Description	This command sets the Variant for GNSS at the input port.
	At *RST condition, this value is set to Auto.
	Navigation Path: Setup > System > GNSS > Variant.
Syntax	:SOURce:DATA:TELecom:GNSS:VARiant <wsp><Variant>
Parameter(s)	**Variant**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Variant.
	AUTO: Auto
	USNO: USNO
	SU: SU
	NTSC: NTSC
	EUROPE: Europe
Response Syntax	<Time Source>
Example(s)	SOUR:DATA:TEL:GNSS:VAR USNO
	SOUR:DATA:TEL:GNSS:VAR?
	Returns: USNO
See Also	SOURce:DATA:TELecom:GNSS:VARiant?

:SOURce:DATA:TELecom:GNSS:VARiant?

Description	This query returns the Variant for GNSS.
	At *RST condition, this value is set to Auto.
	Navigation Path: Setup > System > GNSS > Variant
Syntax	:SOURce:DATA:TELecom:GNSS:VARiant?
Response Syntax	<Variant>
Response(s)	**Variant**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Variant.
	AUTO: Auto
	USNO: USNO
	SU: SU
	NTSC: NTSC
	EUROPE: Europe
Example(s)	SOUR:DATA:TEL:GNSS:VAR USNO
	SOUR:DATA:TEL:GNSS:VAR?
	Returns: USNO
See Also	SOURce:DATA:TELecom:GNSS:VARiant

Summary

:FETCh:DATA:TELecom:CPRI:OBSai:LINK:LAST?

Description	This Query returns the OBSAI last Sync status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > OBSAI - Sync status
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:LINK:LAST?
Response Syntax	<Link Status>
Response(s)	Link Status:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Return Last(summary) link status for State machine.
Example(s)	FETC:DATA:TEL:CPRI:OBS:LINK:LAST?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FCBGen?

:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:LAST:PTARget?

Description	This Query returns the OBSAI RP3 Frame Summary Peer Target Address.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summray > OBSAI - RP3 Peer Target Address
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:LAST:PTARget?
Response Syntax	<Last Peer Target Address>
Response(s)	**Last Peer Target Address**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return Last(summary) Peer Target Address.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:RPFR:LAST:PTAR?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:RPFRame:ADDRess:TARGet?

:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:LAST:STATus?

Description	This Query returns the OBSAI RP3 Frame Summary Peer Target Address Status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > OBSAI - RP3 Peer Target Address Status
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RPFRame:LAST:STATus?
Response Syntax	<Last Peer Target Address Status>
Response(s)	**Last Peer Target Address Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Return Last(summary) Peer Target Address Status.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:RPFR:LAST:STAT?
See Also	SOURce:DATA:TELecom:CPRI:OBSai:FCBGen?

:FETCh:DATA:TELecom:CPRI:OBSai:STATe:RECeive:LAST?

Description	This Query returns the OBSAI RX State Machine last status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > OBSAI - Sync - RX
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:STATe:RECeive:LAST?
Response Syntax	<RX State machine>
Response(s)	**RX State machine**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return Last(summary) status for RX state machine.
Example(s)	FETC:DATA:TEL:CPRI:OBS:STAT:REC:LAST?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:STATe:RECeive:LIVE?

:FETCh:DATA:TELecom:CPRI:OBSai:STATe:TRANsmit:LAST?

Description	This Query returns the OBSAI TX State Machine last status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > OBSAI - Sync - TX
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:STATe:TRANsmit:LAST?
Response Syntax	<TX State machine>
Response(s)	**TX State machine**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return Last(summary) status for TX state machine.
Example(s)	FETC:DATA:TEL:CPRI:OBS:STAT:TRAN:LAST?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:STATe:TRANsmit:LIVE?

:FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:RXCount?

Description	This Query returns the OBSAI Total RX Count.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > OBSAI - Total RX Count
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:RXCount? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the count type.
	CODEword: Code Word
	MESSAGEGROUP: Message Group
	FRAME: Frame
Response Syntax	<Total RX Count>
Response(s)	**Total RX Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return Total RX Count.
Example(s)	FETC:DATA:TEL:CPRI:OBS:SUMM:RXC? CODEWORD
See Also	FETCh:DATA:TELecom:CPRI:OBSai:MESSages:TXCount?

:FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:TXCount?

Description	This Query returns the OBSAI Total TX Count.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > OBSAI - Total TX Count
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:TXCount? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the count type.
	CODEword: Code Word
	MESSAGEGROUP: Message Group
	FRAME: Frame
Response Syntax	<Total TX Count>
Response(s)	**Total TX Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return Total TX Count.
Example(s)	FETC:DATA:TEL:CPRI:OBS:SUMM:TXC? CODEWORD
See Also	FETCh:DATA:TELecom:CPRI:OBSai:MESSages:TXCount?

:FETCh:DATA:TELecom:CPRI:SUMMary:RX:COUNter?

Description	This query returns the number of Received CPRI Frames.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > CPRI > Code Word/Hyperframe Count RX
Syntax	:FETCh:DATA:TELecom:CPRI:SUMMary:RX:COUNter? <wsp><Total RX>
Parameter(s)	**Total RX**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of CPRI Received Counter.
	CODEword, selects the type of CPRI Counter as Code Word.
	HYPErframe, selects the type of CPRI Counter as Hyperframe.
	LINKreset, selects the type of CPRI Counter as L1 Reset.
	66BBlock, selects the type of CPRI Counter as 66B Block.
Response Syntax	<RX>
Response(s)	**RX**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Selects the type of CPRI Received Counter.
	CODE, selects the type of CPRI Counter as Code Word.
	HYPE, selects the type of CPRI Counter as Hyperframe.
Example(s)	FETC:DATA:TEL:CPRI:SUMM:RX:COUN?
See Also	FETCh:DATA:TELecom:CPRI:SUMMary:TX:COUNter?

:FETCh:DATA:TELecom:CPRI:SUMMary:TX:COUNter?

Description	This query returns the number of transmitted CPRI Frames Count.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > CPRI > Code Word/Hyperframe Count TX
Syntax	:FETCh:DATA:TELecom:CPRI:SUMMary:TX:COUNter? <wsp><Total TX>
Parameter(s)	**Total TX**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of CPRI Transmitted Counter.
	CODEword, selects the type of CPRI Counter as Code Word.
	HYPErframe, selects the type of CPRI Counter as Hyperframe.
	66BBlock, selects the type of CPRI Counter as 66B Block.
Response Syntax	<TX>
Response(s)	**TX**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Selects the type of CPRI Transmitted Counter.
	CODE, selects the type of CPRI Counter as Code Word.
	HYPE, selects the type of CPRI Counter as Hyperframe.
Example(s)	FETC:DATA:TEL:CPRI:SUMM:TX:COUN?
See Also	FETCh:DATA:TELecom:CPRI:SUMMary:RX:COUNter?

:FETCh:DATA:TELecom:CPRI:SUMMary:VERDict?

Description	This Query returns status of CPRI Threshold on Summary page.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Summary > CPRI PASS FAIL VERDICT
Syntax	:FETCh:DATA:TELecom:CPRI:SUMMary:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Verdict.
Example(s)	FETC:DATa:TEL:CPRI:SUMM:VERD?
See Also	FETCh:DATA:TELecom:CPRI:ERRor:SEConds?

:FETCh:DATA:TELecom:OTL:SUMMary:SDT:AVERage?

Description	This query returns the average disruption time for summary in OTL multilane configuration.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > Summary > Service disruption > Disruption Time
Syntax	:FETCh:DATA:TELecom:OTL:SUMMary:SDT:AVERage?
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the average disruption time.
Example(s)	FETC:DATA:TEL:OTL:SUMMary:SDT:AVER?
See Also	FETCh:DATA:TEL:OTL:SDT:DEFect?

:FETCh:DATA:TELecom:OTL:SUMMary:SDT:COUNt?

Description	This query returns the number of service disruption counts that happened since the beginning of the Service Disruption Time (SDT) test for summary in OTL multilane configuration.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > Summary > Service disruption > Disruption Time
Syntax	:FETCh:DATA:TELecom:OTL:SUMMary:SDT:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of service disruption counts that happened since the beginning of the SDT test.
Example(s)	FETC:DATA:TEL:OTL:SUMMary:SDT:COUN?
See Also	FETCh:DATA:TELecom:SDT:TOTal?

:FETCh:DATA:TELecom:OTL:SUMMary:SDT:LAST?

Description	This query returns the length of the last disruption time for summary in OTL multilane configuration.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > Summary > Service disruption > Disruption Time
Syntax	:FETCh:DATA:TELecom:OTL:SUMMary:SDT:LAST?
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the last disruption time.
Example(s)	FETC:DATA:TEL:OTL:SUMMary:SDT:LAST?
See Also	FETCh:DATA:TELecom:SDT:LAST?

:FETCh:DATA:TELecom:OTL:SUMMary:SDT:LONGest?

Description	This query returns the longest disruption time for summary in OTL multilane configuration.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > Summary > Service disruption > Disruption Time
Syntax	:FETCh:DATA:TELecom:OTL:SUMMary:SDT:LONGest?
Response Syntax	<Longest>
Response(s)	**Longest**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the longest disruption time.
Example(s)	FETC:DATA:TEL:OTL:SUMMary:SDT:LONG?
See Also	FETCh:DATA:TELecom:SDT:COUNt?

:FETCh:DATA:TELecom:OTL:SUMMary:SDT:SHORtest?

Description	This query returns the shortest disruption time for summary in OTL multilane configuration.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > Summary > Service disruption > Disruption Time
Syntax	:FETCh:DATA:TELecom:OTL:SUMMary:SDT:SHORtest?
Response Syntax	\<Shortest\>
Response(s)	**Shortest**:
	The response data syntax for the first parameter is defined as a \<NR2 NUMERIC RESPONSE DATA\> element.
	Returns the shortest disruption time.
Example(s)	FETC:DATA:TEL:OTL:SUMM:SDT:SHOR?
See Also	FETCh:DATA:TELecom:SDT:LONGest?

:FETCh:DATA:TELecom:OTL:SUMMary:SDT:TOTal?

Description	This query returns the total disruption time for summary in OTL multilane configuraiton.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > Summary > Service disruption > Disruption Time
Syntax	:FETCh:DATA:TELecom:OTL:SUMMary:SDT:TOTal?
Response Syntax	<Total>
Response(s)	**Total**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total disruption time.
Example(s)	FETC:DATA:TEL:OTL:SUMMary:SDT:TOT?
See Also	FETCh:DATA:TELecom:SDT:COUNt?

:FETCh:DATA:TELecom:PATTern:ALARm:CURRent?

Description	This query returns the current status of BER (Unframed) per lane alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results >Summary > Pattern Loss
Syntax	:FETCh:DATA:TELecom:PATTern:ALARm:CURRent? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PLOSs: Pattern Loss
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PATT:ALAR:CURR? 1, PLOS
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:HISTory?

:FETCh:DATA:TELecom:PATTern:ALARm:HISTory?

Description	This query returns the history status of BER (Unframed) per lane alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Pattern Loss > Alarms
Syntax	:FETCh:DATA:TELecom:PATTern:ALARm:HISTory? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PLOSs: Pattern Loss
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PATT:ALAR:HIST? 1, PLOS
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:CURRent?

:FETCh:DATA:TELecom:PATTern:ALARm:SEConds?

Description	This query returns the number of seconds within which BER (Unframed) per lane alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Pattern Loss > Alarms
Syntax	:FETCh:DATA:TELecom:PATTern:ALARm:SEConds? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PLOSs: Pattern Loss
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:PATT:ALAR:SEC? 1, PLOS
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds?

:FETCh:DATA:TELecom:PATTern:ERRor:COUNt?

Description	This query returns the count of BER (Unframed) per lane errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:COUNt? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:PATT:ERR:COUN? 1, BIT
See Also	FETCh:DATA:TELecom:PATTern:ERRor:PATTern:CURRent?

:FETCh:DATA:TELecom:PATTern:ERRor:CURRent?

Description	This query returns the current status of BER (Unframed) per lane error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:CURRent? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for status of the transmitted error pattern. The range for the lane is from 0 to 19.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PATT:ERR:CURR? 1, BIT
See Also	FETCh:DATA:TELecom:PATTern:ERRor:PATTern:HISTory?

:FETCh:DATA:TELecom:PATTern:ERRor:HISTory?

Description	This query returns the history status of BER (Unframed) per lane error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:HISTory? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PATT:ERR:HIST? 1, BIT
See Also	FETCh:DATA:TELecom:PATTern:ERRor:PATTern:HISTory?

:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:THReshold:VERDict?

Description	This query returns the Status of BERT Verdict.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Summary > BERT
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:THReshold:VERDict?[<wsp><Channel Number or Client ID>]
Parameter(s)	**Channel Number or Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<STATUS>
Response(s)	**STATUS**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict status:
	PASS
	FAIL
Example(s)	FETC:DATA:TEL:PATT:ERR:PATT:THR:VERD?
	FETC:DATA:TEL:PATT:ERR:PATT:THR:VERD? 3
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds?

:FETCh:DATA:TELecom:PATTern:ERRor:RATE?

Description	This query returns the current rate of BER (Unframed) per lane error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:RATE? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for status of the transmitted error pattern. The range for the lane is from 0 to 19.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:PATT:ERR:RATE? 1,BIT
See Also	FETCh:DATA:TELecom:PATTern:ERRor:PATTern:HISTory?

:FETCh:DATA:TELecom:PATTern:ERRor:SEConds?

Description	This query returns the number of seconds within which BER (Unframed) per lane error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:SEConds? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:PATT:ERR:SEC? 1, BIT
See Also	FETCh:DATA:TELecom:PATTern:ERRor:PATTern:SEConds?

:FETCh:DATA:TELecom:SDT:AVERage?

Description	This query returns the average disruption duration, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Disruption - Average
Syntax	:FETCh:DATA:TELecom:SDT:AVERage?[<wsp><Channel>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is mandatory in the Multi-Channel OTN application, and cannot be specified in other applications.
	The query returns the average disruption duration for the specified channel.
	The numeric channel ranges from [1:n] in function of ODU Mapping.
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the average disruption duration, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:AVER?
	FETC:DATA:TEL:SDT:AVER? 3
See Also	FETCh:DATA:TELecom:SDT:COUN?

:FETCh:DATA:TELecom:SDT:COUNt?

Description	This query returns the number of service disruptions, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Disruption - Count
Syntax	:FETCh:DATA:TELecom:SDT:COUNt?[<wsp><Channel>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is mandatory in the Multi-Channel OTN application, and cannot be specified in other applications.
	The query returns the number of service disruption for the specified channel.
	The numeric channel ranges from [1:n] in function of ODU Mapping.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of service disruptions, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:COUN?
	FETC:DATA:TEL:SDT:COUN? 3
See Also	FETCh:DATA:TELecom:SDT:TOTal?

:FETCh:DATA:TELecom:SDT:DEFect?

Description	This query returns the layer on which service disruption time test isperformed for OTN.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > Summary > Service disruption > Defect
Syntax	:FETCh:DATA:TELecom:SDT:DEFect?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	This query returns the layer on which service disruption time test isperformed for OTN.
Example(s)	FETC:DATA:TEL:SDT:DEF?
See Also	FETCh:DATA:TELecom:OTL:SDT:DEFect?
	FETCh:DATA:TELecom:SDT:CHAT?

:FETCh:DATA:TELecom:SDT:LAST?

