns: EXFO OTU OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B[1..n]?

Description	This query returns the OTU SM Operator Specific generated message.
	At *RST condition, this value is set to EXFO OTU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > Operator Specific
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OPSPec:B[1..n]?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:OPSP:B32 EXFO OTU OPERATOR SPECIFIC
	SOUR:DATA:TEL:OTN:OTU3:SM:OPSP:B32?
	Returns: EXFO OTU OPERATOR SPECIFIC
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B16?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled

Description	This command enables/disables OTU SM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OTU3:SM:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?

Description	This query returns the status of OTU SM Overwrite.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OTU3:SM:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:TTI:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B[1..n]

Description	This command sets the OTU SM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > SAPI Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B[1..n] <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:SAPI:B16 EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:OTU3:SM:SAPI:B16?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B16
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B16?

:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B[1..n]?

Description	This query returns the OTU SM SAPI generated message.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Setup > Test Configurator > OTU > Traces > OTU > SM TTI Traces > SAPI Generated Message
Syntax	:SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:SAPI:B[1..n]?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	SOUR:DATA:TEL:OTN:OTU3:SM:SAPI:B16 EXFO OTU SAPI
	SOUR:DATA:TEL:OTN:OTU3:SM:SAPI:B16?
	Returns: EXFO OTU SAPI
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B16
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:DAPI:B16?

FTFL/PT

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PCODe

Description	This command sets the corresponding expected payload type as hexadecimal code for OTU1e/2e rate.
	At *RST condition, this value is set to 03.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - Code
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PCODe <wsp><Code>
Parameter(s)	**Code**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the corresponding expected payload type as hexadecimal code.
Response Syntax	<Value>
Example(s)	SENS:DATA:TEL:OTN:OPU1:E:PCOD #H00
	SENS:DATA:TEL:OTN:OPU1:E:PCOD?
	Returns: 00 (the decimal form of #H00)
See Also	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PCODe?

Description	This query returns the corresponding expected payload type as hexadecimal code for OTU1e/2e rate.
	At *RST condition, this value is set to #HFE.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - Code
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PCODe?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the corresponding expected payload type code.
Example(s)	SENS:DATA:TEL:OTN:OPU1:E:PCOD #H00
	SENS:DATA:TEL:OTN:OPU1:E:PCOD?
	Returns: 00 (the decimal form of H00)
See Also	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PLM

Description	This command enables/disables the Optical Payload Unit-Payload Label Mismatch (OPU-PLM) alarm analysis for OTU1e/2e rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - OPU-PLM
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PLM <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the OPU-PLM (Optical Payload Unit-Payload Label Mismatch) alarm analysis.
	ON, enables the PLM alarm.
	OFF, disables the PLM alarm.
Response Syntax	<Code>
Example(s)	SENS:DATA:TEL:OTN:OPU1:E:PLM ON
	SENS:DATA:TEL:OTN:OPU1:E:PLM?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PLM?

Description	This query returns the status of the Optical Payload Unit-Payload Label Mismatch (OPU-PLM) alarm analysis for OTU1e/2e rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - OPU-PLM
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PLM?
Response Syntax	\<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the status of the Optical Payload Unit-Payload Label Mismatch (OPU-PLM) alarm analysis.
	1, PLM alarm analysis is enabled.
	0, PLM alarm analysis is disabled.
Example(s)	SENS:DATA:TEL:OTN:OPU1:E:PLM ON
	SENS:DATA:TEL:OTN:OPU1:E:PLM?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe

Description	This command sets the expected payload signal type to be generated for OTU1e/2e rate.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - Payload Type
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe <wsp><Payload>

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe

Parameter(s)	Payload:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Sets the expected payload signal type to be generated.

ASYNchronous: Asynchronous CBR mapping

ATM: Asynchronous Transfer Mode

BISYnch: Bit Synchronous

BSNTiming: Bit Stream No Timing

BSTiming: Bit Stream Timing

EXPerimental: Experimental mapping

FC100ODU0: FC-100 into ODU0

FC1200ODU2E: FC-1200 into ODU2e

FC200ODU1: FC-200 into ODU0

FC400: FC-400 into ODUflex

FC800: FC-800 into ODUflex

GFP1: Generic Framing Procedure

GFPEOPU2: GFP mapping into extended OPU2

IBDRMAPPING: IB DDR mapping into ODUflex

IBQDRMAPPING: IB QDR mapping into ODUflex

IBSDRMAPPING: IB SDR mapping into ODUflex

NAVailable: Not Available

NULLtest: NULL Test Signal mapping

OC12STM4ODU0: OC-12/STM-4 into ODU0

OC3STM1ODU0: OC-3/STM-1 into ODU0

ODUODTUJK: ODU Multiplex with ODTUk.ts/ODTUjk

ODUODTUKTSODTUJK: ODU Multiplex with ODTUjk

PCSCODEWORD: PCS Codeword transparent Ethernet

PRBStest: PRBS Test Signal mapping

RFSTandard: Reserved for International Standardization

RPRopriet: Reserved Codes for Proprietary

VCONcate: Virtual Concatenation

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe

Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:OTN:OPU1:E:PTYP EXP
	SENS:DATA:TEL:OTN:OPU1:E:PTYP?
	Returns: EXPERIMENTAL
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe?

Description	This query returns the expected payload signal type to be generated for OTU1e/2e rate.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - Payload Type
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe?
Response Syntax	<Payload>

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe?

Response(s)	Payload:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the injected payload signal type to be generated.
	RFSTandard, Reserved for International Standardization is selected.
	EXPerimental, Experimental mapping is selected.
	ASYNchronous, Asynchronous CBR mapping is selected.
	BISYnch, Bit Synchronous CBR mapping as the payload type is selected.
	ATM, ATM mapping is selected.
	GFP1, GFP mapping is selected.
	VCONcate, Virtual Concatenation is selected.
	PCSCTE, PCS Codeword Transparent Ethernet is selected.
	FC1200ODU2E,FC-1200 into ODU2e is selected.
	GFPEOPU2, GFP mapping into extended OPU2 is selected.
	OC3STM1ODU0, OC-3/STM-1 into ODU0 is selected.
	OC12STM4ODU0, OC-12/STM-4 into ODU0 is selected.
	FC100ODU0, FC-100 into ODU0 is selected.
	FC200ODU1, FC-200 into ODU0 is selected.
	FC400, FC-400 into ODUflex is selected.
	FC800, FC-800 into ODUflex is selected.
	BSTiming, Bit Stream with Octet Timing mapping is selected.
	BSNTiming,Bit Stream Without Octet Timing mapping is selected.
	IBDRMAPPING,IB DDR mapping into ODUflex is selected.
	IBSDRMAPPING, IB SDR mapping into ODUflex is selected.
	IBQDRMAPPINGIB QDR mapping into ODUflex is selected.
	ODUODTUKTSODTUJK, ODU Multiplex with ODTUjk is selected.
	ODUODTUJK, ODU Multiplex with ODTUk.ts/ODTUjk as the payload type is selected.
	NAVailable, Not Available is selected.
	RPRopriet, Reserved Codes for Proprietary is selected.
	NULLtest, NULL Test Signal mapping is selected.
	PRBStest, PRBS Test Signal mapping is selected.

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe?

Example(s)	SENS:DATA:TEL:OTN:OPU1:E:PTYP EXP
	SENS:DATA:TEL:OTN:OPU1:E:PTYP?
	Returns: EXPERIMENTAL

:SENSe:DATA:TELecom:OTN:OPU[1..n]:F:PTYPe?

Description	This query returns the expected payload signal type to be generated for OTU1f/2f rate.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > FTFL/PT > ODU1f/2f > PT - Payload Type
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:F:PTYPe?
Response Syntax	<Payload>

:SENSe:DATA:TELecom:OTN:OPU[1..n]:F:PTYPe?

Response(s)	Payload:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the injected payload signal type to be generated.
	RFSTANDARD, indicates Reserved for international standardization
	EXPERIMENTAL, indicates Experimental mapping
	ASYNCHRONOUS, indicates Asynchronous CBR mapping
	BISYNCH, indicates Bit synchronous CBR mapping
	ATM, indicates ATM mapping
	GFP1, indicates GFP Mapping
	VCONCATE, indicates Virtual Concatenated signal
	PCSCODEWORD, indicates PCS Codeword transparent Ethernet
	FC1200ODU2E, indicates FC-1200 into ODU2e
	GFPEOPU2, indicates GFP mapping into extended OPU2
	OC3STM1ODU0, indicates OC3/STM-1 into ODU0
	OC12STM4ODU0, indicates OC12/STM-4 into ODU0
	FC100ODU0, indicates FC-100 into ODU0
	FC200ODU1, indicates FC-200 into ODU1
	FC400, indicates FC-400 into ODUflex
	FC800, indicates FC-800 into ODUflex
	BSTIMING, indicates Bit stream with octet timing mapping
	BSNTIMING, indicates Bit stream without octet timing mapping
	IBDRMAPPING, indicates IB DDR mapping into ODUflex
	IBSDRMAPPING, indicates IB SDR mapping into ODUflex
	IBQDRMAPPING, indicates IB QDR mapping into ODUflex
	ODUODTUJK, indicates ODU multiplex with ODTUjk
	ODUODTUKTSODTUJK, indicates ODU multiplex with ODTUk.ts/ODTUjk
	NAVAILABLE, indicates Not available
	RPROPRIET, indicates Reserved codes for proprietary use
	NULLTEST, indicates NULL test signal mapping
	PRBSTEST, indicates PRBS test signal mapping

:SENSe:DATA:TELecom:OTN:OPU[1..n]:F:PTYPe?

Example(s)	SENS:DATA:TEL:OTN:OPU1:F:PTYP EXP
	SENS:DATA:TEL:OTN:OPU1:F:PTYP?
	Returns: EXPERIMENTAL
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:GOVErwrite?

Description	This query returns if an expected Payload Type has been overwritten on at least one channel for Multi-Channel OTN test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Test Configurator > OTU > PT > ODU > PT - Expected overwritten icon
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:GOVErwrite?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	1: At least one expected Payload Type has been overwritten.
	0: All expected Payload Types are the same as the Global expected Payload Type.
Example(s)	SENS:DATA:TEL:OTN:OPU100:GOVE?
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SENSe:DATA:TELecom:OTN:OPU[1..n]:CHAN
	SENSe:DATA:TELecom:OTN:OPU[1..n]:CHAN?

	SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHA?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe

Description	This command sets the expected Payload Type as hexadecimal code.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT - Expected Code
	Navigation Path: Results > FTFL/PT > ODU > PT - Expected Code
	In Multi-Channel OTN, when accessing an OPU LO,
	the channel must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]CHANnel.
	The expected Payload Type can also be set for all channels by using SENS:DATA:TEL:OTN:OPU[1..n]:ACHAnnel.
	In FlexO BERT, when accessing an OPU LO,
	the client ID must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent
	The expected Payload Type can also be set for all clients by using SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe <wsp><Code>
Parameter(s)	**Code**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the corresponding expected Payload Type as hexadecimal code.

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe

Response Syntax	<Set>
Example(s)	OTN BERT:
	SENS:DATA:TEL:OTN:OPU1:PCOD #H00
	SENS:DATA:TEL:OTN:OPU1:PCOD?
	Returns: 0 (the decimal form of #H00)
	For Multi-Channel OTN:
	SENS:DATA:TEL:OTN:OPU100:ACHA ON
	SENS:DATA:TEL:OTN:OPU100:PCOD #H00
	SENS:DATA:TEL:OTN:OPU100:PCOD?
	Returns: 0 (the decimal form of #H00)

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

Description	This query returns the expected Payload Type as hexadecimal code.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT - Expected Code
	Navigation Path: Results > FTFL/PT > ODU > PT- ExpectedCode
	In Multi-Channel OTN, when accessing an OPU LO,
	the channel must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]CHANnel.
	The global expected Payload Code can also be retrieved by using SENS:DATA:TEL:OTN:OPU[1..n]:ACHAnnel.
	In FlexO BERT, when accessing an OPU LO,
	the client ID must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent
	The global expected Payload Code can also be retrieved by using SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?
Response Syntax	<Code>

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

Response(s)	Code:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the corresponding expected Payload Type as decimal code.
	The values are from 0 to 255.
Example(s)	OTN BERT:
	SENS:DATA:TEL:OTN:OPU1:PCOD #H00
	SENS:DATA:TEL:OTN:OPU1:PCOD?
	Returns: 0 (the decimal form of #H00)
	For Multi-Channel OTN:
	SENS:DATA:TEL:OTN:OPU100:ACHA ON
	SENS:DATA:TEL:OTN:OPU100:PCOD #H00
	SENS:DATA:TEL:OTN:OPU100:PCOD?
	Returns: 0 (the decimal form of #H00)

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PLM

Description	This command enables/disables the state of Optical Payload Unit-Payload Label Mismatch (OPU-PLM) alarm analysis for the instrument.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT - OPU-PLM
	Navigation Path: Results > FTFL/PT > ODU > PT - OPU-PLM
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:PLM <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the OPU-PLM (Optical Payload Unit-Payload Label Mismatch) alarm analysis.
	ON, enables the PLM alarm.
	OFF, disables the PLM alarm.
Response Syntax	<Code>
Example(s)	OTN BERT:
	SENS:DATA:TEL:OTN:OPU1:PLM ON
	SENS:DATA:TEL:OTN:OPU1:PLM?
	Returns: 1
	For Multi-Channel OTN:
	SENS:DATA:TEL:OTN:OPU100:ACHA ON
	SENS:DATA:TEL:OTN:OPU100:PLM ON
	SENS:DATA:TEL:OTN:OPU100:PLM?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PLM?

Description	This query returns the state of Optical Payload Unit-Payload Label Mismatch (OPU-PLM) alarm analysis for the instrument.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT - OPU-PLM
	Navigation Path: Results > FTFL/PT > ODU > PT - OPU-PLM
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:PLM?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Optical Payload Unit-Payload Label Mismatch (OPU-PLM) alarm analysis.
	1, PLM alarm analysis is enabled.
	0, PLM alarm analysis is disabled.
Example(s)	OTN BERT:
	SENS:DATA:TEL:OTN:OPU1:PLM ON
	SENS:DATA:TEL:OTN:OPU1:PLM?
	Returns: 1
	For Multi-Channel OTN:
	SENS:DATA:TEL:OTN:OPU100:ACHA ON
	SENS:DATA:TEL:OTN:OPU100:PLM ON
	SENS:DATA:TEL:OTN:OPU100:PLM?
	Returns: 1

	the client ID must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent
	The expected Payload Type can also be set for all clients by using SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:PTYPe <wsp><Payload Type>

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PTYPe

Parameter(s)	Payload Type:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Sets the expected Payload Type.

_1485_1001OPU1: (1.485/1.001) Gbit/s SDI mapping into OPU1

_1485OPU1: 1.485 Gbit/s SDI mapping in to OPU1

_200GBASER: 200GBASE-R mapping into OPUflex

_25GBASER: 25GBASE-R mapping into OPUflex

_2970_1001OPUFLEX: (2.970/1.001) Gbit/s SDI mapping into OPUflex

_2970OPUFLEX: 2.970 Gbit/s SDI mapping into OPUflex

_400GBASER: 400GBASE-R mapping into OPUflex

ASYNchronous: Asynchronous CBR mapping

ATM: ATM mapping

BISYnch: Bit synchronous CBR mapping

BSNTiming: Bit stream without octet timing mapping

BSTiming: Bit stream with octet timing mapping

DVBASIOPU0: DVB_ASI mapping into OPU0

EXPerimental: Experimental mapping

FC100ODU0: FC-100 into ODU0

FC1200ODU2E: FC-1200 into ODU2e

FC1600: FC-1600 mapping into OPUflex

FC200ODU1: FC-200 into ODU1

FC3200: FC-3200 mapping into OPUflex

FC400: FC-400 into ODUflex

FC800: FC-800 into ODUflex

FLEXEAWARE: FlexE aware (partial rate) mapping into OPUflex

FLEXECLIENT: FlexE Client mapping into OPUflex

GFP1: GFP Mapping

GFPEOPU2: GFP mapping into extended OPU2

:SENSe:DATA:TELecom:OTN:OPU[1..n]:PTYPe

Parameter(s)	
	IBDRMAPPING: IB DDR mapping into ODUflex
	IBQDRMAPPING: IB QDR mapping into ODUflex
	IBSDRMAPPING: IB SDR mapping into ODUflex
	NAVailable: Not available
	NULLtest: NULL test signal mapping
	OC12STM4ODU0: OC12/STM-4 into ODU0
	OC3STM1ODU0: OC3/STM-1 into ODU0
	ODUODTUCNTS: ODU multiplex with ODTUCn.ts
	ODUODTUJK: ODU multiplex with ODTUjk
	ODUODTUKTSODTUJK: ODU multiplex with ODTUk.ts/ODTUjk
	PCSCODEWORD: PCS Codeword transparent Ethernet
	PRBStest: PRBS test signal mapping
	RFSTandard: Reserved for international standardization
	RPRopriet: Reserved codes for proprietary use
	SBCONESCONOPU0: SBCON/ESCON mapping into OPU0
	SDIMAPPING: SDI mapping into OPU0
	VCONcate: Virtual Concatenated signal

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE

Description	This command sets the FTFL Fault Indication code to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Code
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE <wsp><Ftfl>, <Code>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Code:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the FTFL Fault Indication Code to be generated.
Response Syntax	<Payload Type>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:CODE FORW,#H01
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:CODE? FORW
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE?

Description	This query returns the FTFL Fault Indication code to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Code
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the selection of the Fault Type Fault Location (FTFL) fault indication code to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:CODE FORW,#H01
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:CODE? FORW
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:IDENtifier

Description	This command sets the FTFL Operator Identifier to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Operator Identifier
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:IDENtifier <wsp><Ftfl>, <Identifier>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Identifier:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the operator identifier to be generated.
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IDEN FORW,exfo
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IDEN? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:IDENtifier?

Description	This query returns the FTFL Operator Identifier to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Operator Identifier
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:IDENtifier? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Identifier>
Response(s)	**Identifier**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the value of the Fault Type Fault Location (FTFL) Operator Identifier (bytes 1 to 9 for forward, byte 129 to 137 for backward) to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IDEN FORW,exfo
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IDEN? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication

Description	This command sets the FTFL Fault Indication message to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to NFAult.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Fault Indication
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication <wsp><Ftfl>, <Indication>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Indication:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the FTFL Fault Indication message to be generated.
	NFAult: No Fault
	RESERVED: Reserved
	SFAil: Signal Fail
	SDEgraDe: Signal Degraded
Response Syntax	<Identifier>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IND FORW,SFA
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IND? FORW
	Returns: SFAIL
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDicati on?

Description	This query returns the FTFL Fault Indication message to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to NFAult.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Fault Indication
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Indication>
Response(s)	**Indication**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the FTFL Fault Indication message to be generated.
	NFAULT, No Fault (NFAULT) is selected as FTFL Fault Indication message.
	SFAIL, Signal Fail (SFAIL) is selected as FTFL Fault Indication message.
	SDEGRADE, Signal Degraded (SDEGRADE) is selected as FTFL Fault Indication message.
	RESERVED, Reserved is selected as FTFL Fault Indication message.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IND FORW,SFA
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:IND? FORW
	Returns: SFAIL
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OPSPec

Description	This command sets the FTFL Operator Specific to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Operator Specific
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OPSPec <wsp><Ftfl>, <Specific>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Specific:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the operator specific to be generated.
Response Syntax	<Indication>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OPSP FORW,exfo
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OPSP? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OPSPec ?

Description	This query returns the FTFL Operator Specific to be generated for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU3e(1/2) > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Operator Specific
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OPSPec? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Specific>
Response(s)	**Specific**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the value of operator specific (bytes 10 to 127 for forward, byte 138 to 255 for backward) to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OPSP FORW,exfo
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OPSP? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OVERwrite:ENABled

Description	This command enables/disables the Fault Type Fault Location (FTFL) Overwrite feature for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU1e/2e / ODU3e1/e2 > FTFL - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Specific>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OVERwrite:ENABled?

Description	This query returns the status of Fault Type Fault Location (FTFL) Overwrite feature for OTU1e/2e / OTU3e1/E2 rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU1e/2e / ODU3e1/e2 > FTFL - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:CODE

Description	This command sets the FTFL Fault Indication code to be generated for OTU1f/2f rate.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Code
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:CODE <wsp><Ftfl>, <Code>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Code:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the FTFL Fault Indication Code to be generated.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:CODE FORW,#H01
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:CODE? FORW
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:CODE?

Description	This query returns the FTFL Fault Indication code to be generated for OTU1f/2f rate.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Code
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:CODE? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the selection of the Fault Type Fault Location (FTFL) fault indication code to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:CODE FORW,#H01
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:CODE? FORW
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:IDENtifier

Description	This command sets the FTFL Operator Identifier to be generated for OTU1f/2f rate.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Operator Identifier
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:IDENtifier <wsp><Ftfl>, <Identifier>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Identifier:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the operator identifier to be generated.
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IDEN FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IDEN? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:IDENtifier?

Description	This query returns the FTFL Operator Identifier to be generated for OTU1f/2f rate.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Operator Identifier
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:IDENtifier? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Identifier>
Response(s)	**Identifier**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the value of the Fault Type Fault Location (FTFL) Operator Identifier (bytes 1 to 9 for forward, byte 129 to 137 for backward) to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IDEN FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IDEN? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:INDication

Description	This command sets the FTFL Fault Indication message to be generated for OTU1f/2f rate.
	At *RST condition, this value is set to NFAult.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Fault Indication
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:INDication <wsp><Ftfl>, <Indication>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Indication:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the FTFL Fault Indication message to be generated.
	NFAult: No Fault
	SFAil: Signal Fail
	SDED: Signal Degraded
	RESERVED: Reserved
Response Syntax	<Identifier>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IND FORW,SFA
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IND? FORW
	Returns: SFAIL
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:INDication?

Description	This query returns the FTFL Fault Indication message to be generated for OTU1f/2f rate.
	At *RST condition, this value is set to NFAult.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Fault Indication
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:INDication? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Indication>
Response(s)	**Indication**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the FTFL Fault Indication message to be generated.
	NFAULT, No Fault (NFAULT) is selected as FTFL Fault Indication message.
	SFAIL, Signal Fail (SFAIL) is selected as FTFL Fault Indication message.
	SDEGRADE, Signal Degraded (SDEGRADE) is selected as FTFL Fault Indication message.
	RESERVED, Reserved is selected as FTFL Fault Indication message.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IND FORW,SFA
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:IND? FORW
	Returns: SFAIL
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OPSPec

Description	This command sets the FTFL Operator Specific to be generated for OTU1f/2f rate.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Operator Specific
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OPSPec <wsp><Ftfl>, <Specific>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Specific:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the operator specific to be generated.
Response Syntax	<Indication>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:OPSP FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:OPSP? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OPSPec?

Description	This query returns the FTFL Operator Specific to be generated for OTU1f/2f rate.
	At *RST condition, this value is set to EXFO ODU OPERATOR SPECIFIC.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > FTFL - Operator Specific
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OPSPec? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU Fault Type Fault Location (FTFL).
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Specific>
Response(s)	**Specific**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the value of operator specific (bytes 10 to 127 for forward, byte 138 to 255 for backward) to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:OPSP FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:F:FTFL:OPSP? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OVERwrite:ENABled

Description	This command enables/disables the Fault Type Fault Location (FTFL) Overwrite feature for OTU1f/2f rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Specific>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OVERwrite:ENABled?

Description	This query returns the status of Fault Type Fault Location (FTFL) Overwrite feature for OTU1f/2f rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU1e/2e / ODU3e1/E2 > FTFL - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:OVERwrite:ENABled?
Response Syntax	\<Status\>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:E1:FTFL:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE

Description	This command sets the selection of the Fault Type Fault Location (FTFL) Fault Indication code to be generated.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Code
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE <wsp><Ftfl>, <Code>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU (Optical Channel Data Unit) FTFL (Fault Type Fault Location) to be generated.
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Code:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the selection of the Fault Type Fault Location (FTFL) fault indicator code to be generated.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:CODE FORW,#H01
	SOUR:DATA:TEL:OTN:ODU1:FTFL:CODE? FORW
	Returns: 1 (the decimal form of #01H)
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication
	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE?

Description	This query returns the selection of the Fault Type Fault Location (FTFL) Fault Indication code to be generated. At *RST condition, this value is set to 0. Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Code
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE? <wsp><Ftfl>
Parameter(s)	**Ftfl**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the CONFig of the forward and backward ODU (Optical Channel Data Unit) FTFL (Fault Type Fault Location) to be generated. FORWard, sets the Forward CONFig. BACKward, sets the Backward CONFig.
Response Syntax	<Code>
Response(s)	**Code**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the selection of the Fault Type Fault Location (FTFL) fault indicator code to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:CODE FORW,#H01 SOUR:DATA:TEL:OTN:ODU1:FTFL:CODE? FORW Returns: 1 (the decimal form of #01H)
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier

Description	This command sets the Fault Type Fault Location (FTFL) Operator Identifier to be generated.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Operator Identifier
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier <wsp><Ftfl>, <Identifier>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU (Optical Channel Data Unit) FTFL (Fault Type Fault Location) to be generated.
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Identifier:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the operator identifier to be generated. A maximum of 9 characters are allowed.
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:IDEN FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:FTFL:IDEN? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication
	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier?

Description	This query returns the Fault Type Fault Location (FTFL) Operator Identifier to be generated.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Operator Identifier
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU (Optical Channel Data Unit) FTFL (Fault Type Fault Location) to be generated.
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Identifier>
Response(s)	**Identifier**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the value of the Fault Type Fault Location (FTFL) Operator Identifier (bytes 1 to 9 for forward, byte 129 to 137 for backward) to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:IDEN FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:FTFL:IDEN? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication
	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication

Description	This command sets the selection of the Fault Type Fault Location (FTFL) Fault Indication message to be generated.
	At *RST condition, this value is set to NFAult.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Fault Indication
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication <wsp><Ftfl>, <Indication>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU (Optical Channel Data Unit) FTFL (Fault Type Fault Location) to be generated.
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Indication:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the fault indication of the Fault Type Fault Location (FTFL) fault indicator message to be generated.
	NFAult: No Fault
	SFAil: Signal Fail
	SDED: Signal Degraded
	RESERVED: Reserved
Response Syntax	<Identifier>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:IND FORW,SFA
	SOUR:DATA:TEL:OTN:ODU1:FTFL:IND? FORW
	Returns: SFAIL
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier
	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

Description	This query returns the selection of the Fault Type Fault Location (FTFL) Fault Indication message to be generated.
	At *RST condition, this value is set to NFAult.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Fault Indication
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU (Optical Channel Data Unit) FTFL (Fault Type Fault Location) to be generated.
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Indication>
Response(s)	**Indication**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Fault Type Fault Location (FTFL) Fault Indication message to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:IND FORW,SFA
	SOUR:DATA:TEL:OTN:ODU1:FTFL:IND? FORW
	Returns: SFAIL
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier
	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec

Description	This command sets the Fault Type Fault Location (FTFL) Operator Specific to be generated.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Operator Specific
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec <wsp><Ftfl>, <Specific>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU (Optical Channel Data Unit) FTFL (Fault Type Fault Location) to be generated.
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
	Specific:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the operator specific to be generated. A maximum of 118 characters are allowed.
Response Syntax	<Indication>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:OPSP FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:FTFL:OPSP? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication
	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec?

Description	This query returns the Fault Type Fault Location (FTFL) Operator Specific to be generated.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Opertor Specific
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the CONFig of the forward and backward ODU FTFL (Fault Type Fault Location) to be generated.
	FORWard, sets the Forward CONFig.
	BACKward, sets the Backward CONFig.
Response Syntax	<Specific>
Response(s)	**Specific**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the value of operator specific (bytes 10 to 127 for forward, byte 138 to 255 for backward) to be generated.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:FTFL:OPSP FORW,exfo
	SOUR:DATA:TEL:OTN:ODU1:FTFL:OPSP? FORW
	Returns: exfo
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OVERwrite:ENABled

Description	This command enables/disables the Fault Type Fault Location (FTFL) Overwrite feature.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Specific>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:FTFL:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:FTFL:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OVERwrite:ENABled?

Description	This query returns the status of Fault Type Fault Location (FTFL) Overwrite feature.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > FTFL - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ODU3:FTFL:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:ODU3:FTFL:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SM:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PCODe

Description	This command sets the corresponding injected payload type as hexadecimal code for OTU1e/2e rate. At *RST condition, this value is set to #H00. Navigation Path: Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - Code
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PCODe <wsp><Code>
Parameter(s)	**Code**: The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element. Sets the corresponding injected payload type in hexadecimal code. The values are 00 to FF.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:OPU1:E:PCOD #H00 SOUR:DATA:TEL:OTN:OPU1:E:PCOD? Returns: 00 (the decimal form of H00)
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PCODe?

Description	This query returns the corresponding injected payload type as hexadecimal code for OTU1e/2e rate.
	At *RST condition, this value is set to #H03.
	Navigation Path: Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - Code
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PCODe?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the corresponding injected payload type as decimal code.
	The values are 00 to 255.
Example(s)	SOUR:DATA:TEL:OTN:OPU1:E:PCOD #H00
	SOUR:DATA:TEL:OTN:OPU1:E:PCOD?
	Returns: 00 (the decimal form of H00)
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe

Description	This command sets the injected payload signal type to be generated for OTU1e/2e rate.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU1e/2e > FTFL/PT > ODU1e/2e > PT - Payload Type
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe <wsp><Payload>

:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe

Parameter(s)

Payload:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Sets the expected payload signal type to be generated.

RFSTandard: the Reserved for International Standardization

EXPerimental the Experimental mapping.

ASYNchronous: the Asynchronous CBR mapping.

BISYnch: the Bit Synchronous CBR mapping.

ATM: the ATM mapping

GFP1: the GFP mapping.

VCONcate: the Virtual Concatenation

PCSCODEWORD: the PCS Codeword Transparent Ethernet

FC1200ODU2E: the FC-1200 into ODU2e

GFPEOPU2: the GFP mapping into extended OPU2

OC3STM1ODU0: OC-3/STM-1 into ODU0

OC12STM4ODU0: OC-12/STM-4 into ODU0

FC100ODU0: the FC-100 into ODU0

FC200ODU1: the s FC-200 into ODU1

FC400: the FC-400 into ODUflex

FC800: the FC-800 into ODUflex

BSTiming: the Bit Stream Timing.

BSNTiming: Bit Stream No Timing.

IBSDRMAPPING: IB SDR mapping into ODUflex

IBDRMAPPING: IB DDR mapping into ODUflex

IBQDRMAPPING: IB QDR mapping into ODUflex

ODUODTUKTSODTUJK: ODU Multiplex with ODTUjk

ODUODTUJK: ODU Multiplex with ODTUk.ts/ODTUjk

NAVailable: Not Available.

RPRopriet: Reserved Codes for Proprietary Usec

NULLtest: NULL Test Signal mapping

PRBStest: PRBS Test Signal mapping

:SOURce:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe

Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:OTN:OPU1:E:PTYP EXP
	SOUR:DATA:TEL:OTN:OPU1:E:PTYP?
	Returns: EXPERIMENTAL

	IBQDRMAPPING, indicates IB QDR mapping into ODUflex
	ODUODTUJK, indicates ODU multiplex with ODTUjk
	ODUODTUKTSODTUJK, indicates ODU multiplex with ODTUk.ts/ODTUjk
	NAVAILABLE, indicates Not available
	RPROPRIET, indicates Reserved codes for proprietary use
	NULLTEST, indicates NULL test signal mapping
	PRBSTEST, indicates PRBS test signal mapping

:SOURce:DATA:TELecom:OTN:OPU[1..n]:F:PTYPe?

Example(s)	SOUR:DATA:TEL:OTN:OPU1:F:PTYP EXP
	SOUR:DATA:TEL:OTN:OPU1:F:PTYP?
	Returns: EXPERIMENTAL
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PTYPe
	SENSe:DATA:TELecom:OTN:OPU[1..n]:PTYPe?

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe

Description	This command sets the corresponding injected payload type as hexadecimal code.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > PT- Payload Type
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe <wsp><Code>
Parameter(s)	**Code**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the corresponding injected payload type in hexadecimal code.
	The values are 00 to FF.
Response Syntax	<Payload>
Example(s)	SOUR:DATA:TEL:OTN:OPU1:PCOD #H00
	SOUR:DATA:TEL:OTN:OPU1:PCOD?
	Returns: 00 (the decimal form of H00)
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe?

Description	This query returns the corresponding injected payload type as hexadecimal code.
	At *RST condition, this value is set to #H03.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > PT- Payload Type
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the corresponding injected payload type as decimal code.
	The values are 00 to 255.
Example(s)	SOUR:DATA:TEL:OTN:OPU1:PCOD #H00
	SOUR:DATA:TEL:OTN:OPU1:PCOD?
	Returns: 00 (the decimal form of #H00)
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe
	SENSe:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe

Description	This command sets the injected payload signal type to be generated.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT- Payload Type
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe <wsp><Payload Type>

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe

Parameter(s)	
	Payload Type:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Sets the injected payload signal type to be generated.

_1485_1001OPU1: (1.485/1.001) Gbit/s SDI mapping into OPU1

_1485OPU1: 1.485 Gbit/s SDI mapping in to OPU1

_200GBASER: 200GBASE-R mapping into OPUflex

_25GBASER: 25GBASE-R mapping into OPUflex

_2970_1001OPUFLEX: (2.970/1.001) Gbit/s SDI mapping into OPUflex

_2970OPUFLEX: 2.970 Gbit/s SDI mapping into OPUflex

_400GBASER: 400GBASE-R mapping into OPUflex

ASYNchronous: Asynchronous CBR mapping

ATM: ATM mapping

BISYnch: Bit synchronous CBR mapping

BSNTiming: Bit stream without octet timing mapping

BSTiming: Bit stream with octet timing mapping

DVBASIOPU0: DVB_ASI mapping into OPU0

EXPerimental: Experimental mapping

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe:OVERwrite:ENABled

Description	This command enables/disables the Payload Type Overwrite feature.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe:OVERwrite:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:OTN:OPU3:PTYP:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OPU3:PTYP:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:FTFL:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe:OVERwrite:ENABled?

Description	This query returns the status of Payload Type Overwrite feature.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT - Overwrite
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe:OVERwrite:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:OPU3:PTYP:OVER:ENAB ON
	SOUR:DATA:TEL:OTN:OPU3:PTYP:OVER:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:FTFL:OVERwrite:ENABled

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe?

Description	This query returns the injected payload signal type to be generated.
	At *RST condition, this value is set to PRBStest.
	Navigation Path: Setup > Test Configurator > OTU > FTFL/PT > ODU > PT- Payload Type
Syntax	:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe?
Response Syntax	<Payload>

:SOURce:DATA:TELecom:OTN:OPU[1..n]:PTYPe?

Response(s)	Payload:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the expected payload signal type to be generated.

_1485_1001OPU1: (1.485/1.001) Gbit/s SDI mapping into OPU1

_1485OPU1: 1.485 Gbit/s SDI mapping in to OPU1

MAC/IP/UDP

:SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPVersion

Description	This command sets the Destination IPv6 address. At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000. Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > IPv6 Destination Address Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > IPv6 Destination Address
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPVersion <wsp><Number>, <Address>
Parameter(s)	**Number**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Depending on the test application, selects a number as follows: - 1 to 16 Streams for Traffic Gen & Mon - 1 to 10 Services for EtherSAM **Address**: The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element. Sets the Destination IPv6 address.
Response Syntax	<Llayer>
Example(s)	SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPV 1, FE80:0000:0000:0000:0200:00FF:FE00:0000 SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPV? 1 Returns: 0000:0000:0000:0000:0000:0000:0000:0000
See Also	SENSe:DATA:TELecom:ETHernet:STReam:FILTer:SOURce:IPV?

:SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPVersion?

Description	This query returns the Destination IPv6 address.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > IPv6 Destination Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > IPv6 Destination Address
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPVersion? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Destination IPv6 address.
Example(s)	SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPV 1, FE80:0000:0000:0000:0200:00FF:FE00:0000
	SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPV? 1
	Returns: 0000:0000:0000:0000:0000:0000:0000:0000
See Also	SENSe:DATA:TELecom:ETHernet:STReam:FILTer:SOURce:IPV

:SENSe:DATA:TELecom:ETHernet:STReam:FLABel:IPVersion

Description	This command sets the IPv6 Flow Label.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Flow Label
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Flow Label
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:FLABel:IPVersion <wsp><Stream>, <Flow Label>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Flow Label:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the IPv6 Flow Label.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Address>
Example(s)	SENS:DATA:TEL:ETH:STR:FLAB:IPV 1, 20
	SENS:DATA:TEL:ETH:STR:FLAB:IPV? 1
	Returns: 20
See Also	SENSe:DATA:TELecom:ETHernet:STReam:FILTer:DESTination:IPV?

:SENSe:DATA:TELecom:ETHernet:STReam:FLABel:IPVersion?

Description	This query returns the IPv6 Flow Label.
	At *RST condition, this value is set to 0
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Flow Label
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Flow Label
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:FLABel:IPVersion? <wsp><Stream>,[<Flow Label>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Flow Label:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the current flow label is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Flabel>
Response(s)	**Flabel**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the IPv6 Flow Label.
Example(s)	SENS:DATA:TEL:ETH:STR:FLAB:IPV 1, 20
	SENS:DATA:TEL:ETH:STR:FLAB:IPV? 1
	Returns: 21
See Also	SENSe:DATA:TELecom:ETHernet:STReam:FILTer:DESTination:IPV

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID

Description	This command sets the Virtual Local Area Network (VLAN) Identification for frame of the selected service, direction, and stack. At *RST condition, this value is set to 2. Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID <wsp><Service>, <Direction>, <Stacked>, <Id>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Direction**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. (For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1) LTORemote: Local to Remote RTOLocal: Remote to Local P1TOP2: P1 -TO-P2 P2TOP1: P2 -TO-P1 **Stacked**: The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the VLAN stacked. **Id**: The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Select the VLAN ID. MAXimum: Biggest supported value MINimum: Smallest supported value DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID

Response Syntax	<Flabel>
Example(s)	SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:VLAN 1, LTOR,ON
	SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:VLAN:STAC 1, LTOR,2
	SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:VLAN:ID 1, LTOR,1, 50
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:VLAN:TYPE

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit

Description	This command enables/disables the user Virtual Local Area Network (VLAN) eligible bit for frame parameters for selected service, direction, and stack.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit <wsp><Service>, <Direction>, <Stacked>, <Set>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Stacked:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
	Set:
	The program data syntax for the fourth parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enable or disable the eligible bit for the specific VLAN Id.
	ON: Enabled
	OFF: Disabled

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit

Response Syntax	<Flabel>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,2
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit 1, LTOR,2,ON
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:VLAN:STAC

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit?

Description	This query returns the status of user VLAN eligible bit for frame parameters for selected service, direction, and stack.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit? <wsp><Service>, <Direction>, <Stacked>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Stacked:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Status>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit?

Response(s)	**Status**: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the status of eligible bit. 1, eligible bit is enabled. 0, eligible bit is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,2 SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit 1, LTOR,2,ON SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID:ELIGiblebit? 1, LTOR,2 Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:VLAN:STAC?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID?

Description	This query returns the available VLAN ID for frame of the selected service, direction, and stack.
	At *RST condition, this value is set to 2.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID? <wsp><Service>, <Direction>, <Stacked>,[<Id>]
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Stacked:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
	Id:
	The program data syntax for the fourth parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the VLAN ID.
	This parameter is optional. If no token is specified, the current VLAN ID value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:ID?

Response Syntax	\<Id\>
Response(s)	**Id**: The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA\> element. Returns the value of VLAN identification.
Example(s)	SOURce:DATA:TEL:ETH:ESAM:CONF:SERV:VLAN 1, LTOR,ON SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:VLAN:STAC 1, LTOR,2 SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:VLAN:ID 1, LTOR,1, 50 SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:VLAN:ID? 1, LTOR,1 Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority

Description	This command sets the priority of the Virtual Local Area Network (VLAN) identification for frame parameters for selected service, direction, and stack.

At *RST condition, this value is set to 0.

Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > Priority

Syntax

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority <wsp><Service>, <Direction>, <Stacked>, <Priority>

Parameter(s)

Service:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Selects the Service number 1 or 10.

Direction:

The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the Direction.

(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)

LTORemote: Local to Remote

RTOLocal: Remote to Local

P1TOP2: P1 -TO-P2

P2TOP1: P2 -TO-P1

Stacked:

The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Selects the VLAN stacked.

Priority:

The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Set the priority of the stream.

MAXimum: Biggest supported value

MINimum: Smallest supported value

DEFault: Deault value

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority

Response Syntax	<Id>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,2
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority 1, LTOR,2,5
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority?

Description	This query returns the priority of the Virtual Local Area Network (VLAN) identification for frame parameters for selected service, direction, and stack.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > Priority
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority? <wsp><Service>, <Direction>, <Stacked>,[<Priority>]

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority?

Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Stacked:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
	Priority:
	The program data syntax for the fourth parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set the priority of the stream.
	MAXimum is used to retrieve the instrument's greatest supported Virtual Local Area Network (VLAN) priority Value.
	MINimum is used to retrieve the instrument's smallest supported Virtual Local Area Network (VLAN) priority Value.
	This parameter is optional. If no token is specified, the current priority of the Virtual Local Area Network (VLAN) value is returned.
	DEFault is used to retrieve the instrument's default supported Virtual Local Area Network (VLAN) priority Value.
Response Syntax	<Priority>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority?

Response(s)	**Priority**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns value of VLAN priority.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,2
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority 1, LTOR,2,5
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:PRIority? 1, LTOR,2
	Returns: 5
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:BURSt:PARameters:BIRFrame?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE

Description	This command sets the type of Virtual Local Area Network (VLAN) identification for frame parameters specific VLAN service, direction, and stack.
	At *RST condition, this value is set to V8100.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > Type
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE <wsp><Service>, <Direction>, <Stacked>, <Idtype>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Stacked:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
	Idtype:
	The program data syntax for the fourth parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects VLAN type.
	V8100: VLAN type 8100.
	V88A8: VLAN type 88A8.
	V9100: VLAN type 9100.
	V9200: VLAN type 9200.
	V9300: VLAN type 9300.

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE

Response Syntax	<Priority>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,2
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE 1, LTOR,1, V88A8
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE? 1, LTOR,1
	Returns: V88A8
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE?

Description	This command sets the type of Virtual Local Area Network (VLAN) identification for frame parameters specific VLAN service, direction, and stack.
	At *RST condition, this value is set to V8100.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > VLAN > Type
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE? <wsp><Service>, <Direction>, <Stacked>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Stacked:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Idtype>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE?

Response(s)	Idtype:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Virtual Local Area Network (VLAN) type.
	V8100, VLAN type 8100 is selected.
	V88A8, VLAN type 88A8 is selected.
	V9100, VLAN type 9100 is selected.
	V9200, VLAN type 9200 is selected.
	V9300, VLAN type 9300 is selected.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,2
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE 1, LTOR,1, V88A8
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:TYPE? 1, LTOR,1
	Returns: V88A8
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC?

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination

Description	This command sets the Media Access Control (MAC) destination address of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > MAC > Destination MAC Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MAC > Destination MAC Address
	Navigation Path: FlexE BERT > Setup > Test Configurator > Clients > MAC > Destination MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination <wsp><Number>, <Address>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 to n Client ID for FlexE BERT
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the destination MAC address.
Response Syntax	<Idtype>
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:DEST 1, FE:FE:FE:00:00:00
	SOUR:DATA:TEL:ETH:STR:ADDR:DEST? 1
	Returns: FE:FE:FE:00:00:00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination?
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:FLOoding

Description	This command enables the Destination MAC Flooding.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > MAC > Destination Flooding
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:FLOoding <wsp><Stream>, <Set>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Destination MAC Flooding.
	ON, enables the Destination MAC Flooding.
	OFF, disables the Destination MAC Flooding.
Response Syntax	<Idtype>
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:DEST:FLO 1,ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce?

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:FLOoding?

Description	This query returns status of Destination MAC Flooding.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > MAC > Destination Flooding
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:FLOoding? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Destination MAC Flooding.
	1, Destination MAC Flooding is enabled.
	0, Destination MAC Flooding is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:DEST:FLO 1,ON
	SOUR:DATA:TEL:ETH:STR:ADDR:DEST:FLO? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP

Description	This command sets the IPv4 destination address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Destination IP Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Destination IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP <wsp><Number>, <Address>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Set the destination IP address.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:DEST:IP 1, 1.1.1.1
	SOUR:DATA:TEL:ETH:STR:ADDR:DEST:IP? 1
	Returns: 1.1.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:ETHernet:STRearm:ADDRess:DESTination:IP?

Description	This query returns the IPv4 destination address. At *RST condition, this value is set to 0.0.0.0. Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Destination IP Address Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Destination IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STRearm:ADDRess:DESTination:IP? <wsp><Number>
Parameter(s)	**Number**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Depending on the test application, selects a number as follows: - 1 to 16 Streams for Traffic Gen & Mon - 1 to 10 Services for EtherSAM
Response Syntax	<Address>
Response(s)	**Address**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns the IP destination address in the form of a string.
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:DEST:IP 1, 1.1.1.1 SOUR:DATA:TEL:ETH:STR:ADDR:DEST:IP? 1 Returns: 1.1.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STRearm:ADDRess:DESTination SOURce:DATA:TELecom:ETHernet:STRearm:ADDRess:DESTination:IP

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination?

Description	This query returns the Media Access Control (MAC) destination address of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > MAC > Destination MAC Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MAC > Destination MAC Address
	Navigation Path: FlexE BERT > Setup > Test Configurator > Clients > MAC > Destination MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 to n Client ID for FlexE BERT
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the MAC destination address in the form of a string.
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:DEST 1, FE:FE:FE:00:00:00
	SOUR:DATA:TEL:ETH:STR:ADDR:DEST? 1
	Returns: FE:FE:FE:00:00:00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce?

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:FLOoding:RANGe

Description	This command sets the Source/Destination MAC Flooding range.
	At *RST condition, this value is set to 4096.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > MAC > Flooding Range
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:FLOoding:RANGe <wsp><Stream>, <Range>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Range:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Source/Destination MAC Flooding range.
	Range is from 2 to 4096.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:FLO:RANG 1,64
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination?

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:FLOoding:RANGe?

Description	This query returns the Source/Destination MAC Flooding range.
	At *RST condition, this value is set to 4096.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > MAC > Flooding Range
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:FLOoding:RANGe? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Source/Destination MAC Flooding range.
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:FLO:RANG 1,64
	SOUR:DATA:TEL:ETH:STR:ADDR:FLO:RANG? 1
	Returns: 64
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce

Description	This command sets the Media Access Control (MAC) source address.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > MAC > Source MAC Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MAC > Source MAC Address
	Navigation Path: Setup > Test Configurator > Clients > MAC > Source MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce <wsp><Number>, <Address>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 to n Client ID for FlexE BERT
	- 1 for other test applications
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the source MAC address.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR 1, FE:FE:FE:00:00:00
	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR? 1
	Returns: FE:FE:FE:00:00:00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce?
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:FLOoding

Description	This command enables the Source MAC Flooding.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > MAC > Source Flooding
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:FLOoding <wsp><Stream>, <Set>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Source MAC Flooding.
	ON, enables the Source MAC Flooding
	OFF, disables the Source MAC Flooding
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR:FLO 1,ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP?

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce :FLOoding?

Description	This query returns Source MAC Flooding.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > MAC > Source Flooding
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:FLOoding? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Source MAC Flooding.
	1, Source MAC Flooding is enabled.
	0, Source MAC Flooding is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR:FLO 1,ON
	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR:FLO? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP

Description	This command sets the IPv4 source address.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Source IP Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Source IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP <wsp><Number>, <Address>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the source IP address.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR:IP 1, 1.1.1.1
	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR:IP? 1
	Returns: 1.1.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP?

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP?

Description	This query returns the source IPv4 address.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Source IP Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Source IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the source IP address in the form of a string.
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR:IP 1, 1.1.1.1
	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR:IP? 1
	Returns: 1.1.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP

:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce?

Description	This query returns the Media Access Control (MAC) source address.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > MAC > Source MAC Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MAC > Source MAC Address
	Navigation Path: Setup > Test Configurator > Clients > MAC > Source MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 to n Client ID for FlexE BERT
	- 1 for other test applications
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the source MAC address.
Example(s)	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR 1, FE:FE:FE:FE:00:00
	SOUR:DATA:TEL:ETH:STR:ADDR:SOUR? 1
	Returns: FE:FE:FE:FE:00:00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination?

:SOURce:DATA:TELecom:ETHernet:STReam:COUPled:ENABle

Description	This command enables/disables the coupled status
	At *RST condition, this value is set to OFF.
	Navigation Path: setup > test Configurator > MAC/IP/UDP > Coupled with Interface
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Coupled with Interface
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:COUPled:ENABle <wsp><Stream ID>, <Status>
Parameter(s)	**Stream ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Address>
Example(s)	SOURce:DATA:TEL:ETH:STR:COUP:ENAB 1, ON
	SOURce:DATA:TEL:ETH:STR:COUP:ENAB? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated?

:SOURce:DATA:TELecom:ETHernet:STReam:COUPled:ENABle?

Description	This query returns coupled status
	At *RST condition, this value is set to OFF.
	Navigation Path: setup > test Configurator > MAC/IP/UDP > Coupled with Interface
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Coupled with Interface
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:COUPled:ENABle? <wsp><Stream ID>
Parameter(s)	**Stream ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOURce:DATA:TEL:ETH:STR:COUP:ENAB 1, ON
	SOURce:DATA:TEL:ETH:STR:COUP:ENAB? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway

Description	This command enables/disables the IPv4 gateway status.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Default Gateway
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway <wsp><Number>,[<Set>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the IP gateway for the selected stream.
	ON, Enables IP gateway for the selected stream.
	OFF, disables IP gateway for the selected stream.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT 1, ON
	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess

Description	This command sets the default gateway IPv4 address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Default Gateway
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess <wsp><Number>, <Address>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the default IP gateway address.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT 1, ON
	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT:ADDR 1, 0.0.1.1
	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT:ADDR? 1
	Returns: 0.0.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway
	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess?

Description	This query returns the default gateway IPv4 address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Default Gateway
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the default gateway IP address.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT 1, ON
	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT:ADDR 1, 0.0.1.1
	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT:ADDR? 1
	Returns: 0.0.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway
	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway?

Description	This query returns the IPv4 gateway status.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Default Gateway
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the IP gateway.
	1, IP gateway is enabled.
	0, IP gateway is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT 1, ON
	SOUR:DATA:TEL:ETH:STR:DEST:IP:GAT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TOSDs

Description	This command sets the Type of Service/Differentiated Services (TOS/DS) value.
	At *RST condition, this value is set to 00.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > IP/IPv6 > IP TOS/DS
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP/IPv6 > IP TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TOSDs <wsp><Number>, <Tosds>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Tosds:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the TOS/DS value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:TOSD 1, #HFF
	SOUR:DATA:TEL:ETH:STR:DEST:IP:TOSD? 1
	Returns: 255
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TOSDs?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TOSDs?

Description	This query returns the Type of Service/Differentiated Services (TOS/DS) value.
	At *RST condition, this value is set to 00.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > IP/IPv6 > IP TOS/DS
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP/IPv6 > IP TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TOSDs? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Tosds>
Response(s)	**Tosds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TOSDS value.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:TOSD 1, #HFF
	SOUR:DATA:TEL:ETH:STR:DEST:IP:TOSD? 1
	Returns: 255
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TOSDs

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL

Description	This command sets the Time to Live (TTL) value (IPv4).
	At *RST condition, this value is set to 128.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TTL
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TTL
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL <wsp><Number>,[<TTL>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	TTL:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TTL value.
	Choices are 0 to 255.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Tosds>
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:TTL 1, 200
	SOUR:DATA:TEL:ETH:STR:DEST:IP:TTL? 1
	Returns: 200
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL?

Description	This query returns the Time to Live (TTL) value (IPv4). At *RST condition, this value is set to 128. Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TTL Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TTL
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL? <wsp><Number>,[<TTL>]
Parameter(s)	**Number**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Depending on the test application, selects a number as follows: - 1 to 16 Streams for Traffic Gen & Mon - 1 to 10 Services for EtherSAM **TTL**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the TTL value. This parameter is optional. If no token is specified, the current TTL value is returned. MAXimum: Biggest supported value MINimum: Smallest supported value DEFault: Default value
Response Syntax	<Ttl>
Response(s)	**Ttl**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the TTL value.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:IP:TTL 1, 200 SOUR:DATA:TEL:ETH:STR:DEST:IP:TTL? 1 Returns: 200
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT

Description	This command sets the UDP destination port number.
	At *RST condition, this value is set to 7.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > UDP > Destination Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > UDP > Destination Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT <wsp><Number>,[<DPort>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	DPort:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the UDP destination port value for selected stream.
	Choices are 0 to 65535.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Ttl>
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:PORT 1, 60
	SOUR:DATA:TEL:ETH:STR:DEST:PORT? 1
	Returns: 60
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT?
	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT:TCP

Description	This command sets the TCP destination port number.
	At *RST condition, this value is set to 7.
	Navigation Path: Setup > Test CONFig Bert > MAC/IP/UDP > TCP > Destination Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > TCP > Destination Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT:TCP <wsp><Number>,[<DPort>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	DPort:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TCP destination port number.
	MAXimum, sets the maximum destination port value.
	MINimum, sets the minimum destination port value.
	DEFault: Default value
Response Syntax	<Ttl>
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:PORT:TCP 1, 60
	SOUR:DATA:TEL:ETH:STR:DEST:PORT:TCP? 1
	Returns: 60
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT:TCP?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT:TCP?

Description	This query returns the TCP destination port value.
	At *RST condition, this value is set to 7.
	Navigation Path: Setup > Test CONFig Bert > MAC/IP/UDP > TCP > Destination Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > TCP > Destination Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT:TCP? <wsp><Number>,[<DPort>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	DPort:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the TCP destination port number.
	MAXimum, sets the maximum destination port value.
	MINimum, sets the minimum destination port value.
	DEFault: Default value
Response Syntax	<Dport>
Response(s)	**Dport**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns destination port number.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:PORT:TCP 1, 60
	SOUR:DATA:TEL:ETH:STR:DEST:PORT:TCP? 1
	Returns: 60
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT:TCP

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT?

Description	This query returns the UDP destination port number.
	At *RST condition, this value is set to 7.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > UDP > Destination Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > UDP > Destination Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT? <wsp><Number>,[<DPort>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	DPort:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the UDP destination port value for the selected stream.
	This parameter is optional. If no token is specified, the current UDP destination port number is returned.
	Choices are 0 to 65535.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Dport>

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT?

Response(s)	**Dport**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns UDP destination port number for the selected stream.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:PORT 1, 60
	SOUR:DATA:TEL:ETH:STR:DEST:PORT? 1
	Returns: 60
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT
	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve

Description	This command sends a request to the network to retrieve the MAC address corresponding to the selected destination IP/IPv6 address.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Resolve MAC Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP/IPv6 > Resolve MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve[<wsp><Number>],[<Set>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the Resolved MAC address status.
	ON, resolved MAC address status is enabled.
	OFF, resolved MAC address status is disabled.
Response Syntax	<Dport>
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:RES 1, ON
	SOUR:DATA:TEL:ETH:STR:DEST:RES? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve?

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve:STATus?

Description	This query returns the status of the resolved MAC address. When enabled, will send an ARP request to the network to retrieve the MAC address corresponding to the selected IP/IPv6 address.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Resolve MAC Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP/IPv6 > Resolve MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve:STATus?[<wsp><Number>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the resolved MAC address status.
	FAILED, Failed is retrieved.
	NRESOLVED, Not Resolved is retrieved.
	RESOLVED, Resolved is retrieved.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:RES 1, ON
	SOUR:DATA:TEL:ETH:STR:DEST:RES:STAT? 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve

:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve?

Description	This query returns the status of the resolved MAC address setting corresponding to the selected destination IP/IPv6 address.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Resolve MAC Address
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP/IPv6 > Resolve MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve?[<wsp><Number>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of resolved MAC destination address.
	1, resolved MAC destination address is Enabled.
	0, resolved MAC destination address is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:DEST:RES 1, ON
	SOUR:DATA:TEL:ETH:STR:DEST:RES? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:RESolve

:SOURce:DATA:TELecom:ETHernet:STReam:ETHer

Description	This command sets the ether type for the selected traffic stream.
	At *RST condition, this value is set to 0x0000 when Network Layer is set to None; 0x0800 for IPv4; 0x86DD for IPv6; 0x8847 for MPLS; 0x8902 for S-OAM (available with EtherSAM)
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > MAC > EtherType
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ETHer <wsp><Number>, <Set>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Set:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the EtherType for the selected stream: 0x0000 to 0xFFFF. Available when the Network Layer is set to None.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:ETH 1, 0080
	SOUR:DATA:TEL:ETH:STR:ETH? 1
	Returns: 0080
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL

:SOURce:DATA:TELecom:ETHernet:STReam:ETHer?

Description	At *RST condition, this value is set to 0x0000 when Network Layer is set to None; 0x0800 for IPv4; 0x86DD for IPv6; 0x8847 for MPLS; 0x88B7 when Network Layer is set to None with EtherBERT test; 0x8902 for S-OAM (available with EtherSAM). Navigation Path: Setup > Test Configurator > MAC/IP/UDP > MAC > EtherType
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ETHer? <wsp><Number>
Parameter(s)	**Number**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Depending on the test application, selects a number as follows: - 1 to 16 Streams for Traffic Gen & Mon - 1 to 10 Services for EtherSAM
Response Syntax	<Type>
Response(s)	**Type**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the EtherType.
Example(s)	SOUR:DATA:TEL:ETH:STR:ETH? 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT?

:SOURce:DATA:TELecom:ETHernet:STReam:IP:AUTomatic:STATus

Description	This command enables/disables the IPv4 Automatic (DHCP) status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Automatic IP (DHCP)
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Automatic IP (DHCP)
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:IP:AUTomatic:STATus <wsp><Tgen>,[<Set>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the IP Automatic status for the selected stream.
	ON, Enables IP Automatic status for the selected stream.
	OFF, disables IP Automatic status for the selected stream.
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:ETH:STR:IP:AUT:STAT 1, ON
	SOUR:DATA:TEL:ETH:STR:IP:AUT:STAT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:TTL

:SOURce:DATA:TELecom:ETHernet:STReam:IP:AUTomatic:STATus?

Description	This query returns the IPv4 Automatic (DHCP) status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Automatic IP (DHCP)
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Automatic IP (DHCP)
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:IP:AUTomatic:STATus? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Automatic IP.
	1, Automatic IP is enabled.
	0, Automatic IP is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:IP:AUT:STAT 1, ON
	SOUR:DATA:TEL:ETH:STR:IP:AUT:STAT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:IP:AUTomatic:STATus

:SOURce:DATA:TELecom:ETHernet:STReam:IPVersion:HOP:LIMit

Description	This command Set The Hop Limit field of the IPv6 header shall be configurable.
	At *RST condition, this value is set to 128.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Hop Limit
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Hop Limit
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:IPVersion:HOP:LIMit <wsp><Stream>, <HOP Limit>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	HOP Limit:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the HOP Limit
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Set>
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:IPV:HOP:LIMit 1, 25
	SOURce:DATA:TELecom:ETHernet:STReam:IPV:HOP:LIMit? 1
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:ADDRess?
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:MODE
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:IICoupled

:SOURce:DATA:TELecom:ETHernet:STReam:IPVersion:HOP:LIMit?

Description	This query returns The Hop Limit field of the IPv6 header shall be configurable.
	At *RST condition, this value is set to 128.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Hop Limit
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Hop Limit
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:IPVersion:HOP:LIMit? <wsp><Stream>,[<HOP Limit>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	HOP Limit:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Hop Limit is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<HOP Limit>
Response(s)	**HOP Limit**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the IPv6 Hop Limit.
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:IPV:HOP:LIMit 1, 25
	SOURce:DATA:TELecom:ETHernet:STReam:IPV:HOP:LIMit? 2
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:ADDRess
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:MODE
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:IICoupled

:SOURce:DATA:TELecom:ETHernet:STReam:MAC:OUI

Description	This command sets the frame format OUI type for 802.3 SNAP frame format.
	At *RST condition, this value is device dependent.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > MAC > OUI
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MAC > OUI
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MAC:OUI <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets Frame format type
	RFC1042, sets frame format type to RFC1042
	8021H,sets frame format type to 8021H
	USERDEFined, sets frame format type to USERDEFINED
Response Syntax	<HOP Limit>
Example(s)	SOUR:DATA:TEL:ETH:STR:MAC:OUI RFC1042
	SOUR:DATA:TEL:ETH:STR:MAC:OUI?
	Returns: RFC1042
See Also	SOURce:DATA:TELecom:ETHernet:PORT:NETWork:FRAMe:FORMat:OUI RFC1042
	SOURce:DATA:TELecom:ETHernet:PORT:NETWork:FRAMe:FORMat:OUI? Returns RFC1042

:SOURce:DATA:TELecom:ETHernet:STReam:MAC:OUI?

Description	This query returns the frame format OUI type for 802.3 SNAP frame format.
	At *RST condition, this value is device dependent.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > MAC > OUI
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MAC > OUI
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MAC:OUI?
Response Syntax	<OUI>
Response(s)	**OUI**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Frame format type
	RFC1042, Returns as RFC1042 frame format.
	8021H,Returns 8021H as frame format.
	USERDEFINED,Returns USERDEFINED as frame format.
Example(s)	SOUR:DATA:TEL:ETH:STR:MAC:OUI RFC1042
	SOUR:DATA:TEL:ETH:STR:MAC:OUI?
	Returns: RFC1043
See Also	SOURce:DATA:TELecom:ETHernet:PORT:NETWork:FRAMe:FORMat:OUI RFC1042
	SOURce:DATA:TELecom:ETHernet:PORT:NETWork:FRAMe:FORMat:OUI? Returns RFC1042

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp

Description

This command selects the COS/EXP value.

At *RST condition, this value is st to 0 (000 - Low) (default).

Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MPLS > COS

Syntax

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp <wsp><Number>, <Label Index>, <Cosexp>

Parameter(s)

Number:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Depending on the test application, selects a number as follows:

- 1 to 16 Streams for Traffic Gen & Mon

- 1 to 10 Services for EtherSAM

Label Index:

The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Selects the Label Index.

Cosexp:

The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the COS/EXP value.

Sets the Class Of Service for the instrument.

000LOW: 0 (000 - Low)

001LOW: 1 (001 - Low)

010LOW: 2 (010 - Low)

011LOW: 3 (011 - Low)

100HIGH: 4 (100 - High)

101HIGH: 5 (101 - High)

110HIGH: 6 (110 - High)

111HIGH: 7 (111 - High)

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp

Response Syntax	<OUI>
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:COS 1, 1, 111HIGH
	SOUR:DATA:TEL:ETH:STR:MPLS:COS? 1, 1
	Returns: 111HIGH
See Also	SOURce:DATA:TELecom:ETHernet:MPLS:HEADers
	SOURce:DATA:TELecom:ETHernet:MPLS:HEADers?

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp?

Description	This query returns the COS/EXP value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MPLS > COS
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp? <wsp><Number>, <Label Index>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Label Index:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Label Index.
Response Syntax	<Cosexp>

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp?

Response(s)	**Cosexp**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Class Of Service for the instrument.
	000LOW, returns 0 (000 - Low) as Class Of Service.
	001LOW, returns 1 (001 - Low) as Class Of Service.
	010LOW, returns 2 (010 - Low) as Class Of Service.
	011LOW, returns 3 (011 - Low) as Class Of Service.
	100HIGH, returns 4 (100 - High) as Class Of Service.
	101HIGH, returns 5 (101 - High) as Class Of Service.
	110HIGH, returns 6 (110 - High) as Class Of Service.
	111HIGH, returns 7 (111 - High) as Class Of Service.
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:COS 1, 1, 000LOW
	SOUR:DATA:TEL:ETH:STR:MPLS:COS? 1, 1
	Returns: 000LOW
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:LABel

Description	This command sets the Multi Protocol Label Switching (MPLS) label type.
	At *RST condition, this value is set to 16.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MPLS > Label
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:LABel <wsp><Number>, <Label Index>, <Label Value>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Label Index:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Label Index.
	Label Value:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the label value.
	Choices are 0 through 1048575.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Cosexp>
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:LAB 1, 1, 16
	SOUR:DATA:TEL:ETH:STR:MPLS:LAB? 1, 1
	Returns: 16
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:LABel?

Description

This query returns the Multi Protocol Label Switching (MPLS) label type.

At *RST condition, this value is set to 16.

Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MPLS > Label

Syntax

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:LABel? <wsp><Number>, <Label Index>,[<Label Value>]

Parameter(s)

Number:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Depending on the test application, selects a number as follows:

- 1 to 16 Streams for Traffic Gen & Mon

- 1 to 10 Services for EtherSAM

Label Index:

The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Selects the Label Index.

Label Value:

The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.

This parameter is optional. If no token is specified, the current label number is returned.

MAXimum: Biggest supported value

MINimum: Smallest supported value

DEFault: Default value

Response Syntax

<Label>

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:LABel?

Response(s)	**Label**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the label value.
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:LAB 1, 1, 16 SOUR:DATA:TEL:ETH:STR:MPLS:LAB? 1, 1 Returns: 16
See Also	SOURce:DATA:TELecom:ETHernet:MPLS:HEADers SOURce:DATA:TELecom:ETHernet:MPLS:HEADers?

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL

Description	This command sets the Time to Live (TTL) value of Multi Protocol Label Switching (MPLS).
	At *RST condition, this value is set to 128.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MPLS > TTL
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL <wsp><Number>, <Label Index>, <TTL>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Label Index:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Label Index.
	TTL:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TTL value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Label>
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:TTL 1, 1, 200
	SOUR:DATA:TEL:ETH:STR:MPLS:TTL? 1, 1
	Returns: 200
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL?

Description	This query returns the Time to Live (TTL) value of Multi Protocol Label Switching (MPLS).
	At *RST condition, this value is set to 128.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > MPLS > TTL
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL? <wsp><Number>, <Label Index>,[<TTL>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Label Index:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Label Index.
	TTL:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current TTL value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<TTL>
Response(s)	**TTL**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TTL value.
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:TTL 1, 1, 200
	SOUR:DATA:TEL:ETH:STR:MPLS:TTL? 1, 1
	Returns: 200
See Also	SOURce:DATA:TELecom:ELECtrical:STReam:MPLS:LABel?

:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad

Description	This command sets the payload pattern.
	At *RST condition, this value is set to #HCC.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Payload > Pattern
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad <wsp><Tgen>, <Pattern>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Pattern:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the payload pattern value.
	Choices are #H00 through #HFF.
Response Syntax	<TTL>
Example(s)	SOUR:DATA:TEL:ETH:STR:PAYL 1, #HFF
	SOUR:DATA:TEL:ETH:STR:PAYL? 1
	Returns: 255
See Also	SOURce:DATA:TEL:ETH:STR:PROFile:RATE

:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader

Description	This command sets the User Defined Header value.
	At *RST condition, this value is set to "0000000000000000000000000000000".
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Payload > User Defined Header
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader <wsp><Stream>, <Set>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Set:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the User Defined Header.
Response Syntax	<TTL>
Example(s)	SOUR:DATA:TEL:ETH:STR:PAYL:UDH 1, "0000000000000000000000000000011"
	SOUR:DATA:TEL:ETH:STR:PAYL:UDH? 1
	Returns: "0000000000000000000000000000011"
See Also	SOUR:DATA:TEL:ETH:STR:PAYL:UDH:ENAB

:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader:ENABle

Description	This command enables/disables User Defined Header.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Payload > User Defined Header
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader:ENABle <wsp><Stream>, <Status>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<TTL>
Example(s)	SOUR:DATA:TEL:ETH:STR:PAYL:UDH:ENAB 1, ON
	SOUR:DATA:TEL:ETH:STR:PAYL:UDH:ENAB? 1
	Returns: 1
See Also	SOURce:DATA:TEL:ETH:STR:PROFile:RATE

:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader:ENABle?

Description	This query returns the enable/disable statuf of User Defined Header.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Payload > User Defined Header
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader:ENABle? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:PAYL:UDH:ENAB 1, ON
	SOUR:DATA:TEL:ETH:STR:PAYL:UDH:ENAB? 1
	Returns: 1
See Also	SOURce:DATA:TEL:ETH:STR:PROFile:RATE

:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader?

Description	This query returns the User Defined Header value.
	At *RST condition, this value is set to "00000000000000000000000000000000".
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Payload > User Defined Header
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad:UDHeader? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Header>
Response(s)	**Header**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the User Defined Header value.
Example(s)	SOUR:DATA:TEL:ETH:STR:PAYL:UDH 1, "00000000000000000000000000000011"
	SOUR:DATA:TEL:ETH:STR:PAYL:UDH? 1
	Returns: "00000000000000000000000000000011"
See Also	SOUR:DATA:TEL:ETH:STR:PAYL:UDH:ENAB

:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad?

Description	This query returns payload pattern.
	At *RST condition, this value is set to #HCC.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Payload > Pattern
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PAYLoad? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return the payload value.
Example(s)	SOUR:DATA:TEL:ETH:STR:PAYL 1, #HFF
	SOUR:DATA:TEL:ETH:STR:PAYL? 1
See Also	SOURce:DATA:TEL:ETH:STR:PROFile:RATE?

:SOURce:DATA:TELecom:ETHernet:STReam:QPINg

Description	This command quick pings with parameters for mentioned stream. Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP/IPv6 > Quick Ping Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP/IPv6 > Quick Ping
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QPINg <wsp><Tgen>
Parameter(s)	**Tgen**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the stream number. Range: 1 to 16
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:ETH:STR:QPING 1 SOUR:DATA:TEL:ETH:STR:QPING?
See Also	SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess:ENABle

:SOURce:DATA:TELecom:ETHernet:STReam:QPINg?

Description	This query returns the status of last Quick ping done
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP/IPv6 > Quick Ping
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP/IPv6 > Quick Ping
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QPINg?
Response Syntax	<Ping Status>
Response(s)	**Ping Status**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Quick ping status.
	INPROGRESS | SUCCESSFUL | FAIL | NOPINGDONE
Example(s)	SOUR:DATA:TEL:ETH:STR:QPING 1
	SOUR:DATA:TEL:ETH:STR:QPING?
See Also	SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess:ENABle?

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:MULTiplicat

Description	This command enables/disables the IPv4 multiplicator.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:MULTiplicat <wsp><Stream>, <Status>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Ping Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IP:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IP:MULT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:IPVersion:HOP:LIMit?

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:MULTiplicat?

Description	This query returns the status of IPv4 multiplicator.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:MULTiplicat? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<IPv4 Multiplicator Status>
Response(s)	**IPv4 Multiplicator Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of IPv4 multiplicator.
	1, IPv4 multiplicator is Enabled.
	0, IPv4 multiplicator is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IP:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IP:MULT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:IPVersion:HOP:LIMit

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:RANGe

Description	This command sets the IPv4 multiplicator range.
	At *RST condition, this value is set to 0To127.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:RANGe <wsp><Stream>, <Range>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Range:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the range for IP multiplicator.
	0T127: the range from 0 to 127.
	1T128: the range from 1 to 128.
Response Syntax	<IPv4 Multiplicator Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IP:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IP:RANG 1, 1T128
	SOUR:DATA:TEL:ETH:STR:SOUR:IP:RANG? 1
	Returns: 1T128
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:PMASk?

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:RANGe?

Description	This query returns the IPv4 multiplicator range.
	At *RST condition, this value is set to 0To127.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IP:RANGe? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Range>
Response(s)	**Range**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the range for IPv4 multiplicator.
	0T127, range from 1 to 128 is selected.
	1T128, range from 0 to 127 is selected.
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IP:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IP:RANG 1, 1T128
	SOUR:DATA:TEL:ETH:STR:SOUR:IP:RANG? 1
	Returns: 1T128
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:PMASk

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IPVersion:MULTiplicat

Description	This command enables/disables the IPv6 multiplicator.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IPVersion:MULTiplicat <wsp><Stream>, <Status>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Range>
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:MULT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:IPv6:HOP:LIMit

:SOURce:DATA:TELecom:ETHernet:STRearm:SOURce:IPVersion:MULTiplicat?

Description	This query returns the status of IPv6 multiplicator.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STRearm:SOURce:IPVersion:MULTiplicat? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of IPv6 multiplicator.
	1, IPv6 multiplicator is enabled.
	0, IPv6 multiplicator is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:MULT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:IPv6:HOP:LIMit?

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IPVersion:RANGe

Description	This command sets the IPv6 multiplicator range.
	At *RST condition, this value is set to 1TO128.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IPVersion:RANGe <wsp><Stream>, <Range>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Range:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the range for IPv6 multiplicator.
	0T127: the range from 0T127.
	1T128: the range from 1T128.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:RANG 1, 1T128
	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:RANG? 1
	Returns: 1T128
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:PMASk?
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IPVersion:RANGe?

Description	This query returns the IPv6 multiplicator range.
	At *RST condition, this value is set to 1TO128.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IPv6 > Source IP Multiplicator
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Source IP Multiplicator
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:IPVersion:RANGe? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Range>
Response(s)	**Range**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the range for IPv6 multiplicator.
	1T128, range from 1T128 is selected.
	0T127, range from 0T127 is selected.
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:MULT 1, ON
	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:RANG 1, 1T128
	SOUR:DATA:TEL:ETH:STR:SOUR:IPV:RANG? 1
	Returns: 1T128
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:PMASk
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:MASK:IP

Description	This command sets the IPv4 subnet mask.
	At *RST condition, this value is set to 255.255.0.0.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > IP > Subnet Mask
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Subnet Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:MASK:IP <wsp><Tgen>, <Mask>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Mask:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the IP subnet mask in the form of a string.
Response Syntax	<Range>
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:MASK:IP 1, 255.255.255.255
	SOUR:DATA:TEL:ETH:STR:SOUR:MASK:IP? 1
	Returns: 255.255.255.255
See Also	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:MASK:IP?
	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:MASK:IP ?

Description	This query returns the IPv4 subnet mask.
	At *RST condition, this value is set to 255.255.0.0.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > IP > Subnet Mask
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > Subnet Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:MASK:IP? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the IP mask address in form of a string.
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:MASK:IP 1, 255.255.255.255
	SOUR:DATA:TEL:ETH:STR:SOUR:MASK:IP? 1
	Returns: 255.255.255.255
See Also	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:MASK:IP
	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:IP:GATeway:ADDRess

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT

Description	This command sets the UDP source port number.
	At *RST condition, this value is set to 49184.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > UDP > Source Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > UDP > Source Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT <wsp><Tgen>,[<Port>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Port:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the UDP source port number. Choices are 0 to 65535.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:PORT 1, 65500
	SOUR:DATA:TEL:ETH:STR:SOUR:PORT? 1
	Returns: 65500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT?
	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT:TCP

Description	This command sets the TCP source port number.
	At *RST condition, this value is set to 49184.
	Navigation Path: Setup > Test CONFig Bert > MAC/IP/UDP > TCP > Source Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > TCP > Source Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT:TCP <wsp><Tgen>,[<Port>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Port:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the port number.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:PORT:TCP 1, 65500
	SOUR:DATA:TEL:ETH:STR:SOUR:PORT:TCP? 1
	Returns: 65500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT:TCP?

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT:TCP?

Description	This query returns the TCP source port number.
	At *RST condition, this value is set to 49184.
	Navigation Path: Setup > Test CONFig Bert > MAC/IP/UDP > TCP > Source Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > TCP > Source Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT:TCP? <wsp><Tgen>,[<Port>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Port:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the source port number for the selected stream.
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:PORT:TCP 1, 65500
	SOUR:DATA:TEL:ETH:STR:SOUR:PORT:TCP? 1
	Returns: 65500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT:TCP

:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT?

Description	This query returns the UDP source port number.
	At *RST condition, this value is set to 49184.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > UDP > Source Port
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > UDP > Source Port
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT? <wsp><Tgen>,[<Port>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Port:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the UDP source port number for the selected stream.
Example(s)	SOUR:DATA:TEL:ETH:STR:SOUR:PORT 1, 65500
	SOUR:DATA:TEL:ETH:STR:SOUR:PORT? 1
	Returns: 65500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:SOURce:PORT
	SOURce:DATA:TELecom:ETHernet:STReam:DESTination:PORT:TCP?

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID

Description	This command sets the Virtual Local Area Network (VLAN) Identification (ID) of the stream.
	At *RST condition, this value is set to 2.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > VLAN ID
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID <wsp><Number>, <Stacked>, <ID>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Stacked:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	ID:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Virtual Local Area Network (VLAN) ID of the stream. Choices are 0 to 4095.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:ID 1, 1, 50
	SOUR:DATA:TEL:ETH:STR:VLAN:ID? 1, 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID?

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGible bit

Description	This command enables/disables the Virtual Local Area Network (VLAN) Identification (ID) eligible bit.
	At *RST condition, this value is set to OFF.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > Drop Eligible
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGiblebit <wsp><Number>, <Stacked>,[<Set>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Stacked:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Virtual Local Area Network (VLAN) stacked.
	Set:
	The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the eligible bit for the specific VLAN (Virtual Local Area Network) ID (Identification).
	ON,Enables the eligible bit for the specific VLAN (Virtual Local Area Network) ID (Identification).
	OFF,Disables the eligible bit for the specific VLAN (Virtual Local Area Network) ID (Identification).

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGible bit

Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:ID:ELIG 1, 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:ID:ELIG? 1, 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGiblebit?

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGible bit?

Description	This query returns the status of Virtual Local Area Network (VLAN) Identification (ID) eligible bit.
	At *RST condition, this value is set to OFF.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > Drop Eligible
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGiblebit? <wsp><Number>, <Stacked>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Stacked:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Virtual Local Area Network (VLAN) stacked.
Response Syntax	<Set>

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGible bit?

Response(s)	**Set**: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the status of the Virtual Local Area Network (VLAN) ID eligible bit. 1, Virtual Local Area Network (VLAN) ID eligible bit is enabled. 0, Virtual Local Area Network (VLAN) ID eligible bit is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON SOUR:DATA:TEL:ETH:STR:VLAN:ID:ELIG 1, 1, ON SOUR:DATA:TEL:ETH:STR:VLAN:ID:ELIG? 1, 1 Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID:ELIGiblebit

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID?

Description	This query returns the Virtual Local Area Network (VLAN) Identification (ID) of the stream.
	At *RST condition, this value is set to 2.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > VLAN ID
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID? <wsp><Number>, <ID>,[<Value>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	Value:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<VLAN ID>

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID?

Response(s)	**VLAN ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Virtual Local Area Network (VLAN) ID of the stream.
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:ID 1, 1, 50
	SOUR:DATA:TEL:ETH:STR:VLAN:ID? 1, 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:ID

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:PRIority

Description

This command sets the Virtual Local Area Network (VLAN) user priority.

At *RST condition, this value is set to 0.

Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > Priority

Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > Priority

Syntax

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:PRIority <wsp><Number>, <Stacked>, <Priority>

Parameter(s)

Number:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Depending on the test application, selects a number as follows:

- 1 to 16 Streams for Traffic Gen & Mon

- 1 to 10 Services for EtherSAM

Stacked:

The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Select the Virtual Local Area Network (VLAN) stacked.

The value for stacked is set to 1 only.

Priority:

The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Sets the Virtual Local Area Network (VLAN) user priority.

MAXimum: Biggest supported value.

MINimum: Smallest supported value.

DEFault: Default value.

Response Syntax

<VLAN ID>

Example(s)

SOUR:DATA:TEL:ETH:STR:VLAN 1, ON

SOUR:DATA:TEL:ETH:STR:VLAN:PRI 1, 1, 5

SOUR:DATA:TEL:ETH:STR:VLAN:PRI? 1, 1

Returns: 5

SOURce:DATA:TELecom:ETHernet:STReam:VLAN:PRIority?

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:PRIority?

Description	This query returns the Virtual Local Area Network (VLAN) user priority.
	At *RST condition, this value is set to 0.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > Priority
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > Priority
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:PRIority? <wsp><Number>, <Stacked>,[<Value>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Stacked:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	Value:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Priority>

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:PRIority?

Response(s)	**Priority**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Virtual Local Area Network (VLAN) user priority.
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:PRI 1, 1, 5
	SOUR:DATA:TEL:ETH:STR:VLAN:PRI? 1, 1
	Returns: 5
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:PRIority

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE

Description	This command selects the type of Virtual Local Area Network (VLAN).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > Type
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > Type
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE <wsp><Number>, <Stacked>, <Vtype>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Stacked:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
	Vtype:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the VLAN type.
	V8100: VLAN type 8100.
	V88A8: VLAN type 88A8.
	V9100: VLAN type 9100.
	V9200: VLAN type 9200.
	V9300: VLAN type 9300.

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE

Response Syntax	\<Priority\>
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:STAC 1, 3
	SOUR:DATA:TEL:ETH:STR:VLAN:TYPE 1, 1, V9100
	SOUR:DATA:TEL:ETH:STR:VLAN:TYPE? 1, 3
	Returns: V9100
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE?

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE?

Description	This query returns the type of the Virtual Local Area Network (VLAN).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: BERT > Setup > Test Configurator > MAC/IP/UDP > VLAN > Type
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > VLAN > Type
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE? <wsp><Number>, <Stacked>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Stacked:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Vtype>

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE?

Response(s)

Vtype:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the type of the VLAN.

V8100, the VLAN type 8100 is selected.

V88A8, the VLAN type 88A8 is selected.

V9100, the VLAN type 9100 is selected.

V9200, the VLAN type 9200 is selected.

V9300, the VLAN type 9300 is selected.

Example(s)

SOUR:DATA:TEL:ETH:STR:VLAN 1, ON

SOUR:DATA:TEL:ETH:STR:VLAN:STAC 1, 3

SOUR:DATA:TEL:ETH:STR:VLAN:TYPE 1, 1, V9100

SOUR:DATA:TEL:ETH:STR:VLAN:TYPE? 1, 1

Returns: V9100

SOURce:DATA:TELecom:ETHernet:STReam:VLAN:TYPE

EtherBERT, FC BERT, BERT (CPRI), and Unframed BERT

:FETCh:DATA:TELecom:EOTN:ALARm:LINK?

Description	This query returns the current status of Transcoding (EoOTN) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > LINK (Transcoding)
Syntax	:FETCh:DATA:TELecom:EOTN:ALARm:LINK? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm type whose status is to be retrieved.
	LOAML1027B
	LOBL1027B
	HIBER1027B: Hi-BER1027B
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:ALAR:LINK? LOBL1027B
See Also	FETCh:DATA:TELecom:PATTern:ALARm:SYNCh?

:FETCh:DATA:TELecom:ETHernet:EOTN:ALARm:LINK?

Description	This query returns the current status of Ethernet (EoOTN) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > LINK (Ethernet)
Syntax	:FETCh:DATA:TELecom:ETHernet:EOTN:ALARm:LINK? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LFAR: L Fault Rcd
	LFAD: L Fault Det
	RFAult: Remote Fault
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETHernet:EOTN:ALAR:LINK? RFAULT
See Also	FETCh:DATA:TELecom:PATTern:ALARm:SYNCh?

:SENSe:DATA:TELecom:COUPled

Description	This command enables/disables the receiver coupling.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - Coupled RX to TX
Syntax	:SENSe:DATA:TELecom:COUPled <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the receiver coupling.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:COUP ON
	SENS:DATA:TEL:COUP?
	Returns: 1
See Also	SENSe:DATA:TELecom:PATTern:RXP:STATus ON

:SENSe:DATA:TELecom:COUPled?

Description	This query returns the status of the receiver coupling.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - Coupled RX to TX
Syntax	:SENSe:DATA:TELecom:COUPled?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the coupled status of the receiver.
	1, Coupled status is enabled.
	0, Coupled status is disabled.
Example(s)	SENS:DATA:TEL:COUP ON
	SENS:DATA:TEL:COUP?
	Returns: 1
See Also	SENSe:DATA:TELecom:PATTern:RXP:STATus?

:SENSe:DATA:TELecom:FIBer:RTLatency:THReshold

Description	This command sets Round-Trip Latency Threshold in milliseconds.
	At *RST, this value is set to 15.
	Navigation Path: Setup > Test Configurator > FC BERT > Latency Tags Insertion - Round-Trip Latency Threshold
Syntax	:SENSe:DATA:TELecom:FIBer:RTLatency:THReshold <wsp><Threshold Value>
Parameter(s)	**Threshold Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the threshold value.
	MAXimum: Maximum.
	MINimum: Minimum.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FIB:STR:LAT ON
	SOUR:DATA:TEL:FIB:STR:LAT:VERD ON
	SENS:DATA:TEL:FIB:RTL:THR 800.55
See Also	SOURce:DATA:TELecom:FIBer:STReam:SIZE

:SENSe:DATA:TELecom:FIBer:RTLatency:THReshold?

Description	This query returns Round-Trip Latency Threshold in milliseconds.
	At *RST, this value is set to 15.
	Navigation Path: Setup > Test Configurator > FC BERT > Latency Tags Insertion - Round-Trip Latency Threshold
Syntax	:SENSe:DATA:TELecom:FIBer:RTLatency:THReshold?[<wsp><Threshold Value>]
Parameter(s)	**Threshold Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If unspecified, the current value is returned.
	MAXimum: Maximum.
	MINimum: Minimum.
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the round trip latency threshold value.
Example(s)	SOUR:DATA:TEL:FIB:STR:LAT ON
	SOUR:DATA:TEL:FIB:STR:LAT:VERD ON
	SENS:DATA:TEL:FIB:RTL:THR 800.56
	SENS:DATA:TEL:FIB:RTL:THR?
	Returns: 800.56
See Also	SOURce:DATA:TELecom:FIBer:STReam:SIZE?

:SENSe:DATA:TELecom:PATTern:RXPanalysis:STATus

Description	This command sets the status of the RX Pattern Analysis.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - No Pattern Analysis (Live)
Syntax	:SENSe:DATA:TELecom:PATTern:RXPanalysis:STATus <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the status of the RX Pattern Analysis.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Threshold>
Example(s)	SENS:DATA:TEL:PATT:RXP:STAT ON
	SENS:DATA:TEL:PATT:RXP:STAT?
	Returns: 1
See Also	SENSe:DATA:TELecom:COUPled

:SENSe:DATA:TELecom:PATTern:RXPanalysis:STATus?

Description	This query returns the status of the RX Pattern Analysis.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - No Pattern Analysis (Live)
Syntax	:SENSe:DATA:TELecom:PATTern:RXPanalysis:STATus?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the pattern analysis status of the receiver.
	1, RX Pattern Analysis is enabled.
	0, RX Pattern Analysis is disabled.
Example(s)	SENS:DATA:TEL:PATT:RXP:STAT ON
	SENS:DATA:TEL:PATT:RXP:STAT?
	Returns: 1
See Also	SENSe:DATA:TELecom:COUPled?

:SENSe:DATA:TELecom:PATTern:TYPE

Description	This command selects test pattern type for the receiver.
	At *RST condition, this value is set to PRBs2E31.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - RX Pattern
Syntax	:SENSe:DATA:TELecom:PATTern:TYPE <wsp><Type>

:SENSe:DATA:TELecom:PATTern:TYPE

Parameter(s)	Type:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the pattern type for the receiver.

CJTPat: CJTPAT

CRPat: CRPAT

CSPat: CSPAT

DALY: DALY Pattern

LCRTpat: LCRTPAT

MULtipattern: Multi-Pattern

NCLient: NULL CLIENT

P0000: 0000 Pattern

SEEDA: Seed A

SEEDB: Seed B

UPATtern: User Defined

:SENSe:DATA:TELecom:PATTern:TYPE

Response Syntax	\<Set\>
Example(s)	SENS:DATA:TEL:PATT:TYPE PRBs2E15
	SENS:DATA:TEL:PATT:TYPE?
	Returns: PRBs2E15
See Also	SENSe:DATA:TELecom:PATTern:TYPE?

:SENSe:DATA:TELecom:PATTern:TYPE:USER:VALue

Description	This command sets the receiver user pattern value for the specified index.
	At *RST condition, this value is set to #H00000000.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - RX Pattern - User Pattern
Syntax	:SENSe:DATA:TELecom:PATTern:TYPE:USER:VALue[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the receiver user pattern value for the specified index.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault:Default value
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:PATT:TYPE:USER:VAL #H00000001
	SENS:DATA:TEL:PATT:TYPE:USER:VAL?
	Returns: 1
See Also	SENSe:DATA:TELecom:PATTern:TYPE
	SENSe:DATA:TELecom:PATTern:TYPE:USER:VALue?

:SENSe:DATA:TELecom:PATTern:TYPE:USER:VALue?

Description	This query returns the receiver user pattern value for the specified index.
	At *RST condition, this value is set to #H00000000.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - RX Pattern - User Pattern
Syntax	:SENSe:DATA:TELecom:PATTern:TYPE:USER:VALue?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault:Default value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the user pattern value for the receiver.
Example(s)	SENS:DATA:TEL:PATT:TYPE:USER:VAL #H00000001
	SENS:DATA:TEL:PATT:TYPE:USER:VAL?
	Returns: 1
See Also	SENSe:DATA:TELecom:PATTern:TYPE
	SENSe:DATA:TELecom:PATTern:TYPE:USER:VALue

:SENSe:DATA:TELecom:PATTern:TYPE?