Description	This query returns the length of the last disruption time, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Disruption - Last
Syntax	:FETCh:DATA:TELecom:SDT:LAST?[<wsp><Channel>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional in the Multi-Channel OTN application, and cannot be specified in other applications.
	When the channel is specified, the query returns the last disruption duration for the specified channel.
	When the channel is specified, the numeric channel ranges from [1:n] in function of ODU Mapping.
	When the channel is NOT specified, the query returns the last disruption of ALL monitored channels.
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the last disruption duration, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:LAST?
	FETC:DATA:TEL:SDT:LAST? 3
See Also	FETCh:DATA:TELecom:SDT:LONGest?

:FETCh:DATA:TELecom:SDT:LONGest?

Description	This query returns the longest disruption duration, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Disruption - Longest
Syntax	:FETCh:DATA:TELecom:SDT:LONGest?[<wsp><Channel>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional in the Multi-Channel OTN application, and cannot be specified in other applications.
	When the channel is specified, the query returns the longest disruption duration for the specified channel.
	When the channel is specified, the numeric channel ranges from [1:n] in function of ODU Mapping.
	When the channel is NOT specified, the query returns the longest disruption of ALL monitored channels.
Response Syntax	<Longest>
Response(s)	**Longest**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the longest disruption duration, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:LONG?
	FETC:DATA:TEL:SDT:LONG? 3
See Also	FETCh:DATA:TELecom:SDT:SHORtest?

:FETCh:DATA:TELecom:SDT:SHORtest?

Description	This query returns the shortest disruption duration, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Disruption - Shortest
Syntax	:FETCh:DATA:TELecom:SDT:SHORtest?[<wsp><Channel>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is mandatory in the Multi-Channel OTN application, and cannot be specified in other applications.
	The query returns the shortest disruption duration for the specified channel.
	The numeric channel ranges from [1:n] in function of ODU Mapping.
Response Syntax	<Shortest>
Response(s)	**Shortest**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the shortest disruption duration, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:SHOR?
	FETC:DATA:TEL:SDT:SHOR? 3
See Also	FETCh:DATA:TELecom:SDT:COUNt?

:FETCh:DATA:TELecom:SDT:TOTal?

Description	This query returns the total disruption duration, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Disruption - Total
Syntax	:FETCh:DATA:TELecom:SDT:TOTal?[<wsp><Channel>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is mandatory in the Multi-Channel OTN application, and cannot be specified in other applications.
	The query returns the total disruption duration for the specified channel.
	The numeric channel ranges from [1:n] in function of ODU Mapping.
Response Syntax	<Total>
Response(s)	**Total**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total disruption duration, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:TOT?
	FETC:DATA:TEL:SDT:TOT? 3
See Also	FETCh:DATA:TELecom:SDT:LAST?

:FETCh:DATA:TELecom:SDT:VERDict?

Description	This query returns if a SDT disruption greater than than the Pass/Fail verdict threshold was detected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Disruption - Verdict
Syntax	:FETCh:DATA:TELecom:SDT:VERDict?[<wsp><Channel>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is mandatory in the Multi-Channel OTN application, and cannot be specified in other applications.
	The query returns if a SDT disruption greater than than the Pass/Fail verdict threshold was detected for the specified channel.
	The numeric channel ranges from [1:n] in function of ODU Mapping.
Response Syntax	<STATUS>
Response(s)	**STATUS**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Pattern SDT Verdict.
	NONE, verdict is not present.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:SDT:VERD?
	FETC:DATA:TEL:SDT:VERD? 3
See Also	FETCh:DATA:TELecom:OTL:SDT:DEFect?
	FETCh:DATA:TELecom:SDT:CHAT?

:FETCh:DATA:TELecom:TEST:POWer:RECOvery:COUnt?

Description	This query returns the number of times the system has recovered from power failure.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Power Failure
Syntax	:FETCh:DATA:TELecom:TEST:POWer:RECOvery:COUnt?
Response Syntax	<Power Failure Status>
Response(s)	**Power Failure Status**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the power failure status of the test.
Example(s)	SOUR:DATA:TEL:TEST ON
	FETC:DATA:TEL:TEST:POW:RECO:COU?
See Also	FETCh:DATA:TELecom:TEST:STATus?

:FETCh:DATA:TELecom:TEST:STARt:TIME?

Description	This query returns the time at which the test started.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > StartTime
Syntax	:FETCh:DATA:TELecom:TEST:STARt:TIME?
Response Syntax	\<StartTime\>
Response(s)	**StartTime**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA\> element.
	Returns the time at which the test started.
Example(s)	SOUR:DATA:TEL:TEST ON
	FETC:DATA:TEL:TEST:STAR:TIME?
See Also	FETCh:DATA:TELecom:LOGGer:LIST?

:FETCh:DATA:TELecom:TEST:STATus:VERDict?

Description	This query returns Global Test Status verdict status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > Setup > Results > Summary > Status
Syntax	:FETCh:DATA:TELecom:TEST:STATus:VERDict?
Response Syntax	<Global Verdict>
Response(s)	**Global Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns test status global verdict status
	PASS, indicates verdict is Pass.
	FAIL, indicates verdict is Fail.
Example(s)	FETC:DATA:TEL:TEST:STAT:VERD?
See Also	FETCh:DATA:TELecom:PACKetsync:SYNCe:RX:LAST:QL:VERDict?

:FETCh:DATA:TELecom:TEST:STATus?

Description	This query returns the test status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Status
Syntax	:FETCh:DATA:TELecom:TEST:STATus?
Response Syntax	<Test Status>
Response(s)	**Test Status**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the status of the test.
Example(s)	SOUR:DATA:TEL:TEST ON
	FETC:DATA:TEL:TEST:STAT?
See Also	FETCh:DATA:TELecom:TEST:STARt:TIME?

:FETCh:DATA:TELecom:UPRBs:PATTern:THReshold:VERDict?

Description	This query returns the Status of BERT Verdict.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Summary > Unframed BERT
Syntax	:FETCh:DATA:TELecom:UPRBs:PATTern:THReshold:VERDict? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the lane number for which the injection is to be done for unframed BERT alarms and errors.
	The range is from 0 to 3 for 4 Lanes and 0 to 19 for 20 lanes.
Response Syntax	<STATUS>
Response(s)	**STATUS**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Pattern Unframed BERT Verdict.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:UPRB:PATT:THR:VERD? 1
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds?

:SENSe:DATA:TELecom:CPRI:SUMMary:ETHernet:RATE?

Description	This query return the Ethernet Channel rate value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > CPRI > C&M Ethernet Negotiated
Syntax	:SENSe:DATA:TELecom:CPRI:SUMMary:ETHernet:RATE?
Response Syntax	<RATE>
Response(s)	**RATE**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Ethernet Rate.
Example(s)	SENS:DATa:TEL:CPRI:SUMM:ETH:RATE?
See Also	SENSe:DATA:TELecom:CPRI:SUMMary:HDLC:RATE?

:SENSe:DATA:TELecom:CPRI:SUMMary:FSYNc:STATus?

Description	This query return the Frame Sync Status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > CPRI > Results > Summary > Frame Sync
Syntax	:SENSe:DATA:TELecom:CPRI:SUMMary:FSYNc:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame Sequence Sate.
Example(s)	SENS:DATA:TEL:CPRI:SUMM:FSYN:STAT?
See Also	SENSe:DATA:TELecom:CPRI:SUMMary:SSTate?

:SENSe:DATA:TELecom:CPRI:SUMMary:HDLC:RATE?

Description	This query return the HDLC rate value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > CPRI > C&M HDLC Negotiated
Syntax	:SENSe:DATA:TELecom:CPRI:SUMMary:HDLC:RATE?
Response Syntax	<RATE>
Response(s)	**RATE**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the HDLC Rate.
Example(s)	SENS:DATa:TEL:CPRI:SUMM:HDLC:RATE?
See Also	SENSe:DATA:TELecom:CPRI:SUMMary:ETHernet:RATE?

:SENSe:DATA:TELecom:CPRI:SUMMary:PROTocol:VERSion?

Description	This query returns the Summary Protocol Version. At *RST condition, this value is device dependent. Navigation Path: Results > Summary > CPRI > Protocol Negotiated
Syntax	:SENSe:DATA:TELecom:CPRI:SUMMary:PROTocol:VERSion?
Response Syntax	<Version>
Response(s)	**Version**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the Protocol version.
Example(s)	SENS:DATa:TEL:CPRI:SUMM:PROT:VERS?
See Also	SENSe:DATA:TELecom:CPRI:PORT:PROTocol:VERSion?

:SENSe:DATA:TELecom:CPRI:SUMMary:SSTate?

Description	This query return the Sequence State.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > CPRI > Results > Summary > Sequence
Syntax	:SENSe:DATA:TELecom:CPRI:SUMMary:SSTate?
Response Syntax	<Sequence State>
Response(s)	**Sequence State**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Sequence State.
Example(s)	SENS:DATA:TEL:CPRI:SUMM:SST?
See Also	SENSe:DATA:TELecom:CPRI:SUMMary:FSYNc:STATus?

:SOURce:DATA:TELecom:PATTern:ALARm:PATTern?

Description	This query returns the enable/disable status of the continuous BER alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Alarm > Continuous > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:PATTern:ALARm:PATTern?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PATT:ALAR:PATT ON
	SOUR:DATA:TEL:PATT:ALAR:PATT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:SOURce:DATA:TELecom:UNFRamed:PATTern:ALANes

Description	This command enables/disables the selection of all lanes for unframed BERT alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary (Unframed BERT) > Inject > Layer (BER) > All Lanes
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ALANes <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ALAN ON
	SOUR:DATA:TEL:UNFR:PATT:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:LANE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ALANes?

Description	This query returns the enable/disable selection status of all lanes for unframed BERT alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary (Unframed BERT) > Inject > Layer (BER) > All Lanes
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ALANes?
Response Syntax	\<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ALAN ON
	SOUR:DATA:TEL:UNFR:PATT:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:LANE

:SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm

Description	This command enables/disables the Unframed BERT alarm injection. At *RST condition, this value is set to OFF. Navigation Path: Results > Summary > Inject > Layer (BER) - Alarm - Inject
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm <wsp><Set>
Parameter(s)	**Set**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Enables/disables alarm injection. ON: Enabled OFF: Disabled
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ALAR ON SOUR:DATA:TEL:UNFR:PATT:ALAR? Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

Description	This query returns the Unframed BERT alarm type.
	At *RST condition, this value is set to PLOSs.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Alarm - Continuous - Defect
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type of Unframed Bert alarm.
	PLOSs: Pattern Loss
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ALAR:TYPE?
	Returns: PLOS
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm
	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm?

Description	This query returns the enable/disable status of the Unframed BERT alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Alarm - Inject
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the alarm generation.
	1: Alarm injection is enabled.
	0: Alarm injection is disabled.
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ALAR ON
	SOUR:DATA:TEL:UNFR:PATT:ALAR?
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated

Description	This command enables/disables the Unframed BERT error rate injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Rate - Inject
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT ON
	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:CONTinuous

Description	This command enalbes/disables the Unframed BERT error max rate injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Max Rate - Inject
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:CONTinuous <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:CONT ON
	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:CONTinuous?

Description	This query returns the enable/disable status of the Unframed BERT error max rate injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Max Rat - Inject
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:CONTinuous?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of max rate error injection.
	1: Max rate error injection is enabled.
	0: Max rate error injection is disabled.
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:CONT ON
	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:RATE

Description	This command sets the error rate value for Unframed BERT.
	At *RST condition, this value is set to 1.0E-09.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Rate - Rate
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of Unframed BERT error.
	MAXimum
	MINimum
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:RATE 1.0E-03
	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:RATE?
	Returns: 1.0E-03
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:RATE?

Description	This query returns the error rate value for Unframed BERT.
	At *RST condition, this value is set to 1.0E-09.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Rate - Rate
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the error rate value.
	This parameter is optional. If no token is specified, the current rate is returned.
	MAXimum: Biggest rate
	MINimum: Smallest reate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the error rate value.
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:RATE 1.0E-03
	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:RATE?
	Returns: 1.0E-03
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:TYPE?

Description	This query returns the rate/max rate defect for Unframed BERT.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Rate/Max Rate - Defect
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the automated type Unframed Bert error.
	BIT, bit is selected as the automated type Unframed Bert error.
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT:TYPE?
	Returns: BIT
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Unframed BERT error rate injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Rate - Inject
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:AUTomated?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of error rate injection.
	1: Error rate injection is enabled.
	0: Error rate inection is disabled.
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT ON
	SOUR:DATA:TEL:UNFR:PATT:ERR:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual:AMOunt

Description	This command sets the amount of error to be generated for Unframed BERT. At *RST condition, this value is set to 1. Navigation Path: Results > Summary > Inject > Layer (BER) > Errors - Manual - Amount
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the amount of error to be injected. Choices are 1 through 50. MAXimum: Biggest supported value. MINimum: Smallest supported value. DEFault: Default value.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:MAN:AMO 25 SOUR:DATA:TEL:UNFR:PATT:ERR:MAN:AMO? Returns: 25
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual: AMOunt?

Description	This query returns the amount of error to be generated for Unframed BERT.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Summary > Inject > Layer (BER) > Errors - Manual - Amount
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of Unframed Bert error.
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:MAN:AMO 25
	SOUR:DATA:TEL:UNFR:PATT:ERR:MAN:AMO?
	Returns: 25
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual: INJect

Description	This command injects manual error for Unframed BERT.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Summary > Inject > Inject
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:MAN:INJ
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual: TYPE?

Description	This query returns the selected error defect for Unframed BERT.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Summary > Inject > Layer (BER) - Error - Manual - Defect
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:ERRor:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error defect.
	BIT: Bit Error
Example(s)	SOUR:DATA:TEL:UNFR:PATT:ERR:MAN:TYPE?
	Returns: BIT
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALARm:TYPE?

:SOURce:DATA:TELecom:UNFRamed:PATTern:LANE

Description	This command enables/disables the selection of a lane for Unframed BERT alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary > Inject > Layer (BER) > Lane
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables a lane for alarms/errors injection.
	ON: Enables the particular lane.
	OFF: Disables the particular lane.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:UNFR:PATT:LANE 5, ON
	SOUR:DATA:TEL:UNFR:PATT:LANE? 5
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALANes?

:SOURce:DATA:TELecom:UNFRamed:PATTern:LANE?

Description	TThis query returns the enable/disable selection status of a lane for Unframed BERT alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Summary > Inject > Layer (BER) > Lane
Syntax	:SOURce:DATA:TELecom:UNFRamed:PATTern:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of alarms/errors lane selection.
	1: Lane selected
	0: Lane not selected
Example(s)	SOUR:DATA:TEL:UNFR:PATT:LANE 5, ON
	SOUR:DATA:TEL:UNFR:PATT:LANE? 5
	Returns: 1
See Also	SOURce:DATA:TELecom:UNFRamed:PATTern:ALANes

Summary (Traffic Gen & Mon) - (Stream)

:FETCh:DATA:TELecom:ETHernet:COUNt:DUALport:FRAMes:RX?

Description	This query returns the received frame count per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Performance > RX Frame Count
Syntax	:FETCh:DATA:TELecom:ETHernet:COUNt:DUALport:FRAMes:RX? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count.
Example(s)	FETC:DATA:TEL:ETH:COUN:DUAL:FRAM:RX? 1,P1TOP2
See Also	SOURce:DATA:TEL:ETH:STR:PAYL

:FETCh:DATA:TELecom:ETHernet:COUNt:DUALport:FRAMes:TX?

Description	This query returns the transmitted frame count per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Service Performance > TX Frame Count
Syntax	:FETCh:DATA:TELecom:ETHernet:COUNt:DUALport:FRAMes:TX? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service from 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count.
Example(s)	FETC:DATA:TEL:ETH:COUN:DUAL:FRAM:TXR? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETH:COUN:FRAM:RX?

:FETCh:DATA:TELecom:ETHernet:COUNt:DUALport:FRAMes:TXRate?

Description	This query returns the frames transmitted for selected traffic stream for dualport.
	At *RST condition, this value is device dependent.
	Navigation Path: Traffic Gen & Mon > Results > Summary > Stream (Pop up) > TX Rate(%).
Syntax	:FETCh:DATA:TELecom:ETHernet:COUNt:DUALport:FRAMes:TXRate? <wsp><Tgen>, <Direction>
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Frame TXRate>
Response(s)	**Frame TXRate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Total Tx rate value
Example(s)	FETC:DATA:TEL:ETH:COUN:DUAL:FRAM:TX? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETH:COUN:FRAM:RX?

:FETCh:DATA:TELecom:ETHernet:COUNt:FRAMes:RX?

Description	This query returns the number of frames received.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > RX Frame Count
	Navigation Path: Results > Service Performance > RX Frame Count
Syntax	:FETCh:DATA:TELecom:ETHernet:COUNt:FRAMes:RX? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Framerx>
Response(s)	**Framerx**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of flow control pause frames received.
Example(s)	FETC:DATA:TEL:ETH:COUN:FRAM:RX? 2
See Also	SOURce:DATA:TEL:ETH:STR:PAYL

:FETCh:DATA:TELecom:ETHernet:COUNt:FRAMes:TX?

Description	This query returns the frames transmitted for selected traffic stream.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > TX Frame Count
Syntax	:FETCh:DATA:TELecom:ETHernet:COUNt:FRAMes:TX? <wsp><Stream>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream from 1 to 16.
Response Syntax	<Frame TX>
Response(s)	**Frame TX**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of flow control pause frames Transmitted.
Example(s)	FETCh:DATA:TEL:ETHernet:COUNt:FRAM:TX? 2
See Also	FETCh:DATA:TELecom:ETH:COUN:FRAM:RX?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:FLOSs:VERDict?

Description	This query returns the Frame Loss Count/Rate verdict status per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Frame Loss - Count/Rate - Verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:FLOSs:VERDict? <wsp><Service>, <Type>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Count/Rate:
	COUNt
	RATE
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict:
	PASS
	FAIL
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:FLOS:VERD? 1, RATE,P1TOP2
See Also	FETCH:DATA:TELecom:ETHernet:STReam:LATency:MAXimum:VERDict? 1

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:AVERage?

Description	This query returns the Jitter average value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Jitter > Average
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:AVERage? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the average value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:JITT:AVER? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:CURRent?

Description	This query returns the Jitter current value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Jitter > Current
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:CURRent? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:JITT:CURR? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:AVERage?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:ESTimate?

Description	This query returns the Jitter estimated value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Jitter > Estimate
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:ESTimate? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Estimate>
Response(s)	**Estimate**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the estimated value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:JITT:EST? 1, P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MAXimum?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:MAXimum:VERDict?

Description	This query returns the Jitter verdict based on maximum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Jitter > Maximum - Verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:MAXimum:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict:
	PASS
	FAIL
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:JITT:MAX:VERD? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent:VERDict? 1

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:MAXimum?

Description	This query returns the Jitter maximum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Jitter > Maximum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:MAXimum? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the maximum value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:JITT:MAX? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MINimum?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:MINimum?

Description	This query returns the Jitter minimum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Jitter > Minimum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:JITTer:MINimum? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the minimum value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:JITT:MIN? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MAXimum?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency: AVERage?

Description	This query returns the Latency average value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Latency > Average
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency:AVERage? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the average value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:LAT:AVER? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:SEConds?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency: CURRent?

Description	This query returns the Latency current value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Latency > Current
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency:CURRent? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:LAT:CURR? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:COUNt?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency: MAXimum:VERDict?

Description	This query returns the Latency verdict based on mamimum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Latency > Maximum - Verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency:MAXimum:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict:
	PASS
	FAIL
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:LAT:MAX:VERD? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:FLOSs:VERDict? 1, RATE

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency: MAXimum?

Description	This query returns Latency maximum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Latency > Maximum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency:MAXimum? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the maximum value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:LAT:MAX? 1,P1TOP2
See Also	FETCH:DATA:TELecom:ETHernet:ERRor:SANalyzer:HISTory?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency: MINimum?

Description	This query returns the Latency minimum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Latency > Minimum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:LATency:MINimum? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the mimum value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:LAT:MIN? 1,P1TOP2
See Also	FETCH:DATA:TELecom:ETHernet:ERRor:SANalyzer:CURRent?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:OOSequence:VERDict?

Description	This query returns the Out-of-Sequence Count/Rate verdict per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Out-of-Seq - Count/Rate - Verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:OOSequence:VERDict? <wsp><Service>, <Type>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Count or Rate:
	COUNt
	RATE
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict:
	PASS
	FAIL
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:OOS:VERD? 1, COUNt,P1TOP2
See Also	FETCH:DATA:TELecom:ETHernet:STReam:THRoughput:AVERage:VERDict? 1

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:AVERage:VERDict?

Description	This query returns RX Rate (%) verdict based on average value per direction for dualport.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > RX Rate (%) > Average - Verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:AVERage:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict:
	PASS
	FAIL
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:THR:AVER:VERD? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:OOSequence:VERDict? 1, COUNt

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:AVERage?

Description	This query returns the RX RATE (%) average value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > RX Rate (%) > Average
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:AVERage? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction.
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the average value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:THR:AVER? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:CURRent?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:CURRent:VERDict?

Description	This query returns the RX Rate (%) verdict based on the current value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performance > RX Rate (%) > Current - Verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:CURRent:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the vedict:
	PASS
	FAIL
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:THR:CURR:VERD? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum:VERDict? 1

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:CURRent?

Description	This query returns the RX Rate (%) current value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > RX Rate (%) > Current
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:CURRent? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the current value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:THR:CURR? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:AVERage?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:MAXimum?

Description	This query returns the RX Rate (%) maximum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > RX Rate (%) > Maximum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:MAXimum? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:THR:MAX? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MINimum?

:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:MINimum?

Description	This query returns the RX Rate (%) minimum value per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > RX Rate (%) > Minimum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:DUALport:THRoughput:MINimum? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the minimum value.
Example(s)	FETC:DATA:TEL:ETH:STR:DUAL:THR:MIN? 1,P1TOP2
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum?

Summary (1588 PTP (Client))

:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:VERDict?

Description	This query returns the Inter Packet Delay Variation (IPDV) measurement verdict.(Sync,Delay Request)
	Navigation Path: Results > Summary > Delay Measurement > Sync IPDV
	Navigation Path: Results > Summary > Delay Measurement > Delay Req IPDV
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:VERDict? <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Delay measurement parameter.
	SYNCIPDV: Sync IPDV
	DELAYREQIPDV: Delay Req IPDV
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	This query returns Inter Packet Delay Variation (IPDV) verdict.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:PACK:PTP:IPDV:VERDict? SYNCIPDV
See Also	FETCh:DATA:TELecom:PACKetsync:PTPStat:IPDV:CURRent?

:FETCh:DATA:TELecom:PACKetsync:PTP:QL:LAST:CHANge?

Description	This query returns the Date and Time of the Last QL change.
	At *RST condition, this value is set to Never.
	Navigation Path: Results > Summary > Quality Level > Last Change
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:QL:LAST:CHANge?
Response Syntax	<QLChange>
Response(s)	**QLChange**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Last QL Changed
Example(s)	FETC:DATA:TEL:PACK:PTP:QL:LAST:CHAN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTPStat:IPDV:MINimum?

:FETCh:DATA:TELecom:PACKetsync:PTP:QL:LAST:RECeived?

Description	This query returns the Last QL Received.
	Navigation Path: Results > Summary > Quality Level > Last QL Received
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:QL:LAST:RECeived?
Response Syntax	<QLReceived>
Response(s)	**QLReceived**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Last QL Received.
Example(s)	FETC:DATA:TEL:PACK:PTP:QL:LAST:REC?
See Also	FETCh:DATA:TELecom:PACKetsync:PTPStat:IPDV:AVERage?

Summary (Cable Test)

:FETCh:DATA:TELecom:CABLetest:DELayskew:PAIRresult?

Description	This query returns results of Distance to Fault value for Cable test according to pair No.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Pairs
Syntax	:FETCh:DATA:TELecom:CABLetest:DELayskew:PAIRresult? <wsp><Pair no>
Parameter(s)	**Pair no**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets pair no. for Dist to Fault value in cable test
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Dist.to fault value for cable test for Specific Pair.
Example(s)	FETC:DATA:TEL:CABL:DEL:PAIR? 1
See Also	FETCh:DATA:TELecom:ALARm:HISTory?
	FETCh:DATA:TELecom:ALARm:SEConds?

:FETCh:DATA:TELecom:CABLetest:DELayskew:RESult?

Description	This query returns results of Scewdelay for Cable test.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Cable > Delay Scew(ns)
Syntax	:FETCh:DATA:TELecom:CABLetest:DELayskew:RESult?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Delay skew value for cable test.
Example(s)	FETC:DATA:TEL:CABL:DEL:RES?
See Also	FETCh:DATA:TEL:SDHS:HOP:PM:STAT?

:FETCh:DATA:TELecom:CABLetest:LENGth:PAIRresult?

Description	This query returns results of Length value for Cable test according to pair No.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Pairs
Syntax	:FETCh:DATA:TELecom:CABLetest:LENGth:PAIRresult? <wsp><Pair no>
Parameter(s)	**Pair no**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets pair no. for length value in cable test
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Length value for cable test for Specific Pair.
Example(s)	FETC:DATA:TEL:CABL:LENG:PAIR? 1
See Also	FETCh:DATA:TELecom:ERRor:CURRent?
	FETCh:DATA:TELecom:ERRor:SEConds?
	FETCh:DATA:TELecom:ERRor:RATE?
	FETCh:DATA:TELecom:ERRor:COUNT?

:FETCh:DATA:TELecom:CABLetest:LENGth:RESult?

Description	This query returns results of Length for Cable test.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Cable > Length(m)
Syntax	:FETCh:DATA:TELecom:CABLetest:LENGth:RESult?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<NR2 NUMERIC RESPONSE DATA\> element.
	Returns the Cable length value for cable test.
Example(s)	FETC:DATA:TEL:CABL:LENG:RES?
See Also	FETCh:DATA:TEL:PATT:PM:STAT?

:FETCh:DATA:TELecom:CABLetest:PAIR:THReshold?

Description	This query returns verdict results for Cable test depending upon values and Pair no.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Pairs
Syntax	:FETCh:DATA:TELecom:CABLetest:PAIR:THReshold? <wsp><Value>, <Pair no>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets values for threshold in cable test
	PROPdelay is the maximum time for a pulse to reach the far end
	LENGth is the maximum acceptable cable length
	DISTTOFAULT is the distance to fault from the near end for each pair
	Pair no:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets pair no. for threshold in cable test.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the threshold verdict values of cable test according to pair no and values
	Pass, Pass is return as threshold value.
	Fail, Fail return as threshold value.
	None,None return as threshold value.
Example(s)	FETC:DATA:TEL:CABL:PAIR:THR? PROPdelay,1
See Also	SOURce:DATA:TEL:SDHSonet:HOP:POINter:NEW

:FETCh:DATA:TELecom:CABLetest:PROPdelay:PAIRresult?

Description	This query returns results of Propagation Delay value for Cable test according to pair No.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Pairs
Syntax	:FETCh:DATA:TELecom:CABLetest:PROPdelay:PAIRresult? <wsp><Pair no>
Parameter(s)	**Pair no**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets pair no. for Prop.delay value in cable test
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Prop.Delay value for cable test for Specific Pair.
Example(s)	FETC:DATA:TEL:CABL:PROP:PAIR? 1
See Also	FETCh:DATA:TELecom:ALARm:HISTory?
	FETCh:DATA:TELecom:ALARm:CURRent?

:FETCh:DATA:TELecom:CABLetest:PROPdelay:RESult?

Description	This query returns results of Propagation delay for Cable test.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Cable > Prop. Delay(ns)
Syntax	:FETCh:DATA:TELecom:CABLetest:PROPdelay:RESult?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Propagation Delay value for cable test.
Example(s)	FETC:DATA:TEL:CABL:PROP:RES?
See Also	FETCh:DATA:TEL:SON:SECTion:PM:STAT?

:FETCh:DATA:TELecom:CABLetest:THReshold?

Description	This query returns verdict results for Cable test depending upon values.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > cable
Syntax	:FETCh:DATA:TELecom:CABLetest:THReshold? <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets values for threshold in cable test
	WIRemap is the pair having the worst Wire Map
	PROPdelay is the maximum time for a pulse to reach the far end
	LENGth is the maximum acceptable cable length
	DELAYSKEW is the delay skew value for the pair having the worst delay skew
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the threshold Values of cable test according to values.
	Pass, Pass is return as threshold value.
	Fail, Fail return as threshold value.
	None,None return as threshold value.
Example(s)	FETC:DATA:TEL:CABL:THR? PROPdelay
See Also	FETCh:DATA:TELecom:SDHS:ADV:APS:K[1..n]:DNODe?

:FETCh:DATA:TELecom:CABLetest:WIRemap:PAIRresult?

Description	This query returns results of wiremap value for Cable test according to pair No.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Pairs
Syntax	:FETCh:DATA:TELecom:CABLetest:WIRemap:PAIRresult? <wsp><Pair no>
Parameter(s)	**Pair no**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets pair no. for Wire map value in cable test
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Wire Map value for cable test for Specific Pair.
Example(s)	FETC:DATA:TEL:CABL:WIR:PAIR? 1
See Also	FETCh:DATA:TELecom:ALARm:CURRent?
	FETCh:DATA:TELecom:ALARm:SEConds?

:FETCh:DATA:TELecom:CABLetest:WIRemap:RESult?

Description	This query returns results of wiremap for Cable test.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Cable > Wire Map
Syntax	:FETCh:DATA:TELecom:CABLetest:WIRemap:RESult?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Wire Map value for cable test.
Example(s)	FETC:DATA:TEL:CABL:WIR:RES?
See Also	FETCh:DATA:TELecom:MDIO:BULK:READ:INFormation?

Summary (EtherSAM)

:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:VERDict?

Description	This query returns Service CONFig test Verdict
	Navigation Path: Setup > EtherSAM > Results > Service CONFig Test
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:VERDict? 1, LTOR
See Also	SOURce:DATA:TELecom:ETHernet:ESAM:RAMP:STEP:ADD

:FETCh:DATA:TELecom:ETHernet:ESAM:SPRTest:VERDict?

Description

This query returns Service performance test Verdict

Navigation Path: Navigation Path: Setup > EtherSAM > Results > Service Performance Test

Syntax

:FETCh:DATA:TELecom:ETHernet:ESAM:SPRTest:VERDict? <wsp><Service>, <Direction>

Parameter(s)

Service:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Selects the Service number 1 or 10.

Direction:

The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the Direction.

(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)

LTORemote: Local to Remote

RTOLocal: Remote to Local

P1TOP2: P1 -TO-P2

P2TOP1: P2 -TO-P1

Response Syntax

<Verdict>

Response(s)

Verdict:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the Verdict

PASS, verdict is Pass.

FAIL, verdict is Fail.