Description	This query returns test pattern type for the receiver.
	At *RST condition, this value is set to PRBs2E31.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - RX Pattern
Syntax	:SENSe:DATA:TELecom:PATTern:TYPE?
Response Syntax	<Pattern>

:SENSe:DATA:TELecom:PATTern:TYPE?

Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the pattern type for the receiver.
	PRBs2E9, pattern type PRBS9 is selected.
	PRBs2E11, pattern type PRBS11 is selected.
	PRBs2E15, pattern type PRBS15 is selected.
	PRBs2E20, pattern type PRBS20 is selected.
	PRBs2E23, pattern type PRBS23 is selected.
	PRBs2E31, pattern type PRBS31 is selected.
	UPATTERN, pattern type User Defined is selected.
	NCLIENT, pattern type NCLIENT is selected.
	PRBS31UNSCRAMBLED, pattern type PRBS31 Unscrambled is selected.
	SEEDA, pattern type Seed A is selected.
	SEEDB, pattern type Seed B is selected.
	P1111, pattern type 1111 Pattern is selected.
	P1100, pattern type 1100 Pattern is selected.
	P1010, pattern type 1010 Pattern is selected.
	P0000, pattern type 0000 Pattern is selected.
	P1IN8, pattern type 1in8 (1:7) is selected.
	P1IN16, pattern type 1in16 (1:15) is selected.
	P2IN8, pattern type 2in8 is selected.
	P3IN24, pattern type 3in24 is selected.
	P55OCTET, pattern type 55 Octet is selected.
	QRSS, pattern type QRSS is selected.
	DALY, pattern type DALY is selected.
	MULTIPATTERN, pattern type Multi-Pattern is selected.
Example(s)	SENS:DATA:TEL:PATT:TYPE PRBs2E15
	SENS:DATA:TEL:PATT:TYPE?
	Returns: PRBs2E15
See Also	SENSe:DATA:TELecom:PATTern:TYPE

:SENSe:DATA:TELecom:POLarity

Description	This command sets the polarity pattern of the receiver.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - RX Pattern - Invert
Syntax	:SENSe:DATA:TELecom:POLarity <wsp><Polarity>
Parameter(s)	**Polarity**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the polarity pattern for the receiver.
	NINVerted: Non-inverted.
	INVerted: Inverted.
Response Syntax	<Pattern>
Example(s)	SENS:DATA:TEL:POL INV
	SENS:DATA:TEL:POL?
	Returns: INVerted
See Also	SENSe:DATA:TELecom:PATTern:TYPE
	SENSe:DATA:TELecom:PATTern:POLarity?

:SENSe:DATA:TELecom:POLarity?

Description	This query returns the polarity pattern of the receiver. At *RST condition, this value is set to NINVerted. Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - RX Pattern - Invert
Syntax	:SENSe:DATA:TELecom:POLarity?
Response Syntax	<Polarity>
Response(s)	**Polarity**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the polarity pattern of the receiver. NINVERTED, priority as non-inverted is selected. INVERTED, priority as inverted is selected.
Example(s)	SENS:DATA:TEL:POL INV SENS:DATA:TEL:POL? Returns: INVerted
See Also	SENSe:DATA:TELecom:PATTern:TYPE SENSe]:DATA:TELecom:PATTern:POLarity

:SENSe:DATA:TELecom:SDT:DT

Description	This command selects the Debounce Time (ms).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - Debounce Time
Syntax	:SENSe:DATA:TELecom:SDT:DT <wsp><Time>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the debounce time.
	Choices are from 0 ms to 500 ms.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Polarity>
Example(s)	SENS:DATA:TEL:SDT:DT 20
See Also	SENSe:DATA:TELecom:SDT:NTTime

:SENSe:DATA:TELecom:SDT:DT?

Description	This query returns the debounce time (ms).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - Debounce Time.
Syntax	:SENSe:DATA:TELecom:SDT:DT?[<wsp><Debounce Time>]
Parameter(s)	**Debounce Time**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optionnal.
	If no token is specified, the current debounce time is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the debounce time.
Example(s)	SENS:DATA:TEL:SDT:DT?
See Also	SENSe:DATA:TELecom:SDT:NTTime?

:SENSe:DATA:TELecom:SDT:NTTime

Description	This command selects the no Traffic time(ms) without any Traffic before stopping SDT measurement.
	At *RST condition, this value is set to 50.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - No Traffic Time
Syntax	:SENSe:DATA:TELecom:SDT:NTTime <wsp><Time>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the no traffic time without any traffic before stopping SDT measurement.
	Choices are from 0.005ms to 1000 ms.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Time>
Example(s)	SENS:DATA:TEL:SDT:NTT 18
	SENS:DATA:TEL:SDT:NTT?
	Returns: 18
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE

:SENSe:DATA:TELecom:SDT:NTTime?

Description	This query returns the no traffic time(ms) without any traffic before stopping SDT measurement.
	At *RST condition, this value is set to 10000.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - No Traffic Time
Syntax	:SENSe:DATA:TELecom:SDT:NTTime?[<wsp><No Traffic Time>]
Parameter(s)	**No Traffic Time**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the current no traffic time without any traffic is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the no traffic time without any traffic before stopping SDT measurement.
Example(s)	SENS:DATA:TEL:SDT:NTT 200
	SENS:DATA:TEL:SDT:NTT?
	Returns: 200
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL

Description	This command selects all lanes for further configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - All Lanes
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Selects all receiver lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<Time>
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:ALL OFF
	SENS:DATA:TEL:UPRB:PATT:GLOB:ALL?
	Returns: 0
See Also	SENSe:DATA:TELecom:COUPled?

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL?

Description	This query returns the status of all lanes for further configuration.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - All Lanes
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of all lanes of the receiver.
	1, All lanes of the receiver status is enabled.
	0, All lanes of the receiver status is disabled.
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:ALL ON
	SENS:DATA:TEL:UPRB:PATT:GLOB:ALL?
	Returns: 1
See Also	SENSe:DATA:TELecom:COUPled

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:COUPled

Description	This command sets the global pattern for the coupled status for the receiver.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - Coupled RX to TX
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:COUPled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:COUP ON
	SENS:DATA:TEL:UPRB:PATT:GLOB:COUP?
	Returns: 1
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL?

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:COUPled?

Description	This query returns the global pattern for the coupled status for the receiver.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - Coupled RX to TX
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:COUPled?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the coupled status of the receiver.
	1, coupled status of the receiver is enabled.
	0, coupled status of the receiver is disabled.
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:COUP?
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:RX

Description	This command sets the global Invert pattern for the receiver.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - RX Pattern - Invert
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:RX <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the polarity for the receiver.
	NINVerted: Non-Inverted
	INVerted: Inverted
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:POL:RX INV
	SENS:DATA:TEL:UPRB:PATT:GLOB:POL:RX?
	Returns: INVerted
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX?

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:RX?

Description	This query returns the global Invert pattern for the receiver.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - RX Pattern - Invert
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:RX?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the polarity type of the transmitter.
	NINVerted, indicates Non-Inverted as the polarity.
	INVerted, indicates Inverted as the polarity.
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:POL:RX INV
	SENS:DATA:TEL:UPRB:PATT:GLOB:POL:RX?
	Returns: INVerted
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX

Description	This command sets the global test pattern type for the receiver. At *RST condition, this value is set to PRBs2E23. Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - RX Pattern
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX <wsp><Type>
Parameter(s)	**Type**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the test pattern for the receiver. PRBS2E9: PRBS 2^9-1. PRBS2E11: PRBS 2^{11}-1. PRBS2E15: PRBS 2^{15}-1. PRBS2E20: PRBS 2^{20}-1. PRBS2E23: PRBS 2^{23}-1. PRBS2E31: PRBS 2^{31}-1. PSWAVE1: PSWAVE1. PSWAVE2: PSWAVE2. PSWAVE4: PSWAVE4. PSWAVE8:PSWAVE8. PSWAVE16: PSWAVE16. PRBS31Q: PRBS31Q, PRBS13Q: PRBS13Q, SSPRQ: SSPRQ, UPATtern: User Pattern
Response Syntax	<Pattern>
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:PRBS:TYPE:RX PRBs2E31 SENS:DATA:TEL:UPRB:PATT:GLOB:PRBS:TYPE:RX? Returns: PRBs2E31
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX?

:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX?

Description	This query returns the global test pattern type for the receiver.
	At *RST condition, this value is set to PRBs2E23.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - RX Pattern
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test pattern for the Receiver.
	PRBs2E9, PRBS 2^9-1 is selected.
	PRBs2E11, PRBS 2^11-1 is selected.
	PRBs2E15, PRBS 2^15-1 is selected.
	PRBs2E20, PRBS 2^20-1 is selected.
	PRBs2E23, PRBS 2^23-1 is selected.
	PRBs2E31, PRBS 2^31-1 is selected.
	PSWAVE1, PSWAVE1 is selected.
	PSWAVE2, PSWAVE2 is selected.
	PSWAVE4, PSWAVE4 is selected.
	PSWAVE8, PSWAVE8 is selected.
	PSWAVE16, PSWAVE16 is selected.
	PRBS31Q, PRBS31Q is selected.
	PRBS13Q, PRBS13Q is selected.
	SSPRQ, SSPRQis selected.
Example(s)	SENS:DATA:TEL:UPRB:PATT:GLOB:PRBS:TYPE:RX?
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX

:SENSe:DATA:TELecom:UPRBs:PATTern:POLarity:RX

Description	This command sets the Invert pattern per lane for the receiver.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - RX Pattern - Invert
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:POLarity:RX <wsp><Lane>, <Invert>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Invert:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the polarity for the receiver.
	NINVerted: Non-Inverted
	INVerted: Inverted
Response Syntax	<Pattern>
Example(s)	SENS:DATA:TEL:UPRB:PATT:POL:RX 1, INV
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:POLarity:RX?
	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL

:SENSe:DATA:TELecom:UPRBs:PATTern:POLarity:RX?

Description	This query returns the Invert pattern per lane for the receiver.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - RX Pattern - Invert
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:POLarity:RX? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Slects the lane number.
Response Syntax	<Invert>
Response(s)	**Invert**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Invert pattern setting for the selected lane.
Example(s)	SENS:DATA:TEL:UPRB:PATT:POL:RX? 1
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:POLarity:RX
	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL

:SENSe:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:RX

Description	This command sets the test pattern type for the receiver for the selected lane.
	At *RST condition, this value is set to PRBs2E23.
	Navigation Path: Setup > Test Configurator > Unframed BERT > PCS Lane - RX Pattern
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:RX <wsp><Lane>, <Type>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for status of the transmitted error pattern. The range for the lane is from 0 to 19.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the test pattern type for the receiver.
	PRBS2E9: PRBS 2^9-1.
	PRBS2E11: PRBS 2^11-1.
	PRBS2E15: PRBS 2^15-1.
	PRBS2E20: PRBS 2^20-1.
	PRBS2E23: PRBS 2^23-1.
	PRBS2E31: PRBS 2^31-1.
Response Syntax	<Invert>
Example(s)	SENS:DATA:TEL:UPRB:PATT:PRBS:TYPE:RX 1, PRBs2E23
	SENS:DATA:TEL:UPRB:PATT:PRBS:TYPE:RX? 1
	Returns: PRBs2E23
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:RX?

:SENSe:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:RX?

Description	This query returns the test pattern type for the transmitter for the selected lane.
	At *RST condition, this value is set to PRBs2E23.
	Navigation Path: Setup > Test Configurator > Unframed BERT > PCS Lane - RX Pattern
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:RX? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for status of the transmitted error pattern. The range for the lane is from 0 to 19.
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test pattern type for the receiver.
	PRBs2E9, PRBS 2^9-1 is selected.
	PRBs2E11, PRBS 2^11-1 is selected.
	PRBs2E15, PRBS 2^15-1 is selected.
	PRBs2E20, PRBS 2^20-1 is selected.
	PRBs2E23, PRBS 2^23-1 is selected.
	PRBs2E31, PRBS 2^31-1 is selected.
	PSWAVE1, PSWAVE1 is selected.
	PSWAVE2, PSWAVE2 is selected.
	PSWAVE4, PSWAVE4 is selected.
	PSWAVE8, PSWAVE8 is selected.
	PSWAVE16, PSWAVE16 is selected.
Example(s)	SENS:DATA:TEL:UPRB:PATT:PRBS:TYPE:RX? 1
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:RX

:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:VERDict:DISable

Description	This command disables Pass/Fail Verdict in Unframed Bert.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > BERT > Bit Error - Pass/Fail Verdict and BER Threshold
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:VERDict:DISable
Response Syntax	<Pattern>
Example(s)	SENS:DATA:TEL:UPRB:PATT:THR:VERD:DIS

:SOURce:DATA:TELecom:CPRI:OBSai:VERDict:ENABle

Description	This command enables/disables the pass/fail verdict.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > BERT > OBSAI - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:VERDict:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:CPRI:OBS:VERD:ENAB ON
See Also	SOURce:DATA:TELecom:CPRI:OBSai:VERDict:ENABle?

:SOURce:DATA:TELecom:CPRI:OBSai:VERDict:ENABle?

Description	This query returns the enable/disable verdict status.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > BERT > OBSAI - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:VERDict:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:OBS:VERD:ENAB?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:VERDict:ENABle

:SOURce:DATA:TELecom:CPRI:VERDict:ENABle

Description	This command sets status of CPRI Threshold Enable/Disable.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > BERT > CPRI - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:CPRI:VERDict:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATa:TEL:CPRI:VERD:ENAB ON
See Also	SOURce:DATA:TELecom:CPRI:VERDict:ENABle?

:SOURce:DATA:TELecom:CPRI:VERDict:ENABle?

Description	This Query returns status of CPRI Threshold.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > BERT > CPRI - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:CPRI:VERDict:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATa:TEL:CPRI:VERDict:ENAB?
See Also	SOURce:DATA:TELecom:CPRI:VERDict:ENABle

:SOURce:DATA:TELecom:ETHernet:STReam:LATency:MODE:TYPE

Description	This command selects the Latency Mode.
	At *RST condition, this value is set to Round-Trip.
	Navigation Path: Setup > Test Configuration > EtherBERT > Latency > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:LATency:MODE:TYPE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the Latency Mode
	ROUNDTRIP: Round-Trip
	ONEWay: One-Way P<m> <-> P<n>, where m = FIRST port and n = SECOND port
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:LAT:MODE ONEW
	SOUR:DATA:TEL:ETH:STR:LAT:MODE?
	Returns: ONEWay
See Also	SOURce:DATA:TELecom:PORT

:SOURce:DATA:TELecom:ETHernet:STReam:LATency:MODE:TYPE?

Description	This query returns the Latency Mode.
	At *RST condition, this value is set to Round-Trip.
	Navigation Path: Setup > Test Configuration > EtherBERT > Latency > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:LATency:MODE:TYPE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Latency Mode.
	ROUNDTRIP: Round-Trip
	ONEWay: One-Way P<m> <-> P<n>, where m = FIRST port and n = SECOND port
Example(s)	SOUR:DATA:TEL:ETH:STR:LAT:MODE ONEW
	SOUR:DATA:TEL:ETH:STR:LAT:MODE?
	Returns: ONEWay
See Also	SOURce:DATA:TELecom:PORT?

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:ENABle

Description	This command enables/disables QoS metrics Latency measurement.
	At *RST condition, this value is OFF.
	Navigation Path: Setup > Test Configurator > EtherBERT > Latency > Enable
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:ENABle <wsp><Latency Measurement Enable>
Parameter(s)	**Latency Measurement Enable**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:ENAB ON
	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:ENABle?

Description	This query returns status of QoS metrics Latency measurement
	At *RST condition, this value is OFF.
	Navigation Path: Setup > Test Configurator > EtherBERT > Latency > Enabled
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Latency measurement status.
	1, Latency measurement is enabled.
	0, Latency measurement is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:ENAB ON
	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:ENAB ?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus?

:SOURce:DATA:TELecom:ETHernet:STReam:RATE

Description	This command sets the transmitter payload rate for the selected traffic payload type.
	At *RST condition, this value is set to 100%.
	Navigation Path: Setup > Test Configurator > EtherBERT > Shaping - TX Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:RATE 56666
	SOUR:DATA:TEL:ETH:STR:RATE?
	Returns: 56666
See Also	SOURce:DATA:TELecom:ETHernet:STReam:RATE?
	SOURce:DATA:TELecom:ETHernet:STReam:TRANsmit:NFRame

:SOURce:DATA:TELecom:ETHernet:STReam:RATE?

Description	This query returns the transmitter payload rate for the selected traffic payload type.
	At *RST condition, this value is set to 100%.
	Navigation Path: Setup > Test Configurator > EtherBERT > Shaping - TX Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the stream rate for the transmitter.
Example(s)	SOUR:DATA:TEL:ETH:STR:RATE 56666
	SOUR:DATA:TEL:ETH:STR:RATE?
	Returns: 56666
See Also	SOURce:DATA:TELecom:ETHernet:STReam:RATE

:SOURce:DATA:TELecom:ETHernet:STReam:TX:STATus

Description	This command enables/disable the transmitter.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > EtherBERT > Shaping - Enable TX
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TX:STATus <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the transmitter status.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:ETH:STR:TX:STAT ON
	SOUR:DATA:TEL:ETH:STR:TX:STAT?
	Returns: 1
See Also	SOURce:DATA:TELcom:ETHernet:STReam:TX:STATus

:SOURce:DATA:TELecom:ETHernet:STReam:TX:STATus?

Description	This query returns the transmitter status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > EtherBERT > Shaping - Enable TX
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TX:STATus?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the transmitter status.
	1, Transmitter is enabled.
	0, Transmitter is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:TX:STAT ON
	SOUR:DATA:TEL:ETH:STR:TX:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TX:STATus?

:SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

Description	Selects the Client Identifier used by all subsequent client related commands or queries.
	Needs to be part of the currently configured client into the FlexE calendar.
	At *RST condition, this value is set to 0 (Invalid Client ID).
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier <wsp><Client Id>
Parameter(s)	**Client Id**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selected Client Identifier
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FETH:CLI:ID 1
	SOUR:DATA:TEL:FETH:CLI:ID?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier?

:SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier?

Description	Returns the Client Identifier used by all subsequent client related commands or queries.
	At *RST condition, this value is set to 0 (Invalid Client ID)
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier?
Response Syntax	<Client Id>
Response(s)	**Client Id**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Selected Client Identifier
Example(s)	SOUR:DATA:TEL:FETH:CLI:ID 1
	SOUR:DATA:TEL:FETH:CLI:ID?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:SOURce:DATA:TELecom:FETHernet:PATTern:CLIent:IDentifier

Description	Selects the Client Identifier associated with Pattern.
	At *RST condition, this value is set to 1 (Default Client ID).
	Navigation Path: Setup > Test Configurator > Clients > BERT > Pattern on Client ID
Syntax	:SOURce:DATA:TELecom:FETHernet:PATTern:CLIent:IDentifier <wsp><Client ID>
Parameter(s)	**Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects Client Identifier.
Response Syntax	<Client Id>
Example(s)	SOUR:DATA:TEL:FETH:PATT:CLI:ID 2
	SOUR:DATA:TEL:FETH:PATT:CLI:ID?
	Returns: 2

:SOURce:DATA:TELecom:FETHernet:PATTern:CLIent:IDentifier?

Description	Returns the Client Identifier Selected for Pattern.
	At *RST condition, this value is set to 1 (Default Client ID).
	Navigation Path: Setup > Test Configurator > Clients > BERT > Pattern on Client ID
Syntax	:SOURce:DATA:TELecom:FETHernet:PATTern:CLIent:IDentifier?
Response Syntax	<Client ID>
Response(s)	**Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Client Identifier.
Example(s)	SOUR:DATA:TEL:FETH:PATT:CLI:ID 2
	SOUR:DATA:TEL:FETH:PATT:CLI:ID?
	Returns: 2

:SOURce:DATA:TELecom:FIBer:STReam:LATency

Description	This command enables/disables the latency tags status.
	At *RST, this value is set to ON.
	Navigation Path: Setup > Test Configurator > FC BERT > Latency Tags Insertion - Latency Tags
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:LATency <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Client ID>
Example(s)	SOUR:DATA:TEL:FIB:STR:LAT ON
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus

:SOURce:DATA:TELecom:FIBer:STReam:LATency:VERDict

Description	This command sets the Pass/Fail Verdict for the instrument.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > FC BERT > Latency Tags Insertion - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:LATency:VERDict <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Client ID>
Example(s)	SOUR:DATA:TEL:FIB:STR:LAT ON
	SOUR:DATA:TEL:FIB:STR:LAT:VERD ON
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus

:SOURce:DATA:TELecom:FIBer:STReam:LATency:VERDict?

Description	This query returns the Pass/Fail Verdict for the instrument.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > FC BERT > Latency Tags Insertion - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:LATency:VERDict?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Pass/Failed Verdict status.
	1 - Pass/Failed Verdict status is enabled.
	0 - Pass/Failed Verdict status is disabled.
Example(s)	SOUR:DATA:TEL:FIB:STR:LAT ON
	SOUR:DATA:TEL:FIB:STR:LAT:VERD ON
	SOUR:DATA:TEL:FIB:STR:LAT:VERD?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus?

:SOURce:DATA:TELecom:FIBer:STReam:LATency?

Description	This query returns the latency tags status.
	At *RST, this value is set to ON.
	Navigation Path: Setup > Test Configurator > FC BERT > Latency Tags Insertion - Latency Tags
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:LATency?
Response Syntax	<Bbcredit>
Response(s)	**Bbcredit**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Latency tags status.
	1 - Latency tags is enabled.
	0 - Latency tags is disabled.
Example(s)	SOUR:DATA:TEL:FIB:STR:LAT ON
	SOUR:DATA:TEL:FIB:STR:LAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus?

:SOURce:DATA:TELecom:FIBer:STReam:RATE

Description	This command sets the maximum bandwidth rate for fibre channel stream (%).
	At *RST, this value is set to 100.
	Navigation Path: Setup > Test Configurator > FC BERT > Shaping - TX Rate
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate in percentage.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Bbcredit>
Example(s)	SOUR:DATA:TEL:FIB:STR:RATE 100
See Also	SOURce:DATA:TELecom:FIBer:STReam:SIZE

:SOURce:DATA:TELecom:FIBer:STReam:RATE?

Description	This query returns the maximum bandwidth rate for fibre channel stream (%).
	At *RST, this value is set to 100.
	Navigation Path: Setup > Test Configurator > FC BERT > Shaping - TX Rate
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum bandwidth rate for fibre channel stream.
Example(s)	SOUR:DATA:TEL:FIB:STR:RATE 100
	SOUR:DATA:TEL:FIB:STR:RATE?
	Returns: 100
See Also	SOURce:DATA:TELecom:FIBer:STReam:SIZE?

:SOURce:DATA:TELecom:FIBer:STReam:SIZE

Description	This command sets the frame size for fibre channel network (Bytes).
	At *RST, this value is set to 2148.
	Navigation Path: Setup > Test Configurator > FC BERT > FC Frame - Frame Size
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:SIZE <wsp><Size>
Parameter(s)	**Size**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the frame size for fibre channel network. Choices are 32 through 2148.
	MAXimum: Maximum.
	MINimum: Minimum.
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FIB:STR:SIZE 128
See Also	SOURce:DATA:TELecom:FIBer:STReam:RATE

:SOURce:DATA:TELecom:FIBer:STReam:SIZE?

Description	This query returns the frame size for fibre channel network (Bytes). At *RST, this value is set to 2148. Navigation Path: Setup > Test Configurator > FC BERT > FC Frame - Frame Size
Syntax	:SOURce:DATA:TELecom:FIBer:STReam:SIZE?[<wsp><Size>]
Parameter(s)	Size: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. This parameter is optional. If unspecified, the current value will be returned. MAXimum: Maximum. MINimum: Minimum.
Response Syntax	<Size>
Response(s)	Size: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the frame size for fibre channel network.
Example(s)	SOUR:DATA:TEL:FIB:STR:SIZE 128 SOUR:DATA:TEL:FIB:STR:SIZE? Returns: 128
See Also	SOURce:DATA:TELecom:FIBer:STReam:RATE?

:SOURce:DATA:TELecom:PATTern:TYPE

Description	This command sets the test pattern type for the transmitter.
	At *RST condition, this value is set to PRBs2E31.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - TX Pattern
Syntax	:SOURce:DATA:TELecom:PATTern:TYPE <wsp><Type>

:SOURce:DATA:TELecom:PATTern:TYPE

Parameter(s)	
	Type:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the pattern type for the transmitter.

CJTPat: CJTPAT

CRPat: CRPAT

CSPat: CSPAT

DALY: DALY Pattern

LCRTpat: LCRTPAT

MULtipattern: Multi-Pattern

NCLient: NULL CLIENT

P0000: 0000 Pattern

P1010: 1010 Pattern

P1100: 1100 Pattern

P1111: 1111 Pattern

P1IN16: 1in16 (1:15)

P1IN8: 1in8 (1:7)

P2IN8: 2in8

P2E6: P2E6

P3iN24: 3in24

P55Octet: 55 Octet

PRBS2E11: PRBS11

PRBS2E15: PRBS15

PRBS2E20: PRBS20

PRBS2E23: PRBS23

PRBS2E31: PRBS31

PRBS2E9: PRBS9

PRBS31UNScrambled: PRBS31 Unscrambled

QRSS: QRSS

SCRTpat: SCRTPAT

SEEDA: Seed A

SEEDB: Seed B

UPATtern: User Defined

:SOURce:DATA:TELecom:PATTern:TYPE

Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:PATT:TYPE PRBs2E15
	SOUR:DATA:TEL:PATT:TYPE?
	Returns: PRBs2E15
See Also	SOURce:DATA:TELecom:PATTern:TYPE?

:SOURce:DATA:TELecom:PATTern:TYPE:USER:VALue

Description	This command sets the transmitter user pattern value for the specified index.
	At *RST condition, this value is set to #H00000000.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - TX Pattern - User Pattern
Syntax	:SOURce:DATA:TELecom:PATTern:TYPE:USER:VALue[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the transmitter user pattern value for the specified index.
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:PATT:TYPE:USER:VAL #H00000001
	SOUR:DATA:TEL:PATT:TYPE:USER:VAL?
	Returns: 1
See Also	SOURce:DATA:TELecom:PATTern:TYPE
	SOURce:DATA:TELecom:PATTern:TYPE:USER:VALue?

:SOURce:DATA:TELecom:PATTern:TYPE:USER:VALue?

Description	This query returns the transmitter user pattern value for the specified index.
	At *RST condition, this value is set to #H00000000.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - TX Pattern - User Pattern
Syntax	:SOURce:DATA:TELecom:PATTern:TYPE:USER:VALue?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the user pattern value for the transmitter.
Example(s)	SOUR:DATA:TEL:PATT:TYPE:USER:VAL #H00000001
	SOUR:DATA:TEL:PATT:TYPE:USER:VAL?
	Returns: 1
See Also	SOURce:DATA:TELecom:PATTern:TYPE
	SOURce:DATA:TELecom:PATTern:TYPE:USER:VALue

:SOURce:DATA:TELecom:PATTern:TYPE?

Description	This query returns the test pattern type for transmitter.
	At *RST condition, this value is set to PRBs2E31.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - TX Pattern
Syntax	:SOURce:DATA:TELecom:PATTern:TYPE?
Response Syntax	<Pattern>

:SOURce:DATA:TELecom:PATTern:TYPE?

Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the pattern type for the transmitter.
	PRBs2E9, pattern type PRBS9 is selected.
	PRBs2E11, pattern type PRBS11 is selected.
	PRBs2E15, pattern type PRBS15 is selected.
	PRBs2E20, pattern type PRBS20 is selected.
	PRBs2E23, pattern type PRBS23 is selected.
	PRBs2E31, pattern type PRBS31 is selected.
	UPATTERN, pattern type User Defined is selected.
	NCLIENT, pattern type NCLIENT is selected.
	PRBS31UNSCRAMBLED, pattern type PRBS31 Unscrambled is selected.
	SEEDA, pattern type Seed A is selected.
	SEEDB, pattern type Seed B is selected.
	P1111, pattern type 1111 Pattern is selected.
	P1100, pattern type 1100 Pattern is selected.
	P1010, pattern type 1010 Pattern is selected.
	P0000, pattern type 0000 Pattern is selected.
	P1IN8, pattern type 1in8 (1:7) is selected.
	P1IN16, pattern type 1in16 (1:15) is selected.
	P2IN8, pattern type 2in8 is selected.
	P3IN24, pattern type 3in24 is selected.
	P55OCTET, pattern type 55 Octet is selected.
	QRSS, pattern type QRSS is selected.
	DALY, pattern type DALY is selected.
	MULTIPATTERN, pattern type Multi-Pattern is selected.
Example(s)	SOUR:DATA:TEL:PATT:TYPE PRBs2E15
	SOUR:DATA:TEL:PATT:TYPE?
	Returns: PRBs2E15
See Also	SOURce:DATA:TELecom:PATTern:TYPE

:SOURce:DATA:TELecom:POLarity

Description	This command sets the polarity pattern for the transmitter.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - TX Pattern - Invert
Syntax	:SOURce:DATA:TELecom:POLarity <wsp><Polarity>
Parameter(s)	**Polarity**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the transmitter polarity.
	NINVerted: Non-inverted.
	INVerted: Inverted.
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:POL INV
	SOUR:DATA:TEL:POL?
	Returns: INVerted
See Also	SOURce:DATA:TELecom:PATTern:TYPE?
	SOURce:DATA:TELecom:POLarity?

:SOURce:DATA:TELecom:POLarity?

Description	This query returns the polarity pattern of the transmitter.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > EtherBERT > Pattern - TX Pattern - Invert
Syntax	:SOURce:DATA:TELecom:POLarity?
Response Syntax	<Polarity>
Response(s)	**Polarity**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the transmitter polarity pattern for specific stream.
	NINVerted, indicates the polarity as non-inverted.
	INVerted, indicates the polarity as inverted.
Example(s)	SOUR:DATA:TEL:POL INV
	SOUR:DATA:TEL:POL?
	Returns: INVerted
See Also	SOURce:DATA:TELecom:PATTern:TYPE
	SOURce:DATA:TELecom:PATTern:POLarity

:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:TX

Description	This command sets the global polarity pattern for the transmitter.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - TX Pattern - Invert
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:TX <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the polarity for the transmitter.
	NINVerted: Non-Inverted
	INVerted: Inverted
Response Syntax	<Polarity>
Example(s)	SOUR:DATA:TEL:UPRB:PATT:GLOB:POL:TX INV
	SOUR:DATA:TEL:UPRB:PATT:GLOB:POL:TX?
	Returns: INVerted
See Also	SOURce:DATA:TELecom:PATTern:TYPE?
	SOURce:DATA:TELecom:POLarity?

:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:TX ?

Description	This query returns the global polarity pattern for the transmitter.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - TX Pattern - Invert
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:POLarity:TX?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the polarity type of the transmitter.
	NINVerted, indicates Non-Inverted as the polarity.
	INVerted, indicates Inverted as the polarity.
Example(s)	SOUR:DATA:TEL:UPRB:PATT:GLOB:POL:TX INV
	SOUR:DATA:TEL:UPRB:PATT:GLOB:POL:TX?
	Returns: INVerted
See Also	SOURce:DATA:TELecom:PATTern:TYPE
	SOURce:DATA:TELecom:PATTern:POLarity

:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:TX

Description	This command sets the global test pattern type for the Transmitter.
	At *RST condition, this value is set to PRBs2E23.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - TX Pattern
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:TX <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the test pattern for the transmitter.
	PRBS2E9: PRBS 2 ^ 9-1
	PRBS2E11: PRBS 2 ^ 11-1
	PRBS2E15: PRBS 2 ^ 15-1
	PRBS2E20: PRBS 2 ^ 20-1
	PRBS2E23: PRBS 2 ^ 23-1
	PRBS2E31: PRBS 2 ^ 31-1
	PSWAVE1: PSWAVE1
	PSWAVE2: PSWAVE2
	PSWAVE4: PSWAVE4
	PSWAVE8: PSWAVE8
	PSWAVE16: PSWAVE16
	PRBS31Q: PRBS31Q
	PRBS13Q: PRBS13Q
	SSPRQ: SSPRQ
	UPATtern: User Pattern
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:UPRB:PATT:GLOB:PRBS:TYPE:TX PRBs2E23
	SOUR:DATA:TEL:UPRB:PATT:GLOB:PRBS:TYPE:TX?
	Returns: PRBs2E23
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX

:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:TX?

Description	This query returns the global test pattern type for the Transmitter.
	At *RST condition, this value is set to PRBs2E23.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - TX Pattern
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:TX?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test pattern for the Transmitter.
	PRBs2E9, PRBS 2^9-1 is selected.
	PRBs2E11, PRBS 2^11-1 is selected.
	PRBs2E15, PRBS 2^15-1 is selected.
	PRBs2E20, PRBS 2^20-1 is selected.
	PRBs2E23, PRBS 2^23-1 is selected.
	PRBs2E31, PRBS 2^31-1 is selected.
	PSWAVE1, PSWAVE1 is selected.
	PSWAVE2, PSWAVE2 is selected.
	PSWAVE4, PSWAVE4 is selected.
	PSWAVE8, PSWAVE8 is selected.
	PSWAVE16, PSWAVE16 is selected.
	PRBS31Q, PRBS31Q is selected.
	PRBS13Q, PRBS13Q is selected.
	SSPRQ, SSPRQ is selected.
	UPATtern, User Pattern is selected
Example(s)	SOUR:DATA:TEL:UPRB:PATT:GLOB:PRBS:TYPE:TX?
See Also	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:PRBS:TYPE:RX?

:SOURce:DATA:TELecom:UPRBs:PATTern:POLarity:TX

Description	This command sets the Invert pattern per lane for the transmitter.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - TX Pattern - Invert
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:POLarity:TX <wsp><Lane>, <Invert>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Invert:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the polarity for the transmitter.
	NINVerted: Non-Inverted
	INVerted: Inverted
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:UPRB:PATT:POL:TX 1, INV
See Also	SOURce:DATA:TELecom:UPRBs:PATTern:POLarity:TX?
	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL

:SOURce:DATA:TELecom:UPRBs:PATTern:POLarity:TX?

Description	This query returns the Invert pattern per lane for the transmitter.
	At *RST condition, this value is set to NINVerted.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern - TX Pattern - Invert
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:POLarity:TX? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Invert>
Response(s)	**Invert**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Invert pattern setting for the selected lane.
Example(s)	SOUR:DATA:TEL:UPRB:PATT:POL:TX? 1
See Also	SOURce:DATA:TELecom:UPRBs:PATTern:POLarity:TX
	SENSe:DATA:TELecom:UPRBs:PATTern:GLOBal:ALL

:SOURce:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:TX

Description	This command sets the test pattern type for the transmitter for the selected lane.
	At *RST condition, this value is set to PRBs2E23.
	Navigation Path: Setup > Test Configurator > Unframed BERT > PCS Lane - TX Pattern
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:TX <wsp><Lane>, <Type>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for status of the transmitted error pattern. The range for the lane is from 0 to 19.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the test pattern type for the transmitter.
	PRBS2E9: PRBS $2 \wedge 9$-1.
	PRBS2E11: PRBS $2 \wedge 11$-1.
	PRBS2E15: PRBS $2 \wedge 15$-1.
	PRBS2E20: PRBS $2 \wedge 20$-1.
	PRBS2E23: PRBS $2 \wedge 23$-1.
	PRBS2E31: PRBS $2 \wedge 31$-1.
	PSWAVE1: PSWAVE1.
	PSWAVE2: PSWAVE2.
	PSWAVE4: PSWAVE4.
	PSWAVE8: PSWAVE8.
	PSWAVE16: PSWAVE16.
Response Syntax	<Invert>
Example(s)	SOUR:DATA:TEL:UPRB:PATT:PRBS:TYPE:TX 1, PRBs2E23
	SOUR:DATA:TEL:UPRB:PATT:PRBS:TYPE:TX? 1
	Returns: PRBs2E23
See Also	SOURce:DATA:TELecom:PATTern:TYPE
	SOURce:DATA:TELecom:PATTern:TYPE:USER:VALue?

:SOURce:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:TX?

Description	This query returns the test pattern type for the transmitter for the selected lane.
	At *RST condition, this value is set to PRBs2E23.
	Navigation Path: Setup > Test Configurator > Unframed BERT > PCS Lane - TX Pattern
Syntax	:SOURce:DATA:TELecom:UPRBs:PATTern:PRBS:TYPE:TX? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for status of the transmitted error pattern. The range for the lane is from 0 to 19.
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test pattern type for the transmitter for the selected traffic stream.
	PRBs2E9, PRBS 2^9-1 is selected.
	PRBs2E11, PRBS $2^{11}-1$ is selected.
	PRBs2E15, PRBS $2^{15}-1$ is selected.
	PRBs2E20, PRBS $2^{20}-1$ is selected.
	PRBs2E23, PRBS $2^{23}-1$ is selected.
	PRBs2E31, PRBS $2^{31}-1$ is selected.
	PSWAVE1, PSWAVE1 is selected.
	PSWAVE2, PSWAVE2 is selected.
	PSWAVE4, PSWAVE4 is selected.
	PSWAVE8, PSWAVE8 is selected.
	PSWAVE16, PSWAVE16 is selected.
Example(s)	SOUR:DATA:TEL:UPRB:PATT:PRBS:TYPE:TX? 1

RFC 2544 - Global

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:MINtime?

Description	This query returns the minimum time for the back-to-back subtest required to run in best condition.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Back-to-Back - Estimated Time
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:MINtime?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the minimum time.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:MIN?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:MINtime?

Description	This query returns the minimum time the Frame Loss subtest is required to run in best condition.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Loss - Estimated Time
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:MINtime?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the minimum time.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:MIN?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:ENABle

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:MINtime?

Description	This query returns the minimum time the latency subtest is required to run in best condition.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Latency - Estimated Time
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:MINtime?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the minimum time.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:MIN?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:LATency:ENABle

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:MINtime?

Description	This query returns the minimum time the throughput subtest is required to run in best condition.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Throughput - Estimated Time
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:MINtime?
Response Syntax	\<Time\>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA\> element.
	Returns the minimum time the test is required to run in best condition.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:MIN?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughut:ENABle

:FETCh:DATA:TELecom:ETHernet:RFC:TOTal:MINtime?

Description	This query returns the total time the test is required to run in best condition.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Total - Extimated Time
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TOTal:MINtime?
Response Syntax	<Total Time>
Response(s)	**Total Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the total time the test is required to run in best condition.
Example(s)	FETC:DATA:TEL:ETH:RFC:TOT:MIN?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:MINtime?

:SOURce:DATA:TELecom:ETHernet:DUALtest:ENABled

Description	This command enables/disables Dual Test Set.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Dual Test Set > Dual Test Set
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Dual Test Set > Dual Test Set
Syntax	:SOURce:DATA:TELecom:ETHernet:DUALtest:ENABled <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Total Time>
Example(s)	SOUR:DATA:TEL:ETH:DUAL:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:REMote:CONNect?

:SOURce:DATA:TELecom:ETHernet:DUALtest:ENABled?

Description	This query returns the enable/disable Dual Test Set status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Dual Test Set > Dual Test Set
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Dual Test Set > Dual Test Set
Syntax	:SOURce:DATA:TELecom:ETHernet:DUALtest:ENABled?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:DUAL:ENAB ON
	SOUR:DATA:TEL:ETH:DUAL:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:REMote:CONNect

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle

Description	This command enables/disables the selected back-to-back subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Back-to-Back - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:BCKT:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle?

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle?

Description	This query returns the status of the back-to-back subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Back-to-Back - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:BCKT:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle?

:SOURce:DATA:TELecom:ETHernet:RFC:FDIRection

Description	This command sets the Flow Direction
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global Options - Flow Direction
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FDIRection <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Flow direction
	TXTORX: TX To RX
	P1TOP2: Port #1 To Port #2
	P2TOP1: Port #2 To Port #1
	FBIDIRCT: Bidirectional
	LTORemote: Local To Remote
	RTOLocal: Remote To Local
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:RFC:FDIRection TXTORX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:TX

:SOURce:DATA:TELecom:ETHernet:RFC:FDIRection?

Description	This query returns the Flow Direction
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global Options - Flow Direction
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FDIRection?
Response Syntax	<direction>
Response(s)	**direction**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Flow direction
Example(s)	SOURce:DATA:TELecom:ETHernet:RFC:FDIRection?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:TX?

:SOURce:DATA:TELecom:ETHernet:RFC:FDIStrib

Description	This command selects frame size distribution from the list. At *RST condition, this value is set to RFC2544. Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Distribution - Frame Distribution
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FDIStrib \<wsp>\<Distribution>
Parameter(s)	**Distribution**: The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element. Selects frame size distribution from the list. RFC2544: RFC2544 UDEFined: User Defined
Response Syntax	\<direction>
Example(s)	SOUR:DATA:TEL:ETH:RFC:FDIS UDEF SOUR:DATA:TEL:ETH:RFC:FDIS? Returns: UDEFined
See Also	SOURce:DATA:TELecom:ETHernet:RFC:QUANtity SOURce:DATA:TELecom:ETHernet:RFC:QUANtity?

:SOURce:DATA:TELecom:ETHernet:RFC:FDIStrib?

Description	This query returns the frame size distribution from the list.
	At *RST condition, this value is set to RFC2544.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Distribution - Frame Distribution
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FDIStrib?
Response Syntax	<Distribution>
Response(s)	**Distribution**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the frame size distribution from the list.
	RFC2544, RFC2544 is returned as frame size distribution.
	UDEFined, User Defined (UDEFined) is returned as frame size distribution.
Example(s)	SOUR:DATA:TEL:ETH:RFC:FDIS RFC2544
	SOUR:DATA:TEL:ETH:RFC:FDIS?
	Returns: RFC2544
See Also	SOURce:DATA:TELecom:ETHernet:RFC:QUANtity
	SOURce:DATA:TELecom:ETHernet:RFC:QUANtity?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:ENABle

Description	This command enables/disables the selected Frame Loss subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Loss - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Distribution>
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:FLOS:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:ENABle?

Description	This query returns the status of the Frame Loss subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Loss - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:FLOS:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle?

:SOURce:DATA:TELecom:ETHernet:RFC:FSIZe

Description	This command sets the predefined frame size distribution values for RFC 2544 distribution.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Distribution - Frame Size
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FSIZe \<wsp>\<Quantity>, \<Size>
Parameter(s)	**Quantity**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the quantity of frame size.
	Size:
	The program data syntax for the second parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the predefined frame size distribution value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	\<Status>
Example(s)	SOUR:DATA:TEL:ETH:RFC:FDIS UDEF
	SOUR:DATA:TEL:ETH:RFC:QUAN 1
	SOUR:DATA:TEL:ETH:RFC:FSIZ 1, 69
	SOUR:DATA:TEL:ETH:RFC:FSIZ? 1
	Returns: 69
See Also	SOURce:DATA:TELecom:ETHernet:RFC:QUANtity

:SOURce:DATA:TELecom:ETHernet:RFC:FSIZe?

Description	This query returns the predefined frame size distribution values for RFC 2544 distribution.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Distribution - Frame Size
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FSIZe? <wsp><Quantity>,[<Size>]
Parameter(s)	**Quantity**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the quantity of frame size.
	Size:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current predefined frame size distribution is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Fsize>
Response(s)	**Fsize**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the predefined frame size distribution values.
Example(s)	SOUR:DATA:TEL:ETH:RFC:FDIS UDEF
	SOUR:DATA:TEL:ETH:RFC:QUAN 1
	SOUR:DATA:TEL:ETH:RFC:FSIZ 1, 65
	SOUR:DATA:TEL:ETH:RFC:FSIZ? 1
	Returns: 65
See Also	SOURce:DATA:TELecom:ETHernet:RFC:QUANtity?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ENABle

Description	This command enables/disables the latency subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Latency - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Fsize>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:LAT:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ENABle?

Description	This query returns the status of the latency subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Latency - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:LAT:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ENABle?

:SOURce:DATA:TELecom:ETHernet:RFC:QUANtity

Description	This command selects quantity of frame size to be used for the test.
	At *RST condition, this value is set to 7.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Distribution - Quantity
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:QUANtity <wsp><Quantity>
Parameter(s)	**Quantity**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects quantity of frame size.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:RFC:QUAN 7
	SOUR:DATA:TEL:ETH:RFC:QUAN?
	Returns: 7
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FDIStribution
	SOURce:DATA:TELecom:ETHernet:RFC:FDIStribution?

:SOURce:DATA:TELecom:ETHernet:RFC:QUANtity?

Description	This query returns the quantity of frame size used for the test.
	At *RST condition, this value is set to 7.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Frame Distribution - Quantity
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:QUANtity?
Response Syntax	<Quantity>
Response(s)	**Quantity**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the quantity of frame size.
Example(s)	SOUR:DATA:TEL:ETH:RFC:QUAN 7
	SOUR:DATA:TEL:ETH:RFC:QUAN?
	Returns: 7
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FDIStribution
	SOURce:DATA:TELecom:ETHernet:RFC:FDIStribution?

:SOURce:DATA:TELecom:ETHernet:RFC:RESTore

Description	This command restores the default CONFig for RFC Frame Sizes.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Restore RFC 2544 Defaults
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:RESTore
Response Syntax	<Quantity>
Example(s)	SOUR:DATA:TEL:ETH:RFC:REST
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FSIZe

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle

Description	This command enables/disables the selected RFC 2544 throughput subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Throughput - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Quantity>
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:THR:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle?

Description	This query returns the status of the selected throughput subtest.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Global > Throughput - Subtests
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:THR:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations?

Smart Loopback

:SOURce:DATA:TELecom:ETHernet:SLOopback:MATChing:MAC:ADDRess:MODE?

Description	This query returns the MAC address of Smart Loopback application.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Smart Loopback > Loopback - Matching & Swapping - MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLOopback:MATChing:MAC:ADDRess:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the MAC address.
Example(s)	SOUR:DATA:TEL:ETH:SLO:MATC:MAC:ADDR:MODE?
See Also	SOURce:DATA:TELecom:ETHernet:SLOopback:MODE?

:SOURce:DATA:TELecom:ETHernet:SLOopback:MATChing:UDP:PORT:MODE?

Description	This query returns the UDP/TCP port value of Smart Loopback application.
	At *RST condition, this value is set to All.
	Navigation Path: Setup > Test Configurator > Smart Loopback > Loopback - Matching & Swapping - UDP/TCP Port
Syntax	:SOURce:DATA:TELecom:ETHernet:SLOopback:MATChing:UDP:PORT:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the UDP port mode.
Example(s)	SOUR:DATA:TEL:ETH:SLO:MATC:UDP:PORT:MODE?
See Also	SOURce:DATA:TELecom:ETHernet:SLOopback:MODE?

:SOURce:DATA:TELecom:ETHernet:SLOopback:MODE

Description	This command selects the mode for Smart Loopback application.
	At *RST condition, this value is set to UDP.
	Navigation Path: Setup > Test Configurator > Smart Loopback > Loopback - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLOopback:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the loopback mode for the smart loopback application.
	UDPTCP, UDP mode is selected.
	IP, IP mode is selected.
	ETHernet, Ethernet mode is selected.
	EAUNicast, Ethernet all unicast mode is selected.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:SLO:MODE IP
See Also	SOURce:DATA:TELecom:ETHernet:SLOopback:MATChing:UDP:PORT:MODE?

:SOURce:DATA:TELecom:ETHernet:SLOopback:MODE?

Description	This query returns the selected mode for Smart Loopback application.
	At *RST condition, this value is set to UDP.
	Navigation Path: Setup > Test Configurator > Smart Loopback > Loopback - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLOopback:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the loopback mode.
	IP, IP mode is selected.
	UDPTCP, UDP mode is selected.
	ETHERNET, Ethernet mode is selected.
	EAUNICAST, Ethernet all unicast mode is selected.
Example(s)	SOUR:DATA:TEL:ETH:SLO:MODE IP
	SOUR:DATA:TEL:ETH:SLO:MODE?
	Returns: IP
See Also	SOURce:DATA:TELecom:ETHernet:SLOopback:MATChing:UDP:PORT:MODE?

BERT

:FETCh:DATA:TELecom:PATTern:ALARm:SYNC?

Description	This query returns the Sync status of pattern alarm for the selected lane.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Sync
Syntax	:FETCh:DATA:TELecom:PATTern:ALARm:SYNC? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane of pattern alarm.
Response Syntax	<Sync>
Response(s)	**Sync**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Synch status of the pattern alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:PATT:ALAR:SYNC? 1
See Also	FETCh:DATA:TELecom:PATTern:GLOBal:ALARm:SYNC?

:FETCh:DATA:TELecom:PATTern:GLOBal:ALARm:SYNC?

Description	This query returns the Globally Sync status of the pattern alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Sync
Syntax	:FETCh:DATA:TELecom:PATTern:GLOBal:ALARm:SYNC?
Response Syntax	<Sync>
Response(s)	**Sync**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Globally Synch status of the pattern
	alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:PATT:GLOB:ALAR:SYNC?
See Also	FETCh:DATA:TELecom:PATTern:ALARm:SYNC?

:SENSe:DATA:TELecom:PATTern:THReshold:COUNt

Description	This command selects the Pass/Fail Verdict as Bit Error Count and sets the BER Threshold count value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > BERT > Bit Error - Pass/Fail Verdict and BER Threshold (Count)
	Navigation Path: Setup > Test Configurator > Clients > BERT > Bit Error - Pass/Fail Verdict and BER Threshold (Count)
Syntax	:SENSe:DATA:TELecom:PATTern:THReshold:COUNt <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Pattern Threshold Count Value.
	Choices are 0 to 999999
	MAXimum: Biggest supported count
	MINimum: Smallest supported count
	DEFault: Default value
Response Syntax	<Sync>
Example(s)	SENS:DATA:TEL:PATTern:THReshold:COUN 1000
	SENS:DATA:TEL:PATTern:THReshold:COUN? Returns: 1000
See Also	SENSe:DATA:TELecom:SDT:NDTime?

:SENSe:DATA:TELecom:PATTern:THReshold:COUNt?

Description	This query returns the BER Threshold count value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > BERT > Bit Error - Pass/Fail Verdict and BER Threshold (Count)
	Navigation Path: Setup > Test Configurator > Clients > BERT > Bit Error - Pass/Fail Verdict and BER Threshold (Count)
Syntax	:SENSe:DATA:TELecom:PATTern:THReshold:COUNt?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the Pattern Threshold Count Value is returned.
	MAXimum: Biggest count
	MINimum: Smallest count
	DEFault: Default value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the pattern Threshold Count.
Example(s)	SENS:DATA:TEL:PATTern:THReshold:COUN 1000
	SENS:DATA:TEL:PATTern:THReshold:COUN? Returns: 1000
See Also	SENSe:DATA:TELecom:SDT:NDTime

:SENSe:DATA:TELecom:PATTern:THReshold:RATE

Description	This command selects the Pass/Fail Verdict as Bit Error Rate and sets the BER Threshold rate value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > BERT > Bit Error - Pass/Fail Verdict and BER Threshold (Rate)
	Navigation Path: Setup > Test Configurator > Clients > BERT > Bit Error - Pass/Fail Verdict and BER Threshold (Rate)
Syntax	:SENSe:DATA:TELecom:PATTern:THReshold:RATE <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Pattern threshold rate.
	Choices are 1.0E-14 through 1.9E-01
	MAXimum: Biggest rate
	MINimum: Smallest rate
	DEFault: Default rate
Response Syntax	<Value>
Example(s)	SENS:DATA:TEL:PATTern:THReshold:RATE 1.0E-12
	SENS:DATA:TEL:PATTern:THReshold:RATE? Returns: 1.0E-12
See Also	SENSe:DATA:TELecom:SDT:PATTern:THReshold:COUNt?

:SENSe:DATA:TELecom:PATTern:THReshold:RATE?

Description	This query returns BER Threshold rate value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > BERT > Bit Error - BER Threshold (Rate)
	Navigation Path: Setup > Test Configurator >Clients > BERT > Bit Error - BER Threshold (Rate)
Syntax	:SENSe:DATA:TELecom:PATTern:THReshold:RATE?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the Pattern threshold rate is returned.
	MAXimum: Biggest rate
	MINimum: Smallest rate
	DEFault: Default rate
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the pattern BER Threshold rate.
Example(s)	SENS:DATA:TEL:PATTern:THReshold:RATE 1.0E-12
	SENS:DATA:TEL:PATTern:THReshold:RATE? Returns: 1.0E-12
See Also	SENSe:DATA:TELecom:SDT:PATTern:THReshold:COUNt

:SENSe:DATA:TELecom:SDT

Description	This command enables/disables the disruption time measurements.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - Disruption Monitoring
Syntax	:SENSe:DATA:TELecom:SDT <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Value>
Example(s)	SENS:DATA:TEL:SDT ON
	SENS:DATA:TEL:SDT? Returns: 1
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE
	SENSe:DATA:TELecom:SDT:OTN:DSELection

:SENSe:DATA:TELecom:SDT:NDTime

Description	This command selects the no defect time(ms) without any defects before stopping SDT measurement.
	At *RST condition, this value is set to 300 ms.
	Navigation Path: Setup > Test Configurator > BERT > Service Disruption - No Defect Time
Syntax	:SENSe:DATA:TELecom:SDT:NDTime <wsp><Time>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the no defect time without any defects before stopping SDT measurement.Choices are from 0.005ms to 2000 ms.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default Value
Response Syntax	<Value>
Example(s)	SENS:DATA:TEL:SDT:NDT 18
	SENS:DATA:TEL:SDT:NDT?
	Returns: 18
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE

:SENSe:DATA:TELecom:SDT:NDTime?

Description	This query returns the no defect time(ms) without any defects before stopping SDT measurement. At *RST condition, thisthis value is set to 300 ms. Navigation Path: Setup > Test Configurator > BERT > Service Disruption - No Defect Time
Syntax	:SENSe:DATA:TELecom:SDT:NDTime?[<wsp><No Defect Time>]
Parameter(s)	**No Defect Time**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. This parameter is optional.If no token is specified, the current no defect time without any defects is returned. MAXimum: Biggest supported value MINimum: Smallest supported value DEFault: Default value
Response Syntax	<Time>
Response(s)	**Time**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the no defect time without any defects before stopping SDT measurement.
Example(s)	SENS:DATA:TEL:SDT:NDT 200 SENS:DATA:TEL:SDT:NDT? Returns: 200
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE?

:SENSe:DATA:TELecom:SDT:OTN:DSELection

Description	This command selects the defect of selected layer.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > BERT > Service Disruption - Defect
Syntax	:SENSe:DATA:TELecom:SDT:OTN:DSELection <wsp><Selection>
Parameter(s)	**Selection**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the defect:
	AISL, AISP, AISV, AULop,
	B1, B2, B3, BIP2, BITerror, BPV,
	CBIT, CRC6,
	DS1AIS, DS1OOF, DS3AIS, DS3OOF,

Example(s)	SENS:DATA:TEL:SDT:OTN:LAY:TYPE Interface
	SENS:DATA:TEL:SDT:OTN:LAY:TYPE?
	Returns: Interface
See Also	SENSe:DATA:TELecom:SDT:OTN:DSELection?

:SENSe:DATA:TELecom:SDT:THReshold

Description	This command selects the configurable threshold value to declare the Service Disruption Pass/Fail verdict.
	At *RST condition, this value is set to 1000 ms.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - SDT Threshold
Syntax	:SENSe:DATA:TELecom:SDT:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the configurable threshold value to declare the Service Disruption Pass/Fail verdict.
	Choices are from 18.0 to 299999.995
	MAXimum: Biggest supported value
	MINimum: Smallest supported value.
	DEFault: Default value
Response Syntax	<Layer>
Example(s)	SENS:DATA:TEL:SDT:THR 50
	SENS:DATA:TEL:SDT:THR?
	Returns: 50
See Also	SENS[1..n]:DATA:TEL:SDT:NTT 18
	SENS[1..n]:DATA:TEL:SDT:NTT? Returns 18

:SENSe:DATA:TELecom:SDT:THReshold?

Description	This query returns the configurable threshold value to declare the Service Disruption Pass/Fail verdict.
	At *RST condition, this value is set to 50 ms.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - SDT Threshold
Syntax	:SENSe:DATA:TELecom:SDT:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the current threshold value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the configurable threshold value
Example(s)	SENS:DATA:TEL:SDT:THR
	SENS:DATA:TEL:SDT:THR?
	Returns: 0
See Also	SENS[1..n]:DATA:TEL:SDT:NTT 200
	SENS[1..n]:DATA:TEL:SDT:NTT? Returns 200

:SENSe:DATA:TELecom:SDT:VERDict

Description	This command sets the Pass/Fail Verdict.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - Pass/Fail Verdict
Syntax	:SENSe:DATA:TELecom:SDT:VERDict <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDT:VERD ON
	SENS:DATA:TEL:SDT:VERD?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE

:SENSe:DATA:TELecom:SDT:VERDict?

Description	This query returns the Pass/Fail Verdict.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - Pass/Fail Verdict
Syntax	:SENSe:DATA:TELecom:SDT:VERDict?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Pass/Failed Verdict status
	1 - Pass/Failed Verdict status is enabled.
	0 - Pass/Failed Verdict status is disabled.
Example(s)	SENS:DATA:TEL:SDT:VERD ON
	SENS:DATA:TEL:SDT:VERD?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE

:SENSe:DATA:TELecom:SDT?

Description	This query returns the status of disruption time measurements.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > <Test Block> > Service Disruption - Disruption Monitoring
Syntax	:SENSe:DATA:TELecom:SDT?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the disruption time measurements.
	1 - measurement is enabled.
	0 - measurement is disabled.
Example(s)	SENS:DATA:TEL:SDT ON
	SENS:DATA:TEL:SDT? Returns: 1
See Also	SENSe:DATA:TELecom:SDT:OTN:LAYer:TYPE?

:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:COUNt

Description	This command selects the Pass/Fail Verdict as Bit Error Count and sets the BER Threshold count value.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern > BERT Threshold
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:COUNt <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Pattern Threshold Count Value.
	Choices are 0 to 999999
	MAXimum: Biggest supported count
	MINimum: Smallest supported count
	DEFault: Default value
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:UPRB:PATTern:THReshold:COUN 1000
	SENS:DATA:TEL:UPRB:PATTern:THReshold:COUN? Returns: 1000
See Also	SENSe:DATA:TELecom:SDT:NDTime?

:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:COUNt?

Description	This query returns the BER Threshold count value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern > BERT Threshold
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:COUNt?[<wsp><GET>]
Parameter(s)	**GET**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the Pattern Threshold Count Value.
	This parameter is optional. If no token is specified, the Pattern Threshold Count Value is returned.
	MAXimum: Biggest count value
	MINimum: Smallest count value
	DEFault: Default value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the pattern Threshold Count.
Example(s)	SENS:DATA:TEL:UPRB:PATTern:THReshold:COUN 1000
	SENS:DATA:TEL:UPRB:PATTern:THReshold:COUN? Returns: 1000
See Also	SENSe:DATA:TELecom:SDT:NDTime

:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:RATE

Description	This command selects the Pass/Fail Verdict as Bit Error Rate and sets the BER Threshold rate value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern > BERT Threshold
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:RATE <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Pattern threshold rate.
	Choices are 1.0E-14 through 1.9E-01
	MAXimum: Biggest rate
	MINimum: Smallest rate
	DEFault: Default value
Response Syntax	<Value>
Example(s)	SENS:DATA:TEL:UPRB:PATTern:THReshold:RATE 1.0E-12
	SENS:DATA:TEL:UPRB:PATTern:THReshold:RATE? Returns: 1.0E-12
See Also	SENSe:DATA:TELecom:SDT:PATTern:THReshold:COUNt

:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:RATE?

Description	This query returns BER Threshold rate value.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Unframed BERT > Pattern > BERT Threshold
Syntax	:SENSe:DATA:TELecom:UPRBs:PATTern:THReshold:RATE?[<wsp><GET>]
Parameter(s)	**GET**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the Pattern Threshold Rate.
	This parameter is optional. If no token is specified, the Pattern Threshold Rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the pattern Threshold rate.
Example(s)	SENS:DATA:TEL:UPRB:PATTern:THReshold:RATE 1.0E-12
	SENS:DATA:TEL:UPRB:PATTern:THReshold:RATE? Returns: 1.0E-12
See Also	SENSe:DATA:TELecom:SDT:PATTern:THReshold:COUNt

:SOURce:DATA:TELecom:OTN:REStore:DEFault

Description	This command resets the test to its default factory settings.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: OTN Test > Setup > BERT / Unframed BERT > Restore OTN BERT Defaults
Syntax	:SOURce:DATA:TELecom:OTN:REStore:DEFault
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:OTN:REST:DEF
See Also	SOURce:DATA:TELecom:SDHSonet:OH:REStore:DEFault
	SOURce:DATA:TELecom:GFP:OH:REStore:DEFault

:SOURce:DATA:TELecom:PATTern:VERDict:DISable

Description	This command disables the Pass/Fail Verdict.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > BERT > Bit Error - Pass/Fail Verdict
	Navigation Path: Setup > Test Configurator > Clients > BERT > Bit Error - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:PATTern:VERDict:DISable
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:PATTern:VERDict:DISable
See Also	SOURce:DATA:TELecom:OTN:OH:OTU[1..n]:DEFault?

Interface - Laser ON/OFF

:SENSe:DATA:TELecom:ALASer

Description	This command enables/disables the All Lanes selection; once set use the following command to enable/disable the laser for all lanes OUTPut[1..n]:TELecom:LASer
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU4/OTU3/100GE/40GE parallel interface > Interface/Signal > Physical Interface - Laser ON/OFF > All Lanes
Syntax	:SENSe:DATA:TELecom:ALASer <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the laser for all Lanes.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Termination>
Example(s)	SENS:DATA:TEL:ALAS ON
	SENS:DATA:TEL:ALAS?
	Returns: 1
See Also	SENSe:DATA:TELecom:ALASer ON
	SENSe:DATA:TELecom:ALASer?
	Returns: 1

:SENSe:DATA:TELecom:ALASer?

Description	This query returns the state of the All Lanes selection.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU4/OTU3/100GE/40GE parallel interface > Interface/Signal > Physical Interface - Laser ON/OFF > All Lanes
Syntax	:SENSe:DATA:TELecom:ALASer?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the laser for all lanes.
	1, returns the status of the laser for all lanes as ON.
	0, returns the status of the laser for all lanes as OFF.
Example(s)	SENS:DATA:TEL:ALAS ON
	SENS:DATA:TEL:ALAS?
	Returns: 1
See Also	SENSe:DATA:TELecom:LASer?
	SENSe:DATA:TELecom:LASer

:SENSe:DATA:TELecom:LASer

Description	This command enables/disables the laser for the selected lane. Available when the All Lanes setting is disabled.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Laser ON/OFF > Lane
Syntax	:SENSe:DATA:TELecom:LASer <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the laser according to per lane CONFig.
	ON, sets the laser to ON.
	OFF, sets the laser to OFF.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:LAS 1, ON
	SENS:DATA:TEL:LAS? 1
	Returns: 1
See Also	SENSe:DATA:TELecom:LASer?
	SENSe:DATA:TELecom:ALASer

:SENSe:DATA:TELecom:LASer?

Description	This query returns the enable/disable status of the laser for a specific lane.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Laser ON/OFF > Lane
Syntax	:SENSe:DATA:TELecom:LASer? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status of the laser for a specific lane.
	1: Laser is ON
	0: Lase is OFF
Example(s)	SENS:DATA:TEL:LAS 1, ON
	SENS:DATA:TEL:LAS? 1
	Returns: 1
See Also	SENSe:DATA:TELecom:ALASer

Signal - Signal Configuration (OTN) - Modify Tributary Slots/Port

:FETCh:DATA:TELecom:OTN:BITRate?

Description	This query returns the nominal bit rate value.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Nominal Bit Rate
Syntax	:FETCh:DATA:TELecom:OTN:BITRate?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the nominal bit rate value
Example(s)	FETC:DATA:TEL:OTN:BITRate?
See Also	FETCh:DATA:TELecom:OTN:SLOTs

:FETCh:DATA:TELecom:OTN:SLOTs?

Description	This query returns the number of tributary slot enabled/selected.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Number of Trib Slots
Syntax	:FETCh:DATA:TELecom:OTN:SLOTs?
Response Syntax	<Slots>
Response(s)	**Slots**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Count of No.of Tributory Slots selected.
Example(s)	FETC:DATA:TEL:OTN:SLOTs?
See Also	FETCh:DATA:TELecom:OTN:BITRate

:SOURce:DATA:TELecom:OTN:FSTRucture:ENABle

Description	This command enables/disables the fixed structure.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Fixed Structure
Syntax	:SOURce:DATA:TELecom:OTN:FSTRucture:ENABle <wsp><OduType>, <Status>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Slots>
Example(s)	SOUR:DATA:TEL:OTN:FSTR:ENAB ODU3,ON
See Also	SOURce:DATA:TELecom:OTN:PORT

:SOURce:DATA:TELecom:OTN:FSTRucture:ENABle?

Description	This query returns the fixed structure status.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Fixed Structure
Syntax	:SOURce:DATA:TELecom:OTN:FSTRucture:ENABle? <wsp><OduType>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:FSTR:ENAB? ODU3
See Also	SOURce:DATA:TELecom:OTN:PORT

:SOURce:DATA:TELecom:OTN:PORT

Description	This command sets the tributary port value.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Tributary Port
Syntax	:SOURce:DATA:TELecom:OTN:PORT <wsp><OduType>,[<Set>]
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
	Set:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the port value.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:PORT ODU3,3
See Also	SOURce:DATA:TELecom:OTN:FSTRucture:ENABle

:SOURce:DATA:TELecom:OTN:PORT?

Description	This query returns the tributary port value.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Tributary Port
Syntax	:SOURce:DATA:TELecom:OTN:PORT? <wsp><OduType>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
Response Syntax	<port>
Response(s)	**port**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the port value.
Example(s)	SOUR:DATA:TEL:OTN:PORT? ODU3
See Also	SOURce:DATA:TELecom:OTN:FSTRucture:ENABle

:SOURce:DATA:TELecom:OTN:POSition

Description	This command selects/un-selects a specific tributary slot.
	At *RST condition, this value is set to 1 (ON).
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Table of slot selection
Syntax	:SOURce:DATA:TELecom:OTN:POSition <wsp><OduType>, <Slot>, <Set>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
	Slot:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the slot value.
	Set:
	The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the slot status whether selected or not selected.
	ON, enables slot selection.
	OFF, disables slot selection.
Response Syntax	<port>
Example(s)	SOUR:DATA:TEL:OTN:POS ODU2,1, ON
See Also	SOURce:DATA:TELecom:OTN:POSition?
	SOURce:DATA:TELecom:OTN:POSition:RANGe

:SOURce:DATA:TELecom:OTN:POSition:RANGe

Description	This command selects/un-selects a group of tributary slots.
	At *RST condition, this value is set to 1 (ON).
	Navigation Path: Setup > Test Configurator > Signal (OTU) > Modify Tributary Slots/Port
Syntax	:SOURce:DATA:TELecom:OTN:POSition:RANGe <wsp><ODU>, <Slot-From>, <Slot-To>, <Set>
Parameter(s)	**ODU**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
	Slot-From:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the first slot in the range.
	Slot-To:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the last slot in the range.
	Set:
	The program data syntax for the fourth parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/Disables the slots for the selected range.
	ON: Enables slots
	OFF: Disables slots
Response Syntax	<port>
Example(s)	SOUR:DATA:TEL:OTN:POS:RANG ODU4,1,31,ON
	SOUR:DATA:TEL:OTN:POS:RANG? ODU4
See Also	SOURce:DATA:TELecom:OTN:POSition:RANGe?
	SOURce:DATA:TELecom:OTN:POSition

:SOURce:DATA:TELecom:OTN:POSition:RANGe?

Description	This query returns the status for all slots, for selected ODU type.
	At *RST condition, this value is set to 1 (ON).
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Table of slot selection
Syntax	:SOURce:DATA:TELecom:OTN:POSition:RANGe? <wsp><OduType>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
Response Syntax	<Slot status>
Response(s)	**Slot status**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns all available slots and their status for specified ODU type.
	1: Selected
	0: Not selected
Example(s)	SOUR:DATA:TEL:OTN:POS:RANG ODU4,1,31,ON
	SOUR:DATA:TEL:OTN:POS:RANG? ODU4
See Also	SOURce:DATA:TELecom:OTN:POSition:RANGe?
	SOURce:DATA:TELecom:OTN:POSition?

:SOURce:DATA:TELecom:OTN:POSition?

Description	This query returns the state of a specific tributary slot.
	At *RST condition, this value is set to 1 (ON).
	Navigation Path: Setup > Test Configurator > OTU > Signal > Modify Tributary Slots/Port > Table of slot selection
Syntax	:SOURce:DATA:TELecom:OTN:POSition? <wsp><OduType>, <Slot>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the ODU type value.
	Slot:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the slot value.
Response Syntax	<status>
Response(s)	**status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the slot status, whether it is selected or not.
	1: Selected
	0: Not selected
Example(s)	SOUR:DATA:TEL:OTN:POS? ODU2,1
See Also	SOURce:DATA:TELecom:OTN:POSition
	SOURce:DATA:TELecom:OTN:POSition:RANGe?

Signal - Signal Configuration (OTN) - Config TCM

:SOURce:DATA:TELecom:OTN:ODU[1..n]:CONFig:TCM[1..n]

Description	This command enables/disables TCM.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Config TCM > TCMn
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:CONFig:TCM[1..n] <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the TCM values.
	ON, sets the TCM ON.
	OFF, sets the TCM OFF.
Response Syntax	<List of ODUx Tributary Configuration>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:CONF:TCM1 ON
	SOUR:DATA:TEL:OTN:ODU3:CONF:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SCRambler
	SOURce:DATA:TELecom:OTN:OTU[1?n]:SCRambler?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:CONFig:TCM[1..n]?

Description	This query returns the status of TCM.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU > Signal > Config TCM > TCMn
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:CONFig:TCM[1..n]?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the TCM values.
	0, returns the status as OFF.
	1, returns the status as ON.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:CONF:TCM1 ON
	SOUR:DATA:TEL:OTN:ODU3:CONF:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:SCRambler
	SOURce:DATA:TELecom:OTN:OTU[1..n]:SCRambler?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:CONFig:TCM[1..n]

Description	This command sets the status of TCM values for OTU1e/2e and OTU3e1/e2 rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Signal > Config TCM > TCMn
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:CONFig:TCM[1..n] <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:CONF:TCM1 ON
	SOUR:DATA:TEL:OTN:ODU3:E1:CONF:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler
	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:CONFig:TCM[1..n]?

Description	This query returns the status of TCM for OTU1e/2e and OTU3e1/e2 rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1e/2e / OTU3e1/e2 > Signal > Config TCM > TCMn
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:CONFig:TCM[1..n]?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the TCM values.
	0, returns the status as OFF.
	1, returns the status as ON.
Example(s)	SOUR:DATA:TEL:OTN:ODU3:E1:CONF:TCM1 OFF
	SOUR:DATA:TEL:OTN:ODU3:E1:CONF:TCM1?
	Returns: 0
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler
	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:CONFig:TCM[1..n]

Description	This command sets the status of TCM for OTU1f/2f rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Signal > Config TCM > TCMn
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:CONFig:TCM[1..n] <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:CONFig:TCM1 ON
	SOUR:DATA:TEL:OTN:ODU1:F:CONFig:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler
	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler?

:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:CONFig:TCM[1..n]?

Description	This query returns the status of TCM for OTU1f/2f rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OTU1f/2f > Signal > Config TCM > TCMn
Syntax	:SOURce:DATA:TELecom:OTN:ODU[1..n]:F:CONFig:TCM[1..n]?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the TCM values.
	0, returns the status of the TCM values is disabled.
	1, returns the status of the TCM values is enabled.
Example(s)	SOUR:DATA:TEL:OTN:ODU1:F:CONFig:TCM1 OFF
	SOUR:DATA:TEL:OTN:ODU1:F:CONFig:TCM1?
	Returns: 0
See Also	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler
	SOURce:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:SCRambler?

Modify Frame Structure

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:LAYermode

Description	This command sets the Layer mode for selected service.
	At *RST condition, the value is set to Mixed.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > Modify Frame Structure - Layer Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:LAYermode <wsp><Layer Mode>
Parameter(s)	**Layer Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Layer mode.
	MIXED : Mixed
	LAYER2ONLY : L2 Only
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:LAY MIXED

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:LAYermode?

Description	This query returns the Layer mode for selected service.
	At *RST condition, the value is set to Mixed.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > Modify Frame Structure - Layer Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:LAYermode?
Response Syntax	<Layer Mode>
Response(s)	**Layer Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Layer Mode.
	MIXED: Mixed
	LAYER2ONLY : L2 Only
Example(s)	SOUR:DATA:TEL:ETH:ESAM:CONF:SERV:LAY MIXED

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN

Description	This command enables/disables VLAN tags.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN <wsp><Service>, <Direction>, <Set>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Set:
	The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the VLAN.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Layer Mode>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:RESUlt:SCOTest:BURSt:TEST?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STACked

Description	This command selects the number of staked VLAN tags.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STACked <wsp><Service>, <Direction>, <Stacked>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Stacked:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Layer Mode>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,3
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STACked?

Description	This query returns the number of staked VLAN tags.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STACked? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Stacked>
Response(s)	**Stacked**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the VLAN stacked.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC 1, LTOR,3
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN:STAC? 1, LTOR
	Returns: 3
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:VLAN?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN?

Description	This query returns the status fo VLAN tags.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Set>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN?

Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Virtual Local Area Network (VLAN) Configuration.
	1, VLAN is enabled.
	0, VLAN is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN 1, LTOR,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN? 1, LTOR
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STRream: ETHer?

:SOURce:DATA:TELecom:ETHernet:PORT:IPVersion

Description	This command selects the IP version.
	At *RST condition, this value is set to IPv4.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Global Option - IP Version
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Global Option - IP Version
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:IPVersion <wsp><IP Version>
Parameter(s)	**IP Version**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the IP version.
	IPV6
	IPV4
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:PORT:IPV IPV6
	SOUR:DATA:TEL:ETH:PORT:IPV?
	Returns: IPV6
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPV:ADDRess?

:SOURce:DATA:TELecom:ETHernet:PORT:IPVersion?

Description	This query returns the IP version.
	At *RST condition, this value is set to IPv4.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Global Option - IP Version
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Global Option - IP Version
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:IPVersion?
Response Syntax	<IP Version>
Response(s)	**IP Version**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the IP version.
	IPV4 | IPV6
Example(s)	SOUR:DATA:TEL:ETH:PORT:IPV IPV6
	SOUR:DATA:TEL:ETH:PORT:IPV?
	Returns: IPV6
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPV:MODE?

:SOURce:DATA:TELecom:ETHernet:STReam:DATalink

Description	This command sets the framing frame format.
	At *RST condition, this value is set to ETHERNETII.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Framing - Frame Format
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Framing - Frame Format
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DATalink[<wsp><Stream>], <Datalink>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Datalink:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set the type of datalink.
	ETHERNETII: ETHERNETII
	8023LLCSNAP4: 802.3 SNAP
Response Syntax	<IP Version>
Example(s)	SOUR:DATA:TEL:ETH:STR:DAT 1, ETHERNETII
	SOUR:DATA:TEL:ETH:STR:DAT? 1
	Returns: ETHERNETII
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DATalink?

:SOURce:DATA:TELecom:ETHernet:STRem:DATalink?

Description	This query returns the the framing frame format.
	At *RST condition, this value is set to ETHERNETII.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Framing - Frame Format
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Framing - Frame Format
Syntax	:SOURce:DATA:TELecom:ETHernet:STRem:DATalink?[<wsp><Stream>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Datalink>
Response(s)	**Datalink**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the selected datalink type.
	ETHERNETII, ETHERNETII as datalink is selected.
	8023LLCSNAP4,802.3 SNAP as datalink is selected.
Example(s)	SOUR:DATA:TEL:ETH:STR:DAT 1, ETHERNETII
	SOUR:DATA:TEL:ETH:STR:DAT? 1
	Returns: ETHERNETII
See Also	SOURce:DATA:TELecom:ETHernet:STRem:DATalink
	SOURce:DATA:TELecom:ETHernet:STRem:NETWork?

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS

Description	This command enables/disables MPLS labels.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > MPLS - MPLS Label
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS <wsp><Number>, <Set>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the MPLS selection for selected stream
	ON, Enables MPLS selection for selected stream.
	OFF, Disables MPLS selection for selected stream.
Response Syntax	<Datalink>
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:MPLS 1, on
	SOURce:DATA:TELecom:ETHernet:STReam:MPLS? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:HEADers

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:HEADers

Description	This command set the number of MPLS header.
	At *RST condition, this value is set to 2.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > MPLS - MPLS Label
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:HEADers <wsp><Number>, <Label Count>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Label Count:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Label Count.
Response Syntax	<Datalink>
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:HEAD 1, 1
	SOUR:DATA:TEL:ETH:STR:MPLS:HEAD? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ELECtrical:STReam:MPLS:LABel

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:HEADers?

Description	This query returns the number fo MPLS header.
	At *RST condition, this value is set to 2.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > MPLS - MPLS Label
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS:HEADers? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Label Count (header)>
Response(s)	**Label Count (header)**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the label count (Header).
Example(s)	SOUR:DATA:TEL:ETH:STR:MPLS:HEAD 1, 1
	SOUR:DATA:TEL:ETH:STR:MPLS:HEAD? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp?

:SOURce:DATA:TELecom:ETHernet:STReam:MPLS?

Description	This query returns the status of MPLS labels.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > MPLS - MPLS Label
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MPLS? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns MPLS status.
	1, MPLS is enabled.
	0, MPLS is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:MPLS 1, on
	SOURce:DATA:TELecom:ETHernet:STReam:MPLS? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:HEADers?

:SOURce:DATA:TELecom:ETHernet:STReam:NETWork

Description	This command sets framing network layer.
	At *RST condition, this value is set to IPV4.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Framing - Network Layer
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Framing - Network Layer
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:NETWork[<wsp><Tgen>], <Network>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Network:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of network.
	NONE: None
	IPV4: Internet Protocol version 4
	IPV6: Internet Protocol version 6
	MPLSIPV4: IPV4 (Internet Protocol version 4) when MPLS is enabled
	MPLSIPV6: IPV6 (Internet Protocol version 6) when MPLS is enabled
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:NETW 1, IPV4
	SOUR:DATA:TEL:ETH:STR:NETW?
	Returns: IPV4
See Also	SOURce:DATA:TELecom:ETHernet:STReam:NETWork?
	SOURce:DATA:TELecom:ETHernet:STReam:DATalink

:SOURce:DATA:TELecom:ETHernet:STReam:NETWork?

Description	This query returns the framing network layer.
	At *RST condition, this value is set to IPV4.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Framing - Network Layer
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Framing - Network Layer
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:NETWork?[<wsp><Tgen>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Network>
Response(s)	**Network**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the selected network type.
	NONE, No network type is selected.
	IPV4, IPV4 is selected as the network type.
	IPV6, IPV6 is selected as the network type.
	MPLSIPV4, MPLSIPV4 is selected as the network type.
	MPLSIPV6,MPLSIPV6 is selected as the network type.
Example(s)	SOUR:DATA:TEL:ETH:STR:NETW 1, IPV4
	SOUR:DATA:TEL:ETH:STR:NETW? 1
	Returns: IPV4
See Also	SOURce:DATA:TELecom:ETHernet:STReam:NETWork

:SOURce:DATA:TELecom:ETHernet:STReam:TRANsport

Description	This command sets the framing transport layer.
	At *RST condition, this value is set to UDP.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Framing - Transport Layer
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Framing - Transport Layer
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TRANsport[<wsp><Stream>], <Transport>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Transport:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the transport traffic type.
	NONE, No transport traffic type is selected.
	UDP: UDP (User Data Protocol).
	TCP: TCP.
Response Syntax	<Network>
Example(s)	SOUR:DATA:TEL:ETH:STR:TRAN 1, UDP
	SOUR:DATA:TEL:ETH:STR:TRAN? 1
	Returns: UDP
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TRANsport?

:SOURce:DATA:TELecom:ETHernet:STReam:TRANsport?

Description	This query returns the framing transport layer.
	At *RST condition, this value is set to UDP.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > Framing - Transport Layer
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > Framing - Transport Layer
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TRANsport?[<wsp><Stream>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Transport>
Response(s)	**Transport**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the selected transport type.
	UDP, transport link as UDP is selected.
	TCP,transport link as TCP is selected.
Example(s)	SOUR:DATA:TEL:ETH:STR:TRAN 1, UDP
	SOUR:DATA:TEL:ETH:STR:TRAN? 1
	Returns: UDP
See Also	SOURce:DATA:TELecom:ETHernet:STReam:NETWork

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN

Description	This command enables/disables VLAN tags.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN[<wsp><Number>], <Set>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Set the VLAN for the stream.
	ON, enables the VLAN
	OFF, disables the VLAN.
Response Syntax	<Transport>
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN?

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked

Description	This command sets the number of stacked VLAN.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked <wsp><Number>, <Stacked>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	Stacked:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Transport>
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:STAC 1, 3
	SOUR:DATA:TEL:ETH:STR:VLAN:STAC? 1
	Returns: 3
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked?

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked?

Description	This query returns the number of stacked VLAN.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Stacked>
Response(s)	**Stacked**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the VLAN stacked.
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN:STAC 1, 3
	SOUR:DATA:TEL:ETH:STR:VLAN:STAC? 1
	Returns: 3
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked

:SOURce:DATA:TELecom:ETHernet:STReam:VLAN?

Description	This query returns the status of VLAN tags.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > Modify Frame Structure > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:VLAN?[<wsp><Number>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of VLAN type frames.
	1, VLAN is enabled.
	0, VLAN is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:VLAN 1, ON
	SOUR:DATA:TEL:ETH:STR:VLAN? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:VLAN
	SOURce:DATA:TELecom:ETHernet:STReam:VLAN:STACked

TOS/DS Configuration

:SOURce:DATA:TELecom:ETHernet:IP:DS:CODE

Description	This command sets the DSCP Codepoints value.
	At *RST condition, this value is set to CS0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Differentiated Services - DSCP Codepoints.
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:DS:CODE <wsp><Direction>, <Code>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Code:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the code point for the differentiated services.
	AF11, AF12, AF13, AF21, AF22, AF23, AF31, AF32, AF33, AF41, AF42, AF43
	CS0, CS1, CS2,CS3, CS4, CS5, CS6, CS7
	DSCP51
	DSCP54
	EF
	UCODE: User Defined
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:IP:DS:CODE LTOR, CS1
	SOUR:DATA:TEL:ETH:IP:DS:CODE? LTOR
	Returns: CS1
See Also	SOURce:DATA:TELecom:ETHernet:IP:DS
	SOURce:DATA:TELecom:ETHernet:IP:DS:CODE?

:SOURce:DATA:TELecom:ETHernet:IP:DS:CODE?

Description	This query returns the DSCP Codepoints value.
	At *RST condition, this value is set to CS0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Differentiated Services - DSCP Codepoints
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:DS:CODE? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Code>

:SOURce:DATA:TELecom:ETHernet:IP:DS:CODE?

Response(s)	Code:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return the DS codepoint value.
	CS0, selects CS0 as the DS code point.
	CS1, selects CS1 as the DS code point.
	CS2, selects CS2 as the DS code point.
	CS3, selects CS3 as the DS code point.
	CS4, selects CS4 as the DS code point.
	CS5, selects CS5 as the DS code point.
	CS6, selects CS6 as the DS code point.
	CS7, selects CS7 as the DS code point.
	AF11, selects AF11 as the DS code point.
	AF12, selects AF12 as the DS code point.
	AF13, selects AF13 as the DS code point.
	AF21, selects AF21 as the DS code point.
	AF22, selects AF22 as the DS code point.
	AF23, selects AF23 as the DS code point.
	AF31, selects AF31 as the DS code point.
	AF32, selects AF32 as the DS code point.
	AF33, selects AF33 as the DS code point.
	AF41, selects AF41as the DS code point.
	AF42, selects AF42 as the DS code point.
	AF43, selects AF43 as the DS code point.
	EF, selects EF as the DS code point.
	DSCP51, selects 51 as the DS code point.
	DSCP54, selects 54 as the DS code point.
	UCODe, selects User Defined as the DS code point.
Example(s)	SOUR:DATA:TEL:ETH:IP:DS:CODE LTOR, CS1
	SOUR:DATA:TEL:ETH:IP:DS:CODE? LTOR
	Returns: CS1
See Also	SOURce:DATA:TELecom:ETHernet:IP:DS
	SOURce:DATA:TELecom:ETHernet:IP:DS:CODE

:SOURce:DATA:TELecom:ETHernet:IP:DS:ECN

Description	This command sets the value of Explicit Congestion Notification (ECN).
	At *RST condition, this value is set to 00 (Not-ECT).
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Differentiated Services - ECN
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:DS:ECN <wsp><Direction>, <Ecn>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Ecn:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the value for ECN (Explicit Congestion Notification).
	NECT: Not ECT (ECN Capable Transport)
	ECT1: ECT-1
	ECT0: ECT-0
	CE: CE (European Conformity)
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:ETH:IP:DS:ECN LTOR, NECT
	SOUR:DATA:TEL:ETH:IP:DS:ECN? LTOR
	Returns: NECT
See Also	SOURce:DATA:TELecom:ETHernet:IP:DS
	SOURce:DATA:TELecom:ETHernet:IP:DS:ECN?

:SOURce:DATA:TELecom:ETHernet:IP:DS:ECN?

Description	This query returns the value of the Explicit Congestion Notification (ECN).
	At *RST condition, this value is set to 00 (Not-ECT).
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Differentiated Services - ECN
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:DS:ECN? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Ecn>
Response(s)	**Ecn**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value of Explicit Congestion
	Notification (ECN).
	NECT, indicates Not ECT (ECN Capable Transport) as the ECN value.
	ECT1, indicates ECT-1 as the ECN value.
	ECT0, indicates ECT-0 as the ECN value.
	CE, indicates CE (European Conformity) as the ECN value.
Example(s)	SOUR:DATA:TEL:ETH:IP:DS:ECN LTOR, NECT
	SOUR:DATA:TEL:ETH:IP:DS:ECN? LTOR
	Returns: NECT
See Also	SOURce:DATA:TELecom:ETHernet:IP:DS
	SOURce:DATA:TELecom:ETHernet:IP:DS:ECN

:SOURce:DATA:TELecom:ETHernet:IP:TOS:BIT

Description	This command selects the reserved bit value of Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Reserved Bit
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:BIT <wsp><Direction>, <Bit>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Bit:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the reserved bit value.
	0
	1
Response Syntax	<Ecn>
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:BIT LTOR,#B1
	SOUR:DATA:TEL:ETH:IP:TOS:BIT? LTOR
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:BIT?

:SOURce:DATA:TELecom:ETHernet:IP:TOS:BIT?

Description	This query returns the reserved bit value of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Reserved Bit
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:BIT? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Bit>
Response(s)	**Bit**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the reserved bit value.
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:BIT LTOR,#B1
	SOUR:DATA:TEL:ETH:IP:TOS:BIT? LTOR
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:BIT

:SOURce:DATA:TELecom:ETHernet:IP:TOS:COST

Description	This command sets the monetary cost level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Monetary Cost
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:COST <wsp><Direction>, <Cost>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Cost:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the monetary cost level of the Type of Service.
	NORMal: Normal
	TLOW: Low
Response Syntax	<Bit>
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:COST LTOR, TLOW
	SOUR:DATA:TEL:ETH:IP:TOS:COST? LTOR
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:COST?

:SOURce:DATA:TELecom:ETHernet:IP:TOS:COST?

Description	This query returns the monetary cost level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Monetary Cost
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:COST? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Cost>
Response(s)	**Cost**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the monetary cost level of the Type of Service.
	NORMal, indicates Normal as the monetary cost level.
	TLOW, indicates Low as the monetary cost level.
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:COST LTOR, TLOW
	SOUR:DATA:TEL:ETH:IP:TOS:COST? LTOR
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:COST

:SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay

Description	This command sets the delay level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Delay
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay <wsp><Direction>, <Delay>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Delay:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the delay level of the Type of Service.
	NORMal: Normal
	TLOW: Low
Response Syntax	<Cost>
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:DEL LTOR, TLOW
	SOUR:DATA:TEL:ETH:IP:TOS:DEL? LTOR
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay?

:SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay?

Description	This query returns the delay level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Delay
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Delay>
Response(s)	**Delay**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the delay level of the Type of Service.
	NORMal, indicates Normal as the delay level.
	TLOW, indicates Low as the delay level.
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:DEL LTOR, TLOW
	SOUR:DATA:TEL:ETH:IP:TOS:DEL? LTOR
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay

:SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence

Description	This command sets the precedence of the Type of Service (TOS).
	At *RST condition, this value is set to ROUTine.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Precedence
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence <wsp><Direction>, <Precedence>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Precedence:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the precedence of the Type of Service (TOS) for the selected traffic stream.
	ROUTine: Routine.
	PRIority: Priority.
	IMMediate: Immediate.
	FLASh: Flash.
	FOVerride: Flash Override.
	CRITic: Critic.
	ICONtrol: Internet Control.
	NCONtrol: Network Control.
Response Syntax	<Delay>
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:PREC LTOR, ROUT
	SOUR:DATA:TEL:ETH:IP:TOS:PREC? LTOR
	Returns: ROUTINE
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence?
	SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay

:SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence?