Example(s)

FETCh:DATA:TELecom:ETHernet:ESAM:SPRTest:VERDict? 1, LTOR

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs:VERDict?

Description	This query returns the Frame Loss verdict status.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Committed > Frame Loss(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame Loss verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:FLOSs:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs?

Description	This query returns the percentage of frames that are lost. Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Committed > Frame Loss(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs? <wsp><Service>, <Direction>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Direction**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. (For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1) LTORemote: Local to Remote RTOLocal: Remote to Local P1TOP2: P1 -TO-P2 P2TOP1: P2 -TO-P1
Response Syntax	<Frame Loss>
Response(s)	**Frame Loss**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns frame loss percentage
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:FLOSs?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter:VERDict?

Description	This query returns Max Jitter verdict status.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Committed > Max Jitter(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Max Jitter verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MAXJitter:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter?

Description	This query returns maximum measured delay variation.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Committed > Max Jitter(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Max Jitter>
Response(s)	**Max Jitter**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Max Jitter
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MAXJitter?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency:VERDict?

Description	This query returns Max Latency verdict status. Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Committed > Max Latency(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Direction**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. (For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1) LTORemote: Local to Remote RTOLocal: Remote to Local P1TOP2: P1 -TO-P2 P2TOP1: P2 -TO-P1
Response Syntax	<Verdict>
Response(s)	**Verdict**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the Max Latency verdict status. PASS, verdict is Pass. FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MLATency:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency?

Description	This query returns maximum measured round trip latency (delay).
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Committed > Max Latency(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Max Latency>
Response(s)	**Max Latency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Max Latency
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MLATency?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXRate:VERDict?

Description	This query returns Max Rx Rate verdict.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Committed > Max RX Rate(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXRate:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Max Rx Rate verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCH:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXR:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:ARXRate:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXRate?

Description	This query returns measured maximum utilization throughput. Navigation Path: Setup > EtherSAM > Results > Summary > Service Configuration Test > Service Configuration Test > Excess > Max RX Rate(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXRate? <wsp><Service>, <Direction>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Direction**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. (For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1) LTORemote: Local to Remote RTOLocal: Remote to Local P1TOP2: P1 -TO-P2 P2TOP1: P2 -TO-P1
Response Syntax	<Max Rx Rate>
Response(s)	**Max Rx Rate**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns Max Rx Rate
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXR? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:ARXRate?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SERVices:VLAN:PREServ?

Description	This query returns the Virtual Local Area Network (VLAN) preservation status for service.
	At *RST condition, this value is set to UNDEFINED.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SERVices:VLAN:PREServ? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	- For DTS use both LTOR and RTOL as direction and for non-DTS use LTOR as direction:
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	- For Dual Port use P1TOP2 and P2TOP1:
	P1TOP2: P1-to-P2 for dual port topology
	P2TOP1: P2-to-P1 for dual port topology.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns VLAN preservation status.
Example(s)	FETC:DATA:TEL:ETH:ESAM:SUMM:SERV:VLAN:PRES? 1, LTOR
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:BURSt:PARameters:BIRFrame?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:ARXRate:VERDict?

Description	This query returns Avg. Rx Verdict.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Committed > Avg RX Rate(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:ARXRate:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Avg Rx Rate verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:ARXRate:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXR:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:ARXRate?

Description	This query returns the average utilization throughput. Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Committed > Avg RX Rate(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:ARXRate? <wsp><Service>, <Direction>
Parameter(s)	**Service**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the Service number 1 or 10. **Direction**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Direction. (For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1) LTORemote: Local to Remote RTOLocal: Remote to Local P1TOP2: P1 -TO-P2 for dual port topology P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Avg Rx Rate>
Response(s)	**Avg Rx Rate**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns Average Rx Rate
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:ARXRate? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MRXR?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:FLOSs:VERDict?

Description	This query returns the percentage of Frame Loss verdict.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Committed > Frame Loss(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:FLOSs:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame Loss verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:FLOSs:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:FLOSs?

Description	This query returns the percentage of frames that are lost.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Excess > Frame Loss(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:FLOSs? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Frame Loss>
Response(s)	**Frame Loss**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns frame loss percentage
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:FLOSs? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:FLOSs?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MAXJitter:VERDict?

Description	This query returns the Max Jitter verdict.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Committed > Max Jitter(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MAXJitter:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Max Jitter verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MAXJitter:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MAXJitter?

Description	This query returns the maximum measured delay variation.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Committed > Max Jitter(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MAXJitter? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Max Jitter>
Response(s)	**Max Jitter**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Max Jitter
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MAXJitter? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MAXJitter?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MLATency:VERDict?

Description	This query returns the Max Latency verdict.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Committed > Max Latency(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MLATency:VERDict? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Max Latency verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MLATency:VERDict? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MLATency?

Description	This query returns the maximum measured round trip latency (delay).
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Service Performance Test > Committed > Max Latency(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRTest:MLATency? <wsp><Service>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction and For Non DTS use LTOR as direction.In case of Dual Port Use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2 for dual port topology
	P2TOP1: P2 -TO-P1 for dual port topology.
Response Syntax	<Max Latency>
Response(s)	**Max Latency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Max Latency
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SPRT:MLATency? 1, LTOR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:SCOTest:MLATency?

:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:VLAN:PREServ?

Description	This query returns the Virtual Local Area Network (VLAN) preservation status.
	At *RST condition, this value is set to UNDEFINED.
	Navigation Path: Setup > EtherSAM > Results > Summary > Service Performance Test > Vlan Preservation
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:VLAN:PREServ?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns VLAN preservation status.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SUMMary:VLAN:PREServ?
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:BURSt:PARameters:BIRFrame?

:FETCh:DATA:TELecom:ETHernet:ESAM:TESTs:STATus?

Description	This query returns Service CONFig and Service performance test status
	Navigation Path: Setup > EtherSAM > Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:TESTs:STATus? <wsp><Direction>, <Test>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Test:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of EtherSAM sub-tests.
	SCONTest: the Service CONFig Test
	SPERTest: the Service performance Test
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Status.
Example(s)	FETC:DATA:TELecom:ETHernet:ESAM:TESTs:STATus? LTOR,SCONTest
See Also	FETCH:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:FLOSs:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:TESTs:VERDict?

Description	This query returns Service CONFig and Service performance test Verdict
	Navigation Path: Setup > EtherSAM > Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:TESTs:VERDict? <wsp><Direction>, <Test>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Test:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of EtherSAM sub-tests.
	SCONTest: the Service CONFig Test
	SPERTest: the Service performance Test
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TELecom:ETHernet:ESAM:TESTs:VERDict? LTOR,SCONTest
See Also	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:FRASize:QUANtity
	SOURce:DATA:TELecom:ETHernet:ESAM: CONFig:SERVices:FRASize:QUANtity?

Summary (RFC 2544)

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:BBResults[1. .n]?

Description	This query returns the number of frames for the corresponding direction depending on the selected Layer and Displayed Results.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > table - Back-to-Back
	NOTE: For BBResults[1..n], use BBR1 to BBR10 corresponding to the frame number.
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:BBResults[1..n]? <wsp><Direction>, <Results>, <Layers>

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:BBResults[1.

.n]?

Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	Results:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the result mode.
	CURRent
	RMINimum
	RMAXimum
	AVERage
	Layers:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the layers used to calculate the back-to-back test.
	ETHernet: ETHERNET as layer used to calculate the back-to-back test.
	IP: IP
	ALL, All layer
Response Syntax	<Results>

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:BBResults[1..n]?

Response(s)	**Results**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the back-to-back results.
	TX2RX, returns TX-to-RX (TX2RX) for single port topology.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:BBR1? TX2RX,CURR,ALL
See Also	FETCH:DATA:TELecom:ETHernet:RFC:BCKTobck:CTRial?

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:CTRial?

Description	This query returns the current trial number for the Back-to-Back test. Only available when the Back-to-Back test is running.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:CTRial?
Response Syntax	<Number>
Response(s)	**Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the current trial number for the test.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:CTR?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:CTRial?

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:FCOunt:RX?

Description	This query returns the number of received frames for the indicated direction.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:FCOunt:RX? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of received frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:FCO:RX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:FCOunt:TX?

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:FCOunt:TX?

Description	This query returns the number of transmitted frames for the indicated direction.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:FCOunt:TX? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of transmitted frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:FCO:TX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:FCOunt:RX?

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:SMESsage?

Description	This query returns the back-to-back test status messages.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:SMESsage?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test status.
	NONE, None is retrieved.
	INITIALIZING, Initializing is retrieved.
	WAITING, Waiting is retrieved.
	NMEASURABLE, Not Measurable is retrieved.
	SLFRAMES, Sending Learning Frames is retrieved.
	STFRAMES, Sending Test Frames is retrieved.
	ABUSER, Aborted by User is retrieved.
	LDOWN, Link Down is retrieved.
	ALRCONNECTION, Aborted - Loss of Remote Connection is retrieved.
	MANRESOLVED, MAC Address Not Resolved is retrieved.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:SMES?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:SMESsage?

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TETime?

Description	This query returns the elapsed time for the back-to-back subtest.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TETime?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the elapsed time.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:TET?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TETime?

:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TSTate?

Description	This query returns the back-to-back test state.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TSTate?
Response Syntax	<State>
Response(s)	**State**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test state.
	--, indicates that the test has not run yet.
	INPROGRESS, indicates that the test is running.
	COMPLETED, indicates that the test is completed.
	ABORTED, indicates that the test has been interrupted (stopped).
	INACTIVE, indicates that the test is inactive.
	FAILED, indicates that the test has been failed.
Example(s)	FETC:DATA:TEL:ETH:RFC:BCKT:TST?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TSTate?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:CSTep?

Description	This query returns the current percentage of the testing rate.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:CSTep?
Response Syntax	<Step>
Response(s)	**Step**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the current percentage of the testing rate.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:CST?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:CTRial?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:CTRial?

Description	This query returns the current trial number for the Frame Loss test. Only available when the Frame Loss test is running.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:CTRial?
Response Syntax	<Number>
Response(s)	**Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the current trial number for the test.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:CTR?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:CTRial?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FCOunt:RX?

Description	This query returns the number of received frames for the indicated direction.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FCOunt:RX? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of received frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:FCO:RX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FCOunt:TX?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FCOunt:TX?

Description	This query returns the number of transmitted frames for the indicated direction.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FCOunt:TX? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of transmitted frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:FCO:TX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FCOunt:RX?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FRESults[1..n]?

Description	This query returns the number of frames for the corresponding direction depending on the selected Displayed Step and Displayed Results.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > table - Frame Loss
	NOTE: For FRESults[1..n], use FRES1 to FRES10 corresponding to the frame number.
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FRESults[1..n]? <wsp><Direction>, <Results>, <Step>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	Results:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the result mode.
	CURRent
	RMINimum
	RMAXimum
	AVERage
	Step:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the current percentage of the testing rate.
Response Syntax	<Results>

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FRESults[1..n]?

Response(s)	**Results**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss results.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:FRES1? TX2RX,CURR,90.000
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TRESults[1..n]?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:SMESsage?

Description	This query returns the Frame Loss test status messages.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:SMESsage?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame Loss test status.
	NONE, None is retrieved.
	INITIALIZING, Initializing is retrieved.
	WAITING, Waiting is retrieved.
	NMEASURABLE, Not Measurable is retrieved.
	SLFRAMES, Sending Learning Frames is retrieved.
	STFRAMES, Sending Test Frames is retrieved.
	ABUSER, Aborted by User is retrieved.
	LDOWN, Link Down is retrieved.
	ALRCONNECTION, Aborted - Loss of Remote Connection is retrieved.
	MANRESOLVED, MAC Address Not Resolved is retrieved.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:SMES?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:SMESsage?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:TETime?

Description	This query returns the elapsed time for the Frame Loss subtest.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:TETime?
Response Syntax	\<Time\>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA\> element.
	Returns the elapsed time.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:TET?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TETime?

:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:TSTate?

Description	This query returns the Frame Loss test state.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:TSTate?
Response Syntax	<State>
Response(s)	**State**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame Loss test state.
	--, indicates that the test has not run yet.
	INPROGRESS, indicates that the test is running.
	COMPLETED, indicates that the test is completed.
	ABORTED, indicates that the test has been interrupted (stopped).
	INACTIVE, indicates that the test is inactive.
	FAILED, indicates that the test has been failed.
Example(s)	FETC:DATA:TEL:ETH:RFC:FLOS:TST?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TSTate?

:FETCh:DATA:TELecom:ETHernet:RFC:GLOBal:THReshold:VERDict?

Description	This query returns verdict status.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:GLOBal:THReshold:VERDict? <wsp><VALue>
Parameter(s)	**VALue**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Subtests
	THRoughput, select Throughput test
	BTBack, select Back-to-Back Test
	FLOSs: Frame Loss Test
	LATency: Latency test
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict status.
	None, returns test is pending
	Pass, returns test is pass
	Fail, returns test is fail
Example(s)	FETC:DATA:TEL:ETH:RFC:GLOBal:THReshold:VERDict? THR
See Also	FETCh:DATA:TEL:SON:LINE:PM:STAT?

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:CTRial?

Description	This query returns the current trial number for the Latency test. Only available when the Latency test is running.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:CTRial?
Response Syntax	<Number>
Response(s)	**Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the current trial number for the test.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:CTR?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:CTRial?

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:RX?

Description	This query returns the number of received frames for the indicated direction.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:RX? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of received frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:FCO:RX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:TX?

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:TX?

Description	This query returns the number of transmitted frames for the indicated direction.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:TX? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of transmitted frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:FCO:TX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:LATency:FCOunt:RX?

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:LRESults[1..n] ?

Description	This query returns the number of frames for the corresponding direction depending on the selected Mode and Displayed Results.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > table - Latency (per frame)
	NOTE: For LRESults[1..n], use LRES1 to LRES10 corresponding to the frame number.
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:LRESults[1..n]? <wsp><Direction>, <Results>, <Mode>

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:LRESults[1..n]?

Parameter(s)	**Direction**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the direction. (For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1) TX2RX: TX-to-RX (TX2RX) for single port topology. LTORemote: Local-to-Remote direction. RTOLocal: Remote-to-Local direction. P1TOP2: P1 -TO-P2. P2TOP1: P2 -TO-P1. **Results**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the result mode. CURRent RMINimum RMAXimum AVERage **Mode**: The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the propagation time mode. SFORward: Store and Forward (SFORward), which allows the calculation of the propagation time of a frame. CTHRough: Cut Through (CTHRough), which allows the calculation of the propagation time of a bit.
Response Syntax	<Results>

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:LRESults[1..n]?

Response(s)	**Results**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Latency results.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:LRES1? TX2RX,CURR,CTHR
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THroughput:TRESults[1..n]?

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:SMESsage?

Description	This query returns the latency test status messages.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:SMESsage?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the latency test status.
	NONE, None is retrieved.
	INITIALIZING, Initializing is retrieved.
	WAITING, Waiting is retrieved.
	NMEASURABLE, Not Measurable is retrieved.
	SLFRAMES, Sending Learning Frames is retrieved.
	STFRAMES, Sending Test Frames is retrieved.
	ABUSER, Aborted by User is retrieved.
	LDOWN, Link Down is retrieved.
	ALRCONNECTION, Aborted - Loss of Remote Connection is retrieved.
	MANRESOLVED, MAC Address Not Resolved is retrieved.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:SMES?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:SMESsage?

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:TETime?

Description	This query returns the elapsed time for the Latency subtest.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:TETime?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the elapsed time.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:TET?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TETime?