Description	This query returns the precedence of the Type of Service (TOS).
	At *RST condition, this value is set to ROUTine.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Precedence
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Precedence>
Response(s)	**Precedence**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the precedence of the Type of Service.
	ROUTINE, Routine is selected as the TOS precedence.
	PRIORITY, Priority is selected as precedence.
	IMMEDIATE, Immediate is selected as precedence.
	FLASH, Flash is selected as precedence.
	FOVERRIDE, Flash Override is selected as precedence.
	CRITIC, Critic is selected as precedence.
	ICONTROL, Internet Control is selected as precedence.
	NCONTROL, Network Control is selected as precedence.
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:PREC LTOR, ROUT
	SOUR:DATA:TEL:ETH:IP:TOS:PREC? LTOR
	Returns: ROUTINE
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence
	SOURce:DATA:TELecom:ETHernet:IP:TOS:DELay

:SOURce:DATA:TELecom:ETHernet:IP:TOS:RELiability

Description	This command sets the reliability level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Reliability
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:RELiability <wsp><Direction>, <Reliability>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Reliability:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the reliability level of the Type of Service.
	NORMal: Normal
	HIGH: High
Response Syntax	<Precedence>
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:REL LTOR, HIGH
	SOUR:DATA:TEL:ETH:IP:TOS:REL? LTOR
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:RELiability?
	SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence

:SOURce:DATA:TELecom:ETHernet:IP:TOS:RELiability?

Description	This query returns the reliability level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Reliability
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:RELiability? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Reliability>
Response(s)	**Reliability**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the reliability level of the Type of Service.
	NORMal, indicates the reliability level as Normal.
	HIGH, indicates the reliability level as High.
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:REL LTOR, HIGH
	SOUR:DATA:TEL:ETH:IP:TOS:REL? LTOR
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:RELiability
	SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence

:SOURce:DATA:TELecom:ETHernet:IP:TOS:THRoughput

Description	This command sets the throughput level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:THRoughput <wsp><Direction>, <Throughput>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Throughput:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the throughput level of the Type of Service.
	NORMal: Normal
	HIGH: High
Response Syntax	<Reliability>
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:THR LTOR, HIGH
	SOUR:DATA:TEL:ETH:IP:TOS:THR? LTOR
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:THRoughput?
	SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence

:SOURce:DATA:TELecom:ETHernet:IP:TOS:THRoughput?

Description	This query returns the throughput level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TOS/DS Config > Type Of Service - Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:IP:TOS:THRoughput? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Throughput>
Response(s)	**Throughput**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the throughput level of the Type of Service.
	NORMAL, Normal is selected as the throughput level.
	HIGH, High is selected as the throughput level.
Example(s)	SOUR:DATA:TEL:ETH:IP:TOS:THR LTOR, HIGH
	SOUR:DATA:TEL:ETH:IP:TOS:THR? LTOR
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:IP:TOS:THRoughput
	SOURce:DATA:TELecom:ETHernet:IP:TOS:PRECedence

:SOURce:DATA:TELecom:ETHernet:STReam:DS

Description	This command enables/disables the differentiated service status for the selected traffic stream.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > TOS/DS
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DS <wsp><Tgen>,[<Set>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enable or disable the DS.
	ON, Enables the DS.
	OFF, Disables the DS.
Response Syntax	<Throughput>
Example(s)	SOUR:DATA:TEL:ETH:STR:DS 1, ON
	SOUR:DATA:TEL:ETH:STR:DS? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DS?

:SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE

Description	This command sets the DSCP Codepoints value.
	At *RST condition, this value is set to CS0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - DSCP Codepoints
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - DSCP Codepoints
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE <wsp><Tgen>,[<Code>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Code:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the code point for the differentiated services.
	AF11, AF12, AF13, AF21, AF22, AF23, AF31, AF32, AF33, AF41, AF42, AF43
	CS0, CS1, CS2,CS3, CS4, CS5, CS6, CS7
	DSCP51
	DSCP54
	EF
	UCODE: User Defined
Response Syntax	<Throughput>
Example(s)	SOUR:DATA:TEL:ETH:STR:DS 1, ON
	SOUR:DATA:TEL:ETH:STR:DS:CODE 1, CS1
	SOUR:DATA:TEL:ETH:STR:DS:CODE? 1
	Returns: CS1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DS
	SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE?

:SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE?

Description	This query returns the DSCP Codepoints value.
	At *RST condition, this value is set to CS0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - DSCP Codepoints
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - DSCP Codepoints
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Code>

:SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE?

Response(s)	Code:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return the DS codepoint value.
	CS0, selects CS0 as the DS code point.
	CS1, selects CS1 as the DS code point.
	CS2, selects CS2 as the DS code point.
	CS3, selects CS3 as the DS code point.
	CS4, selects CS4 as the DS code point.
	CS5, selects CS5 as the DS code point.
	CS6, selects CS6 as the DS code point.
	CS7, selects CS7 as the DS code point.
	AF11, selects AF11 as the DS code point.
	AF12, selects AF12 as the DS code point.
	AF13, selects AF13 as the DS code point.
	AF21, selects AF21 as the DS code point.
	AF22, selects AF22 as the DS code point.
	AF23, selects AF23 as the DS code point.
	AF31, selects AF31 as the DS code point.
	AF32, selects AF32 as the DS code point.
	AF33, selects AF33 as the DS code point.
	AF41, selects AF41as the DS code point.
	AF42, selects AF42 as the DS code point.
	AF43, selects AF43 as the DS code point.
	EF, selects EF as the DS code point.
	DSCP51, selects 51 as the DS code point.
	DSCP54, selects 54 as the DS code point.
	UCODe, selects User Defined as the DS code point.
Example(s)	SOUR:DATA:TEL:ETH:STR:DS 1, ON
	SOUR:DATA:TEL:ETH:STR:DS:CODE 1, CS1
	SOUR:DATA:TEL:ETH:STR:DS:CODE? 1
	Returns: CS1

:SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE?

See Also   SOURce:DATA:TELecom:ETHernet:STReam:DS

SOURce:DATA:TELecom:ETHernet:STReam:DS:CODE

:SOURce:DATA:TELecom:ETHernet:STReam:DS:ECN

Description	This command sets the value of Explicit Congestion Notification (ECN).
	At *RST condition, this value is set to 00 (Not-ECT).
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - ECN
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - ECN
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DS:ECN <wsp><Tgen>,[<Ecn>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Ecn:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the value for ECN (Explicit Congestion Notification).
	NECT: Not ECT (ECN Capable Transport)
	ECT1: ECT-1
	ECT0: ECT-0
	CE: CE (European Conformity)
Response Syntax	<Code>
Example(s)	SOUR:DATA:TEL:ETH:STR:DS 1, ON
	SOUR:DATA:TEL:ETH:STR:DS:ECN 1, NECT
	SOUR:DATA:TEL:ETH:STR:DS:ECN? 1
	Returns: NECT
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DS
	SOURce:DATA:TELecom:ETHernet:STReam:DS:ECN?

:SOURce:DATA:TELecom:ETHernet:STReam:DS:ECN?

Description	This query returns the value of the Explicit Congestion Notification (ECN).
	At *RST condition, this value is set to 00 (Not-ECT).
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - ECN
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Differentiated Services - ECN
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DS:ECN? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Ecn>
Response(s)	**Ecn**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value of Explicit Congestion
	Notification (ECN).
	NECT, indicates Not ECT (ECN Capable Transport) as the ECN value.
	ECT1, indicates ECT-1 as the ECN value.
	ECT0, indicates ECT-0 as the ECN value.
	CE, indicates CE (European Conformity) as the ECN value.
Example(s)	SOUR:DATA:TEL:ETH:STR:DS 1, ON
	SOUR:DATA:TEL:ETH:STR:DS:ECN 1, NECT
	SOUR:DATA:TEL:ETH:STR:DS:ECN? 1
	Returns: NECT
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DS
	SOURce:DATA:TELecom:ETHernet:STReam:DS:ECN

:SOURce:DATA:TELecom:ETHernet:STReam:DS?

Description	This query returns the status of the differentiated service status for the selected traffic stream.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > TOS/DS
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:DS? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of differentiated service.
	1, Differentiated service is enabled.
	0, Differentiated service is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:DS 1, ON
	SOUR:DATA:TEL:ETH:STR:DS? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DS

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:BIT

Description	This command selects the reserved bit value of Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reserved Bit
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reserved Bit
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:BIT <wsp><Tgen>, <Bit>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Bit:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the reserved bit value.
	0
	1
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:BIT 4,#B1
	SOUR:DATA:TEL:ETH:STR:TOS:BIT? 4
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:BIT?

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:BIT?

Description	This query returns the reserved bit value of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reserved Bit
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reserved Bit
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:BIT? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Bit>
Response(s)	**Bit**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the reserved bit value.
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:BIT 4,#B1
	SOUR:DATA:TEL:ETH:STR:TOS:BIT? 4
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:BIT

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:COST

Description	This command sets the monetary cost level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Monetary Cost
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Monetary Cost
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:COST <wsp><Tgen>, <Cost>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Cost:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the monetary cost level of the Type of Service.
	NORMal: Normal
	TLOW: Low
Response Syntax	<Bit>
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:COST 1, TLOW
	SOUR:DATA:TEL:ETH:STR:TOS:COST? 1
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:COST?

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:COST?

Description	This query returns the monetary cost level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Monetary Cost
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Monetary Cost
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:COST? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Cost>
Response(s)	**Cost**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the monetary cost level of the Type of Service.
	NORMal, indicates Normal as the monetary cost level.
	TLOW, indicates Low as the monetary cost level.
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:COST 1, TLOW
	SOUR:DATA:TEL:ETH:STR:TOS:COST? 1
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:COST

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay

Description	This command sets the delay level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Delay
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Delay
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay <wsp><Tgen>, <Delay>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Delay:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the delay level of the Type of Service.
	NORMal: Normal
	TLOW: Low
Response Syntax	<Cost>
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:DEL 1, TLOW
	SOUR:DATA:TEL:ETH:STR:TOS:DEL? 1
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay?

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay?

Description	This query returns the delay level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Delay
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Delay
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Delay>
Response(s)	**Delay**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the delay level of the Type of Service.
	NORMal, indicates Normal as the delay level.
	TLOW, indicates Low as the delay level.
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:DEL 1, TLOW
	SOUR:DATA:TEL:ETH:STR:TOS:DEL? 1
	Returns: TLOW
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence

Description	This command sets the precedence of the Type of Service (TOS).
	At *RST condition, this value is set to ROUTine.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Precedence
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Precedence
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence <wsp><Tgen>,[<Precedence>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Precedence:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the precedence of the Type of Service (TOS) for the selected traffic stream.
	ROUTine: Routine.
	PRIority: Priority.
	IMMediate: Immediate.
	FLASh: Flash.
	FOVerride: Flash Override.
	CRITic: Critic.
	ICONtrol: Internet Control.
	NCONtrol: Network Control.
Response Syntax	<Delay>
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:PREC 1, ROUT
	SOUR:DATA:TEL:ETH:STR:TOS:PREC? 1
	Returns: ROUTINE
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence?
	SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence ?

Description	This query returns the precedence of the Type of Service (TOS).
	At *RST condition, this value is set to ROUTine.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Precedence
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Precedence
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Precedence>
Response(s)	**Precedence**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the precedence of the Type of Service.
	ROUTINE, Routine is selected as the TOS precedence.
	PRIORITY, Priority is selected as precedence.
	IMMEDIATE, Immediate is selected as precedence.
	FLASH, Flash is selected as precedence.
	FOVERRIDE, Flash Override is selected as precedence.
	CRITIC, Critic is selected as precedence.
	ICONTROL, Internet Control is selected as precedence.
	NCONTROL, Network Control is selected as precedence.
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:PREC 1, ROUT
	SOUR:DATA:TEL:ETH:STR:TOS:PREC? 1
	Returns: ROUTINE
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence
	SOURce:DATA:TELecom:ETHernet:STReam:TOS:DELay

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:RELiability

Description	This command sets the reliability level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reliability
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reliability
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:RELiability <wsp><Tgen>, <Reliability>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Reliability:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the reliability level of the Type of Service.
	NORMal: Normal
	HIGH: High
Response Syntax	<Precedence>
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:REL 1, HIGH
	SOUR:DATA:TEL:ETH:STR:TOS:REL? 1
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:RELiability?
	SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:RELiability?

Description	This query returns the reliability level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reliability
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Reliability
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:RELiability? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Reliability>
Response(s)	**Reliability**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the reliability level of the Type of Service.
	NORMal, indicates the reliability level as Normal.
	HIGH, indicates the reliability level as High.
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:REL 1, HIGH
	SOUR:DATA:TEL:ETH:STR:TOS:REL? 1
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:RELiability
	SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:THRoughput

Description	This command sets the throughput level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Throughput
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:THRoughput <wsp><Tgen>, <Throughput>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Throughput:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the throughput level of the Type of Service.
	NORMal: Normal
	HIGH: High
Response Syntax	<Reliability>
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:THR 1, HIGH
	SOUR:DATA:TEL:ETH:STR:TOS:THR? 1
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:THRoughput?
	SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence

:SOURce:DATA:TELecom:ETHernet:STReam:TOS:THRoughput ?

Description	This query returns the throughput level of the Type of Service (TOS).
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Throughput
	Navigation Path: Setup > Test Configurator > Streams/Services > MAC/IP/UDP > IP > TOS/DS Config > Type Of Service - Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TOS:THRoughput? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Throughput>
Response(s)	**Throughput**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the throughput level of the Type of Service.
	NORMAL, Normal is selected as the throughput level.
	HIGH, High is selected as the throughput level.
Example(s)	SOUR:DATA:TEL:ETH:STR:TOS:THR 1, HIGH
	SOUR:DATA:TEL:ETH:STR:TOS:THR? 1
	Returns: HIGH
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TOS:THRoughput
	SOURce:DATA:TELecom:ETHernet:STReam:TOS:PRECedence

Configure Per Frame Size

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ALL:FRAMe

Description	This command selects/clears the All Frames check box.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Config. Per Frame Size > All Frames
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ALL:FRAMe <wsp><Test>
Parameter(s)	**Test**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables All Frames.
	ON, enables All Frames.
	OFF, disables All Frames.
Response Syntax	<Validations>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:ALL:FRAM ON
	SOUR:DATA:TEL:ETH:RFC:LAT:ALL:FRAM?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ALL:FRAMe?

Description	This query returns the status the All Frames check box.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Config. Per Frame Size > All Frames
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:ALL:FRAMe?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of 'All Frames'.
	0, returns the status of checkbox as disabled.
	1, returns the status of checkbox as enabled.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:ALL:FRAM ON
	SOUR:DATA:TEL:ETH:RFC:LAT:ALL:FRAM?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n]

Description	This command selects the maximum rate per frame for the latency subtest.
	At *RST condition, this value is set to 100.0000.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Config. Per Frame Size > Max Rate (per frame)
	NOTE: For MAXRate[1..n], use MAXR1 to MAXR10 corresponding to the frame number.
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n] <wsp><Direction>, <Maxrate>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the maximum rate for the Latency test.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n]

Response Syntax	\<Get\>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR1 TX2RX,10.00
	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR1? TX2RX
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate1?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1.. n]:SETall

Description	This command sets the maximum rate for all frame sizes.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Config. Per Frame Size > Max Rate (All)
	NOTE: For MAXRate[1..n], use MAXR1 to MAXR10 corresponding to the frame number.
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n]:SETall <wsp><Direction>, <Maxrate>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the value for all frame sizes. Choices varies according to the selection of unit.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n]:SETall

Response Syntax	\<Get\>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR:SET TX2RX,50.00
	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR:SET? TX2RX
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1.. n]:SETall?

Description	This query returns the maximum rate for all frame sizes.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Config. Per Frame Size > Max Rate (All)
	NOTE: For MAXRate[1..n], use MAXR1 to MAXR10 corresponding to the frame number.
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n]:SETall? <wsp><Direction>,[<Maxrate>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the value for all frame sizes. Choices varies according to the selection of unit.
	This parameter is optional. If no token is specified, the current value for all frame sizes is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Maxrate>

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1.. n]:SETall?

Response(s)	**Maxrate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value for all frame sizes.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR:SETall TX2RX,50.00
	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR:SETall? TX2RX
See Also	SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate1?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n]?

Description	This query returns the maximum rate per frame for the latency subtest.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Config. Per Frame Size > Max Rate (per frame)
	NOTE: For MAXRate[1..n], use MAXR1 to MAXR10 corresponding to the frame number.
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1..n]? <wsp><Direction>,[<Maxrate>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the maximum rate for the Latency test.
	This parameter is optional. If no token is specified, the current maximum rate for the latency subtest is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Maxrate>

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate[1.. n]?

Response(s)	**Maxrate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum rate for the latency test.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR1 TX2RX,10.00
	SOUR:DATA:TEL:ETH:RFC:LAT:MAXR1? TX2RX
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:LATency:MAXRate

GFP-F/GFP-T

:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:CID

Description

This command sets the Channel ID.

At *RST condition, this value is 0.

Navigation Path: Setup > Test Configurator > GFP-F/GFP-T > Extension Header - CID

Syntax

:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:CID <wsp><Value>

Parameter(s)

Value:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Selects Channel Id between 0 to 255.

MAXimum, sets Channed Id to maximum value.

MINimum, sets Channed Id to minimum value.

Response Syntax

<Threshold>

Example(s)

SOUR:DATA:TEL:GFP:CHAN:CONF:CID 230

SOUR:DATA:TEL:GFP:CHAN:CONF:CID?

Returns: 230

See Also

SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE?

:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:CID?

Description	This query returns the Channel ID.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > GFP-F/GFP-T > Extension Header - CID
Syntax	:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:CID?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified the CONFig is 0.
	MAXimum, sets Channed Id to maximum value.
	MINimum, sets Channed Id to minimum value.
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Channel used for reception.
Example(s)	SOUR:DATA:TEL:GFP:CHAN:CONF:CID 230
	SOUR:DATA:TEL:GFP:CHAN:CONF:CID?
	Returns: 230
See Also	SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE

:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE

Description	This command sets the presence of expected payload FCS for Frames.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > GFP-F/GFP-T > Type Header - CDF pFCS / CMF pFCS
Syntax	:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE <wsp><Frames>, <Status>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Frame Type.
	CDFRames
	CMFRames
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:GFP:CHAN:CONF:TYPE CDFR,ON
	SOUR:DATA:TEL:GFP:CHAN:CONF:TYPE? CDFR
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:CHANnel:CONFig:CID?

:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE?

Description	This query returns the presence of expected payload FCS for Frames.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > GFP-F/GFP-T > Type Header - CDF pFCS / CMF pFCS
Syntax	:SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Frame Type.
	CDFRames
	CMFRames
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the presence of expected payload Gfp for Frames.
	1 -expected payload Gfp for Frames is enabled.
	0 -expected payload Gfp for Frames is disabled.
Example(s)	SOUR:DATA:TEL:GFP:CHAN:CONF:TYPE CDFR,ON
	SOUR:DATA:TEL:GFP:CHAN:CONF:TYPE? CDFR
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:CHANnel:CONFig:CID

:SOURce:DATA:TELecom:GFP:CONFig:EXI

Description	This command sets the Extension Header Identifier
	At *RST condition, this value is set to Null.
	Navigation Path: Setup > Test Configurator > GFP-F/GFP-T > Type Header - EXI
Syntax	:SOURce:DATA:TELecom:GFP:CONFig:EXI <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Extension Header Identifier value.
	NULL
	LINEar
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:GFP:CONF:EXI NULL
	SOUR:DATA:TEL:GFP:CONF:EXI?
	Returns: NULL
See Also	SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE?

:SOURce:DATA:TELecom:GFP:CONFig:EXI?

Description	This query returns the Extension Header Identifier.
	At *RST condition, this value is set to Null.
	Navigation Path: Setup > Test Configurator > GFP-F/GFP-T > Type Header - EXI
Syntax	:SOURce:DATA:TELecom:GFP:CONFig:EXI?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Extension Header Identifier.
	NULL, returns NULL as Extension Header Identifier
	LINEAR, returns LINEAR as Extension Header Identifier
Example(s)	SOUR:DATA:TEL:GFP:CONF:EXI NULL
	SOUR:DATA:TEL:GFP:CONF:EXI?
	Returns: NULL
See Also	SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE

Signal - Signal Configuration (SONET/SDH)

:SENSe:DATA:TELecom:POSition

Description	This command sets the RX mapping position for decoupled test.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - Timeslot
Syntax	:SENSe:DATA:TELecom:POSition <wsp><Positionid>, <Position1>,[<Position2>],[<Position3>],[<Position4>],[<Position5>]
Parameter(s)	**Positionid**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mapping position.
	HOPPosition: HOP (High Order Path)
	LOPPosition: LOP (Low Order Path)
	Position1:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the mapping position values.
	Position2:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position 2 value.
	Position3:
	The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position 3 value.
	Position4:
	The program data syntax for the fifth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position 4 value.
	Position5:
	The program data syntax for the sixth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position 5 value.

:SENSe:DATA:TELecom:POSition

Response Syntax	\<TX Last QL message\>
Example(s)	SOUR:DATA:TEL:POS HOPP,1, 1, 1, 3,1
	SOUR:DATA:TEL:POS? HOPP
	Returns: (1, 1, 1, 3,1)
See Also	SENSe:DATA:TELecom:HOP:TYPE

:SENSe:DATA:TELecom:POSition?

Description	This query returns the RX mapping position for decoupled test.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - Timeslot
Syntax	:SENSe:DATA:TELecom:POSition? <wsp><Positionid>
Parameter(s)	**Positionid**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mapping position.
	HOPPosition: HOP (High Order Path)
	LOPPosition: LOP (Low Order Path)
Response Syntax	<Position>
Response(s)	**Position**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the mapping positions.
Example(s)	SOUR:DATA:TEL:POS HOPP,1, 1, 1, 3,1
	SOUR:DATA:TEL:POS? HOPP
	Returns: (1, 1, 1, 3,1)
See Also	SENSe:DATA:TELecom:HOP:TYPE?

:SENSe:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TCUNeq: ENABle

Description	This command enables/disables the STS/AU Path TCM UNEQ.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration > STS/AU > TC-UNEQ-P/HPTC-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TCUNeq:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Position>
Example(s)	SENS:DATA:TEL:SDHS:ALAR:HOP:TCM:TCUNeq:ENAB ON
	SENS:DATA:TEL:SDHS:ALAR:HOP:TCM:TCUNeq:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TCUNeq:ENABle?

:SENSe:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TCUNeq: ENABle?

Description	This query returns the enable/disable status of STS/AU Path TCM UNEQ.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration > STS/AU > TC-UNEQ-P/HPTC-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TCUNeq:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:SDHS:ALAR:HOP:TCM:TCUNeq:ENAB ON
	SENS:DATA:TEL:SDHS:ALAR:HOP:TCM:TCUNeq:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TCUNeq:ENABle

:SENSe:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TCUNeq: ENABle

Description	This command enables/disables the VT/TU Path TCM UNEQ.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration > VT/TU > TC-UNEQ-V/LPTC-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TCUNeq:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:SDHS:ALAR:LOP:TCM:TCUNeq:ENAB ON
	SENS:DATA:TEL:SDHS:ALAR:LOP:TCM:TCUNeq:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TCUNeq:ENABle?

:SENSe:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TCUNeq: ENABle?

Description	This query returns the enable/disable status of the VT/TU Path TCM UNEQ.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration > VT/TU > TC-UNEQ-V/LPTC-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TCUNeq:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:SDHS:ALAR:LOP:TCM:TCUNeq:ENAB ON
	SENS:DATA:TEL:SDHS:ALAR:LOP:TCM:TCUNeq:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TCUNeq:ENABle

:SENSe:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle

Description	This command enables/disables the RX TCM for Higher rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - TCM
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB ON
	SENS:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle?

:SENSe:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle?

Description	This query returns the status of RX TCM for Higher rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - TCM
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB ON
	SENS:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle

:SENSe:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle

Description	This command enables/disables the RX TCM for Lower rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - VT/TU - TCM
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB ON
	SENS:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle?

:SENSe:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle?

Description	This query returns the status of the RX TCM for Lower rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - VT/TU - TCM
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB ON
	SENS:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle

:SOURce:DATA:TELecom:BACKground:BULK

Description	This command enables/disables the Bulk Filled Overwrite Enable feature.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OC-n > Signal > Signal Configuration - STS-1 - Overwrite Fixed Stuff
Syntax	:SOURce:DATA:TELecom:BACKground:BULK <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Overwrite Fixed Stuff feature.
	ON - Enables Bulk overwrite Fixed Stuff status
	OFF - Disables bulk overwrite Fixed Stuff status
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:BACK:BULK ON
	SOUR:DATA:TEL:BACK:BULK?
	Returns: 1
See Also	SOURce:DATA:TELecom:BACKground:SDHSonet:HOP

:SOURce:DATA:TELecom:BACKground:BULK?

Description	This query returns the status of the Bulk Filled Overwrite Enable feature.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > OC-n > Signal > Signal Configuration - STS-1 - Overwrite Fixed Stuff
Syntax	:SOURce:DATA:TELecom:BACKground:BULK?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Bulk Filled Overwrite Enable feature.
	1 - Bulk overwrite fixed Stuff Enabled.
	0 - Bulk overwrite fixed Stuff Disabled.
Example(s)	SOUR:DATA:TEL:BACK:BULK ON
	SOUR:DATA:TEL:BACK:BULK?
	Returns: 1
See Also	SOURce:DATA:TELecom:BACKground:SDHSonet:HOP?

:SOURce:DATA:TELecom:BACKground:COMPutation

Description	This command selects of the computation method available for embedded OC-192/STM-64.
	At *RST condition, this value set to M1ONLY
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - OC-n/STM-n - REI-L/MS-REI Computation Method
Syntax	:SOURce:DATA:TELecom:BACKground:COMPutation <wsp><COMPutation>
Parameter(s)	**COMPutation**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the payload computation method.
	M1only: M1.
	M0M1: the M1 and M0
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:BACK:COMP M0M1
	SOUR:DATA:TEL:BACK:COMP?
	Returns: M0M1
See Also	SOURce:DATA:TELecom:BACKground:SDHSonet:HOP?

:SOURce:DATA:TELecom:BACKground:COMPutation?

Description	This query returns the computation method available for embedded OC-192/STM-64.
	At *RST condition, this value set to M1ONLY.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - OC-n/STM-n - REI-L/MS-REI Computation Method
Syntax	:SOURce:DATA:TELecom:BACKground:COMPutation?
Response Syntax	<Computation>
Response(s)	**Computation**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the computation method.
	M1ONLY, M1 as computation method is selected.
	M0M1, M1 and M0 as computation method is selected.
Example(s)	SOUR:DATA:TEL:BACK:COMP M0M1
	SOUR:DATA:TEL:BACK:COMP?
	Returns: M0M1
See Also	SOURce:DATA:TELecom:BACKground:SDHSonet:HOP

:SOURce:DATA:TELecom:BACKground:SDHSonet:HOP

Description	This command selects the High Order Path (HOP) background traffic.
	At *RST condition, this value set to EQUIPPED1.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - Background
Syntax	:SOURce:DATA:TELecom:BACKground:SDHSonet:HOP \<wsp>\<Background Traffic>
Parameter(s)	**Background Traffic**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the High Order Path (HOP) background traffic.
	AIS: Alarm Indication Signal
	UNEQUIPPED1: Unequipped
	EQUIPPED1: Equipped
Response Syntax	\<Computation>
Example(s)	SOUR:DATA:TEL:BACK:SDHS:HOP EQUIPPED1
	SOUR:DATA:TEL:BACK:SDHS:HOP?
	Returns: EQUIPPED1
See Also	SOURce:DATA:TELecom:BACKground:COMPutation

:SOURce:DATA:TELecom:BACKground:SDHSonet:HOP?

Description	This query returns the High Order Path (HOP) background traffic.
	At *RST condition, this value set to EQUIPPED1.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - Background
Syntax	:SOURce:DATA:TELecom:BACKground:SDHSonet:HOP?
Response Syntax	<Background traffic>
Response(s)	**Background traffic**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the High Order Path (HOP) background traffic.
	AIS, Alarm Indication Signal (AIS) as background traffic is selected.
	UNEQUIPPED1, Unequipped as background traffic is selected.
	EQUIPPED1, Equipped as background traffic is selected.
Example(s)	SOUR:DATA:TEL:BACK:SDHS:HOP EQUIPPED1
	SOUR:DATA:TEL:BACK:SDHS:HOP?
	Returns: EQUIPPED1
See Also	SOURce:DATA:TELecom:BACKground:COMPutation?

:SOURce:DATA:TELecom:BACKground:SDHSonet:LOP

Description	This command selects the Low Order Path (LOP) background traffic.
	At *RST condition, this value set to EQUIPPED1.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - VT/TU - Background
Syntax	:SOURce:DATA:TELecom:BACKground:SDHSonet:LOP <wsp><Background Traffic>
Parameter(s)	**Background Traffic:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the LOP (Low Order Path) background traffic.
	AIS: Alarm Indication Signal
	UNEQUIPPED1: Unequipped
	EQUIPPED1: Equipped
Response Syntax	<Background traffic>
Example(s)	SOUR:DATA:TEL:BACK:SDHS:LOP EQUIPPED1
	SOUR:DATA:TEL:BACK:SDHS:LOP?
	Returns: EQUIPPED1
See Also	SOURce:DATA:TELecom:BACKground:COMPutation?

:SOURce:DATA:TELecom:BACKground:SDHSonet:LOP?

Description	This query returns the Low Order Path (LOP) background traffic.
	At *RST condition, this value set to EQUIPPED1.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - VT/TU - Background
Syntax	:SOURce:DATA:TELecom:BACKground:SDHSonet:LOP?
Response Syntax	<Background traffic>
Response(s)	**Background traffic**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the LOP (Low Order Path) background traffic.
	AIS, Alarm Indication Signal (AIS) as background traffic is selected.
	UNEQUIPPED1, Unequipped as background traffic is selected.
	EQUIPPED1, Equipped as background traffic is selected.
Example(s)	SOUR:DATA:TEL:BACK:SDHS:LOP EQUIPPED1
	SOUR:DATA:TEL:BACK:SDHS:LOP?
	Returns: EQUIPPED1
See Also	SOURce:DATA:TELecom:BACKground:COMPutation

:SOURce:DATA:TELecom:POSition

Description

This command sets the TX mapping position.

At *RST condition, this value is device dependent.

Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - Timeslot

For SONET HOP: The STS-1 is defined using the timeslot followed by the two-level [STS-3#,STS-1#] convention.

For SONET LOP: The VT Number is defined using the VTG followed by the VT number.

For SDH HOP: The AU is defined using a 2 to 5 level convention E,D,C,B,A depending on the rate of the STM-n used.

E: the AUG-64 are numbered 1 to 4 (Only used with rate STM-256)

D: the AUG-16 are numbered 1 to 4

C: the AUG-4 are numbered 1 to 4

B: the AUG-1 are numbered 1 to 4

A: the AU-3 are numbered 1 to 3. For AU-3 in STM-0e, A=0.

For SDH LOP: The TU is defined using a 2 or 3 level convention K,L,M depending on the rate of the AU-4 or AU-3 used.

K: the TUG-3 are numbered 1 to 3

L: the TUG-2 are numbered within the TUG-3 0 or from 1 to 7

M: the TU-2, TU-12, TU-11 are numbered within the TUG-2 1, 1 to 3, 1 to 4 respectively

Syntax

:SOURce:DATA:TELecom:POSition <wsp><Positionid>, <Position1>,[<Position2>],[<Position3>],[<Position4>],[<Position5>]

:SOURce:DATA:TELecom:POSition

Parameter(s)

Positionid:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the mapping position.

HOPPosition: HOP (High Order Path)

LOPPosition: LOP (Low Order Path)

Position1:

The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

For SONET HOP: Sets the Timeslot number. However, the next two parameters are mandatory and will overwrite this value for the corresponding timeslot number.

For SONET LOP: Sets the VTG number.

For SDH HOP : Sets the number for either AUG-16 for STM-64, AUG-4 for STM-16, AUG-1 for STM-4, or AU-3 for STM-1

For SDH LOP: The number for the highest TUG level (2 or 3 level convention).

Position2:

The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

For SONET HOP: Sets the STS-3 number.

For SONET LOP: Sets the VT number.

For SDH HOP: Sets the number for either AUG-4 for STM-64, AUG-1 for STM-16, or AU-3 for STM-4

For SDH LOP: The number for either the second TUG level (3 level convention) or TU number (2 level convention).

Position3:

The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

For SONET HOP: Sets the STS-1 number.

For SONET LOP: This parameter is not used.

For SDH HOP: Sets the number for either AUG-1 for STM-64, or AU-3 for STM-16

For SDH LOP: The TU number (3 level convention).

:SOURce:DATA:TELecom:POSition

Parameter(s)	**Position4**:
	The program data syntax for the fifth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For SONET HOP: This parameter is not used.
	For SONET LOP: This parameter is not used.
	For SDH LOP: Sets the number for AU-3 for STM-64
	For SDH LOP: This parameter is not used.
	Position5:
	The program data syntax for the sixth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is no longer used.
Response Syntax	<Background traffic>
Example(s)	SOUR:DATA:TEL:POS HOPP, 2, 1, 2
	SOUR:DATA:TEL:POS? HOPP
	Returns: 2:[1,2]
See Also	SOURce:DATA:TELecom:HOP:TYPE

:SOURce:DATA:TELecom:POSition?

Description	This query returns the TX mapping position.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - Timeslot
Syntax	:SOURce:DATA:TELecom:POSition? <wsp><Positionid>
Parameter(s)	**Positionid**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mapping position.
	HOPPosition: HOP (High Order Path)
	LOPPosition: LOP (Low Order Path)
Response Syntax	<Position>
Response(s)	**Position**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the mapping positions.
Example(s)	SOUR:DATA:TEL:POS HOPP, 2, 1, 2
	SOUR:DATA:TEL:POS? HOPP
	Returns: 2:[1,2]
See Also	SOURce:DATA:TELecom:HOP:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:S:BITS:SSMessage

Description	This command selects the Bits 5-8 (Synchronization Status Message)
	At *RST condition, this value is set to QUNKNOWN0000.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - OC-n/STM-n - Synchronization Status Message (S1)
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:S:BITS:SSMessage <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Bits 5-8 (Synchronization Status Message).
	QUNKNOWN0000: Quality Unknown (0000) Bits Synchronization Status Message.
	ST10001: ST1 (0001) Bits Synchronization Status Message.
	RESERVED0010: RESERVED (0010)
	RESERVED0011: Reserved (0011)
	TNC0100: TNC (0100)
	RESERVED0101: Reserved (0101)
	RESERVED0110: Reserved (0110)
	ST20111: ST2 (0111)
	RESERVED1000: Reserved (1000)
	RESERVED1001: Reserved (1001)
	ST31010: ST3 (1010)
	RESERVED1011: Reserved (1011)
	SMC1100: SMC (1100)
	PNO1101: PNO (1101)
	ST3E1110: ST3E (1110)
	DUSYNCH1111: Don't Use for Synchronization (1111)

:SOURce:DATA:TELecom:SDHSonet:ADVanced:S:BITS:SSMessage

Response Syntax	<Position>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:S:BITS:SSM QUNKNOWN0000
	SOUR:DATA:TEL:SDHS:ADV:S:BITS:SSM?
	Returns: QUNKNOWN0000
See Also	SOURce:DATA:TELecom:HOP:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:S:BITS:SSMessage?

Description	This query returns Bits 5-8 (Synchronization Status Message).
	At *RST condition, this value is set to QUNKNOWN0000.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - OC-n/STM-n - Synchronization Status Message (S1)
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:S:BITS:SSMessage?
Response Syntax	\<Type\>

:SOURce:DATA:TELecom:SDHSonet:ADVanced:S:BITS:SSMessage?

Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Sets the Bits 5-8 (Synchronization Status Message).
	QUNKNOWN0000 - Quality Unknown (0000) Bits Synchronization Status Message is selected.
	ST10001 - ST1 (0001) Bits Synchronization Status Message is selected.
	RESERVED0001 -RESERVED (0010) Bits Synchronization Status Message is selected.
	RESERVED0011 - Reserved (0011) Bits Synchronization Status Message is selected.
	TNC0100 - TNC (0100) Bits Synchronization Status Message is selected.
	RESERVED0101- Reserved (0101) Bits Synchronization Status Message is selected.
	RESERVED0110- Reserved (0110) Bits Synchronization Status Message is selected.
	ST20111 - ST2 (0111) Bits Synchronization Status Message is selected.
	RESERVED1000 - RESERVED (1000) Bits Synchronization Status Message is selected.
	RESERVED1001- Reserved (1001) Bits Synchronization Status Message is selected.
	ST31010 - ST3 (1010) Bits Synchronization Status Message is selected.
	RESERVED1010 - RESERVED (SEC) (1011) Bits Synchronization Status Message is selected.
	SMC1100 - SMC (1100) Bits Synchronization Status Message is selected.
	ST3E1101 - ST3E (1101) Bits Synchronization Status Message is selected.
	PNO1110 - PNO (1110) Bits Synchronization Status Message is selected.
	DUSYNCH1111- Don't Use for Synchronization (1111) Bits Synchronization Status Message is selected.
Example(s)	SOUR:DATA:TEL:SDHS:ADV:S:BITS:SSM QUNKNOWN0000
	SOUR:DATA:TEL:SDHS:ADV:S:BITS:SSM?
	Returns: QUNKNOWN0000
See Also	SOURce:DATA:TELecom:HOP:TYPE

:SOURce:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle

Description	This command enables/disables the TX TCM for Higher rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - TCM
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB ON
	SOUR:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle?

:SOURce:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle ?

Description	This query returns the status of TX TCM for Higher rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - STS/AU - TCM
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle?
Response Syntax	\<Status\>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB ON
	SOUR:DATA:TEL:SDHS:HOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle

:SOURce:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle

Description	This command enables/disables the TX TCM for Lower rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - VT/TU - TCM
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB ON
	SOUR:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle?

:SOURce:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle ?

Description	This query returns the status of TX TCM for Lower rates.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC-n/STM-n > Signal > Signal Configuration - VT/TU - TCM
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:CONFig:TCM:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB ON
	SOUR:DATA:TEL:SDHS:LOP:CONF:TCM:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:CONFig:TCM:ENABle

Traces (SONET/SDH)

:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:EXPected

Description	This command sets the TCM Access Point Identifier expected message High Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - STS/AU Path (N1) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:EXPected[<wsp><Message>]
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message for 16 or 64 bytes format for Path overhead.
Response Syntax	<Label>
Example(s)	SENSe:DATA:TEL:SDHS:HOP:TCAP:EXPected tcmmessage
	SENSe:DATA:TEL:SDHS:HOP:TCAP:EXPected?
	Returns: tcmmessage
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern?

:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:EXPected?

Description	This command sets the TCM Access Point Identifier expected message High Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - STS/AU Path (N1) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected TCM Access Point Identifier message for Path Overhead.
Example(s)	SENSe:DATA:TEL:SDHS:HOP:TCAP:EXPected tcmmessage
	SENSe:DATA:TEL:SDHS:HOP:TCAP:EXPected?
	Returns: tcmmessage
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern

:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:TCTim

Description	This command enables/disables the TCMIM status for TCM Access Point Identifier High Order Path.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TC-TIM-P/HPTC-TIM
	Navigation Path: Results > Traces > TCM Access Point Identifier - TC-TIM-P/HPTC-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:TCTim <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the status of Trace Identifier Mismatch (TIM).
	ON, enables the status of Trace Identifier Mismatch (TIM)
	OFF, disables the status of Trace Identifier Mismatch (TIM)
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:SDHS:HOP:TCAP:TCTim ON
	SENS:DATA:TEL:SDHS:HOP:TCAP:TCTim?
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM?

:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:TCTim?

Description	This query returns the the TCMIM status for TCM Access Point Identifier for High Order Path.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TC-TIM-P/HPTC-TIM
	Navigation Path: Results > Traces > TCM Access Point Identifier - TC-TIM-P/HPTC-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:TCTim?
Response Syntax	<Set>
Response(s)	Set:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Trace Identifier Mismatch (TIM).
	1, TCM Access Point Identifier is enabled.
	0, TCM Access Point Identifier is disabled.
Example(s)	SENS:DATA:TEL:SDHS:HOP:TCAP:TCTim ON
	SENS:DATA:TEL:SDHS:HOP:TCAP:TCTim?
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM?

:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM

Description	This command enables/disables the Trace Identifier Mismatch (TIM) for the expected message defined for Low Path Overhead.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-V/LP-TIM
	Navigation Path: Result > Traces > Traces - TIM-V/LP-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:LOP:OVER:TIM ON
	SENS:DATA:TEL:SDHS:LOP:OVER:TIM?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM?

:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern

Description	This command sets the Trace Identifier Mismatch value in 16 or 64 byte format for Low Path Overhead.
	At *RST condition, this value is set to B16.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-V/LP-TIM - Format
	Navigation Path: Result > Traces > Traces - TIM-V/LP-TIM - Format
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT B16
	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT?
	Returns: B16
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern?

:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern:B

Description	This command sets the expected message for 16 OR 64 bytes format for Low Path Overhead.
	At *RST condition, this value is set to EXFO SONET/SDH.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-V/LP-TIM - Expected
	Navigation Path: Result > Traces > Traces - TIM-V/LP-TIM - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern:B <wsp><Pattern>, <Message>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	Message:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message for 16 or 64 bytes format for Path overhead.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT:B B16, tyghjg
	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT:B? B16
	Returns: tyghjg
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B?

:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern:B?

Description	This query returns the expected message for 16 or 64 bytes format for Low Path Overhead.
	At *RST condition, this value is set to EXFO SONET/SDH.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-V/LP-TIM - Expected
	Navigation Path: Result > Traces > Traces - TIM-V/LP-TIM - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern:B? <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for 16 or 64 bytes format for Low Path Overhead
Example(s)	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT:B B16, tyghjg
	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT:B? B16
	Returns: tyghjg
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B

:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern?

Description	This query returns the format expected for Low Path Overhead.
	At *RST condition, this value is set to B16.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-V/LP-TIM - Format
	Navigation Path: Result > Traces > Traces - TIM-V/LP-TIM - Format
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:PATTern?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the format expected in the J1 trace for Low Path Overhead
	B16, 16 bytes format for Low Path Overhead is selected.
	B64, 64 bytes format for Low Path Overhead is selected.
Example(s)	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT B16
	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:PATT?
	Returns: B16
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern

:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM?

Description	This query returns the status of Trace Identifier Mismatch (TIM) for the expected message defined for Low Path Overhead.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-V/LP-TIM
	Navigation Path: Result > Traces > Traces - TIM-V/LP-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM) for Low Path Overhead.
	1 - Trace Identifier Mismatch (TIM) for Low Path Overhead is enabled.
	0 - Trace Identifier Mismatch (TIM) for Low Path Overhead is disabled.
Example(s)	SENS:DATA:TEL:SDHS:LOP:OVER:TIM ON
	SENS:DATA:TEL:SDHS:LOP:OVER:TIM?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM

:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:EXPected

Description	This command sets the TCM Access Point Identifier expected message Low Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - VT/TU Path (Z6) - Expected
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TU3 Path (N1) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:EXPected[<wsp><Message>]
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message for 16 or 64 bytes format for Path overhead.
Response Syntax	<Set>
Example(s)	SENSe:DATA:TEL:SDHS:LOP:TCAP:EXPected tcmmessage
	SENSe:DATA:TEL:SDHS:LOP:TCAP:EXPected?
	Returns: tcmmessage
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern?

:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:EXPected?

Description	This command sets the TCM Access Point Identifier expected message Low Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - VT/TU Path (Z6) - Expected
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TU3 Path (N1) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:EXPected?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected TCM Access Point Identifier message for Path Overhead.
Example(s)	SENSe:DATA:TEL:SDHS:LOP:TCAP:EXPected tcmmessage
	SENSe:DATA:TEL:SDHS:LOP:TCAP:EXPected?
	Returns: tcmmessage
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern

:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:TCTim

Description	This command enables/disables the TCMIM status for TCM Access Point Identifier Low Order Path.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TC-TIM-V/LPTC-TIM
	Navigation Path: Results > Traces > TCM Access Point Identifier - TC-TIM-V/LPTC-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:TCTim <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:SDHS:LOP:TCAP:TCTim ON
	SENS:DATA:TEL:SDHS:LOP:TCAP:TCTim?
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM?

:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:TCTim?

Description	This query returns the TCMIM status for TCM Access Point Identifier for Low Order Path.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TC-TIM-V/LPTC-TIM
	Navigation Path: Results > Traces > TCM Access Point Identifier - TC-TIM-V/LPTC-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:TCTim?
Response Syntax	\<Set>
Response(s)	Set:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the status of the TCM Access Point Identifier for Path Overhead.
	ENABLE, status of the TCM Access Point Identifier is enabled.
	DISABLE, tatus of the TCM Access Point Identifier is disabled.
Example(s)	SENS:DATA:TEL:SDHS:LOP:TCAP:TCTim ON
	SENS:DATA:TEL:SDHS:LOP:TCAP:TCTim?
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM?

:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM

Description	This command enables/disables the Trace Identifier Mismatch (TIM) for the expected message defined for Path Overhead.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-P/HP-TIM
	Navigation Path: Result > Traces > Traces - TIM-P/HP-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:PATH:OVER:TIM ON
	SENS:DATA:TEL:SDHS:PATH:OVER:TIM?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM?

:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern

Description	This command sets the Trace Identifier Mismatch value of J1 in 16 or 64 byte format for Path Overhead.
	At *RST condition, this value is set to B16.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-P/HP-TIM - Format
	Navigation Path: Result > Traces > Traces - TIM-P/HP-TIM - Format
Syntax	:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT B16
	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT?
	Returns: B16
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern?

:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern:B

Description	This command sets the expected message for 16 OR 64 bytes format of J1 trace for Path Overhead.
	At *RST condition, this value is set to EXFO SONET/SDH.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-P/HP-TIM - Expected
	Navigation Path: Result > Traces > Traces - TIM-P/HP-TIM - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern:B <wsp><Pattern>, <Message>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	Message:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message for 16 or 64 bytes format for Path overhead.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT:B B16,tyghjg
	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT:B? B16
	Returns: tyghjg
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B?

:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern:B?

Description	This query returns the expected message for 16 or 64 bytes format of J1 trace for Path Overhead.
	At *RST condition, this value is set to EXFO SONET/SDH.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-P/HP-TIM - Expected
	Navigation Path: Result > Traces > Traces - TIM-P/HP-TIM - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern:B? <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for 16 or 64 bytes format for Path Overhead.
Example(s)	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT:B B16, tyghjg
	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT:B? B16
	Returns: tyghjg
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B

:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern?

Description	This query returns the format expected in the J1 trace for Path Overhead.
	At *RST condition, this value is set to B16.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-P/HP-TIM - Format
	Navigation Path: Result > Traces > Traces - TIM-P/HP-TIM - Format
Syntax	:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the format expected in the J1 trace for Path Overhead.
	B16, 16 bytes format is selected.
	B64, 64 bytes format is selected.
Example(s)	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT B16
	SENS:DATA:TEL:SDHS:PATH:OVER:TIM:PATT?
	Returns: B16
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern

:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM?

Description	This query returns the status of Trace Identifier Mismatch (TIM) for the expected message defined for Path Overhead.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-P/HP-TIM
	Navigation Path: Result > Traces > Traces - TIM-P/HP-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM?
Response Syntax	\<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM) for Path Overhead.
	1 - TIM enabled.
	0 - TIM disabled.
Example(s)	SENS:DATA:TEL:SDHS:PATH:OVER:TIM ON
	SENS:DATA:TEL:SDHS:PATH:OVER:TIM?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM

:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM

Description	This command enables/disables the Trace Identifier Mismatch (TIM) for the expected message defined for Section Overhead.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-S/RS-TIM
	Navigation Path: Result > Traces > Traces - TIM-S/RS-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:SECT:OVER:TIM ON
	SENS:DATA:TEL:SDHS:SECT:OVER:TIM?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM?

:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern

Description	This command sets the format expected in the J0 trace for Section Overhead.
	At *RST condition, this value is set to B16.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-S/RS-TIM - Format
	Navigation Path: Result > Traces > Traces - TIM-S/RS-TIM - Format
Syntax	:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern \<wsp>\<Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J0 trace for Section overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	\<Set>
Example(s)	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT B16
	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT?
	Returns: B16
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern?

:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B

Description	This command sets the expected message for 16 or 64 bytes format of J0 trace for Section Overhead.
	At *RST condition, this value is set to EXFO SONET/SDH.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-S/RS-TIM - Expected
	Navigation Path: Result > Traces > Traces - TIM-S/RS-TIM - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B <wsp><Pattern>, <Message>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J0 trace for Section overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	Message:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message for 16 or 64 bytes format for Section overhead.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT:B B16, tyghjg
	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT:B? B16
	Returns: tyghjg
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern:B?

:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B?

Description	This query returns the expected message for 16 or 64 bytes format of J0 trace for Section Overhead.
	At *RST condition, this value is set to EXFO SONET/SDH.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-S/RS-TIM - Expected
	Navigation Path: Result > Traces > Traces - TIM-S/RS-TIM - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern:B? <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format expected in the J0 trace for Section overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message for 16 or 64 bytes format for Section Overhead.
Example(s)	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT:B B16, tyghjg
	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT:B? B16
	Returns: tyghjg
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern:B

:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern?

Description	This query returns the format expected in the J0 trace for Section Overhead.
	At *RST condition, this value is set to B16.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-S/RS-TIM - Format
	Navigation Path: Result > Traces > Traces - TIM-S/RS-TIM - Format
Syntax	:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:PATTern?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the format expected in the J0 trace for Section Overhead.
	B16, 16 bytes format is selected.
	B64, 64 bytes format is selected.
Example(s)	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT B16
	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:PATT?
	Returns: B16
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:PATTern

:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM?

Description	This query returns the status of Trace Identifier Mismatch (TIM) for the expected message defined for Section Overhead.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Traces > Traces - TIM-S/RS-TIM
	Navigation Path: Result > Traces > Traces - TIM-S/RS-TIM
Syntax	:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM?
Response Syntax	\<Set>
Response(s)	Set:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the status of Trace Identifier Mismatch (TIM) for Section Overhead.
	1- TIM is Enabled
	0 - TIM is Disabled
Example(s)	SENS:DATA:TEL:SDHS:SECT:OVER:TIM ON
	SENS:DATA:TEL:SDHS:SECT:OVER:TIM?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM

:SOURce:DATA:TELecom:SDHSonet:HOP:TCAPident:N[1..n]: MESSage

Description	This command sets the TCM Access Point Identifier message High Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - STS/AU Path (N1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:TCAPident:N[1..n]:MESSage[<wsp><Message>]
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the 16 or 64 byte format for TCM Access Point Identifier message.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:TCAP:N1:MESSage tcmmessage
	SOUR:DATA:TEL:SDHS:HOP:TCAP:N1:MESSage?
	Returns: tcmmessage
See Also	SOURce:DATA:TELecom:SDHSonet:OVERhead:J1:PATTern:B16?

:SOURce:DATA:TELecom:SDHSonet:HOP:TCAPident:N[1..n]: MESSage?

Description	This query returns the TCM Access Point Identifier message High Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - STS/AU Path (N1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:TCAPident:N[1..n]:MESSage?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the 16 or 64 byte format TCM Access Point Identifier message for Path Overhead.
Example(s)	SOUR:DATA:TEL:SDHS:HOP:TCAP:N1:MESSage tcmmessage
	SOUR:DATA:TEL:SDHS:HOP:TCAP:N1:MESSage?
	Returns: tcmmessage
See Also	SOURce:DATA:TELecom:SDHSonet:OVERhead:J1:PATTern:B16

:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern

Description	This command sets the J1 and J2 trace format for Lower order Path Overhead.
	At *RST condition, this value is set to 1BYTE.
	Navigation Path: Setup > Test Configurator > Traces > Traces - VT/TU Path (J2) - Format
	Navigation Path: Setup > Test Configurator > Traces > Traces - TU3 Path (J1) - Format
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern <wsp><Pattern>
Parameter(s)	Pattern:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J2 trace for Low Path overhead.
	1BYTE: the 1 bytes format.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT B16
	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT?
	Returns: B16
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern?

:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern:B

Description	This command sets the J2 and J1 trace value/message to be generated in selected format for Low Path Overhead.
	At *RST condition, this value is set to 01.
	Navigation Path: Setup > Test Configurator > Traces > Traces - VT/TU Path (J2) - Generated
	Navigation Path: Setup > Test Configurator > Traces > Traces - TU3 Path (J1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern:B <wsp><Pattern>, <Message>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J2 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	1BYTE: the 1BYTE byte format.
	Message:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the 16 or 64 byte format for J2 trace.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT:B B16, RRWEREW
	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT:B? B16
	Returns: RRWEREW
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B?

:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern:B?

Description	This query returns the J2 and J1 trace value/message to be generated in selected format for Low Path Overhead.
	At *RST condition, this value is set to 01.
	Navigation Path: Setup > Test Configurator > Traces > Traces - VT/TU Path (J2) - Generated
	Navigation Path: Setup > Test Configurator > Traces > Traces - TU3 Path (J1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern:B? <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J2 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	1BYTE: the 1BYTE byte format.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the J2 trace for Low Path Overhead.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT:B B16, RRWEREW
	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT:B? B16
	Returns: RRWEREW
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B

:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern?

Description	This query returns the J2 and J1 trace format for Lower order Path Overhead.
	At *RST condition, this value is set to 1BYTE.
	Navigation Path: Setup > Test Configurator > Traces > Traces - VT/TU Path (J2) - Format
	Navigation Path: Setup > Test Configurator > Traces > Traces - TU3 Path (J1) - Format
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:PATTern?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the format for J2 trace for Lower Order Path Overhead.
	B16, 16 bytes format is selected.
	B64, 64 bytes format is selected.
	1BYTE, 1 byte format is selected.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT B16
	SOUR:DATA:TEL:SDHS:LOP:OVER:J2:PATT?
	Returns: B16
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern

:SOURce:DATA:TELecom:SDHSonet:LOP:TCAPident:N[1..n]:MESSage

Description	This command sets the TCM Access Point Identifier message Low Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - VT/TU Path (Z6) - Generated
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TU3 Path (N1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:TCAPident:N[1..n]:MESSage[<wsp><Message>]
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the 16 or 64 byte format for TCM Access Point Identifier message.
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:TCAP:N2:MESSage tcmmessage
	SOUR:DATA:TEL:SDHS:LOP:TCAP:N2:MESSage?
	Returns: tcmmessage
See Also	SOURce:DATA:TELecom:SDHSonet:OVERhead:J1:PATTern:B16?

:SOURce:DATA:TELecom:SDHSonet:LOP:TCAPident:N[1..n]:MESSage?

Description	This query returns the TCM Access Point Identifier message Low Order Path.
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - VT/TU Path (Z6) - Generated
	Navigation Path: Setup > Test Configurator > Traces > TCM Access Point Identifier - TU3 Path (N1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:TCAPident:N[1..n]:MESSage?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the 16 or 64 byte format TCM Access Point Identifier message for Path Overhead.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:TCAP:N2:MESSage tcmmessage
	SOUR:DATA:TEL:SDHS:LOP:TCAP:N2:MESSage?
	Returns: tcmmessage
See Also	SOURce:DATA:TELecom:SDHSonet:OVERhead:J1:PATTern:B16

:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern

Description	This command sets the J1 trace format for Path Overhead
	At *RST condition, this value is set to 1BYTE.
	Navigation Path: Setup > Test Configurator > Traces > Traces - STS/AU Path (J1) - Format
Syntax	:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J1 trace for Path overhead.
	1BYTE: the 1 bytes format.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT B16
	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT?
	Returns: B16
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern?

:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern:B

Description	This command sets the J1 trace value/message to be generated in selected format for Path Overhead.
	At *RST condition, this value is set to 01.
	Navigation Path: Setup > Test Configurator > Traces > Traces - STS/AU Path (J1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern:B <wsp><Pattern>, <Message>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	1BYTE: the 1BYTE byte format.
	Message:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the 16 or 64 byte format for J1 trace.
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT:B B16,RRWEREW
	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT:B? B16
	Returns: RRWEREW
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B?

:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern:B?

Description	This query returns the J1 trace value/message to be generated in selected format for Path Overhead.
	At *RST condition, this value is set to 01.
	Navigation Path: Setup > Test Configurator > Traces > Traces - STS/AU Path (J1) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern:B? <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J1 trace for Path overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	1BYTE: the 1BYTE byte format.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the J1 trace value/message for Path Overhead.
Example(s)	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT:B B16,RRWEREW
	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT:B? B16
	Returns: RRWEREW
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B

:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern?

Description	This query returns the J1 trace format for Path Overhead.
	At *RST condition, this value is set to 1BYTE.
	Navigation Path: Setup > Test Configurator > Traces > Traces - STS/AU Path (J1) - Format
Syntax	:SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J[1..n]:PATTern?
Response Syntax	\<Pattern\>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the format for J1 trace for Path Overhead.
	B16, 16 bytes format is selected.
	B64, 64 bytes format is selected.
	1BYTE, 1 byte format is selected.
Example(s)	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT B16
	SOUR:DATA:TEL:SDHS:PATH:OVER:J1:PATT?
	Returns: B16
See Also	SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern

:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern

Description	This command sets the J0 trace format for Section Overhead.
	At *RST condition, this value is set to 1BYTE.
	Navigation Path: Setup > Test Configurator > Traces > Traces - Section/RS (J0) - Format
Syntax	:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J0 trace for Section overhead.
	1BYTE: the 1 bytes format.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT B16
	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT?
	Returns: B16
See Also	SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J1:PATTern?

:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B

Description	This command sets the J0 trace value/message to be generated in selected format for Section Overhead.
	At *RST condition, this value is set to 01.
	Navigation Path: Setup > Test Configurator > Traces > Traces - Section/RS (J0) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B <wsp><Pattern>, <Message>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J0 trace for Section overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	1BYTE: the 1 byte format.
	Message:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the 16 or 64 byte format for J0 trace.
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT:B B16,RRWEREW
	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT:B? B16
	Returns: RRWEREW
See Also	SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J1:PATTern:B?

:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B?

Description	This query returns the J0 trace value/message to be generated in selected format for Section Overhead.
	At *RST condition, this value is set to 01.
	Navigation Path: Setup > Test Configurator > Traces > Traces - Section/RS (J0) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern:B? <wsp><Pattern>
Parameter(s)	**Pattern**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the format for J0 trace for Section overhead.
	B16: the 16 bytes format.
	B64: the 64 bytes format.
	1BYTE: the 1 byte format.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the J0 trace value/message for Section Overhead.
Example(s)	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT:B B16,RRWEREW
	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT:B? B16
	Returns: RRWEREW
See Also	SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J1:PATTern:B?

:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern?

Description	This query returns the J0 trace format for Section Overhead.
	At *RST condition, this value is set to 1BYTE.
	Navigation Path: Setup > Test Configurator > Traces > Traces - Section/RS (J0) - Format
Syntax	:SOURce:DATA:TELecom:SDHSonet:SECTion:OVERhead:J[1..n]:PATTern?
Response Syntax	<Pattern>
Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the format for J0 trace for Section Overhead.
	B16, 16 bytes format is selected.
	B64, 64 bytes format is selected.
	1BYTE, 1 byte format is selected.
Example(s)	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT B16
	SOUR:DATA:TEL:SDHS:SECT:OVER:J100:PATT?
	Returns: B16
See Also	SOURce:DATA:TELecom:SDHSonet:PATH:OVERhead:J1:PATTern

1588 PTP (Client)

:FETCh:DATA:TELecom:PACKetsync:PTP:DELay:MODE?

Description	This query returns the Delay Mode.
	At *RST condition, this value is set to One -way.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Delay Mode
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:DELay:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the delay Mode.
	PTPONEWAY, returns one way mode
	PTPTWOWAY, returns two way mode
Example(s)	FETC:DATA:TEL:PACK:PTP:DEL:MODE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:MODe?

:FETCh:DATA:TELecom:PACKetsync:PTP:FRAMing?

Description	This query returns the Framing.
	At *RST condition, this value is set to UDP/IPv4.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Framing
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Framing:
	PTPUDPIPV4: UDP/IPv4 is selected as Framing.
	PTPUDPIPV6: UDP/IPv6 is selected as Framing.
	PTPETHERNET: Ethernet is selected as Framing.
Example(s)	FETC:DATA:TEL:PACK:PTP:FRAM?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:NEGotiation:STATus?

:FETCh:DATA:TELecom:PACKetsync:PTP:LEASe:DURation?

Description	This query returns the Lease Duration Parameter.
	At *RST condition, this value is set to 300 seconds.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Service Duration - Lease Duration(s)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:LEASe:DURation?
Response Syntax	<Duration>
Response(s)	**Duration**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Lease Duration Parameter.
Example(s)	FETC:DATA:TEL:PACK:PTP:LEAS:DUR?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:IPDV?

:FETCh:DATA:TELecom:PACKetsync:PTP:MECHanism?

Description	This query returns the Mechanism.
	At *RST condition, this value is set to Request-Response Mechanism
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Mechanism
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:MECHanism?
Response Syntax	<Mechanism>
Response(s)	**Mechanism**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the PTP1588 mechanism.
	PTPREQRESP, returns PtpReqResp as a test type.
Example(s)	FETC:DATA:TEL:PACK:PTP:MECH?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:PROFile?

:FETCh:DATA:TELecom:PACKetsync:PTP:MODE?

Description	This query returns the Pkt Mode.
	At *RST condition, this value is set to Unicast.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Pkt Mode
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:MODE?
Response Syntax	<TransportMode>
Response(s)	**TransportMode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Pkt Mode
	PTPUNICAST, Unicast
	PTPMULTICAST, Multicast
	PTPMIXED, Mixed
Example(s)	FETC:DATA:TEL:PACK:PTP:MODE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:DELay:MODE?

:FETCh:DATA:TELecom:PACKetsync:PTP:NEGotiation:STATus?

Description	This query returns the Negotiation Status.
	At *RST condition, this value is set to Request Granted/Session Canceled/No Reply/Pending/Inactive
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Negotiation Status
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:NEGotiation:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Negotiation Status.
	NOREPLY, No message is received from the Grand Master following transmission of 3 Signaling requests for a message type.
	REQPENDING, Unicast negotiation has started and no message has been received from the Grand Master.
	REQGRANTED, All the Signaling request types have been granted.
	REQDENIED, The Signaling grant message has not been granted.
	GRANTCANCELLED, The Grand Master has canceled the Unicast session.
	INACTIVE, The Unicast negotiation is not active.
Example(s)	FETC:DATA:TEL:PACK:PTP:NEG:STAT?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:LEASe:DURation?

:FETCh:DATA:TELecom:PACKetsync:PTP:PROFile?

Description	This query returns the PTP Profile.
	At *RST condition, this value is set to ITU G.8265.1.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Profile
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:PROFile?
Response Syntax	<Profile>
Response(s)	**Profile**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the profile type.
	PTPTG82651,ITUG.8265.1 is selected as profile type.
Example(s)	FETC:DATA:TEL:PACK:PTP:PROF?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:MECHanism?

:FETCh:DATA:TELecom:PACKetsync:PTP:RENewal:INTerval?

Description	This query returns the Renewal Interval Parameter.
	At *RST condition, this value is set to 150 seconds.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Service Duration - Renewal Interval(s)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RENewal:INTerval?
Response Syntax	<Interval>
Response(s)	**Interval**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Renewal Interval Parameter
Example(s)	FETC:DATA:TEL:PACK:PTP:REN:INT?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:QL:LAST:RECeived?

:FETCh:DATA:TELecom:PACKetsync:PTP:STATus?

Description	This query returns the PTP Link status.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > 1588 PTP > LINK
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the PTP Link status.
Example(s)	FETC:DATA:TEL:PACK:PTP:STAT?
See Also	FETCh:DATA:TELecom:CPRI:PORT:SSTate?

:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IP

Description	This command sets the Boundary Clock / Grand Master IPv4 address.
	At *RST condition, this value is set to 10.10.0.1
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - BC/GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IP <wsp><IP Address>
Parameter(s)	**IP Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the IP address of the Clock
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:PACK:PTP:CLOC:IP 10.10.0.1
	SOUR:DATA:TEL:PACK:PTP:CLOC:IP?
	Returns: 10.10.0.1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds

:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IP?

Description	This query returns the Boundary Clock / Grand Master IPv4 address.
	At *RST condition, this value is set to 10.10.0.1
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - BC/GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IP?
Response Syntax	<IP Address>
Response(s)	**IP Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the IP address of the Clock.
Example(s)	SOUR:DATA:TEL:PACK:PTP:CLOC:IP 10.10.0.1
	SOUR:DATA:TEL:PACK:PTP:CLOC:IP?
	Returns: 10.10.0.1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds?

:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IPVersion

Description	This command sets the Boundary Clock / Grand Master IPv6 address.
	At *RST condition, this value is set to 2001:0000:0000:0000:0000:0000:0000:0000
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - BC/GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IPVersion <wsp><IPAddress>
Parameter(s)	**IPAddress**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	IPv6 address to set
Response Syntax	<IP Address>
Example(s)	SOUR:DATA:TEL:PACK:PTP:CLOC:IPV 2000:1000:0001:1190:2333:1999:0000:0001
	SOUR:DATA:TEL:PACK:PTP:CLOC:IPV?
	Returns: 2000:1000:0001:1190:2333:1999:0000:0001

:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IPVersion?

Description	This query returns the Boundary Clock / Grand Master IPv6 address.
	At *RST condition, this value is set to 2001:0000:0000:0000:0000:0000:0000:0000
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - BC/GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:IPVersion?
Response Syntax	<IPAddress>
Response(s)	**IPAddress**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	IPv6 address of the Clock
Example(s)	SOUR:DATA:TEL:PACK:PTP:CLOC:IPV 2000:1000:0001:1190:2333:1999:0000:0001
	SOUR:DATA:TEL:PACK:PTP:CLOC:IPV?
	Returns: 2000:1000:0001:1190:2333:1999:0000:0001

:SOURce:DATA:TELecom:PACKetsync:PTP:CONNect:ENABled

Description	This command initiates the Grand Master Connection process.
	At *RST condition, this value is set Enable OFF.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Connect
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CONNect:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<IPAddress>
Example(s)	SOUR:DATA:TEL:PACK:PTP:CONN:ENAB 1
	SOUR:DATA:TEL:PACK:PTP:DEL:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce

:SOURce:DATA:TELecom:PACKetsync:PTP:CONNect:ENABled?

Description	This query returns the status of Grand Master Connection process.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Connect
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CONNect:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:CONN:ENAB ON
	SOUR:DATA:TEL:PACK:PTP:CONN:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce?

:SOURce:DATA:TELecom:PACKetsync:PTP:DOMain

Description	This command sets the Domain Configurable.
	At *RST condition, this value is set to Telecom Profile Range: 0-255
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Domain
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:DOMain <wsp><Domain>
Parameter(s)	**Domain**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Domain Configurable.
	Range from 0 to 255
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:PACK:PTP:DOM 9
	SOUR:DATA:TEL:PACK:PTP:DOM?
	Returns: 9
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:GMIPaddress

:SOURce:DATA:TELecom:PACKetsync:PTP:DOMain?

Description	This query returns the Domain.
	At *RST condition, this value is Set to Telecom Profile Range: 0-255
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Domain
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:DOMain?[<wsp><Domain>]
Parameter(s)	**Domain**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns Domain Configured.
	This parameter is optional. If no token is specified, the Domain Configured value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Domain>
Response(s)	**Domain**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Domain number.
Example(s)	SOUR:DATA:TEL:PACK:PTP:DOM 9
	SOUR:DATA:TEL:PACK:PTP:DOM?
	Returns: 9
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:GMIPaddress?

:SOURce:DATA:TELecom:PACKetsync:PTP:FLABel

Description	This command sets the PTP IPv6 Flow Label value.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Flow Label
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:FLABel <wsp><Flow Label>
Parameter(s)	**Flow Label**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Flow label value to set
Response Syntax	<Domain>
Example(s)	SOUR:DATA:TEL:PACK:PTP:FLAB 108
	SOUR:DATA:TEL:PACK:PTP:FLAB?
	Returns: 108

:SOURce:DATA:TELecom:PACKetsync:PTP:FLABel?

Description	This query returns the PTP IPv6 Flow Label value.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Flow Label
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:FLABel?
Response Syntax	<Flow Label>
Response(s)	**Flow Label**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Flow Label for IPv6 protocol
Example(s)	SOUR:DATA:TEL:PACK:PTP:FLAB 108
	SOUR:DATA:TEL:PACK:PTP:FLAB?
	Returns: 108

:SOURce:DATA:TELecom:PACKetsync:PTP:GMADdress:IPVersion

Description	This command sets the Grand Master IPv6 address. Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMADdress:IPVersion <wsp><IPAddress>
Parameter(s)	**IPAddress**: The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element. IPv6 address to set
Response Syntax	<Flow Label>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMAD:IPV 2000:1000:0001:1190:2333:1999:0000:0001 SOUR:DATA:TEL:PACK:PTP:GMAD:IPV? Returns: 2000:1000:0001:1190:2333:1999:0000:0001

:SOURce:DATA:TELecom:PACKetsync:PTP:GMADdress:IPVersion?

Description	This query returns the Grand Master IPv6 address.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMADdress:IPVersion?
Response Syntax	<IPAddress>
Response(s)	**IPAddress**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	IPv6 address of the Grand Master
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMAD:IPV 2000:1000:0001:1190:2333:1999:0000:0001
	SOUR:DATA:TEL:PACK:PTP:GMAD:IPV?
	Returns: 2000:1000:0001:1190:2333:1999:0000:0001

:SOURce:DATA:TELecom:PACKetsync:PTP:GMIPaddress

Description	This command sets the Grand Master IPv4 address.
	At *RST condition, this value is set Set by user
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMIPaddress <wsp><IPAddress>
Parameter(s)	**IPAddress**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the IP address of the Grand Master Clock.
Response Syntax	<IPAddress>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMIP 10.10.0.1
	SOUR:DATA:TEL:PACK:PTP:GMIP?
	Returns: 10.10.0.1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds

:SOURce:DATA:TELecom:PACKetsync:PTP:GMIPaddress?

Description	This query returns the Grand Master IPv4 address.
	At *RST condition, this value is set Set by user.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - GM IP Address
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMIPaddress?
Response Syntax	<IPAddress>
Response(s)	**IPAddress**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Grand Master IP address.
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMIP 10.10.0.1
	SOUR:DATA:TEL:PACK:PTP:GMIP?
	Returns: 10.10.0.1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds?

:SOURce:DATA:TELecom:PACKetsync:PTP:IPDV:THReshold

Description	The command sets the IPDV Threshold Parameter.
	At *RST condition, this value is set 2 msec.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Alarm Timeout/Threshold - IPDV Threshold
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:IPDV:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the IPDV Threshold Parameter which defines the inter packet delay variation threshold used to raise the Unusable message alarm.
Response Syntax	<IPAddress>
Example(s)	SOUR:DATA:TEL:PACK:PTP:IPDV:THR 5.0
	SOUR:DATA:TEL:PACK:PTP:IPDV:THR?
	Returns: 5.0
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:SYNC

:SOURce:DATA:TELecom:PACKetsync:PTP:IPDV:THReshold?

Description	This query returns the IPDV Threshold Parameter.
	At *RST condition, this value is set to 2 msec.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Alarm Timeout/Threshold - IPDV Threshold
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:IPDV:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Returns IPDV Threshold.This parameter is optional. If no token is specified, the IPDV Threshold value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the IPDV Threshold Parameter shall determine the threshold used to raise an Alarm related to Packet Delay Variation.
Example(s)	SOUR:DATA:TEL:PACK:PTP:IPDV:THR 5.0
	SOUR:DATA:TEL:PACK:PTP:IPDV:THR?
	Returns: 5.0
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:SYNC?

:SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds

Description	This command sets the PTP TOS/DS Value.
	At *RST condition, this value is set 0x00
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - IP TOS/DS / Traffic Class (TOS/DS)
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds <wsp><TOSDOS>
Parameter(s)	**TOSDOS**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the TOS/DS value.
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:PACK:PTP:IPT #H1
	SOUR:DATA:TEL:PACK:PTP:IPT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:TEST:TYPE

:SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds?

Description	This query returns the PTP TOS/DS Value.
	At *RST condition, this value is set to 0x00
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - IP TOS/DS
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:IPTosds?
Response Syntax	<IpToSds>
Response(s)	**IpToSds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	returns the PTP IP TOS DS Value
Example(s)	SOUR:DATA:TEL:PACK:PTP:IPT #H1
	SOUR:DATA:TEL:PACK:PTP:IPT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:TEST:TYPE?

:SOURce:DATA:TELecom:PACKetsync:PTP:MMAC

Description	This command sets the G-8275.1 Multicast MAC address.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Multicast MAC
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:MMAC <wsp><MAC address>
Parameter(s)	**MAC address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the MAC address.
Response Syntax	<IpToSds>
Example(s)	SOUR:DATA:TEL:PACK:PTP:MMAC 01:1B:19:00:00:00
	SOUR:DATA:TEL:PACK:PTP:MMAC?
	Returns: 01:1B:19:00:00:00
See Also	SOURce:DATA:TELecom:PACKetsync:UDMA:ADDRess

:SOURce:DATA:TELecom:PACKetsync:PTP:MMAC?

Description	This query returns the G-8275.1 Multicast MAC address.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Multicast MAC
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:MMAC?
Response Syntax	<MAC address>
Response(s)	**MAC address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the MAC address.
Example(s)	SOUR:DATA:TEL:PACK:PTP:MMAC 01:1B:19:00:00:00
	SOUR:DATA:TEL:PACK:PTP:MMAC?
	Returns: 01:1B:19:00:00:00
See Also	SOURce:DATA:TELecom:PACKetsync:UDMA:ADDRess?

:SOURce:DATA:TELecom:PACKetsync:PTP:PROFile

Description	This command sets the the PTP Profile.
	At *RST condition, this value is set to ITU G.8265.1.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Profile
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:PROFile <wsp><Profile>
Parameter(s)	**Profile**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the PTP Profile.
	PTPTG82651: G.8265.1
	PTPTG82751: G.8275.1
	PTPTG82752: G.8275.2
Response Syntax	<MAC address>
Example(s)	SOUR:DATA:TEL:PACK:PTP:PROF PTPTG82751
	SOUR:DATA:TEL:PACK:PTP:PROF?
	Return: PTPTG82751

:SOURce:DATA:TELecom:PACKetsync:PTP:PROFile?

Description	This query returns the PTP Profile.
	At *RST condition, this value is set to ITU G.8265.1.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Profile
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:PROFile?
Response Syntax	<Profile>
Response(s)	**Profile**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the PTP Profile Telecom G.8265.1/G.8275.1/G.8275.2.
	PTPTG82651: G.8265.1
	PTPTG82751: G.8275.1
	PTPTG82752: G.8275.2
Example(s)	SOUR:DATA:TEL:PACK:PTP:PROF PTPTG82751
	SOUR:DATA:TEL:PACK:PTP:PROF?
	Return: PTPTG82751

:SOURce:DATA:TELecom:PACKetsync:PTP:QL:EXPected

Description   This command configure an Expected Quality Level value.

At *RST condition, this value is set to QL-PRS.

Navigation Path: Setup > Test Configurator > 1588 PTP > Quality Level - Expected QL

Syntax   :SOURce:DATA:TELecom:PACKetsync:PTP:QL:EXPected <wsp><Quality Level>

Parameter(s)   **Quality Level**:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Configure an Expected Quality Level value.

QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)

QLSTUUNK: QL-STU/UNK 82 Synchronized

QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)

QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)

QLINV3: QL-INV3 88 Quality Level Invalid 3

QLSSUATNC: QL-SSU-A/TNC 90 Type I or V slave clock (G.812)

Traceable to Transit Node Clock (G.812 Type V)

QLINV5: QL-INV5 92 Quality Level Invalid 5

QLINV6: QL-INV6 94 Quality Level Invalid 6

QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)

QLINV9: QL-INV9 98 Quality Level Invalid 9

QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)

QLEEC2ST3: QL-EEC2/ST3 102 Ethernet Traceable to Stratum 3 (G.812 Type IV)

QLEEC1SEC: QL-EEC1/SEC 104 Ethernet Synchronous Equipment Clock (G.813 or G.8262, Option 1)

QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)

QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)

QLDNUDUS: QL-DNU/DUS 110 Do Not Use

Do Not Use for Synchronization

QLPRCPRS6: QL-PRC/PRS PRS traceable (Recommendation G.811).

QLSSUAST2: QL-SSU-A/ST2 Traceable to Stratum 2 (Recommendation G.812, Type II).

QLSSUBST3E: QL-SSU-B/ST3E Traceable to Stratum 3E (Recommendation G.812, Type III).

:SOURce:DATA:TELecom:PACKetsync:PTP:QL:EXPected

Response Syntax	\<Profile\>
Example(s)	SOUR:DATA:TEL:PACK:PTP:QL:EXP QLPRS
	SOUR:DATA:TEL:PACK:PTP:QL:EXP?
	Returns: QLPRS
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:VERDict:ENABled?

:SOURce:DATA:TELecom:PACKetsync:PTP:QL:EXPected?

Description	This query returns the Expected Quality Level value.
	At *RST condition, this value is set to QL-PRS.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Quality Level - Expected QL
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:QL:EXPected?
Response Syntax	<Quality Level>

:SOURce:DATA:TELecom:PACKetsync:PTP:QL:EXPected?

Response(s)

Quality Level:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the Expected Quality Level value.

QL-PRS, returns QL-PRS as Quality Level

QL-STU/UNK, returns QL-STU/UNK as Quality Level

QL-PRC, returns QL-PRC as Quality Level

QL-ST2, returns QL-ST2 as Quality Level

QL-INV3, returns QL-INV3 as Quality Level

QL-SSU-A/TNC 90, returns QL-SSU-A/TNC as Quality Level

QL-INV5, returns QL-INV5 as Quality Level

QL-INV6, returns QL-INV6 as Quality Level

QL-SSU-B, returns QL-SSU-B as Quality Level

QL-INV9, returns QL-INV9 as Quality Level

QL-ST3E, returns QL-ST3E as Quality Level

QL-EEC2/ST3, returns QL-EEC2/ST3 as Quality Level

QL-EEC1/SEC, returns QL-EEC1/SEC as Quality Level

QL-SMC 106, returns QL-SMC 106 as Quality Level

QL-PROV 108, returns QL-PROV 108 as Quality Level

QL-DNU/DUS, returns QL-DNU/DUS as Quality Level

QLPRCPRS6, returns QL-PRC/PRS as Quality Level

QLSSUAST2, returns QL-SSU-A/ST2 as Quality Level

QLSSUBST3E, returns QL-SSU-B/ST3E as Quality Level

Example(s)

SOUR:DATA:TEL:PACK:PTP:QL:EXP QLPRS

SOUR:DATA:TEL:PACK:PTP:QL:EXP?

Returns: QLPRS

SOURce:DATA:TELecom:PACKetsync:PTP:RATE:DELay:REQuest

:SOURce:DATA:TELecom:PACKetsync:PTP:QL:MISMatch:ENABled

Description	This command enables/disables the QL mismatch monitoring.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Quality Level - QL Mismatch monitoring
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:QL:MISMatch:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Quality Level>
Example(s)	SOUR:DATA:TEL:PACK:PTP:QL:MISM:ENAB ON
	SOUR:DATA:TEL:PACK:PTP:QL:MISM:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:DELay:REQuest

:SOURce:DATA:TELecom:PACKetsync:PTP:QL:MISMatch:ENABled?

Description	This query returns the QL Mismatch Monitoring Enable parameter.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Quality Level - QL Mismatch monitoring
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:QL:MISMatch:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:QL:MISM:ENAB ON
	SOUR:DATA:TEL:PACK:PTP:QL:MISM:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:DELay:REQuest?

:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce

Description	This command sets the Announce Rate parameter.
	At *RST condition, this value is set 1 message/2s (default).
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Message Rate - Announce
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Announce Rate parameter.
	RATE1PER16SEC: 1 msg/16s
	RATE1PER8SEC: 1 msg/8s
	RATE1PER4SEC: 1 msg/4s
	RATE1PER2SEC: 1 msg/2s
	RATE1PERSEC: 1 msg/s
	RATE2PERSEC: 2 msg/s
	RATE4PERSEC: 4 msg/s
	RATE8PERSEC: 8 msg/s
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:PACK:PTP:RATE:ANN RATE1PER2SEC
	SOUR:DATA:TEL:PACK:PTP:RATE:ANN?
	Returns: RATE1PER2SEC
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RECeipt:TIMeout

:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce?

Description	This query returns the Announce Rate parameter.
	At *RST condition, this value is set to 1 message/2s
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Message Rate - Announce
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Announce Rate parameter.
	RATE1PER16SEC: 1 msg/16s
	RATE1PER8SEC: 1 msg/8s
	RATE1PER4SEC: 1 msg/4s
	RATE1PER2SEC: 1 msg/2s
	RATE1PERSEC: 1 msg/s
	RATE2PERSEC: 2 msg/s
	RATE4PERSEC: 4 msg/s
	RATE8PERSEC: 8 msg/s
Example(s)	SOUR:DATA:TEL:PACK:PTP:RATE:ANN RATE1PER2SEC
	SOUR:DATA:TEL:PACK:PTP:RATE:ANN?
	Returns: RATE1PER2SEC
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RECeipt:TIMeout?

:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:DELay:REQuest

Description	This command sets the Delay Request Rate parameter.
	At *RST condition, this value is set 32 message/s.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Message Rate - Delay-Request
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:DELay:REQuest <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Delay Request Rate parameter.
	RATE1PER16SEC: 1 msg/16s
	RATE1PER8SEC: 1 msg/8s
	RATE1PER4SEC: 1 msg/4s
	RATE1PER2SEC: 1 msg/2s
	RATE1PERSEC: 1 msg/s
	RATE2PERSEC: 2 msg/s
	RATE4PERSEC: 4 msg/s
	RATE8PERSEC: 8 msg/s
	RATE16PERSEC: 16 msg/s
	RATE32PERSEC: 32 msg/s
	RATE64PERSEC: 64 msg/s
	RATE128PERSEC: 128 msg/s
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:PACK:PTP:RATE:DEL:REQ RATE1PERSEC
	SOUR:DATA:TEL:PACK:PTP:RATE:DEL:REQ?
	Returns: RATE1PERSEC
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:QL:MISMatch:ENABled

:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:DELay:REQuest?

Description	This query returns the Delay Request Rate parameter.
	At *RST condition, this value is set to 32 message/s
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Message Rate - Delay-Request
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:DELay:REQuest?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Sync Rate parameter.
	RATE1PER16SEC: 1 msg/16s
	RATE1PER8SEC: 1 msg/8s
	RATE1PER4SEC: 1 msg/4s
	RATE1PER2SEC: 1 msg/2s
	RATE1PERSEC: 1 msg/s
	RATE2PERSEC: 2 msg/s
	RATE4PERSEC: 4 msg/s
	RATE8PERSEC: 8 msg/s
	RATE16PERSEC: 16 msg/s
	RATE32PERSEC: 32 msg/s
	RATE64PERSEC: 64 msg/s
	RATE128PERSEC: 128 msg/s
Example(s)	SOUR:DATA:TEL:PACK:PTP:RATE:DEL:REQ RATE1PERSEC
	SOUR:DATA:TEL:PACK:PTP:RATE:DEL:REQ?
	Returns: RATE1PERSEC
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:QL:MISMatch:ENABled?

:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:SYNC

Description	This command sets the Sync Rate parameter. At *RST condition, this value is set 32 message/s. Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Message Rate - Sync
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:SYNC <wsp><Rate>
Parameter(s)	**Rate**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the Sync Rate parameter. RATE1PER16SEC: 1 msg/16s RATE1PER8SEC: 1 msg/8s RATE1PER4SEC: 1 msg/4s RATE1PER2SEC: 1 msg/2s RATE1PERSEC: 1 msg/s RATE2PERSEC: 2 msg/s RATE4PERSEC: 4 msg/s RATE8PERSEC: 8 msg/s RATE16PERSEC: 16 msg/s RATE32PERSEC: 32 msg/s RATE64PERSEC: 64 msg/s RATE128PERSEC: 128 msg/s
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:PACK:PTP:RATE:SYNC RATE32PERSEC SOUR:DATA:TEL:PACK:PTP:RATE:SYNC? Returns: RATE32PERSEC
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:IPDV:THReshold

:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:SYNC?

Description	This query returns the Sync Rate parameter.
	At *RST condition, this value is set to 32 message/s
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Message Rate - Sync
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RATE:SYNC?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Sync Rate parameter.
	RATE1PER16SEC: 1 msg/16s
	RATE1PER8SEC: 1 msg/8s
	RATE1PER4SEC: 1 msg/4s
	RATE1PER2SEC: 1 msg/2s
	RATE1PERSEC: 1 msg/s
	RATE2PERSEC: 2 msg/s
	RATE4PERSEC: 4 msg/s
	RATE8PERSEC: 8 msg/s
	RATE16PERSEC: 16 msg/s
	RATE32PERSEC: 32 msg/s
	RATE64PERSEC: 64 msg/s
	RATE128PERSEC: 128 msg/s
Example(s)	SOUR:DATA:TEL:PACK:PTP:RATE:SYNC RATE32PERSEC
	SOUR:DATA:TEL:PACK:PTP:RATE:SYNC?
	Returns: RATE32PERSEC
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:IPDV:THReshold?

:SOURce:DATA:TELecom:PACKetsync:PTP:RECeipt:TIMeout

Description	This command sets the Receipt Timeout Parameter.
	At *RST condition, this value is set 3.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Alarm Timeout/Threshold - Receipt Timeout
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RECeipt:TIMeout <wsp><Timeout>
Parameter(s)	**Timeout**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Receipt Timeout.
	MAXimum, sets Receipt Timeout to its Maximum value.
	MINimum, sets Receipt Timeout to its Minimum value.
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:PACK:PTP:REC:TIM 5
	SOUR:DATA:TEL:PACK:PTP:REC:TIM?
	Returns: 5
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce

:SOURce:DATA:TELecom:PACKetsync:PTP:RECeipt:TIMeout?

Description	This query returns the Receipt Timeout Parameter.
	At *RST condition, this value is set to 3.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Alarm Timeout/Threshold - Receipt Timeout
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:RECeipt:TIMeout?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns Receipt Timeout.This parameter is optional. If no token is specified, the Receipt time out value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Timeout>
Response(s)	**Timeout**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Receipt Timeout Parameter shall determine the threshold point for raising Alarms related to loss of PTP messages
Example(s)	SOUR:DATA:TEL:PACK:PTP:REC:TIM 5
	SOUR:DATA:TEL:PACK:PTP:REC:TIM?
	Returns: 5
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:ANNounce?

:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:ADDRess

Description	This command sets the G-8275.1 User Defined MAC address.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Multicast MAC (User Defined address)
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:ADDRess <wsp><MAC address>
Parameter(s)	**MAC address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the MAC address.
Response Syntax	<Timeout>
Example(s)	SOUR:DATA:TEL:PACK:PTP:UDMA:ADDR 01:02:03:04:05:06
	SOUR:DATA:TEL:ETH:NETW:MAC:ADDR?
	Returns: 00:00:00:00:00:00
See Also	SOURce:DATA:TELecom:PACKetsync:MMAC

:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:ADDRess?

Description	This query returns the G-8275.1 User Defined MAC address.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Multicast MAC (User Defined address)
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:ADDRess?
Response Syntax	<MAC address>
Response(s)	**MAC address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the MAC address.
Example(s)	SOUR:DATA:TEL:PACK:PTP:UDMA:ADDR?
	Returns: 00:00:00:00:00:00
See Also	SOURce:DATA:TELecom:PACKetsync:MMAC?

:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:STATus

Description	This command enables/disable User Defined MAC Address.
	At *RST condition, this value is set Enable OFF.
	Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Multicast MAC (User Defined enable)
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:STATus \<wsp>\<Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	\<MAC address>
Example(s)	SOUR:DATA:TEL:PACK:PTP:UDMA:STAT ON
	SOUR:DATA:TEL:PACK:PTP:DEL:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:UDMA:ADDRess

:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:STATus?

Description	This query returns the status of the User Defined MAC Address. At *RST condition, this value is set to OFF. Navigation Path: Setup > Test Configurator > 1588 PTP > PTP - Multicast MAC (User Defined enable)
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:UDMAc:STATus?
Response Syntax	\<Set\>
Response(s)	**Set**: The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element. This query returns the status of the User Defined MAC Address. 1, Grand Master Connection process is enabled. 0, Grand Master Connection process is disabled.
Example(s)	SOUR:DATA:TEL:PACK:PTP:UDMA:STAT? SOUR:DATA:TEL:PACK:PTP:CONN:ENAB? Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:UDMA:ADDRess?

:SOURce:DATA:TELecom:PACKetsync:PTP:VERDict:ENABled

Description	This command Set the PTP Pass/Fail Verdict.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:VERDict:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:PACK:PTP:VERD:ENAB ON
	SOUR:DATA:TEL:PACK:PTP:VERD:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:RATE:SYNC

:SOURce:DATA:TELecom:PACKetsync:PTP:VERDict:ENABled?