:FETCh:DATA:TELecom:ETHernet:RFC:LATency:TSTate?

Description	This query returns the latency test state.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:LATency:TSTate?
Response Syntax	<State>
Response(s)	**State**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the latency test state.
	--, indicates that the test has not run yet.
	INPROGRESS, indicates that the test is running.
	COMPLETED, indicates that the test is completed.
	ABORTED, indicates that the test has been interrupted (stopped).
	INACTIVE, indicates that the test is inactive.
	FAILED, indicates that the test has been failed.
Example(s)	FETC:DATA:TEL:ETH:RFC:LAT:TST?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:TSTate?

:FETCh:DATA:TELecom:ETHernet:RFC:SUMMary:THReshold:VERDict?

Description	This query returns verdict status depends upon test and frame size.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:SUMMary:THReshold:VERDict? <wsp><VALue>, <Fsize>
Parameter(s)	**VALue**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Subtests
	THRoughput, select Throughput test
	BTBack, select Back-to-Back Test
	FLOSs: Frame Loss Test
	LATency: Latency test
	Fsize:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Frame Size
	F64: 64
	F128to255: 128
	F256to511: 256
	F512to1023: 512
	F1024to1518: 1024
	F12804tof1517: 1280
	F1518: 1518
Response Syntax	<Status>

:FETCh:DATA:TELecom:ETHernet:RFC:SUMMary:THReshold:VERDict?

Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the verdict status.
	None, returns test is pending
	Pass, returns test is pass
	Fail, returns test is fail
Example(s)	FETC:DATA:TEL:ETH:RFC:SUMM:THR:VERD? THR,F1518
See Also	FETCh:DATA:TEL:SON:LINE:PM:STAT?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:CTRial?

Description	This query returns the current trial number for the Throughput test. Only available when the Throughput test is running.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:CTRial?
Response Syntax	<Number>
Response(s)	**Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the current trial number.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:CTR?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:CTRial?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:FCOunt:RX?

Description	This query returns the number of received frames for the indicated direction. At *RST condition, this value is set to device-dependent. Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:FCOunt:RX? <wsp><Direction>
Parameter(s)	**Direction**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the direction. (For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1) TX2RX: TX-to-RX (TX2RX) for single port topology. LTORemote: Local-to-Remote direction. RTOLocal: Remote-to-Local direction. P1TOP2: P1 -TO-P2. P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns the number of received frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:FCO:RX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:FCOunt:TX?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:FCOunt:TX?

Description	This query returns the number of transmitted frames for the indicated direction.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:FCOunt:TX? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
Response Syntax	<Fcount>
Response(s)	**Fcount**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of transmitted frames for the indicated direction.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:FCO:TX? TX2RX
See Also	FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:FCOunt:RX?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:SMESsage?

Description	This query returns the throughput test status messages.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:SMESsage?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the throughput test status messages.
	NONE, None is retrieved.
	INITIALIZING, Initializing is retrieved.
	WAITING, Waiting is retrieved.
	NMEASURABLE, Not Measurable is retrieved.
	SLFRAMES, Sending Learning Frames is retrieved.
	STFRAMES, Sending Test Frames is retrieved.
	ABUSER, Aborted by User is retrieved.
	LDOWN, Link Down is retrieved.
	ALRCONNECTION, Aborted - Loss of Remote Connection is retrieved.
	MANRESOLVED, MAC Address Not Resolved is retrieved.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:SMES?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:SMESsage?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TETime?

Description	This query returns the elapsed time for the throughput subtest.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TETime?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the elapsed time.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:TET?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TETime?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TRESults[1..n]?

Description	This query returns the number of frames for the corresponding direction depending on the selected Layer and Displayed Results.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > table - Throughput
	NOTE: For TRESults[1..n], use TRES1 to TRES10 corresponding to the frame number.
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TRESults[1..n]? <wsp><Direction>, <Results>, <Layers>

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TRESults[1..n]?

Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the direction.
	(For DTS used LTOR and RTOL as direction, for single port use TX2RX as direction and for Dual port topology use P1TOP2 and P2TOP1)
	TX2RX: TX-to-RX (TX2RX) for single port topology.
	LTORemote: Local-to-Remote direction.
	RTOLocal: Remote-to-Local direction.
	P1TOP2: P1 -TO-P2.
	P2TOP1: P2 -TO-P1.
	Results:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the result mode.
	CURRent
	RMINimum
	RMAXimum
	AVERage
	Layers:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the layer:
	ETHernet: Ethernet
	IP
	ALL: All layer
Response Syntax	<Results>

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TRESults[1..n]?

Response(s)	**Results**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Throughput results.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:TRES1? TX2RX,CURR,ALL
See Also	FETCh:DATA:TELecom:ETHernet:RFC:FLOSs:FRESults[1..n]?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TSTate?

Description	This query returns the throughput test state.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:TSTate?
Response Syntax	<State>
Response(s)	**State**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the throughput test state.
	--, indicates that the test has not run yet.
	INPROGRESS, indicates that the test is running.
	COMPLETED, indicates that the test is completed.
	ABORTED, indicates that the test has been interrupted (stopped).
	INACTIVE, indicates that the test is inactive.
	FAILED, indicates that the test has been failed.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:TST?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:BCKTobck:TSTate?

:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:VALidation?

Description	This query returns the number of times the result should be validated.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Summary > Val. #
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:THRoughput:VALidation?
Response Syntax	<Current validation>
Response(s)	**Current validation**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of times the result should be validated.
Example(s)	FETC:DATA:TEL:ETH:RFC:THR:VAL?
See Also	FETCh:DATA:TELecom:ETHernet:RFC:LATency:MINTime?

Summary (SyncE)

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:AVERage?

Description	This query returns the ESMC Average frame/s.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > Avrage frame/s
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:AVERage?
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns ESMC Average frame/s.
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:FRAM:AVER?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:MINimum?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:MAXimum?

Description	This query returns the ESMC Maximum frame/s
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > Maximum frame/s
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:MAXimum?
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns ESMC Maximum frame/s
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:FRAMes:MAX?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:AVERage?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:MINimum?

Description	This query returns the ESMC Minimum frame/s
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > Minimum frame/s
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:MINimum?
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns ESMC Minimum frame/s
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:FRAM:MIN?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:FRAMes:MAXimum?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXEvent:COUNt?

Description	This query returns the RX Event Count
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > RX Event Count
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > RX Event Total
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXEvent:COUNt?
Response Syntax	<RX Event count>
Response(s)	**RX Event count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns RX Event Count
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:RXEV:COUN?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXQLmismatch:FRAMes:COUNt?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXINfo?

Description	This query returns the RX Information
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > RX Information
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > RX Information Total
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXINfo?
Response Syntax	<RX Information>
Response(s)	**RX Information**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns RX Information
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:RXIN?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXRate?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:CHANge?

Description	This query returns the RX Last change
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > RX Last change
	Results > Quality Level > Last Change Recived
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:CHANge?
Response Syntax	<RX Last change>
Response(s)	**RX Last change**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns RX Last change
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:RXLast:CHANge?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:CHANge?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:QL Message?

Description	This query returns the RX Last QL Message
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > RX Last QL Message
	Navigation Path: Test App > SyncE > Results > Quality Level > last QL Received
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:QLMessage?
Response Syntax	<QL Message>
Response(s)	**QL Message**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns RX Last QL Message
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:RXLast:QLM?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:QLMessage?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXQLmismatch:FRAMes:COUNt?

Description	This query returns the RX QL Mismatch Frame Count
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > RX QL Mismatch Frame Count
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXQLmismatch:FRAMes:COUNt?
Response Syntax	<Frame count>
Response(s)	**Frame count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns RX QL Mismatch Frame Count
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:RXQL:FRAM:COUNt?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXEVent:COUNt?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXRate?

Description	This query returns the ESMC RX rate
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > ESMC RX rate
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXRate?
Response Syntax	<RX Rate>
Response(s)	**RX Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns ESMC RX rate
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:RXR?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXINfo?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXEvent:COUNt?

Description	This query returns the TX Event Count
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > TX Event Count
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > TX Event Total
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXEvent:COUNt?
Response Syntax	<TX Event>
Response(s)	**TX Event**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns TX Event Count
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:TXEV:COUN?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXEVent:COUNt?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXINfo?

Description	This query returns the TX Information
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > TX Information
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > TX Information Total
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXINfo?
Response Syntax	<TX Information>
Response(s)	**TX Information**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns TX Information
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:TXIN?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXINfo?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXLast:CHANge?

Description	This query returns the TX Last change
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > TX Last change
	Navigation Path: Test App > SyncE > Results > Quality Level > Last Change Generated
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXLast:CHANge?
Response Syntax	<TX Last change>
Response(s)	**TX Last change**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns TX Last change
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:TXL:CHAN?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:CHANge?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXLast:QL Message?

Description	This query returns the TX Last QL Message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Summary > ESMC - Port 1 > TX Last QL Message
	Navigation Path: Test App > SyncE > Results > Quality Level > Generated QL
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:TXLast:QLMessage?
Response Syntax	<TX Last QL message>
Response(s)	**TX Last QL message**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns TX Last QL Message.
Example(s)	SENS:DATA:TEL:PACK:SYNC:ESMC:TXL:QLM?
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:ESMC:RXLast:QLMessage?

Summary (TCP Throughput)

:FETCh:DATA:TELecom:ETHernet:RTD:TIME:AVERage?

Description	This query returns the average round trip delay value.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Round Trip Latency (ms) > Average.
Syntax	:FETCh:DATA:TELecom:ETHernet:RTD:TIME:AVERage?
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the average Round Trip Delay value.
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:RTD:TIME:AVER?
See Also	FETCh:DATA:TELecom:ETHernet:RTD:TIME:LAST?

:FETCh:DATA:TELecom:ETHernet:RTD:TIME:LAST?

Description	This query returns the last round trip delay value.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Round Trip Latency (ms) > Last.
Syntax	:FETCh:DATA:TELecom:ETHernet:RTD:TIME:LAST?
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the last Round Trip Delay recorded.
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:RTD:TIME:LAST?
See Also	FETCh:DATA:TELecom:ETHernet:RTD:TIME:AVERage?

:FETCh:DATA:TELecom:ETHernet:RTD:TIME:MAXimum?

Description	This query returns the maximum Round Trip Delay recorded.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Round Trip Latency (ms) > Maximum.
Syntax	:FETCh:DATA:TELecom:ETHernet:RTD:TIME:MAXimum?
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the maximum Round Trip Delay recorded
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:RTD:TIME:MAX?
See Also	FETCh:DATA:TELecom:ETHernet:RTD:TIME:MINimum?

:FETCh:DATA:TELecom:ETHernet:RTD:TIME:MINimum?

Description	This query returns the minimum Round Trip Delay recorded.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Round Trip Latency (ms) > Minimum.
Syntax	:FETCh:DATA:TELecom:ETHernet:RTD:TIME:MINimum?
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the minimum Round Trip Delay recorded
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:RTD:TIME:MIN?
See Also	FETCh:DATA:TELecom:ETHernet:RTD:TIME:MAXimum?

:FETCh:DATA:TELecom:ETHernet:TCP:CONNection:STATus?

Description	This command returns the Connection Status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > TCP Connection Status.
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:CONNection:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the connection status.
	-- indicates the test is not running or results are not available.
	INPROGRESS indicates that the TCP initialization algorithm is in progress.
	WAITING indicates on the remote unit that the test is started but the TCP initialization algorithm is not initiated by the local unit.
	ESTABLISHED indicates that the TCP session has been successfully established between the local and remote units.
	CLOSING indicates on the TCP protocol is closing down the connection.
	CLOSED indicates that the session is closed. Either no TCP initialization algorithm has been received, the remote unit has received and completed the request to close the TCP session, or no data has been received at the remote unit for 30 seconds.
	RIPNFOUND indicates that the local unit didn't received an answer to the ARP request sent to the IP address of the remote unit.
Example(s)	FETC:DATA:TEL:ETH:TCP:CONN:STAT?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:CONNection:STATus

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:EFFiciency?

Description	This query returns the Total Efficiency (%)
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Total Efficency (%)
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:EFFiciency?
Response Syntax	<Efficiency>
Response(s)	**Efficiency**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Total Efficiency (%)
	At *RST condition, this value is device dependent.
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:EFF?
See Also	SOURce:DATA:TELecom:ETHernet:TCP:INJection:THReshold

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:AVERage?

Description	This query returns the Avrage TCP Throughput(%)
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > Avrage TCP Throughput(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:AVERage?
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Average TCP Throughput(%)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:THR:AVERage?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:LAST?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:LAST?

Description	This query returns the Last TCP Throughput(%)
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > TCP Throughput(%) > Last
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:LAST?
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Last TCP Throughput(%)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:THR:LAST?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:LAST?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput :MAXimum:VERDict?

Description	This query returns Maximum TCP Throughput Verdict status
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput % > Maximum Verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:MAXimum:VERDict?
Response Syntax	\<Verdict\>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns Maximum TCP Throughput Verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:TCP:STAT:THRoughput:MAXimum:VERDict?
See Also	SOURce:DATA:TELecom:ETHernet:TCP:INJection:THReshold?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput :MAXimum?

Description	This query returns the Maximum TCP Throughput(%)
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > Maximum TCP Throughput(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:MAXimum?
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Maximum TCP Throughput(%)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:THR:MAXimum?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:MINimum?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput :MINimum?

Description	This query returns the Minimum TCP Throughput(%)
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > Minimum TCP Throughput(%)
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:MINimum?
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Minimum TCP Throughput(%)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:THR:MINimum?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:MAXimum?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:TRTFrames?

Description	This query returns the Total Re-transmitted Frames
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > Re transmitted frames.
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:TRTFrames?
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Total Re-transmitted Frames
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:TRTF?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:TTFRames?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:TTFRames?

Description	This query returns the Total Transmitted Frames
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > transmitted frames
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:TTFRames?
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Total Transmitted Frames
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:TTFR?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:TRTFrames?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:LAST?

Description	This query returns the Last Window Size (Mbytes)
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > Window Size (Mbytes) > Last
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:LAST?
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Last Window Size (Mbytes)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:WINDsize:LAST?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:THRoughput:AVERage?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:MAXimum?

Description	This query returns the Maximum Window Size (Mbytes)
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > Window Size (Mbytes) > Maximum
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:MAXimum?
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Maximum Window Size (Mbytes)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:WINDsize:MAXimum?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:MINimum?

:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:MINimum?

Description	This query returns the Minimum Window Size (Mbytes)
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > TCP Throughput > Window Size (Mbytes) > Minimum
Syntax	:FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:MINimum?
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Minimum Window Size (Mbytes)
Example(s)	SOUR:DATA:TEL:ETH:TCP:MODE LOC
	FETC:DATA:TEL:ETH:TCP:STAT:WINDsize:MINimum?
See Also	FETCh:DATA:TELecom:ETHernet:TCP:STATistics:WINDsize:MAXimum?

Summary (Traffic Gen & Mon)

:FETCh:DATA:TELecom:ETHernet:STReam:LATency:STATus:TIME?

Description	This query returns the time required for a bit to travel from the transmitter back to its receiver after crossing a far-end loopback.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > QoS Metrics
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:LATency:STATus:TIME? <wsp><Time>
Parameter(s)	**Time**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the time required for a bit to travel.
	CURRent, displays the result of the last latency measurement.
	LATMIN, displays the minimum latency recorded.
	LATMAX, displays the maximum latency recorded.
	AVERage, displays the average latency value.
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the time required for a bit to travel.
	CURRENT, displays the result of the last latency measurement.
	LATMIN, displays the minimum latency recorded.
	LATMAX, displays the maximum latency recorded.
	AVERAGE, displays the average latency value.
Example(s)	FETC:DATA:TEL:ETH:STR:LAT:STAT:TIME? CURR
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:STReam:SEConds?