Description	This query returns the Global Pass/Fail Verdict.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP > Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:VERDict:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:VERD:ENAB ON
	SOUR:DATA:TEL:PACK:PTP:VERD:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:CONNect:ENABled

1588 PTP (GM)

:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:TYPE

Description	This command sets the 1588 PTP GM Clock Type.
	At *RST condition this value is set to Two-step.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > PTP - Clock Type.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:TYPE <wsp><ClockType>
Parameter(s)	**ClockType**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Clock Type.
	ONESTEP: One-step
	TWOSTEPS: Two-step
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:PACK:PTP:CLOC:TYPE TWOSTEPS
	SOUR:DATA:TEL:PACK:PTP:CLOC:TYPE?
	Returns: TWOSTEPS

:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:TYPE?

Description	This query returns the 1588 PTP GM Clock Type.
	At *RST condition this value is set to Two-step.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > PTP - Clock Type.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:CLOCk:TYPE?
Response Syntax	<ClockType>
Response(s)	**ClockType**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Clock Type.
Example(s)	SOUR:DATA:TEL:PACK:PTP:CLOC:TYPE TWOSTEPS
	SOUR:DATA:TEL:PACK:PTP:CLOC:TYPE?
	Returns: TWOSTEPS

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CACCuracy

Description	This command sets the 1588 PTP GM Clock Accuracy.
	At *RST condition this value is set to UNKNOWN.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Clock Accuracy.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CACCuracy <wsp><ClockAccuracy>

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CACCuracy

Parameter(s)	**ClockAccuracy**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Clock Accuracy.
	ACCURATEABOVE10000000000NS: Accurate to > 10 s (31)
	ACCURATEWITHIN10000000000NS: Accurate within 10 s (30)
	ACCURATEWITHIN1000000000NS: Accurate within 1 s (2F)
	ACCURATEWITHIN100000000NS: Accurate within 100 ms (2D)
	ACCURATEWITHIN10000000NS: Accurate within 10 ms (2B)
	ACCURATEWITHIN1000000NS: Accurate within 1 ms (29)
	ACCURATEWITHIN100000NS: Accurate within 100 us (27)
	ACCURATEWITHIN10000NS: Accurate within 10 us (25)
	ACCURATEWITHIN1000NS: Accurate within 1 us (23)
	ACCURATEWITHIN100NS: Accurate within 100 ns (21)
	ACCURATEWITHIN250000000NS: Accurate within 250 ms (2E)
	ACCURATEWITHIN25000000NS: Accurate within 25 ms (2C)
	ACCURATEWITHIN2500000NS: Accurate within 2.5 ms (2A)
	ACCURATEWITHIN250000NS: Accurate within 250 us (28)
	ACCURATEWITHIN25000NS: Accurate within 25 us (26)
	ACCURATEWITHIN2500NS: Accurate within 2.5 us (24)
	ACCURATEWITHIN250NS: Accurate within 250 ns (22)
	ACCURATEWITHIN25NS: Accurate within 25 ns (20)
	UNKNOWN: Unknown (FE)
Response Syntax	<ClockType>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:CACC ACCURATEWITHIN100NS
	SOUR:DATA:TEL:PACK:PTP:CLOC:CACC?
	Returns: ACCURATEWITHIN100NS

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CACCuracy?

Description	This query returns the 1588 PTP GM Clock Accuracy.
	At *RST condition this value is set to UNKNOWN.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Clock Accuracy.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CACCuracy?

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CACCuracy?

Response Syntax	<ClockAccuracy>
Response(s)	**ClockAccuracy**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Clock Accuracy.
	ACCURATEABOVE10000000000NS: Accurate to > 10 s (31)
	ACCURATEWITHIN10000000000NS: Accurate within 10 s (30)
	ACCURATEWITHIN1000000000NS: Accurate within 1 s (2F)
	ACCURATEWITHIN100000000NS: Accurate within 100 ms (2D)
	ACCURATEWITHIN10000000NS: Accurate within 10 ms (2B)
	ACCURATEWITHIN1000000NS: Accurate within 1 ms (29)
	ACCURATEWITHIN100000NS: Accurate within 100 us (27)

	ACCURATEWITHIN1000NS: Accurate within 1 us (23)
	ACCURATEWITHIN100NS: Accurate within 100 ns (21)
	ACCURATEWITHIN250000000NS: Accurate within 250 ms (2E)
	ACCURATEWITHIN25000000NS: Accurate within 25 ms (2C)
	ACCURATEWITHIN2500000NS: Accurate within 2.5 ms (2A)
	ACCURATEWITHIN250000NS: Accurate within 250 us (28)
	ACCURATEWITHIN25000NS: Accurate within 25 us (26)
	ACCURATEWITHIN2500NS: Accurate within 2.5 us (24)
	ACCURATEWITHIN250NS: Accurate within 250 ns (22)
	ACCURATEWITHIN25NS: Accurate within 25 ns (20)
	UNKNOWN: Unknown (FE)
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:CACC ACCURATEWITHIN100NS
	SOUR:DATA:TEL:PACK:PTP:CLOC:CACC?
	Returns: ACCURATEWITHIN100NS

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCCode

Description	This command sets the 1588 PTP GM User Defined Clock Class code.
	At *RST condition this value is set to 248.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Clock Class (User Defined code).
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCCode <wsp><ClockClassCode>
Parameter(s)	**ClockClassCode**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Clock Class code.
	Range from 0-255.
	DEFault: Default value.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<ClockAccuracy>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:CCC 44
	SOUR:DATA:TEL:PACK:PTP:GMCL:CCC?
	Returns 44

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCCode?

Description	This query returns the 1588 PTP GM User Defined Clock Class code.
	At *RST condition this value is set to 248.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Clock Class (User Defined code).
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCCode?[<wsp><ClockClassCode>]
Parameter(s)	**ClockClassCode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Clock Class code value is returned.
	DEFault: Default value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<ClockClassCode>
Response(s)	**ClockClassCode**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Clock Class code.
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:CCC 44
	SOUR:DATA:TEL:PACK:PTP:GMCL:CCC?
	Returns 44

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCLass

Description	This command sets the 1588 PTP GM Clock Class. At *RST condition this value is set to QLSECEEC1ST3EEC2248. Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Clock Class.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCLass <wsp><ClockClass>
Parameter(s)	**ClockClass**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the Clock Class. QLCODEUSERDEFINED: User Defined QLPRCPRS135: QL-PRC/PRS (135) QLPRCPRS140: QL-PRC/PRS (140) QLPRCPRS6: QL-PRC/PRS (6) QLPRCPRS7: QL-PRC/PRS (7) QLSECEEC1ST3EEC2165: QL-SEC/EEC1/ST3/EEC2 (165) QLSECEEC1ST3EEC2248: QL-SEC/EEC1/ST3/EEC2 (248) QLSECEEC1ST3EEC2255: QL-SEC/EEC1/ST3/EEC2 (255) QLSSUAST2: QL-SSU-A/ST2 (150) QLSSUBST3E: QL-SSU-B/ST3E (160)
Response Syntax	<ClockClassCode>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:CCL QLPRCPRS135 SOUR:DATA:TEL:PACK:PTP:CLOC:CCL? Returns: QLPRCPRS135

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCLass?

Description	This query returns the 1588 PTP GM Clock Class.
	At *RST condition this value is set to QLSECEEC1ST3EEC2248.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Clock Class.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CCLass?
Response Syntax	<ClockClass>
Response(s)	**ClockClass**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Clock Class.
	QLCODEUSERDEFINED: User Defined
	QLPRCPRS135: QL-PRC/PRS (135)
	QLPRCPRS140: QL-PRC/PRS (140)
	QLPRCPRS6: QL-PRC/PRS (6)
	QLPRCPRS7: QL-PRC/PRS (7)
	QLSECEEC1ST3EEC2165: QL-SEC/EEC1/ST3/EEC2 (165)
	QLSECEEC1ST3EEC2248: QL-SEC/EEC1/ST3/EEC2 (248)
	QLSECEEC1ST3EEC2255: QL-SEC/EEC1/ST3/EEC2 (255)
	QLSSUAST2: QL-SSU-A/ST2 (150)
	QLSSUBST3E: QL-SSU-B/ST3E (160)
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:CCL QLPRCPRS135
	SOUR:DATA:TEL:PACK:PTP:CLOC:CCL?
	Returns: QLPRCPRS135

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CIDentity?

Description	This query returns the 1588 PTP GM Clock Identity.
	At *RST condition this value is set to 0x000000FFFE000111.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Clock Identity.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:CIDentity?
Response Syntax	<ClockIdentity>
Response(s)	**ClockIdentity**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	SOUR:DATA:TEL:PACK:PTP:CLOC:CID?
	Returns: 0x000000FFFE000111

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:FTRaceable

Description	This command enables/disables the Frequency Traceable.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Frequency Traceable.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:FTRaceable <wsp><FrequencyTraceable>
Parameter(s)	**FrequencyTraceable**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/Disables:
	OFF: Disables
	ON: Enables
Response Syntax	<ClockIdentity>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:FTR ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:FTR?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:FTRaceable?

Description	This query returns the Frequency Traceable.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Frequency Traceable.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:FTRaceable?
Response Syntax	\<FrequencyTraceable\>
Response(s)	**FrequencyTraceable**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:FTR ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:FTR?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PONE

Description	This command sets the 1588 PTP GM Clock Priority 1.
	At *RST condition this value is set to 128.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Priority 1.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PONE <wsp><Priority1>
Parameter(s)	**Priority1**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Priority 1.
	Range from 0-255.
	DEFault: Default value.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<FrequencyTraceable>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:PONE 222
	SOUR:DATA:TEL:PACK:PTP:GMCL:PONE?
	Return: 222

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PONE?

Description	This query returns the 1588 PTP GM Clock Priority 1.
	At *RST condition this value is set to 128.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Priority 1.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PONE?[<wsp><Priority1>]
Parameter(s)	**Priority1**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Priority 1 value is returned.
	DEFault: Default value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Priority1>
Response(s)	**Priority1**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Priorty 1.
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:PONE 222
	SOUR:DATA:TEL:PACK:PTP:GMCL:PONE?
	Return: 222

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PTWO

Description	This command sets the 1588 PTP GM Clock Priority 2.
	At *RST condition this value is set to 128.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Priority 2.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PTWO <wsp><Priority2>
Parameter(s)	**Priority2**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Priority 2.
	Range from 0-255.
	DEFault: Default value.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<Priority1>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:PTWO 142
	SOUR:DATA:TEL:PACK:PTP:GMCL:PTWO?
	Return: 142

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PTWO?

Description	This query returns the 1588 PTP GM Clock Priority 2.
	At *RST condition this value is set to 128.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Priority 2.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:PTWO?[<wsp><Priority2>]
Parameter(s)	**Priority2**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Priority 2 value is returned.
	DEFault: Default value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Priority2>
Response(s)	**Priority2**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Priorty 2.

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:SREMoved

Description	This command sets the 1588 PTP GM Clock Steps Removed.
	At *RST condition this value is set to 0.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Steps Removed.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:SREMoved <wsp><StepsRemoved>
Parameter(s)	**StepsRemoved**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Steps Removed.
	Range from 0-100.
	DEFault: Default value.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<Priority2>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:SREM 5
	SOUR:DATA:TEL:PACK:PTP:GMCL:SREM?
	Return: 5

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:SREMoved?

Description	This query returns the 1588 PTP GM Clock Steps Removed.
	At *RST condition this value is set to 0.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Steps Removed.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:SREMoved?[<wsp><StepsRemoved>]
Parameter(s)	**StepsRemoved**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Steps Removed value is returned.
	DEFault: Default value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<StepsRemoved>
Response(s)	**StepsRemoved**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Steps Removed number.
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:SREM 5
	SOUR:DATA:TEL:PACK:PTP:GMCL:SREM?
	Return: 5

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TIMescale

Description	This command enables/disables the Timescale.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - PTP Timescale.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TIMescale <wsp><Timescale>
Parameter(s)	**Timescale**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/Disables:
	OFF: Disables
	ON: Enables
Response Syntax	<StepsRemoved>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:TIM ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:TIM?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TIMescale?

Description	This query returns the Timescale.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - PTP Timescale.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TIMescale?
Response Syntax	<Timescale>
Response(s)	**Timescale**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:TIM ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:TIM?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TSOurce

Description	This command sets the 1588 PTP GM Clock Time Source. At *RST condition this value is set to INTERNALOSCILLATOR. Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Time Source.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TSOurce <wsp><TimeSource>
Parameter(s)	**TimeSource**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the Time Source. ATOMICCLOCK: Atomic Clock (10) GPS: GPS (20) HANDSET: Hand Set (60) INTERNALOSCILLATOR: Internal Oscillator (A0) NTP: NTP (50) OTHER: Other (90) PTP: PTP (40) TERRESTRIALRADIO: Terrestrial Radio (30)
Response Syntax	<Timescale>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:TSRC OTHER SOUR:DATA:TEL:PACK:PTP:GMCL:TSRC? Returns: OTHER

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TSOurce?

Description	This query returns the 1588 PTP GM Clock Time Source.
	At *RST condition this value is set to INTERNALOSCILLATOR.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Time Source.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TSOurce?
Response Syntax	<TimeSource>
Response(s)	**TimeSource**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Time Source.
	ATOMICCLOCK: Atomic Clock (10)
	GPS: GPS (20)
	HANDSET: Hand Set (60)
	INTERNALOSCILLATOR: Internal Oscillator (A0)
	NTP: NTP (50)
	OTHER: Other (90)
	PTP: PTP (40)
	TERRESTRIALRADIO: Terrestrial Radio (30)
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:TSRC OTHER
	SOUR:DATA:TEL:PACK:PTP:GMCL:TSRC?
	Returns: OTHER

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TTRaceable

Description	This command enables/disables the Time Traceable.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Time Traceable.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TTRaceable <wsp><TimeTraceable>
Parameter(s)	**TimeTraceable**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/Disables:
	OFF: Disables
	ON: Enables
Response Syntax	<TimeSource>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:TTR ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:TTR?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TTRaceable?

Description	This query returns the Time Traceable.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Time Traceable.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:TTRaceable?
Response Syntax	<TimeTraceable>
Response(s)	**TimeTraceable**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:TTR ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:TTR?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset

Description	This command sets the 1588 PTP GM Clock UTC Offset.
	At *RST condition this value is set to 37.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - UTC Offset.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset <wsp><UTCOffset>
Parameter(s)	**UTCOffset**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the UTC Offset.
	Range from -1000 - 1000.
	DEFault: Default value.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<TimeTraceable>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC 22
	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC?
	Return: 22

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset:VALid

Description	This command enables/disables the Current UTC Offset Valid.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Current UTC Offset Valid.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset:VALid <wsp><UTCOffsetValid>
Parameter(s)	**UTCOffsetValid**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/Disables:
	OFF: Disables
	ON: Enables
Response Syntax	<TimeTraceable>
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC:VAL ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC:VAL?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset:VALid?

Description	This query returns the Current UTC Offset Valid.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - Current UTC Offset Valid.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset:VALid?
Response Syntax	<UTCOffsetValid>
Response(s)	**UTCOffsetValid**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC:VAL ON
	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC:VAL?
	Returns: 1

:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset?

Description	This query returns the 1588 PTP GM Clock UTC Offset.
	At *RST condition this value is set to 37.
	Navigation Path: Setup > Test Configurator > 1588 PTP (GM) > Clock Attributes - UTC Offset.
Syntax	:SOURce:DATA:TELecom:PACKetsync:PTP:GMCLock:UTCoffset?[<wsp><UTCOffset>]
Parameter(s)	**UTCOffset**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current UTC Offset value is returned.
	DEFault: Default value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<UTCOffset>
Response(s)	**UTCOffset**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the UTC Offset number.
Example(s)	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC 22
	SOUR:DATA:TEL:PACK:PTP:GMCL:UTC?
	Return: 22

Grand Master Information

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:ACCuracy?

Description	This query returns Boundary Clock / Grand Master Information Clock Accuracy Desciption and Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Clock Accuracy
	Navigation Path: Results > Summary > BC/GM Info > Clock Accuracy
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:ACCuracy? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Accuracy.
	DESCription
	CODE
Response Syntax	<Accuracy>
Response(s)	**Accuracy**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Clock Accuracy Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:ACC? Desc
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:CLASs?

Description	This query returns Boundary Clock / Grand Master Information Clock Class Desciption and Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Clock Class
	Navigation Path: Results > Summary > BC/GM Info > Clock Class
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:CLASs? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Clock Class.
	DESCription
	CODE
Response Syntax	<Class>
Response(s)	**Class**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Clock Class Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:CLAS? Desc
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:IDENtity?

Description	This query returns Boundary Clock / Grand Master Information Clock Identity Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Identity
	Navigation Path: Results > Summary > BC/GM Info > Identity
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:IDENtity? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the identity.
	DESCription
	CODE
Response Syntax	<Identity>
Response(s)	**Identity**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Identity Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:IDEN? CODE
See Also	FETCH:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:LMISync?

Description	This query returns Boundary Clock / Grand Master Information Log Message Interval for Sync Description and Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Log Message Interval (Sync)
	Navigation Path: Results > Summary > BC/GM Info > Log Message Interval (Sync)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:LMISync? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Log Message Interval For Sync
	DESCription
	CODE
Response Syntax	<Log Message Interval For Sync>
Response(s)	**Log Message Interval For Sync**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Log Message Interval For Sync Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:LMIS? Desc
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:LMIannounce ?

Description	This query returns Boundary Clock / Grand Master Information Log Message Interval for Announce Desciption and Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Log Message Interval (Announce)
	Navigation Path: Results > Summary > BC/GM Info > Log Message Interval (Announce)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:LMIannounce? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Log Message Interval For Announce
	DESCription
	CODE
Response Syntax	<Log Message Interval For Announce>
Response(s)	**Log Message Interval For Announce**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Log Message Interval For Announce Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:LMI? Desc
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:MODE?

Description	This query returns Boundary Clock / Grand Master Information Clock Mode Description.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Clock Mode
	Navigation Path: Results > Summary > BC/GM Info > Clock Mode
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:MODE? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Clock mode.
	DESCription
	CODE
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Mode Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:MODE? DESC
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:PIDentity?

Description	This query returns Boundary Clock / Grand Master Information Port Identity Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Port Identity
	Navigation Path: Results > Summary > BC/GM Info > Port Identity
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:PIDentity? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Port identity.
	DESCription
	CODE
Response Syntax	<Port Identity>
Response(s)	**Port Identity**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Port Identity Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:PID? code
See Also	FETCH:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:PRIority:ONE ?

Description	This query returns Boundary Clock / Grand Master Information Priority 1 Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Priority 1
	Navigation Path: Results > Summary > BC/GM Info > Priority 1
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:PRIority:ONE? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Priority 1.
	DESCription
	CODE
Response Syntax	<Priority 1>
Response(s)	**Priority 1**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Priority 1 Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:PRI:ONE? CODE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:PRIority:TWO?

Description	This query returns Boundary Clock / Grand Master Information Priority 2 Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Priority 2
	Navigation Path: Results > Summary > BC/GM Info > Priority 2
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:PRIority:TWO? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Priority 2.
	DESCription
	CODE
Response Syntax	<Priority 2>
Response(s)	**Priority 2**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Priority 2 Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:PRI:TWO? CODE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:SREMoved?

Description	This query returns Boundary Clock / Grand Master Information Steps Removed Code. Navigation Path: Setup > 1588 PTP > BC/GM Info > Steps Removed Navigation Path: Results > Summary > BC/GM Info > Steps Removed
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:SREMoved? <wsp><Type>
Parameter(s)	**Type**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Steps Removed. DESCription CODE
Response Syntax	<Steps Removed>
Response(s)	**Steps Removed**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns Steps Removed Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:SREM? CODE
See Also	FETCH:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:TSOurce?

Description	This query returns Boundary Clock / Grand Master Information Time Source Description and Code.
	Navigation Path: Setup > 1588 PTP > BC/GM Info > Time Source
	Navigation Path: Results > Summary > BC/GM Info > Time Source
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:CLOCk:TSOurce? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Time Source.
	DESCription
	CODE
Response Syntax	<Time Source>
Response(s)	**Time Source**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Time Source Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:CLOC:TSO? Code
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:ACCUracy?

Description	This query returns Grand Master Information Clock Accuracy Desciption and Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Clock Accuracy
	Navigation Path: Results > Summary > GM Info > Clock Accuracy
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:ACCUracy? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Clock Accuracy.
	DESCription
	CODE
Response Syntax	<Accuracy>
Response(s)	**Accuracy**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Clock Accuracy Desc and Code
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:ACCuracy? Desc
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:CLASs?

Description	This query returns Grand Master Information Clock Class Desciption and Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Clock Class
	Navigation Path: Results > Summary > GM Info > Clock Class
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:CLASs? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Clock Class.
	DESCription
	CODE
Response Syntax	<Class>
Response(s)	**Class**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Clock Class Desc and Code
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:CLASs? Desc
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:MODE?

Description	This query returns Grand Master Information Clock Mode Description.
	Navigation Path: Setup > 1588 PTP > GM Info > Clock Mode
	Navigation Path: Results > Summary > GM Info > Clock Mode
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:MODE? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Clock mode.
	DESCription
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Grand Master Information Clock Mode Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:GMIN:CLOC:MODE? DESC
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:IDENtity?

Description	This query returns Grand Master Information Identity Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Identity
	Navigation Path: Results > Summary > GM Info > Identity
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:IDENtity? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Clock identity.
	CODE
Response Syntax	<Identity>
Response(s)	**Identity**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Identity Desc and Code.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:IDENtity? CODE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:LMIAnnounce?

Description	This query returns Grand Master Information Log Message Interval for Announce Desciption and Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Log Message Interval (Announce)
	Navigation Path: Results > Summary > GM Info > Log Message Interval (Announce)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:LMIAnnounce? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Log Message Interval For Announce .
	DESCription
	CODE
Response Syntax	<Log Message Interval For Announce>
Response(s)	**Log Message Interval For Announce**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Log Message Interval For Announce Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:GMIN:LMIA? Desc
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:LMISync?

Description	This query returns Grand Master Information Log Message Interval for Sync Description and Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Log Message Interval (Sync)
	Navigation Path: Results > Summary > GM Info > Log Message Interval (Sync)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:LMISync? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Log Message Interval For Sync.
	DESCription
	CODE
Response Syntax	<Log Message Interval For Sync>
Response(s)	**Log Message Interval For Sync**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Log Message Interval For Sync Desc and Code
Example(s)	FETC:DATA:TEL:PACK:PTP:GMIN:LMIS? Desc
See Also	FETCH:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:PIDEntity?

Description	This query returns Grand Master Information Port Identity Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Port Identity
	Navigation Path: Results > Summary > GM Info > Port Identity
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:PIDEntity? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Clock Port identity.
	CODE
Response Syntax	<Port Identity>
Response(s)	**Port Identity**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Port Identity Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:GMIN:PIDEntity? code
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:PRIOrity:ONE?

Description	This query returns Grand Master Information Priority 1 Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Priority 1
	Navigation Path: Results > Summary > GM Info > Priority 1
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:PRIOrity:ONE? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Priority 1.
	CODE
Response Syntax	<Priority 1>
Response(s)	**Priority 1**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Priority 1 Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:GMIN:PRIO:ONE? CODE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:PRIOrity:TWO?

Description	This query returns Grand Master Information Priority 2 Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Priority 2
	Navigation Path: Results > Summary > GM Info > Priority 2
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:PRIOrity:TWO? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Priority 2.
	CODE
Response Syntax	<Priority 2>
Response(s)	**Priority 2**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Priority 2 Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:GMIN:PRIO:TWO? CODE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:SREMoved?

Description	This query returns Grand Master Information Steps Removed Code. Navigation Path: Setup > 1588 PTP > GM Info > Step Removed Navigation Path: Results > Summary > GM Info > Step Removed
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:SREMoved? <wsp><Type>
Parameter(s)	**Type**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Grand Master Information Steps Removed. CODE
Response Syntax	<Steps Removed>
Response(s)	**Steps Removed**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns Grand Master Information Steps Removed Desc and Code.
Example(s)	FETC:DATA:TEL:PACK:PTP:GMIN:SREM? CODE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:TSOUrce?

Description	This query returns Grand Master Information Time Source Description and Code.
	Navigation Path: Setup > 1588 PTP > GM Info > Time Source
	Navigation Path: Results > Summary > GM Info > Time Source
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:TSOUrce? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Grand Master Information Time Source.
	DESCription
	CODE
Response Syntax	<Time Source>
Response(s)	**Time Source**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Grand Master Information Time Source Desc and Code.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:TSOU? Code
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

Streams - Profile

:SOURce:DATA:TELecom:ETHernet:ENABled:BANDwidth?

Description	This query returns the total enabled bandwidth value for all the configured traffic streams.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Total TX Rate.
Syntax	:SOURce:DATA:TELecom:ETHernet:ENABled:BANDwidth?
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return the total enabled bandwidth.
Example(s)	SOUR:DATA:TEL:ETH:ENAB:BAND?
See Also	SOURce:DATA:TELecom:ETHernet:TOTal:BANDwidth?

:SOURce:DATA:TELecom:ETHernet:STReam:ENABled

Description	This command enables/disables the transmission of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is set to OFF in Traffic Gen & Mon.
	At *RST condition, this value is set to ON in FlexE BERT.
	Navigation Path: Traffic Gen & Mon > Setup > Test Configurator > Streams > Profile > Stream - Enable
	Navigation Path: Traffic Gen & Mon > Setup > Test Configurator > Streams > Global > Enable stream check box
	Navigation Path: FlexE BERT > Setup > Test Configurator > Clients > BERT > Shaping - Enable TX
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ENABled <wsp><Stream number or client ID>, <Status>
Parameter(s)	**Stream number or client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16 (Traffic Gen & Mon) or client ID from 1 to n (FlexE BERT)
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Bandwidth>
Example(s)	SOUR:DATA:TEL:ETH:STR:ENAB 1, ON
	SOUR:DATA:TEL:ETH:STR:ENAB? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:STATus

:SOURce:DATA:TELecom:ETHernet:STReam:ENABled?

Description	This query returns the transmission status of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is set to OFF in Traffic Gen & Mon.
	At *RST condition, this value is set to ON in FlexE BERT.
	Navigation Path: Traffic Gen & Mon > Setup > Test Configurator > Streams > Profile > Stream - Enable
	Navigation Path: Traffic Gen & Mon > Setup > Test Configurator > Streams > Global > Enable stream check box
	Navigation Path: FlexE BERT > Setup > Test Configurator > Clients > BERT > Shaping - Enable TX
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:ENABled? <wsp><Stream number or client ID>
Parameter(s)	**Stream number or client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16 (Traffic Gen & Mon) or client ID from 1 to n (FlexE BERT)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:ENAB 1, ON
	SOUR:DATA:TEL:ETH:STR:ENAB? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:STATus?

:SOURce:DATA:TELecom:ETHernet:STReam:FCOunt

Description	This command counts the number of frames transmitted for the selected traffic stream.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Frame Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FCOunt <wsp><Tgen>, <Fcount>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Fcount:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects number of frame counts.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:MODE 1, NFR
	SOUR:DATA:TEL:ETH:STR:FCO 1, 500
	SOUR:DATA:TEL:ETH:STR:FCO? 1
	Returns: 500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE

:SOURce:DATA:TELecom:ETHernet:STReam:FCOunt?

Description	This query returns the number of frames transmitted for the selected traffic stream.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Frame Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FCOunt? <wsp><Tgen>,[<Fcount>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Fcount:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current frame count is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of frame counts.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, NFR
	SOUR:DATA:TEL:ETH:STR:FCO 1, 500
	SOUR:DATA:TEL:ETH:STR:FCO? 1
	Returns: 500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE
	?

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE

Description	This command sets the frame size.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Frame Size
	Navigation Path: Setup > Test Configurator > Clients > Profile > Ethernet Frame - Frame Size
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE <wsp><Number>, <Size>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 to n Client ID for FlexE BERT
	- 1 for other test applications
	Size:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the frame size:
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Fcount>
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE:TYPE 1, FIXED
	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE 1, 500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE:TYPE

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE:TYPE

Description	This command sets the frame size type.
	At *RST condition, this value is set to Fixed.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Frame Size
	Navigation Path: Setup > Test Configurator > EtherBert > Ethernet Frame - Frame Size
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE:TYPE <wsp><Number>, <Type>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 Stream for EtherBert
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the frame size type:
	FIXED
	RANDOM
	EMIX (EtherSAM and EtherBert)
	SWEEP (Traffic Gen & Mon)
Response Syntax	<Fcount>
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE:TYPE 1, FIXED
	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE:TYPE? 1
	Returns: FIXED
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:STARt?

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE:TYPE ?

Description	This query returns the frame size type.
	At *RST condition, this value is set to Fixed.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Frame Size
	Navigation Path: Setup > Test Configurator > EtherBert > Ethernet Frame - Frame Size
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE:TYPE? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 Stream for EtherBert
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type frame size:
	FIXED
	RANDOM
	EMIX (EtherSAM and EtherBert)
	SWEEP (Traffic Gen & Mon)
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE:TYPE 1, FIXED
	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE:TYPE? 1
	Returns: FIXED
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:STARt

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE?

Description	This query returns the frame size.
	At *RST condition, this value is device-dependent.
	Navigation Path: Test Configurator > Streams/Servoces > Profile > Profile - Frame Size
	Navigation Path: Setup > Test Configurator > Clients > BERT > Ethernet Frame - Frame Size
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE? <wsp><Number>,[<Size>]
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Depending on the test application, selects a number as follows:
	- 1 to 16 Streams for Traffic Gen & Mon
	- 1 to 10 Services for EtherSAM
	- 1 to n Client ID for FlexE BERT
	- 1 for other test applications
	Size:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	frame size
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Frame size>
Response(s)	**Frame size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the frame size.
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE:TYPE 1, FIXED
	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE 1, 500
	SOUR:DATA:TEL:ETH:STR:FRAM:SIZE? 1
	Returns: 500
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE:TYPE? 1

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:E ND

Description	This command sets the maximum value of the sweep range.
	At *RST condition, this value is set to 1518.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Profile - Sweep > Sweep Range - Max
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:END <wsp><Stream>, <Sweep Range>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Sweep Range:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the sweep frame end size.
	MAXimum, sets the maximum sweep frame end size.
	MINimum, sets the minimum sweep frame end size.
Response Syntax	<Frame size>
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SWE:END 1,67
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:ETHernet:STRream:FRAMe:SWEep:END?

Description	This query returns the maximum value of the sweep range.
	At *RST condition, this value is set to 1518.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Profile - Sweep > Sweep Range - Max
Syntax	:SOURce:DATA:TELecom:ETHernet:STRream:FRAMe:SWEep:END? \<wsp>\<Stream>,[\<Sweep Range>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Sweep Range:
	The program data syntax for the second parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current sweep frame end size is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	\<Frame Size Type>
Response(s)	**Frame Size Type**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA> element.
	Returns the sweep frame end size.
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SWE:END 1,67
	SOUR:DATA:TEL:ETH:STR:FRAM:SWE:END? 1
	Returns: 67
See Also	SOURce:DATA:TELecom:ETHernet:STRream:ADDRess:DESTination:IP

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:STARt

Description	This command sets the minimum value of the sweep range.
	At *RST condition, this value is set to 64.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Profile - Sweep > Sweep Range - Min
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:STARt \<wsp\>\<Stream\>, \<Sweep Range\>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA\> element.
	Selects the stream from 1 to 16.
	Sweep Range:
	The program data syntax for the second parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA\> element.
	Sets the sweep frame start size.
	MAXimum, sets the maximum sweep frame start size.
	MINimum, sets the minimum sweep frame start size.
Response Syntax	\<Frame Size Type\>
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SWE:STAR 1,64
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE?

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:STARt?

Description	This query returns the minimum value of the sweep range.
	At *RST condition, this value is set to 64.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Profile - Sweep > Sweep Range - Min)
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SWEep:STARt? \<wsp>\<Stream>,[\<Sweep Range>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Sweep Range:
	The program data syntax for the second parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current sweep frame start size is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	\<Frame Size Type>
Response(s)	**Frame Size Type**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA> element.
	Returns the sweep frame start size.
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:SWE:STAR 1,64
	SOUR:DATA:TEL:ETH:STR:FRAM:SWE:STAR? 1
	Returns: 64
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:SIZE

:SOURce:DATA:TELecom:ETHernet:STReam:MODE

Description	This command sets the transmitter mode for the selected stream.
	At *RST condition, this value is set to CONTinuous.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MODE <wsp><Tgen>, <Mode>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Mode:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the transmitter mode for the selected stream.
	CONTinuous: transmitter mode as Continuous
	BURSt: Burst
	RAMP: Ramp
	NFRame: Number of Frame
	NBURst: Number of Burst
	NRAMp: Number of Ramp
Response Syntax	<Frame Size Type>
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:MODE? 1
	Returns: BURST
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe 2,VG723

:SOURce:DATA:TELecom:ETHernet:STReam:MODE?

Description	This query returns the transmitter mode for the stream.
	At *RST condition, this value is set to CONTinuous.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:MODE? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the transmitter mode for the selected stream.
	CONTinuous, for Continuous.
	BURSt, for Burst.
	RAMP, for Ramp.
	NFRame, for Number of Frame.
	NBURst, for Number of Burst.
	NRAMp, for Number of Ramp.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:MODE? 1
	Returns: BURST
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo:CHANnels?

:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE

Description	This command sets the TX rate (in percent) of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is set to 100.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Rate / Max TX Rate
	Navigation Path: Setup > Test Configurator > Clients > BERT > Shaping - TX Rate / Max TX Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE <wsp><Stream/Client ID>,[<RateInPercent>]
Parameter(s)	**Stream/Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16 (Traffic Gen & Mon) or client ID from 1 to n (FlexE BERT)
	RateInPercent:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream or client TX rate, in percent, for the transmitter.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:STR:PROFile:RATE 1, 105
	SOUR:DATA:TEL:ETH:STR:PROFile:RATE? 1
	Returns: 105
See Also	SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE:MBPS
	SOURce:DATA:TELecom:ETHernet:STReam:FCOunt

:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE:MBPS

Description	This command sets the TX rate (in Mbit/s) of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is set to the maximum rate of the interface or client rate.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Rate / Max TX Rate
	Navigation Path: Setup > Test Configurator > Clients > BERT > Shaping - TX Rate / Max TX Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE:MBPS <wsp><Stream/Client ID>,[<RateInMbps>]
Parameter(s)	**Stream/Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16 (Traffic Gen & Mon) or client ID from 1 to n (FlexE BERT)
	RateInMbps:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream or client TX rate, in Mbit/s, for the transmitter.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:STR:PROFile:RATE:MBPS 1, 10000
	SOUR:DATA:TEL:ETH:STR:PROFile:RATE:MBPS? 1
	Returns: 10000
See Also	SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE

:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE:MBPS?

Description	This query returns the TX rate (in Mbit/s) of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is set to the maximum rate of the interface or client rate.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Rate / Max TX Rate
	Navigation Path: Setup > Test Configurator > Clients > BERT > Shaping - TX Rate / Max TX Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE:MBPS? <wsp><Stream/Client ID>,[<MinOrMaxRate>]
Parameter(s)	**Stream/Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16 (Traffic Gen & Mon) or client ID from 1 to n (FlexE BERT)
	MinOrMaxRate:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current profile rate, in Mbit/s, is returned.
	MAXimum: Biggest supported value, in Mbit/s.
	MINimum: Smallest supported value, in Mbit/s.
Response Syntax	<RateInMbps>
Response(s)	**RateInMbps**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the stream or client TX rate, in Mbit/s, for the transmitter.
Example(s)	SOUR:DATA:TEL:ETH:STR:PROFile:RATE:MBPS 1, 10000
	SOUR:DATA:TEL:ETH:STR:PROFile:RATE:MBPS? 1
	Returns: 10000
See Also	SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE?

:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE?

Description	This query returns the TX rate (in percent) of the selected stream for 'Traffic Gen & Mon' or the selected client for 'FlexE BERT'.
	At *RST condition, this value is set to 100.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Rate / Max TX Rate
	Navigation Path: Setup > Test Configurator > Clients > BERT > Shaping - TX Rate / Max TX Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE? <wsp><Stream/Client ID>,[<MinOrMaxOrDefaultRate>]
Parameter(s)	**Stream/Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16 (Traffic Gen & Mon) or client ID from 1 to n (FlexE BERT)
	MinOrMaxOrDefaultRate:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current profile rate, in percent, is returned.
	MAXimum: Biggest supported value, in percent.
	MINimum: Smallest supported value, in percent.
	DEFault: Default value, in percent
Response Syntax	<RateInPercent>
Response(s)	**RateInPercent**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the stream or client TX rate, in percent, for the transmitter.
Example(s)	SOUR:DATA:TEL:ETH:STR:PROFile:RATE 1, 105
	SOUR:DATA:TEL:ETH:STR:PROFile:RATE? 1
	Returns: 105
See Also	SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE:MBPS?
	SOURce:DATA:TELecom:ETHernet:STReam:FCOunt?

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt

Description	This command sets QoS metrics maximum Frame Loss count value.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Frame Loss Count - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the frame loss count value.
	Choices are from 0 to 9999999999
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<RateInPercent>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:COUN 1, 20
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:COUN? 1
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VAL 1, 12.00
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VAL? 1 Returns 12.00

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt?

Description	This query returns QoS metrics maximum Frame Loss count value.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Frame Loss Count - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt? <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current frame loss count is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frame loss count value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:COUN 1, 20
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:COUN? 1
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VAL 1, 12.00
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VAL? 1 Returns 12.00

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:RATE

Description	This command sets QoS metrics maximum Frame Loss rate value.
	At *RST condition, this value is set to 1.0E-02.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Frame Loss Rate - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:RATE <wsp><Stream>, <Value>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the frame loss Rate value
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:RATE 1, 1.0E00
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:RATE? 1
	Returns: 1.0E00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus 1, ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus? 1 Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:RATE?

Description	This query returns QoS metrics maximum Frame Loss rate value.
	At *RST condition, this value is set to 1.0E-02.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Frame Loss Rate - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:RATE? <wsp><Stream>, <Value>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the frame loss rate value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:RATE 1, 1.0E00
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:RATE? 1
	Returns: 1.0E00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus 1, ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus? 1 Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus

Description	This command enables/disables QoS metrics Frame Loss pass/fail verdict.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Frame Loss Count/Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus <wsp><Stream>,[<Type>],[<Status>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects frame loss type.
	COUNt Sets the frame loss type to COUN
	RATE Sets the frame loss type to RATE
	Status:
	The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the frame loss status.
	ON,Enables frame loss.
	OFF,Disables frame loss.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:STAT 1, COUN,ON
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:STAT? 1, COUN
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VAL 1, 12.00
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VAL? 1 Returns 12.00

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus?

Description	This query returns status of the QoS metrics Frame Loss pass/fail verdict setting.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Frame Loss Count/Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus? <wsp><Stream>,[<Type>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects frame loss type.
	COUNt Sets the frame loss type to COUN
	RATE Sets the frame loss type to RATE
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the QOS Metrics frame loss Status.
	1, QOS Metrics frame loss is enabled.
	0, QOS Metrics frame loss is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:STAT 1, COUN,ON
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:STAT? 1, COUN
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VAL 1, 12.00
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VAL? 1 Returns 12.00

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE

Description	This command sets QoS metrics Frame Loss type.
	At *RST condition, this value is set to count.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics > Global Thresholds Type > Frame Loss
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Frameloss Type.
	COUNt
	RATE
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:TYPE COUN
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:TYPE?
	Returns: COUN
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus 1, ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus? 1 Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE?

Description	This query returns status of the QoS metrics Frame Loss pass/fail verdict setting.
	At *RST condition, this value is set to Count.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics > Global Thresholds Type > FrameLoss
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE?
Response Syntax	<Frame Loss TYPE>
Response(s)	**Frame Loss TYPE**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the QOSMetrics frame loss TYPE
	COUNt, returns frame loss type as Count.
	RATE, returns frame loss type as RATE.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:TYPE COUN
	SOUR:DATA:TEL:ETH:STR:QOSM:FLOS:TYPE?
	Returns: COUN
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus 1, ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus? 1 Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus

Description	This command enables/disables QoS metrics Jitter pass/fail verdict.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Jitter
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus <wsp><Stream>,[<Status>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets QOS metrics Jitter status.
	ON,Enables the QOSmetrics Jitter.
	OFF,Disables the QOSmetrics Jitter.
Response Syntax	<Frame Loss TYPE>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:STAT 1, ON
	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:STAT? 1
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE COUNt
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE? Returns COUNt

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus?

Description	This query returns status of QoS metrics Jitter pass/fail verdict setting.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Jitter
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:STATus? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the QoS Jitter Status.
	1, QOS metrics Jitter is enabled.
	0, QOS metrics Jitter is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:STAT 1, ON
	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:STAT? 1
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE COUNt
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:TYPE? Returns COUNt

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VALue

Description	This command Sets QoS metrics maximum Jitter Value.
	At *RST condition, this value is set to 15.0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Jitter - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VALue <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Jitter value
	Choices are from 0.005 to 8000.0 for 10M rate and
	0.001 to 8000.0 for all other rates.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:VAL 1, 12.00
	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:VAL? 1
	Returns: 12.00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus 1, COUNt,ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus? 1, COUNt Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VALue?

Description	This query returns QoS metrics maximum Jitter Value.
	At *RST condition, this value is set to 15.0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Jitter - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:JITTer:VALue? <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Jitter is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Jitter value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:VAL 1, 12.00
	SOUR:DATA:TEL:ETH:STR:QOSM:JITT:VAL? 1
	Returns: 12.00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus 1, COUNt,ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus? 1, COUNt Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus

Description	This command enables/disables QoS metrics Latency pass/fail verdict.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Latency
	Navigation Path: Setup > Test Configurator > EtherBERT > Latency > Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus <wsp><Stream>,[<Status>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	QOS metrics latency status.
	ON, Enables QOSmetrics latency.
	OFF, Disables QOSmetrics latency.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:STAT 1, ON
	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:STAT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus 1, COUNt,ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:STATus? 1, COUNt Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus?

Description	This query returns status of QoS metrics Latency pass/fail verdict setting.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Latency
	Navigation Path: Setup > Test Configurator > EtherBERT > Latency > Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:STATus? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the QoS Latency Status.
	1, QOS metrics latency is enabled.
	0, QOS metrics latency is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:STAT 1, ON
	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:STAT? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:RATE 1, 1.0E00
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:RATE? 1 Returns 1.0E01

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VALue

Description	This command Sets QoS metrics maximum Latency value.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Latency - Maximum
	Navigation Path: Setup > Test Configurator > EtherBERT > Latency > Threshold
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VALue <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the latency value
	Choices are from 0.005 to 8000.0 for 10M rate and 0.001 to 8000.0 for all other rates.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:VAL 1, 12.00
	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:VAL? 1
	Returns: 12.00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt 1, 20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt? 1 Returns 20

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VALue?

Description	This query returns QoS metrics maximum Latency value.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Latency - Maximum
	Navigation Path: Setup > Test Configurator > EtherBERT > Latency > Threshold
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:LATency:VALue? <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current latency is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Latency value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:VAL 1, 12.00
	SOUR:DATA:TEL:ETH:STR:QOSM:LAT:VAL? 1
	Returns: 12.00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt 1, 20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:FLOSs:COUNt? 1 Returns 21

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt

Description	This command sets QoS metrics maximum Out-Of-Sequence Count value.
	At *RST condition, this value is set to 100.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Out-Of-Sequence Count - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Out-of- Sequence count value
	Choices are from 0 to 9999999999
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:COUN 1, 20
	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:COUN? 1
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MIN 1, CURR,20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MIN? 1, CURR Returns 20

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt?

Description	This query returns QoS metrics maximum Out-Of-Sequence Count value.
	At *RST condition, this value is set to 100.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Out-Of-Sequence Count - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt? <wsp><Stream>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Out-of- Sequence count is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Out-of- Sequence count value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:COUN 1, 20
	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:COUN? 1
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MIN 1, CURR,20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MIN? 1, CURR Returns 20

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE

Description	This command sets QoS metrics maximum Out-Of-Sequence rate value.
	At *RST condition, this value is set to 1.0E-02.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Out-Of-Sequence Rate - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE <wsp><Stream>, <Value>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Out-of- Sequence Rate value
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:RATE 1, 1.0E00
	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:RATE? 1
	Returns: 1.0E00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAX 1, CURR,20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAX? 1, CURR Returns 20

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE?

Description	This query returns QoS metrics maximum Out-Of-Sequence rate value.
	At *RST condition, this value is set to 1.0E-02.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Out-Of-Sequence Rate - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the Out-of- Sequence rate value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:RATE 1, 1.0E00
	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:RATE? 1
	Returns: 1.0E00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAX 1, CURR,20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAX? 1, CURR Returns 20

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:STATus

Description	This command enables/disables QoS Metrics Out-of-Sequence pass/fail verdict. At *RST condition, this value is device dependant. Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Out-Of-Sequence Count/Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:STATus <wsp><Stream>,[<Type>],[<Status>]
Parameter(s)	**Stream**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the stream from 1 to 16. **Type**: The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects out of sequence Type. COUNt selects out of sequence type to COUNt. RATE selects out of sequence type to RATE. **Status**: The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element. Sets the QOS Metrics out of sequence status. ON, Enables QOSMetrics out of sequence. OFF, Disables QOSMetrics out of sequence.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:STAT 1, COUN,ON SOUR:DATA:TEL:ETH:STR:QOSM:OOS:STAT? 1, COUN Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:STATus 1, CURR,ON SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:STATus? 1, CURR Returns ON

:SOURce:DATA:TELecom:ETHernet:STRead:QOSMetrics:OOSequence:STATus?

Description	This query returns status of the QoS Metrics Out-of-Sequence pass/fail verdict setting.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Out-Of-Sequence Count/Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:STRead:QOSMetrics:OOSequence:STATus? <wsp><Stream>,[<Type>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects out of sequence Type.
	COUNt selects out of sequence type to COUNt.
	RATE selects out of sequence type to RATE.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the QoS Metrics Out-Of Sequence status.
	1, QoS Metrics Out-Of Sequence is enabled.
	0, QoS Metrics Out-Of Sequence is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:STAT 1, COUN,ON
	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:STAT? 1, COUN
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STRead:QOSMetrics:THRoughput:STATus 1, CURR,ON
	SOURce:DATA:TELecom:ETHernet:STRead:QOSMetrics:THRoughput:STATus? 1, CURR Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE

Description	This command sets QoS metrics Out-Of-Sequence type.
	At *RST condition, this value is set to count.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics > Global Thresholds Type > Out-Of-Sequence
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Out of Sequence Type.
	COUNt Selects Out of Sequence Type to COUNt.
	RATE Selects Out of Sequence Type to RATE.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:TYPE COUN
	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:TYPE?
	Returns: COUN
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE CURR
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE? Returns CURR

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE?

Description	This query returns QoS metrics Out-Of-Sequence type.
	At *RST condition, this value is set to count.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics > Global Thresholds Type > Out-Of-Sequence
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE?
Response Syntax	<TYPE>
Response(s)	**TYPE**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the QoS Metrics Out-Of Sequence Type.
	COUNt, returns Out-Of Sequence type as Count.
	RATE, returns Out-Of Sequence type as RATE.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:TYPE COUN
	SOUR:DATA:TEL:ETH:STR:QOSM:OOS:TYPE?
	Returns: COUN
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE CURR
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE? Returns CURR

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAXimum

Description	This command sets QoS metrics maximum Throughput value.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Throughput - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAXimum <wsp><Stream>, <Type>, <Value>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Throughput Type.
	AVG: Average
	CURRent: Current
	Value:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the maximum throughput value
	Choices are from 0.0000 to 107.0000
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<TYPE>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MAX 1, CURR,20
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MAX? 1, CURR
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE 1, 1.0E00
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE? 1 Returns 1.0E00

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRo ughput:MAXimum?

Description	This query returns QoS metrics maximum Throughput value.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Throughput - Maximum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAXimum? <wsp><Stream>, <Type>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Throughput Type.
	AVG: Average
	CURRent: Current
	Value:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the current maximum throughput value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Maximum Throughput Value>

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MAXimum?

Response(s)	**Maximum Throughput Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum throughput value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MAX 1, CURR,20
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MAX? 1, CURR
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE 1, 1.0E00
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:RATE? 1 Returns 1.0E00

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MINimum

Description	This command sets QoS metrics minimum Throughput value.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Throughput - Minimum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MINimum <wsp><Stream>, <Type>, <Value>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Throughput Type.
	AVG: Average
	CURRent: Current
	Value:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the minimum throughput value
	Choices are from 0.0000 to 107.0000
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Maximum Throughput Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MIN 1, CURR,20
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MIN? 1, CURR
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt 1, 20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt? 1 Returns 20

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MINimum?

Description	This query returns QoS metrics mimimum Throughput value.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Threshold - Throughput - Minimum
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MINimum? <wsp><Stream>, <Type>,[<Value>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Throughput Type.
	AVG: Average
	CURRent: Current
	Value:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the current minimum throughput value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Minimum Throughput Value>

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:MINimum?

Response(s)	**Minimum Throughput Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the minimum throughput value
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MIN 1, CURR,20
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:MIN? 1, CURR
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt 1, 20
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:COUNt? 1 Returns 20

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:STATus

Description	This command enables/disables Throughput pass/fail verdict.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:STATus <wsp><Stream>,[<Type>],[<Status>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects Throughput Type.
	AVG: Average
	CURRent: Current
	Status:
	The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the QOSmetrics Throughput status ON	OFF.
	ON,Enables the QOSmetrics Throughput.
	OFF,Disables the QOSmetrics Throughput.
Response Syntax	<Minimum Throughput Value>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:STAT 1, CURR,ON
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:STAT? 1, CURR
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:STATus 1, COUNt,ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:STATus? 1, COUNt Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:STATus?

Description	This query returns status of QoS metrics Throughput pass/fail verdict setting.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics - Pass Fail Verdict - Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:STATus? <wsp><Stream>,[<Type>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Type:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects Throughput Type.
	AVG: Average
	CURRent: Current
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the QoS Metrics throughput Status.
	1, QoS Metrics throughput is enabled.
	0, QoS Metrics throughput is disabled.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:STAT 1, CURR,ON
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:STAT? 1, CURR
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:STATus 1, COUNt,ON
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:STATus? 1, COUNt
	Returns ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE

Description	This command sets QoS metrics Throughput Type.
	At *RST condition, this value is set to Average Throughput.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics > Global Thresholds Type > Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Throughput Type.
	AVERAGE, sets throughput type to AVERAGE
	CURRent, sets throughput type to CURRENT
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:TYPE CURR
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:TYPE?
	Returns: CURR
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE COUNt
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE? 1, 1 Returns COUNt

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE?

Description	This query returns QoS metrics Throughput Type.
	At *RST condition, this value is set to Average Throughput.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics > Global Thresholds Type > Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:THRoughput:TYPE?
Response Syntax	<TYPE>
Response(s)	**TYPE**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the QoS Metrics throughput TYPE
	AVG, returns throughput type as Average.
	CURRENT, returns Throughput type as Current.
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:THR:TYPE CURR
	SOUR:DATA:TEL:ETH:STR:QOSM:THR:TYPE?
	Returns: CURR
See Also	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE COUNt
	SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:OOSequence:TYPE? 1, 1 Returns COUNt

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:VERDict

Description	This command enables/disables the QoS Metrics Global Pass/Fail verdict.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics ‚Äì Global Pass/Fail Verdict.
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:VERDict <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<TYPE>
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:VERD ON

:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:VERDict?

Description	This query returns the enable/disable status of the QoS Metrics Global Pass/Fail Verdict.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Streams > Profile > QoS Metrics ‚Äì Global Pass/Fail Verdict.
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:QOSMetrics:VERDict?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status of the Global Pass/Fail Verdict.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:QOSM:VERD ON
	SOUR:DATA:TEL:ETH:STR:QOSM:VERD?
	Returns: 1

:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:MODE

Description	This command sets the Transmit Mode.
	At *RST condition, this value is set to Continuous.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the transmit mode for the stream CONFig.
	CONTinuous: Continuous
	NFRame: Number of frames
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:TRAN:MODE CONTINUOUS
	SOUR:DATA:TEL:ETH:STR:TRAN:MODE?
	Returns: CONTINUOUS
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TRANsmit:MODE?

:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:MODE?

Description	This query returns the Transmit Mode.
	At *RST condition, this value is set to Continuous.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - TX Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the transmit mode of the stream CONFig.
	CONtinuous, indicates Continuous as the transmit mode.
	NFRame, indicates Number of frames as the transmit mode.
Example(s)	SOUR:DATA:TEL:ETH:STR:TRAN:MODE CONTINUOUS
	SOUR:DATA:TEL:ETH:STR:TRAN:MODE?
	Returns: CONTINUOUS
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TRANsmit:MODE?

:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:NFRame

Description	This command sets the number of frames.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Frame Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:NFRame <wsp><Size>
Parameter(s)	**Size**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the number of frames.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:STR:TRAN:NFR 100
	SOUR:DATA:TEL:ETH:STR:TRAN:NFR?
	Returns: 100
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TRANsmit:NFRame?

:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:NFRame?

Description	This query returns the number of frames.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Frame Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:TRAnsmit:NFRame?
Response Syntax	<Frame>
Response(s)	**Frame**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of frames for each traffic type.
	MAXimum, indicates maximum as number of frames.
	MINimum, indicates minimum as number of frames.
Example(s)	SOUR:DATA:TEL:ETH:STR:TRAN:NFR 100
	SOUR:DATA:TEL:ETH:STR:TRAN:NFR?
	Returns: 100
See Also	SOURce:DATA:TELecom:ETHernet:STReam:TRANsmit:NFRame

:SOURce:DATA:TELecom:ETHernet:TOTal:BANDwidth?

Description	This query returns the total available bandwidth value for all configured traffic streams.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Link Capacity.
Syntax	:SOURce:DATA:TELecom:ETHernet:TOTal:BANDwidth?
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total available bandwidth.
Example(s)	SOUR:DATA:TEL:ETH:TOT:BAND?
See Also	SOURce:DATA:TELecom:ETHernet:ENABled:BANDwidth?

Streams - Profile (Profile)

:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo

Description	This command sets the Video Codec for the selected traffic stream/service. At *RST condition, this value is set to SDTVMPEG2. Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Video Codec
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo <wsp><Tgen>, <Profile>
Parameter(s)	**Tgen**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the stream from 1 to 16. **Profile**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the video codec type for the selected stream. SDTVMPEG2: SDTV (MPEG-2) HDTVMPEG2: HDTV (MPEG-2) HDTVMPEG4: HDTV (MPEG-4)
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:STR:PROF:TYPE 2,VDEO SOUR:DATA:TEL:ETH:STR:COD:VID 2,SDTVMPEG2 SOUR:DATA:TEL:ETH:STR:COD:VID? 2 Returns: SDTVMPEG2
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo?

:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo:CHANnels

Description	This command sets the number of channels for the selected traffic stream/service.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Number Of Channels
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo:CHANnels <wsp><Stream>, <Channels>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	EtherSAM - Selects the service from 1 to 10.
	Channels:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the number of channels.
	VG711: VG711 jitter packet type
	VG723: VG723 jitter packet type
	VG729: VG729 jitter packet type
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	UDEFined: User Defined jitter packet type
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:STR:PROF:TYPE 2,VIDeo
	SOUR:DATA:TEL:ETH:STR:COD:VID 2,SDTVMPEG2
	SOUR:DATA:TEL:ETH:STR:COD:VID:CHAN 2,20
	SOUR:DATA:TEL:ETH:STR:COD:VID:CHAN? 2
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE?

:SOURce:DATA:TELecom:ETHernet:STREam:CODec:VIDeo:CHANnels?

Description	This query returns the number of channels for the selected traffic stream/service.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Number Of Channels
Syntax	:SOURce:DATA:TELecom:ETHernet:STREam:CODec:VIDeo:CHANnels? <wsp><Stream>,[<MIN/MAX>]
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	EtherSAM - Selects the service from 1 to 10.
	MIN/MAX:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Channels>
Response(s)	**Channels**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of channels.
Example(s)	SOUR:DATA:TEL:ETH:STR:PROF:TYPE 2,VIDeo
	SOUR:DATA:TEL:ETH:STR:COD:VID 2,SDTVMPEG2
	SOUR:DATA:TEL:ETH:STR:COD:VID:CHAN 2,20
	SOUR:DATA:TEL:ETH:STR:COD:VID:CHAN? 2
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STREam:CODec:VIDeo?

:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo?

Description	This query returns the Video Codec for the selected traffic stream/service.
	At *RST condition, this value is set to SDTVMPEG2.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Video Codec
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Codec>
Response(s)	**Codec**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the video codec type for the selected stream.
	SDTVMPEG2, SDTV (MPEG-2) is selected as video codec type.
	HDTVMPEG2, HDTV (MPEG-2) is selected as video codec type.
	HDTVMPEG4, HDTV (MPEG-4) is selected as video codec type.
Example(s)	SOUR:DATA:TEL:ETH:STR:PROF:TYPE 2,VIDeo
	SOUR:DATA:TEL:ETH:STR:COD:VID 2,SDTVMPEG2
	SOUR:DATA:TEL:ETH:STR:COD:VID? 2
	Returns: SDTVMPEG2
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo

:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe

Description	This command sets the voice codec for the selected traffic stream/service.
	At *RST condition, this value is set to VG711.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Voice Codec
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe \<wsp>\<Tgen>, \<Voice>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Voice:
	The program data syntax for the second parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Sets the voice codec for the selected traffic stream.
	VG711: VG711.
	VG723: VG723.
	VG729: VG729.
Response Syntax	\<Codec>
Example(s)	SOUR:DATA:TEL:ETH:STR:COD:VOIC 2,VG723
	SOUR:DATA:TEL:ETH:STR:COD:VOIC? 2
	Returns: VG723
See Also	SOURce:DATA:TELecom:ETHernet:STReam:PROFile:TYPE

:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe:CALLs

Description	This command sets the number of calls for the selected traffic stream/service.
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Number of Calls
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe:CALLs <wsp><Tgen>, <Calls>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Calls:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of calls.
Response Syntax	<Codec>
Example(s)	SOUR:DATA:TEL:ETH:STR:COD:VOIC 2,VG723
	SOUR:DATA:TEL:ETH:STR:COD:VOIC:CALL 2,20
	SOUR:DATA:TEL:ETH:STR:COD:VOIC:CALL? 2
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo:CHANnels

:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe:CALLs?

Description	This query returns the number of calls for the selected traffic stream/service.
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Number of Calls
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe:CALLs? <wsp><Tgen>,[<Value>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
Response Syntax	<Calls>
Response(s)	**Calls**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of calls.
Example(s)	SOUR:DATA:TEL:ETH:STR:COD:VOIC 2,VG723
	SOUR:DATA:TEL:ETH:STR:COD:VOIC:CALL 2,20
	SOUR:DATA:TEL:ETH:STR:COD:VOIC:CALL? 2
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VIDeo:CHANnels?

:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe?

Description	This query returns the selected voice codec for the selected traffic stream/service.
	At *RST condition, this value is set to VG711.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Voice Codec
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe? <wsp><Tgen>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Voice>
Response(s)	**Voice**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the voice codec.
	VG711, VG711 is selected.
	VG723, VG723 is selected.
	VG729, VG729 is selected.
Example(s)	SOUR:DATA:TEL:ETH:STR:COD:VOIC 2,VG723
	SOUR:DATA:TEL:ETH:STR:COD:VOIC? 2
	Returns: VG723
See Also	SOURce:DATA:TELecom:ETHernet:STReam:PROFile:TYPE?

:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:TYPE

Description	This command sets the profile type for the selected traffic stream/service.
	At *RST condition, this value is set to Data.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Voice/Video/Data
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:TYPE <wsp><Stream>, <Profile>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Profile:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the profile type.
	VOICe: Voice
	VIDeo: Video
	DATA: Data
Response Syntax	<Voice>
Example(s)	SOUR:DATA:TEL:ETH:STR:PROF:TYPE 2,VOICE
	SOUR:DATA:TEL:ETH:STR:PROF:TYPE? 2
	Returns: VOICE
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe

:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:TYPE?

Description	This query returns the profile type for the selected traffic stream/service.
	At *RST condition, this value is set to Data.
	Navigation Path: Setup > Test Configurator > Streams/Services > Profile > Profile - Profile > Voice/Video/Data
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:PROFile:TYPE? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Profile>
Response(s)	**Profile**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the profile type.
	VOICe, Voice as profile type is selected.
	VIDeo, Video as profile type is selected.
	DATA, Data as profile type is selected.
Example(s)	SOUR:DATA:TEL:ETH:STR:PROF:TYPE 2,VOIC
	SOUR:DATA:TEL:ETH:STR:PROF:TYPE? 2
	Returns: VOICE
See Also	SOURce:DATA:TELecom:ETHernet:STReam:CODec:VOICe?

Shaping

:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:BANDwidth

Description	This command sets the burst bandwidth for the selected traffic stream.
	At *RST condition, this value is set to 50.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Burst Duty Cycle
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:BANDwidth[<wsp><Tgen>], <Bandwidth>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Bandwidth:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the bandwidth in percentage.
	Choices are 1 through 100%.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:BURS:BAND 1, 100
	SOUR:DATA:TEL:ETH:STR:BURS:BAND? 1
	Returns: 100
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE

:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:BANDwidth?

Description	This query returns the burst bandwidth for the selected traffic stream.
	At *RST condition, this value is set to 50.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Burst Duty Cycle
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:BANDwidth?[<wsp><Tgen>],[<Bandwidth>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Bandwidth:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current bandwidth is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the burst bandwidth from 1 to 100 in percentage.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:BURS:BAND 1, 100
	SOUR:DATA:TEL:ETH:STR:BURS:BAND? 1
	Returns: 100
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE?

:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:COUNt

Description	This command sets the number of burst count for the selected traffic stream.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Burst Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:COUNt <wsp><Tgen>, <Count>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Count:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the number of the burst count.
	Choices are 1 through 255.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Bandwidth>
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:BURS:COUN 1, 50
	SOUR:DATA:TEL:ETH:STR:BURS:COUN? 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BURSt:BANDwidth

:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:COUNt?

Description	This query returns the number of burst count for the selected traffic stream.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Burst Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:COUNt? <wsp><Tgen>,[<Count>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Count:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current burst count is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the burst count.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:BURS:COUN 1, 50
	SOUR:DATA:TEL:ETH:STR:BURS:COUN? 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BURSt:BANDwidth?

:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:TIME

Description	This command sets the burst period for the selected traffic stream.
	At *RST condition, this value is set to 1000.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Period
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:TIME <wsp><Tgen>, <Period>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Period:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the burst time.
	Choices are 1 to 8000 milliseconds.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Count>
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:BURS:TIME 1, 50
	SOUR:DATA:TEL:ETH:STR:BURS:TIME? 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BURSt:COUNt

:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:TIME?

Description	This query returns the duration of burst for the selected traffic stream.
	At *RST condition, this value is set to 1000.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Period
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BURSt:TIME? <wsp><Tgen>,[<Period>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Period:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current burst period is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns burst time.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, BURS
	SOUR:DATA:TEL:ETH:STR:BURS:TIME 1, 50
	SOUR:DATA:TEL:ETH:STR:BURS:TIME? 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BURSt:COUNt?

:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:COUNt

Description	This command sets the ramp cycle count for the selected traffic stream.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Ramp Cycle Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:COUNt <wsp><Tgen>, <Count>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Count:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the ramp cycle count. Choices are 1 through 225.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, RAMP
	SOUR:DATA:TEL:ETH:STR:RAMP:COUN 1, 20
	SOUR:DATA:TEL:ETH:STR:RAMP:COUN? 1
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BURSt:COUNt?

:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:COUNt?

Description	This query returns the number of ramp cycle count for the selected traffic stream.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Ramp Cycle Count
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:COUNt? <wsp><Tgen>,[<Count>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Count:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the ramp count value.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, RAMP
	SOUR:DATA:TEL:ETH:STR:RAMP:COUN 1, 20
	SOUR:DATA:TEL:ETH:STR:RAMP:COUN? 1
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE

:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:STEP

Description	This command sets the number of ramp steps for the selected traffic stream.
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Ramp Nb. Of Steps
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:STEP <wsp><Tgen>, <Step>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Step:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the step for the ramp. Choices are 2 through 100.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Count>
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, RAMP
	SOUR:DATA:TEL:ETH:STR:RAMP:STEP 1, 50
	SOUR:DATA:TEL:ETH:STR:RAMP:STEP? 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE

:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:STEP?

Description	This query returns the number of ramp steps for the selected traffic stream.
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Ramp Nb. Of Steps
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:STEP? <wsp><Tgen>,[<Step>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Step:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Step>
Response(s)	**Step**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the ramp step value.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, RAMP
	SOUR:DATA:TEL:ETH:STR:RAMP:STEP 1, 50
	SOUR:DATA:TEL:ETH:STR:RAMP:STEP? 1
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MODE?

:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:TIME

Description	This command sets the ramp step time for the selected traffic stream.
	At *RST condition, this value is set to 1000.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Step Time
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:TIME <wsp><Tgen>, <Time>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Time:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the ramp step time. Choices are 100 through 8000 milliseconds.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Step>
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, RAMP
	SOUR:DATA:TEL:ETH:STR:RAMP:TIME 1, 5
	SOUR:DATA:TEL:ETH:STR:RAMP:TIME? 1
	Returns: 5
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BURSt:TIME

:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:TIME?

Description	This query returns the ramp step time for the selected traffic stream.
	At *RST condition, this value is set to 1000.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Shaping - Shaping > Step Time
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:RAMP:TIME? <wsp><Tgen>,[<Time>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Time:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the ramp step time.
Example(s)	SOUR:DATA:TEL:ETH:STR:MODE 1, RAMP
	SOUR:DATA:TEL:ETH:STR:RAMP:TIME 1, 5
	SOUR:DATA:TEL:ETH:STR:RAMP:TIME? 1
	Returns: 5
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BURSt:TIME?

Streams - Global

:FETCh:DATA:TELecom:ETHernet:STReam:BATCh:COPY:SYNC: PROGress?

Description	This query returns the progress of copy triggered for batch Configuration.
	This is an event so no *RST condition.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing > Batch > Apply To
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:BATCh:COPY:SYNC:PROGress?
Response Syntax	<Progress>
Response(s)	**Progress**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the progress of copy.
Example(s)	FETC:DATA:TEL:ETH:STR:BATC:COPY:SYNC:PROG?
See Also	FETCh:DATA:TELecom:GFP:ALARm:FRAMe:CURRent?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY

Description	This command selects all, unselect all, or invert the stream selection for batch configuration.
	This is an event so no *RST condition.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing MAC/IP > Batch > (Un)Select All / Invert
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the streams for copy.
	SELECTALL: Selects all streams
	UNSELECTALL: Deselects all streams
	INVERT: Invert the stream selection
Response Syntax	<Progress>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:COPY SELECTALL
	Selects all the streams for copying
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:APPLy

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:APPLy

Description	This command apply trigger copy to all selected stream for batch Configuration.
	This is an event so no *RST condition.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing > Batch > Apply To
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:APPLy
Response Syntax	<Progress>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:COPY:APPL
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:STReam

Description	This command enable/disable stream(s) for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams/Services > Global > Addressing > Batch > Stream/Service 1 to 16
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:STReam <wsp><Stream/Service>, <Set>
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the stream.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enable or disable the stream/service.
	ON, enables the stream.
	OFF, disables the stream.
Response Syntax	<Progress>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATCH:COPY:STR 1,ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:STReam?

Description	This query returns the enabled streams for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing > Batch > Stream 1 to 16
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:STReam?
Response Syntax	<result>
Response(s)	**result**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the all selected streams
Example(s)	SOUR:DATA:TEL:ETH:STR:BATCH:COPY:STR 1,ON
	SOUR:DATA:TEL:ETH:STR:BATCH:COPY:STR?
	Returns: Enabled Stream = 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:ENABle

Description	This command enables/disables the Default gateway for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - Default gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:ENABle<wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<result>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEF:GAT:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP:ENABle

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:ENABle?

Description	This query returns the status of the Default gateway for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - Default gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEF:GAT:ENAB ON
	SOUR:DATA:TEL:ETH:STR:BATC:DEF:GAT:ENAB?
	Return: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP:ENABle?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP

Description	This command sets the Default gateway IP Address for batch Configuration.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - Default gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Default gateway IP Address.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEF:GAT:IP 10.10.10.10
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP?

Description	This query returns the Default gateway IP Address for batch Configuration.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - Default gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Default gateway IP address.
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEF:GAT:IP 10.10.10.10
	SOUR:DATA:TEL:ETH:STR:BATC:DEF:GAT:IP?
	Returns: 10.10.10.10
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP

Description	This command sets the Destination IP Address for batch Configuration.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Destination IP address - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Destination IP Address.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:IP 10.10.10.10
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP:ENABle

Description	This command enables/disables the Destination IP Address group for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Destination IP address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:IP:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ENABle

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP:ENABle?

Description	This query returns the status of the Destination IP Address group for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Destination IP address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:IP:ENAB ON
	SOUR:DATA:TEL:ETH:STR:BATC:DEST:IP:ENAB?
	Return: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ENABle?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP?

Description	This query returns the Destination IP Address for batch Configuration.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Destination IP address - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Destination IP address.
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:IP 10.10.10.10
	SOUR:DATA:TEL:ETH:STR:BATC:DEST:IP?
	Returns: 10.10.10.10
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ADDRess

Description	This command sets the Destination MAC address for batch Configuration.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing > Batch > Destination MAC address - MAC address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ADDRess <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Destination MAC address.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:ADDR 00:AA:DD:CC:11:00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:SUBNet:MASK

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ADDRess?

Description	This query returns the Destination MAC address for batch Configuration.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing > Batch > Destination MAC address - MAC addres
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Destination MAC address.
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:ADDR 00:AA:DD:CC:11:00
	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:ADDR?
	Returns: 00:AA:DD:CC:11:00
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ENABle

Description	This command enables/disables the Destination MAC address group for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Destination MAC address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP:ENABle

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ENABle?

Description	This query returns the status of the Destination MAC address group for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Destination MAC address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:ENAB ON
	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:ENAB?
	Return: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP:ENABle?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTinati on:MAC:TYPE

Description	This command sets the Destination MAC address type for batch Configuration.
	At *RST condition, this value is set to Resolve.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing > Batch > Destination MAC address - Resolve / Set to
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:TYPE <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Destination MAC address type.
	RESOLVE: Resolve.
	STATICMAC: Static MAC.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:TYPE RESOLVE
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:ADDRess:TYPE

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTinati on:MAC:TYPE?

Description	This query returns the Destination MAC address type for batch Configuration.
	At *RST condition, this value is set to Resolve.
	Navigation Path: Traffic Gen & Mon/EtherSAM > Setup > Streams > Global > Addressing > Batch > Destination MAC address - Resolve / Set to
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:TYPE?
Response Syntax	<set>
Response(s)	**set**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Destination MAC address type.
	RESOLVE, Resolve as Destination MAC address type.
	STATICMAC, Set to as Destination MAC address type.
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:TYPE RESOLVE
	SOUR:DATA:TEL:ETH:STR:BATC:DEST:MAC:TYPE?
	Returns: RESOLVE
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:ADDRess:TYPE?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:ADDRess:TYPE

Description	This command sets the Source IP Address type for batch Configuration.
	At *RST condition, this value is set to Couple with Interface.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Couple with Interface / Automatic IP (DHCP) / Set to
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:ADDRess:TYPE <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Source IP Address type.
	COUPLEWITHINTERFACE: Couple With Interface.
	DHCP: Automatic IP (DHCP).
	STATICIP: Static IP
Response Syntax	<set>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:ADDR:TYPE DHCP
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:TYPE

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:ADDRess:TYPE?

Description	This query returns the Source IP Address type for batch Configuration.
	At *RST condition, this value is set to Couple with Interface.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Couple with Interface / Automatic IP (DHCP) / Set to
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:ADDRess:TYPE?
Response Syntax	<set>
Response(s)	**set**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Source IP Address type.
	COUPLEWITHINTERFACE, Couple With Interface as Source IP Address type.
	DHCP, Automatic IP (DHCP) as Source IP Address type.
	STATICIP, Set to as Source IP Address type.
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:ADDR:TYPE DHCP
	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:ADDR:TYPE?
	Returns: DHCP
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:MAC:TYPE?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP

Description	This command sets the Source IP Address for batch Configuration.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Source IP Address.
Response Syntax	<set>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:IP 10.10.10.10
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP :ENABle

Description	This command enables/disables the Source IP Address group for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<set>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:IP:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP:ENABle

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP :ENABle?

Description	This query returns the status of the Source IP Address group for batch Configuration.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:IP:ENAB ON
	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:IP:ENAB?
	Return: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP:ENABle?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP?

Description	This query returns the Source IP Address for batch Configuration.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:IP?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Source IP address.
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:IP 10.10.10.10
	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:IP?
	Returns: 10.10.10.10
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DESTination:IP?

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:SUBNet:MASK

Description	This command sets the Subnet mask Address for batch Configuration.
	At *RST condition, this value is set to 255.255.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - Subnet mask
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:SUBNet:MASK <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Subnet mask Address.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:SUBN:MASK 255.255.255.0
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP

:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:SUBNet:MASK?

Description	This query returns the Subnet mask Address for batch Configuration.
	At *RST condition, this value is set to 255.255.0.0.
	Navigation Path: Setup > Test Configurator > Streams > Global > Addressing MAC/IP > Batch > Source IP address - Set to - Subnet mask
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:BATCh:SOURce:SUBNet:MASK?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Subnet mask address.
Example(s)	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:SUBN:MASK 255.255.255.0
	SOUR:DATA:TEL:ETH:STR:BATC:SOUR:SUBN:MASK?
	Returns: 255.255.255.0
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:DEFault:GATeway:IP?

:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:QOSMetrics:ENABle

Description	This command enables/disables the QoS Metrics Tag Insertion.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Global Options - QoS Metrics Tags Insertion
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:QOSMetrics:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:QOSMetrics:ENABle ON
See Also	SOURce:DATA:TEL:ETH:STR:PROFile:RATE

:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:QOSMetrics:ENABle?

Description	This query return status of the QoS Metrics Tag Insertion setting.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Streams > Global > Global Options - QoS Metrics Tags Insertion
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:QOSMetrics:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:QOSMetrics:ENABle ON
	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:QOSMetrics:ENABle?
	Returns: 1
See Also	SOURce:DATA:TEL:ETH:STR:PROFile:RATE?

:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:RESTore: DEFault

Description	This command restores the stream configuration to default values.
	This is action command so no default values.
	Navigation Path: Setup > Test Configurator > Streams > Global > Restore Default
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:RESTore:DEFault
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:RESTore:DEFault
See Also	SOURce:DATA:TELecom:OTN:REStore:DEFault
	SOURce:DATA:TELecom:ETHernet:ESAM:RESTore:DEFault
	SOURce:DATA:TELecom:ETHernet:RFC:RESTore:DEFault
	SOURce:DATA:TELecom:RESTore:DEFault

:SOURce:DATA:TELecom:ETHernet:STReam:NAME

Description	This command sets the stream name for selected traffic stream.
	At *RST condition, this value is set to Stream 1 for first stream.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Stream Name
	Navigation Path: Setup > Test Configurator > Streams > Global > Stream Name
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:NAME[<wsp><Tgen>], <Name>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Name:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the name for selected stream.
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:NAME 1, streamA
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:RATE?

:SOURce:DATA:TELecom:ETHernet:STReam:NAME?

Description	This query returns stream name for the selected traffic stream.
	At *RST condition, this value is set to Stream 1 for first stream.
	Navigation Path: Setup > Test Configurator > Streams > Profile > Stream Name
	Navigation Path: Setup > Test Configurator > Streams > Global > Stream Name
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:NAME?[<wsp><Tgen>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Name>
Response(s)	**Name**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the name for selected stream
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:NAME 1, streamA
	SOURce:DATA:TELecom:ETHernet:STReam:NAME? 1
	Returns: streamA
See Also	SOURce:DATA:TELecom:ETHernet:STReam:PROFile:RATE

Streams - Global (Copy Stream)

:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:COPYstream

Description	This command copies the stream/service configuration of source stream/service to destination stream/service. There is no *RST value for this command. Navigation Path: Setup > Test Configurator > Streams/Services > Global > Copy Stream/Service > Copy Stream / To the following Streams/Services / Copy
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:COPYstream[<wsp><Source>], <Destination>
Parameter(s)	**Source**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the source stream/service from 1 to 16. **Destination**: The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the destination stream/service from 1 to 16.
Response Syntax	<Frame Size>
Example(s)	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:COPYstream 1, 2
See Also	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:RESTore:DEFault

SyncE

:FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:ESMC?

Description	This query returns ESMC link status.
	At *RST condition, this value is set to down.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - ESMC
Syntax	:FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:ESMC?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns ESMC link status
Example(s)	FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:ESMC?
See Also	FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RECeivedql?

:FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RECeivedql?

Description	This query returns Received QL.
	At *RST condition, this value is set to 1 second.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - Received QL
Syntax	:FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RECeivedql?
Response Syntax	<Received QL>
Response(s)	**Received QL**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Received QL.
Example(s)	FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RECeivedql?
See Also	FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:ESMC?

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLENable

Description	This command enables/disables the Generated QL setting.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Generation - Generated QL
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLENable <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Received QL>
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLEN ON
	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLEN?
	Returns: 1
See Also	SOURce:DATA:TELecom:SONet:OH:LINE:OVERwrite:ENABled

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENerati on:GENerated:QLENable?

Description	This query returns the status of the Generated QL setting.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Generation - Generated QL
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLENable?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns ESMC QL Enable
	0, Returns ESMC QL Enable
	1, Returns ESMC QL Disables
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLEN ON
	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLEN?
	Returns: 1
See Also	SOURce:DATA:TELecom:SONet:OH:LINE:OVERwrite:ENABled?

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENerati on:GENerated:QLValue

Description	This command set the Generated QL value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Generation - Generated QL
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLValue <wsp><QL Value>
Parameter(s)	**QL Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Quality Level/PTP Clock Class
	QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)
	QLSTUUNK: QL-STU/UNK 82 Synchronized
	QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)
	QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)
	QLINV3: QL-INV3 88 Quality Level Invalid 3
	QLSSUATNC: QL-SSU-A/TNC 90 Type I or V slave clock (G.812)
	Traceable to Transit Node Clock (G.812 Type V)
	QLINV5: QL-INV5 92 Quality Level Invalid 5
	QLINV6: QL-INV6 94 Quality Level Invalid 6
	QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)
	QLINV9: QL-INV9 98 Quality Level Invalid 9
	QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)
	QLEEC2ST3: QL-EEC2/ST3 102 Ethernet
	Traceable to Stratum 3 (G.812 Type IV)
	QLEEC1SEC: QL-EEC1/SEC 104 Ethernet
	Synchronous Equipment Clock (G.813 or G.8262, Option 1)
	QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)
	QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)
	QLDNUDUS: QL-DNU/DUS 110 Do Not Use
	Do Not Use for Synchronization

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLValue

Response Syntax	\<Status\>
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLV QLSTUUNK
	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLV?
	Returns: QLSTUUNK
See Also	SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLValue?

Description	This query returns the Generated QL value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Generation - Generated QL
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLValue?
Response Syntax	<QL Value>
Response(s)	**QL Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns ESMC QL Value
	QL-PRS,Returns QL-PRS as Quality Level
	QL-STU/UNK,Returns QL-STU/UNK as Quality Level
	QL-PRC,Returns QL-PRC as Quality Level
	QL-ST2, Returns QL-ST2 as Quality Level
	QL-INV3,Returns QL-INV3 as Quality Level
	QL-SSU-A/TNC 90, Returns QL-SSU-A/TNC as Quality Level
	QL-INV5,ReturnsQL-INV5 as Quality Level
	QL-INV6,Returns QL-INV6 as Quality Level
	QL-SSU-B,Returns QL-SSU-B as Quality Level
	QL-INV9,Returns QL-INV9 as Quality Level
	QL-ST3E,Returns QL-ST3E as Quality Level
	QL-EEC2/ST3, Returns QL-EEC2/ST3 as Quality Level
	QL-EEC1/SEC,Returns QL-EEC1/SEC as Quality Level
	QL-SMC 106,Returns QL-SMC 106 as Quality Level
	QL-PROV 108, Returns QL-PROV 108 as Quality Level
	QL-DNU/DUS, Returns QL-DNU/DUS as Quality Level
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLV QLSTUUNK
	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLV?
	Returns: QLSTUUNK
See Also	SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE?

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:QLRate

Description	This command set the QL Rate.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Generation - QL Rate
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:QLRate <wsp><QL Rate>
Parameter(s)	**QL Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Rate of Quality Level/PTP Clock Class
Response Syntax	<QL Value>
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:QLR 1
	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:QLR?
	Returns: 1
See Also	SOURce:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLV

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:QLRate?

Description	This query returns the QL Rate value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Generation - QL Rate
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:QLRate?
Response Syntax	<QL Rate>
Response(s)	**QL Rate**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns ESMC QL Rate
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:QLR 1
	SOUR:DATA:TEL:PACK:SYNC:ESMC:GEN:QLR?
	Returns: 1
See Also	SOURce:DATA:TEL:PACK:SYNC:ESMC:GEN:GEN:QLV?

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:EXPectedql

Description	This command set the Expected QL.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - Expected QL
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:EXPectedql<wsp><Expected QL>
Parameter(s)	**Expected QL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Quality Level/PTP Clock Class
	QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)
	QLSTUUNK: QL-STU/UNK 82 Synchronized
	QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)
	QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)
	QLINV3: QL-INV3 88 Quality Level Invalid 3
	QLSSUATNC: QL-SSU-A/TNC 90 Type I or V slave clock (G.812)
	Traceable to Transit Node Clock (G.812 Type V)
	QLINV5: QL-INV5 92 Quality Level Invalid 5
	QLINV6: QL-INV6 94 Quality Level Invalid 6
	QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)
	QLINV9: QL-INV9 98 Quality Level Invalid 9
	QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)
	QLEEC2ST3: QL-EEC2/ST3 102 Ethernet
	Traceable to Stratum 3 (G.812 Type IV)
	QLEEC1SEC: QL-EEC1/SEC 104 Ethernet
	Synchronous Equipment Clock (G.813 or G.8262, Option 1)
	QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)
	QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)
	QLDNUDUS: QL-DNU/DUS 110 Do Not Use for Synchronization

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:EXPectedql

Response Syntax	<QL Rate>
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:EXP QLSTUUNK
	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:EXP?
	Returns: QLSTUUNK
See Also	SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:QLMismatch

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:EXPectedql?

Description	This query returns the Expected QL.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - Expected QL
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:EXPectedql?
Response Syntax	<Expected QL>
Response(s)	**Expected QL**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Expected QL
	QL-PRS, returns QL-PRS as Quality Level
	QL-STU/UNK, returns QL-STU/UNK as Quality Level
	QL-PRC, returns QL-PRC as Quality Level
	QL-ST2, returns QL-ST2 as Quality Level
	QL-INV3, returns QL-INV3 as Quality Level
	QL-SSU-A/TNC 90, returns QL-SSU-A/TNC as Quality Level
	QL-INV5, returns QL-INV5 as Quality Level
	QL-INV6, returns QL-INV6 as Quality Level
	QL-SSU-B, returns QL-SSU-B as Quality Level
	QL-INV9, returns QL-INV9 as Quality Level
	QL-ST3E, returns QL-ST3E as Quality Level
	QL-EEC2/ST3, returns QL-EEC2/ST3 as Quality Level
	QL-EEC1/SEC, returns QL-EEC1/SEC as Quality Level
	QL-SMC 106, returns QL-SMC 106 as Quality Level
	QL-PROV 108, returns QL-PROV 108 as Quality Level
	QL-DNU/DUS, returns QL-DNU/DUS as Quality Level
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:EXP QLSTUUNK
	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:EXP?
	Returns: QLSTUUNK
See Also	SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:QLMismatch?

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:PASSfail:VERDict

Description	This command enables/disables the Pass/Fail Verdict.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:PASSfail:VERDict <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Expected QL>
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:PASS:VERD ON
	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:PASS:VERD?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLENable

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:PASSfail:VERDict?

Description	This query returns the status of the Pass/Fail Verdict setting.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:PASSfail:VERDict?
Response Syntax	<Verdict Status>
Response(s)	**Verdict Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns Pass/Fail Verdict
	0, Returns Pass/Fail Verdict OFF
	1, Returns Pass/Fail Verdict ON
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:PASS:VERD ON
	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:PASS:VERD?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:GENeration:GENerated:QLENable?

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:QLMismatch

Description	This command enables/disables the QL Mismatch Monitoring.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - QL Mismatch Monitoring
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:QLMismatch <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Verdict Status>
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:QLM ON
See Also	SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:EXPectedql

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:QLMismatch?

Description	This query returns the status of QL Mismatch Monitoring setting.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - QL Mismatch Monitoring
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:QLMismatch?
Response Syntax	<QL Mismatch>
Response(s)	**QL Mismatch**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns QL Mismatch Monitoring
	0, Returns QL Mismatch OFF
	1, Returns QL Mismatch ON
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:QLM ON
	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:QLM?
	Returns: 1
See Also	SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:EXPectedql?

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RATE:THReshold

Description	This command enables/disables the ESMC Rate Threshold.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - ESMC Rate threshold
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RATE:THReshold <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<QL Mismatch>
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:RATE:THR ON
	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:RATE:THR?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:THReshold

:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RATE:THReshold?

Description	This query returns the status of ESMC Rate Threshold setting.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > SyncE > ESMC Monitoring - ESMC Rate threshold
Syntax	:SOURce:DATA:TELecom:PACKetsync:SYNCe:ESMC:MONitoring:RATE:THReshold?
Response Syntax	<Rate Threshold>
Response(s)	**Rate Threshold**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns ESMC Rate Threshold.
	0, returns ESMC Rate Threshold OFF
	1, returns ESMC Rate Threshold ON
Example(s)	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:RATE:THR ON
	SOUR:DATA:TEL:PACK:SYNC:ESMC:MON:RATE:THR?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:THReshold?

Services - Profile

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:PROFile:SERVice:ENABle

Description	This command enables/disables the selected service.
	This command is not associated with any *RST condition.
	Navigation Path: Setup > Test Configurator > Services > Profile > Service - Enable
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:PROFile:SERVice:ENABle <wsp><Service>, <Status>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Bandwidth>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:PROFile:SERVice:ENABle 1, ON
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:TESTs

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:PROFile:SERVice:ENABle?

Description	This query returns the enable/disable status of the selected Service.
	This query is not associated with any *RST condition.
	Navigation Path: Setup > Test Configurator > Services > Profile > Service - Enable
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:PROFile:SERVice:ENABle? <wsp><Service>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:PROFile:SERVice:ENABle 1, ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:PROFile:SERVice:ENABle? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:TESTs?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:EMIX:FRAMesize

Description	This command sets the frame sizes for the selected service.
	This command is not associated with *RST condition.
	Navigation Path: Setup > Test Configurator > Services > Profile > Profile - EMIX > EMIX Frame SIzes
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:EMIX:FRAMesize <wsp><Service>, <EMIX frame>, <Size>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	EMIX frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the EMIX Frame.
	Size:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the EMIX Frame size.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:EMIX:FRAMesize 1, 1, 64
See Also	SOURce:DATA:TEL:ETH:STR:FRAM:SIZE?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:F RASize:EMIX:FRAMesize?

Description	This query returns the frame sizes for the selected service.
	This query is not associated with *RST condition.
	Navigation Path: Setup > Test Configurator > Services > Profile > Profile - EMIX > EMIX Frame Sizes
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:EMIX:FRAMesize? <wsp><Service>, <EMIX frame>,[<Size>]
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	EMIX frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the EMIX Frame.
	Size:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the EMIX Frame size.
	This parameter is optional. If no token is specified, the current EMIX frame size value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<FrameSize>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:F RASize:EMIX:FRAMesize?

Response(s)	**FrameSize**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the frame size of emix frames for selected service.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:EMIX:FRAMesize 1, 1, 64
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:EMIX:FRAMesize? 1, 1
	Returns: 64
See Also	SOURce:DATA:TEL:ETH:STR:FRAM:SIZE

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity

Description	This command sets the quantity of EMIX frame sizes for selected service.
	At *RST condition, the value is set to 2.
	Navigation Path: Setup > Test Configurator > Services > Profile > Profile - EMIX > Quantity
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity <wsp><Service>, <Quantity>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Quantity:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the quantity of frames.
Response Syntax	<FrameSize>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity 1, 5
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:EMIX:FRAMesize

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity?

Description	This query returns the quantity of EMIX frame sizes for selected service.
	At *RST condition, the value is set to 2.
	Navigation Path: Setup > Test Configurator > Services > Profile > Profile - EMIX > Quantity
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity? <wsp><Service>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
Response Syntax	<Quantity>
Response(s)	**Quantity**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the quantity of EMIX frames for selected service.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity 1, 5
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity? 1
	Returns: 5
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:FRASize:EMIX:FRAMesize?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:RESDefault

Description	This command restores the EMIX configuration to default settings for the selected service. This command is not associated with any *RST condition. Navigation Path: Setup > Test Configurator > Services > Profile > Profile - EMIX > Restore Default
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:RESDefault <wsp><Service>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10.
Response Syntax	<Quantity>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:RESDefault 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe

Description	This command sets the CBS and EBS burst sizes for selected service.
	At *RST condition, the value is set to 12144.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - Burst Size
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe <wsp><Service>, <Direction>, <Burst Size Type>, <Size>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Burst Size Type:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the type of Burst.
	CBS
	EBS
	Size:
	The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the burst size.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe

Response Syntax	<Quantity>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe 1, LTOR,cbs,2050
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZE:ENABle

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle

Description	This command enables/disables the CBS and EBS Burst Size for selected service.
	At *RST condition CBS is enabled and EBS is disabled.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - Burst Size
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle <wsp><Service>, <Burst Size Type>, <Status>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Burst Size Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the type of Burst.
	CBS: EBS as the type of Burst.
	Status:
	The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Quantity>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle 1, CBS, ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle? 1, CBS
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:SLAParameter:BSIZE

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle?

Description	This query returns the enable/disable status of CBS and EBS Burst Size for selected service.
	At *RST condition CBS is enabled and EBS is disabled.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - Burst Size
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle? <wsp><Service>, <Burst Size Type>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Burst Size Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the type of Burst.
	CBS
	EBS
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle 1, CBS, ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe:ENABle? 1, CBS
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZE?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe?

Description	This query returns the CBS and EBS burst sizes for selected service.
	At *RST condition, the value is set to 12144.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - Burst Size
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe? <wsp><Service>, <Direction>, <Burst Size Type>,[<Size>]

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe?

Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Direction**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. (For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1) LTORemote: Local to Remote RTOLocal: Remote to Local P1TOP2: P1 -TO-P2 P2TOP1: P2 -TO-P1 **Burst Size Type**: The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the type of Burst. CBS EBS **Size**: The program data syntax for the fourth parameter is defined as a <CHARACTER PROGRAM DATA> element. Sets the burst size. This parameter is optional. If no token is specified, the current burst size value is returned. MAXimum: Biggest supported value MINimum: Smallest supported value DEFault: Default value.
Response Syntax	<Size>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe?

Response(s)	Size:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the burst size for selected burst size type.
	MAXimum, Maximum is selected as the burst size.
	MINimum, Minimum is selected as the burst size.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:BSIZe? 1, LTOR,cbs
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:SLAParameter:BSIZE:ENABle? 1, CBS

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:S LAParameter:INFRate

Description	This command sets the CIR and CIR+EIR for the selected service.
	At *RST condition, the rate is 50%* Line Rate for CIR and 75%*Line Rate for CIR+EIR.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - CIR / CIR+EIR
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate <wsp><Service>, <Information Rate Type>, <Direction>, <Value>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Information Rate Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the information rate for the selected service.
	CIR: CIR (Mbit/s)
	CIREIR: EIR +CIR (Mbit/s)
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Value:
	The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the value of the selected information rate type.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate

Response Syntax	\<Size\>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR 1, CIR,LTOR,50
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate:ENABle

Description	This commands enables/disables the CIR and CIR+EIR for the selected service.
	At *RST condition CIR is enabled and CIR+EIR is disabled.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - CIR / CIR+EIR
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate:ENABle <wsp><Service>, <Information Rate Type>, <Status>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Information Rate Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the information rate for the selected service.
	CIR: CIR.
	CIREIR: EIR
	Status:
	The program data syntax for the third parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Size>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR:ENABle 1, Cir,1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate:ENABle?

Description	This query returns the enable/disable status of CIR and CIR+EIR for the selected service.
	At *RST condition CIR is enabled and CIR+EIR is disabled.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - CIR / CIR+EIR
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate:ENABle? <wsp><Service>, <Information Rate Type>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Information Rate Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the information rate for the selected service.
	CIR: CIR
	CIREIR: EIR
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR:ENABle 1, CIR, 1
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR:ENABle? 1, CIR
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:BURSt:PARameters:BIRFrame

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate?

Description	This query returns the CIR and CIR+EIR for the selected service.
	At *RST condition, the rate is 50%* Line Rate for CIR and 75%*Line Rate for CIR+EIR.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - CIR / CIR+EIR
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate? <wsp><Service>, <Information Rate Type>, <Direction>,[<Value>]

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate?

Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Information Rate Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the information rate for the selected service.
	CIR: CIR (Mbit/s)
	CIREIR: EIR +CIR (Mbit/s)
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Value:
	The program data syntax for the fourth parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the value of the selected information rate.
	This parameter is optional. If no token is specified, the current information rate value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Value>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFRate?

Response(s)	**Value**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the configured value for the selected information rate type.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR 1, CIR, LTOR, 50 SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR? 1, CIR, LTOR Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:BURSt:PARameters:RDERatio

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:S LAParameter:PERCriteria:ENABle

Description	This command enables/diables performance criteria for the selected service.
	At *RST condition, the value is set to enabled for both direction.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - Performance Criteria
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria:ENABle <wsp><Service>, <direction>, <Type>, <Status>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Type:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the performance criteria for the selected service.
	MAXJitter, Max jitter (ms).
	MAXRTLatency, Max Round-Trip latency (ms).
	MAXFLoss, Max frame loss (%).
	Status:
	The program data syntax for the fourth parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria:ENABle

Response Syntax	<Value>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria:ENABle 1, LTOR,MAXJ,1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:RDERatio?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria:ENABle?

Description	This query returns the enable/disable status of performance criteria for the selected service.
	At *RST condition, the value is set to be enabled for both directions.
	Navigation Path: Setup > Test Configurator > Services > Profile > SLA Parameters - Performance Criteria
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria:ENABle? <wsp><Service>, <direction>, <Type>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote

	P2TOP1: P2 -TO-P1
	Type:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the performance criteria for the selected service.
	MAXJitter, Max jitter (ms).
	MAXRTLatency, Max Round-Trip latency (ms).
	MAXFLoss, Max frame loss (%).
	DEFault: Default value:
	The program data syntax for the fourth parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current performance criteria value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Value>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:S LAParameter:PERCriteria:VALue?

Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the configured performance criteria values for the selected service.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria:VALue 1, LTOR,MAXJ,1000
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria:VALUe? 1, LTOR,MAXJ
	Returns: 1000
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:VLAN

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate

Description	This command sets the Burst max rate for selected service. At *RST condition, the value is equal to Line rate. Navigation Path: Setup > Test Configurator > Services > Profile > Test Parameters - Burst Max Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate <wsp><Service>, <Direction>, <Value>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Direction**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. (For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1) LTORemote: Local to Remote RTOLocal: Remote to Local P1TOP2: P1 -TO-P2 P2TOP1: P2 -TO-P1 **Value**: The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the Burst max rate. MAXimum: Biggest supported value MINimum: Smallest supported value DEFault: Default value
Response Syntax	<Value>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate 1, LTOR,65
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:BURSt:PARameters:NOBSequence

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate?

Description	This query returns the Burst max rate for selected service.
	At *RST condition, the value is equal to Line rate.
	Navigation Path: Setup > Test Configurator > Services > Profile > Test Parameters - Burst Max Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate? <wsp><Service>, <Direction>,[<Value>]
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Value:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Burst max rate.
	This parameter is optional. If no token is specified, the current Burst max rate value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Value>

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate?

Response(s)	**Value**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the configured Burst max rate value.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate 1, LTOR,65 SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:BMRate? 1, LTOR Returns: 65

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle

Description	This command enables/disables Traffic policing. At *RST condition, this value is set to Enabled Navigation Path: Setup > Test Configurator > Services > Profile > Test Parameters - Traffic Policing
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle <wsp><Service>, <Status>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Status**: The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element. Enables/disables: ON: Enables OFF: Disables
Response Syntax	<Value>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle 1, ON
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:FRASize:RESDefault

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle?

Description	This query returns the enable/disable status of Traffic policing.
	At *RST condition, this value is set to Enabled
	Navigation Path: Setup > Test Configurator > Services > Profile > Test Parameters - Traffic Policing
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle? <wsp><Service>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
Response Syntax	<status>
Response(s)	**status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle 1, ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:PERCriteria: ENABle

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:VALue

Description	This command sets the Traffic Policing value for the selected service.
	At *RST Condition value is set to 100 (Mbits/s)
	Navigation Path: Setup > Test Configurator > Services > Profile > Test Parameters - Traffic Policing
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:VALue <wsp><Service>, <Direction>, <Traffic Policing Value>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Traffic Policing Value:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets Traffic Policing Value for the selected Service.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:VALue

Response Syntax	<status>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:TPARameter:TRAPolicing:ENABle 1, 1

EtherSAM - Global

:FETCh:DATA:TELecom:ETHernet:ESAM:GLOBal:LATency:ALARm:CURRent?

Description	This query returns LOOPS alarms for One Way Latency Measurement Mode.
	Navigation Path: Test > EtherSAM > Setup > EtherSAM > Global > Global Options
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Global Options - Latency Measurement Mode - LOOPS-L/LOOPS-R
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:GLOBal:LATency:ALARm:CURRent? <wsp><Latency Measurment Mode>
Parameter(s)	**Latency Measurment Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Loss Of 1PPS Alarm type.
	LOPPSL: Loss Of 1PPS Local.
	LOPPSR: Loss Of 1PPS Remote.
Response Syntax	<Alarm Current State.>
Response(s)	**Alarm Current State.**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns theLoss Of 1PPS Alarm Current State.
Example(s)	FETCh:DATA:TEL:ETH:ESAM:GLOBal:LATency:ALARm:CURRent? LOPPSL
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:GLOBal:TDURation:ESTimate?

Description	This query returns the Global test duration estimate.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Subtests - Global Test duration estimation
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:GLOBal:TDURation:ESTimate?
Response Syntax	<Duration>
Response(s)	**Duration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	This query returns the Global test duration estimate
Example(s)	FETC:DATA:TEL:ETH:ESAM:GLOB:TDURation:EST?
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:FLOSs:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:NATDiscovery:LWIPaddress?

Description	This query returns the WAN IP of the local unit.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > EtherSAM > Graphic (WAN IP address)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:NATDiscovery:LWIPaddress?
Response Syntax	<IP Address>
Response(s)	**IP Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Local WAN IP Address
Example(s)	FETC:DATA:TEL:ETH:ESAM:NATD:LWIP?
	Returns the local's WAN IP Address
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:NATDiscovery:LWIPaddress?

:FETCh:DATA:TELecom:ETHernet:ESAM:NATDiscovery:STATus?

Description	This query returns the NAT discovery status.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > EtherSAM > Graphic (NAT discovery status)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:NATDiscovery:STATus?
Response Syntax	<Nat Status>
Response(s)	**Nat Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns NAT discovery status
Example(s)	FETC:DATA:TEL:ETH:ESAM:NATD:STAT?
	Returns the NAT discovery status
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:NATDiscovery:STATus?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview: SCOTest:TYPE

Description	This command enables/disables Ramp/Burst Service Configuration Test.
	At *RST condition the Ramp is enabled and Burst is disabled.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Subtests - Service Configuration Test
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview:SCOTest:TYPE <wsp><Test>, <Enable>
Parameter(s)	**Test**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of Service CONFig Test.
	BURSTTest: Burst test
	RAMPTEST: Ramp test
	Enable:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Service CONFig Test.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Nat Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview:SCOTest:TYPE RAMPTest,OFF
See Also	SOURce[1..n]:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview:SERVice:ENAble

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview: SCOTest:TYPE?

Description	This query returns the enable/disable status of Burst/Ramp Service Configuration Test.
	At *RST condition the Ramp is enabled and Burst is disabled.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Subtests - Service Configuration Test
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview:SCOTest:TYPE? <wsp><Test>
Parameter(s)	**Test**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of Service CONFig Test.
	BURSTTest: Burst test
	RAMPTEST: Ramp test
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Service Configuration Test.
	1 Service Configuration Ramp/Burst Test Enabled
	0 Service Configuration Ramp/Burst Test Disabled
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview:SCOTest:TYPE RAMPTest,ON
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview:SCOTest:TYPE? RAMPTest
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:OVERview:SERVice:ENAble?

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:LMMode

Description	This command sets the Latency measurement mode.
	At *RST condition, the value is set to Round Trip.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Global Options - Latency Measurement Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:LMMode <wsp><Latency Measurement Mode>
Parameter(s)	**Latency Measurement Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Latency measurement mode.
	ONEWay: One Way
	RTLATENCY: Round Trip Latency
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:LMM RTLATENCY
See Also	SOURce:DATA:TELecom:ETHernet:RFC:GLOBal:LMMode?

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:LMMode?

Description	This query returns the Latency measurement mode.
	At *RST condition, the value is Round Trip.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Global Options - Latency Measurement Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:LMMode?
Response Syntax	<Latency measurement mode>
Response(s)	**Latency measurement mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Latency measurement mode.
	ONEWAY, One way is selected as latency mode.
	RTLATENCY, Round Trip Latency is selected as latency mode.
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:LMM RTLATENCY
	SOUR:DATA:TEL:ETH:ESAM:GLOB:LMM?
	Returns: RTLATENCY
See Also	SOURce:DATA:TELecom:ETHernet:RFC:GLOBal:LMMode?

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:PDIRection: CONFig:STATus

Description	This commands eanbles/disables the Per direction configuration.
	At *RST condition value is true.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Global Options - Per direction configuration
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:PDIRection:CONFig:STATus<wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the direction configuration status.
	ON,Enables the per direction status.
	OFF, Disables the per direction status.
Response Syntax	<Latency measurement mode>
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:PDIR:CONF:STAT ON
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:MAXJitter:VERDict?

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:PDIRection: CONFig:STATus?

Description	This query returns the on/off status of Per direction configuration.
	At *RST condition value is true.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Global Options - Per direction configuration
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:PDIRection:CONFig:STATus?
Response Syntax	<Duration>
Response(s)	**Duration**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	This query returns the Global test duration estimate
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:PDIR:CONF:STAT ON
	SOUR:DATA:TEL:ETH:ESAM:GLOB:PDIR:CONF:STAT?
	Returns: 1
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:RTLatency:VERDict?

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:DURation

Description	This commands sets the duration for Service Performance Test.
	At *RST condition value is 10 min.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Subtests - Service Performance Test - Subtest Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:DURation <wsp><Duration>
Parameter(s)	**Duration**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the service performance test Duration in DD:HH:MM:SS
Response Syntax	<Duration>
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:SPRTest:DUR 10D:00:10:00
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:RTLatency?

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:DURation?

Description	This query returns the duration for Service Performance Test.
	At *RST condition value is 10 min.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Subtests - Service Performance Test - Subtest Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:DURation?
Response Syntax	<Duration>
Response(s)	**Duration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	This query returns the Global test duration estimate
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:SPRTest:DUR 10D:00:10:00
	SOUR:DATA:TEL:ETH:ESAM:GLOB:SPRTest:DUR?
	Returns: 10D:00:10:00
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate?

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:ENABled

Description	This commands enables/disables the Service Performance Test.
	At *RST condition value is ON/OFF.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Subtests - Service Performance Test
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Duration>
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:SPRT:ENAB ON
	SOUR:DATA:TEL:ETH:ESAM:GLOB:SPRT:ENAB?
	Returns: 1
See Also	SOUR[1..n]:DATA:TEL:ETH:ESAM:GLOB:SPRTest:DUR

:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:ENABled?

Description	This query returns the on/off status of Service Performance Test.
	At *RST condition value is 10 min.
	Navigation Path: Setup > Test Configurator > EtherSAM > Global > Subtests - Service Performance Test
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:SPRTest:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:ESAM:GLOB:SPRT:ENAB ON
	SOUR:DATA:TEL:ETH:ESAM:GLOB:SPRT:ENAB?
	Returns: 1
See Also	SOUR[1..n]:DATA:TEL:ETH:ESAM:GLOB:SPRTest:DUR?

:SOURce:DATA:TELecom:ETHernet:ESAM:RESTore:DEFault

Description	This command sets the EtherSAM configuration to default settings. Navigation Path: Setup > Test Configurator > EtherSAM > Global > Restore EtherSAM Defaults
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:RESTore:DEFault
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:RESTore:DEFault
See Also	SOURce:DATA:TELecom:OTN:REStore:DEFault SOURce:DATA:TELecom:ETHernet:RFC:RESTore:DEFault SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:RESTore:DEFault SOURce:DATA:TELecom:RESTore:DEFault

EtherSAM - Burst

:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:CBS:TIME?

Description	This query returns CBS Time for selected service and direction.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > CBS Test Time
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:CBS:TIME? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology.
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<CBS Time>
Response(s)	**CBS Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns CBS Time for mentioned Stream and direction
Example(s)	FETC:DATA:TEL:ETH:ESAM:BURSt:CBS:TIME? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:ARXRate?

:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:EBS:TIME?

Description	This query returns EBS Time for selected service and direction.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > EBS Test Time
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:EBS:TIME? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology.
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<EBS Time>
Response(s)	**EBS Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns EBS Time for mentioned Stream and direction
Example(s)	FETC:DATA:TEL:ETH:ESAM:BURSt:EBS:TIME? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:TXRate?

:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:TBURst:TIME?

Description	This query returns Total Burst Time for selected service and direction
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Total Burst Test Time
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:TBURst:TIME? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology.
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Total BURST time>
Response(s)	**Total BURST time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns Total Burst Time for mentioned Stream and direction
Example(s)	FETC:DATA:TEL:ETH:ESAM:BURSt:TBURst:TIME? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:FLOSs?

:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:TOTal?

Description	This query returns the Total values for CBS/EBS/Total Burst Time for selected service.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Total
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:BURSt:TOTal? <wsp><Direction>, <Type>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type pf burst parameter.
	CBS: CBS
	EBS: EBS
	TBURST: Total Burst a
Response Syntax	<BURST>
Response(s)	**BURST**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Total values for CBS/EBS/Total Burst Time for specified service.
Example(s)	FETC:DATA:TEL:ETH:ESAM:BURSt:TOT? LTOR,CBS
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:MAXJitter?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame

Description	This command sets the Burst/IR frame ratio.
	At *RST condition the value is set to 90.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Parameters - Burst/IR Frame Ratio
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame <wsp><Burst IR frame ratio>
Parameter(s)	**Burst IR frame ratio**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Burst/IR frame ratio.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<BURST>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame 20
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR:ENABle ?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame?

Description	This query returns the Burst/IR frame ratio.
	At *RST condition the value is set to 90.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Parameters - Burst/IR Frame Ratio
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame?[<wsp><Burst IR frame ratio>]
Parameter(s)	**Burst IR frame ratio**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Burst/IR frame ratio.
	This parameter is optional. If no token is specified, the current Burst/IR frame ratio value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Burst ir Frame ratio>
Response(s)	**Burst ir Frame ratio**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Burst/IR frame ratio.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame 20
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:BIRFrame?
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:SLAParameter:BSIZE?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence

Description	This command sets the number of Burst sequence.
	At *RST condition the value is set to 2.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Parameters - Number of Burst Sequence
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence <wsp><Number of Burst Sequence>
Parameter(s)	**Number of Burst Sequence**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of Burst sequence.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Burst ir Frame ratio>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence 6
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:VLAN

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence?

Description	This query returns the number of burst sequence.
	At *RST condition the value is set to 2.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Parameters - Number of Burst Sequence
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence?[<wsp><Number of Burst Sequence>]
Parameter(s)	**Number of Burst Sequence**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the number of Burst sequence.
	This parameter is optional. If no token is specified, the current Burst sequence value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Number of burst Sequence>
Response(s)	**Number of burst Sequence**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of Burst sequence.
	MAXimum, returns the Burst sequence as maximum.
	MINimum, returns the Burst sequence as minimum.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:NOBSequence?
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:FRASize:QUANtity

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:RDERatio

Description	This command sets the refill delay ratio.
	At *RST condition the value is set to 50.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Parameters - Refill Delay Ratio
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:RDERatio <wsp><Refil delay Ratio>
Parameter(s)	**Refil delay Ratio**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the refill delay ratio (%).
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Number of burst Sequence>
Example(s)	SOUR:DATA:TEL:ETH:ESAM:CONF:BURS:PAR:RDER 50
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:FRASize:QUANtity?

:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:RDERatio?

Description	This query returns the refill delay ratio.
	At *RST condition the value is set to 50.
	Navigation Path: Setup > Test Configurator > EtherSAM > Burst > Parameters - Refill Delay Ratio
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:RDERatio?[<wsp><Refil delay Ratio>]
Parameter(s)	**Refil delay Ratio**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the refill delay ratio (%).
	This parameter is optional. If no token is specified, the current refill delay ratio value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Refil Delay Ratio>
Response(s)	**Refil Delay Ratio**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the refill delay ratio (%).
	MAXimum, returns the refill delay ratio as maximum.
	MINimum, returns the refill delay ratio as minimum.
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:RDERatio 50
	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:BURSt:PARameters:RDERatio?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:CONFig:SERVices:SLAParameter:INFR:ENABle

EtherSAM - Ramp

:FETCh:DATA:TELecom:ETHernet:ESAM:RAMP:DURation?

Description	This query returns the Ramp duration.
	Navigation Path: Setup > Test Configurator > EtherSAM > Ramp > Ramp Duration
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:RAMP:DURation?
Response Syntax	<RAMP DURATION>
Response(s)	**RAMP DURATION**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Ramp Duration
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:RAMP:DURation?
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:RTLatency?

:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:ADD

Description	This command adds the step value.
	Navigation Path: Setup > Test Configurator > EtherSAM > Ramp > Add Step
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:ADD <wsp><Step Value>
Parameter(s)	**Step Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Step value to add
Response Syntax	<RAMP DURATION>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:ADD 10
See Also	SOURce:DATA:TELecom:ETH:ESAM:GLOB:PDIR:CONF:STAT

:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:DEFault

Description	This command resets steps to default settings.
	Navigation Path: Setup > Test Configurator > EtherSAM > Ramp > Defaults
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:DEFault
Response Syntax	<RAMP DURATION>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:DEFault
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:RESTore:DEFault

:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:DELete

Description	This command deletes the step value.
	Navigation Path: Setup > Test Configurator > EtherSAM > Ramp > Delete Step
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:DELete <wsp><Step Index>
Parameter(s)	**Step Index**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Index of the step to be deleted
Response Syntax	<RAMP DURATION>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:DELete 2
See Also	SOURce:DATA:TELecom:ETH:ESAM:GLOB:PDIR:CONF:STAT?

:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:TIME

Description	This command sets the ramp Step Time.
	Navigation Path: Setup > Test Configurator > EtherSAM > Ramp > Step Time
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:TIME <wsp><Ramp Step Time>
Parameter(s)	**Ramp Step Time**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set Ramp Step Time
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<RAMP DURATION>
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:TIME 7
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:FLOSs?

:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:TIME?

Description	This query returns the ramp Step Time.
	Navigation Path: Setup > Test Configurator > EtherSAM > Ramp > Step Time
Syntax	:SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:TIME?[<wsp><Ramp Step Time>]
Parameter(s)	**Ramp Step Time**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns Ramp Step Time
	This parameter is optional. If no token is specified, the current Ramp Step Time value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<RAMP STEPTIME>
Response(s)	**RAMP STEPTIME**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Ramp Step Time
Example(s)	SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:TIME 7
	SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:TIME?
	Returns: 7
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:MAXJitter?

Fibre Channel

:FETCh:DATA:TELecom:FIBer:PORT:DTOPology?

Description	This query returns the discovered topology for storage network.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Discovered Topology
Syntax	:FETCh:DATA:TELecom:FIBer:PORT:DTOPology?
Response Syntax	<Dtopology>
Response(s)	**Dtopology**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the discovered topology for storage network.
	FABRIC, Fabric is retrieved.
	PTPOINT, Point to Point is retrieved.
Example(s)	SOUR:DATA:TEL:FIB:PORT:LOG:STAT ON
	FETCh:DATA:TEL:FIB:PORT:LOG
	FETC:DATA:TEL:FIB:PORT:DTOP?
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

Description	This query returns the fabric login status for the storage network.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Fabric Status
Syntax	:FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?
Response Syntax	\<Status\>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the fabric login status for the storage network.
	LOGGEDIN, Logged-in is retrieved.
	FAILED, Failed is retrieved.
	INPROGRESS, In progress is retrieved.
	LOGGEDOUT, Logged-out is retrieved.
Example(s)	SOUR:DATA:TEL:FIB:PORT:LOG:STAT ON
	FETCh:DATA:TEL:FIB:PORT:LOG
	FETC:DATA:TEL:FIB:PORT:FLOG:STAT?
See Also	FETCh:DATA:TELecom:FIBer:PORT:PLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:PORT:LOGin

Description	This command sends the login request.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Login
Syntax	:FETCh:DATA:TELecom:FIBer:PORT:LOGin
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FIB:PORT:LOG:STAT ON
	FETCh:DATA:TEL:FIB:PORT:LOG
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:PORT:PLOGin:STATus?

Description	This query returns the port login status for the storage network.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Port Status
Syntax	:FETCh:DATA:TELecom:FIBer:PORT:PLOGin:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the port login status for the storage network.
	LOGGEDIN, Logged-in is retrieved.
	FAILED, Failed is retrieved.
	INPROGRESS, In progress is retrieved.
	LOGGEDOUT, Logged-out is retrieved.
Example(s)	SOUR:DATA:TEL:FIB:PORT:LOG:STAT ON
	FETCh:DATA:TEL:FIB:PORT:LOG
	FETC:DATA:TEL:FIB:PORT:PLOG:STAT?
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:SOURce:DATA:TELecom:FIBer:PORT:ADVertised:BBCRedit

Description	This command sets the advertised Buffer to Buffer (BB) credit during login.
	At *RST, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Advertised BB_Credit
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:ADVertised:BBCRedit <wsp><Bbcredit>
Parameter(s)	**Bbcredit**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the advertised BB credit during login. Choices are 0 through 65535.
	MAXimum: Maximum
	MINimum: Minimum
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FIB:PORT:ADV:BBCR 60
See Also	SOURce:DATA:TELecom:FIBer:PORT:AVAilable:BBCRedit

:SOURce:DATA:TELecom:FIBer:PORT:ADVertised:BBCRedit?

Description	This query returns the advertised Buffer to Buffer (BB) credit during login.
	At *RST, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Advertised BB_Credit
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:ADVertised:BBCRedit?[<wsp><BB Credit>]
Parameter(s)	**BB Credit**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If unspecified, the current value will be returned.
	MAXimum: Maximum
	MINimum: Minimum
Response Syntax	<Bbcredit>
Response(s)	**Bbcredit**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the advertised BB credit during login.
Example(s)	SOUR:DATA:TEL:FIB:PORT:ADV:BBCR 60
	SOUR:DATA:TEL:FIB:PORT:ADV:BBCR?
	Returns: 60
See Also	SOURce:DATA:TELecom:FIBer:PORT:AVAilable:BBCRedit?

:SOURce:DATA:TELecom:FIBer:PORT:AVAilable:BBCRedit

Description	This command sets the number of AvailableBB_Credit.
	At *RST, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Buffer to Buffer Flow Control - Available BB_Credit
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:AVAilable:BBCRedit <wsp><BB Credit>
Parameter(s)	**BB Credit**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of available BB credit. Choices are 0 through 65535.
	MAXimum: Maximum allowed value.
	MINimum: Minimum allowed value.
Response Syntax	<Bbcredit>
Example(s)	SOUR:DATA:TEL:FIB:PORT:AVA:BBCR 25
See Also	SOURce:DATA:TELecom:FIBer:PORT:ADVertised:BBCRedit

:SOURce:DATA:TELecom:FIBer:PORT:AVAilable:BBCRedit?

Description	This query returns the number of available Available BB_Credit.
	At *RST, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Buffer to Buffer Flow Control - Available BB_Credit
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:AVAilable:BBCRedit?[<wsp><BB Credit>]
Parameter(s)	**BB Credit**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If unspecified, the current value is returned.
	MAXimum: Maximum allowed value.
	MINimum: Minimum allowed value.
Response Syntax	<Bbcredit>
Response(s)	**Bbcredit**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of available BB credit.
Example(s)	SOUR:DATA:TEL:FIB:PORT:AVA:BBCR 25
	SOUR:DATA:TEL:FIB:PORT:AVA:BBCR?
	Returns: 25
See Also	SOURce:DATA:TELecom:FIBer:PORT:ADVertised:BBCRedit?

:SOURce:DATA:TELecom:FIBer:PORT:FCONtrol:ENABle

Description	This command enables/disables the buffer to buffer flow control.
	At *RST, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Buffer to Buffer Flow Control - Enable
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:FCONtrol:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Bbcredit>
Example(s)	SOUR:DATA:TEL:FIB:PORT:FCON:ENAB ON
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus

:SOURce:DATA:TELecom:FIBer:PORT:FCONtrol:ENABle?

Description	This query returns the on/off status of buffer to buffer flow control.
	At *RST, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Buffer to Buffer Flow Control - Enable
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:FCONtrol:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FIB:PORT:FCON:ENAB ON
	SOUR:DATA:TEL:FIB:PORT:FCON:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus?

:SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus

Description	This command enables/disables login. At *RST, this value is set to OFF. Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Enable
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus <wsp><Set>
Parameter(s)	**Set**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Enables/disables: ON: Enables OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FIB:PORT:LOG:STAT ON
See Also	SOURce:DATA:TELecom:FIBer:PSP

:SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus?

Description	This query returns the on/off status of login.
	At *RST, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Fibre Channel > Login - Enable
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:LOGin:STATus?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the login status.
Example(s)	SOUR:DATA:TEL:FIB:PORT:LOG:STAT ON
	SOUR:DATA:TEL:FIB:PORT:LOG:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:PSP?

:SOURce:DATA:TELecom:FIBer:PORT:WDEStination

Description	This command sets the destination World Wide Name (WWN) address.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Fibre Channel > World Wide Name (WWN) - Destination
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:WDEStination <wsp><Wdestination>
Parameter(s)	**Wdestination**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the destination World Wide Name (WWN) for storage network.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FIB:PORT:WDES AA-00-00-AA-10-00-00-AA
See Also	SOURce:DATA:TELecom:FIBer:PORT:WSOurce

:SOURce:DATA:TELecom:FIBer:PORT:WDEStination?

Description	This query returns the destination World Wide Name (WWN) address.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Fibre Channel > World Wide Name (WWN) - Destination
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:WDEStination?
Response Syntax	<Wdestination>
Response(s)	**Wdestination**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the destination World Wide Name (WWN) for storage network.
Example(s)	SOUR:DATA:TEL:FIB:PORT:WDES AA-00-00-AA-10-00-00-AA
	SOUR:DATA:TEL:FIB:PORT:WDES?
	Returns: AA-00-00-AA-10-00-00-AA
See Also	SOURce:DATA:TELecom:FIBer:PORT:WSOurce?

:SOURce:DATA:TELecom:FIBer:PORT:WSOurce

Description	This command sets the World Wide Name (WWN) source address.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Fibre Channel > World Wide Name (WWN) - Source
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:WSOurce <wsp><Wsource>
Parameter(s)	**Wsource**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the source World Wide Name (WWN) for storage network.
Response Syntax	<Wdestination>
Example(s)	SOUR:DATA:TEL:FIB:PORT:WSO AA-00-00-AA-10-00-00-12
See Also	SOURce:DATA:TELecom:FIBer:PORT:WDEStination

:SOURce:DATA:TELecom:FIBer:PORT:WSOurce?

Description	This query returns the World Wide Name (WWN) source address.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Fibre Channel > World Wide Name (WWN) - Source
Syntax	:SOURce:DATA:TELecom:FIBer:PORT:WSOurce?
Response Syntax	\<Wsource\>
Response(s)	**Wsource**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA\> element.
	Returns the source World Wide Name (WWN).
Example(s)	SOUR:DATA:TEL:FIB:PORT:WSO AA-00-00-AA-10-00-00-12
	SOUR:DATA:TEL:FIB:PORT:WSO?
	Returns: AA-00-00-AA-10-00-00-12
See Also	SOURce:DATA:TELecom:FIBer:PORT:WDEStination?

Labels

:SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected

Description   This command sets the expected STS/AU Path (C2) of High Order Path (HOP).

At *RST condition, the CONFig is set to a device-dependent value.

Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - STS/AU Path (C2) - Expected

Navigation Path: Results > Traces > Labels - STS/AU Path (C2) - Expected

Syntax   :SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected <wsp><Label>

Parameter(s)   Label:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the expected path signal label.

EQUipped: Equipped non-specific.

FVTMode: Floating VT (Virtual Tributary) mode.

LOCKed: Locked VT (Virtual Tributary) mode.

AMDS3: asynchronous Mapping for DS3.

MDEVelopment: Mapping under Development.

AM140: asynchronous Mapping for 140M (DS4NA).

ATMM: Mapping for ATM.

MDQDb: Mapping for DQDB.

FDDim: asynchronous Mapping for Fiber Distributed Data Interface (FDDI).

MHDLc: Mapping of HDLC (High-Level Data Link Control) over SONET.

SSELf: SDL with self-synchronization scrambler.

MHLaps: Mapping of HDLC (High-Level Data Link Control)/LAPS (Link Access Procedure for SDH).

SSET: Set SDL with use of a set-reset scrambler.

M10ethernet: 10 Gbps ethernet (IEEE 802.3).

GFP: GFP (Generic Framing Procedure).

RHPPp: Reserved [obsolete HDLC (High-Level Data Link Control)/PPP (Point-to-Point Protocol) framed].

TSIGnal: Test signal, ITU-T 0.181 specific mapping.

AMODuk: Async Mapping of ODUK

M10Fc: Mapping 10 Gbits/S FC

:SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected

Response Syntax	\<Value\>
Example(s)	SENS:DATA:TEL:SDHS:HOP:PATH:LAB:EXP EQUIPPED
	SENS:DATA:TEL:SDHS:HOP:PATH:LAB:EXP?
	Returns: EQUIPPED
See Also	SENSe:DATA:TELecom:SDHSonet:HOP:PUNeq?

:SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected ?

Description	This query returns the expected STS/AU Path (C2) of High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - STS/AU Path (C2) - Expected
	Navigation Path: Results > Traces > Labels - STS/AU Path (C2) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected?
Response Syntax	<Label>

:SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected?

Response(s)	**Label**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the expected path signal label. EQUIPPED, Equipped non-specific. FVTMODE, Floating Virtual Tributary (VT) mode. LOCKED, Locked Virtual Tributary (VT) mode. AMDS3, asynchronous Mapping for Digital Signal-level 3 (DS3). MDEVELOPMENT, Mapping under development. AM140, asynchronous Mapping for 140M (DS4NA). ATMM, Mapping for ATM. MDQDB, Mapping for DQDB. FDDIM, asynchronous Mapping for Fiber Distributed Data Interface (FDDI). MHDLC, Mapping of High-Level Data Link Control (HDLC) over SONET. SSELF, SDL with self-synchronization scrambler. MHLAPS, Mapping of High-Level Data Link Control (HDLC)/Link Access Procedure for SDH (LAPS). SSET, Set SDL with use of a set-reset scrambler. M10ETHERNET, 10 Gbps ethernet (IEEE 802.3). GFP, Generic Framing Procedure (GFP). RHPPP, Reserved [obsolete High-Level Data Link Control (HDLC)/Point-to-Point Protocol (PPP) framed]. TSIGNAL, Test signal, ITU-T 0.181 specific mapping. AMODUK, Async Mapping of ODUK M10FC, Mapping 10 Gbits/S FC
Example(s)	SENS:DATA:TEL:SDHS:HOP:PATH:LAB:EXP EQUIPPED SENS:DATA:TEL:SDHS:HOP:PATH:LAB:EXP? Returns: EQUIPPED
See Also	SENSe:DATA:TELecom:SDHSonet:HOP:PUNeq

:SENSe:DATA:TELecom:SDHSonet:HOP:PUNeq

Description	This command enables/disables the PLM-P/UNEQ-P / HP-PLM/HP-UNEQ monitoring.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - PLM-P/UNEQ-P / HP-PLM/HP-UNEQ
	Navigation Path: Results > Labels > Labels - PLM-P/UNEQ-P / HP-PLM/HP-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:PUNeq <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Signal Label Mismatch for the expected message as well as UNEQ-P (Unequipped - Path) monitoring.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Label>
Example(s)	SENS:DATA:TEL:SDHS:HOP:PUN ON
	SENS:DATA:TEL:SDHS:HOP:PUN?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected?

:SENSe:DATA:TELecom:SDHSonet:HOP:PUNeq?

Description	This query returns the on/off status of PLM-P/UNEQ-P / HP-PLM/HP-UNEQ monitoring.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - PLM-P/UNEQ-P / HP-PLM/HP-UNEQ
	Navigation Path: Results > Traces > Labels - PLM-P/UNEQ-P / HP-PLM/HP-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:PUNeq?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Payload Label Mismatch - Path (PLM-P) / Unequipped - Path (UNEQ-P).
	1 - UNEQ-P status is enabled.
	0 - UNEQ-P status is disabled.
Example(s)	SENS:DATA:TEL:SDHS:HOP:PUN ON
	SENS:DATA:TEL:SDHS:HOP:PUN?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:HOP:PATH:LABel:EXPected

:SENSe:DATA:TELecom:SDHSonet:LOP:PATH:LABel:EXPected

Description	This command sets the expected VT/TU Path (V5) of Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - VT/TU Path (V5) - Expected
	Navigation Path: Results > Traces > Labels - VT/TU Path (V5) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:PATH:LABel:EXPected <wsp><Label>
Parameter(s)	**Label**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the path signal label.
	EQUipped: the Equipped non-specific path signal label.
	ASYNchronous: the Asynchronous path signal label.
	BISYnch: the BITS (Bit Synchronous) path signal label.
	BYSYnch: the BYTes (Byte Synchronous) path signal label.
	SIGNal: the extended path Signal.
	TEST: the Test signal, ITU-T 0.181 specific mapping path signal label.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:SDHS:LOP:PATH:LAB:EXP EQU
	SENS:DATA:TEL:SDHS:LOP:PATH:LAB:EXP?
	Returns: EQUIPPED
See Also	SENSe:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel:EXPected?

:SENSe:DATA:TELecom:SDHSonet:LOP:PATH:LABel:EXPected ?

Description	This query returns the expected VT/TU Path (V5) of Low Order Path (LOP).
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - VT/TU Path (V5) - Expected
	Navigation Path: Results > Traces > Labels - VT/TU Path (V5) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:PATH:LABel:EXPected?
Response Syntax	\<Label\>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the path signal label.
	UNEQIPPED, Unequipped path signal label is selected.
	EQUIPPED, Equipped non-specific path signal label is selected.
	ASYNCHRONOUS, Asynchronous path signal label is selected.
	BISYNCH, Bit Synchronous path (BITS) signal label is selected.
	BYSYNCH, Byte Synchronous path signal (BYTES) label is selected.
	SIGNAL, Extended path Signal is selected.
	TEST, Test signal, ITU-T 0.181 specific mapping path signal label is selected.
Example(s)	SENS:DATA:TEL:SDHS:LOP:PATH:LAB:EXP EQU
	SENS:DATA:TEL:SDHS:LOP:PATH:LAB:EXP?
	Returns: EQUIPPED
See Also	SENSe:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel:EXPected

:SENSe:DATA:TELecom:SDHSonet:LOP:PUNeq

Description	This command enables/disables PLM-V/UNEQ-V / LP-PLM/LP-UNEQ monitoring.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - PLM-V/UNEQ-V / LP-PLM/LP-UNEQ
	Navigation Path: Results > Labels > Labels - PLM-V/UNEQ-V / LP-PLM/LP-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:PUNeq <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Signal Label Mismatch for the expected message as well as UNEQ-P (Unequipped - Path) monitoring of Low Order Path (LOP).
	ON: Enabled
	OFF: Disabled
Response Syntax	<Label>
Example(s)	SENS:DATA:TEL:SDHS:LOP:PUN ON
	SENS:DATA:TEL:SDHS:LOP:PUN?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:LOP:PUNeq?

:SENSe:DATA:TELecom:SDHSonet:LOP:PUNeq?

Description	This query returns the on/off status of PLM-V/UNEQ-V / LP-PLM/LP-UNEQ monitoring.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - PLM-V/UNEQ-V / LP-PLM/LP-UNEQ
	Navigation Path: Results > Traces > Labels - PLM-V/UNEQ-V / LP-PLM/LP-UNEQ
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:PUNeq?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Payload Label Mismatch - VT (PLM-V) / Unequipped - VT (UNEQ-V).
Example(s)	SENS:DATA:TEL:SDHS:LOP:PUN ON
	SENS:DATA:TEL:SDHS:LOP:PUN?
	Returns: 1
See Also	SENSe:DATA:TELecom:SDHSonet:LOP:PUNeq

:SENSe:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel:EXPected

Description	This command sets the expected TU Path (C2) of Low Order Path (LOP-TU3).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - TU Path (C2) - Expected
	Navigation Path: Results > Traces > Labels - TU Path (C2) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel:EXPected <wsp><Label>
Parameter(s)	**Label**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the path signal label.
	EQUipped: the Equipped non-specific path signal label.
	GFP: the GFP.
	LOCKed: the LOCKED Locked VT Mode/TU Mode signal label.
	AM140: the Async Mapping of 140M in C-4 signal label.
	ATMM: the ATM Mapping Signal label.
	MDEVelopment: the Mapping under development signal label.
	MDQDb: the Mapping for DQDB signal label.
	AMDS3: the Async Mapping for DS3 label.
	M10Fc: the Mapping 10 Gbit/s FC label.
	FDDim: the Async Mapping for FDDI label.
	MHDLc: the Mapping of HDLC label.
	MHLaps: the Mapping of HDLC/LAPS label.
	AMODuk: the Async Mapping of ODUk label.
	REServed: the RESERVED label.
	RHPPp: the RESERVED label.
	SSELf: the SDL self-synch scrambler label.
	SSET: the SDL set-reset scrambler label.
	M10ethernet: the 10 Gbit/s Ethernet (IEEE 802.3) label.
	TSIGNal: the Test Signal, ITU-T 0.181 label.
	FVTMode: the 02 Floating VT Mode label.
	AISTcm: the AIS (TCM) label.

:SENSe:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel:EXPected

Response Syntax	\<Set\>
Example(s)	SENS:DATA:TEL:SDHS:LOPT:PATH:LAB:EXP EQU
	SENS:DATA:TEL:SDHS:LOPT:PATH:LAB:EXP?
	Returns: EQUIPPED
See Also	SENSe:DATA:TELecom:SDHSonet:LOP:PATH:LABel:EXPected?

:SENSe:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel:EXPected?

Description	This query returns the expected TU Path (C2) of Low Order Path (LOP-TU3).
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - TU Path (C2) - Expected
	Navigation Path: Results > Traces > Labels - TU Path (C2) - Expected
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel:EXPected?
Response Syntax	<Label>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label.
	UNEQIPPED, Unequipped path signal label is selected.
	EQUIPPED, Equipped non-specific path signal label is selected.
	ASYNCHRONOUS, Asynchronous path signal label is selected.
	BISYNCH, Bit Synchronous path (BITS) signal label is selected.
	BYSYNCH, Byte Synchronous path signal (BYTES) label is selected.
	SIGNAL, Extended path Signal is selected.
	TEST, Test signal, ITU-T 0.181 specific mapping path signal label is selected.
Example(s)	SENS:DATA:TEL:SDHS:LOPT:PATH:LAB:EXP EQU
	SENS:DATA:TEL:SDHS:LOPT:PATH:LAB:EXP?
	Returns: EQUIPPED
See Also	SENSe:DATA:TELecom:SDHSonet:LOP:PATH:LABel:EXPected

:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel

Description	This command sets the generated STS/AU Path (C2) of High Order Path (HOP).
	At *RST condition, the CONFig is set to TSIGnal.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - STS/AU Path (C2) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel <wsp><Label>

:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel

Parameter(s)

Label:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the path signal.

UNEQuipped: unequipped

EQUipped: equipped non-specific

FVTMode: floating VT (Virtual Tributary) Mode

LOCKed: locked VT (Virtual Tributary) Mode

AMDS3: asynchronous mapping for DS3 (Digital Signal-level 3)

MDEVelopment: mapping under development

REServed: reserved

AM140: asynchronous mapping for 140M (DS4NA)

ATMM: mapping for ATM

MDQDb: mapping for DQDB

FDDim: asynchronous mapping for FDDI

MHDLc: mapping of HDLC over SONET

SSELf: SDL with self-synchronization scrambler

MHLaps: mapping of HDLC/LAPS

SSET: set SDL with use of a set-reset scrambler

M10ETHERNET: 10 Gbps ethernet (IEEE 802.3)

GFP: Generic Framing Procedure (GFP)

RHPPp: reserved [Obsolete High-Level Data Link Control (HDLC)/Point-to-Point Protocol (PPP) framed]

S1W: the STS-1 w/1 VTx payload defect; S2W: the STS-1 w/2 VTx payload defect;... up to S28W: the STS-1 w/28 VTx payload defect

TSIGnal: the test signal, ITU-T 0.181 specific mapping.

AISTcm: the STS (Synchronous Transport Signal) SPE (Synchronous Payload Envelope) AIS (Alarm Indication Signal) (TCM)

AMODUK: Async Mapping of ODUK

M10FC: Mapping 10 Gbits/S FC

:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel

Response Syntax	\<Label\>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:PATH:LAB EQUIPPED
	SOUR:DATA:TEL:SDHS:HOP:PATH:LAB?
	Returns: EQUIPPED
See Also	SOURce:DATA:TELecom:SDHSonet:OVERhead:J1:PATTern:B16?

:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel?

Description	This query returns the STS/AU Path (C2) of High Order Path (HOP).
	At *RST condition, the CONFig is set to TSIGnal.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - STS/AU Path (C2) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel?
Response Syntax	<Label>

:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel?

Response(s)

Label:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the path signal label selected:

UNEQUIPPED, Unequipped.

EQUIPPED, Equipped non-specific.

FVTMODE, Floating Virtual Tributary (VT) Mode.

LOCKED, Locked Virtual Tributary (VT) Mode.

AMDS3, Asynchronous mapping for Digital Signal-level 3 (DS3).

MDEVELOPMENT, Mapping under development.

RESERVED, Reserved.

AM140, Asynchronous mapping for 140M (DS4NA).

ATMM, Mapping for ATM.

MDQDB, Mapping for DQDB.

FDDIM, Asynchronous mapping for Fiber Distributed Data Interface (FDDI).

MHDLC, Mapping of High-Level Data Link Control (HDLC) over SONET.

SSELF, SDL with self-synchronization scrambler.

MHLAPS, Mapping of High-Level Data Link Control (HDLC)/Link Access Procedure for SDH (LAPS).

SSET, Set SDL with use of a set-reset scrambler.

M10ETHERNET, 10 Gbps ethernet (IEEE 802.3).

GFP, Generic Framing Procedure (GFP).

RHPPP, Reserved [Obsolete High-Level Data Link Control (HDLC)/Point-to-Point Protocol (PPP) framed].

S1W, STS-1 w/1 VTx payload defect.; S2W, STS-1 w/2 VTx payload defect; up to S28W, STS-1 w/28 VTx payload defect.

TSIGNAL, Test signal, ITU-T 0.181 specific mapping path signal label.

AISTCM, Synchronous Transport Signal (STS) Synchronous Payload Envelope (SPE) Alarm Indication Signal (AIS) (TCM) path signal label.

AMODUK, Async Mapping of ODUK

M10FC, Mapping 10 Gbits/S FC

Example(s)

SOUR:DATA:TEL:SDHS:HOP:PATH:LAB EQUIPPED

SOUR:DATA:TEL:SDHS:HOP:PATH:LAB?

Returns: EQUIPPED

:SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel?

See Also   SOURce:DATA:TELecom:SDHSonet:OVERhead:J1:PATTern:B16

:SOURce:DATA:TELecom:SDHSonet:LOP:PATH:LABel

Description	This command sets generated VT/TU Path (V5) of Low Order Path (LOP).
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - VT/TU Path (V5) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:PATH:LABel <wsp><Label>
Parameter(s)	**Label**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the path signal label.
	UNEQuipped: the unequipped path signal label.
	EQUipped: the Equipped non-specific path signal label.
	ASYNchronous: the Asynchronous path signal label.
	BISYnch: the BITS (Bit Synchronous) path signal label.
	BYSYnch: the BYTes (Byte Synchronous) path signal label.
	SIGNal: the extended path Signal.
	TEST: the Test signal, ITU-T 0.181 specific mapping path signal label.
	VTAis: the VT SPE AIS (Alarm Indication Signal) (TCM) path signal label.
Response Syntax	<Label>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:PATH:LAB EQU
	SOUR:DATA:TEL:SDHS:LOP:PATH:LAB?
	Returns: EQUIPPED
See Also	SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel?

:SOURce:DATA:TELecom:SDHSonet:LOP:PATH:LABel?

Description	This query returns the generated VT/TU Path (V5) of Low Order Path (LOP).
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - VT/TU Path (V5) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:PATH:LABel?
Response Syntax	<Label>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label.
	UNEQUIPPED, Unequipped path signal label is selected.
	EQUIPPED, Equipped non-specific path signal label is selected.
	ASYNCHRONOUS, Asynchronous path signal label is selected.
	BISYNCH, Bit Synchronous path (BITS) signal label is selected.
	BYSYNCH, Byte Synchronous path signal (BYTES) label is selected.
	SIGNAL, Extended path Signal is selected.
	TEST, Test signal, ITU-T 0.181 specific mapping path signal label is selected.
	VTAIS, Virtual Tributary (VT) Synchronous Payload Envelope (SPE) Alarm Indication Signal (AIS)(TCM) is selected.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:PATH:LAB EQU
	SOUR:DATA:TEL:SDHS:LOP:PATH:LAB?
	Returns: EQUIPPED
See Also	SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel

:SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel

Description

This command sets the generated TU Path (C2) of Low Order Path (LOP-TU3).

At *RST condition, the configuration is set to a device-dependent value.

Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - TU Path (C2) - Generated

Syntax

:SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel <wsp><Label>

Parameter(s)

Label:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the path signal label.

UNEQuipped: the unequipped path signal label.

EQUipped: the Equipped non-specific path signal label.

GFP: the GFP.

LOCKED: the LOCKED Locked VT Mode/TU Mode signal label.

AM140: the Async Mapping of 140M in C-4 signal label.

ATMM: the ATM Mapping Signal label.

MDEVELOPMENT: the Mapping under development signal label.

MDQDB: the Mapping for DQDB signal label.

AMDS3: the Async Mapping for DS3 label.

M10FC: the Mapping 10 Gbit/s FC label.

FDDIM: the Async Mapping for FDDI label.

MHDLC: the Mapping of HDLC label.

MHLAPS: the Mapping of HDLC/LAPS label.

AMODUK: the Async Mapping of ODUk label.

RESERVED: the RESERVED label.

RHPPP: the RESERVED label.

SSELF: the SDL self-synch scrambler label.

SSET: the SDL set-reset scrambler label.

M10ETHERNET: the 10 Gbit/s Ethernet (IEEE 802.3) label.

TSIGNAL: the Test Signal, ITU-T 0.181 label.

FVTMODE: the 02 Floating VT Mode label.

AISTCM: the AIS (TCM) label.

:SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel

Response Syntax	<Label>
Example(s)	SOUR:DATA:TEL:SDHS:LOPT:PATH:LAB EQU
	SOUR:DATA:TEL:SDHS:LOPT:PATH:LAB?
	Returns: EQUIPPED
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:PATH:LABel?

:SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel?

Description	This query returns the generated TU Path (C2) of Low Order Path (LOP-TU3).
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Setup > Test Configurator > OC/STM > Labels > Labels - TU Path (C2) - Generated
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel?
Response Syntax	<Label>

:SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel?

Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label.
	UNEQuipped, UNEQuipped path signal label is selected.
	EQUipped, EQUipped path signal label is selected.
	GFP, GFPpath signal label is selected.
	LOCKED, LOCKED path signal label is selected.
	AM140, AM140 path signal label is selected.
	ATMM, ATMM path signal label is selected.
	MDEVELOPMENT, MDEVELOPMENT path signal label is selected.
	MDQDB, MDQDB path signal label is selected.
	AMDS3, AMDS3 path signal label is selected.
	M10FC, M10FCpath signal label is selected.
	FDDIM, FDDIM path signal label is selected.
	MHDLC, MHDLC path signal label is selected.
	MHLAPS, MHLAPS path signal label is selected.
	AMODUK, AMODUK path signal label is selected.
	RESERVED, RESERVED path signal label is selected.
	RHPPP, RHPPP path signal label is selected.
	SSELF, SSELFpath signal label is selected.
	SSET, SSET path signal label is selected.
	M10ETHERNET, M10ETHERNET path signal label is selected.
	TSIGNAL, TSIGNAL path signal label is selected.
	FVTMODE, FVTMODE path signal label is selected.
	AISTCM, AISTCM path signal label is selected.
Example(s)	SOUR:DATA:TEL:SDHS:LOPT:PATH:LAB EQU
	SOUR:DATA:TEL:SDHS:LOPT:PATH:LAB?
	Returns: EQUIPPED
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:PATH:LABel

Thresholds (RFC 2544)

:SOURce:DATA:TELecom:ETHernet:REMote:THReshold

Description This command sets the RFC 2544 threshold values.

At *RST condition, this value is set to 100.0.

Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Thresholds

Syntax :SOURce:DATA:TELecom:ETHernet:REMote:THReshold <wsp><Subtest>, <Direction>, <Value>

Parameter(s) **Subtest**:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the subtest:

BTBack: Back-to-Back

FLOSs: Frame Loss

LATency: Latency

THRoughput: Throughput

Direction:

The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the direction:

TX2RX: TX-to-RX (TX2RX) for single port topology.

LTORemote: Local-to-Remote direction.

RTOLocal: Remote-to-Local direction.

P1TOP2: P1-to-P2 for dual port topology.

P2TOP1: P2-to-P1 for dual port topology.

BIDirectional: Bidirectional

Value:

The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Selects the threshold value:

MAXimum: Biggest supported value

MINimum: Smallest supported value

DEFault: Default value

:SOURce:DATA:TELecom:ETHernet:REMote:THReshold

Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:REM:THR THR,LTOR,40
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate?

:SOURce:DATA:TELecom:ETHernet:REMote:THReshold?

Description	This query returns the RFC 2544 threshold values.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Thresholds
Syntax	:SOURce:DATA:TELecom:ETHernet:REMote:THReshold? <wsp><Subtest>, <Direction>,[<Value>]
Parameter(s)	**Subtest**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the subtest:
	BTBack: Back-to-Back
	FLOSs: Frame Loss
	LATency: Latency
	THRoughput: Throughput
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction:
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1-to-P2 for dual port topology.
	P2TOP1: P2-to-P1 for dual port topology.
	BIDirectional: Bidirectional
	Value:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current threshold value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Value>

:SOURce:DATA:TELecom:ETHernet:REMote:THReshold?

Response(s)	Value: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the threshold value.
Example(s)	SOUR:DATA:TEL:ETH:REM:THR THR,LTOR,40 SOUR:DATA:TEL:ETH:REM:THR? THR,LTOR Returns: 40
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate

Network

:FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway :IPVersion:ADDRess:STATus?

Description	This query returns the Default Gateway IPv6 address status for Loopback Tool.
	At *RST condition, this value is device dependent.
	Navigation Path: Lpbk Tool > Network > IP - Default Gateway
Syntax	:FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Default Gateway IPv6 address status.
	UNDEFINED, Undefined is retrieved.
	CHECKING, Checking is retrieved.
	UNREACHABLE, Unreachable is retrieved.
	REACHABLE, Reachable is retrieved.
Example(s)	FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess:STATus?
See Also	FETCh:DATA:TELecom:ETHernet:NETWork:DGATeway:IPV:ADDRess:STATus?

:FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess:STATus?

Description	This query returns the Global IPv6 address status for Loopback Tool.
	At *RST condition, this value is device dependent.
	Navigation Path: Lpbk Tool > Network > IP - Global IPv6 Address
Syntax	:FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Global IPv6 address status.
	TENTATIVE, Tentative is retrieved.
	GENERATING, Generating is retrieved.
	SUCCESSFUL, Successful is retrieved.
	PREFERRED, Preferred is retrieved.
	FAILED, Failed is retrieved.
	CHECKING, Checking is retrieved.
	NDUPLICATE, No Duplication is retrieved.
	DDETECTED, Duplication Detected is retrieved.
	UNDEFINED, Undefined is retrieved.
Example(s)	FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess:STATus?
See Also	FETCh:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess:STATus?

:FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess:STATus?

Description	This query returns the Link-Local IPv6 address status for Loopback Tool.
	At *RST condition, this value is device dependent.
	Navigation Path: Lpbk Tool > Network > IP - Link-Local IPv6 Address
Syntax	:FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Link-Local IPv6 address status.
	TENTATIVE, Tentative is retrieved.
	GENERATING, Generating is retrieved.
	SUCCESSFUL, Successful is retrieved.
	PREFERRED, Preferred is retrieved.
	FAILED, Failed is retrieved.
	CHECKING, Checking is retrieved.
	NDUPLICATE, No Duplication is retrieved.
	DDETECTED, Duplication Detected is retrieved.
	UNDEFINED, Undefined is retrieved.
Example(s)	FETCh:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess:STATus?
See Also	FETCh:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess:STATus?

:SOURce:DATA:TELecom:ETHernet:NETWork:DATalink:TYPE

Description	This command sets the Frame Format.
	At *RST condition, this value is set to ETHernet.
	Navigation Path: Setup > Test Configurator > Interface > Network > MAC - Frame Format
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DATalink:TYPE <wsp><Datalink>
Parameter(s)	**Datalink**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set the type of datalink.
	ETHERNETII: ETHERNETII
	IEEE8023LLCSNAP: 802.3 SNAP
Response Syntax	<Status>
Example(s)	SOURce:DATA:TELecom:ETHernet:NETWork:DATalink:TYPE ETHERNETII
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DATalink?

:SOURce:DATA:TELecom:ETHernet:NETWork:DATalink:TYPE?

Description	This query returns the Frame Format.
	At *RST condition, this value is set to ETHernet.
	Navigation Path: Setup > Test Configurator > Interface > Network > MAC - Frame Format
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DATalink:TYPE?
Response Syntax	<Datalink>
Response(s)	**Datalink**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Frame Format
	ETHERNETII, Returns ETHERNETII as datalink.
	IEEE8023LlcSnap,returns 802.3 SNAP as datalink.
Example(s)	SOURce:DATA:TELecom:ETHernet:NETWork:DATalink:TYPE ETHERNETII
	SOURce:DATA:TELecom:ETHernet:NETWork:DATalink:TYPE?
	Returns: ETHERNETII
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DATalink?

:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:ADDRess

Description	This command sets the Default Gateway address. At *RST condition, this value is set to 0.0.0.0. Navigation Path: Setup > Test Configurator > Interface > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:ADDRess <wsp><address>
Parameter(s)	**address**: The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element. Sets the Default gateway address.
Response Syntax	<Datalink>
Example(s)	SOUR:DATA:TEL:ETH:NETW:DEF:GAT:ADDR 10.192.5.139 SOUR:DATA:TEL:ETH:NETW:DEF:GAT:ADDR? Returns: 10.192.5.139
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK

:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:ADDRess?

Description	This query returns the Default Gateway address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Default gateway address.
Example(s)	SOUR:DATA:TEL:ETH:NETW:DEF:GAT:ADDR 10.192.5.139
	SOUR:DATA:TEL:ETH:NETW:DEF:GAT:ADDR?
	Returns: 10.192.5.139
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:STATus

Description	This command enables/disables Default Gateway.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:STATus <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the Default gateway status for the smart loopback application.
	ON, enables the Default gateway.
	OFF, disables the Default gateway.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:DEF:GAT:STAT ON
	SOUR:DATA:TEL:ETH:NETW:DEF:GAT:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:TRANsparent:MODE:ENABle

:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:STATus?

Description	This query returns the on/off status of Default Gateway.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:STATus?
Response Syntax	<set>
Response(s)	**set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Default Gateway status.
	1, Default gateway is enabled.
	0, Default gateway is disabled.
Example(s)	SOUR:DATA:TEL:ETH:NETW:DEF:GAT:STAT ON
	SOUR:DATA:TEL:ETH:NETW:DEF:GAT:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:TRANsparent:MODE:ENABle?

:SOURce:DATA:TELecom:ETHernet:NETWork:DHCP:STATus

Description	This command enables/disables the Auomatic IP (DHCP).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Automatic IP (DHCP)
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DHCP:STATus <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the DHCP status for the smart loopback application.
	ON, enables the automatic IP.
	OFF, disables the automatic IP.
Response Syntax	<set>
Example(s)	SOUR:DATA:TEL:ETH:NETW:DHCP:STAT ON
	SOUR:DATA:TEL:ETH:NETW:DHCP:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:TRANsparent:MODE:ENABle

:SOURce:DATA:TELecom:ETHernet:NETWork:DHCP:STATus?

Description	This query returns the on/off status of Automatic IP (DHCP).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Automatic IP (DHCP)
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DHCP:STATus?
Response Syntax	\<set\>
Response(s)	**set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the loopback mode status.
	1, automatic IP is enabled.
	0, automatic IP is disabled.
Example(s)	SOUR:DATA:TEL:ETH:NETW:DHCP:STAT ON
	SOUR:DATA:TEL:ETH:NETW:DHCP:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:TRANsparent:MODE:ENABle?

:SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault

Description	This command enables/disables the use of factory default MAC Address.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Setup > Test Configurator > Interface > Network > MAC - Factory Default
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Allows to activate/deactivate the display of a pop-up upon start-up of the module asking to restore the factory settings or not
	ON, activates the display of a pop-up upon start-up of the module asking to restore the factory settings or not
	OFF, deactivates the display of a pop-up upon start-up of the module asking to restore the factory settings or not
Response Syntax	<set>
Example(s)	SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault ON
	SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault?

Description	This query returns the on/off status of Factory Default.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Setup > Test Configurator > Interface > Network > MAC - Factory Default
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Factory Default State
	1, Returns factory default is enable
	0, Returns factory default is disable
Example(s)	SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault ON
	SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:MODE?

:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion: ADDRess

Description	This command sets the Link-Local IPv6 Address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Link-Local IPv6 Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Sets the Local IPv6 Address
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:NETW:IPV IPV6
	SOUR:DATA:TEL:ETH:NETW:LOC:IPV:ADDR FE80:0000:0000:0000:0000:0000:0000:1111
	SOUR:DATA:TEL:ETH:NETW:LOC:IPV:ADDR?
	Returns: FE80:0000:0000:0000:0000:0000:0000:1111
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion: ADDRess?

Description	This query returns the Link-Local IPv6 Address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Link-Local IPv6 Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Link-Local IPv6 Address.
Example(s)	SOUR:DATA:TEL:ETH:NETW:IPV IPV6
	SOUR:DATA:TEL:ETH:NETW:LOC:IPV:ADDR FE80:0000:0000:0000:0000:0000:0000:1111
	SOUR:DATA:TEL:ETH:NETW:LOC:IPV:ADDR?
	Returns: FE80:0000:0000:0000:0000:0000:0000:1111
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:MAC:ADDRess

Description	This command sets the MAC address.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Setup > Test Configurator > Interface > Network > MAC - MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:MAC:ADDRess <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the MAC address.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:MAC:ADDR 00:00:00:00:00:00
	SOUR:DATA:TEL:ETH:NETW:MAC:ADDR?
	Returns: 00:00:00:00:00:00
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK

:SOURce:DATA:TELecom:ETHernet:NETWork:MAC:ADDRess?

Description	This query returns the MAC address.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Setup > Test Configurator > Interface > Network > MAC - MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:MAC:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the MAC address.
Example(s)	SOUR:DATA:TEL:ETH:NETW:MAC:ADDR 00:00:00:00:00:00
	SOUR:DATA:TEL:ETH:NETW:MAC:ADDR?
	Returns: 00:00:00:00:00:00
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK

Description	This command sets the subnet mask.
	At *RST condition, this value is set to 255:255:000:000.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Subnet Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the subnet mask value.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:SUBN:MASK 255.255.000.000
	SOUR:DATA:TEL:ETH:NETW:SUBN:MASK?
	Returns: 255.255.000.000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID

:SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

Description	This query returns the subnet mask value.
	At *RST condition, this value is set to 255:255:000:000.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - Subnet Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the subnet mask value.
Example(s)	SOUR:DATA:TEL:ETH:NETW:SUBN:MASK 255.255.000.000
	SOUR:DATA:TEL:ETH:NETW:SUBN:MASK?
	Returns: 255.255.000.000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID?

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN

Description	This command enables/disables VLAN Tag.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Set the VLAN for the stream.
	ON, enables the VLAN.
	OFF, disables the VLAN.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN ON
	SOUR:DATA:TEL:ETH:NETW:VLAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID

Description	This command sets the VLAN ID.
	At *RST condition, this value is set to 2.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID <wsp><Stacked>, <VLAN ID>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	VLAN ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Virtual Local Area Network (VLAN) ID.
	Choices are 0 to 4095.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:ID 1, 1
	SOUR:DATA:TEL:ETH:NETW:VLAN:ID? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit

Description	This command enables/disables the VLAN Drop Eligible. At *RST condition, this value is set to OFF. Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit <wsp><Stacked>, <Set>
Parameter(s)	**Stacked**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. enables/disables the Virtual Local Area Network (VLAN) ID stacked. **Set**: The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element. enables/disables the eligible bit for the specific VLAN (Virtual Local Area Network) ID (Identification). ON, enables the eligible bit. OFF, disables the eligible bit.
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:ID:ELIG 1, ON SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit? 1 Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGibl ebit?

Description	This query returns the on/off status of VLAN Drop Eligible.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit? <wsp><Stacked>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	enables/disables the Virtual Local Area Network (VLAN) ID stacked.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Virtual Local Area Network (VLAN) ID eligible bit.
	1, eligible bit is enabled.
	0, eligible bit is disabled.
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:ID:ELIG 1, ON
	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE?

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID?

Description	This query returns the VLAN ID.
	At *RST condition, this value is set to 2.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID? <wsp><Stacked>,[<VLAN ID>]
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	VLAN ID:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Virtual Local Area Network (VLAN) ID.
	This parameter is optional. If no token is specified, the current VLAN ID is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Vlanid>
Response(s)	**Vlanid**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Virtual Local Area Network (VLAN) ID.
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:ID 1, 1
	SOUR:DATA:TEL:ETH:NETW:VLAN:ID? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority?

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority

Description	This command sets the VLAN Priority.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - Priority
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority <wsp><Stacked>, <VLAN Priority>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	VLAN Priority:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Virtual Local Area Network (VLAN) priority. Choices are 0 to 7.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Vlanid>
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:PRI 1, 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority?

Description	This query returns the VLAN Priority.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - Priority
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority? <wsp><Stacked>,[<VLAN Priority>]
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	VLAN Priority:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current VLAN priority is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Priority>
Response(s)	**Priority**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Virtual Local Area Network (VLAN) user priority.
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:PRI 1, 1
	SOUR:DATA:TEL:ETH:NETW:VLAN:PRI? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID?

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked

Description	This command sets the number of stacked VLANs.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked <wsp><Stacked>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Priority>
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:STACked 2
	SOUR:DATA:TEL:ETH:NETW:VLAN:STACked?
	Returns: 2
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked?

Description	This query returns the number of stacked VLANs.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked?
Response Syntax	<Stacked>
Response(s)	**Stacked**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the VLAN stacked.
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:STACked 2
	SOUR:DATA:TEL:ETH:NETW:VLAN:STACked?
	Returns: 2
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN?

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE

Description	This command selects the VLAN Type.
	At *RST condition, this value is set to V8100.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - Type
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE <wsp><Stacked>, <Vtype>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
	Vtype:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the VLAN type.
	V8100: VLAN type 8100.
	V88A8: VLAN type 88A8.
	V9100: VLAN type 9100.
	V9200: VLAN type 9200.
	V9300: VLAN type 9300.
Response Syntax	<Stacked>
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:TYPE 1, V8100
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE?

Description	This query returns the VLAN Type.
	At *RST condition, this value is set to V8100.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - Type
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE? <wsp><Stacked>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Vtype>
Response(s)	**Vtype**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type of the VLAN.
	V8100, the VLAN type 8100 is selected.
	V88A8, the VLAN type 88A8 is selected.
	V9100, the VLAN type 9100 is selected.
	V9200, the VLAN type 9200 is selected.
	V9300, the VLAN type 9300 is selected.
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN:TYPE 1, V8100
	SOUR:DATA:TEL:ETH:NETW:VLAN:TYPE? 1
	Returns: V8100
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit?

:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN?

Description	This query returns the on/off status of VLAN Tag.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Interface > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:VLAN?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the status of VLAN type frames.
	1, VLAN is enabled.
	0, VLAN is disabled.
Example(s)	SOUR:DATA:TEL:ETH:NETW:VLAN ON
	SOUR:DATA:TEL:ETH:NETW:VLAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked?

:SOURce:DATA:TELecom:ETHernet:PORT:ADDRess:IP

Description	This command sets the port IPv4 address.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ADDRess:IP <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the IP address in form of string.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:PORT:ADDR:IP 10.1.1.1
	SOUR:DATA:TEL:ETH:PORT:ADDR:IP?
	Returns: 10.1.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:ETHernet:PORT:ADDRess:IP?

Description	This query returns the port IPv4 address.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Setup > Test Configurator > Interface > Network > IP - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:ADDRess:IP?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the IP address in the form of string.
Example(s)	SOUR:DATA:TEL:ETH:PORT:ADDR:IP 10.1.1.1
	SOUR:DATA:TEL:ETH:PORT:ADDR:IP?
	Returns: 10.1.1.1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DATalink: TYPE

Description	This command sets the Frame Format for Loopback Tool.
	At *RST condition, this value is set to ETHernet.
	Navigation Path: Lpbk Tool > Network > MAC - Frame format
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DATalink:TYPE <wsp><Datalink>
Parameter(s)	**Datalink**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set the type of datalink.
	ETHERNETII: EthernetII
	IEEE8023LLCSNAP: 802.3 SNAP
Response Syntax	<Address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DATalink:TYPE ETHERNETII
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DATalink?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DATalink: TYPE?

Description	This returns the frame format selected for Loopback Tool.
	At *RST condition, this value is set to ETHernet.
	Navigation Path: Lpbk Tool > Network > MAC - Frame format
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DATalink:TYPE?
Response Syntax	<Datalink>
Response(s)	**Datalink**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Frame Format
	ETHERNETII, Ethernet II is set as datalink.
	IEEE8023LlcSnap,802.3 SNAP is set as datalink.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DATalink:TYPE ETHERNETII
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DATalink:TYPE?
	Returns: ETHERNETII
See Also	SOURce:DATA:TELecom:ETHernet:STReam:DATalink?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault: GATeway:ADDRess

Description	This command sets the default gateway address for Loopback Tool.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Lpbk Tool > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:ADDRess <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Default gateway address.
Response Syntax	<Datalink>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:ADDRess 10.192.5.139
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:ADDRess

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault: GATeway:ADDRess?

Description	This query returns the default gateway address for Loopback Tool.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Lpbk Tool > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Default gateway address.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:ADDRess 10.192.5.139
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:ADDRess?
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:ADDRess?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:STATus

Description	This command sets the Default gateway status for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:STATus <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the Default gateway status for the smart loopback application.
	ON, enables the Default gateway.
	OFF, disables the Default gateway.
Response Syntax	<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:STATus ON
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:STATus

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault: GATeway:STATus?

Description	This query returns the Default gateway status for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > IP - Default Gateway
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:STATus?
Response Syntax	<set>
Response(s)	**set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Default Gateway status.
	1, Default gateway checkbox is enabled.
	0, Default gateway checkbox disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:STATus ON
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DEFault:GATeway:STATus?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DEFault:GATeway:STATus?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DHCP:STATus

Description	This command sets the DHCP status for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > IP - Automatic IP (DHCP)
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DHCP:STATus <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the DHCP status for the smart loopback application.
	ON, enables the automatic IP.
	OFF, disables the automatic IP.
Response Syntax	<set>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DHCP:STATus ON
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DHCP:STATus

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DHCP:STATus?

Description	This query returns the DHCP status for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > IP - Automatic IP (DHCP)
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DHCP:STATus?
Response Syntax	\<set\>
Response(s)	**set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the loopback mode status.
	1, automatic IP is enabled.
	0, automatic IP is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DHCP:STATus ON
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DHCP:STATus?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DHCP:STATus?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:FACTory: DEFault

Description	This command enables/disables the Factory default for Loopback Tool.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Lpbk Tool > Network > MAC - Factory default
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:FACTory:DEFault <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Factory default.
	ON,Enables Factory default.
	OFF,Disables Factory default.
Response Syntax	<set>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:FACTory:DEFault ON
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:FACTory: DEFault?

Description	This query returns the Factory default state for Loopback Tool.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Lpbk Tool > Network > MAC - Factory default
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:FACTory:DEFault?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Factory Default State
	1,Returns factory default is enable
	0,Returns factory default is disable
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:FACTory:DEFault ON
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:FACTory:DEFault?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:FACTory:DEFault?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:MAC:ADDRess

Description	This command sets the MAC address for Loopback Tool.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Lpbk Tool > Network > MAC - MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:MAC:ADDRess <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the MAC address.
Response Syntax	<Set>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:MAC:ADDRess 00:00:00:00:00:00
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:MAC:ADDRess

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:MAC:ADDRess?

Description	This query returns the MAC address for Loopback Tool.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Navigation Path: Lpbk Tool > Network > MAC - MAC Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:MAC:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the MAC address.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:MAC:ADDRess 00:00:00:00:00:00
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:MAC:ADDRess?
	Returns: 00:00:00:00:00:00
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:MAC:ADDRess?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:SUBNet: MASK

Description	This command sets the subnet mask for Loopback Tool.
	At *RST condition, this value is set to 255:255:000:000.
	Navigation Path: Lpbk Tool > Network > IP - Subnet Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:SUBNet:MASK <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the subnet mask value.
Response Syntax	<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:SUBNet:MASK 255.255.000.000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:SUBNet:MASK?

Description	This query returns the subnet mask value for Loopback Tool.
	At *RST condition, this value is set to 255:255:000:000.
	Navigation Path: Lpbk Tool > Network > IP - Subnet Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:SUBNet:MASK?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the subnet mask value.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:SUBNet:MASK 255.255.000.000
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:SUBNet:MASK?
	Returns: 255.255.000.000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN

Description	This command enables/disables VLAN type for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Set the VLAN for the Smart loopback tool test.
	ON, enables the VLAN.
	OFF, disables the VLAN.
Response Syntax	<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN ON
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID

Description	This command sets the Virtual Local Area Network (VLAN) Identification (ID) for Loopback Tool.
	At *RST condition, this value is set to 2.
	Navigation Path: Lpbk Tool > Network > VLAN - VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID <wsp><Stacked>, <Vlanid>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	Vlanid:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Virtual Local Area Network (VLAN) ID.
	Choices are 0 to 4095.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID 1,1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID: ELIGiblebit

Description	This command enables/disables the Virtual Local Area Network (VLAN) Identification (ID) eligible bit for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > VLAN - Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID:ELIGiblebit <wsp><Stacked>, <Set>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	enables/disables the Virtual Local Area Network (VLAN) ID stacked.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the eligible bit for the specific VLAN (Virtual Local Area Network) ID (Identification).
	ON, enables the eligible bit.
	OFF, disables the eligible bit.
Response Syntax	<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID:ELIGiblebit 1,ON
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID: ELIGiblebit?

Description	This query returns the status of Virtual Local Area Network (VLAN) Identification (ID) eligible bit for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > VLAN - Drop Eligible
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID:ELIGiblebit? <wsp><Stacked>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	enables/disables the Virtual Local Area Network (VLAN) ID stacked.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Virtual Local Area Network (VLAN) ID eligible bit.
	1, eligible bit is enabled.
	0, eligible bit is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID:ELIGiblebit 1,ON
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID:ELIGiblebit? 1
	Returns: ON
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID:ELIGiblebit?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID?

Description	This query returns the Virtual Local Area Network (VLAN) Identification (ID) for Loopback Tool.
	At *RST condition, this value is set to 2.
	Navigation Path: Lpbk Tool > Network > VLAN - VLAN ID
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID? <wsp><Stacked>,[<Vlanid>]
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	Vlanid:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Virtual Local Area Network (VLAN) ID.
	This parameter is optional. If no token is specified, the current VLAN ID will be returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Vlanid>
Response(s)	**Vlanid**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Virtual Local Area Network (VLAN) ID.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID 1,1
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:ID? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:ID?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:PRIority

Description	This command sets the Virtual Local Area Network (VLAN) user priority for Loopback Tool.
	At *RST condition, this value is set to 0.
	Navigation Path: Lpbk Tool > Network > VLAN - Priority
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:PRIority <wsp><Stacked>, <VlanPriority>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	VlanPriority:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Virtual Local Area Network (VLAN) priority. Choices are 0 to 7.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Vlanid>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:PRIority 1,1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:PRIority?

Description	This query returns the Virtual Local Area Network (VLAN) user priority for Loopback Tool.
	At *RST condition, this value is set to 0.
	Navigation Path: Lpbk Tool > Network > VLAN - Priority
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:PRIority? <wsp><Stacked>,[<VlanPriority>]
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the Virtual Local Area Network (VLAN) stacked.
	The value for stacked is set to 1 only.
	VlanPriority:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current VLAN priority will be returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Priority>
Response(s)	**Priority**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Virtual Local Area Network (VLAN) user priority.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:PRIority 1,1
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:PRIority? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:PRIority?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:STACked

Description	This command sets the number of stacked VLAN for Loopback Tool.
	At *RST condition, this value is set to 1.
	Navigation Path: Lpbk Tool > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:STACked <wsp><Stacked>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Priority>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:STACked 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:STACked?

Description	This query returns the number of stacked VLAN for Loopback Tool.
	At *RST condition, this value is set to 1.
	Navigation Path: Lpbk Tool > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:STACked?
Response Syntax	<Stacked>
Response(s)	**Stacked**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the VLAN stacked.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:STACked 1
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:STACked?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:STACked?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:TYPE

Description	This command selects the Virtual Local Area Network (VLAN) Ethernet type for Loopback Tool.
	At *RST condition, this value is set to V8100.
	Navigation Path: Lpbk Tool > Network > VLAN - Type
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:TYPE <wsp><Stacked>, <Vtype>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
	Vtype:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the VLAN type.
	V8100: VLAN type 8100.
	V88A8: VLAN type 88A8.
	V9100: VLAN type 9100.
	V9200: VLAN type 9200.
	V9300: VLAN type 9300.
Response Syntax	<Stacked>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:TYPE 1,V8100
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:TYPE?

Description	This query returns the Virtual Local Area Network (VLAN) Ethernet type for Loopback Tool.
	At *RST condition, this value is set to V8100.
	Navigation Path: Lpbk Tool > Network > VLAN - Type
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:TYPE? <wsp><Stacked>
Parameter(s)	**Stacked**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the VLAN stacked.
Response Syntax	<Vtype>
Response(s)	**Vtype**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type of the VLAN.
	V8100, the VLAN type 8100 is selected.
	V88A8, the VLAN type 88A8 is selected.
	V9100, the VLAN type 9100 is selected.
	V9200, the VLAN type 9200 is selected.
	V9300, the VLAN type 9300 is selected.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:TYPE 1,V8100
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN:TYPE? 1
	Returns: V8100
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN:TYPE?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN?

Description	This query returns the status of VLAN type frames for Loopback Tool.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > VLAN - VLAN Tag
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of VLAN type frames.
	1, VLAN is enabled.
	0, VLAN is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN ON
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:VLAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:VLAN?

:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:ADDRess:IP

Description	This command sets the port IPv4 address for Loopback Tool.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Lpbk Tool > Network > IP - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:ADDRess:IP <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the IP address in form of string.
Response Syntax	<Set>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:ADDRess:IP 125.105.245.145
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:ADDRess:IP?

Description	This query returns the port IPv4 address for Loopback Tool.
	At *RST condition, this value is set to 10.10.0.0.
	Navigation Path: Lpbk Tool > Network > IP - IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:ADDRess:IP?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the IP address in the form of string.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:ADDRess:IP 125.105.245.145
	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:ADDRess:IP?
	Returns: 125.105.245.145
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion

Description	This command selects the IP Version for Loopback Tool.
	At *RST condition, this value is set to IPV4.
	Navigation Path: Lpbk Tool > Network > IP - IP Version
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion \<wsp>\<IP Version>
Parameter(s)	**IP Version**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the IP version for Smart loopback tool test.
	IPV6
	IPV4
Response Syntax	\<Address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion IPV6
See Also	SOURce:DATA:TELecom:ETHernet:PORT:IPVersion

:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion?

Description	This query returns the IP Version for Loopback Tool.
	At *RST condition, this value is set to IPV4.
	Navigation Path: Lpbk Tool > Network > IP - IP Version
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion?
Response Syntax	<IP Version>
Response(s)	**IP Version**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the IP version.
	IPV4,IPv4 is selected as IP Version.
	IPV6,IPv6 is selected as IP Version.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion IPV6
	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion?
	Returns: IPV6
See Also	SOURce:DATA:TELecom:ETHernet:PORT:IPVersion?

Signal Auto-Detect

:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:CODE?

Description	This query returns the detected Line Coding.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect > Line Coding
Syntax	:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:CODE?
Response Syntax	<code>
Response(s)	**code**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value of Line code.
Example(s)	FETC:DATA:TEL:SIGN:AUTO:DET:CODE?
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?

:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:DS[1..n]:FRAMing?

Description	This query returns the detected framing.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect > DS1/DS3 Framing
Syntax	:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:DS[1..n]:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value of DS framing.
Example(s)	FETC:DATA:TEL:SIGN:AUTO:DET:DS1:FRAM?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:PATTern?

Description	This query returns the detected Test Pattern.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect > Test Pattern
Syntax	:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:PATTern?
Response Syntax	\<Maximum Amplitude\>
Response(s)	**Maximum Amplitude**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the Pattern.
Example(s)	FETC:DATA:TEL:SIGN:AUTO:DET:PATT?
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?

:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:STATe?

Description	This query returns the signal auto-detect status message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect > Detecting/Successful/Failed
Syntax	:FETCh:DATA:TELecom:SIGNal:AUTO:DETect:STATe?
Response Syntax	<state>
Response(s)	**state**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the signal auto detection state.
Example(s)	FETC:DATA:TEL:SIGN:AUTO:DET:STAT?
See Also	SENSe:DATA:TELecom:OPTical:RX:POWer:MINimum?

:FETCh:DATA:TELecom:SIGNal:AUTO:DETect?

Description	This query returns the status of start signal auto detection.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect
Syntax	:FETCh:DATA:TELecom:SIGNal:AUTO:DETect?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of signal detection
	0, abort signal detection is disabled,
	1, abort signal detection is enabled
Example(s)	FETC:DATA:TEL:SIGN:AUTO:DET?
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SOURce:DATA:TELecom:SIGNal:AUTO:DETect

Description	This command starts the signal auto detection.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect
Syntax	:SOURce:DATA:TELecom:SIGNal:AUTO:DETect <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SIGN:AUTO:DET ON
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SOURce:DATA:TELecom:SIGNal:AUTO:DETect:ABORt

Description	This command stops the signal auto detection.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect > Abort
Syntax	:SOURce:DATA:TELecom:SIGNal:AUTO:DETect:ABORt <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SIGN:AUTO:DET:ABOR ON
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SOURce:DATA:TELecom:SIGNal:AUTO:DETect:ABORt?

Description	This query returns the on/off status of the abort signal auto detection.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect > Abort
Syntax	:SOURce:DATA:TELecom:SIGNal:AUTO:DETect:ABORt?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of abort signal detection
	0, abort signal detection is disabled,
	1, abort signal detection is enabled
Example(s)	SOUR:DATA:TEL:SIGN:AUTO:DET:ABOR ON
	SOUR:DATA:TEL:SIGN:AUTO:DET:ABOR?
	Returns: 1
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

:SOURce:DATA:TELecom:SIGNal:AUTO:DETect?

Description	This query returns the status of start signal auto detection.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Singal Auto-Detect
Syntax	:SOURce:DATA:TELecom:SIGNal:AUTO:DETect?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of start signal detection
	0, signal detection is disabled,
	1, signal detection is enabled
Example(s)	SOUR:DATA:TEL:SIGN:AUTO:DET ON
	SOUR:DATA:TEL:SIGN:AUTO:DET?
	Returns: 1
See Also	SENSe:DATA:TELecom:OPTical:TX:POWer?

DS1 Loopback

:FETCh:DATA:TELecom:DS[1..n]:LOOP:DOWN?

Description	This command returns the Loop-Down code used for injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Loop-Down
Syntax	:FETCh:DATA:TELecom:DS[1..n]:LOOP:DOWN?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Loopdown values.
Example(s)	FETCh:DATA:TEL:DS1:LOOP:DOWN?
See Also	SOURce:DATA:TELecom:MDIO:READ

:FETCh:DATA:TELecom:DS[1..n]:LOOP:UP?

Description	This command returns the Loop-Up code used for injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Loop-Up
Syntax	:FETCh:DATA:TELecom:DS[1..n]:LOOP:UP?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Loopup values.
Example(s)	FETCh:DATA:TEL:DS1:LOOP:UP?
See Also	SOURce:DATA:TELecom:MDIO:WRITe

:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE

Description	This command selects the Loop Code.
	At *RST condition, this value set to CSU.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Loop Code
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE <wsp><Loopcode>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Loop Code.
	CSU: CSU (10000/100)
	INBANDLOCODE1: Loop Code 1
	INBANDLOCODE2: Loop Code 2
	INBANDLOCODE3: Loop Code 3
	INBANDLOCODE4: Loop Code 4
	INBANDLOCODE5: Loop Code 5
	INBANDLOCODE6: Loop Code 6
	INBANDLOCODE7: Loop Code 7
	INBANDLOCODE8: Loop Code 8
	INBANDLOCODE9: Loop Code 9
	INBANDLOCODE10: Loop Code 10
	NFAC1: NIU FAC1 (1100/1110)
	NFAC2: NIU FAC2 (11000/11100)
	NFAC3: NIU FAC3 (100000/100)
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:DS1:LOOP:CODE FAC1
See Also	SOURce:DATA:TELecom:BACKground:COMPutation

:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE:INJect

Description	This events injects either a Loop-Up or Loop-Down.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Loop-Up/Loop-Down
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE:INJect <wsp><Loopcode>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Loopcode type
	LOOPUP: LOOPUP
	LOOPDOWN: LOOPDOWN
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:DS1:LOOP:CODE:INJect LOOPUP
See Also	SOURce:DATA:TELecom:MDIO:READ

:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE:NAME

Description	This command selects the Loop Code name.
	At *RST condition, this value set to Loop Code
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Modify Loop Codes > Name
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE:NAME <wsp><Loopcode>, <Value>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Loopcode ID
	Range is from 1 To 10.
	Value:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Loopcode value.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:DS1:LOOP:CODE:NAME 1, AAAAA
	SOUR:DATA:TEL:DS1:LOOP:CODE:NAME? 1
	Returns: AAAA
See Also	SOURce:DATA:TELecom:BACKground:COMPutation

:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE:NAME?

Description	This query returns the Loop Code name.
	At *RST condition, this value set to EQUIPPED1.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Modify Loop Codes > Name
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE:NAME? <wsp><Loopcode>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Loopcode ID
	Range is from 1 To 10.
Response Syntax	<Loopcode>
Response(s)	**Loopcode**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Loopcode values
Example(s)	SOUR:DATA:TEL:DS1:LOOP:CODE:NAME 1, AAAAA
	SOUR:DATA:TEL:DS1:LOOP:CODE:NAME? 1
	Returns: AAAA
See Also	SOURce:DATA:TELecom:BACKground:COMPutation?

:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE?

Description	This query returns the Loop Code.
	At *RST condition, this value set to CSU.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Loop Code
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:CODE?
Response Syntax	<Loopcode>
Response(s)	**Loopcode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Loop Code:
	CSU: CSU (10000/100)
	INBANDLOCODE1: Loop Code 1
	INBANDLOCODE2: Loop Code 2
	INBANDLOCODE3: Loop Code 3
	INBANDLOCODE4: Loop Code 4
	INBANDLOCODE5: Loop Code 5
	INBANDLOCODE6: Loop Code 6
	INBANDLOCODE7: Loop Code 7
	INBANDLOCODE8: Loop Code 8
	INBANDLOCODE9: Loop Code 9
	INBANDLOCODE10: Loop Code 10
	NFAC1: NIU FAC1 (1100/1110)
	NFAC2: NIU FAC2 (11000/11100)
	NFAC3: NIU FAC3 (100000/100)
Example(s)	SOUR:DATA:TEL:DS1:LOOP:CODE FAC1
	SOUR:DATA:TEL:DS1:LOOP:CODE?
	Returns: FAC1
See Also	SOURce:DATA:TELecom:BACKground:COMPutation?

:SOURce:DATA:TELecom:DS[1..n]:LOOP:DOWN

Description	This command sets the Loop-Down code.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Modify Loop Codes > Loop-Down
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:DOWN <wsp><Loopcode>, <Loop-Down>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Loopcode Type
	Range for Loopcode is from 1 To 10
	Loop-Down:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Loopdown value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Loopcode>
Example(s)	SOUR:DATA:TEL:DS1:LOOP:DOWN 1,1100
See Also	SOURce:DATA:TELecom:MDIO:READ

:SOURce:DATA:TELecom:DS[1..n]:LOOP:DOWN?