Summary (NI/CSU Emulation)

:FETCh:DATA:TELecom:DSN:LOOPback:STATus?

Description	This query returns the auto-response loopback status
	At *RST condition, this value is device dependent.
	Navigation Path: Test > NICSU > Results > Summary > Auto-Response Loopback status
	Navigation Path: Test > NICSU > Test configurator > Summary > Auto-Response Loopback status
Syntax	:FETCh:DATA:TELecom:DSN:LOOPback:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the auto-response loopback status.
	1, auto-response loopback status is active.
	0, auto-response loopback status is inactive.
Example(s)	FETC:DATA:TEL:DSN:LOOP:STAT?
See Also	FETCh:DATA:TEL:SON:SECTion:PM:STAT?

Summary (S-OAM and MPLS-TP OAM)

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:DOMain:ID: CCM?

Description	This query returns the Domain Id of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > Domain ID > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:DOMain:ID:CCM?
Response Syntax	<Domain Id>
Response(s)	**Domain Id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Domain Id value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:DOM:ID:CCM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:SLOS:RAT?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:DOMain:ID: FORMat?

Description	This query returns whether it is unexpected format of the Domain Id of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > Domain ID > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:DOMain:ID:FORMat?
Response Syntax	<Domain Id Format>
Response(s)	**Domain Id Format**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Domain Id format
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:DOM:ID:FORM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:SLOS:RAT?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MA:NAMe:CCM?

Description	This query returns the MA NAME of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > MA Name > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MA:NAMe:CCM?
Response Syntax	<MA Name>
Response(s)	**MA Name**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Local MA Name.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:MA:NAME:CCM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:STAT?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MA:NAMe:FORMat?

Description	This query returns whether it is unexpected format of the MA NAME of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > MA Name > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MA:NAMe:FORMat?
Response Syntax	<MA Name Format>
Response(s)	**MA Name Format**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of MA Name format
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:MA:NAME:FORM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:STAT?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MD:LEVel:CCM?

Description	This query returns the MD Level of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > MID Level > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MD:LEVel:CCM?
Response Syntax	<MD Level>
Response(s)	**MD Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the MD Level.
	0, 0 is selected as MD Level
	1, 1 is selected as MD Level
	2, 2 is selected as MD Level
	3, 3 is selected as MD Level
	4, 4 is selected as MD Level
	5, 5 is selected as MD Level
	6, 6 is selected as MD Level
	7, 7 is selected as MD Level
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:MD:LEV:CCM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:TX:CCM:COUN?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEG:ID:CCM?

Description	This query returns the MEG ID of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > MEG ID > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEG:ID:CCM?
Response Syntax	<MEG Id>
Response(s)	**MEG Id**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the MEG ID of last received CCM frame.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:MEG:ID:CCM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:LOOPback?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEG:ID:FORMat?

Description	This query returns whether it is unexpected format of the MEG ID of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > MEG ID > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEG:ID:FORMat?
Response Syntax	<MEG Id Format>
Response(s)	**MEG Id Format**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of MEG Id format
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:MEG:ID:FORM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:LOOPback?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEG:LEVel: CCM?

Description	This query returns the MEG Level of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > MEG Level > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEG:LEVel:CCM?
Response Syntax	<MEG Level>
Response(s)	**MEG Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the MEG Level.
	0, 0 is selected as MEG Level.
	1, 1 is selected as MEG Level.
	2, 2 is selected as MEG Level.
	3, 3 is selected as MEG Level.
	4, 4 is selected as MEG Level.
	5, 5 is selected as MEG Level.
	6, 6 is selected as MEG Level.
	7, 7 is selected as MEG Level.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:MEG:LEV:CCM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:TEST?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEP:ID:CCM?

Description	This query returns the MEP ID of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > MEP ID > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:MEP:ID:CCM?
Response Syntax	<MEP Id>
Response(s)	**MEP Id**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Local MEP Id values in hexadecimal format.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:MEP:ID:CCM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:FDEL:MAX?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:PERiod:CCM?

Description	This query returns the Period of last received CCM frame.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > Period > CCM
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:PERiod:CCM?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Period.
	P333MS, 3.33 MilliSeconds is selected as period
	P10MS, 10 MilliSeconds is selected as period
	P100MS,100 MilliSeconds is selected as period
	P1S, 1 Second is selected as period
	P10S, 10 Seconds is selected as period
	P1MIN, 1 Minute is selected as period
	P10MIN, 10 Minutes is selected as period
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:PER:CCM?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:FLOS:RAT?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:RX:CCM:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics RX CCM Count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > RX CCM > Count
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:RX:CCM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Rx CCM Count.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:RX:CCM:COUN?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:SLOS:MEAS?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:STATus?

Description	This query returns the Continuity check function shall report a Test Status
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity check > Status
	Continuity Check function shall report the content of the last received CCM frame
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Continuity Check function running Status.
	LOSSOFCONTINUTY, LOSSOFCONTINUTY is selected as type of Continuity Check function running Status.
	MISMERGE, MISMERGE is selected as type of Continuity Check function running Status.
	UNEXPECTEDMEGLEVEL, UNEXPECTEDMEGLEVEL is selected as type of Continuity Check function running Status.
	UNEXPECTEDMDLEVEL, UNEXPECTEDMDLEVEL is selected as type of Continuity Check function running Status.
	UNEXPECTEDMEP, UNEXPECTEDMEP is selected as type of Continuity Check function running Status.
	UNEXPECTEDPERIOD, UNEXPECTEDPERIOD is selected as type of Continuity Check function running Status.
	RECEIVINGCCMS, RECEIVINGCCMS is selected as type of Continuity Check function running Status.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:STAT?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:FDEL:MEAS?

:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:TX:CCM:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics summary TX CCM Count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Continuity Check > TX CCM > Count
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:CCHeck:TX:CCM:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Tx CCM Count.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:CCH:TX:CCM:COUN?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:FLOS:MEAS?

:FETCh:DATA:TELecom:SOAM:SUMMary:LOOPback:RX:LINe: UTILization?

Description	This query returns the RX Line Utilization.
	At *RST condition, this value Range = 0 to 100%.
	Navigation Path: Results > Summary > Loopback > RX Line Utilization(%)
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:LOOPback:RX:LINe:UTILization?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Rx Line Utilizaltion.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:LOOP:RX:LIN:UTIL?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:FLOS:RAT?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FDELay:MAXimum?

Description	This query returns the Frame Loss Ratio value.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Frame Delay(ms)(Maximum) > Result
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FDELay:MAXimum?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay maximum value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:FDEL:MAX?
See Also	FETCH:DATA:TELecom:SOAM:SUMM:CCH:DOM:ID:CCM?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FDELay:MEASurement?

Description	This query returns the frame delay measurements successful & failed values
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Frame Delay Measurement > Successful / Failed
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FDELay:MEASurement? <wsp><Result>
Parameter(s)	**Result**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Successful or failed Frame delay measurement
	SUCCESSFUL: Successful Frame delay measurement
	FAILED: failed Frame delay measurement
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay successful or failed value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:FDEL:MEAS? SUCCessful
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:RX:CCM:COUN?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FLOSs:MEASurement?

Description	This query returns the frame loss measurements successful & failed values
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Frame Loss Measurement > Successful / Failed
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FLOSs:MEASurement? <wsp><Result>
Parameter(s)	**Result**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Successful or failed Frame loss measurement
	SUCCESSFUL: Successful Frame loss measurement
	FAILED: failed Frame loss measurement
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame loss successful or failed value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:FLOS:MEAS? SUCCessful
See Also	FETCH:DATA:TELecom:SOAM:SUMM:CCH:MEG:ID:CCM?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FLOSs:RATio?

Description	This query returns the Frame Delay maximum value.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Frame Loss Ratio > Result (NearEnd/FarEnd)
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:FLOSs:RATio? <wsp><value>
Parameter(s)	value:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Near end or farend Frame loss ratio
	NEAREND: Successful Frame loss ratio
	FAREND: failed Frame loss ratio
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame loss ratio Nearend or Farend value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:FLOS:RAT? FARend
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:MA:NAME:CCM?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:LOOPback?

Description	This query returns the loopbacks successful & failed values
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Loopback
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:LOOPback? <wsp><Result>
Parameter(s)	**Result**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Successful or failed Loopback measurement
	SUCCESSFUL: Successful Loopback measurement
	FAILED: failed Loopback measurement
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback successful or failed value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:LOOPback? SUCCessful
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:MEP:ID:CCM?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:SLOSs:MEAS urement?

Description	This query returns the synthetic loss measurements successful & failed values
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Synthetic Loss Measurement > Successful / Failed
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:SLOSs:MEASurement? \<wsp>\<Result>
Parameter(s)	**Result**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects Successful or failed Synthetic loss measurement
	SUCCESSFUL: Successful Synthetic loss measurement
	FAILED: failed Synthetic loss measurement
Response Syntax	\<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA> element.
	Returns the Synthetic loss successful or failed value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:SLOS:MEAS? SUCCessful
See Also	FETCH:DATA:TELecom:SOAM:SUMM:CCH:MEG:LEV:CCM?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:SLOSs:RATio ?

Description	This query returns the Synthetic Loss Ratio value.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Synthetic Loss Ratio > Result (NearEnd/FarEnd)
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:SLOSs:RATio? <wsp><value>
Parameter(s)	value:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Near end or farend Sythetic loss ratio
	NEAREND: Successful Sythetic loss ratio
	FAREND: failed Sythetic loss ratio
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Sythetic loss ratio Nearend or Farend value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:SLOS:RAT? FARend
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:MD:LEV:CCM?

:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:TEST?

Description	This query returns the tests successful & failed values
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Results Summary > Test
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:RESults:TEST? <wsp><Result>
Parameter(s)	**Result**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Successful or failed Test measurement
	SUCCESSFUL: Successful Test measurement
	FAILED: failed Test measurement
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Test successful or failed value.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:RES:TEST? SUCCessful
See Also	FETCh:DATA:TELecom:SOAM:SUMM:CCH:PER:CCM?

:FETCh:DATA:TELecom:SOAM:SUMMary:TEST:RX:TST:RATE?

Description	This query returns the Test TST RX Rate.
	At *RST condition, this value is 0.
	Navigation Path: Results > Summary > Test > TXT RX Rate
Syntax	:FETCh:DATA:TELecom:SOAM:SUMMary:TEST:RX:TST:RATE?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Rx Rate.
Example(s)	FETC:DATA:TEL:SOAM:SUMM:TEST:RX:TST:RATE?
See Also	FETCh:DATA:TELecom:SOAM:SUMM:RES:SLOS:RATE?

Summary (FC BERT)

:FETCh:DATA:TELecom:FIBer:RTLatency:AVERage?

Description	This query returns the round trip latency average value (ms).
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Round-Trip Latency > Average
Syntax	:FETCh:DATA:TELecom:FIBer:RTLatency:AVERage?
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the round trip latency average value.
Example(s)	FETC:DATA:TEL:FIB:RTL:AVER?
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:RTLatency:LAST?

Description	This query returns the round trip latency last value (ms).
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Round-Trip Latency > Last
Syntax	:FETCh:DATA:TELecom:FIBer:RTLatency:LAST?
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the round trip latency last value.
Example(s)	FETC:DATA:TEL:FIB:RTL:LAST?
See Also	FETCh:DATA:TELecom:ETHernet:STATus?

:FETCh:DATA:TELecom:FIBer:RTLatency:MAXimum?

Description	This query returns the round trip latency maximum value (ms).
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Round-Trip Latency > Maximum
Syntax	:FETCh:DATA:TELecom:FIBer:RTLatency:MAXimum?
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the round trip latency maximum value.
Example(s)	FETC:DATA:TEL:FIB:RTL:MAX?
See Also	FETCh:DATA:TELecom:FIBer:PORT:PLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:RTLatency:MINimum?

Description	This query returns the round trip latency minimum value (ms).
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Round-Trip Latency > Minimum
Syntax	:FETCh:DATA:TELecom:FIBer:RTLatency:MINimum?
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the round trip latency minimum value.
Example(s)	FETC:DATA:TEL:FIB:RTL:MIN?
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:RTLatency:SAMPles?

Description	This query returns the number of latency data points (ms).
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Round-Trip Latency > Samples
Syntax	:FETCh:DATA:TELecom:FIBer:RTLatency:SAMPles?
Response Syntax	<Samples>
Response(s)	**Samples**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of latency data points.
Example(s)	FETC:DATA:TEL:FIB:RTL:SAMP?
See Also	FETCh:DATA:TELecom:FIBer:PORT:PLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:RTLatency:THReshold:VERDict?

Description	This query returns the Status of Latency Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Round-Trip Latency > Maximum Verdict
Syntax	:FETCh:DATA:TELecom:FIBer:RTLatency:THReshold:VERDict?
Response Syntax	<STATUS>
Response(s)	**STATUS**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Pattern Verdict.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:FIB:RTL:THR:VERD?
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds?

:FETCh:DATA:TELecom:FIBer:STReam:BYTE:COUNt?

Description	This query returns the total number of bytes transmitted/received on the line.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Traffic > Byte Count > Tx / Rx
Syntax	:FETCh:DATA:TELecom:FIBer:STReam:BYTE:COUNt? <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mode.
	TX: Transmitter mode.
	RX: Receiver mode.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total number of bytes transmitted/received.
Example(s)	FETC:DATA:TEL:FIB:STR:BYTE:COUN? TX
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:STReam:ESTimated:BBCRedit?

Description	This query returns the Estimated BB Credit.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Round-Trip Latency > Estimated BB_Credit
Syntax	:FETCh:DATA:TELecom:FIBer:STReam:ESTimated:BBCRedit?
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the round trip latency threshold value.
Example(s)	FETC:DATA:TEL:FIB:STR:EST:BBCR?
See Also	FETCh:DATA:TELecom:ETHernet:STATus?

:FETCh:DATA:TELecom:FIBer:STReam:FRAMe:COUNt?

Description	This query returns the number of frames transmitted/received.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Traffic > Frame Count > Tx / Rx
Syntax	:FETCh:DATA:TELecom:FIBer:STReam:FRAMe:COUNt? <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mode.
	TX: Transmitter mode.
	RX: Receiver mode.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total number of frames transmitted/received.
Example(s)	FETC:DATA:TEL:FIB:STR:FRAM:COUN? TX
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:STReam:FRAMe:RATE?

Description	This query returns frame rate (Frames/s) transmitted/received on the line.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Traffic > Frame Rate > Tx / Rx
Syntax	:FETCh:DATA:TELecom:FIBer:STReam:FRAMe:RATE? <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mode.
	TX: Transmitter mode.
	RX: Receiver mode.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frame rate (Frames/s) transmitted/received.
Example(s)	FETC:DATA:TEL:FIB:STR:FRAM:RATE? TX
See Also	FETCh:DATA:TELecom:FIBer:PORT:PLOGin:STATus?

:FETCh:DATA:TELecom:FIBer:STReam:LINE:UTILization?

Description	This query returns line utilization (%).
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Traffic > Line Utilization > Tx / Rx
Syntax	:FETCh:DATA:TELecom:FIBer:STReam:LINE:UTILization? <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the mode.
	TX: Transmitter mode.
	RX: Receiver mode.
Response Syntax	<Utilization>
Response(s)	**Utilization**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Line Utilization (%) transmitted/received.
Example(s)	FETC:DATA:TEL:FIB:STR:LINE:UTIL? TX
See Also	FETCh:DATA:TELecom:FIBer:PORT:FLOGin:STATus?

Summary (RFC 6349)

:FETCh:DATA:TELecom:ETHernet:RFC:ACTConnections?

Description	This query returns the number of iPerf server active connections.
	Navigation Path: Results > Summary > Active Connections
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:ACTConnections?
Response Syntax	<Active Connections>
Response(s)	**Active Connections**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of iPerf server active connections.
Example(s)	FETC:DATA:TEL:ETH:RFC:ACTC?

:FETCh:DATA:TELecom:ETHernet:RFC:CDETails?

Description	This query returns the list of active connection details.
	Navigation Path: Results > Summary > Connection Details
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:CDETails?
Response Syntax	<Connection Details>
Response(s)	**Connection Details**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	This query returns the list of active Connection Details.
Example(s)	FETC:DATA:TEL:ETH:RFC:CDET?

:FETCh:DATA:TELecom:ETHernet:RFC:MINimum:RTT?

Description	This query returns the Minimum RTT.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Minimum RTT(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:MINimum:RTT?
Response Syntax	<Minimum RTT>
Response(s)	**Minimum RTT**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Minimum RTT.
Example(s)	FETC:DATA:TEL:ETH:RFC:MIN:RTT?
	Returns the Minimum RTT
See Also	FETCh:DATA:TELecom:ETHernet:RFC:MTU?

:FETCh:DATA:TELecom:ETHernet:RFC:MTU?

Description	This query returns the Maximum Transfer Unit
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > MTU (Bytes)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:MTU?
Response Syntax	<MTU>
Response(s)	**MTU**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Maximum Transfer Unit.
Example(s)	FETC:DATA:TEL:ETH:RFC:MTU?
	Returns the Maximum Transfer Unit
See Also	FETCh:DATA:TELecom:ETHernet:RFC:MINimum:RTT?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:ACTUal:L:VERDict?

Description	This query returns the average of actual TCP Throughput metric verdict
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Actual L4 verdict.
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:ACTUal:L:VERDict? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the TCP Throughput metric verdict.
	PASS, Verict is Pass.
	FAIL, Verdict is Fail.
	UNDEFINED, Undefined verdict.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:ACTU:L:VERD? LTOR
	Returns the actual TCP Throughput metric verdict for local to remote.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:ACTUal:L?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:ACTUal:L?

Description	This query returns the average of actual TCP Throughput metric.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Actual L4
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:ACTUal:L? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Actual L>
Response(s)	**Actual L**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the average of actual TCP Throughput metric.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:ACTU:L? LTOR
	Returns the Actual L value for local to remote.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:WINDow?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:AVERage:RTT?

Description	This query returns the Average RTT.
	At *RST this value is device dependent.
	Navigation Path: Results>Summary>Average RTT(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:AVERage:RTT? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Average RTT>
Response(s)	**Average RTT**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Average RTT.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:AVER:RTT? LTOR

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:BUFFer:DELay?

Description	This query returns the ideal Buffer Delay metric.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Buffer Delay
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:BUFFer:DELay? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Buffer delay>
Response(s)	**Buffer delay**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Buffer Delay
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:BUFF:DEL? LTOR
	Returns ideal Buffer Delay metric for local to remote.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:TCP:EFFiciency?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:CCWNd?

Description	This query returns the current CWND TCP Throughput metric.
	At *RST this value is device dependent.
	Navigation Path:Results>Summary>Current CWND
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:CCWNd? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction;
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Current CWND>
Response(s)	**Current CWND**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the current CWND TCP Throughput metric.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:CCWN? LTOR
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:CCWNd

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:CURRent:L?

Description	This query returns the Current L4 TCP Throughput metric.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Current L4
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:CURRent:L? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Current L4>
Response(s)	**Current L4**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Current L4 TCP Throughput metric.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:CURR:L? LTOR

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:CURRent:RTT?

Description	This query returns the Current RTT.
	At *RST this value is device dependent.
	Navigation Path: Results>Summary>Currrent RTT (ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:CURRent:RTT? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Current RTT>
Response(s)	**Current RTT**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Current RTT.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:CURR:RTT? LTOR
See Also	FETCh:DATA:TELecom:ETHernet:RFC:MINimum:RTT?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:IDEal:L?

Description	This query returns the ideal TCP throughput metric.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Ideal L4
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:IDEal:L? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Ideal L>
Response(s)	**Ideal L**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Ideal L
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:IDE:L? LTOR
	Returns the Ideal L for local to remote.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:IDEal:L?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:MAXimum:RTT?

Description	This query returns the Maximum RTT.
	At *RST this value is device dependent.
	Navigation path:Results>Summary>Max RTT(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:MAXimum:RTT? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Maximum RTT>
Response(s)	**Maximum RTT**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Maximum RTT.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:MAX:RTT? LTOR

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:MCWNd?

Description	This query returns the Max CWND of TCP Throughput Metric.
	At *RST this value is device dependent.
	Navigation Path: Results>Summary>Max CWND
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:MCWNd? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction:
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Max CWND>
Response(s)	**Max CWND**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Max CWND of TCP Throughput Metric.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:MCWN? LTOR
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:MCWNd

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:MINimum:RTT?

Description	This query returns the Minimum RTT.
	At *RST this value is device dependent.
	Navigation Path: Results>Summary> Minimum RTT(ms)
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:MINimum:RTT? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Minimum RTT>
Response(s)	**Minimum RTT**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Minimum RTT.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:MIN:RTT? LTOR

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:NOFConn?

Description	This query returns the TCP Throughput number of connections.
	At *RST this value is device dependent.
	Navigation Path: Results>Summary>Nb Of Connections
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:NOFConn? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<NbOfConn>
Response(s)	**NbOfConn**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TCP Throughput number of connections.
Example(s)	FETChDATA:TEL:ETH:RFC:TCP:THR:NOFC? LTOR

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:RWBoost?

Description	This query returns the recommended window boost metric.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Recommended Window Boost
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:RWBoost? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote.
	RTOLocal: Remote to Local.
Response Syntax	<Recommended Window Boost>
Response(s)	**Recommended Window Boost**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return the Recommended Window Boost.
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:RBW? LTOR
	Returns recommended Window Boost metric for Locat to Remote.
See Also	FETC:DATA:TEL:ETH:RFC:TCPTHR:BUFF:DEL?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:TCP:EFFiciency?

Description	This query returns the TCP Efficiency metric.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > TCP Efficiency
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:TCP:EFFiciency? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<TCP Efficiency>
Response(s)	**TCP Efficiency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the TCP Efficiency metric
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:TCP:EFF? LTOR
	Returns TCP Efficiency metric value for local to remote.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold?

Description	This query returns the average of actual TCP Throughput threshold.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > TCP Throughput threshold
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:THReshold? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Threshold>
Response(s)	**Threshold**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the average of actual TCP Throughput threshold
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:THR? LTOR
	Returns TCP Throughput threshold for local to remote.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:BUFFer:DELay?

:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:WINDow?

Description	This query returns the TCP Throughput Total Max Window.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > TCP Throughput > Window
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:WINDow? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Max Window>
Response(s)	**Max Window**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Total Max Window
Example(s)	FETC:DATA:TEL:ETH:RFC:TCP:THR:WINDOW? RTOL
	Returns TCP Throuput Total Max Window for remote to local.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:BUFFer:DELay?

:FETCh:DATA:TELecom:ETHernet:RFC:WINDow:SWEep:ACTUal:L?

Description	This query returns the each step average TCP throughput metric
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Window Sweep > Actual L4
Syntax	:FETCh:DATA:TELecom:ETHernet:RFC:WINDow:SWEep:ACTUal:L? <wsp><Step>, <Direction>
Parameter(s)	**Step**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the step from 1 to 4
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Sweep L>
Response(s)	**Sweep L**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Window sweep actual L.
Example(s)	FETC:DATA:TEL:ETH:RFC:WIND:SWE:ACTU:L? 1,LTOR
	Returns the average TCP throughput metric for step1 local to remote.
See Also	FETCh:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:ACTUal:L?

:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:RWBoost:APPLy

Description	This command applies the Recommened Window Boost factor to the configurable Window Boost Factor.
	This is an action command and has no default value.
	Navigation Path: Setup > RFC6349 > Test Configurator > RFC6349 > Apply Recommended Window Boost.
Syntax	:SOURce:DATA:TELecom:ETHernet:RFC:TCP:THRoughput:RWBoost:APPLy
Response Syntax	<Sweep L>
Example(s)	SOUR:DATA:TEL:ETH:RFC:TCP:THR:RWB:APPL
See Also	SOUR:DATA:TEL:ETH:RFC:REST:DEF

Summary (Link OAM)

	:FETCh:DATA:TELecom:LOAM:ALARm:CURRent?
Description	This query returns the Current status of the OAM alarms.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Alarms > Current
Syntax	:FETCh:DATA:TELecom:LOAM:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the current status of the pattern alarm.
	CRITICALEVENT: Status of Critical Event.
	DYINGGASP: Status of Dying Gasp.
	LINKFAULT: Status of Link Fault.
	LINKOAM: Status of Link OAM.
Response Syntax	<Curr Alarm>
Response(s)	**Curr Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return count of Current status of Alarm.
Example(s)	FETC:DATA:TEL:LOAM:ALAR:CURR? LINKOAM
See Also	FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

:FETCh:DATA:TELecom:LOAM:ALARm:HISTory?

Description	This query returns the history status of the OAM alarms.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Alarms > History
Syntax	:FETCh:DATA:TELecom:LOAM:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the history status of the pattern alarm.
	CRITICALEVENT: Status of Critical Event.
	DYINGGASP: Status of Dying Gasp.
	LINKFAULT: Status of Link Fault.
	LINKOAM: Status of Link OAM.
Response Syntax	<Hist Alarm>
Response(s)	**Hist Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Return count of History status Alarm.
Example(s)	FETC:DATA:TEL:LOAM:ALAR:HIST? LINKOAM
See Also	FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

:FETCh:DATA:TELecom:LOAM:ALARm:SEConds?

Description	This query returns the Second of the OAM alarms.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Alarms > Seconds
Syntax	:FETCh:DATA:TELecom:LOAM:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the number of seconds within which the alarm occurred.
	CRITICALEVENT: No of Seconds Critical Event occurred.
	DYINGGASP: No of Seconds Dying Gasp Occurred.
	LINKFAULT: No of Seconds Link Fault Occurred.
	LINKOAM: Status of Link OAM.
Response Syntax	<Sec Alarm>
Response(s)	**Sec Alarm**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return count of No of Seconds Alarm occurred.
Example(s)	FETC:DATA:TEL:LOAM:ALAR:SEC? LINKOAM
See Also	FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

:FETCh:DATA:TELecom:LOAM:FRAMe:COUNt:RX?

Description	This query returns the Rx Frame Count.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > OAMPDU Frame Count > RX
Syntax	:FETCh:DATA:TELecom:LOAM:FRAMe:COUNt:RX? <wsp><Ftype>
Parameter(s)	**Ftype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of RX OAMPDU Frame count.
	FINFormation: Information Frame Count.
	FLBack: Loopback Control Count.
	FTOTal: Total Frame Count.
	FEVEnt: Total Event Notification Count
Response Syntax	<Rx Frame Count>
Response(s)	**Rx Frame Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return Rx frame count of type Information or Loopback Control or Event Notification.
Example(s)	FETC:DATA:TEL:LOAM:FRAM:COUN:RX? FINFormation
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:FETCh:DATA:TELecom:LOAM:FRAMe:COUNt:TX?

Description	This query returns the Tx Frame Count.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > OAMPDU Frame Count > TX
Syntax	:FETCh:DATA:TELecom:LOAM:FRAMe:COUNt:TX? <wsp><Ftype>
Parameter(s)	**Ftype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of TX OAMPDU Frame count.
	FINFormation: Information Frame Count.
	FLBack: Loopback Control Count.
	FTOTal: Total Frame Count.
Response Syntax	<Tx Frame Count>
Response(s)	**Tx Frame Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return Tx frame count of type Information or Loopback Control or Event Notification.
Example(s)	FETC:DATA:TEL:LOAM:FRAM:COUN:TX? FINFormation
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:FETCh:DATA:TELecom:LOAM:LBACk:STATus:FAILed?

Description	This query returns the Fail count status of Remote Loopback for Link OAM.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > Remote > Fail
Syntax	:FETCh:DATA:TELecom:LOAM:LBACk:STATus:FAILed?
Response Syntax	<Fail Count>
Response(s)	**Fail Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return count of Fail attempt.
Example(s)	FETC:DATA:TEL:LOAM:LBAC:STAT:FAIL?
See Also	FETCh:DATA:TELecom:LOAM:LBACk:STATus:SUCCessful?

:FETCh:DATA:TELecom:LOAM:LBACk:STATus:SUCCessful?

Description	This query returns the Successful count status of Remote Loopback for Link OAM.
	At *RST, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > Remote > Successful
Syntax	:FETCh:DATA:TELecom:LOAM:LBACk:STATus:SUCCessful?
Response Syntax	<Success Count>
Response(s)	**Success Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return count of Successful attempt.
Example(s)	FETC:DATA:TEL:LOAM:LBAC:STAT:SUCC?
See Also	FETCh:DATA:TELecom:LOAM:LBACk:STATus:FAILed?

Summary (iOptics)

:FETCh:DATA:TELecom:IOPTics:BERT:ALARm:PLOSs?

Description	This query returns the Pass/Fail Verdict of P. Loss for Bit Error Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Bit Error Test > P.Loss
Syntax	:FETCh:DATA:TELecom:IOPTics:BERT:ALARm:PLOSs?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Pattern Loss Verdict of connected transceiver.
	ABSENT: Pattern Loss is not detected.
	PRESENT: Pattern Loss is detected.
	HISTORYPRESENT: Pattern Loss was detected previously.
Example(s)	FETC:DATA:TEL:IOPT:BERT:ALAR:PLOS?
See Also	FETC:DATA:TEL:CAUI:ALAR:LANE:HIST?

:FETCh:DATA:TELecom:IOPTics:BERT:COUNt:VERDict?

Description	This query returns the Pass/Fail Verdict for Count of Bit Error Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Bit Error Test > Count Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:BERT:COUNt:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Count Verdict of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:BERT:COUN:VERD?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:BERT:COUNt?

Description	This query returns the Bert Count of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Bit Error Test > Count
Syntax	:FETCh:DATA:TELecom:IOPTics:BERT:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Bit Error Count for Bit Error Test of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:BERT:COUN?
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?

:FETCh:DATA:TELecom:IOPTics:BERT:STATus?

Description	This query returns the Bit Error Test status of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Bit Error Test
Syntax	:FETCh:DATA:TELecom:IOPTics:BERT:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Bit Error Test Status.
	PENDING: Pending
	RUNNING: Testing
	COMPLETED: Completed
	ABORTED: Aborted
Example(s)	FETC:DATA:TEL:IOPT:BERT:STAT?
See Also	FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:STATus?

:FETCh:DATA:TELecom:IOPTics:BERT:VERDict?

Description	This query returns the Pass/Fail Verdict for Bit Error Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Bit Error Test > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:BERT:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Bit Error Test of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:BERT:VERD?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:IINTerface:PINS:VERDict?

Description	This query returns the Pass/Fail Verdict of Pins of I/O Interface Quick Check Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > I/O Interface Quick Check > Pins > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:IINTerface:PINS:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Pins Verdict.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:IINT:PINS:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:STATus?