Description	This command returns the Loop-Down code.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Modify Loop Codes > Loop-Down
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:DOWN? <wsp><Loopcode>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Loopcode Type
	Range for Loopcode is from 1 To 10
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Loopdown values.
Example(s)	SOUR:DATA:TEL:DS1:LOOP:DOWN 1,1100
	SOUR:DATA:TEL:DS1:LOOP:DOWN? 1
	Returns: 1100
See Also	SOURce:DATA:TELecom:MDIO:READ

:SOURce:DATA:TELecom:DS[1..n]:LOOP:UP

Description	This command set the Loop-Up code.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Modify Loop Codes > Loop-Up
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:UP <wsp><Loopcode>, <Loop-Up>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Loopcode Type
	Range for Loopcode is from 1 To 10
	Loop-Up:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Loopup value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:DS1:LOOP:UP 1,1100
See Also	SOURce:DATA:TELecom:MDIO:WRITe

:SOURce:DATA:TELecom:DS[1..n]:LOOP:UP?

Description	This query returns the Loop-Up code.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Modify Loop Codes > Loop-Up
Syntax	:SOURce:DATA:TELecom:DS[1..n]:LOOP:UP? <wsp><Loopcode>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Loopcode Type
	Range for Loopcode is from 1 To 10
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Loopup values.
Example(s)	SOUR:DATA:TEL:DS1:LOOP:UP 1,1100
	SOUR:DATA:TEL:DS1:LOOP:UP? 1
	Returns: 1100
See Also	SOURce:DATA:TELecom:MDIO:WRITe

RFC 2544 - Subtests

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy

Description	This command sets the accuracy measurement for Back-to-Back subtest.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Accuracy
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy <wsp><Accuracy>
Parameter(s)	**Accuracy**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects accuracy measurement value in frames. Choices are 1 to 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:ACC 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:ACC?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames?

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy?

Description	This query returns the accuracy measurement for Back-to-Back subtest.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Accuracy
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy?[<wsp><Accuracy>]
Parameter(s)	Accuracy:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current accuracy measurement in frames is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Accuracy>
Response(s)	Accuracy:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the accuracy measurement value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:ACC 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:ACC?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames?

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:AERRors

Description	This command sets the number of acceptable errors for Back-to-Back subtest.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Acceptable Errors
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:AERRors <wsp><Errors>
Parameter(s)	Errors:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the number of acceptable errors. Choices are 0 to 10.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Accuracy>
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:AERR 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:AERR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors?

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:AERRors?

Description	This query returns the number of acceptable errors for Back-to-Back subtest.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Acceptable Errors
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:AERRors?[<wsp><Errors>]
Parameter(s)	Errors:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of acceptable errors for the back-to-back subtest is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Errors>
Response(s)	Errors:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of acceptable errors.
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:AERR 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:AERR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors?

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames

Description	This command sets the burst time for Back-to-Back subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Burst Time
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames[<wsp><Time>]
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the burst time.
Response Syntax	<Errors>
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:MTFR 00:01
	SOUR:DATA:TEL:ETH:RFC:BCKT:MTFR?
	Returns: 00:01
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy?
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames ?

Description	This query returns the burst time for Back-to-Back subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Burst Time
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:MTFRames?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the maximum time worth of frames (Burst Time).
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:MTFR 00:01
	SOUR:DATA:TEL:ETH:RFC:BCKT:MTFR?
	Returns: 00:01
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy?
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:ACCuracy

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:NBURst

Description	This command sets the number of bursts that is generated for Back-to-Back subtest.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Bursts
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:NBURst <wsp><Nburst>
Parameter(s)	**Nburst**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of bursts that is generated for Back-to-Back subtest.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:NBUR 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:NBUR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:NBURst?

Description	This query returns the number of bursts that is generated for Back-to-Back subtest.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Bursts
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:NBURst?[<wsp><Nburst>]
Parameter(s)	**Nburst**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of bursts generated is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Burst>
Response(s)	**Burst**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of bursts.
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:NBUR 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:NBUR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage

Description	This command sets the number of times the Back-to-Back subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage <wsp><Average>
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the number of trials. Choices are 1 to 100.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Burst>
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:TAV 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage?

Description	This query returns the number of times the Back-to-Back subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Back-to-Back - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage?[<wsp><Average>]
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of times the back-to-back subtest is generated is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of trials.
Example(s)	SOUR:DATA:TEL:ETH:RFC:BCKT:TAV 10
	SOUR:DATA:TEL:ETH:RFC:BCKT:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:MAXRate

Description	This command sets the maximum rate for Frame Loss subtest.
	At *RST condition, this value is set to 100.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Max. Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:MAXRate <wsp><Direction>, <Maxrate>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the maximum rate for the Frame Loss test.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Average>
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:MAXR TX2RX,10.00
	SOUR:DATA:TEL:ETH:RFC:FLOS:MAXR? TX2RX
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:MAXRate?

Description	This query returns the maximum rate for Frame Loss subtest.
	At *RST condition, this value is set to 100.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Max. Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:MAXRate? <wsp><Direction>,[<Maxrate>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the maximum rate for the Frame Loss test.
	This parameter is optional. If no token is specified, the current maximum rate for the Frame Loss subtest is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Maxrate>

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:MAXRate?

Response(s)	**Maxrate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum rate for the Frame Loss test.
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:MAXR TX2RX,10.00
	SOUR:DATA:TEL:ETH:RFC:FLOS:MAXR? TX2RX
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage

Description	This command sets the number of times the Frame Loss subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage <wsp><Average>
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of times the Frame Loss test is generated. Choices are 1 to 50.
	MAXimum: Biggest supported number
	MINimum: Smallest supported number
	DEFault: Default value
Response Syntax	<Maxrate>
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:TAV 10
	SOUR:DATA:TEL:ETH:RFC:FLOS:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage?

Description	This query returns the number of times the Frame Loss subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage?[<wsp><Average>]
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the number of times the Frame Loss test is generated. Choices are 1 to 50.
	This parameter is optional. If no token is specified, the current number of times the Frame Loss subtest generated is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of times the Frame Loss test is generated.
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:TAV 10
	SOUR:DATA:TEL:ETH:RFC:FLOS:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:BCKTobck:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TGRanularity

Description	This command sets the granularity for Frame Loss subtest.
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Granularity
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TGRanularity <wsp><Granularity>
Parameter(s)	**Granularity**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the test granularity percentage. Choices are 1 to 10.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Average>
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:TGR 10
	SOUR:DATA:TEL:ETH:RFC:FLOS:TGR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TGRanularity?

Description	This query returns the granularity for Frame Loss subtest.
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Granularity
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TGRanularity?[<wsp><Granularity>]
Parameter(s)	**Granularity**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current percentage of Frame Loss subtest granularity is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Granularity>
Response(s)	**Granularity**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the test granularity percentage.
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:TGR 10
	SOUR:DATA:TEL:ETH:RFC:FLOS:TGR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe

Description	This command sets the trial duration for Frame loss subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Trial Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe <wsp><Time>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the trial duration for the Frame Loss test.
Response Syntax	<Granularity>
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:TTIM 30:00
	SOUR:DATA:TEL:ETH:RFC:FLOS:TTIM?
	Returns: 30:00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe?

:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe?

Description	This query returns the trial duration for the Frame Loss subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Frame Loss - Trial Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the test trial duration value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:FLOS:TTIM 30:00
	SOUR:DATA:TEL:ETH:RFC:FLOS:TTIM?
	Returns: 30:00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe?

:SOURce:DATA:TELecom:ETHernet:RFC:GLOBal:LMMode

Description	This command sets the measurement mode for Latency subtest.
	At *RST condition, the value is set to Round Trip.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Measurement Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:GLOBal:LMMode <wsp><Latency Measurment Mode>
Parameter(s)	**Latency Measurment Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Latency measurement mode.
	ONEWay: One Way.
	RTLATENCY: Round Trip Latency.
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:RFC:GLOB:LMM RTLATENCY
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:LMMode?

:SOURce:DATA:TELecom:ETHernet:RFC:GLOBal:LMMode?

Description	This query returns the measurement mode for Latency subtest.
	At *RST condition, the value is Round Trip.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Measurement Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:GLOBal:LMMode?
Response Syntax	<Latency measurement mode>
Response(s)	**Latency measurement mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Latency measurement mode.
	ONEWAY, One way is selected as latency mode.
	RTLATENCY,Round Trip Latency is selected as latency mode.
Example(s)	SOUR:DATA:TEL:ETH:RFC:GLOB:LMM RTLATENCY
	SOUR:DATA:TEL:ETH:RFC:GLOB:LMM?
	Returns: RTLATENCY
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:GLOBal:LMMode

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:COPYtest

Description	This command enables/disables the Copy From Throughput test to get values from the throughput test results.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Copy From Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:COPYtest <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, enables the copy from the throughput test.
	OFF, disables the copy from the throughput test.
Response Syntax	<Latency measurement mode>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:COPY ON
	SOUR:DATA:TEL:ETH:RFC:LAT:COPY?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:COPYtest?

Description	This query returns the on/off status of the Copy From Throughput test setting.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Copy From Throughput
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:COPYtest?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of copy from the throughput test.
	0, returns the status of copy from the throughput test as OFF.
	1, returns the status of copy from the throughput test as ON.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:COPY ON
	SOUR:DATA:TEL:ETH:RFC:LAT:COPY?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe
	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MARGin

Description	This command sets the maximum rate of each frame size for Latency subtest.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Margin
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MARGin <wsp><Margin>
Parameter(s)	**Margin**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the maximum rate for each frame size.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default value
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:MARG 1
	SOUR:DATA:TEL:ETH:RFC:LAT:MARG?
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MARGin?

Description	This query returns the maximum rate of each frame size for Latency subtest.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Margin
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:MARGin?[<wsp><Margin>]
Parameter(s)	**Margin**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the maximum rate for each frame size.
	This parameter is optional. If no token is specified, the current maximum rate for each frame size is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Percenatge>
Response(s)	**Percenatge**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum rate for each frame size.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:MARG?
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TAVerage

Description	This command sets the number of times the Latency subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TAVerage <wsp><Average>
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of times the latency test is generated.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Percenatge>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:TAV 10
	SOUR:DATA:TEL:ETH:RFC:LAT:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TAVerage?

Description	This query returns the number of times the Latency subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TAVerage?[<wsp><Average>]
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the number of times the latency test is generated.
	This parameter is optional. If no token is specified, the current number of times the latency subtest generated is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of times the latency test is generated.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:TAV 10
	SOUR:DATA:TEL:ETH:RFC:LAT:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage
	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TAVerage?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TTIMe

Description	This command sets the trial duration for Latency subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Trial Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TTIMe <wsp><Time>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the trial duration for the latency test.
Response Syntax	<Average>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:TTIM 01:00
	SOUR:DATA:TEL:ETH:RFC:LAT:TTIM?
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe?

:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TTIMe?

Description	This query returns the trial duration value for the Latency subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Latency - Trial Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LATency:TTIMe?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the trial duration for the latency test.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LAT:TTIM 01:00
	SOUR:DATA:TEL:ETH:RFC:LAT:TTIM?
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FLOSs:TTIMe

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ACCuracy

Description	This command sets the accuracy value for the throughput subtest.
	*RST values are 1.0 for Gbit/s, 1000 for Mbit/s and 1.0 for %.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Accuracy
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ACCuracy <wsp><Accuracy>
Parameter(s)	Accuracy:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the throughput accuracy value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:ACC 10.00
	SOUR:DATA:TEL:ETH:RFC:THR:ACC?
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ACCuracy?

Description	This query returns the accuracy value for the throughput subtest.
	*RST values are 1.0 for Gbit/s, 1000 for Mbit/s and 1.0 for %.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Accuracy
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ACCuracy?[<wsp><Accuracy>]
Parameter(s)	**Accuracy**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current accuracy value for the throughput subtest is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Accuracy>
Response(s)	**Accuracy**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the accuracy measurement value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:ACC 10.00
	SOUR:DATA:TEL:ETH:RFC:THR:ACC?
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate?

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors

Description	This command sets the number of acceptable errors for the throughput subtest.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Acceptable Errors
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors <wsp><Errors>
Parameter(s)	**Errors**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the number of acceptable throughput errors. Choices are 0 to 10.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Accuracy>
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:AERR 10
	SOUR:DATA:TEL:ETH:RFC:THR:AERR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ACCuracy

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors?

Description	This query returns the number of acceptable errors for the throughput subtest.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Acceptable Errors
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors?[<wsp><Errors>]
Parameter(s)	**Errors**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of acceptable errors for the throughput subtest is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Errors>
Response(s)	**Errors**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of acceptable errors for the throughput subtest.
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:AERR 10
	SOUR:DATA:TEL:ETH:RFC:THR:AERR?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:ACCuracy?

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate

Description	This command sets the maximum throughput rate for the throughput subtest.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Max. Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate <wsp><Direction>, <Maxrate>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects maximum throughput rate.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Errors>
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:MAXR TX2RX,10.00
	SOUR:DATA:TEL:ETH:RFC:THR:MAXR? TX2RX
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FSIZe

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate?

Description	This query returns the maximum throughput rate for the throughput subtest.
	At *RST condition, this value is set to 100.0.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Max. Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate? <wsp><Direction>,[<Maxrate>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	BIDirectional: Bidirectional
	Maxrate:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current throughput rate for the throughput subtest is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Maxrate>

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:MAXRate?

Response(s)	**Maxrate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum throughput rate for the test.
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:MAXR TX2RX,10.00
	SOUR:DATA:TEL:ETH:RFC:THR:MAXR? TX2RX
	Returns: 10.00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:FSIZe?

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage

Description	This command sets the number of times the throughput subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage <wsp><Average>
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of throughput trials. Choices are 1 to 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Maxrate>
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:TAV 10
	SOUR:DATA:TEL:ETH:RFC:THR:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage?

Description	This query returns the number of times the throughput subtest is generated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Trials
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage?[<wsp><Average>]
Parameter(s)	**Average**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of times the throughput subtest generated is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of times the throughput test is generated.
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:TAV 10
	SOUR:DATA:TEL:ETH:RFC:THR:TAV?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:AERRors?

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe

Description	This command sets the trial duration for the throughput subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Trial Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe <wsp><Time>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the throughput test time value.
Response Syntax	<Average>
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:TTIM 30:00
	SOUR:DATA:TEL:ETH:RFC:THR:TTIM?
	Returns: 30:00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe?

Description	This query returns the trial duration for the throughput subtest.
	At *RST condition, this value is set to 00:01.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Trial Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TTIMe?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the trial duration for the test.
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:TTIM 30:00
	SOUR:DATA:TEL:ETH:RFC:THR:TTIM?
	Returns: 30:00
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations?

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations

Description	This command sets the number of times the throughput result should be validated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Validations
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations <wsp><Validations>
Parameter(s)	**Validations**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the number of throughput validations. Choices are 1 to 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:VAL 10
	SOUR:DATA:TEL:ETH:RFC:THR:VAL?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage

:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations?

Description	This query returns the number of times the throughput result should be validated.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > RFC 2544 > Subtests > Throughput - Validations
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:VALidations?[<wsp><Validations>]
Parameter(s)	**Validations**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of times the result should be validated is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Validations>
Response(s)	**Validations**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of times the result should be validated.
Example(s)	SOUR:DATA:TEL:ETH:RFC:THR:VAL 10
	SOUR:DATA:TEL:ETH:RFC:THR:VAL?
	Returns: 10
See Also	SOURce:DATA:TELecom:ETHernet:RFC:THRoughput:TAVerage?

TCP Throughput

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:IP:TOSDs

Description	This command sets the Type of Service/Differentiated Services (TOS/DS) value.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > IP TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:IP:TOSDs <wsp><Tosds>
Parameter(s)	**Tosds**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Set the TOSDS value from #H00 to #HFF.
Response Syntax	<Frame Size>
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:CONN:IP:TOSD #HDD
	SOUR:DATA:TEL:ETH:TCP:CONN:IP:TOSD?
	Returns: 221
See Also	SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:INTSize?

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:IP:TOSDs ?

Description	This query returns the Type of Service/Differentiated Services (TOS/DS) value.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > IP TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:IP:TOSDs?
Response Syntax	<TOSDS>
Response(s)	**TOSDS**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TOSDS value.
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:CONN:IP:TOSD #HDD
	SOUR:DATA:TEL:ETH:TCP:CONN:IP:TOSD?
	Returns: 221
See Also	SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:INTSize

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:LIP

Description	This command set accept connection from IP (TCP Mode - Remote)
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > Accept connection From IP
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:LIP <wsp><Adress>
Parameter(s)	**Adress**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Set the Local IP Address.
Response Syntax	<TOSDS>
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE REMOTE
	SOUR:DATA:TEL:ETH:TCP:CONN:LIP 0.0.0.0
	SOUR:DATA:TEL:ETH:TCP:CONN:LIP?
	Returns: 0.0.0.0
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:PORT?

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:LIP?

Description	This query returns the accept connection from IP (TCP Mode - Remote)
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > Accept connection From IP
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:LIP?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Local IP Address
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE REMOTE
	SOUR:DATA:TEL:ETH:TCP:CONN:LIP 0.0.0.0
	SOUR:DATA:TEL:ETH:TCP:CONN:LIP?
	Returns: 0.0.0.0
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:PORT

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:PORT

Description	This command set the TCP Port
	At *RST condition, this value is set to 50201.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > TCP Port
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:PORT <wsp><TCP Port>
Parameter(s)	**TCP Port**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the TCP Port.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:TCP:CONN:PORT 26
	SOUR:DATA:TEL:ETH:TCP:CONN:PORT?
	Returns: 26
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:LIP?

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:PORT?

Description	This query returns the TCP Port
	At *RST condition, this value is set to 50201.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > TCP Port
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:PORT?[<wsp><TCP Port>]
Parameter(s)	**TCP Port**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current TCP Port is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<TCP Port>
Response(s)	**TCP Port**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TCP Port
Example(s)	SOUR:DATA:TEL:ETH:TCP:CONN:PORT 26
	SOUR:DATA:TEL:ETH:TCP:CONN:PORT?
	Returns: 26
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:LIP

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:RIP

Description	This command set the Remote IP Address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > Remote IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:RIP <wsp><Adress>
Parameter(s)	**Adress**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Set the Remote IP Address.
Response Syntax	<TCP Port>
Example(s)	SOUR:DATA:TEL:ETH:TCP:CONN:RIP 0.0.0.0
	SOUR:DATA:TEL:ETH:TCP:CONN:RIP?
	Returns: 0.0.0.0
See Also	SOURce:DATA:TELecom:ETHernet:TCP:MODE?

:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:RIP?

Description	This query returns the Remote IP Address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Connection Configuration > Remote IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:CONNection:RIP?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Remote IP Address.
Example(s)	SOUR:DATA:TEL:ETH:TCP:CONN:RIP 0.0.0.0
	SOUR:DATA:TEL:ETH:TCP:CONN:RIP?
	Returns: 0.0.0.0
See Also	SOURce:DATA:TELecom:ETHernet:TCP:MODE

:SOURce:DATA:TELecom:ETHernet:TCP:INJection:THReshold

Description	This command sets the Throughput Threshold (%)
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Throughput Threshold (%)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:INJection:THReshold <wsp><Throughput Threshold>
Parameter(s)	**Throughput Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the Throughput Threshold(%).
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:INJ:THR 50
	SOUR:DATA:TEL:ETH:TCP:INJ:THR?
	Returns: 50
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:EFFiciency?

:SOURce:DATA:TELecom:ETHernet:TCP:INJection:THReshold?

Description	This query returns the Throughput Threshold (%) At *RST condition, this value is set to #H00. Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Throughput Threshold (%)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:INJection:THReshold?[<wsp><Throughput Threshold>]
Parameter(s)	**Throughput Threshold**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. This parameter is optional. If no token is specified, the currentThroughput Threshold(%) is returned. MAXimum: Biggest supported value MINimum: Smallest supported value
Response Syntax	<Throughput Threshold>
Response(s)	**Throughput Threshold**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the Threshold(%)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC SOUR:DATA:TEL:ETH:TCP:INJ:THR 50 SOUR:DATA:TEL:ETH:TCP:INJ:THR? Returns: 51
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STAT:THRoughput:MAXimum:VERDict?

:SOURce:DATA:TELecom:ETHernet:TCP:MODE

Description	This command set the TCP Mode.
	At *RST condition, this value is set to Local.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set the TCP mode.
	LOCal
	REMote
Response Syntax	<Throughput Threshold>
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:MODE?
	Returns: LOCAL
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:RIP?

:SOURce:DATA:TELecom:ETHernet:TCP:MODE?

Description	This query returns the TCP Mode. At *RST condition, this value is set to Local. Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the TCP Mode. LOCAL | REMOTE
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC SOUR:DATA:TEL:ETH:TCP:MODE? Returns: LOCAL
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:RIP

:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:INTSize

Description	This command sets the Initial Window Size.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Initial Window Size (Kbytes)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:INTSize <wsp><Initial Window Size>
Parameter(s)	**Initial Window Size**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the Initial Window Size in Kbytes.
	Choices are 2 to 65536.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:THR:INTS 20
	SOUR:DATA:TEL:ETH:TCP:THR:INTS?
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:IP:TOSDs?

:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:INTSize?

Description	This query returns the Initial Window Size.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Initial Window Size (Kbytes)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:INTSize?[<wsp><Initial Window Size>]
Parameter(s)	**Initial Window Size**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set the Initial Window Size in Kbytes.
	Choices are 2 to 65536.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Initial Window Size (Kbytes).
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:THR:INTS 20
	SOUR:DATA:TEL:ETH:TCP:THR:INTS?
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:TCP:CONNection:IP:TOSDs?

:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MAXSize

Description	This command sets the Maximum Window Size.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Maximum Window Size (Mbytes)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MAXSize <wsp><Maximum Window Size>
Parameter(s)	**Maximum Window Size**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the Maximum Window Size in Mbytes.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:THR:MAXS 20.20
	SOUR:DATA:TEL:ETH:TCP:THR:MAXS?
	Returns: 20.20
See Also	SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MINSize?

:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MAXSize?

Description	This query returns the Maximum Window Size.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Maximum Window Size (Mbytes)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MAXSize?[<wsp><Maximum Window Size>]
Parameter(s)	**Maximum Window Size**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Maximum Window Size is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Maximum Window Size(Mbytes).
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:THR:MAXS 20.20
	SOUR:DATA:TEL:ETH:TCP:THR:MAXS?
	Returns: 20.20
See Also	SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MINSize

:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MINSize

Description	This command sets the Minimum Window Size.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Minimum Window Size (Kbytes)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MINSize <wsp><Minimum Window Size>
Parameter(s)	**Minimum Window Size**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the Minimum Window Size in Kbytes.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:THR:MINS 20
	SOUR:DATA:TEL:ETH:TCP:THR:MINS?
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MAXSize?

:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MINSize?

Description	This query returns the Minimum Window Size.
	At *RST condition, this value is set to #H00.
	Navigation Path: Setup > Test Configurator > TCP Throughput > TCP Throughput Configuration > Minimum Window Size (Kbytes)
Syntax	:SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MINSize?[<wsp><Minimum Window Size>]
Parameter(s)	**Minimum Window Size**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Minimum Window Size value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Minimum Window Size(Kbytes).
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	SOUR:DATA:TEL:ETH:TCP:THR:MINS 20
	SOUR:DATA:TEL:ETH:TCP:THR:MINS?
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:TCP:THRoughput:MAXSize

:SOURce:DATA:TELecom:RESTore:DEFault

Description	This command restores the values for test to default values for test applications: TCP Throughput, Carrier Ethernet OAM, 1588 PTP, SyncE, CPRI/OBSAI and FlexE BERT.
Syntax	:SOURce:DATA:TELecom:RESTore:DEFault
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:REST:DEF
See Also	SOURce:DATA:TELecom:OTN:REStore:DEFault
	SOURce:DATA:TELecom:ETHernet:ESAM:RESTore:DEFault
	SOURce:DATA:TELecom:ETHernet:RFC:RESTore:DEFault
	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:RESTore:DEFault

Cable Test

:SOURce:DATA:TELecom:CABLetest:LENGth:THReshold

Description	This command sets the Length Threshold for Cable test.
	At *RST condition, this value is set to 100.0
	Navigation Path: Setup > Test Configurator > Cable Test > Pass/Fail Verdict - Length Threshold (m)
Syntax	:SOURce:DATA:TELecom:CABLetest:LENGth:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Length Threshold for Cable test.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:CABL:LENG:THReshold 120
	SOUR:DATA:TEL:CABL:LENG:THReshold?
	Returns: 120
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec?

:SOURce:DATA:TELecom:CABLetest:LENGth:THReshold?

Description	This query returns the Length Threshold for Cable test.
	At *RST condition, this value is set to 100.0
	Navigation Path: Setup > Test Configurator > Cable Test > Pass/Fail Verdict - Length Threshold (m)
Syntax	:SOURce:DATA:TELecom:CABLetest:LENGth:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current no defect time without any defects is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Length>
Response(s)	**Length**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the length threshuld value for Cabletest.
Example(s)	SOUR:DATA:TEL:CABL:LENG:THReshold 120
	SOUR:DATA:TEL:CABL:LENG:THReshold?
	Returns: 120
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:OPSPec

:SOURce:DATA:TELecom:CABLetest:PROPdelay:THReshold

Description	This command sets the Prop. Delay Threshold for Cable test.
	At *RST condition, this value is set to 556 ns
	Navigation Path: Setup > Test Configurator > Cable Test > Pass/Fail Verdict - Prop. Delay Threshold(ns)
Syntax	:SOURce:DATA:TELecom:CABLetest:PROPdelay:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Prop. Delay Value for Cable test.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Length>
Example(s)	SOUR:DATA:TEL:CABL:PROP:THR 10
	SOUR:DATA:TEL:CABL:PROP:THR?
	Returns: 10
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE?

:SOURce:DATA:TELecom:CABLetest:PROPdelay:THReshold?

Description	This query returns the Prop. Delay Threshold for Cable test.
	At *RST condition, this value is set to 556 ns
	Navigation Path: Setup > Test Configurator > Cable Test > Pass/Fail Verdict - Prop. Delay Threshold(ns)
Syntax	:SOURce:DATA:TELecom:CABLetest:PROPdelay:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Prop. Delay Threshold is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Delay>
Response(s)	**Delay**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Prop. Delay for Cable test.
	MAXimum is used to retrieve the instruments greatest supported value for Prop. Delay
	MINimum is used to retrieve the instruments smallest supported value for Prop. Delay
Example(s)	SOUR:DATA:TEL:CABL:PROP:THR 10
	SOUR:DATA:TEL:CABL:PROP:THR?
	Returns: 10
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE

:SOURce:DATA:TELecom:CABLetest:REStore:THReshold:DEFault

Description	This command resets the Cable Test to factory default settings.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > Cable Test > Restore Cable Test Defauts
Syntax	:SOURce:DATA:TELecom:CABLetest:REStore:THReshold:DEFault
Response Syntax	<Delay>
Example(s)	SOUR:DATA:TEL:CABL:RESTore:THReshold:DEFault
See Also	FETCh:DATA:TELecom:SDHS:ADV:APS:K[1..n]:BREQ?

:SOURce:DATA:TELecom:CABLetest:SKEW:THReshold

Description	This command sets the Delay Skew Threshold for Cable test.
	At *RST condition, this value is device dependent
	Navigation Path: Setup > Test Configurator > Cable Test > Pass/Fail Verdict - Delay Skew Threshold (ns)
Syntax	:SOURce:DATA:TELecom:CABLetest:SKEW:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Skew Threshold for Cable test.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Delay>
Example(s)	SOUR:DATA:TEL:CABL:SKEW:THR 10
	SOUR:DATA:TEL:CABL:SKEW:THR?
	Returns: 10
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier?

:SOURce:DATA:TELecom:CABLetest:SKEW:THReshold?

Description	This query returns the Delay Skew Threshold for Cable test.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Cable Test > Pass/Fail Verdict - Delay Skew Threshold (ns)
Syntax	:SOURce:DATA:TELecom:CABLetest:SKEW:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Delay Skew Threshold is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Skew>
Response(s)	**Skew**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Skew Threshold value for Cable test.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Example(s)	SOUR:DATA:TEL:CABL:SKEW:THR 10
	SOUR:DATA:TEL:CABL:SKEW:THR?
	Returns: 10
See Also	SOURce:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier

:SOURce:DATA:TELecom:CABLetest:WIRestandard

Description	This command sets the wiring standards for Cable test.
	At *RST condition, this value is set to T568A.
	Navigation Path: Setup > Test Configurator > Cable Test > Global Options - Wiring Standards
Syntax	:SOURce:DATA:TELecom:CABLetest:WIRestandard <wsp><WIREstandard>
Parameter(s)	**WIREstandard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Wire Standard for the Cable test.
	T568A
	T568B
Response Syntax	<Skew>
Example(s)	SOUR:DATA:TEL:CABL:WIR T568A
	SOUR:DATA:TEL:CABL:WIR?
	Returns: T568A
See Also	SOUR:DATA:TEL:CABL:RESTore:THReshold:DEFault

:SOURce:DATA:TELecom:CABLetest:WIRestandard?

Description	This query returns the wiring standards for Cable test.
	At *RST condition, this value is set to T568A.
	Navigation Path: Setup > Test Configurator > Cable Test > Global Options - Wiring Standards
Syntax	:SOURce:DATA:TELecom:CABLetest:WIRestandard?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Wire Standard for the Cable test.
	T568A, T568A is return as Wire Standard.
	T568B, T568B is return as Wire Standard.
Example(s)	SOUR:DATA:TEL:CABL:WIR T568A
	SOUR:DATA:TEL:CABL:WIR?
	Returns: T568A
See Also	SOURce:DATA:TELecom:OTN:FRAMing?

IPv6 Address Configuration

:FETCh:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess:STATus?

Description	This query returns the port Default Gateway IPv6 address status.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Default Gateway
Syntax	:FETCh:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Default Gateway IPv6 address status.
	UNDEFINED, Undefined is retrieved.
	CHECKING, Checking is retrieved.
	UNREACHABLE, Unreachable is retrieved.
	REACHABLE, Reachable is retrieved.
Example(s)	FETC:DATA:TEL:ETH:NETW:DGAT:IPV:ADDR:STAT?
See Also	FETCh:DATA:TELecom:ETHernet:PORT:LOCal:IPV:STATus?

:FETCh:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion: ADDRess:STATus?

Description	This query returns the port Global IPv6 address status.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address
Syntax	:FETCh:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Global IPv6 address status.
	TENTATIVE, Tentative is retrieved.
	GENERATING, Generating is retrieved.
	SUCCESSFUL, Successful is retrieved.
	PREFERRED, Preferred is retrieved.
	FAILED, Failed is retrieved.
	CHECKING, Checking is retrieved.
	NDUPLICATE, No Duplication is retrieved.
	DDETECTED, Duplication Detected is retrieved.
	UNDEFINED, Undefined is retrieved.
Example(s)	FETC:DATA:TEL:ETH:NETW:GLOB:IPV:ADDR:STAT?
See Also	FETCH:DATA:TELecom:ETHernet:PORT:LOCal:IPV:STATus?

:FETCh:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess:STATus?

Description	This query returns the port Link-Local IPv6 address status.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Link-Local IPv6 Address
Syntax	:FETCh:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Link-Local IPv6 address status.
	TENTATIVE, Tentative is retrieved.
	GENERATING, Generating is retrieved.
	SUCCESSFUL, Successful is retrieved.
	PREFERRED, Preferred is retrieved.
	FAILED, Failed is retrieved.
	CHECKING, Checking is retrieved.
	NDUPLICATE, No Duplication is retrieved.
	DDETECTED, Duplication Detected is retrieved.
	UNDEFINED, Undefined is retrieved.
Example(s)	FETC:DATA:TEL:ETH:NETW:LOC:IPV:ADDR:STAT?
See Also	FETCh:DATA:TELecom:ETHernet:PORT:GLOBal:IPV:STATus?

:FETCh:DATA:TELecom:ETHernet:STReam:DGATeway:IPVersion:ADDRess:STATus?

Description	This query returns the Default Gateway IPv6 address Status.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Default Gateway - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Default Gateway - Address
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DGATeway:IPVersion:ADDRess:STATus? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Default Gateway IPv6 address status.
	UNDEFINED, Undefined is retrieved.
	CHECKING, Checking is retrieved.
	UNREACHABLE, Unreachable is retrieved.
	REACHABLE, Reachable is retrieved.
Example(s)	FETC:DATA:TEL:ETH:STR:DGAT:IPV:ADDR:STAT? 1
See Also	FETCh:DATA:TELecom:ETHernet:PORT:LOCal:IPV:STATus?

:FETCh:DATA:TELecom:ETHernet:STReam:GLOBal:IPVersion: ADDRess:STATus?

Description	This query returns the Global IPv6 address status.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Address
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:GLOBal:IPVersion:ADDRess:STATus? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Global IPv6 address status.
	TENTATIVE, Tentative is retrieved.
	GENERATING, Generating is retrieved.
	SUCCESSFUL, Successful is retrieved.
	PREFERRED, Preferred is retrieved.
	FAILED, Failed is retrieved.
	CHECKING, Checking is retrieved.
	NDUPLICATE, No Duplication is retrieved.
	DDETECTED, Duplication Detected is retrieved.
	UNDEFINED, Undefined is retrieved.
Example(s)	FETC:DATA:TEL:ETH:STR:GLOB:IPV:ADDR:STAT? 1
See Also	FETCH:DATA:TELecom:ETHernet:PORT:LOCal:IPV:STATus?

:FETCh:DATA:TELecom:ETHernet:STReam:LOCal:IPVersion:ADDRess:STATus?

Description	This query returns the Link-Local IPv6 address status.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Address
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:LOCal:IPVersion:ADDRess:STATus? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Link-Local IPv6 address status.
	TENTATIVE, Tentative is retrieved.
	GENERATING, Generating is retrieved.
	SUCCESSFUL, Successful is retrieved.
	PREFERRED, Preferred is retrieved.
	FAILED, Failed is retrieved.
	CHECKING, Checking is retrieved.
	NDUPLICATE, No Duplication is retrieved.
	DDETECTED, Duplication Detected is retrieved.
	UNDEFINED, Undefined is retrieved.
Example(s)	FETC:DATA:TEL:ETH:STR:LOC:IPV:ADDR:STAT? 1
See Also	FETCH:DATA:TELecom:ETHernet:PORT:GLOBal:IPV:STATus?

:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess

Description	This command sets the port Default Gateway IPv6 address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Default Gateway - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Default Gateway IPv6 Address.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:MODE STATIC
	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:ADDR FE80:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:ADDR?
	Returns: FE80:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETW:DGATeway:IPV:ADDRess
	SOURce:DATA:TELecom:ETHernet:NETW:DGATeway:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess?

Description	This query returns the port Default Gateway IPv6 address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Default Gateway - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Default Gateway IPv6 Address.
Example(s)	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:MODE STATIC
	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:ADDR FE80:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:ADDR?
	Returns: FE80:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETW:DGATeway:IPV:MODE?

:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:MODE

Description	This command selects the port Default Gateway IPv6 Mode.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Default Gateway - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Default Gateway IPv6 Address mode.
	AUTomatic: Automatic
	STATic: Static
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:MODE AUT
	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:MODE?
	Returns: AUTOMATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETW:DGATeway:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:MODE?

Description	This query returns the port Default Gateway IPv6 Mode.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Default Gateway - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Default Gateway IPv6 Address Mode.
	AUTOMATIC, Automatic is selected as default gateway address mode.
	MANUAL, Manual is selected as default gateway address mode.
Example(s)	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:MODE AUT
	SOUR:DATA:TEL:ETH:NETW:DGAT:IPV:MODE?
	Returns: AUTOMATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETW:DGATeway:IPV:ADDRess?
	SOURce:DATA:TELecom:ETHernet:NETW:DGATeway:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess

Description	This command sets the port Global IPv6 Address.
	At *RST condition, this value is set to 2001:0000:0000:0000.0000:0000:0000.1111.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess <wsp><address>
Parameter(s)	**address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Sets the Global IPv6 Address
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:IIC OFF
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:ADDR 2001:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:ADDR?
	Returns: 2001:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess?

Description	This query returns the port Global IPv6 Address.
	At *RST condition, this value is set to 2001:0000:0000:0000.0000:0000:0000.1111.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Global IPv6 Address.
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:IIC OFF
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:ADDR 2001:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:ADDR?
	Returns: 2001:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:IICoupled

Description	This command enables/disables the port Interface ID Coupled of the Global IPv6 address.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Interface ID Coupled
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:IICoupled <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the Interface ID of the Global IPv6 address.
	ON,Enables Interface ID Coupled
	OFF,Disables Interface ID Coupled
Response Syntax	<address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:IIC OFF
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:IIC?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:ADDRess?
	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:MODE
	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:IICoupled

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:IICoupled?

Description	This query returns the status of the port Interface ID Coupled of the Global IPv6 address.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Interface ID Coupled
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:IICoupled?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Interface ID of the Global IPv6 address.
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:IIC OFF
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:IIC?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:ADDRess
	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:MODE
	SOURce:DATA:TELecom:ETHernet:NETW:GLOB:IPV:IICoupled

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:MODE

Description	This command selects the port Global IPv6 Mode.
	At *RST condition, this value is set to NONE.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Global IPv6 Mode.
	SAUTo,sets mode to stateless Auto
	STATic,Sets mode to static
	NONE, Sets mode to None
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE?
	Returns: STATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:MODE?

Description	This query returns the port Global IPv6 Mode.
	At *RST condition, this value is set to NONE.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Global IPv6 mode.
	NONE, No Global IPv6 mode is selected.
	STATIC, Static is selected as Global IPv6 mode.
	SAUTo, Stateless Auto. (SAUTo) is selected as Global IPv6 mode.
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE?
	Returns: STATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:PMASk

Description	This command sets the port Global IPv6 Address Prefix Mask.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Prefix Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:PMASk <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Global IPv6 Address Prefix Mask.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:PMAS FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:PMAS?
	Returns: FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETW:LOCal:IPV:MODE?

:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:PMASk?

Description	This query returns the port Global IPv6 Address Prefix Mask.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Global IPv6 Address - Prefix Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:PMASk?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Global IPv6 Address Prefix Mask.
Example(s)	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:PMAS FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:NETW:GLOB:IPV:PMAS?
	Returns: FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETW:LOCal:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion: MODE

Description	This command selects the port Link-Local IPv6 Mode.
	At *RST condition, this value is set to STATic.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Link-Local IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Local IPv6 Mode.
	SAUTo,sets mode to stateless Auto
	STATic,Sets mode to static
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:NETW:LOC:IPV:MODE STAT
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion: MODE?

Description	This query returns the port Link-Local IPv6 Mode.
	At *RST condition, this value is set to STATic.
	Navigation Path: Test > Test Configurator > Interface > Network > Config > Link-Local IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Link-Local IPv6 mode.
	STATic, Static is selected as Link-Local IPv6 mode.
	SAUTo, Stateless Auto. (SAUTo) is selected as Link-Local IPv6 mode.
Example(s)	SOUR:DATA:TEL:ETH:NETW:LOC:IPV:MODE STAT
	SOUR:DATA:TEL:ETH:NETW:LOC:IPV:MODE?
	Returns: STATic
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:SUBNet:MASK?

:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:ADDRess

Description	This command sets the IPv6 Default Gateway Address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Default Gateway - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Default Gateway - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:ADDRess <wsp><Stream>, <Address>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Default Gateway IPv6 Address.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:ADDR 1, FE80:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:ADDR? 1
	Returns: FE80:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPV:ADDRess
	SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:ADDRess?

Description	This query returns the IPv6 Default Gateway Address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Default Gateway - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Default Gateway - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:ADDRess? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Default Gateway IPv6 Address.
Example(s)	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:ADDR 1, FE80:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:ADDR? 1
	Returns: FE80:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPV:MODE?

:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:MODE

Description	This command selects the Default Gateway IPv6 Address Mode.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Default Gateway - Mode
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Default Gateway - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:MODE <wsp><Stream>, <Mode>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Mode:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Default Gateway IPv6 Address mode.
	AUTomatic: Automatic
	STATic: Static
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:MODE 1, AUT
	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:MODE? 1
	Returns: AUTOMATIC
See Also	SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:MODE?

Description	This query returns the Default Gateway IPv6 Address Mode.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Default Gateway - Mode
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Default Gateway - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPVersion:MODE? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Default Gateway IPv6 Address Mode.
	AUTOMATIC, Automatic is selected as default gateway address mode.
	MANUAL, Manual is selected as default gateway address mode.
Example(s)	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:MODE 1, AUT
	SOUR:DATA:TEL:ETH:PORT:DGAT:IPV:MODE? 1
	Returns: AUTOMATIC
See Also	SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPV:ADDRess?
	SOURce:DATA:TELecom:ETHernet:PORT:DGATeway:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:ADDRess

Description	This command sets the Global IPv6 Address.
	At *RST condition, this value is set to 2001:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:ADDRess <wsp><Stream>, <Address>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Global IPv6 Address.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:IIC 1, OFF
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:ADDR 1, 2001:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:ADDR? 1
	Returns: 2001:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:PORT:IPVersion?

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:ADDRess?

Description	This query returns the Global IPv6 Address.
	At *RST condition, this value is set to 2001:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:ADDRess? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Global IPv6 Address.
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:IIC 1, OFF
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:ADDR 1, 2001:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:ADDR? 1
	Returns: 2001:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:PORT:IPVersion

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:II Coupled

Description	This command enables/disables the Interface ID Coupled of the Global IPv6 address.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Interface ID Coupled
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Interface ID Coupled
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:IICoupled <wsp><Stream>, <Set>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, enables the Interface ID of the Global IPv6 address.
	OFF, disables the Interface ID of the Global IPv6 address.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:IIC 1, OFF
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:IIC? 1
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPV:IICoupled

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:II Coupled?

Description	This query returns the status of Interface ID Coupled of the Global IPv6 address.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Interface ID Coupled
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Interface ID Coupled
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:IICoupled? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Interface ID of the Global IPv6 address.
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:IIC 1, OFF
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:IIC? 1
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:ADDRess
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:MODE
	SOURce:DATA:TELecom:ETHernet:PORT:GLOB:IPV:IICoupled

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:MODE

Description	This command selects the Global IPv6 Mode.
	At *RST condition, this value is set to NONE.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Mode
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:MODE <wsp><Stream>, <Mode>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Mode:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Global IPv6 mode.
	NONE, None
	STATic: Static
	SAUTo: Stateless Auto.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE? 1
	Returns: STATIC
See Also	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPV:ADDRess?
	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:MODE?

Description	This query returns the Global IPv6 Mode.
	At *RST condition, this value is set to NONE.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Mode
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:MODE? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Global IPv6 mode.
	NONE, No Global IPv6 mode is selected.
	STATIC, Static is selected as Global IPv6 mode.
	SAUTO, Stateless Auto. (SAUTo) is selected as Global IPv6 mode.
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE? 1
	Returns: STATIC
See Also	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPV:ADDRess
	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:PMASk

Description	This command sets the Global IPv6 Address Prefix Mask.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Prefix Mask
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Prefix Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:PMASk <wsp><Stream>, <Prefix Mask>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Prefix Mask:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Global IPv6 Address Prefix Mask.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:PMAS 1, FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:PMAS? 1
	Returns: FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPV:MODE?

:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:PMASk?

Description	This query returns the Global IPv6 Address Prefix Mask.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Prefix Mask
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Global IPv6 Address - Prefix Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPVersion:PMASk? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Global IPv6 Address Prefix Mask.
Example(s)	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:PMAS 1, FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
	SOUR:DATA:TEL:ETH:PORT:GLOB:IPV:PMAS? 1
	Returns: FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPV:MODE

:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPVersion:ADDRess

Description	This command sets the Link-Local IPv6 Address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPVersion:ADDRess <wsp><Stream>, <Address>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
	Address:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Link-Local IPv6 Address.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:ADDR 1, FE80:0000:0000:0000:0000:0000:0000:FFFF
	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:ADDR? 1
	Returns: FE80:0000:0000:0000:0000:0000:0000:FFFF
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPV:IICoupled

:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPVersion:ADDRess?

Description	This query returns the Link-Local IPv6 Address.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Address
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPVersion:ADDRess? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Link-Local IPv6 Address.
Example(s)	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:ADDR 1, FE80:0000:0000:0000:0000:0000:0000:FFFF
	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:ADDR? 1

:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPVersion:MODE?

Description	This query returns the Link-Local IPv6 Mode.
	At *RST condition, this value is set to STATIC.
	Navigation Path: Test > Test Configurator > Streams/Services > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Mode
	Navigation Path: Test > Test Configurator > MAC/IP/UDP > IPv6 > Config > Link-Local IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:PORT:LOCal:IPVersion:MODE? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	EtherSAM - Selects the service from 1 to 10.
	Traffic Gen and Mon - Selects the stream from 1 to 16.
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Link-Local IPv6 mode.
	STATic, Static is selected as Link-Local IPv6 mode.
	SAUTo, Stateless Auto. (SAUTo) is selected as Link-Local IPv6 mode.
Example(s)	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:MODE 1, STAT
	SOUR:DATA:TEL:ETH:PORT:LOC:IPV:MODE? 1
	Returns: STAT
See Also	SOURce:DATA:TELecom:ETHernet:PORT:GLOBal:IPV:PMASk

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess

Description	This command sets the Default Gateway IPv6 Address for Loopback Tool test.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Lpbk Tool > Network > Config > Default Gateway - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Default Gateway IPv6 Address.
Response Syntax	<Mode>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess FE80:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess?

Description	This query returns the Default Gateway IPv6 Address for Loopback Tool test.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Lpbk Tool > Network > Config > Default Gateway - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Default Gateway IPv6 Address.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess FE80:0000:0000:0000:0000:0000:0000:0000
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:ADDRess?
	Returns: FE80:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:ADDRess?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:MODE

Description	This command selects the Default Gateway IPv6 Address Mode for Loopback Tool test.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Lpbk Tool > Network > Config > Default Gateway - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Default Gateway IPv6 Address mode.
	AUTomatic
	STATic
Response Syntax	<Address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:MODE AUTOMATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:MODE

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:MODE?

Description	This query returns the Default Gateway IPv6 Address Mode for Loopback Tool test.
	At *RST condition, this value is set to AUToamtic.
	Navigation Path: Lpbk Tool > Network > Config > Default Gateway - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Default Gateway IPv6 Address Mode.
	AUTOMATIC, Automatic is selected as default gateway address mode.
	MANUAL, Manual is selected as default gateway address mode.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:MODE AUTOMATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:DGATeway:IPVersion:MODE?
	Returns: AUTOMATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:DGATeway:IPVersion:MODE?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess

Description	This command sets the Global IPv6 Address for Loopback Tool test.
	At *RST condition, this value is set to 2001:0000:0000:0000:0000:0000:0000.1111.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Global IPv6 Address
Response Syntax	<Mode>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess 2001:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess?

Description	This query returns the Global IPv6 Address for Loopback Tool test.
	At *RST condition, this value is set to 2001:0000:0000:0000.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Global IPv6 Address.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess 2001:0000:0000:0000:0000:0000:0000:0000
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:ADDRess?
	Returns: 2001:0000:0000:0000:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:ADDRess?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:IICoupled

Description	This command enables/disables the Interface ID Coupled of the Global IPv6 address for Loopback Tool test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Interface ID Coupled
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:IICoupled\<wsp>\<Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	enables/disables the Interface ID of the Global IPv6 address.
	ON,Enables Interface ID Coupled
	OFF,Disables Interface ID Coupled
Response Syntax	\<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:IICoupled OFF
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:IICoupled

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:IICoupled?

Description	This query returns the status of Interface ID Coupled of the Global IPv6 address for Loopback Tool test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Interface ID Coupled
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:IICoupled?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Interface ID of the Global IPv6 address.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:IICoupled OFF
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:IICoupled?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:IICoupled?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE

Description	This command selects the Global IPv6 Mode for Loopback Tool test.
	At *RST condition, this value is set to NONE.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Global IPv6 Mode.
	SAUTo, sets mode to stateless Auto
	STATic, sets mode to static
	NONE, sets mode to none
Response Syntax	<Set>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:MODE

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE?

Description	This query returns the Global IPv6 Mode for Loopback Tool test.
	At *RST condition, this value is set to NONE.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Global IPv6 mode.
	NONE, No Global IPv6 mode is selected.
	STATIC, Static is selected as Global IPv6 mode.
	SAUTO, Stateless Auto. (SAUTo) is selected as Global IPv6 mode.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE?
	Returns: STATIC
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:MODE?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:PMASk

Description	This command sets the Global IPv6 Address Prefix Mask for Loopback Tool test.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Prefix Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:PMASk <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Global IPv6 Address Prefix Mask.
Response Syntax	<Mode>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:PMASk FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:PMASk

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:PMASk?

Description	This query returns the Global IPv6 Address Prefix Mask for Loopback Tool test.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Lpbk Tool > Network > Config > Global IPv6 Address - Prefix Mask
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:PMASk?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Global IPv6 Address Prefix Mask.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:MODE STATIC
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:PMASk FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:GLOBal:IPVersion:PMASk?
	Returns: FFFF:FFFF:FFFF:FFFF:0000:0000:0000:0000
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:GLOBal:IPVersion:PMASk?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess

Description	This command sets the Link-Local IPv6 Address for Loopback Tool test.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Lpbk Tool > Network > Config > Link-Local IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Sets the Local IPv6 Address
Response Syntax	<Address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion IPV6
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess FE80:0000:0000:0000:0000:0000:0000:1111
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess?

Description	This query returns the Link-Local IPv6 Address for Loopback Tool test.
	At *RST condition, this value is set to FE80:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Lpbk Tool > Network > Config > Link-Local IPv6 Address - Address
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess?
Response Syntax	<address>
Response(s)	**address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Link-Local IPv6 Address.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:PORT:IPVersion IPV6
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess FE80:0000:0000:0000:0000:0000:0000:1111
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:ADDRess?
	Returns: FE80:0000:0000:0000:0000:0000:0000:1111
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess?

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:MODE

Description	This command selects the Link-Local IPv6 Mode for Loopback Tool test.
	At *RST condition, this value is set to STATic.
	Navigation Path: Lpbk Tool > Network > Config > Link-Local IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Local IPv6 Mode.
	SAUTo, sets mode to stateless Auto
	STATic, sets mode to static
Response Syntax	<address>
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:MODE SAUTO
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:MODE

:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:MODE?

Description	This query returns the Link-Local IPv6 Mode for Loopback Tool test.
	At *RST condition, this value is set to STATic.
	Navigation Path: Lpbk Tool > Network > Config > Link-Local IPv6 Address - Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:SLTool:NETWork:LOCal:IPVersion:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Link-Local IPv6 mode.
	STATic, Static is selected as Link-Local IPv6 mode.
	SAUTo, Stateless Auto. (SAUTo) is selected as Link-Local IPv6 mode.
Example(s)	SOURce:DATA:TELecom:ETHernet:SLTool:NETWORK:LOCal:IPVersion:MODE SAUTO
	SOURce:DATA:TELecom:ETHernet:SLTool:NETWORK:LOCal:IPVersion:MODE?
	Returns: SAUTO
See Also	SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:MODE?

Signal - Signal Configuration (DSn/PDH)

:SENSe:DATA:TELecom:DSNPdh:POSition

Description	This command sets the DSn/PDH mapping position for Through topology.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Channel
Syntax	:SENSe:DATA:TELecom:DSNPdh:POSition <wsp><Positionid>, <Position1>, <Position2>, <Position3>
Parameter(s)	**Positionid**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mapping position.
	DSEPOSition: DSn/PDH
	Position1:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the mapping postion values.
	Position2:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position values.
	Position3:
	The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position values.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:DSNPdh:POS DSEPOSITION,1, 1,0
See Also	SOURce:DATA:TELecom:HOP:TYPE

:SENSe:DATA:TELecom:DSNPdh:POSition?

Description	This query returns the DSn/PDH mapping position for Through topology.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Channel
Syntax	:SENSe:DATA:TELecom:DSNPdh:POSition? <wsp><Positionid>
Parameter(s)	**Positionid**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mapping position.
	DSEPOSition: DSn/PDH
Response Syntax	<Position>
Response(s)	**Position**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the mapping positions.
Example(s)	SENS:DATA:TEL:DSNPdh:POS DSEPOSITION,1, 1,0
	SENS:DATA:TEL:DSNPdh:POS? DSEPOSITION
	Returns: (1,1,0)
See Also	SOURce:DATA:TELecom:HOP:TYPE?

:SENSe:DATA:TELecom:DS[1..n]:AUTO:FORCe:RELease

Description	This command force release of loopback.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Force Release
Syntax	:SENSe:DATA:TELecom:DS[1..n]:AUTO:FORCe:RELease
Response Syntax	<Position>
Example(s)	SENS:DATA:TEL:DS1:AUTO:FORC:REL
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing

:SENSe:DATA:TELecom:DS[1..n]:AUTO:TYPE

Description	This command sets auto-response Type.
	At *RST condition, this value is set to In-Band.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Type
Syntax	:SENSe:DATA:TELecom:DS[1..n]:AUTO:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of Auto-Response mode.
	INband, Sets In-Band auto-response type.
	OUTband, Sets Out-of-band auto-response type.
Response Syntax	<Position>
Example(s)	SENS:DATA:TEL:DS1:AUTO:TYPE IN
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?

:SENSe:DATA:TELecom:DS[1..n]:AUTO:TYPE?

Description	This query returns the auto-response Type.
	At *RST condition, this value is set to In-Band.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Type
Syntax	:SENSe:DATA:TELecom:DS[1..n]:AUTO:TYPE?
Response Syntax	<TYPE>
Response(s)	**TYPE**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type of auto-response mode.
	INBAND, In-Band type is selected.
	OUTBAND, Out-of-band type is selected.
Example(s)	SENS:DATA:TEL:DS1:AUTO:TYPE OUT
	SENS:DATA:TEL:DS1:AUTO:TYPE?
	Returns: OUTBAND
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing

:SENSe:DATA:TELecom:DS[1..n]:ENABled

Description	This command enables/disables the activation of Digital Signal-level 0 (DS0)/64K testing for Through topology.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - DS0
Syntax	:SENSe:DATA:TELecom:DS[1..n]:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<TYPE>
Example(s)	SENS:DATA:TEL:DS:ENAB ON
See Also	SOURce:DATA:TELecom:DS:ENABled?

:SENSe:DATA:TELecom:DS[1..n]:ENABled?

Description	This query returns the status of Digital Signal-level 0 (DS0)/64K testing for Through topology.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - DS0
Syntax	:SENSe:DATA:TELecom:DS[1..n]:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:DS:ENAB ON
	SENS:DATA:TEL:DS:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:DS:ENABled

:SENSe:DATA:TELecom:DS[1..n]:LOOP:CODE

Description	This command selects the RX Loop Code for NI/CSU Emulation.
	At *RST condition, this value set to CSU.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Loop Code
Syntax	:SENSe:DATA:TELecom:DS[1..n]:LOOP:CODE <wsp><Loopcode>
Parameter(s)	**Loopcode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Loop Code.
	CSU: CSU (10000/100)
	INBANDLOCODE1: Loop Code 1
	INBANDLOCODE2: Loop Code 2
	INBANDLOCODE3: Loop Code 3
	INBANDLOCODE4: Loop Code 4
	INBANDLOCODE5: Loop Code 5
	INBANDLOCODE6: Loop Code 6
	INBANDLOCODE7: Loop Code 7
	INBANDLOCODE8: Loop Code 8
	INBANDLOCODE9: Loop Code 9
	INBANDLOCODE10: Loop Code 10
	NFAC1: NIU FAC1 (1100/1110)
	NFAC2: NIU FAC2 (11000/11100)
	NFAC3: NIU FAC3 (100000/100)
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:DS:LOOP:CODE NFAC1
See Also	SENSe:DATA:TELecom:DS[1..n]:LOOP:CODE?

:SENSe:DATA:TELecom:DS[1..n]:LOOP:CODE?

Description	This query returns the RX Loop Code for NI/CSU Emulation.
	At *RST condition, this value set to CSU.
	Navigation Path: Setup > Test Configurator > DS1 > Loopback > Loop Code
Syntax	:SENSe:DATA:TELecom:DS[1..n]:LOOP:CODE?
Response Syntax	<Loopcode>
Response(s)	**Loopcode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Loop Code:
	CSU: CSU (10000/100)
	INBANDLOCODE1: Loop Code 1
	INBANDLOCODE2: Loop Code 2
	INBANDLOCODE3: Loop Code 3
	INBANDLOCODE4: Loop Code 4
	INBANDLOCODE5: Loop Code 5
	INBANDLOCODE6: Loop Code 6
	INBANDLOCODE7: Loop Code 7
	INBANDLOCODE8: Loop Code 8
	INBANDLOCODE9: Loop Code 9
	INBANDLOCODE10: Loop Code 10
	NFAC1: NIU FAC1 (1100/1110)
	NFAC2: NIU FAC2 (11000/11100)
	NFAC3: NIU FAC3 (100000/100)
Example(s)	SENS:DATA:TEL:DS:LOOP:CODE NFAC1
	SENS:DATA:TEL:DS:LOOP:CODE?
	Returns: NFAC1

:SENSe:DATA:TELecom:DS[1..n]:MANual:ACTivate

Description	This command enables/disables manual mode.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Activate
Syntax	:SENSe:DATA:TELecom:DS[1..n]:MANual:ACTivate <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the activation of manual mode.
	ON, activated manual mode.
	OFF,deactivated manual mode.
Response Syntax	<Loopcode>
Example(s)	SENS:DATA:TEL:DS1:MAN:ACT ON
See Also	SOURce:DATA:TELecom:PDH:E:ENABled?

:SENSe:DATA:TELecom:DS[1..n]:MANual:ACTivate?

Description	This query returns the on/off status of manual mode.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Activate
Syntax	:SENSe:DATA:TELecom:DS[1..n]:MANual:ACTivate?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of manual mode.
	1, manual mode is activated.
	0, manual mode is deactivated.
Example(s)	SENS:DATA:TEL:DS1:MAN:ACT ON
	SENS:DATA:TEL:DS1:MAN:ACT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:E:ENABled

:SENSe:DATA:TELecom:DS[1..n]:MANual:TYPE

Description	This command sets manual Type.
	At *RST condition, this value is set to Auto-Response.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Type
Syntax	:SENSe:DATA:TELecom:DS[1..n]:MANual:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of manual mode.
	NONE, Sets None manual type.
	LINE, Sets Line manual type.
	PAYLOAD, Sets Payload manual type.
Response Syntax	<Set>
Example(s)	SENS:DATA:TEL:DS1:MAN:TYPE LINE
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?

:SENSe:DATA:TELecom:DS[1..n]:MANual:TYPE?

Description	This query returns the manual Type.
	At *RST condition, this value is set to Auto-Response.
	Navigation Path: Setup > NI/CSU > Test Configurator > Setup > Signal Configuration > Mode (Manual) > TYPE
Syntax	:SENSe:DATA:TELecom:DS[1..n]:MANual:TYPE?
Response Syntax	<TYPE>
Response(s)	**TYPE**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type of manual mode.
	NONE, None type is selected.
	LINE, Line type is selected.
	PAYLOAD, Payload type is selected.
Example(s)	SENS:DATA:TEL:DS1:MAN:TYPE LINE
	SENS:DATA:TEL:DS1:MAN:TYPE?
	Returns: LINE
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing

:SENSe:DATA:TELecom:DS[1..n]:MODE

Description	This command sets the Mode.
	At *RST condition, this value is set to Auto-Response.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Mode
Syntax	:SENSe:DATA:TELecom:DS[1..n]:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of mode.
	AUTO, Sets AUTO-RESPONSE mode.
	MANual, Sets MANUAL mode.
Response Syntax	<TYPE>
Example(s)	SENS:DATA:TEL:DS1:MODE AUTO
See Also	SOURce:DATA:TELecom:HOP:TYPE

:SENSe:DATA:TELecom:DS[1..n]:MODE?

Description	This query returns the Mode.
	At *RST condition, this value is set to Auto-Response.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Mode
Syntax	:SENSe:DATA:TELecom:DS[1..n]:MODE?
Response Syntax	<mode>
Response(s)	**mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the value mode selected.
	AUTO, Auto-Response mode is selected.
	MANUAL, Manual mode is selected.
Example(s)	SENS:DATA:TEL:DS1:MODE AUTO
	SENS:DATA:TEL:DS1:MODE?
	Returns: AUTO
See Also	SOURce:DATA:TELecom:HOP:TYPE?

:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing

Description	This command selects the framing of Digital Signal-level 1 (DS1)/Digital Signal-level 3 (DS3) for Through topology.
	At *RST condition, this value is set to CBITp.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing <wsp><Framing>
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the framing for transmission.
	UNFRAMED1: Unframed for DS1/DS3
	M13: M13 for DS3
	CBITP: Control-Bit (CBIT) for DS3
	SF1: Superframe for DS1
	ESF: Extended Superframe for DS1
	SLC96: SLC96 for DS1
	T1DALY: T1DALY for DS1
Response Syntax	<mode>
Example(s)	SENS:DATA:TEL:DS3:PAYL:FRAM UNF1
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?

:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?

Description	This query returns the framing of Digital Signal-level 1 (DS1)/Digital Signal-level 3 (DS3) for Through topology.
	At *RST condition, this value is set to CBITp.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SENSe:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the framing that is used for transmission.
	UNFRAMED1, Unframed is selected as Digital Signal-level 1 (DS1)/Digital Signal-level 3 (DS3) framing.
	M13, M13 is selected as Digital Signal-level 3 (DS3) framing.
	CBITP, Control-Bit (C-Bit) Parity is selected as Digital Signal-level 3 (DS3) framing.
	SF1, Superframe (FSF) is selected as Digital Signal-level 1 (DS1) framing.
	ESF, Extended Superframe (FESF) is selected as Digital Signal-level 1 (DS1) framing.
	SLC96,SLC96 is selected as Digital Signal-level 1 (DS1) framing.
	T1DALY,T1DALY is selected as Digital Signal-level 1 (DS1) framing.
Example(s)	SENS:DATA:TEL:DS3:PAYL:FRAM UNF1
	SENS:DATA:TEL:DS3:PAYL:FRAM?
	Returns: UNFRAMED1
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing

:SENSe:DATA:TELecom:PDH:E[1..n]:ENABled

Description	This command enables/disables the activation of European standard for digital transmission-level 0 (E0)/64K testing for Through topology.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - E0
Syntax	:SENSe:DATA:TELecom:PDH:E[1..n]:ENABled <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Framing>
Example(s)	SENS:DATA:TEL:PDH:E:ENAB ON
See Also	SOURce:DATA:TELecom:PDH:E:ENABled?

:SENSe:DATA:TELecom:PDH:E[1..n]:ENABled?

Description	This query returns the status of European standard for digital transmission-level 0 (E0)/64K testing for Through topology.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - E0
Syntax	:SENSe:DATA:TELecom:PDH:E[1..n]:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:PDH:E:ENAB ON
	SENS:DATA:TEL:PDH:E:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:E:ENABled

:SENSe:DATA:TELecom:PDH:E[1..n]:FRAMing

Description	This command sets the E1/E2/E3/E4 framing for Through topology.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SENSe:DATA:TELecom:PDH:E[1..n]:FRAMing \<wsp>\<Framing>
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Sets the frame coding that is used for transmission.
	UNFRAMED1: Unframed for E1/E2/E3/E4
	PCM301: PCM30 (Pulse Code Modulation) for E1/E2/E3/E4
	PCM30C41: PCM30 (Pulse Code Modulation)CRC4 (Cyclic Redundancy Check) for E1/E2/E3/E4
	PCM311: PCM31 (Pulse Code Modulation) for E1/E2/E3/E4
	PCM31C41: PCM31 (Pulse Code Modulation) CRC4 (Cyclic Redundancy Check) for E1/E2/E3/E4
	FRAMED: Framed for E2/E3/E4
Response Syntax	\<Status>
Example(s)	SENS:DATA:TEL:PDH:E1:FRAM UNF1
See Also	SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing?

:SENSe:DATA:TELecom:PDH:E[1..n]:FRAMing?

Description	This query returns the E1/E2/E3/E4 framing for Through topology.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SENSe:DATA:TELecom:PDH:E[1..n]:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the frame coding that is used for transmission.
	UNFRAMED1, Unframed is selected as E1/E2/E3/E4 framing.
	PCM301, Pulse Code Modulation (PCM30) is selected as E1/E2/E3/E4 framing.
	PCM30C41, Pulse Code Modulation (PCM30) Cyclic Redundancy Check (CRC4) is selected as E1/E2/E3/E4 framing.
	PCM311, PCM31 is selected as E1/E2/E3/E4 framing.
	PCM31C41, Pulse Code Modulation (PCM31) Cyclic Redundancy Check (CRC4) is selected as E1/E2/E3/E4 framing.
	FRAMED, Framed is selected as E2/E3/E4 framing.
Example(s)	SENS:DATA:TEL:PDH:E1:FRAM UNF1
	SENS:DATA:TEL:PDH:E1:FRAM?
	Returns: UNFRAMED1
See Also	SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing

:SOURce:DATA:TELecom:DSNPdh:BACKground

Description	This command selects the background traffic.
	At *RST condition, this value set to EQUIPPED1.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Background
Syntax	:SOURce:DATA:TELecom:DSNPdh:BACKground <wsp><Background Traffic>
Parameter(s)	**Background Traffic**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the background traffic for SignaL CONFig.
	AIS: Alarm Indication Signal
	ALLZeros: ALLZeros
Response Syntax	<Framing>
Example(s)	SOUR:DATA:TEL:DSNPdh:BACKground AIS
See Also	SOURce:DATA:TELecom:BACKground:COMPutation

:SOURce:DATA:TELecom:DSNPdh:BACKground?

Description	This query returns the background traffic.
	At *RST condition, this value set to EQUIPPED1.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Background
Syntax	:SOURce:DATA:TELecom:DSNPdh:BACKground?
Response Syntax	<Background traffic>
Response(s)	**Background traffic**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the background traffic for Singal CONFig.
	AIS, Alarm Indication Signal (AIS) as background traffic is selected.
	ALLZeros, ALLZeros as background traffic is selected.
Example(s)	SOUR:DATA:TEL:DSNPdh:BACKground AIS
	SOUR:DATA:TEL:DSNPdh:BACKground?
	Returns: AIS
See Also	SOURce:DATA:TEL:BACKground:COMPutation?

:SOURce:DATA:TELecom:DSNPdh:POSition

Description	This command sets the DSn/PDH mapping position.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Channel
Syntax	:SOURce:DATA:TELecom:DSNPdh:POSition <wsp><Positionid>, <Position1>, <Position2>, <Position3>
Parameter(s)	**Positionid**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mapping position.
	DSEPOSition: DSn/PDH
	Position1:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the mapping position values.
	Position2:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position values.
	Position3:
	The program data syntax for the fourth parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the mapping position values.
Response Syntax	<Background traffic>
Example(s)	SOUR:DATA:TEL:DSNP:POS DSEPOSITION,1,1,0
See Also	SOURce:DATA:TELecom:HOP:TYPE

:SOURce:DATA:TELecom:DSNPdh:POSition?

Description	This query returns the DSn/PDH mapping position.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Channel
Syntax	:SOURce:DATA:TELecom:DSNPdh:POSition? <wsp><Positionid>
Parameter(s)	**Positionid**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mapping position.
	DSEPOSition: DSn/PDH
Response Syntax	<Position>
Response(s)	**Position**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the mapping positions.
Example(s)	SOUR:DATA:TEL:DSNP:POS DSEPOSITION,1,1,0
	SOUR:DATA:TEL:DSNP:POS? DSEPOSITION
	Returns: (1,1,0)
See Also	SOURce:DATA:TELecom:HOP:TYPE?

:SOURce:DATA:TELecom:DS[1..n]:ENABled

Description	This command enables/disables the activation of Digital Signal-level 0 (DS0)/64K testing.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - DS0
Syntax	:SOURce:DATA:TELecom:DS[1..n]:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Position>
Example(s)	SOUR:DATA:TEL:DS:ENAB ON
See Also	SOURce:DATA:TELecom:DS:ENABled?

:SOURce:DATA:TELecom:DS[1..n]:ENABled?

Description	This query returns the status of Digital Signal-level 0 (DS0)/64K testing.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - DS0
Syntax	:SOURce:DATA:TELecom:DS[1..n]:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:DS:ENAB ON
	SOUR:DATA:TEL:DS:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:DS:ENABled

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing

Description	This command selects the framing of Digital Signal-level 1 (DS1)/Digital Signal-level 3 (DS3).
	At *RST condition, this value is set to CBITp.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing <wsp><Framing>
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the framing for transmission.
	CBITP: Control-Bit (CBIT) for DS3
	ESF: Extended Superframe for DS1
	M13: M13 (DS3)
	SF1: Superframe for DS1
	SLC96: SLC96 for DS1
	T1DALY: T1DALY for DS1
	UNFRAMED1: Unframed for DS1/DS3
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:DS3:PAYL:FRAM UNF1
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?

:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?

Description	This query returns the framing of Digital Signal-level 1 (DS1)/Digital Signal-level 3 (DS3).
	At *RST condition, this value is set to CBITp.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the framing that is used for transmission.
	UNFRAMED1, Unframed is selected as Digital Signal-level 1 (DS1)/Digital Signal-level 3 (DS3) framing.
	M13, M13 is selected as Digital Signal-level 3 (DS3) framing.
	CBITP, Control-Bit (C-Bit) Parity is selected as Digital Signal-level 3 (DS3) framing.
	SF1, Superframe (FSF) is selected as Digital Signal-level 1 (DS1) framing.
	ESF, Extended Superframe (FESF) is selected as Digital Signal-level 1 (DS1) framing.
	SLC96,SLC96 is selected as Digital Signal-level 1 (DS1) framing.
	T1DALY,T1DALY is selected as Digital Signal-level 1 (DS1) framing.
Example(s)	SOUR:DATA:TEL:DS3:PAYL:FRAM UNF1
	SOUR:DATA:TEL:DS3:PAYL:FRAM?
	Returns: UNFRAMED1
See Also	SOURce:DATA:TELecom:DS[1..n]:PAYLoad:FRAMing

:SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle

Description	This command enables/disables the activation of DS1 Tx Signaling.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Tx Signaling
Syntax	:SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Framing>
Example(s)	SOUR:DATA:TEL:DS1:SIGN:ENAB ON
See Also	SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle

:SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle?

Description	This query returns the status of DS1 Tx Signaling.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration -Tx Signaling
Syntax	:SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:DS1:SIGN:ENAB ON
	SOUR:DATA:TEL:DS1:SIGN:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle?

:SOURce:DATA:TELecom:E[1..n]:SIGNaling:ENABle

Description	This command enables/disables the activation of E1 TX Signaling in PDH.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - TX Signaling
Syntax	:SOURce:DATA:TELecom:E[1..n]:SIGNaling:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:E1:SIGN:ENAB ON
See Also	SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle

:SOURce:DATA:TELecom:E[1..n]:SIGNaling:ENABle?

Description	This query returns the status of E1 TX Signaling in PDH.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - TX Signaling
Syntax	:SOURce:DATA:TELecom:E[1..n]:SIGNaling:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:E1:SIGN:ENAB ON
	SOUR:DATA:TEL:E1:SIGN:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:DS[1..n]:SIGNaling:ENABle?

:SOURce:DATA:TELecom:PDH:E[1..n]:ENABled

Description	This command enables/disables the activation of European standard for digital transmission-level 0 (E0)/64K testing.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - E0
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:ENABled <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:PDH:E:ENAB ON
See Also	SOURce:DATA:TELecom:PDH:E:ENABled?

:SOURce:DATA:TELecom:PDH:E[1..n]:ENABled?

Description	This query returns the status of European standard for digital transmission-level 0 (E0)/64K testing.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - E0
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:ENABled?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PDH:E:ENAB ON
	SOUR:DATA:TEL:PDH:E:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:E:ENABled

:SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing

Description	This command sets the E1/E2/E3/E4 framing.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing <wsp><Framing>
Parameter(s)	**Framing**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the frame coding that is used for transmission.
	UNFRAMED1: Unframed for E1/E2/E3/E4
	PCM301: PCM30 (Pulse Code Modulation) for E1/E2/E3/E4
	PCM30C41: PCM30 (Pulse Code Modulation)CRC4 (Cyclic Redundancy Check) for E1/E2/E3/E4
	PCM311: PCM31 (Pulse Code Modulation) for E1/E2/E3/E4
	PCM31C41: PCM31 (Pulse Code Modulation) CRC4 (Cyclic Redundancy Check) for E1/E2/E3/E4
	FRAMED: Framed for E2/E3/E4
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:PDH:E1:FRAM UNF1
See Also	SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing?

:SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing?

Description	This query returns the E1/E2/E3/E4 framing.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > DSn/PDH > Signal Configuration - Framing
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing?
Response Syntax	<Framing>
Response(s)	**Framing**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the frame coding that isused for transmission.
	UNFRAMED1, Unframed is selected as E1/E2/E3/E4 framing.
	PCM301, Pulse Code Modulation (PCM30) is selected as E1/E2/E3/E4 framing.
	PCM30C41, Pulse Code Modulation (PCM30) Cyclic Redundancy Check (CRC4) is selected as E1/E2/E3/E4 framing.
	PCM311, PCM31 is selected as E1/E2/E3/E4 framing.
	PCM31C41, Pulse Code Modulation (PCM31) Cyclic Redundancy Check (CRC4) is selected as E1/E2/E3/E4 framing.
	FRAMED, Framed is selected as E2/E3/E4 framing.
Example(s)	SOUR:DATA:TEL:PDH:E1:FRAM UNF1
	SOUR:DATA:TEL:PDH:E1:FRAM?
	Returns: UNFRAMED1
See Also	SOURce:DATA:TELecom:PDH:E[1..n]:FRAMing

S-OAM and MPLS-TP OAM

:SENSe:DATA:TELecom:SOAM:PEER:MEP:QUICk:PING?

Description	This query returns the Quick ping status.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Peer MEP Parameters - OAM Quick Ping
Syntax	:SENSe:DATA:TELecom:SOAM:PEER:MEP:QUICk:PING?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Quick ping status.
	INPROGRESS: Quick ping is in-progress
	SUCCESSFUL,: Quick ping completed successfully
	FAILED: Quick ping failed
Example(s)	SOUR:DATA:TEL:SOAM:PEER:MEP:QUICk:PING
	SENS:DATA:TEL:SOAM:PEER:MEP:QUICk:PING?
	Returns: INPROGRESS
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:QUICk:PING
	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:PERiod?

:SOURce:DATA:TELecom:SOAM:CCHeck:ADDRess:TYPE

Description	This command sets the Continuity Check Address Type.
	At *RST condition, this value is set to MULTICAST.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Address Type
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:ADDRess:TYPE[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the Address type.
	UNIcast
	MULTicast
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:ADDRess:TYPE UNICAST
	SOUR:DATA:TEL:SOAM:CCHeck:ADDRess:TYPE?
	Returns: UNICAST
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TX:ENABle?

:SOURce:DATA:TELecom:SOAM:CCHeck:ADDRess:TYPE?

Description	This query returns the Continuity Check Address Type.
	At *RST condition, this value is set to MULTICAST.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Address Type
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:ADDRess:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Address type.
	UNICAST, UNICAST is selected as Address type
	MULTICAST, MULTICAST is selected as Address type
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:ADDRess:TYPE UNICAST
	SOUR:DATA:TEL:SOAM:CCHeck:ADDRess:TYPE?
	Returns: UNICAST
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TX:ENABle

:SOURce:DATA:TELecom:SOAM:CCHeck:DROP:ELIGible

Description	This command enables/disables Drop Eligible.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Drop Eligible
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:DROP:ELIGible <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the status of Drop Eligible.
	YES
	NO
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:DROP:ELIGible NO
	SOUR:DATA:TEL:SOAM:CCHeck:DROP:ELIGible?
	Returns: NO
See Also	FETCh:DATA:TELecom:SOAM:TRAF:TX:TOTal?

:SOURce:DATA:TELecom:SOAM:CCHeck:DROP:ELIGible?

Description	This query returns the on/off status of Drop Eligible.
	At *RST condition, this value is set to NO.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Drop Eligible
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:DROP:ELIGible?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Drop Eligible.
	YES,YES is selected as status of Drop Eligible.
	NO,NO is selected as status of Drop Eligible.
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:DROP:ELIGible NO
	SOUR:DATA:TEL:SOAM:CCHeck:DROP:ELIGible?
	Returns: NO
See Also	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:SIZE

:SOURce:DATA:TELecom:SOAM:CCHeck:FUNCtion:ENABle

Description	This command enables/disables CC Function.
	At *RST condition, this value is set to ON.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - CC Function
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:FUNCtion:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:FUNCtion:ENABle ON
	SOUR:DATA:TEL:SOAM:CCHeck:FUNCtion:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:FUNC:CONT:ENABle?

:SOURce:DATA:TELecom:SOAM:CCHeck:FUNCtion:ENABle?

Description	This query returns the on/off status of CC Function.
	At *RST condition, this value is ON.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - CC Function
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:FUNCtion:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:FUNCtion:ENABle ON
	SOUR:DATA:TEL:SOAM:CCHeck:FUNCtion:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:FUNC:CONT:ENABle

:SOURce:DATA:TELecom:SOAM:CCHeck:PERiod

Description	This command sets the transmission period of the CCM frame.
	At *RST condition, this value is set to 100 ms.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Period
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:PERiod[<wsp><Period>]
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the Period.
	P333MS: 3.33 MilliSeconds
	P10MS: 10 MilliSeconds
	P100MS: 100 MilliSeconds
	P1S: 1 Second
	P10S: 10 Seconds
	P1MIN: 1 Minute
	P10MIN: 10 Minutes
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:PERiod P10MS
	SOUR:DATA:TEL:SOAM:CCHeck:PERiod?
	Returns: P10MS
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TX:RATE?

:SOURce:DATA:TELecom:SOAM:CCHeck:PERiod?

Description	This query returns the transmission period of the CCM frame.
	At *RST condition, this value is 100 ms.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Period
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:PERiod?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Period.
	P333MS, 3.33 MilliSeconds is selected as period
	P10MS, 10 MilliSeconds is selected as period
	P100MS,100 MilliSeconds is selected as period
	P1S, 1 Second is selected as period
	P10S, 10 Seconds is selected as period
	P1MIN, 1 Minute is selected as period
	P10MIN, 10 Minutes is selected as period
Example(s)	SOUR:DATA:TEL:SOAM:CCH:PER P10MS
	SOUR:DATA:TEL:SOAM:CCH:PER?
	Returns: P10MS
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TX:RATE?

:SOURce:DATA:TELecom:SOAM:CCHeck:PRIority

Description	This command sets the Continuity Check Priority.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Priority
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:PRIority <wsp><value>
Parameter(s)	**value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the priority.
	0: the priority 0
	1: the priority 1
	2: the priority 2
	3: the priority 3
	4: the priority 4
	5: the priority 5
	6: the priority 6
	7: the priority 7
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:PRIority 2
	SOUR:DATA:TEL:SOAM:CCHeck:PRIority?
	Returns: 2
See Also	FETCh:DATA:TELecom:SOAM:TRAF:TX:COUNt?

:SOURce:DATA:TELecom:SOAM:CCHeck:PRIority?

Description	This query returns level of priority.
	At *RST condition, this value is set to 7.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Continuity Check - Priority
Syntax	:SOURce:DATA:TELecom:SOAM:CCHeck:PRIority?
Response Syntax	\<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA> element.
	Returns the priority:
	0, 1, 2, 3, 4, 5, 6, or 7
Example(s)	SOUR:DATA:TEL:SOAM:CCHeck:PRIority 2
	SOUR:DATA:TEL:SOAM:CCHeck:PRIority?
	Returns: 2
See Also	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:SIZE?

:SOURce:DATA:TELecom:SOAM:FUNCtion:ADDRess:TYPE

Description	This command sets the Address Type parameter shall determine the Destination Address Type of the LBM frame.
	At *RST condition, this value is set to Unicast.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Address Type
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:ADDRess:TYPE[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the Address type.
	UNIcast: the UNICAST type
	MULTicast: the MULTICAST type
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:ADDRess:TYPE MULTICAST
	SOUR:DATA:TEL:SOAM:FUNC:ADDRess:TYPE?
	Returns: MULTICAST
See Also	SOURce:DATA:TELecom:SOAM:LOC:DOMain:ID?

:SOURce:DATA:TELecom:SOAM:FUNCtion:ADDRess:TYPE?

Description	This query returns the Address Type parameter shall determine the Destination Address Type of the LBM frame.
	At *RST condition, this value is set to Unicast.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Address Type
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:ADDRess:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Address type.
	UNICAST, UNICAST as selected Address type
	MULTICAST, MULTICAST as selected Address type
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:ADDRess:TYPE MULTICAST
	SOUR:DATA:TEL:SOAM:FUNC:ADDRess:TYPE?
	Returns: MULTICAST
See Also	SOURce:DATA:TELecom:SOAM:LOC:DOMain:ID

:SOURce:DATA:TELecom:SOAM:FUNCtion:CONTinuous:ENABle

Description	This command sets the status of Continuous parameter.
	At *RST condition, this value is set to ON.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Continuous
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:CONTinuous:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:CONT:ENABle ON
	SOUR:DATA:TEL:SOAM:FUNC:CONT:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:ID?

:SOURce:DATA:TELecom:SOAM:FUNCtion:CONTinuous:ENABle?

Description	This query returns the status of Continuous parameter as Enabled/Disabled.
	At *RST condition, this value is ON.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Continuous
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:CONTinuous:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:CONT:ENABle ON
	SOUR:DATA:TEL:SOAM:FUNC:CONT:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:ID

:SOURce:DATA:TELecom:SOAM:FUNCtion:DROP:ELIGible

Description	This command enables/disable Drop Eligible.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Drop Eligible
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:DROP:ELIGible <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the status of Drop Eligible.
	YES
	NO
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:DROP:ELIGible YES
	SOUR:DATA:TEL:SOAM:FUNC:DROP:ELIGible?
	Returns: YES
See Also	FETCh:DATA:TELecom:SOAM:TRAF:TX:TOTal?

:SOURce:DATA:TELecom:SOAM:FUNCtion:DROP:ELIGible?

Description	This query returns the status of Drop Eligible.
	At *RST condition, this value is set to NO.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Drop Eligible
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:DROP:ELIGible?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Drop Eligible.
	YES,YES is selected as status of Drop Eligible.
	NO,NO is selected as status of Drop Eligible.
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:DROP:ELIGible YES
	SOUR:DATA:TEL:SOAM:FUNC:DROP:ELIGible?
	Returns: YES
See Also	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:SIZE

:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:COUNt

Description	This command sets the Frame Count parameter shall set in inapplicable state if the Continuous parameter is enabled.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Frame Count
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:COUNt[<wsp><value>]
Parameter(s)	**value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the frame count.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:FRAMe:COUNt 64
	SOUR:DATA:TEL:SOAM:FUNC:FRAMe:COUNt?
	Returns: 64
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:FUNCtion:ENABle?

:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:COUNt?

Description	This query returns the Frame Count parameter.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Frame Count
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:COUNt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the frame count.
	This parameter is optional. If no token is specified, the current frame count value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the frame count.
	MAXimum, Gets the frame count as maximum.
	MINimum, Gets the frame count as minimum.
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:FRAMe:COUNt 64
	SOUR:DATA:TEL:SOAM:FUNC:FRAMe:COUNt?
	Returns: 64
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:FUNCtion:ENABle

:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:SIZE

Description	This command sets the Frame Size parameter shall determine the LBM frame size.
	At *RST condition, this value is set to 64.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Frame Size
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:SIZE[<wsp><value>]
Parameter(s)	**value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the frame size.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:FRAM:SIZE 68
	SOUR:DATA:TEL:SOAM:FUNC:FRAM:SIZE?
	Returns: 68
See Also	SOURce:DATA:TELecom:SOAM:LOC:MD:LEVel?

:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:SIZE?

Description	This query returns the Frame Size parameter shall determine the LBM frame size.
	At *RST condition, this value is 64.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Frame Size
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:FRAMe:SIZE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the frame size.
	This parameter is optional. If no token is specified, the current frame size value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TX rate.
	MAXimum, Gets the frame size as maximum.
	MINimum, Gets the frame size as minimum.
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:FRAM:SIZE 68
	SOUR:DATA:TEL:SOAM:FUNC:FRAM:SIZE?
	Returns: 68
See Also	SOURce:DATA:TELecom:SOAM:LOC:MD:LEVel

:SOURce:DATA:TELecom:SOAM:FUNCtion:PAYLoad

Description	This command sets the Payload value.
	At *RST condition, this value is set to CC.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - PayLoad
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:PAYLoad[<wsp><PAYLoad>]
Parameter(s)	**PAYLoad**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Payload.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:PAYLoad #H00
	SOUR:DATA:TEL:SOAM:FUNC:PAYLoad?
	Returns: 0
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:PERiod?

:SOURce:DATA:TELecom:SOAM:FUNCtion:PAYLoad?

Description	This query returns Payload value.
	At *RST condition, this value is CC.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - PayLoad
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:PAYLoad?
Response Syntax	<Payload>
Response(s)	**Payload**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the payload values in integer format.
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:PAYLoad #H00
	SOUR:DATA:TEL:SOAM:FUNC:PAYLoad?
	Returns: 0
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:PERiod

:SOURce:DATA:TELecom:SOAM:FUNCtion:PERiod?

Description	This query returns the Period parameter.
	At *RST condition, this value is set to 100ms.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Period
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:PERiod?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Period.
	P333MS, 3.33 MilliSeconds is selected as period
	P10MS, 10 MilliSeconds is selected as period
	P100MS,100 MilliSeconds is selected as period
	P1S, 1 Second is selected as period
	P10S, 10 Seconds is selected as period
	P1MIN, 1 Minute is selected as period
	P10MIN, 10 Minutes is selected as period
Example(s)	SOUR:DATA:TEL:SOAM:TESt:FUNCtion FRAMEDELAY
	SOUR:DATA:TEL:SOAM:FUNC:PERiod?
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:QUICk:PING

:SOURce:DATA:TELecom:SOAM:FUNCtion:PRIority

Description	This command sets the Priority.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Priority
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:PRIority <wsp><value>
Parameter(s)	**value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the priority.
	0: the priority 0
	1: the priority 1
	2: the priority 2
	3: the priority 3
	4: the priority 4
	5: the priority 5
	6: the priority 6
	7: the priority 7
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:SOAM:FUNCtion:PRIority 2
	SOUR:DATA:TEL:SOAM:FUNCtion:PRIority?
	Returns: 2
See Also	FETCh:DATA:TELecom:SOAM:TRAF:TX:COUNt?

:SOURce:DATA:TELecom:SOAM:FUNCtion:PRIority?

Description	This query returns level of priority.
	At *RST condition, this value is set to 7.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Priority
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:PRIority?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the priority.
	0, 1, 2, 3, 4, 5, 6, or 7.
Example(s)	SOUR:DATA:TEL:SOAM:FUNCtion:PRIority 2
	SOUR:DATA:TEL:SOAM:FUNCtion:PRIority?
	Returns: 2
See Also	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:SIZE?

:SOURce:DATA:TELecom:SOAM:FUNCtion:RMEPid:ENABle

Description	This command enables/disables Requesting MEP ID TLV.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Requesting MEP ID TLV
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:RMEPid:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:RMEP:ENABle ON
	SOUR:DATA:TEL:SOAM:FUNC:RMEP:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:ID?

:SOURce:DATA:TELecom:SOAM:FUNCtion:RMEPid:ENABle?

Description	This query returns the on/off status of Requesting MEP ID TLV.
	At *RST condition, this value is ON.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Requesting MEP ID TLV
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:RMEPid:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:RMEP:ENABle ON
	SOUR:DATA:TEL:SOAM:FUNC:RMEP:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:ID

:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:ID

Description	This command sets the Test Pattern parameter shall determine the test pattern used to fill the Test TLV.
	At *RST condition, this value is set to 00 00 00 01.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Test Function (Synthetic Loss) > Test ID
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:ID[<wsp><Test Id>]
Parameter(s)	**Test Id**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Test Id.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE TESTID
	SOUR:DATA:TEL:SOAM:FUNC:TEST:ID #H00FF00FF
	SOUR:DATA:TEL:SOAM:FUNC:TEST:ID?
	Returns: 16711935
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TX:RATE?

:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:ID?

Description	This query returns the Pattern parameter shall determine the test pattern used to fill the Test TLV.
	At *RST condition, this value is 1.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Test Function (Synthetic Loss) > Test ID
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:ID?
Response Syntax	<Test Id>
Response(s)	**Test Id**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Peer MEP Id values in integer format.
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE TESTID
	SOUR:DATA:TEL:SOAM:FUNC:TEST:ID #H00FF00FF
	SOUR:DATA:TEL:SOAM:FUNC:TEST:ID?
	Returns: 16711935
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TX:RATE

:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:PATTern

Description	This command sets the Test Pattern parameter shall determine the test pattern used to fill the Test TLV.
	At *RST condition, this value is set to PRBS31.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Test Pattern
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:PATTern[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the Test Pattern.
	NULLCRC32: NULLCRC32
	NULLPATTERN: NULL
	PRBS31: PRBS31
	PRBS31CRC32: PRBS31CRC32
Response Syntax	<Test Id>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE TEST
	SOUR:DATA:TEL:SOAM:FUNC:TEST:PATTern PRBS31
	SOUR:DATA:TEL:SOAM:FUNC:TEST:PATTern?
	Returns: PRBS31
See Also	SOURce:DATA:TELecom:SOAM:FUNC:ADDRess:TYPE?

:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:PATTern?

Description	This query returns the Pattern parameter shall determine the test pattern used to fill the Test TLV.
	At *RST condition, this value is PRBS31.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Test Pattern
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:PATTern?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Test Pattern.
	NULLCRC32, NULLCRC32 is selected as type of Test Pattern.
	NULLPATTERN,NULL is selected as type of Test Pattern.
	PRBS31, PRBS31 is selected as type of Test Pattern.
	PRBS31CRC32,PRBS31CRC32 is selected as type of Test Pattern.
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE TEST
	SOUR:DATA:TEL:SOAM:FUNC:TEST:PATTern PRBS31
	SOUR:DATA:TEL:SOAM:FUNC:TEST:PATTern?
	Returns: PRBS31
See Also	SOURce:DATA:TELecom:SOAM:FUNC:ADDRess:TYPE

:SOURce:DATA:TELecom:SOAM:FUNCtion:TLV:TYPE

Description	This command sets the TLV Type parameter shall be configured to Test and shall be set in read-only state.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - TLV Type
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TLV:TYPE[<wsp><Type>]
Parameter(s)	Type:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the TLV type.
	DATA
	INVALID
	TEST
	TESTID
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE DATA
	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE?
	Returns: DATA
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:ADDRess:TYPe?

:SOURce:DATA:TELecom:SOAM:FUNCtion:TLV:TYPE?

Description	This query returns the TLV Type parameter.
	At *RST condition, this value is device dependent.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - TLV Type
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TLV:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the TLV type.
	DATA, DATA is selected as TLV type.
	INVALID,INVALID is selected as TLV type.
	TEST, TEST is selected as TLV type.
	TESTID,TESTID is selected as TLV type.
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE DATA
	SOUR:DATA:TEL:SOAM:FUNC:TLV:TYPE?
	Returns: DATA
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:ADDRess:TYPE

:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENABle

Description	This command enables/disables TX Enable.
	At *RST condition, this value is set to OFF.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - TX Enable
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TX:ENABle ON
	SOUR:DATA:TEL:SOAM:FUNC:TX:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:MAC:ADDRess?

:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENABle?

Description	This query returns the on/off status of TX Enable.
	At *RST condition, this value is OFF.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - TX Enable
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SOAM:FUNC:TX:ENABle ON
	SOUR:DATA:TEL:SOAM:FUNC:TX:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:PEER:MEP:MAC:ADDRess

:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:RATE

Description	This command sets the TX Rate % parameter shall determine the transmission rate of the LBM frame.
	At *RST condition, this value is set to 99.4999.
	Range: 0.001 to 100.000%
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - TX Rate
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TX rate.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:TEST:FUNC LOOPBACK
	SOUR:DATA:TEL:SOAM:FUNC:TX:RATE 50
	SOUR:DATA:TEL:SOAM:FUNC:TX:RATE?
	Returns: 50
See Also	SOURce:DATA:TELecom:SOAM:LOC:MA:NAME?

:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:RATE?

Description	This query returns the TX Rate % parameter shall determine the transmission rate of the LBM frame.
	At *RST condition, this value is 99.4999.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - TX Rate
Syntax	:SOURce:DATA:TELecom:SOAM:FUNCtion:TX:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the TX rate.
	This parameter is optional. If no token is specified, the current TX rate value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the TX rate.
	MAXimum, Gets the Tx rate as maximum.
	MINimum, Gets the Tx rate as minimum.
Example(s)	SOUR:DATA:TEL:SOAM:TEST:FUNC LOOPBACK
	SOUR:DATA:TEL:SOAM:FUNC:TX:RATE 50
	SOUR:DATA:TEL:SOAM:FUNC:TX:RATE?
	Returns: 50
See Also	SOURce:DATA:TELecom:SOAM:LOC:MA:NAME

:SOURce:DATA:TELecom:SOAM:IP

Description	This command sets the IPv4 Address.
	At *RST condition, this value is set to 000.000.000.000
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Next Hop Router - IP address
Syntax	:SOURce:DATA:TELecom:SOAM:IP <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the IPv4 address.
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SOAM:IP 10.192.5.124
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TLV:TYPe

:SOURce:DATA:TELecom:SOAM:IP?

Description	This query returns the IPv4 Address.
	At *RST condition, this value is set to 000.000.000.000
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Next Hop Router - IP address
Syntax	:SOURce:DATA:TELecom:SOAM:IP?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the IPv4 address.
Example(s)	SOUR:DATA:TEL:SOAM:IP 10.192.5.124
	SOUR:DATA:TEL:SOAM:IP?
	Returns: 10.192.5.124
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TLV:TYPe?

:SOURce:DATA:TELecom:SOAM:IPVersion

Description	This command sets the IPv6 Address.
	At *RST condition, this value is set to FFFF:FFFF:FFFF:FFFF:FFFF:FFFF:FFFF:FFFF
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Next Hop Router - IP address
Syntax	:SOURce:DATA:TELecom:SOAM:IPVersion <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the IPv6 address.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:SOAM:IPV FE80:0000:0000:0000:0200:00FF:FE00:0000
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TLV:TYPe

:SOURce:DATA:TELecom:SOAM:IPVersion?

Description	This query returns the IPv6 Address.
	At *RST condition, this value is set to FFFF:FFFF:FFFF:FFFF:FFFF:FFFF:FFFF:FFFF
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Next Hop Router - IP address
Syntax	:SOURce:DATA:TELecom:SOAM:IPVersion?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the IPv6 address.
Example(s)	SOUR:DATA:TEL:SOAM:IPV FE80:0000:0000:0000:0200:00FF:FE00:0000
	SOUR:DATA:TEL:SOAM:IPV?
	Returns: FE80:0000:0000:0000:0200:00FF:FE00:0000
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TLV:TYPe?

:SOURce:DATA:TELecom:SOAM:LOCal:DOMain:ID

Description	This command sets the Maintenance Domain Id.
	At *RST condition, this value is set to EXFO Domain ID.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MAID - Domain ID
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:DOMain:ID[<wsp><Domain Id>]
Parameter(s)	**Domain Id**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the Domain Id value.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:SOAM:MODE AG8021
	SOUR:DATA:TEL:SOAM:LOC:DOMain:ID EXFO Domain
	SOUR:DATA:TEL:SOAM:LOC:DOMain:ID?
	Returns: EXFO Domain
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:ID?

:SOURce:DATA:TELecom:SOAM:LOCal:DOMain:ID?

Description	This query returns the Maintenance Domain Id.
	At *RST condition, this value is EXFO Domain ID.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MAID - Domain ID
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:DOMain:ID?
Response Syntax	<Domain Id>
Response(s)	**Domain Id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Local Domain Id value.
Example(s)	SOUR:DATA:TEL:SOAM:MODE AG8021
	SOUR:DATA:TEL:SOAM:LOC:DOMain:ID EXFO Domain
	SOUR:DATA:TEL:SOAM:LOC:DOMain:ID?
	Returns: EXFO Domain
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:ID

:SOURce:DATA:TELecom:SOAM:LOCal:MA:NAME

Description	This command sets the Maintenance Domain Name.
	At *RST condition, this value is set to EXFO MA Name.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MAID - MA Name
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MA:NAME[<wsp><MA Name>]
Parameter(s)	**MA Name**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the MA Name.
Response Syntax	<Domain Id>
Example(s)	SOUR:DATA:TEL:SOAM:MODE AG8021
	SOUR:DATA:TEL:SOAM:LOC:MA:NAME EXFO MA
	SOUR:DATA:TEL:SOAM:LOC:MA:NAME?
	Returns: EXFO MA
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:PATTern?

:SOURce:DATA:TELecom:SOAM:LOCal:MA:NAME?

Description	This query returns the Maintenance Domain Name.
	At *RST condition, this value is EXFO MA Name.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MAID - MA Name
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MA:NAME?
Response Syntax	<MA Name>
Response(s)	**MA Name**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Local MA Name.
Example(s)	SOUR:DATA:TEL:SOAM:MODE AG8021
	SOUR:DATA:TEL:SOAM:LOC:MA:NAME EXFO MA
	SOUR:DATA:TEL:SOAM:LOC:MA:NAME?
	Returns: EXFO MA
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TEST:PATTern

:SOURce:DATA:TELecom:SOAM:LOCal:MD:LEVel

Description	This command sets the Maintenance domain levels.
	At *RST condition, this value is set to 7.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MD Level
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MD:LEVel[<wsp><MD Level>]
Parameter(s)	**MD Level**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the MD Level.
	0: the MD Level 0
	1: the MD Level 1
	2: the MD Level 2
	3: the MD Level 3
	4: the MD Level 4
	5: the MD Level 5
	6: the MD Level 6
	7: the MD Level 7
Response Syntax	<MA Name>
Example(s)	SOUR:DATA:TEL:SOAM:MODE AG8021
	SOUR:DATA:TEL:SOAM:LOC:MD:LEVel 5
	SOUR:DATA:TEL:SOAM:LOC:MD:LEVel?
	Returns: 5
See Also	SOURce:DATA:TELecom:SOAM:FUNC:PAYLoad?

:SOURce:DATA:TELecom:SOAM:LOCal:MD:LEVel?

Description	This query returns the Maintenance domain levels.
	At *RST condition, this value is 7.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MD Level
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MD:LEVel?
Response Syntax	<MD Level>
Response(s)	**MD Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the MD Level.
	1, 1 is selected as MD Level
	2, 2 is selected as MD Level
	3, 3 is selected as MD Level
	4, 4 is selected as MD Level
	5, 5 is selected as MD Level
	6, 6 is selected as MD Level
	7,7 is selected as MD Level
Example(s)	SOUR:DATA:TEL:SOAM:MODE AG8021
	SOUR:DATA:TEL:SOAM:LOC:MD:LEVel 5
	SOUR:DATA:TEL:SOAM:LOC:MD:LEVel?
	Returns: 5
See Also	SOURce:DATA:TELecom:SOAM:FUNC:PAYLoad

:SOURce:DATA:TELecom:SOAM:LOCal:MEG:ID

Description	This command sets the MEG ID.
	At *RST condition, this value is set to EXFO MEG ID.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MEG ID
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MEG:ID[<wsp><MEG Id>]
Parameter(s)	**MEG Id**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the MEG Id value.
Response Syntax	<MD Level>
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:LOCal:MEG:ID EXFO 123
	SOUR:DATA:TEL:SOAM:LOCal:MEG:ID?
	Returns: EXFO 123
See Also	SOURce:DATA:TELecom:SOAM:LOCal:MEP:ID?

:SOURce:DATA:TELecom:SOAM:LOCal:MEG:ID?

Description	This query returns the MEG ID.
	At *RST condition, this value is EXFO MEG ID.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MEG ID
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MEG:ID?
Response Syntax	<MEG Id>
Response(s)	**MEG Id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Local MEG Id value.
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:LOCal:MEG:ID EXFO 123
	SOUR:DATA:TEL:SOAM:LOCal:MEG:ID?
	Returns: EXFO 123
See Also	SOURce:DATA:TELecom:SOAM:LOCal:MEP:ID

:SOURce:DATA:TELecom:SOAM:LOCal:MEG:LEVel

Description	This command sets the MEG Level.
	At *RST condition, this value is set to 7.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MEG Level
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MEG:LEVel[<wsp><MEG Level>]
Parameter(s)	**MEG Level**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the MEG Level.
	0: the MEG Level 0
	1: the MEG Level 1
	2: the MEG Level 2
	3: the MEG Level 3
	4: the MEG Level 4
	5: the MEG Level 5
	6: the MEG Level 6
	7: the MEG Level 7
Response Syntax	<MEG Id>
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:LOCal:MEG:LEVel 1
	SOUR:DATA:TEL:SOAM:LOCal:MEG:LEVel?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:TESt:FUNCtion?

:SOURce:DATA:TELecom:SOAM:LOCal:MEG:LEVel?

Description	This query returns the MEG Level.
	At *RST condition, this value is 7.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MEG Level
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MEG:LEVel?
Response Syntax	<MEG Level>
Response(s)	**MEG Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the MEG Level.
	0, 0 is Selected as the MEG Level
	1, 1 is Selected as the MEG Level
	2, 2 is Selected as the MEG Level
	3, 3 is Selected as the MEG Level
	4, 4 is Selected as the MEG Level
	5,5 is Selected as the MEG Level
	6, 6 is Selected as the MEG Level
	7, 7 is Selected as the MEG Level
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:LOCal:MEG:LEVel 1
	SOUR:DATA:TEL:SOAM:LOCal:MEG:LEVel?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:TESt:FUNCtion

:SOURce:DATA:TELecom:SOAM:LOCal:MEP:ID

Description	This command sets the local MEP ID.
	At *RST condition, this value is set to 0x0001.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MEP ID
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MEP:ID[<wsp><MEP Id>]
Parameter(s)	**MEP Id**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Local MEP ID. The range for the MEP ID is from 0x0001 to 0x1FFF
Response Syntax	<MEG Level>
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:LOCal:MEP:ID #H15
	SOUR:DATA:TEL:SOAM:LOCal:MEP:ID?
	Returns: 21
See Also	SOURce:DATA:TELecom:SOAM:THReshold?

:SOURce:DATA:TELecom:SOAM:LOCal:MEP:ID?

Description	This query returns the Local MEP ID.
	At *RST condition, this value is 1.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Local Parameters - MEP ID
Syntax	:SOURce:DATA:TELecom:SOAM:LOCal:MEP:ID?
Response Syntax	<MEP Id>
Response(s)	**MEP Id**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Local MEP Id values in integer format.
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:LOCal:MEP:ID #H15
	SOUR:DATA:TEL:SOAM:LOCal:MEP:ID?
	Returns: 21
See Also	SOURce:DATA:TELecom:SOAM:THReshold

:SOURce:DATA:TELecom:SOAM:MODE

Description	This command sets the OAM mode.
	At *RST condition, this value is set to Y.1731 for S-OAM and G.8113.1 for MPLS-TP OAM.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > OAM Mode
Syntax	:SOURce:DATA:TELecom:SOAM:MODE[<wsp><Mode>]
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select S-OAM mode.
	Y1731: Y.1731
	AG8021: 802.1ag
	MEF: MEF
	G8113: G.8113.1
Response Syntax	<MEP Id>
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:MODE?
	Returns: Y1731
See Also	SOURce:DATA:TELecom:SOAM:RESPonder:ENABle?

:SOURce:DATA:TELecom:SOAM:MODE?

Description	This query returns the OAM mode.
	At *RST condition, this value is set to Y.1731 for S-OAM and G.8113.1 for MPLS-TP OAM.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > OAM Mode
Syntax	:SOURce:DATA:TELecom:SOAM:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the S-OAM mode.
	Y1731, Y.1731 is selected as type of S-OAM mode
	AG8021, 802.1ag is selected as type of S-OAM mode
	MEF, MEF is selected as type of S-OAM mode
	G8113, G.8113.1 is selected as type of S-OAM mode
Example(s)	SOUR:DATA:TEL:SOAM:MODE Y1731
	SOUR:DATA:TEL:SOAM:MODE?
	Returns: Y1731
See Also	SOURce:DATA:TELecom:SOAM:RESPonder:ENABle

:SOURce:DATA:TELecom:SOAM:MPLStp:ENABle

Description	This command enables/disables Label2/Label1/GAL.
	At *RST condition, this value is ON.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:ENABle \<wsp>\<Type>, \<Status>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL
	Status:
	The program data syntax for the second parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	\<Mode>
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:ENAB GAL,ON
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:ADDRess:TYPe

:SOURce:DATA:TELecom:SOAM:MPLStp:ENABle?

Description	This query returns the on/off status of Label2/Label1/GAL.
	At *RST condition, this value is ON.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:ENABle? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:ENAB GAL,ON
	SOUR:DATA:TEL:SOAM:MPLS:ENAB? GAL
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:PERiod?

:SOURce:DATA:TELecom:SOAM:MPLStp:LABel

Description	This command sets the label id value of Label2/Label1/GAL.
	At *RST condition, this value is set to device dependant.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL - Label
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:LABel <wsp><Type>,[<value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL.
	value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Label Id of Label2/Label1/GAL.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:LAB GAL,58
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:PERiod

:SOURce:DATA:TELecom:SOAM:MPLStp:LABel?

Description	This query returns the label id value of Label2/Label1/GAL.
	At *RST condition, this value is set to device dependant.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL - Label
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:LABel? <wsp><Type>,[<Value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Label Id of Label2/Label1/GAL.
	This parameter is optional. If no token is specified, the Label Id value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Label Id of Label2/Label1/GAL.
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:LAB GAL,58
	SOUR:DATA:TEL:SOAM:MPLS:LAB? GAL
	Returns: 58
See Also	SOURce:DATA:TELecom:SOAM:FUNC:ADDRess:TYPe?

:SOURce:DATA:TELecom:SOAM:MPLStp:MODE

Description	This command sets the MPLS-TP mode.
	At *RST condition, this value is set to PW.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - MPLS-TP Mode
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:MODE[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects MPLS-TP mode
	LSP: LSP.
	PW: PW.
	SECTION: SECTION.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:MODE LSP
See Also	SOURce:DATA:TELecom:SOAM:MODE

:SOURce:DATA:TELecom:SOAM:MPLStp:MODE?

Description	This query returns the MPLS-TP mode.
	At *RST condition, this value is set to PW.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - MPLS-TP Mode
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the MPLS-TP mode.
	LSP, LSP is selected.
	PW, PW is selected.
	SECTION, SECTION is selected.
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:MODE LSP
	SOUR:DATA:TEL:SOAM:MPLS:MODE?
	Returns: LSP
See Also	SOURce:DATA:TELecom:SOAM:MODE?

:SOURce:DATA:TELecom:SOAM:MPLStp:TC

Description	This command sets the TC value of Label2/Label1/GAL.
	At *RST condition, this value is set to device dependant.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL - TC
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:TC <wsp><Type>,[<value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL
	value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TC of Label2/Label1/GAL.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:TC GAL,5
See Also	SOURce:DATA:TELecom:SOAM:FUNC:ADDRess:TYPe

:SOURce:DATA:TELecom:SOAM:MPLStp:TC?

Description	This query returns the TC value of Label2/Label1/GAL.
	At *RST condition, this value is set to device dependant.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL - TC
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:TC? <wsp><Type>,[<Value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the TC of Label2/Label1/GAL.
	This parameter is optional. If no token is specified, the TC value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TC of Label2/Label1/GAL.
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:TC GAL,5
	SOUR:DATA:TEL:SOAM:MPLS:TC? GAL
	Returns: 5
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TX:RATE?

:SOURce:DATA:TELecom:SOAM:MPLStp:TTL

Description	This command sets the TTL value of Label2/Label1/GAL.
	At *RST condition, this value is set to device dependant.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL - TL
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:TTL <wsp><Type>,[<value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL
	value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TTL of Label2/Label1/GAL.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:TTL GAL,158
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TX:RATE

:SOURce:DATA:TELecom:SOAM:MPLStp:TTL?

Description	This query returns the TTL value of Label2/Label1/GAL.
	At *RST condition, this value is set to device dependant.
	Setup > Test Configurator > MPLS-TP OAM > MPLS-TP Label Stack - Label2/Label1/GAL - TL
Syntax	:SOURce:DATA:TELecom:SOAM:MPLStp:TTL? <wsp><Type>,[<Value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Label name.
	LABEL2: the Label2
	LABEL1: the Label1
	GAL: the GAL
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the TTL of Label2/Label1/GAL.
	This parameter is optional. If no token is specified, the TTL value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TTL of Label2/Label1/GAL
Example(s)	SOUR:DATA:TEL:SOAM:MPLS:TTL GAL,158
	SOUR:DATA:TEL:SOAM:MPLS:TTL? GAL
	Returns: 158
See Also	SOURce:DATA:TELecom:SOAM:CCHeck:FUNCtion:ENABle

:SOURce:DATA:TELecom:SOAM:PEER:MEP:ID

Description	This command sets the peer MEP Id.
	At *RST condition, this value is set to 0x0001.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Peer MEP Parameters - MEP ID
Syntax	:SOURce:DATA:TELecom:SOAM:PEER:MEP:ID[<wsp><MEP Id>]
Parameter(s)	**MEP Id**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Peer MEP ID. The range for the MEP ID is from 0x0001 to 0x1FFF
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SOAM:PEER:MEP:ID #H15
	SOUR:DATA:TEL:SOAM:PEER:MEP:ID?
	Returns: 21
See Also	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:COUNt?

:SOURce:DATA:TELecom:SOAM:PEER:MEP:ID?

Description	This query returns the peer MEP Id.
	At *RST condition, this value is 1.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Peer MEP Parameters - MEP ID
Syntax	:SOURce:DATA:TELecom:SOAM:PEER:MEP:ID?
Response Syntax	<MEP Id>
Response(s)	**MEP Id**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Peer MEP Id values in integer format.
Example(s)	SOUR:DATA:TEL:SOAM:PEER:MEP:ID #H15
	SOUR:DATA:TEL:SOAM:PEER:MEP:ID?
	Returns: 21
See Also	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:COUNt

:SOURce:DATA:TELecom:SOAM:PEER:MEP:MAC:ADDRess

Description	This command sets the MAC Address.
	At *RST condition, this value is set to 00:00:00:00:00:00.
	Setup > Test Configurator > S-OAM > Peer MEP Parameters - MAC Address
	Setup > Test Configurator > MPLS-TP OAM > Next Hop Router - MAC Address
Syntax	:SOURce:DATA:TELecom:SOAM:PEER:MEP:MAC:ADDRess[<wsp><Address>]
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the Peer MEP MAC address.
Response Syntax	<MEP Id>
Example(s)	SOUR:DATA:TEL:SOAM:PEER:MEP:MAC:ADDRess 00:00:00:FF:FF:CC
	SOUR:DATA:TEL:SOAM:PEER:MEP:MAC:ADDRess?
	Returns: 00:00:00:FF:FF:CC
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TLV:TYPE?

:SOURce:DATA:TELecom:SOAM:PEER:MEP:MAC:ADDRess?

Description	This query returns the MAC Address. At *RST condition, this value is 00:00:00:00:00:00. Setup > Test Configurator > S-OAM > Peer MEP Parameters - MAC Address Setup > Test Configurator > MPLS-TP OAM > Next Hop Router - MAC Address
Syntax	:SOURce:DATA:TELecom:SOAM:PEER:MEP:MAC:ADDRess?
Response Syntax	<Address>
Response(s)	**Address**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns the Peer MEP MAC address.
Example(s)	SOUR:DATA:TEL:SOAM:PEER:MEP:MAC:ADDRess 00:00:00:FF:FF:CC SOUR:DATA:TEL:SOAM:PEER:MEP:MAC:ADDRess? Returns: 00:00:00:FF:FF:CC
See Also	SOURce:DATA:TELecom:SOAM:FUNC:TLV:TYPE

:SOURce:DATA:TELecom:SOAM:PEER:MEP:QUICk:PING

Description	This command starts Quick ping.
	This command is an event and is not associated with an *RST condition.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Peer MEP Parameters - OAM Quick Ping
Syntax	:SOURce:DATA:TELecom:SOAM:PEER:MEP:QUICk:PING
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:SOAM:PEER:MEP:QUICk:PING
	SENS:DATA:TEL:SOAM:PEER:MEP:QUICk:PING?
	Returns: INPROGRESS
See Also	SENSe:DATA:TELecom:SOAM:PEER:MEP:QUICk:PING?
	SOURce:DATA:TELecom:SOAM:FUNC:FRAMe:PERiod?

:SOURce:DATA:TELecom:SOAM:RESPonder:ENABle

Description	This command enables/disables the OAM Responder
	At *RST condition, this value is ON.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > S-OAM / MPLS-TP OAM Responder
Syntax	:SOURce:DATA:TELecom:SOAM:RESPonder:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:SOAM:RESPonder:ENABle ON
	SOUR:DATA:TEL:SOAM:RESPonder:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:MODE?

:SOURce:DATA:TELecom:SOAM:RESPonder:ENABle?

Description	This query returns the on/off status of the OAM Responder
	At *RST condition, this value is ON.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > S-OAM / MPLS-TP OAM Responder
Syntax	:SOURce:DATA:TELecom:SOAM:RESPonder:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SOAM:RESPonder:ENABle ON
	SOUR:DATA:TEL:SOAM:RESPonder:ENABle?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:MODE

:SOURce:DATA:TELecom:SOAM:RESolve:MAC:ENABle

Description	This command enables/disables Resolve MAC address.
	At *RST condition, this value is OFF.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Next Hop Router - Resolve MAC address
Syntax	:SOURce:DATA:TELecom:SOAM:RESolve:MAC:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:RES:MAC:ENAB ON
See Also	SOURce:DATA:TELecom:SOAM:MODE

:SOURce:DATA:TELecom:SOAM:RESolve:MAC:ENABle?

Description	This query returns the on/off status of Resolve MAC address.
	At *RST condition, this value is OFF.
	Navigation Path: Setup > Test Configurator > S-OAM / MPLS-TP OAM > Next Hop Router - Resolve MAC address
Syntax	:SOURce:DATA:TELecom:SOAM:RESolve:MAC:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SOAM:RES:MAC:ENAB ON
	SOUR:DATA:TEL:SOAM:RES:MAC:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:MODE?

:SOURce:DATA:TELecom:SOAM:TEST:FUNCtion

Description	This command sets the functional requirements for the Test function.
	At *RST condition, this value is set to Loopback.
	Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Function
Syntax	:SOURce:DATA:TELecom:SOAM:TEST:FUNCtion[<wsp><Type>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select Test Function type.
	LOOPBACK
	TEST
	FRAMEDELAY
	FRAMELOSS
	SYNTHETICLOSS
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:SOAM:TESt:FUNCtion FRAMELOSS
	SOUR:DATA:TEL:SOAM:TESt:FUNCtion?
	Returns: FRAMELOSS
See Also	SOURce:DATA:TELecom:SOAM:LOCal:MEG:LEVel?

:SOURce:DATA:TELecom:SOAM:TEST:FUNCtion?

Description	This command sets the functional requirements for the Test function. At *RST condition, this value is set to Loopback. Setup > Test Configurator > S-OAM / MPLS-TP OAM > Test Function - Function
Syntax	:SOURce:DATA:TELecom:SOAM:TEST:FUNCtion?
Response Syntax	<Type>
Response(s)	**Type**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns Test Function type. LOOPBACK, LOOPBACK is selected as type of Test Function TEST, TEST is selected as type of Test Function FRAMEDELAY, FRAMEDELAY is selected as type of Test Function FRAMELOSS, FRAMELOSS is selected as type of Test Function SYNTHETICLOSS,SYNTHETICLOSS is selected as type of Test Function
Example(s)	SOUR:DATA:TEL:SOAM:TESt:FUNCtion FRAMELOSS SOUR:DATA:TEL:SOAM:TESt:FUNCtion? Returns: FRAMELOSS
See Also	SOURce:DATA:TELecom:SOAM:LOCal:MEG:LEVel

Thresholds (S-OAM)

:SOURce:DATA:TELecom:SOAM:THReshold

Description	This command sets the threshold values
	At *RST condition, the threshold values are 50.0 ms for Frame Dealy, 10.0% for Frame Loss, and 10.0% for Synthetic Loss.
	Navigation Path: Setup > Test Configurator > Setup > S-OAM > S-OAM or MPLS-TP OAM > Thresholds
Syntax	:SOURce:DATA:TELecom:SOAM:THReshold <wsp><Type>, <Value>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select Threshold type.
	FRAMEDELAY: Frame Delay Threshold
	FRAMELOSS: Frame Loss Threshold
	SYNTHETICLOSS: Synthetic Loss Threshold
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the threshold value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<UTCOffset>
Example(s)	SOUR:DATA:TEL:SOAM:THReshold FRAMEDELAY, 20
	SOUR:DATA:TEL:SOAM:THReshold? FRAMEDELAY
	Returns: 20
See Also	SOURce:DATA:TELecom:SOAM:LOCal:MEG:ID?

:SOURce:DATA:TELecom:SOAM:THReshold?

Description	This query returns the threshold values
	At *RST condition, the threshold values are 50.0 ms for Frame Dealy, 10.0% for Frame Loss, and 10.0% for Synthetic Loss.
	Navigation Path: Setup > Test Configurator > Setup > S-OAM > S-OAM or MPLS-TP OAM > Thresholds
Syntax	:SOURce:DATA:TELecom:SOAM:THReshold? \<wsp>\<Type>,[\<Value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Select Threshold type.
	FRAMEDELAY: Frame Delay Threshold
	FRAMELOSS: Frame Loss Threshold
	SYNTHETICLOSS: Synthetic Loss Threshold
	Value:
	The program data syntax for the second parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Returns threshold value.
	This parameter is optional. If no token is specified, the threshold value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	\<value>
Response(s)	**value**:
	The response data syntax for the first parameter is defined as a \<NR2 NUMERIC RESPONSE DATA> element.
	Returns the threshold value.
Example(s)	SOUR:DATA:TEL:SOAM:THReshold FRAMEDELAY, 20
	SOUR:DATA:TEL:SOAM:THReshold? FRAMEDELAY
	Returns: 21
See Also	SOURce:DATA:TELecom:SOAM:LOCal:MEG:ID

RFC 6349

:FETCh:DATA:TELecom:ETHernet:RFC:EWORx:RID?

Description	This query returns the ID (name) of the remote.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > RFC 6349 > Graphic (Remote module ID)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:EWORx:RID?
Response Syntax	<Remote ID>
Response(s)	**Remote ID**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Remote ID
Example(s)	FETC:DATA:TEL:ETH:RFC:EWOR:RID?
	Returns the remote's ID
See Also	FETCh:DATA:TELecom:ETHernet:RFC:EWORx:RID?

:FETCh:DATA:TELecom:ETHernet:RFC:EWORx:RSTAte?

Description	This query returns the state of the remote.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > RFC 6349 > Graphic (Remote Status)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:EWORx:RSTAte?
Response Syntax	<State>
Response(s)	**State**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Remote state
Example(s)	FETC:DATA:TEL:ETH:RFC:EWOR:RSTA?
	Returns the remote's state
See Also	FETCh:DATA:TELecom:ETHernet:RFC:EWORx:RSTAte?

:FETCh:DATA:TELecom:ETHernet:RFC:NATDiscovery:LWIPaddress?

Description	This query returns the WAN IP of the local unit.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > RFC 6349 > Graphic (WAN IP address)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:NATDiscovery:LWIPaddress?
Response Syntax	<IP Address>
Response(s)	**IP Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Local WAN IP Address
Example(s)	FETC:DATA:TEL:ETH:RFC:NATD:LWIP?
	Returns the local's WAN IP Address
See Also	FETCh:DATA:TELecom:ETHernet:RFC:NATDiscovery:RWIPaddress?

:FETCh:DATA:TELecom:ETHernet:RFC:NATDiscovery:STATus?

Description	This query returns the NAT discovery status.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > RFC 6349 > Graphic (NAT discovery status)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:NATDiscovery:STATus?
Response Syntax	<Nat Status>
Response(s)	**Nat Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns NAT discovery status
Example(s)	FETC:DATA:TEL:ETH:RFC:NATD:STAT?
	Returns the NAT discovery status
See Also	FETCh:DATA:TELecom:ETHernet:RFC:NATDiscovery:STATus?

:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:BUFFerdelay

Description	This command sets the Buffer Delay Weight.
	At *RST, this value is set to 1.0
	Navigation Path: Setup > Test Configurator > RFC 6349 > Advanced > Buffer Delay Weight
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:BUFFerdelay \<wsp>\<Buffer Delay Weight>
Parameter(s)	**Buffer Delay Weight**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Set the Buffer Delay Weight
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	\<Nat Status>
Example(s)	SOUR:DATA:TEL:ETH:RFC:ADV:BUFF 1.0
	SOUR:DATA:TEL:ETH:RFC:ADV:BUFF?
	Returns: 1.0
See Also	SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:TCPThr

:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:BUFFerdelay?

Description	This query returns the value of Buffer Delay Weight.
	At *RST, this value is set to 1.0
	Navigation Path: Setup > Test Configurator > RFC 6349 > Advanced > Buffer Delay Weight
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:BUFFerdelay?[<wsp><Buffer Delay Weight>]
Parameter(s)	**Buffer Delay Weight**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token specified, the current Buffer Delay Weight is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Buffer Delay Weight>
Response(s)	**Buffer Delay Weight**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of Buffer Delay Weight.
Example(s)	SOUR:DATA:TEL:ETH:RFC:ADV:BUFF 1.0
	SOUR:DATA:TEL:ETH:RFC:ADV:BUFF?
	Returns: 1.0
See Also	SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:TCPThr?

:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:TCPThr

Description	This command sets the TCP Throughput Weight.
	At *RST, this value is set to 0.0
	Navigation Path: Setup > Test Configurator > RFC 6349 > Advanced > TCP Throughput Weight
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:TCPThr <wsp><TCP Throughput Weight>
Parameter(s)	**TCP Throughput Weight**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the TCP Throughput Weight
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Buffer Delay Weight>
Example(s)	SOUR:DATA:TEL:ETH:RFC:ADV:TCPT 1.0
	SOUR:DATA:TEL:ETH:RFC:ADV:TCPT?
	Returns: 1.0
See Also	SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:BUFFerdelay

:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:TCPThr?

Description	This query returns the value of TCP Throughput Weight.
	At *RST, this value is set to 0.0
	Navigation Path: Setup > Test Configurator > RFC 6349 > Advanced > TCP Throughput Weight
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:TCPThr?[<wsp><TCP Throughput Weight>]
Parameter(s)	**TCP Throughput Weight**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current TCP Throughput Weight is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<TCP Throughput Weight>
Response(s)	**TCP Throughput Weight**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the value of TCP Throughput Weight.
Example(s)	SOUR:DATA:TEL:ETH:RFC:ADV:TCPT 1.0
	SOUR:DATA:TEL:ETH:RFC:ADV:TCPT?
	Returns: 1.0
See Also	SOURce:DATA:TELecom:ETHernet:RFC:ADVanced:BUFFerdelay?

:SOURce:DATA:TELecom:ETHernet:RFC:CIR

Description	This command sets the CIR for RFC 6349 test application.
	At *RST, this value is set to 1.0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > CIR
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:CIR <wsp><Direction>, <CIR>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	CIR:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the CIR
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<TCP Throughput Weight>
Example(s)	SOUR:DATA:TEL:ETH:RFC:CIR LTOR, 2.2
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TOSDs

:SOURce:DATA:TELecom:ETHernet:RFC:CIR?

Description	This query returns the CIR for RFC 6349 test application.
	At *RST, this value is set to 1.0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > CIR
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:CIR? <wsp><Direction>,[<CIR>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	CIR:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current CIR is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<CIR>
Response(s)	**CIR**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the CIR value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:CIR LTOR, 2.2
	SOUR:DATA:TEL:ETH:RFC:CIR? LTOR
	Returns 2.2
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TOSDs?

:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MANual

Description	This command sets the manual number of connections.
	At *RST,this value is set to system connection limit.
	Navigation path: Setup>Test Configurator>RFC 6349>Number Of Connections>Manual
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MANual <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the manual number of connections.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<CIR>
Example(s)	SOUR:DATA:TEL:ETH:RFC:CONN:MAN 5
See Also	SOUR:DATA:TELecom:ETHernet:RFC:CONNection:MANual?

:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MANual?

Description	This query returns the number of connections configured in manual mode for RFC 6349 test application.
	At *RST this value is set to system connection limit.
	Navigation path:Setup>Test Configurator>RFC6349>Number Of Connections>Manual
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MANual?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current manual value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Manual Number of Connections.
Example(s)	SOUR:DATA:TEL:ETH:RFC:CONN:MAN 5
See Also	SOUR:DATA:TELecom:ETHernet:RFC:CONNection:MANual

:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MODe

Description	This command selects the number of connections mode for RFC 6349 test application.
	At *RST this value sets to AUTO.
	Navigation path: Setup>Test Configurator>RFC 6349>Number Of Connections>Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MODe <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the number of connections mode.
	AUTO: Auto
	MANUAL: Manual
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:RFC:CONN:MOD AUTO
See Also	SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MODe?

:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MODe?

Description	This query returns the number of connections mode for RFC 6349 test application.
	At *RST value sets to AUTO.
	Navigation path: Setup>Test Configurator>RFC 6349>Number Of Connections>Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MODe?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the number of connections mode.
	AUTO: Auto
	MANUAL: Manual
Example(s)	SOUR:DATA:TEL:ETH:RFC:CONN:MOD MANUAL
	SOUR:DATA:TEL:ETH:RFC:CONN:MOD?
	Returns MANUAL
See Also	SOURce:DATA:TELecom:ETHernet:RFC:CONNection:MODe

:SOURce:DATA:TELecom:ETHernet:RFC:DIRection

Description	This command selects the direction for RFC 6349 test application
	At *RST, this value is set to BIDIRECTIONAL.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Direction
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:DIRection <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction
	BIDIRECTIONAL: Bidirectional
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:RFC:DIR LTOR
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort

:SOURce:DATA:TELecom:ETHernet:RFC:DIRection?

Description	This query returns the direction for RFC 6349 test application.
	At *RST, this value is set to BIDIRECTIONAL.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Direction
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:DIRection?
Response Syntax	<Direction>
Response(s)	**Direction**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the direction
	BIDIRECTIONAL: Bidirectional
	LTOR: Local to Remote
	RTOL: Remote to Local
Example(s)	SOUR:DATA:TEL:ETH:RFC:DIR LTOR
	SOUR:DATA:TEL:ETH:RFC:DIR?
	Returns LTOR
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort?

:SOURce:DATA:TELecom:ETHernet:RFC:LISTening:PORT

Description	This command sets the Listening TCP port for RFC 6349 iPerf Compatible Server operation mode.
	At *RST, this value is set to 5001.
	Navigation Path: Setup > Test Configurator > RFC 6349 > iPerf Compatible Server > Listening TCP Port
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LISTening:PORT <wsp><Port Number>
Parameter(s)	**Port Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the Remote Port Number
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Direction>
Example(s)	SOUR:DATA:TEL:ETH:RFC:LIST:PORT 3456
	SOUR:DATA:TEL:ETH:RFC:LIST:PORT?
	Returns: 3456
See Also	SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT

:SOURce:DATA:TELecom:ETHernet:RFC:LISTening:PORT?

Description	This query returns the Listening TCP port for RFC 6349 iPerf Compatible Server operation mode.
	At *RST, this value is set to 5001.
	Navigation Path: Setup > Test Configurator > RFC 6349 > iPerf Compatible Server > Listening TCP Port
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:LISTening:PORT?[<wsp><Port Number>]
Parameter(s)	**Port Number**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current TCP port number is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Port Number>
Response(s)	**Port Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Listening TCP port number.
Example(s)	SOUR:DATA:TEL:ETH:RFC:LIST:PORT 3456
	SOUR:DATA:TEL:ETH:RFC:LIST:PORT?
	Returns: 3456
See Also	SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT?

:SOURce:DATA:TELecom:ETHernet:RFC:MAX:MTU

Description	This command sets the Max MTU value
	At *RST, this value is set to 1500
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Max MTU
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:MAX:MTU <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Max MTU value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Port Number>
Example(s)	SOUR:DATA:TEL:ETH:RFC:MAX:MTU 1080
See Also	SOURce:DATA:TELecom:ETHernet:RFC:PATH:MTU:DISCovery

:SOURce:DATA:TELecom:ETHernet:RFC:MAX:MTU?

Description	This query returns the Max MTU for RFC 6349 test application.
	At *RST, this value is set to 1500
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Max MTU
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:MAX:MTU?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current MTU value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Max MTU value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:MAX:MTU 1080
	SOUR:DATA:TEL:ETH:RFC:MAX:MTU? Returns 1080
See Also	SOURce:DATA:TELecom:ETHernet:RFC:PATH:MTU:DISCovery?

:SOURce:DATA:TELecom:ETHernet:RFC:MAXConnections

Description	This command selects the max number of connection allowed for RFC 6349 test application.
	At *RST, this value is set to 16.
	Navigation Path: RFC 6349 > Test Configurator > RFC 6349 > Max Nb of Connection Allowed
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:MAXConnections <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the max number of connection allowed
	16
	128
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:ETH:RFC:MAXC 16

:SOURce:DATA:TELecom:ETHernet:RFC:MAXConnections?

Description	This query returns the max number of connection allowed for RFC 6349 test application.
	At *RST, this value is set to 16.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Max Nb of Connection Allowed
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:MAXConnections?
Response Syntax	<Number>
Response(s)	**Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the max number of connection allowed
	16
	128
Example(s)	SOUR:DATA:TEL:ETH:RFC:MAXC 16
	SOUR:DATA:TEL:ETH:RFC:MAXC?
	Returns: 16

:SOURce:DATA:TELecom:ETHernet:RFC:MULTiple:CONNections

Description	This command enable disables Multiple connections
	At *RST, this value is set to 1
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Multiple Connections
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:MULTiple:CONNections <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enable/disable the Multiple connections
	ON: Enables the Multiple connections
	OFF: Disables the Multiple connections
Response Syntax	<Number>
Example(s)	SOUR:DATA:TEL:ETH:RFC:MULT:CONN ON
See Also	SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe

:SOURce:DATA:TELecom:ETHernet:RFC:MULTiple:CONNections?

Description	This query returns status of Multiple connection
	At *RST, this value is set to 1
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Multiple Connections
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:MULTiple:CONNections?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Multiple connection status
	1, Multiple connection is enabled.
	0, Multiple connection is disabled.
Example(s)	SOUR:DATA:TEL:ETH:RFC:MULT:CONN ON
	SOUR:DATA:TEL:ETH:RFC:MULT:CONN? Returns 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe?

:SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe

Description	This command selects the operation mode for RFC 6349 test application.
	At *RST, this value is set to Dual Test Set.
	Navigation Path: RFC 6349 > Test Configurator > RFC 6349 > Operation mode
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the operation mode
	RFC6349DTS: RFC 6349 DTS
	IPERFCS: iPerf Compatible Server
	TCPTDTS: TCP Throughput DTS
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:RFC:OPER:MOD RFC6349DTS
See Also	SOURce:DATA:TELecom:ETHernet:RFC:DIRection

:SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe?

Description	This query returns the operation mode for RFC 6349 test application.
	At *RST, this value is set to Dual Test Set.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Operation mode
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe?
Response Syntax	\<Mode\>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the Operation mode
	RFC6349DTS: RFC 6349 DTS
	IPERFCS: iPerf Compatible Server
	TCPTDTS: TCP Throughput DTS
Example(s)	SOUR:DATA:TEL:ETH:RFC:OPER:MOD RFC6349DTS
	SOUR:DATA:TEL:ETH:RFC:OPER:MOD?
	Returns RFC6349DTS
See Also	SOURce:DATA:TELecom:ETHernet:RFC:DIRection?

:SOURce:DATA:TELecom:ETHernet:RFC:PATH:MTU:DISCovery

Description	This command sets the status for Path MTU discovery.
	At *RST, this value is set to ON.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Path MTU Discovery
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:PATH:MTU:DISCovery \<wsp>\<Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Enable/disable the Path MTU Discovery.
	ON: Enables the Path MTU Discovery.
	OFF: Disables the Path MTU Discovery.
Response Syntax	\<Mode>
Example(s)	SOUR:DATA:TEL:ETH:RFC:PATH:MTU:DISC ON
See Also	SOURce:DATA:TELecom:ETHernet:RFC:MAX:MTU

:SOURce:DATA:TELecom:ETHernet:RFC:PATH:MTU:DISCovery ?

Description	This query returns the status for Path MTU discovery.
	At *RST, this value is set to 0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Path MTU Discovery
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:PATH:MTU:DISCovery?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Path MTU Discovery status.
	1, Path MTU Discovery is enabled.
	0, Path MTU Discovery is disabled.
Example(s)	SOUR:DATA:TEL:ETH:RFC:PATH:MTU:DISC ON
	SOUR:DATA:TEL:ETH:RFC:PATH:MTU:DISC? Returns 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:MAX:MTU?

:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:ADDRess:IP

Description	This command set the remote IP for the EXFO | Worx Interop operation mode of RFC 6349 test application.
	At *RST, this value is set to Dual Test Set.
	Navigation Path: Setup > Test Configurator > RFC 6349 > Remote IP Address
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:ADDRess:IP <wsp><IP Address>
Parameter(s)	**IP Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Set the Remote IP Address
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:RFC:REMO:ADDR:IP 1.2.3.4
	SOUR:DATA:TEL:ETH:RFC:ADDR:IP? Return 1.2.3.4
See Also	SOURce:DATA:TELecom:ETHernet:RFC:REMOte:ADDRess:IP

:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:ADDRess:IP?

Description	This query returns the remote IP for the EXFO | Worx Interop operation mode of RFC 6349 test application.
	At *RST, this value is set to Dual Test Set.
	Navigation Path: Setup > Test Configurator > RFC 6349 > Remote IP address
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:ADDRess:IP?
Response Syntax	<IP Address>
Response(s)	**IP Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Remote IP Address
	DTS: Dual test set
	IPREF
Example(s)	SOUR:DATA:TEL:ETH:RFC:REMO:ADDR:IP?
	Returns remote's IP address
See Also	SOURce:DATA:TELecom:ETHernet:RFC:REMOte:ADDRess:IP?

:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT

Description	This command set the TCP port number of RFC 6349 test application.
	At *RST, this value is set to 50201.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TCP Port
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT <wsp><Port Number>
Parameter(s)	**Port Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the Remote Port Number
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<IP Address>
Example(s)	SOUR:DATA:TEL:ETH:RFC:REMO:PORT 56789
	SOUR:DATA:TEL:ETH:RFC:REMO:PORT? Return 56789
See Also	SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT

:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT?

Description	This query returns the TCP port number of RFC 6349 test application.
	At *RST, this value is set to 50201.
	Navigation Path: Setup > Test Configurator > RFC 6349 > TCP Port
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT?[<wsp><Port Number>]
Parameter(s)	**Port Number**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current TCP port number is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Port Number>
Response(s)	**Port Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Remote port number
	DTS: Dual test set
	IPREF
Example(s)	SOUR:DATA:TEL:ETH:RFC:REMO:PORT?
	Returns remote's port number
See Also	SOURce:DATA:TELecom:ETHernet:RFC:REMOte:PORT?

:SOURce:DATA:TELecom:ETHernet:RFC:RESTore:DEFault

Description	This command restore defaults the RFC 6349 values.
	This is a action commands and has no default value.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Restore RFC 6349 Defaults.
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:RESTore:DEFault
Response Syntax	<Port Number>
Example(s)	SOUR:DATA:TEL:ETH:RFC:REST:DEF
See Also	SOURce:DATA:TELecom:OTN:REStore:DEFault
	SOURce:DATA:TELecom:ETHernet:ESAM:RESTore:DEFault
	SOURce:DATA:TELecom:ETHernet:STReam:GLOBal:RESTore:DEFault
	SOURce:DATA:TELecom:RESTore:DEFault

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort

Description	This command sets the TCP server port for RFC 6349 test application.
	At *RST, this value is set to 50201.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Server port
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort <wsp><Direction>, <TCP server port>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	TCP server port:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TCP server port value
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Port Number>
Example(s)	SOUR:DATA:TEL:ETH:RFC:TCP:SERP 24
See Also	SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort?

Description	This query returns the direction for RFC 6349 test application.
	At *RST, this value is set to 50201
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Server port
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort? <wsp><Direction>,[<Value>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port number.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<TCP server port>
Response(s)	**TCP server port**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TCP server port value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:TCP:SERP 24
	SOUR:DATA:TEL:ETH:RFC:TCP:SERP?
	Returns 24
See Also	SOURce:DATA:TELecom:ETHernet:RFC:OPERation:MODe?

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:DURation

Description	This command sets the TCP Throughput duration.
	At *RST, this value is set to 00d:00:01:00
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Throughput > Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:DURation \<wsp>\<Duration>
Parameter(s)	**Duration**:
	The program data syntax for the first parameter is defined as a \<STRING PROGRAM DATA> element.
	Sets the TCP throughput duration.
	Format is 00d:hh:mm:ss
Response Syntax	\<TCP server port>
Example(s)	SOUR:DATA:TEL:ETHernet:RFC:TCP:THR:DUR 00d:00:01:01
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:DURation?

Description	This query returns the TCP Throughput duration.
	At *RST, this value is set to 00d:00:01:00
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Throughput > Duration
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:DURation?
Response Syntax	<Duration>
Response(s)	**Duration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the TCP Throughput duration
Example(s)	SOUR:DATA:TEL:ETHernet:RFC:TCP:THR:DUR 00d:00:01:01
	SOUR:DATA:TEL:ETHernet:RFC:TCP:THR:DUR? Returns 00d:00:01:01
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold?

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold

Description	This command sets the TCP Throughput Threshold.
	At *RST, this value is set to 95.0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Throughput > Threshold(%)
	Navigation Path: Results > Summary > TCP Throughput > TCP Throughput Threshold
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TCP Throughput Threshold.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Duration>
Example(s)	SOUR:DATA:TEL:ETH:RFC:TCP:THR:THR 20.2
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:DURation

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold?

Description	This query returns the TCP Throughput Threshold.
	At *RST, this value is set to 95.0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Throughput > Threshold(%)
	Navigation Path: Results > Summary > TCP Throughput > TCP Throughput Threshold
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current TCP Throughput Threshold is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Threshold value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:TCP:THR:THR 20.2
	SOUR:DATA:TEL:ETH:RFC:TCP:THR:THR? Returns 20.2
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:DURation?

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:VERDict

Description	This command enabe disables the TCP Throughput Verdict
	At *RST, this value is set to 1
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Throughput > Verdict
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:VERDict <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enable/disable the TCP throughput verdict.
	ON: Enables the verdict
	OFF: Disables the verdict
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:ETH:RFC:TCP:THR:VERD 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:VERDict?

Description	This query returns status of the TCP Throughput Verdict
	At *RST, this value is set to 1
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TCP Throughput > Verdict
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:VERDict?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the verdict status
	1, verdict is enabled.
	0, verdict is disabled.
Example(s)	SOUR:DATA:TEL:ETH:RFC:TCP:THR:VERD 1
	SOUR:DATA:TEL:ETH:RFC:TCP:THR:VERD? Returns 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold?

:SOURce:DATA:TELecom:ETHernet:RFC:TOSDs

Description	This command sets the TOS/DS for RFC 6349 test application.
	At *RST, this value is set to 0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TOSDs <wsp><Direction>, <TOSDS>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	TOSDS:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TOS/DS value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:RFC:TOSD LTOR,#H01
See Also	SOURce:DATA:TELecom:ETHernet:RFC:CIR

:SOURce:DATA:TELecom:ETHernet:RFC:TOSDs?

Description	This query returns the TOS/DS for RFC 6349 test application.
	At *RST, this value is set to 0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > TOS/DS
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TOSDs? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<TOS/DS>
Response(s)	**TOS/DS**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TOS/DS value
Example(s)	SOUR:DATA:TEL:ETH:RFC:TOSD LTOR,#H01
	SOUR:DATA:TEL:ETH:RFC:TOSD? LTOR Returns 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:CIR?

:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor

Description	This command sets the Window Boost Factor for RFC 6349 test application. At *RST, this value is set to 1.0 NavigationPath: Setup > RFC 6349 > Test Configurator > RFC 6349 > Window Boost
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor <wsp><Direction>, <WBFactor>
Parameter(s)	**Direction**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. LTORemote: Local to Remote RTOLocal: Remote to Local **WBFactor**: The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the Window Boost Factor MAXimum: Biggest supported value MINimum: Smallest supported value DEFault: Default value
Response Syntax	<TOS/DS>
Example(s)	SOUR:DATA:TEL:ETH:RFC:WBF 1.3
See Also	SOURce:DATA:TELecom:ETHernet:RFC:CIR

:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor:ENABle

Description	This command enables Window Boost Factor
	At *RST, this value is set to OFF
	Navigation Path: Setup > Test Configurator > RFC 6349 > Window Boost - Enable
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enable/disable the Window Boost Factor
	ON: Enables
	OFF: Disables
Response Syntax	<TOS/DS>
Example(s)	SOUR:DATA:TEL:ETH:RFC:WBF:ENAB ON
See Also	SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep ON

:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor:ENABle?

Description	This query returns the Window Boost Factor Enable status.
	At *RST, this value is set to OFF
	Navigation Path: Setup > Test Configurator > RFC 6349 > Window Boost - Enable
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Window Boost Factor enable status
	1, Enabled.
	0, Disabled
Example(s)	SOUR:DATA:TEL:ETH:RFC:WBF:ENAB ON
	SOUR:DATA:TEL:ETH:RFC:WBF:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep

:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor?

Description	This query returns the Window Boost Factor for RFC 6349 test application.
	At *RST condition, this value is set to 1.0
	Navigation Path: Setup > Test Configurator > RFC 6349 > Window Boost
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WBFactor? <wsp><Direction>,[<WBFactor>]
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	WBFactor:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Window Boost Factor is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<WBFactor>
Response(s)	**WBFactor**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Window Boost Factor value.
Example(s)	SOUR:DATA:TEL:ETH:RFC:WBF 1.3
	SOUR:DATA:TEL:ETH:RFC:WBF?
	Returns: 1.3
See Also	SOURce:DATA:TELecom:ETHernet:RFC:CIR?

:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep

Description	This command sets the Window sweep status
	At *RST, this value is set to 0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Window Sweep
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enable/disable the Window sweep
	ON: Enables the Window sweep
	OFF: Disables the Window sweep
Response Syntax	<WBFactor>
Example(s)	SOUR:DATA:TEL:ETH:RFC:WIND:SWE ON
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:VERDict

:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep:DURation

Description	This command sets the Window sweep status.
	At *RST, this value is set to 00:30
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Window Sweep > Duration (per step)
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep:DURation <wsp><Duratoin>
Parameter(s)	**Duratoin**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the Window sweep duration.
	Format is MM:SS
Response Syntax	<WBFactor>
Example(s)	SOUR:DATA:TEL:ETH:RFC:WIND:SWE:DUR 00:30
See Also	SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep

:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep:DURation?

Description	This query returns the Window sweep status.
	At *RST, this value is set to 00:30
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Window Sweep > Duration (per step)
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep:DURation?
Response Syntax	<Duration>
Response(s)	**Duration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Window sweep duration
Example(s)	SOUR:DATA:TEL:ETH:RFC:WIND:SWE:DUR 00:30
	SOUR:DATA:TEL:ETH:RFC:WIND:SWE:DUR? Returns 00:30
See Also	SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep?

:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep?

Description	This query returns the Window sweep status.
	At *RST, this value is set to 0
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Window Sweep
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WINDow:SWEep?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Window sweep status
	1, Window sweep is enabled.
	0, Window sweep is disabled.
Example(s)	SOUR:DATA:TEL:ETH:RFC:WIND:SWE ON
	SOUR:DATA:TEL:ETH:RFC:WIND:SWE? Returns 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:VERDict?

:SOURce:DATA:TELecom:ETHernet:RFC:WSIZetarget

Description	This command selects the direction for RFC 6349 test application
	At *RST, this value is set to BIDIRECTIONAL.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Direction
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WSIZetarget <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Window size target
	WS1M: window size 1MiB
	WS4M: window size 4 MiB
	WS8M: window size 8 MiB
	WS16M: window size 16 MiB
	WS32M: window size 32 MiB
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:RFC:WSIZetarget
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort

:SOURce:DATA:TELecom:ETHernet:RFC:WSIZetarget?

Description	This query returns the direction for RFC 6349 test application.
	At *RST, this value is set to BIDIRECTIONAL.
	Navigation Path: Setup > RFC 6349 > Test Configurator > RFC 6349 > Direction
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:WSIZetarget?
Response Syntax	<Window Size>
Response(s)	**Window Size**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Window size target
	WS1M: window size 1MiB
	WS4M: window size 4 MiB
	WS8M: window size 8 MiB
	WS16M: window size 16 MiB
	WS32M: window size 32 MiB
Example(s)	SOUR:DATA:TEL:ETH:RFC:WSIZetarget WS4M
	SOUR:DATA:TEL:ETH:RFC:WSIZetarget?
	Returns WindowSize4MiB
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:SERPort?

Link OAM

:FETCh:DATA:TELecom:LOAM:DISCovery:LOCal:STATus?

Description	This query returns the Local OAM Discovery Status.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Link OAM > OAM Discovery Status > Local
Syntax	:FETCh:DATA:TELecom:LOAM:DISCovery:LOCal:STATus?
Response Syntax	<Local Discovery Status>
Response(s)	**Local Discovery Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return local Status as Unsatisfied | Stable | Evaluating.
Example(s)	FETC:DATA:TEL:LOAM:DISC:LOC:STAT?
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle?

:FETCh:DATA:TELecom:LOAM:DISCovery:REMote:STATus?

Description	This query returns the Remote OAM Discovery Status.
	At *RST, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Link OAM > OAM Discovery Status > Remote
Syntax	:FETCh:DATA:TELecom:LOAM:DISCovery:REMote:STATus?
Response Syntax	<Remote Discovery Status>
Response(s)	**Remote Discovery Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return remote Status as Unsatisfied | Stable | Evaluating.
Example(s)	FETC:DATA:TEL:LOAM:DISC:REM:STAT?
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle?

:FETCh:DATA:TELecom:LOAM:LBACk:STATus?

Description	This query returns Local or Remote Loopback status.
	At *RST, this value of Local Loopback Status is Disabled and Remote Loopback Status depends on Remote capability.
	Navigation Path: Setup > Test Configurator > Link OAM > Local And Remote Loopback Status
	Navigation Path: Carrier Ethernet OAM > Modify Structure > OAM Type > Link OAM > Link Oam Summary Page > Local And Remote Loopback Status
Syntax	:FETCh:DATA:TELecom:LOAM:LBACk:STATus? <wsp><Device>
Parameter(s)	**Device**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Get Loopback status Enabled or Disabled.
	LOCal
	REMote
Response Syntax	<Status of Loopback>
Response(s)	**Status of Loopback**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return Staus as Disabled or Enabled.
Example(s)	FETC:DATA:TEL:LOAM:LBAC:STAT? LOC
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:SOURce:DATA:TELecom:LOAM:LBACk:LOCal

Description	This command allows configuration of Local Loopback.
	At *RST, this button control is set to Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Local Loopback Enable Button
	Navigation Path: Carrier Ethernet OAM > Modify Structure > OAM Type > Link OAM > Link Oam Summary Page > Local Loopback Enable Button.
Syntax	:SOURce:DATA:TELecom:LOAM:LBACk:LOCal <wsp><Local Status>
Parameter(s)	**Local Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set Local Loopback Enabled or Disabled.
	ENABle
	DISable
Response Syntax	<Status of Loopback>
Example(s)	SOUR:DATA:TEL:LOAM:LBAC:LOC ENABLE
See Also	SOURce:DATA:TELecom:ETHer:RFC:WIND:SWE:DUR

:SOURce:DATA:TELecom:LOAM:LBACk:REMOte

Description	This command allows configuration of Remote Loopback.
	At *RST, this button control is set to Gridout Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Remote Loopback Enable Button
	Navigation Path: Carrier Ethernet OAM > Modify Structure > OAM Type > Link OAM > Link Oam Summary Page > Remote Loopback Enable Button.
Syntax	:SOURce:DATA:TELecom:LOAM:LBACk:REMOte <wsp><Remote Status>
Parameter(s)	**Remote Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set Remote Loopback Enabled or Disabled.
	ENABle
	DISable
Response Syntax	<Status of Loopback>
Example(s)	SOUR:DATA:TEL:LOAM:LBAC:REMO ENABLE
See Also	SOURce:DATA:TELecom:ETHer:RFC:WIND:SWE:DUR

:SOURce:DATA:TELecom:LOAM:MODE

Description	This command allows configuration of OAM Mode.
	At *RST, this value is set to Active.
	Navigation Path: Setup > Test Configurator > Link OAM > OAM Mode
Syntax	:SOURce:DATA:TELecom:LOAM:MODE <wsp><OAM Mode>
Parameter(s)	**OAM Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Set OAM Mode to ACTIVE or PASSIVE.
Response Syntax	<Status of Loopback>
Example(s)	SOUR:DATA:TEL:LOAM:MODE PASSIVE
See Also	SOURce:DATA:TELecom:TSCan:LEVel:TYPE

:SOURce:DATA:TELecom:LOAM:MODE?

Description	This query returns the OAM Mode.
	At *RST, this value is set to Active.
	Navigation Path: Setup > Test Configurator > Link OAM > OAM Mode
Syntax	:SOURce:DATA:TELecom:LOAM:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return the OAM Mode.
	ACTIVE: Activate Active Mode.
	PASSIVE: Activate Passive Mode.
Example(s)	SOUR:DATA:TEL:LOAM:MODE?
See Also	SOURce:DATA:TELecom:TSCan:LEVel:TYPE?

:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC

Description	This command allows configuration of OAM PDU Destination MAC Address.
	At *RST, this value is set to 01:80:C2:00:00:02.
	Navigation Path: Setup > Test Configurator > Link OAM > OAMPDU Destination MAC Address
Syntax	:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC <wsp><MAC Address>
Parameter(s)	**MAC Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Set the MAC Address.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:LOAM:PDU:DEST:MAC 00:03:01:00:00:04
See Also	SOURce:DATA:TELecom:TSCan:LEVel:TYPE

:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC:ENABle

Description	This command allows configuration of Default MAC Button.
	At *RST, this value is set to Check Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Default
Syntax	:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:LOAM:PDU:DEST:MAC:ENABle ON
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle

:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC:ENABle?

Description	This query returns the status of Default MAC Button.
	At *RST, this value is set to Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Default
Syntax	:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:LOAM:PDU:DEST:MAC:ENAB?
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle?

:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC?

Description	This query returns the OAMPDU Destination MAC Address.
	At *RST, this value is set to 01:80:C2:00:00:02.
	Navigation Path: Setup > Test Configurator > Link OAM > OAMPDU Destination MAC Address
Syntax	:SOURce:DATA:TELecom:LOAM:PDU:DESTination:MAC?
Response Syntax	<MAC Address>
Response(s)	**MAC Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns OAM PDU Dest MAC Address.
Example(s)	SOUR:DATA:TEL:LOAM:PDU:DEST:MAC?
See Also	SOURce:DATA:TELecom:TSCan:LEVel:TYPE?

:SOURce:DATA:TELecom:LOAM:VERDict:ALARm:ENABle

Description	This command allows configuration of Remote Alarms Checkbox.
	At *RST, this value is set to Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Pass/Fail Verdict > Remote Alarms
Syntax	:SOURce:DATA:TELecom:LOAM:VERDict:ALARm:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<MAC Address>
Example(s)	SOUR:DATA:TEL:LOAM:VERD:ALAR:ENAB OFF
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle

:SOURce:DATA:TELecom:LOAM:VERDict:ALARm:ENABle?

Description	This query returns the status of Remote Alarms checkbox. At *RST, this value is set to Enable. Navigation Path: Setup > Test Configurator > Link OAM > Pass/Fail Verdict > Remote Alarms
Syntax	:SOURce:DATA:TELecom:LOAM:VERDict:ALARm:ENABle?
Response Syntax	<Status>
Response(s)	**Status**: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the enable/disable status: 1: Enabled 0: Disabled
Example(s)	SOUR:DATA:TEL:LOAM:VERD:ALAR:ENAB?
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle?

:SOURce:DATA:TELecom:LOAM:VERDict:ENABle

Description	This command allows configuration of Pass/Fail Verdict checkbox.
	At *RST, this value is set to Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:LOAM:VERDict:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:LOAM:VERD:ENAB 1
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle

:SOURce:DATA:TELecom:LOAM:VERDict:ENABle?

Description	This query returns the Pass/Fail Verdict.
	At *RST, this value is set to Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:LOAM:VERDict:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:LOAM:VERD:ENAB?
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle?

:SOURce:DATA:TELecom:LOAM:VERDict:LBACk:ENABle

Description	This command allows configuration of Remote Loopback checkbox. At *RST, this value is set to Enable. Navigation Path: Setup > Test Configurator > Link OAM > Pass/Fail Verdict > Remote Loopback
Syntax	:SOURce:DATA:TELecom:LOAM:VERDict:LBACk:ENABle <wsp><Status>
Parameter(s)	**Status**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Enables/disables: ON: Enables OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:LOAM:VERD:LBAC:ENAB ON
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle

:SOURce:DATA:TELecom:LOAM:VERDict:LBACk:ENABle?

Description	This query returns the Remote Loopback status.
	At *RST, this value is set to Enable.
	Navigation Path: Setup > Test Configurator > Link OAM > Pass/Fail Verdict > Remote Loopback
Syntax	:SOURce:DATA:TELecom:LOAM:VERDict:LBACk:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:LOAM:VERD:LBAC:ENAB?
See Also	SOURce:DATA:TELecom:TSCan:SCAN:ENABle?

Modify Trib Slots/Channels (Multi-Channel OTN)

:SOURce:DATA:TELecom:OTN:FRAMing:MIX

Description	This command sets ODUx and Port Id for both direction to the user specified values and reset assignation of TributarySlot.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels> Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:FRAMing:MIX <wsp><OduType>, <List of ODUx, PortId>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the Parent ODU type value.
	Example: Type ODU4 when mapping is ODU4/ODU0 and we want to configure ODU0 Tributaries (Slot Id/Port Id)
	List of ODUx, PortId:
	The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element.
	List of (ODUx, PortId, ...)
Response Syntax	<Page Select>
Example(s)	SOUR:DATA:TEL:OTN:FRAM:MIX ODU4,(ODU0,1,ODU1,2,ODU2,5)SOUR:DATA:TEL:OTN:FRAM:MIX? ODU4
	(ODU0,1,ODU1,2,ODU2,5)
See Also	SOURce:DATA:TELecom:OTN:TRIButaries
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?
	SOURce:DATA:TELecom:OTN:TRIButaries:DEFAult
	SOURce:DATA:TELecom:OTN:TRIButaries:COPY
	SOURce:DATA:TELecom:OTN:TRIButaries?

:SOURce:DATA:TELecom:OTN:FRAMing:MIX?

Description	This command Gets ODUx and Port Id list.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels> Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:FRAMing:MIX? <wsp><OduType>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the Parent ODU type value.
	Example: Type ODU4 when mapping is ODU4/ODUk.
Response Syntax	<ODU Type>
Response(s)	**ODU Type**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Return the ODU type of each channel
Example(s)	SOUR:DATA:TEL:OTN:FRAM:MIX ODU4,(ODU0,1,ODU1,2,ODU2,5)SOUR:DATA:TEL:OTN:FRAM:MIX? ODU4
	(ODU0,1,ODU1,2,ODU2,5)
See Also	SOURce:DATA:TELecom:OTN:FRAM:MI
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?
	SOURce:DATA:TELecom:OTN:TRIButaries:DEFAult
	SOURce:DATA:TELecom:OTN:TRIButaries:COPY
	SOURce:DATA:TELecom:OTN:TRIButaries?

:SOURce:DATA:TELecom:OTN:TRIButaries

Description	This command sets ODUx Tributaries configuration (Port Id/ Slot Id Associations) for the given direction to the user specified values
	N.B. Partial list of ODUx Tributary configuration is allowed and will be auto-completed by assigning free increasing tributary slot id to free increasing tributary port id.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels(ODUx) > Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:TRIButaries <wsp><OduType>, <Direction>, <Tributary>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the Parent ODU type value.
	Example: Type ODU4 when mapping is ODU4/ODU0 and we want to configure ODU0 Tributaries (Slot Id/Port Id)
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the channel direction to apply the tributaries configuration
	TX: TX valid only when the Coupled Status is OFF, invalid otherwise
	RX: RX valid only when the Coupled Status is OFF, invalid otherwise
	RXANDTX: RXANDTX valid only when the Coupled Status is ON, invalid otherwise
	Tributary:
	The program data syntax for the third parameter is defined as a <STRING PROGRAM DATA> element.
	List of ODUx Tributary Configuration

:SOURce:DATA:TELecom:OTN:TRIButaries

Response Syntax	<ODU Type>
Example(s)	SOUR:DATA:TEL:OTN:TRIB ODU4,rxandtx,(ODU2,1,(80,79,78,77,76,75,74,73),ODU2,10,(33:34,35,36,37:40)) when SOUR:DATA:TEL:OTN:TRIB:COUP? = 1
	SOUR:DATA:TEL:OTN:TRIB ODU4,rx,(ODU2,1,(80,79,78,77,76,75,74,73),ODU2,10,(33,34,35,36:37,38,39,40)) when SOUR:DATA:TEL:OTN:TRIB:COUP? = 0
	SOUR:DATA:TEL:OTN:TRIB ODU4,tx,(ODU2,1,(80,79,78:73),ODU2,10,(33,34,35,36,37,38,39,40)) when SOUR:DATA:TEL:OTN:TRIB:COUP? = 0
See Also	SOURce:DATA:TELecom:OTN:TRIButaries?
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?
	SOURce:DATA:TELecom:OTN:TRIButaries:DEFAult
	SOURce:DATA:TELecom:OTN:TRIButaries:COPY

:SOURce:DATA:TELecom:OTN:TRIButaries:COPYrx

Description	Copy the received ODUx Tributaries configuration (Port Id/ Slot Id Associations) into the RX ODUx Tributaries configuration (Port Id/ Slot Id Associations)
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels(ODUx) > Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:TRIButaries:COPYrx
Response Syntax	<ODU Type>
Example(s)	SOUR:DATA:TEL:OTN:TRIB:COPY
See Also	SOURce:DATA:TELecom:OTN:TRIButaries?
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?

:SOURce:DATA:TELecom:OTN:TRIButaries:COUPled

Description	This command sets the Coupled Status for the ODUx Tributaries Configuration
	At *RST condition, this value is set to ON.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels(ODUx) > Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:TRIButaries:COUPled <wsp><Status>,[<Direction>]
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the source to destination direction to copy the tributaries configuration
	TXTORX valid only when the Coupled Status is ON, will copy the TX tributaries configurarion over the RX tributaries configurarion.
	RXTOTX valid only when the Coupled Status is ON, will copy the RX tributaries configurarion over the TX tributaries configurarion.
	Invalid when the Coupled Status is OFF
Response Syntax	<ODU Type>
Example(s)	SOUR:DATA:TEL:OTN:TRIB:COUP ON, TXTORX
	SOUR:DATA:TEL:OTN:TRIB:COUP ON, RXTOTX
	SOUR:DATA:TEL:OTN:TRIB:COUP OFF
See Also	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?
	SOURce:DATA:TELecom:OTN:TRIButaries
	SOURce:DATA:TELecom:OTN:TRIButaries?
	SOURce:DATA:TELecom:OTN:TRIButaries:DEFAult

:SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?

Description	This query returns the Coupled Status for the ODUx Tributaries Configuration
	At *RST condition, this value is set to ON.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels(ODUx) > Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?
Response Syntax	<Coupled Status>
Response(s)	**Coupled Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the slot status, whether it is selected or not.
	1, returns the slot value as ON.
	0, returns the slot value as OFF.
Example(s)	SOUR:DATA:TEL:OTN:TRIB:COUP?
See Also	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled
	SOURce:DATA:TELecom:OTN:TRIButaries
	SOURce:DATA:TELecom:OTN:TRIButaries?
	SOURce:DATA:TELecom:OTN:TRIButaries:DEFAult

:SOURce:DATA:TELecom:OTN:TRIButaries:DEFAult

Description	This command sets ODUx Tributaries configuration (Port Id/ Slot Id Associations) for the given direction to the default values
	N.B. Default ODUx Tributary configuration is a group of increasing tributary slot id assigned to increasing tributary port id.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels(ODUx) > Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:TRIButaries:DEFAult <wsp><OduType>, <Direction>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the Parent ODU type value.
	Example: Type ODU4 when mapping is ODU4/ODU0 and we want to configure ODU0 Tributaries (Slot Id/Port Id)
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the channel direction to apply the tributaries configuration
	TX: TX valid only when the Coupled Status is OFF, invalid otherwise
	RX: RX valid only when the Coupled Status is OFF, invalid otherwise
	RXANDTX: RXANDTX valid only when the Coupled Status is ON, invalid otherwise
Response Syntax	<Coupled Status>
Example(s)	SOUR:DATA:TEL:OTN:TRIB:DEFA RXANDTX when SOUR:DATA:TEL:OTN:TRIB:COUP? = 1
	SOUR:DATA:TEL:OTN:TRIB:DEFA RX when SOUR:DATA:TEL:OTN:TRIB:COUP? = 0
	SOUR:DATA:TEL:OTN:TRIB:DEFA TXwhen SOUR:DATA:TEL:OTN:TRIB:COUP? = 0
See Also	SOURce:DATA:TELecom:OTN:TRIButaries?
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled
	SOURce:DATA:TELecom:OTN:TRIButaries:COUPled?

:SOURce:DATA:TELecom:OTN:TRIButaries?

Description	This query returns the complete list of ODUx Tributaries configuration (Port Id/ Slot Id Associations) for the given direction
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Test > Setup > OTU (4 lanes) > ODU Channels(ODUx) > Modify Tributary Slots/Channels
Syntax	:SOURce:DATA:TELecom:OTN:TRIButaries? <wsp><OduType>, <Direction>
Parameter(s)	**OduType**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the Parent ODU type value.
	Example: Type ODU4 when mapping is ODU4/ODU0 and we want to configure ODU0 Tributaries (Slot Id/Port Id)
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the channel direction to apply the tributaries configuration
	TX: TX valid only when the Coupled Status is OFF, invalid otherwise
	RX: RX valid only when the Coupled Status is OFF, invalid otherwise
	RXANDTX: RXANDTX valid only when the Coupled Status is ON, invalid otherwise
Response Syntax	<List of ODUx Tributary Configuration>

:SOURce:DATA:TELecom:OTN:TRIButaries?

Response(s)	**List of ODUx Tributary Configuration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns all ODUx Tributary configuration for specified parent ODU type.
	Ex: Using multi-channel test application with ODU4/ODU2 mapping and after configuring the tributaries at default the command TRIB? returns (ODU2,1,(1,2,3,4,5,6,7,8),ODU2,2,(9,10,11,12,13,14,15,16),ODU2,3,(17,18,19,20,21,22,23,24),ODU2,4,(25,26,27,28,29,30,31,32),ODU2,5,(33,34,35,36,37,38,39,40),ODU2,6,(41,42,43,44,45,46,47,48),ODU2,7,(49,50,51,52,53,54,55,56),ODU2,8,(57,58,59,60,61,62,63,64),ODU2,9,(65,66,67,68,69,70,71,72),ODU2,10,(73,74,75,76,77,78,79,80))
Example(s)	SOUR:DATA:TEL:OTN:TRIB? ODU4,rxandtx when SOUR:DATA:TEL:OTN:TRIB:COUP? = 1
	SOUR:DATA:TEL:OTN:TRIB? ODU4,tx when SOUR:DATA:TEL:OTN:TRIB:COUP? = 0
	SOUR:DATA:TEL:OTN:TRIB? ODU4,rx when SOUR:DATA:TEL:OTN:TRIB:COUP? = 0

Optical Device Under Test (iOptics)

:SOURce:DATA:TELecom:IOPTics:ADAPter:QSFP:SFP:ENABle

Description	This command enables/disables Bidirectional transceiver.
	At *RST condition, this value set to OFF.
	Navigation Path: Setup > Test Configurator > Device Under Test > Use with QSFP28 to SFP28 Adapter
Syntax	:SOURce:DATA:TELecom:IOPTics:ADAPter:QSFP:SFP:ENABle <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/Disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Type>
Example(s)	SOURCE:DATA:TEL:IOPT:ADAP:QSFP:SFP:ENAB ON
	SOURCE:DATA:TEL:IOPT:ADAP:QSFP:SFP:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENABle

:SOURce:DATA:TELecom:IOPTics:ADAPter:QSFP:SFP:ENABle?

Description	This query returns enables/disables status for Bidirectional transceiver.
	At *RST condition, this value is OFF.
	Navigation Path: Setup > Test Configurator > Device Under Test > Use with QSFP28 to SFP28 Adapter
Syntax	:SOURce:DATA:TELecom:IOPTics:ADAPter:QSFP:SFP:ENABle?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:IOPT:ADAP:QSFP:SFP:ENAB ON
	SOUR:DATA:TEL:IOPT:ADAP:QSFP:SFP:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENAble

:SOURce:DATA:TELecom:IOPTics:BDIRectional

Description	This command enables/disables Bidirectional transceiver.
	At *RST condition, this value set to OFF.
	Navigation Path: Setup > Test Configurator > Device Under Test > Bidirectional
Syntax	:SOURce:DATA:TELecom:IOPTics:BDIRectional <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/Disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Value>
Example(s)	SOURCE:DATA:TEL:IOPT:BDIR ON
	SOURCE:DATA:TEL:IOPT:BDIR?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENAble

:SOURce:DATA:TELecom:IOPTics:BDIRectional?

Description	This query returns enables/disables status for Bidirectional transceiver.
	At *RST condition, this value is OFF.
	Navigation Path: Setup > Test Configurator > Device Under Test > Bidirectional
Syntax	:SOURce:DATA:TELecom:IOPTics:BDIRectional?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:IOPT:BDIR ON
	SOUR:DATA:TEL:IOPT:BDIR?
	Returns: 1
See Also	SOURce:DATA:TELecom:SOAM:FUNCtion:TX:ENAble

:SOURce:DATA:TELecom:IOPTics:LOOPback:PORT?

Description	This query return the iOptics Loopback Port.
	At *RST condition, this value set to device-dependent.
	Navigation Path: Setup > Test Configurator > Optical Device Under Test.
Syntax	:SOURce:DATA:TELecom:IOPTics:LOOPback:PORT?
Response Syntax	<Loopback Port Id>
Response(s)	**Loopback Port Id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the iOptics Loopback Port.
Example(s)	SOUR:DATA:TEL:IOPT:LOOP:PORT?
See Also	SOUR:DATA:TEL:ETH:PORT:TRAN?

:SOURce:DATA:TELecom:IOPTics:LTYPe

Description	This command sets the host or media loopback type for iOptics Application.
	At *RST condition, this value is None.
	Navigation Path: Setup > Test Configurator > Optical Device Under Test > Host/Media Loopback
Syntax	:SOURce:DATA:TELecom:IOPTics:LTYPe <wsp><Loopback>
Parameter(s)	**Loopback**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	NONE: No loopback
	HOST_SIDE_INPUT: Host side input loopback
	MEDIA_SIDE_OUTPUT: Media side output loopback
Response Syntax	<Loopback Port Id>
Example(s)	SOUR:DATA:TEL:IOPT:LTYP NONE
See Also	SOURce:DATA:TELecom:IOPTics:RATE

:SOURce:DATA:TELecom:IOPTics:LTYPe?

Description	This query returns the host or media loopback type for iOptics Application.
	At *RST condition, this value is None.
	Navigation Path: Setup > Test Configurator > Optical Device Under Test > Host/Media Loopback
Syntax	:SOURce:DATA:TELecom:IOPTics:LTYPe?
Response Syntax	<Loopback>
Response(s)	**Loopback**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the host or media loopback type
	NONE: No loopback
	HOST_SIDE_INPUT: Host side input loopback
	MEDIA_SIDE_OUTPUT: Media side output loopback
Example(s)	SOUR:DATA:TEL:IOPT:LTYP NONE
	SOUR:DATA:TEL:IOPT:LTYP?
	Returns: NONE
See Also	SOURce:DATA:TELecom:IOPTics:RATE?

:SOURce:DATA:TELecom:IOPTics:RATE

Description	This command configures the interface rate for iOptics Application.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Optical Device Under Test > Rate
Syntax	:SOURce:DATA:TELecom:IOPTics:RATE <wsp><Rate>
Parameter(s)	**Rate:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the interface rate.
	100MOPTICAL, 1GEOPTICAL, 10GELAN, 10GEWAN: respectively 100M Optical, 1GE Optical, 10GE LAN, 10GE WAN
	1X, 2X, 4X, 8X, 10X, 16X, 32X: respectively Fibre Channel 1X, 2X, 4X, 8X, 10X, 16X, 32X
	CPRI12G, CPRI24G, CPRI31G, CPRI49G, CPRI61G, CPRI98G, CPRI101G: respectively CPRI 1.2G, 2.4G, 3.1G, 4.9G, 6.1G, 9.8G, 10.1G
	OTU3: OTU3 (4 Lanes) [43.018 Gbit/s]
	OTU4: OTU4 (4 Lanes) [111.81 Gbit/s]
	25GE: 25GE
	40GE: 40GE (4 lanes) [41.25 Gbit/s]
	100GE: 100GE (4 lanes) [103.125 Gbit/s]
	200GE: 200GE (4 lanes) [212.5 Gbit/s]
	OBSAI15G, OBSAI31G, OBSAI61G: respectively OBSAI 1.5G, 3.1G, 6.1G
	OC1, OC3, OC12, OC48, OC192: respectively OC-1, OC-3, OC-12, OC-48, OC-192
	OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F: respectively OTU1, OTU1e, OTU1f, OTU2, OTU2e, OTU2f
	OTU3E1: OTU3e1 (4 Lanes) [44.571 Gbit/s]
	OTU3E2: OTU3e2 (4 Lanes) [44.583 Gbit/s]
	400GE: 400GE (8 lanes) [425 Gbit/s]
Response Syntax	<Loopback>
Example(s)	SOUR:DATA:TEL:IOPT:RATE 1GEOPTICAL
	SOUR:DATA:TEL:IOPT:RATE?
	Returns: 1GEOPTICAL
See Also	SOURce:DATA:TELecom:ITYPe

:SOURce:DATA:TELecom:IOPTics:RATE?

Description	This query returns the interface rate for iOptics Application.
	At *RST condition, this value is device dependant.
	Navigation Path: Setup > Test Configurator > Optical Device Under Test > Rate
Syntax	:SOURce:DATA:TELecom:IOPTics:RATE?
Response Syntax	<Rate>
Response(s)	Rate:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the interface rate.
	100MOPTICAL, 1GEOPTICAL, 10GELAN, 10GEWAN: respectively 100M Optical, 1GE Optical, 10GE LAN, 10GE WAN
	1X, 2X, 4X, 8X, 10X, 16X, 32X: respectively Fibre Channel 1X, 2X, 4X, 8X, 10X, 16X, 32X
	CPRI12G, CPRI24G, CPRI31G, CPRI49G, CPRI61G, CPRI98G, CPRI101G: respectively CPRI 1.2G, 2.4G, 3.1G, 4.9G, 6.1G, 9.8G, 10.1G
	OTU3: OTU3 (4 Lanes) [43.018 Gbit/s]
	OTU4: OTU4 (4 Lanes) [111.81 Gbit/s]
	25GE: 25GE
	40GE: 40GE (4 lanes) [41.25 Gbit/s]
	100GE: 100GE (4 lanes) [103.125 Gbit/s]
	200GE: 200GE (4 lanes) [212.5 Gbit/s]
	OBSAI15G, OBSAI31G, OBSAI61G: respectively OBSAI 1.5G, 3.1G, 6.1G
	OC1, OC3, OC12, OC48, OC192: respectively OC-1, OC-3, OC-12, OC-48, OC-192
	OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F: respectively OTU1, OTU1e, OTU1f, OTU2, OTU2e, OTU2f
	OTU3E1: OTU3e1 (4 Lanes) [44.571 Gbit/s]
	OTU3E2: OTU3e2 (4 Lanes) [44.583 Gbit/s]
	400GE: 400GE (8 lanes) [425 Gbit/s]
Example(s)	SOUR:DATA:TEL:IOPT:RATE 1X
	SOUR:DATA:TEL:IOPT:RATE?
	Returns: 1X
See Also	SOURce:DATA:TELecom:ITYPe?

Test Sequence (iOptics)

:FETCh:DATA:TELecom:IOPTics:POWer:RX:RANGe?

Description	This query returns the RX Power Range for iOptics Application.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Test Sequence > RX Power Range (dBm)
Syntax	:FETCh:DATA:TELecom:IOPTics:POWer:RX:RANGe? <wsp><Range>
Parameter(s)	**Range**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the RX Power Range to return.
	RMAXimum: Selects the Minimum range.
	RMINimum: Selects the Maximum range.
Response Syntax	<Power>
Response(s)	**Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Selects the Power Value.
Example(s)	FETC:DATA:TEL:IOPT:POW:RX:RANG? RMAX
See Also	FETCh:DATA:TELecom:CPRI:SUMMary:RX:COUNter?

:FETCh:DATA:TELecom:IOPTics:POWer:TX:RANGe?

Description	This query returns the TX Power Range for iOptics Application.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Test Sequence > TX Power Range (dBm)
Syntax	:FETCh:DATA:TELecom:IOPTics:POWer:TX:RANGe? <wsp><Range>
Parameter(s)	**Range**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the TX Power Range to return.
	RMAXimum: Selects the Minimum range.
	RMINimum: Selects the Maximum range.
Response Syntax	<Power>
Response(s)	**Power**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Selects the Power Value.
Example(s)	FETC:DATA:TEL:IOPT:POW:TX:RANG? RMAX
See Also	FETCH:DATA:TELecom:CPRI:SUMMary:RX:COUNter?

:SOURce:DATA:TELecom:IOPTics:BERT:DURation

Description	This command allows to select the BERT test duration for iOptics Application.
	At *RST condition, this value is set to 1 minutes.
	Navigation Path: Setup > Test Configurator > Test Sequence > BERT Duration
Syntax	:SOURce:DATA:TELecom:IOPTics:BERT:DURation <wsp><TIME>
Parameter(s)	**TIME**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the test duration.
	1M: 1 Minute
	2M: 2 Minutes
	3M: 3 Minutes
	4M: 4 Minutes
	5M: 5 Minutes
	30M: 30 Minutes
Response Syntax	<Power>
Example(s)	SOUR:DATA:TEL:IOPT:BERT:DUR 5M
	SOUR:DATA:TEL:IOPT:BERT:DUR?
	Returns: 5M
See Also	SOURce:DATA:TELecom:TIMer:DURation

:SOURce:DATA:TELecom:IOPTics:BERT:DURation?

Description	This query returns the BERT test duration for iOptics Application.
	At *RST condition, this value is set to 1 minutes.
	Navigation Path: Setup > Test Configurator > Test Sequence > BERT Duration
Syntax	:SOURce:DATA:TELecom:IOPTics:BERT:DURation?
Response Syntax	<TIME>
Response(s)	**TIME**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the BERT duration.
	1M, 1 Minute.
	2M, 2 Minutes.
	3M, 3 Minutes.
	4M, 4 Minutes.
	5M, 5 Minutes.
	30M, 30 Minutes.
Example(s)	SOUR:DATA:TEL:IOPT:BERT:DUR 5M
	SOUR:DATA:TEL:IOPT:BERT:DUR?
	Returns: 5M
See Also	SOURce:DATA:TELecom:TIMer:DURation?

:SOURce:DATA:TELecom:IOPTics:BERT:THReshold?

Description	This query returns the BERT Threshold for iOptics Application.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > Test Configurator > Test Sequence > BERT Threshold
Syntax	:SOURce:DATA:TELecom:IOPTics:BERT:THReshold?
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the BERT Threshold.
Example(s)	SOUR:DATA:TEL:IOPT:BERT:THR?
	Returns: 5
See Also	SOURce:DATA:TELecom:CABLetest:LENGth:THReshold?

:SOURce:DATA:TELecom:IOPTics:CPCHeck

Description	This command enables/disables the control pin check status for iOptics application.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Test Sequence > Control Pin Check
Syntax	:SOURce:DATA:TELecom:IOPTics:CPCHeck <wsp><Control Pin Check>
Parameter(s)	**Control Pin Check**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:IOPT:CPCH ON
	SOUR:DATA:TEL:IOPT:CPCH?
	Returns: 1
See Also	SOURce:DATA:TELecom:IOPTics:CPCHeck?

:SOURce:DATA:TELecom:IOPTics:CPCHeck?

Description	This Query returns the enable/disable control pin check status for iOptics Test.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Test Sequence > Control Pin Check
Syntax	:SOURce:DATA:TELecom:IOPTics:CPCHeck?
Response Syntax	<Control Pin Check>
Response(s)	**Control Pin Check**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable control pin check status.
	1: Enabled.
	0: Disabled.
Example(s)	SOUR:DATA:TEL:IOPT:CPCH ON
	SOUR:DATA:TEL:IOPT:CPCH?
	Returns: 1
See Also	SOURce:DATA:TELecom:IOPTics:CPCHeck

:SOURce:DATA:TELecom:IOPTics:POWer:THReshold:VERDict

Description	This command enables/disables the power threshold verdict for iOptics application.
	At *RST condition, this value is set to Enabled.
	Navigation Path: Setup > Test Configurator > Test Sequence > Power Threshold (W)
Syntax	:SOURce:DATA:TELecom:IOPTics:POWer:THReshold:VERDict <wsp><Verdict>
Parameter(s)	**Verdict**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Control Pin Check>
Example(s)	SOUR:DATA:TEL:IOPT:POW:THR:VERD ON
	SOUR:DATA:TEL:IOPT:POW:THR:VERD?
	Returns: 1
See Also	SOURce:DATA:TELecom:CPRI:VERDict:ENABle

:SOURce:DATA:TELecom:IOPTics:POWer:THReshold:VERDict?

Description	This Query returns enable/disable verdict status for iOptics Test.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Test Sequence > Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:IOPTics:POWer:THReshold:VERDict?
Response Syntax	<STATUS>
Response(s)	**STATUS**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable verdict status.
	1: Enabled.
	0: Disabled.
Example(s)	SOUR:DATA:TEL:IOPT:POW:THR:VERD ON
	SOUR:DATA:TEL:IOPT:POW:THR:VERD?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:VERDict?

:SOURce:DATA:TELecom:IOPTics:POWer:THReshold?

Description	This query returns the power threshold value for iOptics application.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > Test Configurator > Test Sequence > Power Threshold (W)
Syntax	:SOURce:DATA:TELecom:IOPTics:POWer:THReshold?
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns Power Threshold value.
Example(s)	SOUR:DATA:TEL:IOPT:POW:THR?
	Returns: 10
See Also	SOURce:DATA:TELecom:OTN:OTL:THReshold?

:SOURce:DATA:TELecom:IOPTics:SKEW:THReshold?

Description	This query returns the SKEW Threshold for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Setup > Test Configurator > Test Sequence > SKEW Threshold
Syntax	:SOURce:DATA:TELecom:IOPTics:SKEW:THReshold?
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the SKEW Threshold.
Example(s)	SOUR:DATA:TEL:IOPT:SKEW:THR?
	Returns: 5
See Also	SOURce:DATA:TELecom:IOPTics:BERT:THReshold?

:SOURce:DATA:TELecom:IOPTics:TEMPerature:THReshold

Description	This command configure the temperature Threshold for iOptics Application.
	At *RST condition, this value is set to 70.
	Navigation Path: Setup > Test Configurator > Test Sequence > Temp. Threshold (C)
Syntax	:SOURce:DATA:TELecom:IOPTics:TEMPerature:THReshold <wsp><Temperature>
Parameter(s)	**Temperature**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Temperature Threshold.
	Choices are 0 to 75
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:IOPT:TEMP:THR 50
	SOUR:DATA:TEL:IOPT:TEMP:THR?
	Returns: 50
See Also	SENSe:DATA:TELecom:PATTern:THReshold:COUNt

:SOURce:DATA:TELecom:IOPTics:TEMPerature:THReshold?

Description	This query returns the Temperature Threshold for iOptics Application.
	At *RST condition, this value is set to 70.
	Navigation Path: Setup > Test Configurator > Test Sequence > Temp. Threshold (C)
Syntax	:SOURce:DATA:TELecom:IOPTics:TEMPerature:THReshold?[<wsp><Temperature>]
Parameter(s)	**Temperature**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current temperature is returned.
	MAXimum: Biggest value
	MINimum: Smallest value
Response Syntax	<Temperature>
Response(s)	**Temperature**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Temperature Threshold.
Example(s)	SOUR:DATA:TEL:IOPT:TEMP:THR?
	Returns: 50
See Also	SENSe:DATA:TELecom:PATTern:THReshold:COUNt?

FlexE Group

:FETCh:DATA:TELecom:FETHernet:GROup:CalendarMISmatch?

Description	This query returns the live status of FlexE Calendar Mismatch. Navigation Path: Setup > Test Configurator > FlexE Group > Calendar Mismatch
Syntax	:FETCh:DATA:TELecom:FETHernet:GROup:CalendarMISmatch?
Response Syntax	<Calendar Mismatch>
Response(s)	**Calendar Mismatch:** The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns FlexE Calendar Mismatch live status.
Example(s)	FETCh:DATA:TEL:FETH:GRO:CMIS?

:FETCh:DATA:TELecom:FETHernet:GROup:STATus?

Description	This query returns the status of FlexE Group
	Navigation Path: Setup > Test Configurator > FlexE Group > FlexE Status
Syntax	:FETCh:DATA:TELecom:FETHernet:GROup:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns FlexE Group Status
Example(s)	FETCh:DATA:TEL:FETH:GRO:STAT?

:SOURce:DATA:TELecom:FETHernet:GROup:CALendar

Description	This command selects the FlexE Calendar.
	At *RST condition, this value is set to CALENDARA.
	Navigation Path: Setup > Test Configurator > FlexE Group > Calendar
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:CALendar <wsp><Calendar In Use>
Parameter(s)	**Calendar In Use**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the FlexE Calendar
	CALENDARA: Calendar A
	CALENDARB: Calendar B
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:GRO:CAL CALENDARB
	SOUR:DATA:TEL:FETH:GRO:CAL?
	Returns: CALENDARB
See Also	SOURce:DATA:TELecom:FETHernet:GROup:CALendar?

:SOURce:DATA:TELecom:FETHernet:GROup:CALendar:GRANularity

Description	This command selects the FlexE Calendar Granularity. At *RST condition, this value is set to 5G. Navigation Path: Setup > Test Configurator > FlexE Group > Calendar Granularity
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:CALendar:GRANularity <wsp><Calendar Granularity>
Parameter(s)	**Calendar Granularity**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the FlexE Calendar granularity 5G 25G
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:GRO:CAL:GRAN 5G SOUR:DATA:TEL:FETH:GRO:CAL:GRAN? Returns: 5G
See Also	SOURce:DATA:TELecom:FETHernet:GROup:CALendar

:SOURce:DATA:TELecom:FETHernet:GROup:CALendar:GRANularity?

Description	This query returns the FlexE Calendar Granularity.
	At *RST condition, this value is set to 5G.
	Navigation Path: Setup > Test Configurator > FlexE Group > Calendar Granularity
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:CALendar:GRANularity?
Response Syntax	\<Calendar Granularity\>
Response(s)	**Calendar Granularity**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the FlexE Calendar granularity
	5G
	25G
Example(s)	SOUR:DATA:TEL:FETH:GRO:CAL:GRAN 25G
	SOUR:DATA:TEL:FETH:GRO:CAL:GRAN?
	Returns: 25G
See Also	SOURce:DATA:TELecom:FETHernet:GROup:CALendar?

:SOURce:DATA:TELecom:FETHernet:GROup:CALendar?

Description	This query returns the FlexE Calendar currently in use.
	At *RST condition, this value is set to CALENDARA.
	Navigation Path: Setup > Test Configurator > FlexE Group > Calendar
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1/2/3 C bit
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:CALendar?
Response Syntax	<Calendar In Use>
Response(s)	**Calendar In Use**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the FlexE Calendar currently in use
	CALENDARA: Calendar A
	CALENDARB: Calendar B
Example(s)	SOUR:DATA:TEL:FETH:GRO:CAL CALENDARB
	SOUR:DATA:TEL:FETH:GRO:CAL?
	Returns: CALENDARB
See Also	SOURce:DATA:TELecom:FETHernet:GROup:CALendar

:SOURce:DATA:TELecom:FETHernet:GROup:NUMBer

Description	This command sets the Group Number associated with the FlexE Group.
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:NUMBer <wsp><GroupNumber>
Parameter(s)	**GroupNumber**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the group number associated with the FlexE group.
	Value Range: 0 to 1048575
Response Syntax	<Calendar In Use>
Example(s)	SOUR:DATA:TEL:FETH:GRO:NUMB 128
	SOUR:DATA:TEL:FETH:GRO:NUMB ?
	Returns: 128
See Also	SOURce:DATA:TELecom:FETHernet:GROup:NUMBer?

:SOURce:DATA:TELecom:FETHernet:GROup:NUMBer?

Description	This query returns the group number associated with a FlexE group.
Syntax	:SOURce:DATA:TELecom:FETHernet:GROup:NUMBer?
Response Syntax	<GroupNumber>
Response(s)	**GroupNumber**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the group number associated with the FlexE group.
Example(s)	SOUR:DATA:TEL:FETH:GRO:NUMB 128 SOUR:DATA:TEL:FETH:GRO:NUMB? Returns: 128
See Also	SOURce:DATA:TELecom:FETHernet:GROup:NUMBer

FlexE Calendar

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:ACLient
Description	This command adds a new Client of the given size with the given list of FlexE Calendar Slots into the FlexE Calendar Configuration Navigation Path: Setup > Test Configurator > FlexE Group > Modify... > Add Client
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:ACLient <wsp><Client ID>, <Client Rate>, <FlexE Calendar Occupied Slots>

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:ACLient

Parameter(s)	**Client ID**:

Client ID:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Specified Client ID between 1 and 65534

DEFault: Smallest available Client ID

MINimum: Smallest available Client ID

MAXimum: Biggest available Client ID

Client Rate:

The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the type of FlexE Client Rate

 _5GB: 5Gb Client occupying 1 Calendar Slot

 _10GB: 10Gb Client occupying 2 Calendar Slots

 _25GB: 25Gb Client occupying 5 Calendar Slots

 _40GB: 40Gb Client occupying 8 Calendar Slots

 _50GB: 50Gb Client occupying 10 Calendar Slots

_100GB: 100Gb Client occupying 20 Calendar Slots

_150GB: 150Gb Client occupying 30 Calendar Slots

_200GB: 200Gb Client occupying 40 Calendar Slots

_250GB: 250Gb Client occupying 50 Calendar Slots

_300GB: 300Gb Client occupying 60 Calendar Slots

_350GB: 350Gb Client occupying 70 Calendar Slots

_400GB: 400Gb Client occupying 80 Calendar Slots

FlexE Calendar Occupied Slots:

The program data syntax for the third parameter is defined as a <STRING PROGRAM DATA> element.

String containing a coma separated list of FlexE Calendar Zero Based Slot Index between open/close parenthesis delimiters

For Granularity 5G

Example: (0,1)

For Granularity 25G the parameters will have 1 slot out of group of 5

Example: (0) selects 0,1,2,3,4 slots

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:ACLient

Response Syntax	\<Status\>
Example(s)	SOUR:DATA:TEL:FETH:CLI:CAL:ACL 1,_10GB,(0,1)
	SOUR:DATA:TEL:FETH:CLI:CAL:ACL 2,_100GB,(2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21)
	For 25G granularity
	SOUR:DATA:TEL:FETH:CLI:CAL:ACL 2,_25GB,(10)
	SOUR:DATA:TEL:FETH:CLI:CAL:ACL 3,_100GB,(15,20,25,30)
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:CONFig?
	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:RCLient

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:CONFig ?

Description	This query returns the current FlexE Client Calendar Configuration as a string containing a coma separated list of (Client Id, Ethernet Interface, List of Occupied Calendar Slots)
	Navigation Path: Setup > Test Configurator > FlexE Group > Modify...
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 3 - Client Calendar
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:CONFig?
Response Syntax	<FlexE Client Calendar Configuration>
Response(s)	**FlexE Client Calendar Configuration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current FlexE Client Calendar Configuration as a string containing a coma separated list of (Client Id, Ethernet Interface, List of Occupied Calendar Slots)
	Ex: Using a single _200Gb default client
	(1,_200Gb,(0,1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22,23,24,25,26,27,28,29,30,31,32,33,34,35,36,37,38,39))
	The numbering of the slot is from 0 to 79, so PHY1 uses 0 to 19, PHY2 uses 20 to 39 and so on.
Example(s)	SOUR:DATA:TEL:FETH:CLI:CAL:CONF?
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:DELete
	SOURce:DATA:TELecom:FETHernet:CLI:CALendar:ACLient
	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:RCLient
	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:MCID
	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:MOSLots

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:DELete

Description	This command removes all Clients from the FlexE Calendar Configuration
	Navigation Path: Setup > Test Configurator > FlexE Group > Modify...
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:DELete
Response Syntax	<FlexE Client Calendar Configuration>
Example(s)	SOUR:DATA:TEL:FETH:CLIent:CAL:DEL
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:CONFig?

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:MCID

Description	This command replaces an existing Client Id by the new given one
	Navigation Path: Setup > Test Configurator > FlexE Group > Modify...
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:MCID <wsp><Old Client ID>, <New Client ID>
Parameter(s)	**Old Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Client ID to be replaced
	New Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Client ID used to replace with
Response Syntax	<FlexE Client Calendar Configuration>
Example(s)	SOUR:DATA:TEL:FETH:CLI:CAL:MCID 1,456
See Also	SOUR:DATA:TEL:FETH:CLI:CAL:CONF?

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:MOSLots

Description	This command assigns the given list of FlexE Calendar Occupied Slots to the given Client ID Navigation Path: Setup > Test Configurator > FlexE Group > Modify...
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:MOSLots <wsp><Client ID>, <FlexE Calendar Occupied Slots>
Parameter(s)	**Client ID**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Client ID to be modified **FlexE Calendar Occupied Slots**: The program data syntax for the second parameter is defined as a <STRING PROGRAM DATA> element. String containing a coma separated list of FlexE Calendar Zero Based Slot Index between open/close parenthesis delimiters For Granularity 5G Example: (0,1) For Granularity 25G the parameters will have 1 slot out of group of 5 Example: (0) selects 0,1,2,3,4 slots
Response Syntax	<FlexE Client Calendar Configuration>
Example(s)	SOUR:DATA:TEL:FETH:CLI:CAL:MOSL 1,(5,6,7,8,9) For 25G granularity SOUR:DATA:TEL:FETH:CLI:CAL:MOSL 1,(5)
See Also	SOUR:DATA:TEL:FETH:CLI:CAL:CONF?

:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:RCLient

Description	This command removes the given Client from the FlexE Calendar Configuration
	Navigation Path: Setup > Test Configurator > FlexE Group > Modify...
Syntax	:SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:RCLient <wsp><Client ID>
Parameter(s)	**Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Client ID to be removed
Response Syntax	<FlexE Client Calendar Configuration>
Example(s)	SOUR:DATA:TEL:FETH:CLI:CAL:RCL 123
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:CONFig?
	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:ACLient

TA-xxx (Transceiver System)

:FETCh:DATA:TELecom:SLT:TA:INFO?

Description	This query displays the transceiver system infomation for the loopback tool.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test Control > Lpbk Tool > TA
Syntax	:FETCh:DATA:TELecom:SLT:TA:INFO? <wsp><TaReqInfo>
Parameter(s)	**TaReqInfo**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	ICOUNT: Transceiver system insertion counter
	ID: Transceiver System Id
	SN: Transceiver System serial number
	REV: Transceiver System revision
	BATT: Transceiver System battery level
	OMICOUNT: Optical module insertion counter
	TA_STATE: Transceiver system state
	PORT_ID: Transceiver system port id
Response Syntax	<TaRespInfo>
Response(s)	**TaRespInfo**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the requested transceiver system information
Example(s)	FETC:DATA:TEL:SLT:TA:INFO? SN
See Also	FETCh:DATA:TELecom:TA:INFO?

:FETCh:DATA:TELecom:TA:INFO?

Description	This query displays the transceiver system infomation.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface/Signal > TA/TA4
Syntax	:FETCh:DATA:TELecom:TA:INFO? <wsp><TaReqInfo>
Parameter(s)	**TaReqInfo**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	ICOUNT: Transceiver system insertion counter
	ID: Transceiver System Id
	SN: Transceiver System serial number
	REV: Transceiver System revision
	BATT: Transceiver System battery level
	OMICOUNT: Optical module insertion counter
	TA_STATE: Transceiver system state
	PORT_ID: Transceiver system port id
Response Syntax	<TaRespInfo>
Response(s)	**TaRespInfo**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the requested transceiver system information
Example(s)	FETC:DATA:TEL:TA:INFO? SN
See Also	FETCh:DATA:TELecom:TA:INFO

:FETCh:DATA:TELecom:TA:SYNC:INFO?

Description	This query displays the transceiver system sync information.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > External/Internal/Recovered/Backplane Clock > TA-SYNC
Syntax	:FETCh:DATA:TELecom:TA:SYNC:INFO? <wsp><TaSyncReqInfo>
Parameter(s)	**TaSyncReqInfo**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	ICOUNT: Transceiver system insertion counter
	ID: Transceiver System Id
	SN: Transceiver System serial number
	REV: Transceiver System revision
	TA_STATE: Transceiver system state
	PORT_ID: Transceiver system port id
Response Syntax	<TaSyncRespInfo>
Response(s)	**TaSyncRespInfo**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the requested transceiver system sync information
Example(s)	FETC:DATA:TEL:TA:SYNC:INFO? SN
See Also	FETCh:DATA:TELecom:TA:INFO

FlexO-OTUCn

:FETCh:DATA:TELecom:FOTN:GROup:STATus?

Description	This query returns the status of FlexO group.
	Navigation Path: Setup > Test Configurator > FlexO > FlexO Status
Syntax	:FETCh:DATA:TELecom:FOTN:GROup:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns FlexO group status
Example(s)	FETC:DATA:TEL:FOTN:GRO:STAT?
See Also	FETCh:DATA:TELecom:FOTN:GROup:ALARm:HISTory?
	FETCh:DATA:TELecom:FOTN:GROup:ALARm:SEConds?
	FETCh:DATA:TELecom:FOTN:GROup:ALARm:CURRent?

:SOURce:DATA:TELecom:FOTN:CLIent:CONFig?

Description	This query returns FlexO clients tributary slots assignment as a string. The returned value contains a coma separated list of client Ids, odu types, list of occupied tributary slots in the ODUCn.
	Navigation: Setup > Test Configurator > FlexO - OTUCn > OTUCn
Syntax	:SOURce:DATA:TELecom:FOTN:CLIent:CONFig?
Response Syntax	<FOTN Client Configuration>
Response(s)	**FOTN Client Configuration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns FlexO clients tributary slots assignment as a string. The returned value contains a coma separated list of client IDs, ODU types, and the list of occupied tributary slots in the ODUCn.
	Ex: Using a single OduFlex occupying all ODUC's
	(1,OduFlex,(0,1,2,3,4,5,6,7,8,9,10,11,12,,Ää13,14,15,16,17,18,19,20,21,22,23,24,25,,Ää26, 27,28,29,30,31,32,33,34,35,36,37,38,,Ää39,40,41,42,43,44,45,46,47,48,49,50,51,,Ää52,53, 54,55,56,57,58,59,60,61,62,63,64,,Ää65,66,67,68,69,70,71,72,73,74,75,76,77,,Ää78,79))
Example(s)	SOUR:DATA:TEL:FOTN:CLI:CONF?
See Also	SOURce:DATA:TELecom:FOTN:CLIent:MCID

:SOURce:DATA:TELecom:FOTN:CLIent:MCID

Description	This command replaces an existing Client ID by the new given one
	Navigation Path: Setup > Test Configurator > FlexO-OTUCn > OTUCn > Edit ID
Syntax	:SOURce:DATA:TELecom:FOTN:CLIent:MCID <wsp><Old Client ID>, <New Client ID>
Parameter(s)	**Old Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Client ID to be replaced
	New Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Client ID used to replace with
Response Syntax	<FOTN Client Configuration>
Example(s)	SOUR:DATA:TEL:FOTN:CLI:MCID 1,23
See Also	SOURce:DATA:TELecom:FOTN:CLIent:CONFig?

:SOURce:DATA:TELecom:FOTN:GROup:IDentifier

Description	This command sets the group ID associated with the FlexO Group.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > FlexO-OTUCn > FlexO > FlexO Group ID
Syntax	:SOURce:DATA:TELecom:FOTN:GROup:IDentifier <wsp><GroupID>
Parameter(s)	**GroupID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the group ID associated with the FlexO group.
	Value Range: 0 to 1048575
Response Syntax	<FOTN Client Configuration>
Example(s)	SOUR:DATA:TEL:FOTN:GRO:ID 18
	SOUR:DATA:TEL:FOTN:GRO:ID?
	Returns: 18
See Also	SOURce:DATA:TELecom:FOTN:GROup:IDentifier?

:SOURce:DATA:TELecom:FOTN:GROup:IDentifier?

Description	This query returns the group ID associated with a FlexO group. At *RST condition, this value is set to 1. Navigation Path: Setup > Test Configurator > FlexO-OTUCn > FlexO > FlexO Group ID
Syntax	:SOURce:DATA:TELecom:FOTN:GROup:IDentifier?
Response Syntax	<GroupID>
Response(s)	**GroupID**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the group ID associated with the FlexO group.
Example(s)	SOUR:DATA:TEL:FOTN:GRO:ID 18 SOUR:DATA:TEL:FOTN:GRO:ID? Returns: 18
See Also	SOURce:DATA:TELecom:FOTN:GROup:IDentifier

Modify Wavelength

:SENSe:DATA:TELecom:OPTical:TUNable:CHANnel:NUMBer?

Description	This query returns the tunable wavelength channel number value.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Modify Wavelength - Channel Number
Syntax	:SENSe:DATA:TELecom:OPTical:TUNable:CHANnel:NUMBer?
Response Syntax	<ChannelNumber>
Response(s)	**ChannelNumber**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the tunable channel number of wavelength.
Example(s)	SENS:DATA:TEL:OPT:TUN:CHAN:NUMB?
See Also	SENSe:DATA:TELecom:OPTical:TUNable:CHANnel:SPACing?

:SENSe:DATA:TELecom:OPTical:TUNable:CHANnel:SPACing?

Description	This query returns the tunable wavelength channel spacing value.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Modify Wavelength - Channel Spacing (GHz)
Syntax	:SENSe:DATA:TELecom:OPTical:TUNable:CHANnel:SPACing?
Response Syntax	<ChannelSpacing>
Response(s)	**ChannelSpacing**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the tunable channel spacing of wavelength.
Example(s)	SENS:DATA:TEL:OPT:TUN:CHAN:SPAC?
See Also	SENSe:DATA:TELecom:OPTical:TUNable:CHANnel:NUMBer?

:SENSe:DATA:TELecom:OPTical:TUNable:FREQuency?

Description	This query returns the tunable frequency value.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Modify Wavelength - Frequency (THz)
Syntax	:SENSe:DATA:TELecom:OPTical:TUNable:FREQuency?
Response Syntax	<Frequency>
Response(s)	**Frequency**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the tunable frequency value.
Example(s)	SENS:DATA:TEL:OPT:TUN:FREQ?
See Also	SENSe:DATA:TELecom:OPTical:PORT:FREQuency?

:SOURce:DATA:TELecom:OPTical:SLTool:TUNable:ITU?

Description	Returns the ITU Grid Value for the current registered wavelength on the device. Add this number to the channel number to get the ITU compliant channel number.
	At *RST condition, this value is device-dependent.
	Navigation Path: Test Control > Lpbk Tool > Interface > Physical Interface > Modify - Channel Number
Syntax	:SOURce:DATA:TELecom:OPTical:SLTool:TUNable:ITU?
Response Syntax	<ITU Grid Value>
Response(s)	**ITU Grid Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the ITU Grid Value
Example(s)	SOUR:DATA:TEL:OPT:SLT:TUN:ITU?
See Also	SENSe:DATA:TELecom:OPTical:SLTool:TUNable:CHANnel:NUMBer?

:SOURce:DATA:TELecom:OPTical:TUNable:ITU?

Description	Returns the ITU Grid Value for the current registered wavelength on the device. Add this number to the channel number to get the ITU compliant channel number.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Physical Interface > Modify Wavelength - Channel Number
Syntax	:SOURce:DATA:TELecom:OPTical:TUNable:ITU?
Response Syntax	<ITU Grid Value>
Response(s)	**ITU Grid Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the ITU Grid Value
Example(s)	SOUR:DATA:TEL:OPT:TUN:ITU?
See Also	SENSe:DATA:TELecom:OPTical:TUNable:CHANnel:NUMBer?

:SOURce:DATA:TELecom:OPTical:TUNable:WAVelength

Description	This command sets the wavelength for tunable tranceivers.
	At *RST condition, this value is device-dependent.
	Navigation Path: Setup > Test Configurator >Interface > Physical Interface >Modify Wavelength - Wavelength (nm)
Syntax	:SOURce:DATA:TELecom:OPTical:TUNable:WAVelength <wsp><Wavelength>
Parameter(s)	**Wavelength**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Modify the tunable wavelength value.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<ITU Grid Value>
Example(s)	SOUR:DATA:TEL:OPT:TUN:WAV 1548.38
See Also	SENS:DATA:TEL:SDT:THR 50.0
	SENS:DATA:TEL:SDT:THR? Returns 50.0

:SOURce:DATA:TELecom:OPTical:TUNable:WAVelength?

Description	This query returns the tunable wavelength value.
	At *RST condition, this value is device-dependent..
	Navigation Path: Setup > Test Configurator >Interface > Physical Interface >Modify Wavelength - Wavelength (nm)
Syntax	:SOURce:DATA:TELecom:OPTical:TUNable:WAVelength?[<wsp><Wavelength>]
Parameter(s)	**Wavelength**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.
	If no token is specified, the current wavelength value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the tunable wavelength value.
Example(s)	SOUR:DATA:TEL:OPT:TUN:WAV
	SOUR:DATA:TEL:OPT:TUN:WAV?
	Returns 0
See Also	SENS:DATA:TEL:SDT:THR 50.0
	SENS:DATA:TEL:SDT:THR? Returns 50.0

EMIX Pop-Up

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:DEFault

Description	This command restore the EMIX configuration to default settings for selected service/stream.
	This command is not associated with *RST condition.
	Navigation path: Setup > Test Configurator > Services > Profile > Profile-EMIX > Restore Default
	Navigation path: Setup > Test Configurator > EtherBERT > Ethernet Frame-EMIX > Restore Default
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:DEFault <wsp><Service>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service/stream number 1 or 10
	Select 1 for EtherBERT
Response Syntax	<Profile>
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:EMIX:DEF 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:QUANtity

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:QUANtity

Description	This command sets the quantity of EMIX frame sizes for selected service/stream.
	At *RST condition, this value is device-dependent.
	Navigation path: Setup > Test Configurator > Services > Profile > Profile-EMIX > Quantity
	Navigation path: Setup > Test Configurator > EtherBert> Ethernet Frame-EMIX > Quantity
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:QUANtity <wsp><Service>, <Quantity>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service/stream number 1 or 10
	Select 1 for EtherBERT
	Quantity:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the quantity of frames
Response Syntax	<Profile>
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:EMIX:QUAN 1, 5
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:SIZE

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:QUANtity?

Description	This query returns the quantity of EMIX frame sizes for selected service/stream.
	At *RST condition, this value is device-dependent.
	Navigation path: Setup > Test Configurator > Services > Profile > Profile-EMIX > Quantity
	Navigation path: Setup > Test Configurator > EtherBERT> Ethernet Frame-EMIX > Quantity
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:QUANtity? <wsp><Service>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service/stream number 1 or 10
	Select 1 for EtherBERT
Response Syntax	<Quantity>
Response(s)	**Quantity**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Quantity of EMIX frames for selected service.
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:EMIX:QUAN 1, 5
	SOUR:DATA:TEL:ETH:STR:FRAM:EMIX:QUAN? 1
	Returns 5
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:SIZE?

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:SIZE

Description	This command sets the frame size for selected service/stream.
	At *RST condition, this value is device-dependent.
	Navigation path: Setup > Test Configurator > Services > Profile > Profile-EMIX > EMIX Frame Sizes
	Navigation path: Setup > Test Configurator > EtherBERT > Ethernet Frame-EMIX > EMIX Frame Sizes
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:SIZE <wsp><Service>, <EMIX frame>, <Size>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service/stream number 1 or 10.
	Select 1 for EtherBERT.
	EMIX frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the EMIX frame.
	Size:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the frame size.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Quantity>
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:EMIX:SIZE 1, 1, 64
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:QUANtity

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:SIZE?

Description	This query returns the frame sizes for selected service/stream.
	This query is not associated with *RST condition.
	Navigation path: Setup > Test Configurator > Services > Profile > Profile-EMIX > EMIX Frame Sizes
	Navigation path: Setup > Test Configurator > EtherBERT> Ethernet Frame-EMIX > EMIX Frame Sizes
Syntax	:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:SIZE? <wsp><Service>, <EMIX Frame>,[<Size>]
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service/sream number 1 or 10.
	Select 1 for EtherBERT
	EMIX Frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the EMIX Frame.
	Size:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the EMIX Frame size.
	This parameter is optional. If no token is specified, the current EMIX frame size value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value
Response Syntax	<Frame Size>

:SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:SIZE?

Response(s)	**Frame Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return the frame size of EMIX frames for selected services/stream
Example(s)	SOUR:DATA:TEL:ETH:STR:FRAM:EMIX:SIZE 1, 1, 64
	SOUR:DATA:TEL:ETH:STR:FRAM:EMIX:SIZE? 1, 1
	Returns 64
See Also	SOURce:DATA:TELecom:ETHernet:STReam:FRAMe:EMIX:QUANtity?

Clients - Path OAM

:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:MONitoring:ENABle

Description	This command enables/disables the FlexE Path OAM Expected Client Signal Type.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > CS Type - Expected
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:MONitoring:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Value>
Example(s)	SENS:DATA:TEL:FETH:POAM:CSIG:MON:ENAB OFF
	SENS:DATA:TEL:FETH:POAM:CSIG:MON:ENAB?
	Returns: 0

:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:MONitoring:ENABle?

Description	This query returns the enable/dsable status of FlexE Path OAM Expected Client Signal Type.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > CS Type - Expected
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:MONitoring:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:FETH:POAM:CSIG:MON:ENAB OFF
	SENS:DATA:TEL:FETH:POAM:CSIG:MON:ENAB?
	Returns: 0

:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:EXPexted

Description	This command sets the FlexE Path OAM Expected Client Signal type.
	At *RST condition, this value is set to ETHERNET.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > CS Type - Expected
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:EXPexted <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the expected type
	CSTYPE_CHNL: Character Not Loaded
	CSTYPE_ETHernet: ETHERNET
	CSTYPE_SDH: SDH
	CSTYPE_CPRI: CPRI
	CSTYPE_FC: FC
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:FETH:POAM:CSIG:TYPE:EXP CSTYPE_SDH
	SENS:DATA:TEL:FETH:POAM:CSIG:TYPE:EXP?
	Returns CSTYPE_SDH

:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:EXPexted?

Description	This query returns the FlexE Path OAM Expected Client Signal type.
	At *RST condition, this value is set to ETHERNET.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > CS Type - Expected
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:EXPexted?
Response Syntax	\<Type\>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the expected type:
	CSTYPE_CHNL: Character Not Loaded
	CSTYPE_ETHernet: ETHERNET
	CSTYPE_SDH: SDH
	CSTYPE_CPRI: CPRI
	CSTYPE_FC: FC
Example(s)	SENS:DATA:TEL:FETH:POAM:CSIG:TYPE:EXP CSTYPE_SDH
	SENS:DATA:TEL:FETH:POAM:CSIG:TYPE:EXP?
	Returns CSTYPE_SDH

:SENSe:DATA:TELecom:FETHernet:POAM:CVER:DAPI:EXPexted

Description	This command sets the FlexE Path OAM connectivity verification DAPI expected message.
	At *RST condition, this value is set to EXFO DAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Expected DAPI
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CVER:DAPI:EXPexted <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Type>
Example(s)	SENS:DATA:TEL:FETH:POAM:CVER:DAPI:EXP EXFO DAPI
	SENS:DATA:TEL:FETH:POAM:CVER:DAPI:EXP?
	Returns: EXFO DAPI

:SENSe:DATA:TELecom:FETHernet:POAM:CVER:DAPI:EXPexted?

Description	This query returns the FlexE Path OAM connectivity verification DAPI expected message.
	At *RST condition, this value is set to EXFO DAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Expected DAPI
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CVER:DAPI:EXPexted?
Response Syntax	\<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA> element.
	Returns the expected message.
Example(s)	SENS:DATA:TEL:FETH:POAM:CVER:DAPI:EXP EXFO DAPI
	SENS:DATA:TEL:FETH:POAM:CVER:DAPI:EXP?
	Returns: EXFO DAPI

:SENSe:DATA:TELecom:FETHernet:POAM:CVER:MONitoring:ENABle

Description	This command enables/disables the FlexE Path OAM connectivity verification Expected SAPI/DAPI.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - SAPI/DAPI Expected
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CVER:MONitoring:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:FETH:POAM:CVER:MON:ENAB OFF
	SENS:DATA:TEL:FETH:POAM:CVER:MON:ENAB?
	Returns: 0

:SENSe:DATA:TELecom:FETHernet:POAM:CVER:MONitoring:ENABle?

Description	This query returns enable/disable status of the FlexE Path OAM connectivity verification SAPI/DAPI Expected.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - SAPI/DAPI Expected
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CVER:MONitoring:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:FETH:POAM:CVER:MON:ENAB OFF
	SENS:DATA:TEL:FETH:POAM:CVER:MON:ENAB?
	Returns: 0

:SENSe:DATA:TELecom:FETHernet:POAM:CVER:SAPI:EXPexted

Description	This command sets the FlexE Path OAM connectivity verification SAPI expectedmessage.
	At *RST condition, this value is set to EXFO SAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Expected SAPI
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CVER:SAPI:EXPexted <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the expected message.
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:FETH:POAM:CVER:SAPI:EXP EXFO SAPI
	SENS:DATA:TEL:FETH:POAM:CVER:SAPI:EXP?
	Returns: EXFO SAPI

:SENSe:DATA:TELecom:FETHernet:POAM:CVER:SAPI:EXPexted?

Description	This query returns the FlexE Path OAM connectivity verification SAPI expected message.
	At *RST condition, this value is set to EXFO SAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Expected SAPI
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:CVER:SAPI:EXPexted?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the expected message.
Example(s)	SENS:DATA:TEL:FETH:POAM:CVER:SAPI:EXP EXFO SAPI
	SENS:DATA:TEL:FETH:POAM:CVER:SAPI:EXP?
	Returns: EXFO SAPI

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:CCFunction

Description	This command enables/disables the FlexE Path OAM continuity check function
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Basic OAM - CC Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:CCFunction <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:CCF OFF
	SOUR:DATA:TEL:FETH:POAM:BOAM:CCF?
	Returns: 0

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:CCFunction?

Description	This query returns the FlexE Path OAM continuity check function status
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Basic OAM - CC Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:CCFunction?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:CCF OFF
	SOUR:DATA:TEL:FETH:POAM:BOAM:CCF?
	Returns: 0

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:PERiod

Description	This command sets the FlexE Path OAM Basic OAM period
	At *RST condition, this value is set to _64K.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Basic OAM - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:PERiod <wsp><Period>
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the period:
	_16K: 16K
	_32K: 32K
	_512K: 512K
	_64K: 64K
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:PER _32K
	SOUR:DATA:TEL:FETH:POAM:BOAM:PER?
	Returns: _32K

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:PERiod?

Description	This query returns the FlexE Path OAM Basic OAM period
	At *RST condition, this value is _64K.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Basic OAM - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:PERiod?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the period:
	_16K: 16K
	_32K: 32K
	_512K: 512K
	_64K: 64K
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:PER _32K
	SOUR:DATA:TEL:FETH:POAM:BOAM:PER?
	Returns: _32K

:SOURce:DATA:TELecom:FETHernet:POAM:CLIent:IDentifier

Description	Selects the Client Identifier associated with FlexE Path OAM.
	At *RST condition, this value is set to 1 (Default Client ID).
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Path OAM on Client ID
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CLIent:IDentifier <wsp><Client ID>
Parameter(s)	**Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects Client Identifier.
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CLI:ID 2
	SOUR:DATA:TEL:FETH:POAM:CLI:ID?
	Returns 2

:SOURce:DATA:TELecom:FETHernet:POAM:CLIent:IDentifier?

Description	Returns the Client Identifier selected for FlexE Path OAM.
	At *RST condition, this value is set to 1 (Default Client ID).
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Path OAM functions on Client ID
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CLIent:IDentifier?
Response Syntax	<Client ID>
Response(s)	**Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Client Identifier.
Example(s)	SOUR:DATA:TEL:FETH:POAM:CLI:ID 2
	SOUR:DATA:TEL:FETH:POAM:CLI:ID?
	Returns 2

:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:ENABle

Description	This command enables/disables the FlexE Path OAM Client Signal type function.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > CS Type - CS Type Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Client ID>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CSIG:ENAB
	SOUR:DATA:TEL:FETH:POAM:CSIG:ENAB?
	Returns: 0

:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:ENABle?

Description	This query returns the FlexE Path OAM Client Signal type function status
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Client Signal - CS Type Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:CSIG:ENAB
	SOUR:DATA:TEL:FETH:POAM:CSIG:ENAB?
	Returns: 0

:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TX:PERiod

Description	This command sets the FlexE Path OAM Client Signal type period
	At *RST condition, this value is set to _10S.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > CS Type - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TX:PERiod <wsp><Period>
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the period:
	_1Second: 1 Second
	_10Second: 10 Seconds
	_1Minute: 1 Minute
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CSIG:TX:PER _1S
	SOUR:DATA:TEL:FETH:POAM:CSIG:TX:PER?
	Returns _1S

:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TX:PERiod?

Description	This query returns the FlexE Path OAM Client Signal Type period
	At *RST condition, this value is set to _10S.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Client Signal - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TX:PERiod?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the period:
	_1Second: 1 Second
	_10Second: 10 Seconds
	_1Minute: 1 Minute
Example(s)	SOUR:DATA:TEL:FETH:POAM:CSIG:TX:PER _1S
	SOUR:DATA:TEL:FETH:POAM:CSIG:TX:PER?
	Returns _1S

:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated

Description	This command sets the FlexE Path OAM generated Client Signal type
	At *RST condition, this value is set to ETHERNET.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Client Signal - Type
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the type
	CSTYPE_CHNL: Character Not Loaded
	CSTYPE_ETHernet: ETHERNET
	CSTYPE_SDH: SDH
	CSTYPE_CPRI: CPRI
	CSTYPE_FC: FC
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CSIG:TYPE:GEN CSTYPE_SDH
	SOUR:DATA:TEL:FETH:POAM:CSIG:TYPE:GEN?
	Returns CSTYPE_SDH

:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated?

Description	This query returns the FlexE Path OAM generated Client Signal type
	At *RST condition, this value is set to ETHERNET
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Client Signal - Type
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type:
	CSTYPE_CHaracterNotLoaded: Chanel Not Loaded
	CSTYPE_ETHernet: ETHERNET
	CSTYPE_SDH: SDH
	CSTYPE_CPRI: CPRI
	CSTYPE_FC: FC
Example(s)	SOUR:DATA:TEL:FETH:POAM:CSIG:TYPE:GEN CSTYPE_SDH
	SOUR:DATA:TEL:FETH:POAM:CSIG:TYPE:GEN?
	Returns CSTYPE_SDH

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:DAPI:GENeration

Description	This command sets the FlexE Path OAM connectivity verification DAPI generated message.
	At *RST condition, this value is set to EXFO DAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - DAPI Generated
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:DAPI:GENeration <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:DAPI:GEN EXFO DAPI
	SOUR:DATA:TEL:FETH:POAM:CVER:DAPI:GEN?
	Returns: EXFO DAPI

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:DAPI:GENeration?

Description	This query returns the FlexE Path OAM connectivity verification DAPI generated message.
	At *RST condition, this value is set to EXFO DAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Dapi
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:DAPI:GENeration?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the generated message.
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:DAPI:GEN EXFO DAPI
	SOUR:DATA:TEL:FETH:POAM:CVER:DAPI:GEN?
	Returns: EXFO DAPI

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:ENABle

Description	This command enables/disables the FlexE Path OAM connectivity verification function
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - CV Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:ENAB OFF
	SOUR:DATA:TEL:FETH:POAM:CVER:ENAB?
	Returns: 0

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:ENABle?

Description	This query returns the FlexE Path OAM conectivity verification function status
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - CV Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:ENABle?
Response Syntax	\<Status\>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:ENAB OFF
	SOUR:DATA:TEL:FETH:POAM:CVER:ENAB?
	Returns: 0

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:SAPI:GENeration

Description	This command sets the FlexE Path OAM connectivity verification SAPI generated message.
	At *RST condition, this value is set to EXFO SAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Sapi
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:SAPI:GENeration <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the generated message.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:SAPI:GEN EXFO SAPI
	SOUR:DATA:TEL:FETH:POAM:CVER:SAPI:GEN?
	Returns: EXFO SAPI

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:SAPI:GENeration?

Description	This query returns the FlexE Path OAM connectivity verification SAPI generated message.
	At *RST condition, this value is set to EXFO SAPI.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Sapi
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:SAPI:GENeration?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the generated message.
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:SAPI:GEN EXFO SAPI
	SOUR:DATA:TEL:FETH:POAM:CVER:SAPI:GEN?
	Returns: EXFO SAPI

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:TX:PERiod

Description	This command sets the FlexE Path OAM Connectivity Verification period
	At *RST condition, this value is set to _10S.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:TX:PERiod <wsp><Period>
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the period:
	_1Second: 1 Second
	_10Second: 10 Seconds
	_1Minute: 1 Minute
Response Syntax	<Message>
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:TX:PER _1S
	SOUR:DATA:TEL:FETH:POAM:CVER:TX:PER?
	Returns _1S

:SOURce:DATA:TELecom:FETHernet:POAM:CVER:TX:PERiod?

Description	This query returns the FlexE Path OAM Connectivity Verification period
	At *RST condition, this value is set to _10S.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Connectivity Verification - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:CVER:TX:PERiod?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the period:
	_1Second: 1 Second
	_10Second: 10 Seconds
	_1Minute: 1 Minute
Example(s)	SOUR:DATA:TEL:FETH:POAM:CVER:TX:PER _1S
	SOUR:DATA:TEL:FETH:POAM:CVER:TX:PER?
	Returns _1S

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle

Description	This command enables/disables the FlexE Path OAM Delay Measurement 2DM Function.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - 2DM Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:DEL:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:RESPonder:ENABle

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle?

Description	This query returns the enable/disable status of the FlexE Path OAM Delay Measurement 2DM Function.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - 2DM Function
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle?
Response Syntax	\<Status\>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable status:
	ON: Enabled
	OFF: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:DEL:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:RESPonder:ENABle?

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:CONTinuous:ENABle

Description	This command enables/disables the FlexE Path OAM Delay Measurement Continuous transmission mode.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - Continuous
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:CONTinuous:ENABle \<wsp>\<Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	\<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL::TX:CONT:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:CONT:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:CONTinuous:ENABle?

Description	This query returns enable/disable status of the FlexE Path OAM Delay Measurement Continuous mode.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - Continuous
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:CONTinuous:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	ON: Enabled
	OFF: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL:TX:CONT:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:CONT:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle?

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:ENABle

Description	This command enables/disables the FlexE Path OAM Delay Measurement Message Transmission status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - EX Enable
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:ENABle <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL::TX:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:ENABle?

Description	This query returns the FlexE Path OAM Delay Measurement Message Transmission status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - TX Enable
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	ON: Enabled
	OFF: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL::TX:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle?

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:FRAMe:COUNt

Description	This command sets the FlexE Path OAM Delay Measurement frame count.
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - Count
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:FRAMe:COUNt <wsp><Count>
Parameter(s)	**Count**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Set the number of frame count.
	Choices are 1 through 1000.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL:TX:COUN 5
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:COUN?
	Returns 5
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:PERiod

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:FRAMe: COUNt?

Description	This query returns the FlexE Path OAM Delay Measurement frame count,
	At *RST condition, this value is set to 10.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - Count
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:FRAMe:COUNt?[<wsp><Count>]
Parameter(s)	**Count**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current burst count is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Delay Measurement frame count
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL:TX:COUN 5
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:COUN?
	Returns 5
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:PERiod?

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:PERiod

Description	This command sets the FlexE Path OAM Delay Measurement period
	At *RST condition, this value is set to _10S.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:PERiod <wsp><Period>
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the period:
	_1Second: 1 Second
	_10Second: 10 Seconds
	_1Minute: 1 Minute
Response Syntax	<Count>
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL:TX:PER _1S
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:PER?
	Returns _1S
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:PERiod

:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:PERiod?

Description	Thisquery returns the FlexE Path OAM Delay Measurement period
	At *RST condition, this value is set to _10S.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Bidirectional Delay Measurement - Period
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:DELay:TX:PERiod?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the period:
	_1Second: 1 Second
	_10Second: 10 Seconds
	_1Minute: 1 Minute
Example(s)	SOUR:DATA:TEL:FETH:POAM:DEL:TX:PER _1S
	SOUR:DATA:TEL:FETH:POAM:DEL:TX:PER?
	Returns _1S
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:PERiod?

:SOURce:DATA:TELecom:FETHernet:POAM:GSTatus

Description	This command enables/disables the global FlexE Path OAM.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Path OAM
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:GSTatus <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:FETH:POAM:GST ON
	SOUR:DATA:TEL:FETH:POAM:GST?
	Returns: 1

:SOURce:DATA:TELecom:FETHernet:POAM:GSTatus?

Description	This query returns the global FlexE Path OAM At *RST condition, this value is set to OFF. Navigation Path: Setup > Test Configurator > Clients > Path OAM > Path OAM
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:GSTatus?
Response Syntax	<Status>
Response(s)	**Status**: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the enable/disable status: 1: Enabled 0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:GST ON SOUR:DATA:TEL:FETH:POAM:GST? Returns: 1

:SOURce:DATA:TELecom:FETHernet:POAM:RESPonder:ENABle

Description	This command enables/disables the FlexE Path OAM Responder function.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > OAM Responder
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:RESPonder:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:RESP:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:RESP:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle

:SOURce:DATA:TELecom:FETHernet:POAM:RESPonder:ENABle?

Description	This Query returns the FlexE Path OAM Responder function status
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > OAM Responder
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:RESPonder:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:RESP:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:RESP:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle?

:SOURce:DATA:TELecom:FETHernet:POAM:VERDisct:ENABle

Description	This command enables/disables the FlexE Path OAM verdict status.
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Global Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:VERDisct:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:VERD:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:VERD:ENAB?
	Returns: 1

:SOURce:DATA:TELecom:FETHernet:POAM:VERDisct:ENABle?

Description	This Query returns FlexE Path OAM verdict status
	At *RST condition, this value is set to ON.
	Navigation Path: Setup > Test Configurator > Clients > Path OAM > Global Pass/Fail Verdict
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:VERDisct:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:VERD:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:VERD:ENAB?
	Returns: 1

Remote Interface Discovery

:SOURce:DATA:TELecom:ETHernet:REMote:SCANning:STATus

Description	This command enables/disables the interface discovery process.
	At *RST condition, this value is set to false.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Discovery > Discover
Syntax	:SOURce:DATA:TELecom:ETHernet:REMote:SCANning:STATus <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the discovery process
	ON: Discovery is on
	OFF: Discovery is off
Response Syntax	<Throughput>
Example(s)	SOUR:DATA:TEL:ETH:REM:SCAN:STAT ON
	SOUR:DATA:TEL:ETH:REM:SCAN:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:REMote:SCAN:TYPE

:SOURce:DATA:TELecom:ETHernet:REMote:SCANning:STATus ?

Description	This command returns the scanning status of discovery.
	At *RST condition, this value is set to false.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Discovery > Discover
Syntax	:SOURce:DATA:TELecom:ETHernet:REMote:SCANning:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the scanning status of discovery.
	1: Discovery is on
	0: Discovery is off
Example(s)	SOUR:DATA:TEL:ETH:REM:SCAN:STAT ON
	SOUR:DATA:TEL:ETH:REM:SCAN:STAT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:REMote:SSUBnet?

:SOURce:DATA:TELecom:ETHernet:REMote:SIGNature:APPLy

Description	This command apply signature to selected stream.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Discovery > Apply To Stream
Syntax	:SOURce:DATA:TELecom:ETHernet:REMote:SIGNature:APPLy <wsp><Stream ID>, <Signature ID>
Parameter(s)	**Stream ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Stream ID : Apply signature configuration on selected stream ID
	Signature ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Signature ID: Apply selected signature configuration.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:REM:SIGN:APPL
See Also	SOURce:DATA:TELecom:ETHernet:STReam:BATCh:COPY:APPLy

:SOURce:DATA:TELecom:ETHernet:REMote:SIGNature:DETail?

Description	This command returns the details for the selected singature.
	Navigation Path: Setup > Test Configurator > Streams > MAC/IP/UDP > Discovery > Remote Interfaces
Syntax	:SOURce:DATA:TELecom:ETHernet:REMote:SIGNature:DETail? <wsp><Number>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the signature ID
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the details of signature.
Example(s)	SOUR:DATA:TEL:ETH:REM:SIGN:DET? 1
	Returns: "Signature Id = 1, MAC Address = 00:03:01:F7:97:7E, IP Address= 10.10.151.126, E-VLAN Id = 2, S-VLAN Id= 2, C-VALN Id = 2"
See Also	FETCh:DATA:TELecom:LOGGer:LIST?

:SOURce:DATA:TELecom:ETHernet:REMote:SIGNature:LIST?

Description	This command returns list of signatures which are discovered from the scanning.
	Navigation Path: Setup > Test Configurator > Streams -> MAC/IP/UDP -> Discovery > Remote Interfaces
Syntax	:SOURce:DATA:TELecom:ETHernet:REMote:SIGNature:LIST?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the list of signatures.
Example(s)	SOUR:DATA:TEL:ETH:REM:SIGN:LIST?
See Also	FETCh:DATA:TELecom:LOGGer:LIST?

Link Degrade Signaling Thresholds

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:ACTivate

Description	This command sets the value of Link Degraded Signaling Activate Threshold.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling > Thresholds > Activate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:ACTivate <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets value of Link Degraded Signaling Activate Threshold.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<SkewDelayValue>
Example(s)	SOUR:DATA:TEL:FIB:LINK:DSIG:THR:ACT 7723
	SOUR:DATA:TEL:FIB:LINK:DSIG:THR:ACT?
	Returns: 7723
See Also	SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:ACTivate?

Description	This query returns the value of Link Degraded Signaling Activate Threshold.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling > Threshold > Activate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:ACTivate?[<wsp><Token>]
Parameter(s)	**Token**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum
	MINimum
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	This parameter is optional. If no token is specified, the current value of Link Degraded Signaling Activate Threshold is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Example(s)	SOUR:DATA:TEL:FIB:LINK:DSIG:THR:ACT 7230
	SOUR:DATA:TEL:FIB:LINK:DSIG:THR:ACT?
	Returns: 7230
See Also	SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval?

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:DEACtivate

Description	This command sets the value of Link Degraded Signaling Deactivate Threshold.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling > Thresholds > Deactivate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:DEACtivate <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets value of Link Degraded Signaling Deactivate Threshold.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:DEAC 7723
	SOUR:DATA:TEL:ETH:FEC:DSER:THR:DEAC?
	Returns: 7723
See Also	SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:ACTivate

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:DEACtivate?

Description	This query returns the value of Link Degraded Signaling Deactivate Threshold.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling > Threshold > Deactivate Threshold (Symbols)
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:DEACtivate?[<wsp><Token>]
Parameter(s)	**Token**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum
	MINimum
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	This parameter is optional. If no token is specified, the current value of Link Degraded Signaling Deactivate Threshold is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Example(s)	SOUR:DATA:TEL:ETH:FEC:DSER:THR:DEAC 800
	SOUR:DATA:TEL:ETH:FEC:DSER:THR:DEAC?
	Returns: 800
See Also	SOURce:DATA:TELecom:ETHernet:FEC:DSER:THReshold:ACTIvate?

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval

Description	This command sets the value of Link Degraded Signaling Interval.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling > Thresholds > Interval(CW)
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval <wsp><Interval>
Parameter(s)	**Interval**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets value of Link Degraded Signaling Interval.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Threshold>
Example(s)	SOUR:DATA:TEL:FIB:LINK:DSIG:THR:INT 123
See Also	SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:ENABle

:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval?

Description	This query returns the value of Link Degraded Signaling Interval. Navigation Path: Setup > Test Configurator > Interface > Link Degraded Signaling > Threshold > Interval(CW)
Syntax	:SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:THReshold:INTerval?[<wsp><Interval>]
Parameter(s)	**Interval**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. MAXimum MINimum
Response Syntax	<Threshold>
Response(s)	**Threshold**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. This parameter is optional. If no token is specified, the current value of Link Degraded Signaling Interval is returned. MAXimum: Biggest supported value MINimum: Smallest supported value
Example(s)	SOUR:DATA:TEL:FIB:LINK:DSIG:THR:INT 123 SOUR:DATA:TEL:FIB:LINK:DSIG:THR:INT? Returns: 123
See Also	SOURce:DATA:TELecom:FIBer:LINK:DSIGnaling:ENABle?

Timer

:SOURce:DATA:TELecom:TIMer

Description	This command enables/disables the test timer. Start time should be enabled and the start date and time should have been expired.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Timer > Arm
Syntax	:SOURce:DATA:TELecom:TIMer \<wsp>\<Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	\<value>
Example(s)	SOUR:DATA:TEL:TIM ON
	SOUR:DATA:TEL:TIM?
	Returns: 1
See Also	SOURce:DATA:TELecom:TIMer?
	SOURce:DATA:TELecom:TIMer:STOP

:SOURce:DATA:TELecom:TIMer:CONFig

Description	This command automatically starts and/or stops a test case at a given time or for a specific duration.
	At *RST condition, this value is set to 15 minutes.
	Navigation Path: Setup > Timer > Duration ON/OFF
	Navigation Path: Setup > Timer > Start Time ON/OFF
	Navigation Path: Setup > Timer > Stop Time ON/OFF
Syntax	:SOURce:DATA:TELecom:TIMer:CONFig <wsp><Time>, <Status>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	STARttime: The time the test will automatically start.
	STOPtime: The time the test will automatically stop.
	DURation: The test duration based on the test delayed start time.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<value>
Example(s)	SOUR:DATA:TEL:TIM:CONF STAR,ON
	SOUR:DATA:TEL:TIM:CONF? STAR
	Returns: 1
See Also	SOURce:DATA:TELecom:TIMer:CONFig
	SOURce:DATA:TELecom:TIMer:STARt?

:SOURce:DATA:TELecom:TIMer:CONFig?

Description	This query returns the status of the test start time, stop time, or duration.
	At *RST condition, this value is set to 15 minutes.
	Navigation Path: Setup > Timer > Duration ON/OFF
	Navigation Path: Setup > Timer > Start Time ON/OFF
	Navigation Path: Setup > Timer > Stop Time ON/OFF
Syntax	:SOURce:DATA:TELecom:TIMer:CONFig? <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	STARttime: The time the created test will automatically start.
	STOPtime: The time the test will automatically stop.
	DURation: The test duration based on the test delayed start time.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of selected parameter (STARttime, STOPtime, DURation).
Example(s)	SOUR:DATA:TEL:TIM:CONF STAR,ON
	SOUR:DATA:TEL:TIM:CONF? STAR
	Returns: 1
See Also	SOURce:DATA:TELecom:TIMer:CONFig
	SOURce:DATA:TELecom:TIMer:STARt?

:SOURce:DATA:TELecom:TIMer:DURation

Description	This command allows to select the test duration based on the test start time.
	At *RST condition, this value is set to 15 minutes.
	Navigation Path: Setup > Timer > Duration ON
	Navigation Path: Setup > Timer > Duration > Duration
Syntax	:SOURce:DATA:TELecom:TIMer:DURation <wsp><TIME>
Parameter(s)	**TIME**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Allows to select the test duration based on the test delayed start time.
	15M: 15 minutes
	1H: 1 hour
	2H: 2 hours
	4H: 4 hours
	6H: 6 hours
	12H: 12 hours
	24H: 24 hours
	72H: 72 hours
	7D: 7 days
	UDEFined: Undefined
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:TIM:DUR 15M
	SOUR:DATA:TEL:TIM:DUR?
	Returns: 15M
See Also	SOURce:DATA:TELecom:TIMer:DURation?

:SOURce:DATA:TELecom:TIMer:DURation?

Description	This query returns the test duration based on the test delayed start time.
	At *RST condition, this value is set to 15 minutes.
	Navigation Path: Setup > Timer > Duration ON
	Navigation Path: Setup > Timer > Duration > Duration
Syntax	:SOURce:DATA:TELecom:TIMer:DURation?
Response Syntax	<TIME>
Response(s)	**TIME**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test duration based on the test delayed start time.
	15M, the test duration is 15 minutes.
	1H, the test duration is 1 hour.
	2H, the test duration is 2 hours.
	6H, the test duration is 6 hours.
	12H, the test duration is 12 hours.
	24H, the test duration is 24 hours.
	72H, the test duration is 72 hours.
	7D, the test duration is 7D.
	UDEFined, the test duration is undefined.
Example(s)	SOUR:DATA:TEL:TIM:DUR 15M
	SOUR:DATA:TEL:TIM:DUR?
	Returns: 15M
See Also	SOURce:DATA:TELecom:TIMer:DURation

:SOURce:DATA:TELecom:TIMer:STARt

Description	This command sets the date and time the test will automatically start. Start time should be enabled.
	At *RST condition, this value is set to the current date.
	Navigation Path: Setup > Timer > Start Time > Date
Syntax	:SOURce:DATA:TELecom:TIMer:STARt <wsp><DateTime>
Parameter(s)	**DateTime**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the date and time the test will automatically start.
Response Syntax	<TIME>
Example(s)	SOUR:DATA:TEL:TIM:STAR "7/15/2011 20:30:35"
	SOUR:DATA:TEL:TIM:STAR?
	Returns: "7/15/2011 20:30:35"
See Also	SOURce:DATA:TELecom:TIMer:CONFig?

:SOURce:DATA:TELecom:TIMer:STARt?

Description	This query returns the date and time the test will automatically start. Start time should be enabled.
	At *RST condition, this value is set to the current date and time.
	Navigation Path: Setup > Timer > Start Time > Date
Syntax	:SOURce:DATA:TELecom:TIMer:STARt?
Response Syntax	<DateTime>
Response(s)	**DateTime**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the date and time the test will automatically start.
Example(s)	SOUR:DATA:TEL:TIM:STAR "7/15/2011 20:30:35"
	SOUR:DATA:TEL:TIM:STAR?
	Returns: "7/15/2011 20:30:35"
See Also	SOURce:DATA:TELecom:TIMer:CONFig

:SOURce:DATA:TELecom:TIMer:STOP

Description	This command sets the date and time the test will automatically stop. Stop time should be enabled.
	At *RST condition, this value is set to the current date and time.
	Navigation Path: Setup > Timer > Stop Time > Date
Syntax	:SOURce:DATA:TELecom:TIMer:STOP <wsp><DateTime>
Parameter(s)	**DateTime**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Select the specific date the test will automatically stop.
Response Syntax	<DateTime>
Example(s)	SOUR:DATA:TEL:TIM:STOP "7/15/2011 20:30:35"
	SOUR:DATA:TEL:TIM:STOP?
	Returns: "7/15/2011 20:30:35"
See Also	SOURce:DATA:TELecom:TIMer:STOP?
	SOURce:DATA:TELecom:TIMer:STARt?

:SOURce:DATA:TELecom:TIMer:STOP?

Description	This query returns the specific date and time the test will automatically stop. Stop time should be enabled.
	At *RST condition, this value is set to the current date and time.
	Navigation Path: Setup > Timer > Stop Time > Date
Syntax	:SOURce:DATA:TELecom:TIMer:STOP?
Response Syntax	<DateTime>
Response(s)	**DateTime**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the date and time the test will automatically stop.
Example(s)	SOUR:DATA:TEL:TIM:STOP "7/15/2011 20:30:35"
	SOUR:DATA:TEL:TIM:STOP?
	Returns: "7/15/2011 20:30:35"
See Also	SOURce:DATA:TELecom:TIMer:STOP
	SOURce:DATA:TELecom:TIMer:STARt

:SOURce:DATA:TELecom:TIMer:UDEFined

Description	This command allows you to select the test duration, when User Defined has been selected for duration. Choices are from 1 second to 30 days.
	At *RST condition, this value is set to 1 second.
	Navigation Path: Setup > Timer > Duration ON
	Navigation Path: Setup > Timer > Duration > User Defined Duration
Syntax	:SOURce:DATA:TELecom:TIMer:UDEFined <wsp><Utime>
Parameter(s)	**Utime**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Selects the test duration, when User Defined is selected for duration.
Response Syntax	<DateTime>
Example(s)	SOUR:DATA:TEL:TIM:UDEF 00d:00:15:00
	SOUR:DATA:TEL:TIM:UDEF?
	Returns: 00d:00:15:00
See Also	SOURce:DATA:TELecom:TIMer:UDEF?
	SOURce:DATA:TELecom:TIMer:DURation

:SOURce:DATA:TELecom:TIMer:UDEFined?

Description	This query returns the test duration, when User Defined has been selected for duration.
	At *RST condition, this value is set to 1 second.
	Navigation Path: Setup > Timer > Duration ON
	Navigation Path: Setup > Timer > Duration > User Defined Duration
Syntax	:SOURce:DATA:TELecom:TIMer:UDEFined?
Response Syntax	<User Defined Duration>
Response(s)	**User Defined Duration**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the test duration when User Defined has been selected for duration.
Example(s)	SOUR:DATA:TEL:TIM:UDEF 00d:00:15:00
	SOUR:DATA:TEL:TIM:UDEF?
	Returns: 00d:00:15:00
See Also	SOURce:DATA:TELecom:TIMer:UDEFined
	SOURce:DATA:TELecom:TIMer:DURation

:SOURce:DATA:TELecom:TIMer?

Description	This query returns the status of the test timer.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Timer > Arm
Syntax	:SOURce:DATA:TELecom:TIMer?
Response Syntax	<STATUS>
Response(s)	**STATUS**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the timer.
	1, timer is enabled.
	0, timer is disabled.
Example(s)	SOUR:DATA:TEL:TIM ON
	SOUR:DATA:TEL:TIM?
	Returns: 1
See Also	SOURce:DATA:TELecom:TIMer
	SOURce:DATA:TELecom:TIMer:STOP

System - General

:SOURce:DATA:TELecom:FACTory:RESTore:DEFault

Description	This command restores the factory default settings.
	Navigation Path: Setup > System > Factory Defult > Restore Default.
Syntax	:SOURce:DATA:TELecom:FACTory:RESTore:DEFault
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:FACT:REST:DEF
See Also	SOURce:DATA:TELecom:RESTore:DEFault

:SOURce:DATA:TELecom:TRANsceiver:TFAult:ENABle

Description	This command enables/disables the status of the 'Transceiver Transaction Fault' notification(s).
	When enabled, transaction faults seen on any transceiver involved in the test will be shown in the notification area.
	When disabled, no notifications are shown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > System > Notification Control > Transceiver Transaction Fault
Syntax	:SOURce:DATA:TELecom:TRANsceiver:TFAult:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables transceiver transaction fault notifications
	OFF: Disables transceiver transaction fault notifications
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:TRAN:TFA:ENAB ON
	SOUR:DATA:TEL:TRAN:TFA:ENAB?
	Returns: 1
See Also	FETCH:DATA:TELecom:TRANsceiver:TFAult:STATus?

:SOURce:DATA:TELecom:TRANsceiver:TFAult:ENABle?

Description	This query returns the 'Transceiver Transaction Fault' notification(s) enabled/disabled status.
	When enabled, transaction faults seen on any transceiver involved in the test will be shown in the notification area.
	When disabled, no notifications are shown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > System > Notification Control > Transceiver Transaction Fault
Syntax	:SOURce:DATA:TELecom:TRANsceiver:TFAult:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status of the 'Transceiver Transaction Fault' notification(s)
Example(s)	SOUR:DATA:TEL:TRAN:TFA:ENAB ON
	SOUR:DATA:TEL:TRAN:TFA:ENAB?
	Returns: 1
See Also	FETCH:DATA:TELecom:TRANsceiver:TFAult:STATus?

:SOURce:DATA:TELecom:TRANsceiver:VALidation:ENABle

Description	This command enables/disables the status of the 'Transceiver Validation' notification(s).
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > System > Notification Control > Transceiver Validation
Syntax	:SOURce:DATA:TELecom:TRANsceiver:VALidation:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables transceiver validation notifications
	OFF: Disables transceiver validation notifications
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:TRAN:VAL:ENAB ON
	SOUR:DATA:TEL:TRAN:VAL:ENAB?
	Returns: 1
See Also	FETCH:DATA:TELecom:TRANsceiver:TFAult:STATus?

:SOURce:DATA:TELecom:TRANsceiver:VALidation:ENABle?

Description	This query returns the 'Transceiver Validation' notification(s) enabled/disabled status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > System > Notification Control > Transceiver Validation
Syntax	:SOURce:DATA:TELecom:TRANsceiver:VALidation:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status of the 'Transceiver Validation' notification(s)
Example(s)	SOUR:DATA:TEL:TRAN:VAL:ENAB ON
	SOUR:DATA:TEL:TRAN:VAL:ENAB?
	Returns: 1
See Also	FETCH:DATA:TELecom:TRANsceiver:TFAult:STATus?

System - GNSS

:FETCh:DATA:TELecom:GNSS:ANTenna:ALTitude?

Description	This query returns the antenna Altitude coordinate for GNSS.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses > Coordinates - Altitude (m)
Syntax	:FETCh:DATA:TELecom:GNSS:ANTenna:ALTitude?
Response Syntax	<Altitude (m)>
Response(s)	Altitude (m):
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Altitude coordinate.
Example(s)	FETC:DATA:TEL:GNSS:ANT:ALT?
See Also	FETCh:DATA:TELecom:GNSS:ANTenna:LATitude?

:FETCh:DATA:TELecom:GNSS:ANTenna:LATitude?

Description	This query returns the antenna Latitude coordinate for GNSS.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses > Coordinates - Latitude (deg)
Syntax	:FETCh:DATA:TELecom:GNSS:ANTenna:LATitude?
Response Syntax	<Latitude (deg)>
Response(s)	**Latitude (deg)**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Latitude coordinate.
Example(s)	FETCh:DATA:TEL:GNSS:ANT:LAT?
See Also	FETCh:DATA:TELecom:GNSS:ANTenna:ALTitude?

:FETCh:DATA:TELecom:GNSS:ANTenna:LONGitude?

Description	This query returns the antenna Longitude coordinate for GNSS.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses > Coordinates - Longitude (deg)
Syntax	:FETCh:DATA:TELecom:GNSS:ANTenna:LONGitude?
Response Syntax	<Longitude (deg)>
Response(s)	**Longitude (deg)**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Longitude coordinate.
Example(s)	FETC:DATA:TEL:GNSS:ANT:LONG?
See Also	FETCh:DATA:TELecom:GNSS:ANTenna:LATitude?

:FETCh:DATA:TELecom:GNSS:DISCipline:PROGress?

Description	This query returns the Discipline Oscillator progress.
	Navigation Path: Setup > System > GNSS > Holdover > Tuning Status
Syntax	:FETCh:DATA:TELecom:GNSS:DISCipline:PROGress?
Response Syntax	<Progress>
Response(s)	**Progress**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns disciplining oscillator progress
Example(s)	FETC:DATA:TEL:GNSS:DISC:PROG?

:FETCh:DATA:TELecom:GNSS:DISCipline:STATus?

Description	This query returns the Disciplinine Oscillator status.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Holdover > Tuning Status
Syntax	:FETCh:DATA:TELecom:GNSS:DISCipline:STATus?
Response Syntax	<Disciplining>
Response(s)	**Disciplining**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current Disciplining status:
	DISABLED: DISABLED
	INPROGRESS: IN PROGRESS
	COMPLETED: COMPLETED
Example(s)	FETC:DATA:TEL:GNSS:DISC:STAT?

:FETCh:DATA:TELecom:GNSS:HISTogram?

Description	This query returns the Histogram Satellite information for GNSS.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Histogram
Syntax	:FETCh:DATA:TELecom:GNSS:HISTogram?
Response Syntax	<Histogram>
Response(s)	**Histogram**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Histogram information in following format:
	Satellite ID:Rx Power:Used/NotUsed
Example(s)	FETC:DATA:TEL:GNSS:HIST?
	Returns: "G10:25:Used; E10:40:NotUsed"
See Also	FETCh:DATA:TELecom:GNSS?

:FETCh:DATA:TELecom:GNSS:HOLDover:ETIMe?

Description	This query returns the Holdover Elapsed time.
	Navigation Path: Setup > System > GNSS > Holdover > Elapsed Time
Syntax	:FETCh:DATA:TELecom:GNSS:HOLDover:ETIMe?
Response Syntax	<Elapsed Time>
Response(s)	**Elapsed Time**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the holdover elapsed time
Example(s)	FETC:DATA:TEL:GNSS:HOLD:ETIM?

:FETCh:DATA:TELecom:GNSS:HOLDover:RTIMe?

Description	This query returns the Holdover Remaining time.
	Navigation Path: Setup > System > GNSS > Holdover > Estimated Holdover Remaining Time
Syntax	:FETCh:DATA:TELecom:GNSS:HOLDover:RTIMe?
Response Syntax	<Remaining Time>
Response(s)	**Remaining Time**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the holdover remaining time.
Example(s)	FETC:DATA:TEL:GNSS:HOLD:RTIM?

:FETCh:DATA:TELecom:GNSS:HOLDover:STATus?

Description	This query returns the Holdover status.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Holdover > Status
Syntax	:FETCh:DATA:TELecom:GNSS:HOLDover:STATus?
Response Syntax	<Holdover>
Response(s)	**Holdover**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current Holdover status:
	DISABLED: DISABLED
	INPROGRESS: IN PROGRESS
	COMPLETED: COMPLETED
Example(s)	FETC:DATA:TEL:GNSS:HOLD:STAT?

:FETCh:DATA:TELecom:GNSS:JAMMing?

Description	This query returns the Jamming status for GNSS.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses - Jamming
Syntax	:FETCh:DATA:TELecom:GNSS:JAMMing?
Response Syntax	<Jamming>
Response(s)	**Jamming**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Jamming.
	OK: OK
	WARNING: Warning
	CRITICAL: Critical
	UNKNOWN: Unknown
Example(s)	FETC:DATA:TEL:GNSS:JAMM?
See Also	FETCh:DATA:TELecom:GNSS:TLOCk?

:FETCh:DATA:TELecom:GNSS:SATellite?

Description	This query returns the Number of Satellite used for GNSS
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses - # of Sat used
Syntax	:FETCh:DATA:TELecom:GNSS:SATellite?
Response Syntax	<# of Sat used>
Response(s)	**# of Sat used**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of used Satellite.
Example(s)	FETC:DATA:TEL:GNSS:SAT?
See Also	FETCh:DATA:TELecom:GNSS?

:FETCh:DATA:TELecom:GNSS:STATus?

Description	This query returns the GNSS Status.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses - Status
Syntax	:FETCh:DATA:TELecom:GNSS:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Status.
	ACQUIRING: Acquiring
	SURVEYIN: Survey-In
	FIXEDMODE: Fixed Mode
Example(s)	FETC:DATA:TEL:GNSS:STAT?
See Also	FETCh:DATA:TELecom:GNSS?

:FETCh:DATA:TELecom:GNSS:TLOCk?

Description	This query returns the Time Lock status for GNSS.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses - Time Lock
Syntax	:FETCh:DATA:TELecom:GNSS:TLOCk?
Response Syntax	<Time Lock>
Response(s)	**Time Lock**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current Time Lock.
	LOCKED: Locked
	NOTLOCKED: Not Locked
Example(s)	FETC:DATA:TEL:GNSS:TLOC?
See Also	FETCh:DATA:TELecom:GNSS?

:FETCh:DATA:TELecom:GNSS:UTC?

Description	This query returns the UTC Variant for GNSS.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses - UTC Variant
Syntax	:FETCh:DATA:TELecom:GNSS:UTC?
Response Syntax	<UTC Variant>
Response(s)	**UTC Variant**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the UTC Variant.
	USNO: Unites States Naval Observatory
	SU: Soviet Union
	NTSC: National Time Service Center
	EUROPE: Europe
	PENDing: Pending
Example(s)	FETC:DATA:TEL:GNSS:UTC?
See Also	FETCh:DATA:TELecom:GNSS?

:FETCh:DATA:TELecom:GNSS:WUP:RTIMe?

Description	This query returns the Warm UP Remaining time.
	Navigation Path: Setup > System > GNSS > Holdover > Oscillator Warm-UP
Syntax	:FETCh:DATA:TELecom:GNSS:WUP:RTIMe?
Response Syntax	<Remaining Time>
Response(s)	**Remaining Time**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Oscillator Warm-UP remaining time.
Example(s)	FETC:DATA:TEL:GNSS:WUP:RTIM?

:FETCh:DATA:TELecom:GNSS:WUP:STATus?

Description	This query returns the Warm Up status.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Holdover > Oscillator Warm-UP
Syntax	:FETCh:DATA:TELecom:GNSS:WUP:STATus?
Response Syntax	<Warm Up>
Response(s)	**Warm Up**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current Warm Up status:
	DISABLED: DISABLED
	INPROGRESS: IN PROGRESS
	COMPLETED: COMPLETED
Example(s)	FETC:DATA:TEL:GNSS:WUP:STAT?

:FETCh:DATA:TELecom:GNSS?

Description	This query returns the global GNSS status.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > System > GNSS > Statuses - GNSS
Syntax	:FETCh:DATA:TELecom:GNSS?
Response Syntax	<GNSS>
Response(s)	**GNSS**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current GNSS:
	NOTREADY: Not Ready
	READY: Ready
Example(s)	FETC:DATA:TEL:GNSS?
See Also	FETCh:DATA:TELecom:GNSS:STAT?

:SOURce:DATA:TELecom:GNSS:ANTenna:ALTitude

Description	This command sets the Antenna Latitude for GNSS.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > System > GNSS > Antenna Coordinates > Altitude (m)
Syntax	:SOURce:DATA:TELecom:GNSS:ANTenna:ALTitude <wsp><Altitude>
Parameter(s)	Altitude:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Altitude Value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<GNSS>
Example(s)	SOUR:DATA:TEL:GNSS:ANT:ALT 50.01
	SOUR:DATA:TEL:GNSS:ANT:ALT?
	Returns: 50.01
See Also	SOURce:DATA:TELecom:GNSS:ANTenna:ALTitude?

:SOURce:DATA:TELecom:GNSS:ANTenna:ALTitude?

Description	This query returns the Antenna Altitude for GNSS.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > System > GNSS > Antenna Coordinates > Altitude (m)
Syntax	:SOURce:DATA:TELecom:GNSS:ANTenna:ALTitude?[<wsp><Altitude>]
Parameter(s)	**Altitude**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Antenna Altitude is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Altitude>
Response(s)	**Altitude**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Altitude.
	MAXimum is used to retrieve the instruments greatest supported value for Antenna Altitude.
	MINimum is used to retrieve the instruments smallest supported value for Antenna Altitude.
Example(s)	SOUR:DATA:TEL:GNSS:ANT:ALT 50.01
	SOUR:DATA:TEL:GNSS:ANT:ALT?
	Returns: 50.01
See Also	SOURce:DATA:TELecom:GNSS:ANTenna:ALTitude

:SOURce:DATA:TELecom:GNSS:ANTenna:LATitude

Description	This command sets the Antenna Latitude for GNSS.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > System > GNSS > Antenna Coordinates > Latitude (deg)
Syntax	:SOURce:DATA:TELecom:GNSS:ANTenna:LATitude <wsp><Latitude>
Parameter(s)	**Latitude**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Latitude Value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Altitude>
Example(s)	SOUR:DATA:TEL:GNSS:ANT:LAT 50.1005
	SOUR:DATA:TEL:GNSS:ANT:LAT?
	Returns: 50.1005
See Also	SOURce:DATA:TELecom:GNSS:ANTenna:LATitude?

:SOURce:DATA:TELecom:GNSS:ANTenna:LATitude?

Description	This query returns the Antenna Latitude for GNSS.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > System > GNSS > Antenna Coordinates > Latitude (deg)
Syntax	:SOURce:DATA:TELecom:GNSS:ANTenna:LATitude?[<wsp><Latitude>]
Parameter(s)	**Latitude**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Antenna Latitude is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Latitude>
Response(s)	**Latitude**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Latitude.
	MAXimum is used to retrieve the instruments greatest supported value for Antenna Latitude
	MINimum is used to retrieve the instruments smallest supported value for Antenna Latitude
Example(s)	SOUR:DATA:TEL:GNSS:ANT:LAT 50.10001
	SOUR:DATA:TEL:GNSS:ANT:LAT?
	Returns: 50.10001
See Also	SOURce:DATA:TELecom:GNSS:ANTenna:LATitude

:SOURce:DATA:TELecom:GNSS:ANTenna:LONGitude

Description	This command sets the Antenna Longitude for GNSS.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > System > GNSS > Antenna Coordinates > Longitude (deg)
Syntax	:SOURce:DATA:TELecom:GNSS:ANTenna:LONGitude <wsp><Longitude>
Parameter(s)	**Longitude**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Longitude Value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Latitude>
Example(s)	SOUR:DATA:TEL:GNSS:ANT:LONG 50.10001
	SOUR:DATA:TEL:GNSS:ANT:LONG?
	Returns: 50.10001
See Also	SOURce:DATA:TELecom:GNSS:ANTenna:LONGitude?

:SOURce:DATA:TELecom:GNSS:ANTenna:LONGitude?

Description	This query returns the Antenna Longitude for GNSS.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > System > GNSS > Antenna Coordinates > Longitude (deg)
Syntax	:SOURce:DATA:TELecom:GNSS:ANTenna:LONGitude?[<wsp><Longitude>]
Parameter(s)	**Longitude**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Antenna Longitude is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Longitude>
Response(s)	**Longitude**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Longitude.
	MAXimum is used to retrieve the instruments greatest supported value for Antenna Longitude
	MINimum is used to retrieve the instruments smallest supported value for Antenna Longitude
Example(s)	SOUR:DATA:TEL:GNSS:ANT:LONG 50.10001
	SOUR:DATA:TEL:GNSS:ANT:LONG?
	Returns: 50.10001
See Also	SOURce:DATA:TELecom:GNSS:ANTenna:LONGitude

:SOURce:DATA:TELecom:GNSS:CDELay

Description	This command sets the Cable Delay for GNSS.
	At *RST condition, this value is set to 25 ns
	Navigation Path: Setup > System > GNSS > Cable Delay(ns)
Syntax	:SOURce:DATA:TELecom:GNSS:CDELay <wsp><Cable Delay>
Parameter(s)	**Cable Delay**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Cable Delay Value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Longitude>
Example(s)	SOUR:DATA:TEL:GNSS:CDEL 50
	SOUR:DATA:TEL:GNSS:CDEL?
	Returns: 50
See Also	SOURce:DATA:TELecom:GNSS:CDELay?

:SOURce:DATA:TELecom:GNSS:CDELay?

Description	This query returns the Cable Delay for GNSS.
	At *RST condition, this value is set to 25 ns
	Navigation Path: Setup > System > GNSS > Cable Delay(ns)
Syntax	:SOURce:DATA:TELecom:GNSS:CDELay?[<wsp><Cable Delay>]
Parameter(s)	**Cable Delay**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Cable Delay is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Cable Delay>
Response(s)	**Cable Delay**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Cable Delay.
	MAXimum is used to retrieve the instruments greatest supported value for Cable Delay
	MINimum is used to retrieve the instruments smallest supported value for Cable Delay
Example(s)	SOUR:DATA:TEL:GNSS:CDEL 50
	SOUR:DATA:TEL:GNSS:CDEL?
	Returns: 50
See Also	SOURce:DATA:TELecom:GNSS:CDELay

:SOURce:DATA:TELecom:GNSS:CONStellation

Description	This command sets the Constellation for GNSS at the input port.
	At *RST condition, this value is set to GPS, Galileo, BeiDou.
	Navigation Path: Setup > System > GNSS > Constellation.
Syntax	:SOURce:DATA:TELecom:GNSS:CONStellation <wsp><Constellation>
Parameter(s)	**Constellation**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Constellation.
	GPS_GALILEO_BEIDOU: GPS, Galileo, BeiDou
	GPS_GALILEO_GLONASS: GPS, Galileo, GLONASS
	GPS_GALILEO: GPS, Galileo
	GPS_BEIDOU: GPS, BeiDou
	GPS_GLONASS: GPS, GLONASS
	GALILEO_BEIDOU: Galileo, BeiDou
	GALILEO_GLONASS: Galileo, GLONASS
	BEIDOU_GLONASS: BeiDou, GLONASS
	GPS: GPS
	GALILEO: Galileo
	BEIDOU: BeiDou
	GLONASS: GLONASS
Response Syntax	<Cable Delay>
Example(s)	SOUR:DATA:TEL:GNSS:CONS GPS
	SOUR:DATA:TEL:GNSS:CONS?
	Returns: GPS
See Also	SOURce:DATA:TELecom:GNSS:CONStellation?

:SOURce:DATA:TELecom:GNSS:CONStellation?

Description	This query returns the Constellation for GNSS at the input port.
	At *RST condition, this value is set to GPS, Galileo, BeiDou.
	Navigation Path: Setup > System > GNSS > Constellation.
Syntax	:SOURce:DATA:TELecom:GNSS:CONStellation?
Response Syntax	<Constellation>
Response(s)	**Constellation**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Constellation.
	GPS_GALILEO_BEIDOU: GPS, Galileo, BeiDou
	GPS_GALILEO_GLONASS: GPS, Galileo, GLONASS
	GPS_GALILEO: GPS, Galileo
	GPS_BEIDOU: GPS, BeiDou
	GPS_GLONASS: GPS, GLONASS
	GALILEO_BEIDOU: Galileo, BeiDou
	GALILEO_GLONASS: Galileo, GLONASS
	BEIDOU_GLONASS: BeiDou, GLONASS
	GPS: GPS
	GALILEO: Galileo
	BEIDOU: BeiDou
	GLONASS: GLONASS
Example(s)	SOUR:DATA:TEL:GNSS:CONS GPS
	SOUR:DATA:TEL:GNSS:CONS?
	Returns: GPS
See Also	SOURce:DATA:TELecom:GNSS:CONStellation

:SOURce:DATA:TELecom:GNSS:DACC

Description	This command sets the Desired Accuracy for GNSS at the input port.
	At *RST condition, this value is set to Very High.
	Navigation Path: Setup > System > GNSS > Desired Accuracy.
Syntax	:SOURce:DATA:TELecom:GNSS:DACC <wsp><Desired Accuracy>
Parameter(s)	**Desired Accuracy**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Desired Accuracy.
	VERYHIGH: Very High
	HIGH: High
	MEDIUM: Medium
	LOW: Low
Response Syntax	<Constellation>
Example(s)	SOUR:DATA:TEL:GNSS:DACC Low
	SOUR:DATA:TEL:GNSS:DACC?
	Returns: DACC
See Also	SOURce:DATA:TELecom:GNSS:DACC?

:SOURce:DATA:TELecom:GNSS:DACC?

Description	This query returns the Desired Accuracy for GNSS at the input port.
	At *RST condition, this value is set to Very High.
	Navigation Path: Setup > System > GNSS > Desired Accuracy.
Syntax	:SOURce:DATA:TELecom:GNSS:DACC?
Response Syntax	<Desired Accuracy>
Response(s)	**Desired Accuracy**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Desired Accuracy.
	VERYHIGH: Very High
	HIGH: High
	MEDIUM: Medium
	LOW: Low
Example(s)	SOUR:DATA:TEL:GNSS:DACC HIGH
	SOUR:DATA:TEL:GNSS:DACC?
	Returns: HIGH
See Also	SOURce:DATA:TELecom:GNSS:DACC

:SOURce:DATA:TELecom:GNSS:DISCipline:ENABle

Description	This command enables/disables Discipline Oscillator
	At *RST, this value is set to Enabled.
	Navigation Path: Setup > System > GNSS > Holdover > Discipline Oscillator
Syntax	:SOURce:DATA:TELecom:GNSS:DISCipline:ENABle <wsp><Disciplining>
Parameter(s)	**Disciplining**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Desired Accuracy>
Example(s)	SOUR:DATA:TEL:GNSS:DISC:ENAB ON
	SOUR:DATA:TEL:GNSS:DISC:ENAB?
	Returns 1
See Also	SOURce:DATA:TELecom:GNSS:DISCipline:ENABle?

:SOURce:DATA:TELecom:GNSS:DISCipline:ENABle?

Description	This query returns the Discipline Oscillator enable/disable status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > System > GNSS > Holdover > Discipline Oscillator
Syntax	:SOURce:DATA:TELecom:GNSS:DISCipline:ENABle?
Response Syntax	<Disciplining>
Response(s)	**Disciplining**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:GNSS:DISC:ENAB ON
	SOUR:DATA:TEL:GNSS:DISC:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:GNSS:DISCipline:ENABle

:SOURce:DATA:TELecom:GNSS:HOLDover:ENABle

Description	This command enables/disables Holdover
	At *RST, this value is set to Disabled.
	Navigation Path: Setup > System > GNSS > Holdover > Holdover
Syntax	:SOURce:DATA:TELecom:GNSS:HOLDover:ENABle <wsp><Holdover>
Parameter(s)	**Holdover**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Disciplining>
Example(s)	SOUR:DATA:TEL:GNSS:HOLD:ENAB ON
	SOUR:DATA:TEL:GNSS:HOLD:ENAB?
	Returns 1
See Also	SOURce:DATA:TELecom:GNSS:HOLDover:ENABle?

:SOURce:DATA:TELecom:GNSS:HOLDover:ENABle?

Description	This query returns the Holdover enable/disable status
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > System > GNSS > Holdover > Holdover
Syntax	:SOURce:DATA:TELecom:GNSS:HOLDover:ENABle?
Response Syntax	<Holdover>
Response(s)	**Holdover**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:GNSS:HOLD:ENAB ON
	SOUR:DATA:TEL:GNSS:HOLD:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:GNSS:HOLD:ENABle

:SOURce:DATA:TELecom:GNSS:PMODe

Description	This command sets the Position Mode for GNSS at the input port.
	At *RST condition, this value is set to Survey-In.
	Navigation Path: Setup > System > GNSS > Positiom Mode.
Syntax	:SOURce:DATA:TELecom:GNSS:PMODe <wsp><Position Mode>
Parameter(s)	**Position Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Position Mode.
	SURVEYIN: Survey-In
	MANUAL: Manual
Response Syntax	<Holdover>
Example(s)	SOUR:DATA:TEL:GNSS:PMOD MANUAL
	SOUR:DATA:TEL:GNSS:PMOD?
	Returns: MANUAL
See Also	SOUR:DATA:TEL:GNSS:PMOD?

:SOURce:DATA:TELecom:GNSS:PMODe?

Description	This query returns the Position mode for GNSS at the input port.
	At *RST condition, this value is set to Survey-In.
	Navigation Path: Setup > System > GNSS > Positiom Mode.
Syntax	:SOURce:DATA:TELecom:GNSS:PMODe?
Response Syntax	<Position Mode>
Response(s)	**Position Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Position Mode.
	SURVEYIN: Survey-In
	MANUAL: Manual
Example(s)	SOUR:DATA:TEL:GNSS:PMOD MANUAL
	SOUR:DATA:TEL:GNSS:PMOD?
	Returns: MANUAL
See Also	SOURce:DATA:TELecom:GNSS:PMODe

:SOURce:DATA:TELecom:GNSS:QZSS:ENABle

Description	This command enables/disables QZSS.
	At *RST, this value is set to Enabled.
	Navigation Path: Setup > System > GNSS > QZSS
Syntax	:SOURce:DATA:TELecom:GNSS:QZSS:ENABle <wsp><QZSS>
Parameter(s)	**QZSS**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Position Mode>
Example(s)	SOUR:DATA:TEL:GNSS:QZSS:ENAB ON
	SOUR:DATA:TEL:GNSS:QZSS:ENAB?
	Returns 1
See Also	SOURce:DATA:TELecom:GNSS:QZSS:ENABle?

:SOURce:DATA:TELecom:GNSS:QZSS:ENABle?

Description	This query returns the QZSS value of the GNSS.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > System > GNSS > QZSS
Syntax	:SOURce:DATA:TELecom:GNSS:QZSS:ENABle?
Response Syntax	<QZSS>
Response(s)	**QZSS**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:GNSS:QZSS:ENAB ON
	SOUR:DATA:TEL:GNSS:QZSS:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:GNSS:QZSS:ENABle

:SOURce:DATA:TELecom:GNSS:RESTart

Description	This command performs a cold start of the GNSS receiver. Navigation Path: Setup > System > GNSS > Restart
Syntax	:SOURce:DATA:TELecom:GNSS:RESTart
Response Syntax	<QZSS>
Example(s)	SOUR:DATA:TEL:GNSS:REST
See Also	SOURce:DATA:TELecom:GNSS:RESTart

:SOURce:DATA:TELecom:GNSS:TSOurce

Description	This command sets the Time Source for GNSS at the input port.
	At *RST condition, this value is set to UTC.
	Navigation Path: Setup > System > GNSS > Time Source.
Syntax	:SOURce:DATA:TELecom:GNSS:TSOurce <wsp><Time Source>
Parameter(s)	**Time Source**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Time Source.
	UTC: UTC
	GPS: GPS
	GALILEO: Galileo
	BEIDOU: BeiDou
	GLONASS: GLONASS
Response Syntax	<QZSS>
Example(s)	SOUR:DATA:TEL:GNSS:TSO GPS
	SOUR:DATA:TEL:GNSS:TSO?
	Returns: GPS
See Also	SOURce:DATA:TELecom:GNSS:TSOurce?

:SOURce:DATA:TELecom:GNSS:TSOurce?

Description	This query returns the Time Source for GNSS.
	At *RST condition, this value is set to UTC.
	Navigation Path: Setup > System > GNSS > Time Source
Syntax	:SOURce:DATA:TELecom:GNSS:TSOurce?
Response Syntax	<Time Source>
Response(s)	**Time Source**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Time Source.
	UTC: UTC
	GPS: GPS
	GALILEO: Galileo
	BEIDOU: BeiDou
	GLONASS: GLONASS
Example(s)	SOUR:DATA:TEL:GNSS:TSO GPS
	SOUR:DATA:TEL:GNSS:TSO?
	Returns: GPS
See Also	SOURce:DATA:TELecom:GNSS:TSOurce

:SOURce:DATA:TELecom:GNSS:VARiant