Description	This query returns the I/O Interface Quick Check Test status of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > I/O Interface Quick Check
Syntax	:FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the I/O Interface Quick Check Test Status.
	PENDING: Pending
	RUNNING: Testing
	COMPLETED: Completed
	ABORTED: Aborted
Example(s)	FETC:DATA:TEL:IOPT:IINT:QCH:TEST:STAT?
	Returns: COMPLETED
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:VERDict?

Description	This query returns the Pass/Fail Verdict of I/O Interface Quick Check Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > I/O Interface Quick Check > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for I/O Interface Quick Check Test.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:IINT:QCH:TEST:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:IINTerface:TYPe:VERDict?

Description	This query returns the Pass/Fail Verdict for I2C or MDIO Type Pins of I/O Interface Quick Check Test of connected transceiver for iOptics Application. At *RST condition, this value is Device Dependent. Navigation Path: Results > Summary > Sub-Test Sequence > I/O Interface Quick Check > I2C or MDIO > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:IINTerface:TYPe:VERDict?
Response Syntax	\<Verdict\>
Response(s)	**Verdict**: The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element. Returns the MDIO or I2C verdict. PASS: Verdict is Pass. FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:IINT:TYP:VERD? Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:ACTual ?

Description	This query returns the Actual Current Consumption of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Monitoring > Power Consumption > Current(A) Actual
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:ACTual?
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Actual Current of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:MON:CURR:ACT?
	Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:ACTual?

:FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:MAXimum?

Description	This query returns the Maximum Current Consumption of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Monitoring > Power Consumption > Current(A) Maximum
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:MAXimum?
Response Syntax	<MaxCurrent>
Response(s)	**MaxCurrent**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Maximum Current of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:MON:CURR:MAX?
	Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?

:FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:ACTual?

Description	This query returns the Actual Power Consumption of connected transceiver for iOptics Application. At *RST condition, this value is Device Dependent. Navigation Path: Results > Summary > Monitoring > Power Consumption > Power(W) Actual
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:ACTual?
Response Syntax	<Power>
Response(s)	**Power**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the Actual Power of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:MON:POW:ACT? Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:ACTual?

:FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?

Description	This query returns the Maximum Power Consumption of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Monitoring > Power Consumption > Power(W) Maximum
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?
Response Syntax	\<MaxPower>
Response(s)	**MaxPower**:
	The response data syntax for the first parameter is defined as a \<NR2 NUMERIC RESPONSE DATA> element.
	Returns the Maximum Power of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:MON:POW:MAX?
	Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:MAXimum?

:FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:VERDict?

Description	This query returns the Pass/Fail Verdict of Power Consumption Test of connected transceiver for iOptics Application. At *RST condition, this value is Device Dependent. Navigation Path: Results > Summary > Monitoring > Power Consumption > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:VERDict?
Response Syntax	\<Verdict\>
Response(s)	**Verdict**: The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element. Returns the Verdict for Power Consumption Test Status of connected transceiver. PASS: Verdict is Pass. FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:MON:POW:VERD? Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:MONitoring:TEMPerature:ACTual?

Description	This query returns the Actual Temperature of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Monitoring > Temperature > Temperature(C) Actual
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:TEMPerature:ACTual?
Response Syntax	<Temperature>
Response(s)	**Temperature**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Actual Temperature of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:MON:TEMP:ACT?
	Returns: 23
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:ACTual?

:FETCh:DATA:TELecom:IOPTics:MONitoring:TEMPerature:MAXimum?

Description	This query returns the Maximum Temperature of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Monitoring > Temperature > Temperature(C) Maximum
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:TEMPerature:MAXimum?
Response Syntax	\<Temperature\>
Response(s)	**Temperature**:
	The response data syntax for the first parameter is defined as a \<NR2 NUMERIC RESPONSE DATA\> element.
	Returns the Maximum Temperature of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:MON:TEMP:MAX?
	Returns: 21
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:ACTual?

:FETCh:DATA:TELecom:IOPTics:MONitoring:TEMPerature:VERDict?

Description	This query returns the Pass/Fail Verdict of Temperature Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Monitoring > Temperature > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:TEMPerature:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Temperature Test Status of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:MON:TEMP:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:MONitoring:TEST:STATus?

Description	This query returns the Test status of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Test Status
Syntax	:FETCh:DATA:TELecom:IOPTics:MONitoring:TEST:STATus?
Response Syntax	<Status>

Response(s)

Status:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the Test Status for connected transceiver.

CALIBRATING: Calibrating in progress

NOABORTCONDITION: No Aborted Condition

INVALIDDUT: Invalid Device Under Test

LASEROFF: Laser is Off

LOSSOFSIGNAL: Loss Of Signal

SIGNALOVERLOAD: Signal Overload

HIGHERPOWERCLASS: Higher Power Class

DEVICEPULLED: Device Pulled

USERSTOPPED: User Stopped

MISSINGDUT: Missing Device Under Test

MISSINGTA: Missing TA

INVALIDTA: Invalid TA

FAILED: Failed

Example(s)	FETC:DATA:TEL:IOPT:MON:TEST:STAT?
See Also	FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:STATus?

:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MAXimum:VERDict?

Description	This query returns the Pass/Fail Verdict of Maximum Received power for Optical RX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical RX Power Test (dBm) > Max Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MAXimum:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Maximum Received Power of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:ORX:PTES:MAX:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MAXimum?

Description	This query returns the Maximum Received power for Optical RX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical RX Power Test (dBm) > Max
Syntax	:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MAXimum?
Response Syntax	\<Max>
Response(s)	**Max**:
	The response data syntax for the first parameter is defined as a \<NR2 NUMERIC RESPONSE DATA> element.
	Returns the Maximum Received Power of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:ORX:PTES:MAX?
	Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?

:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MINimum:VERDict?

Description	This query returns the Pass/Fail Verdict of Minimum Received power for Optical RX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical RX Power Test (dBm) > Min Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MINimum:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Minimum Received Power of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:ORX:PTES:MIN:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MINimum?

Description	This query returns the Minimum Received power for Optical RX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical RX Power Test (dBm) > Min
Syntax	:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:MINimum?
Response Syntax	<Min>
Response(s)	**Min**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Minimum Received Power of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:ORX:PTES:MIN?
	Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?

:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:STATus?

Description	This query returns the Received power Test status of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical RX Power Test (dBm)
Syntax	:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Optical RX Power Test Status.
	PENDING: Pending
	RUNNING: Testing
	COMPLETED: Completed
	ABORTED: Aborted
Example(s)	FETC:DATA:TEL:IOPT:ORX:PTES:STAT?
	Returns: COMPLETED
See Also	FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:STATus?

:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:VERDict?

Description	This query returns the Pass/Fail Verdict of Received power for Optical RX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical RX Power Test (dBm) > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:ORX:PTESt:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Received Power of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:ORX:PTES:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MAXimum:VERDict?

Description	This query returns the Pass/Fail Verdict of Maximum Transmitted power for Optical TX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical TX Power Test (dBm) > Max Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MAXimum:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Maximum Transmitted Power of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:OTX:PTES:MAX:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MAXimum?

Description	This query returns the Maximum Transmitted power for Optical TX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical TX Power Test (dBm) > Max
Syntax	:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MAXimum?
Response Syntax	<Max>
Response(s)	**Max**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Maximum Transmitted Power of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:OTX:PTES:MAX?
	Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?

:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MINimum:VERDict?

Description	This query returns the Pass/Fail Verdict of Minimum Transmitted power for Optical TX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical TX Power Test (dBm) > Min Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MINimum:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Minimum Transmitted Power of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:OTX:PTES:MIN:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MINimum?

Description	This query returns the Minimum Transmitted power for Optical TX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical TX Power Test (dBm) > Min
Syntax	:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:MINimum?
Response Syntax	<Min>
Response(s)	**Min**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Minimum Transmitted Power of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:OTX:PTES:MIN?
	Returns: 1.120000
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:POWer:MAXimum?

:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:STATus?

Description	This query returns the Transmitted power Test status of connected transceiver for iOptics Application. At *RST condition, this value is Device Dependent. Navigation Path: Results > Summary > Sub-Test Sequence > Optical TX Power Test (dBm)
Syntax	:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:STATus?
Response Syntax	<Status>
Response(s)	**Status**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the Optical TX Power Test Status. PENDING: Pending RUNNING: Testing COMPLETED: Completed ABORTED: Aborted
Example(s)	FETC:DATA:TEL:IOPT:OTX:PTES:STAT? Returns: COMPLETED
See Also	FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:STATus?

:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:VERDict?

Description	This query returns the Pass/Fail Verdict of Transmitted power for Optical TX Power Test of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Optical TX Power Test (dBm) > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:OTX:PTESt:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Transmitted Power of connected transceiver.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:OTX:PTES:VERD?
	Returns: PASS
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:SKEW:MAXimum:VERDict?

Description	This query returns the Pass/Fail Verdict of Max Skew of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Excessive Skew Test > Max Skew Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:SKEW:MAXimum:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict for Max Skew.
	PASS: Verdict is Pass.
	FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:SKEW:MAX:VERD?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

:FETCh:DATA:TELecom:IOPTics:SKEW:MAXimum?

Description	This query returns the Maximum Skew of Excessive Skew of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Excessive Skew Test > Max Skew
Syntax	:FETCh:DATA:TELecom:IOPTics:SKEW:MAXimum?
Response Syntax	<MaxSkew>
Response(s)	**MaxSkew**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Max Skew of connected transceiver.
Example(s)	FETC:DATA:TEL:IOPT:SKEW:MAX?
See Also	FETCh:DATA:TELecom:IOPTics:MONitoring:CURRent:MAXimum?

:FETCh:DATA:TELecom:IOPTics:SKEW:STATus?

Description	This query returns the Received Excessive Skew Test status of connected transceiver for iOptics Application.
	At *RST condition, this value is Device Dependent.
	Navigation Path: Results > Summary > Sub-Test Sequence > Excessive Skew Test Status
Syntax	:FETCh:DATA:TELecom:IOPTics:SKEW:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Excessive Skew Test Status.
	PENDING: Pending
	RUNNING: Testing
	COMPLETED: Completed
	ABORTED: Aborted
Example(s)	FETC:DATA:TEL:IOPT:SKEW:STAT?
See Also	FETCh:DATA:TELecom:IOPTics:IINTerface:QCHeck:TEST:STATus?

:FETCh:DATA:TELecom:IOPTics:SKEW:VERDict?

Description	This query returns the Pass/Fail Verdict of Excessive Skew Test of connected transceiver for iOptics Application. At *RST condition, this value is Device Dependent. Navigation Path: Results > Summary > Sub-Test Sequence > Excessive Skew Test > Verdict
Syntax	:FETCh:DATA:TELecom:IOPTics:SKEW:VERDict?
Response Syntax	\<Verdict>
Response(s)	**Verdict**: The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA> element. Returns the Verdict for Excessive Skew Test of connected transceiver. PASS: Verdict is Pass. FAIL: Verdict is Fail.
Example(s)	FETC:DATA:TEL:IOPT:SKEW:VERD?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

Summary (FlexE)

:FETCh:DATA:TELecom:FETHernet:CLIent:THReshold:VERDict?

Description	This query returns status of the verdict, for a given FlexE client.
	For the client associated with pattern, the verdict is declared 'failed' if any bit error(s), pattern loss, ethernet alarm(s) or FCS error(s) occur.
	For the other clients, the verdict is declared 'failed' if any ethernet alarm(s) or FCS error(s) occur.
	Navigation Path: Results -> Summary -> Client
Syntax	:FETCh:DATA:TELecom:FETHernet:CLIent:THReshold:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the verdict, for a given FlexE client.
	PASS, Verdict is pass.
	FAIL, Verdict is fail.
	UNDEFINED, Undefined verdict.
Example(s)	FETCh:DATA:TELecom:FETHernet:CLIent:THReshold:VERDict?
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier
	SOURce:DATA:TELecom:FETHernet:PATTern:CLIent:IDentifier
	SOURce:DATA:TELecom:PATTern:VERDict:DISable
	SENSe:DATA:TELecom:PATTern:THReshold:COUNt
	SENSe:DATA:TELecom:PATTern:THReshold:RATE

:SENSe:DATA:TELecom:ETHernet:PACKet:LINE:RATE?

Description	This query returns the transmitting/receiving line rate in bit per second (bps).
	Navigation Path: Results > Summary > FlexE Clients
Syntax	:SENSe:DATA:TELecom:ETHernet:PACKet:LINE:RATE? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	The signal direction of the line rate
	RX Specifies the receiving line rate
	TX Specifies the transmitting line rate
Response Syntax	<Line rate in bps>
Response(s)	**Line rate in bps**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	The line rate in bit per second (bps) for the specified direction
Example(s)	SENS:DATA:TEL:ETH:PACK:LINE:RATE? RX
See Also	SENSe:DATA:TELecom:ETHernet:PACKet:LINE:UTILization?

Summary - Path OAM pop-up (FlexE)

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:RX:CCM:COUNt?

Description	This query returns the FlexE Path OAM Continuity Check function RX BAS count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Path OAM Client - Path OAM > Basic OAM - RX BAS Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:RX:CCM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the RX CCM count
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:RX:CCM:COUN?

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:RX:CCSTatus?

Description	This query returns the FlexE Path OAM Continuity check function status
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Path OAM Client - Path OAM > Basic OAM - CC Status
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:RX:CCSTatus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Continuity Check function status
	PEND: Pending
	LOCO: Loss of Continuity
	UPER: Unexpected Period
	RMES: Received Message
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:RX:CCST?
	Returns: PEND
See Also	FETCh:DATA:TELecom:FETHernet:POAM:CVER:RX:CVSTatus?

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:TX:CCM:COUNt?

Description	This query returns the FlexE Path OAM Ccontinuity check function TX CCM count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary >Basic OAM > TX BAS Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:TX:CCM:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TX CCM count
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:TX:CCM:COUN?

:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:RX:CSMessage:COUNt?

Description	This query returns the FlexE Path OAM Client Signal function RX CSM count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Client Signal > RX CSM - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:RX:CSMessage:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the RX CSM count
Example(s)	FETC:DATA:TEL:FETH:POAM:CSIG:RX:CSM:COUN?

:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:RX:CSSTatus?

Description

This query returns the FlexE Path OAM Client Signal function status

At *RST condition, this value is device dependent.

Navigation Path: Results > Summary > Path OAM > CS Type > Status

Syntax

:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:RX:CSSTatus?

Response Syntax

<Status>

Response(s)

Status:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the Client Signal function status

PENDING: Pending

NORMAL: Normal

CSTYPE_MISMATCH: CS Type Mismatch

Example(s)

FETC:DATA:TEL:FETH:POAM:CSIG:RX:CSST?

Returns: PENDING

See Also

FETCh:DATA:TELecom:FETHernet:POAM:CVER:RX:CVSTatus?

:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:TX:CSMessage :COUNt?

Description	This query returns the FlexE Path OAM Client Signal function TX CSM count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Client Signal > TX CSM - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:TX:CSMessage:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TX CSM count
Example(s)	FETC:DATA:TEL:FETH:POAM:CSIG:TX:CSM:COUN?

:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:TYPE:REC?

Description	This query returns the FlexE Path OAM received Client Signal type
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Summary > Client Signal > CS Type - Received
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CSIG:TYPE:REC?
Response Syntax	<Client Signal Type>
Response(s)	**Client Signal Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Received Client Signal Type
Example(s)	FETC:DATA:TEL:FETH:POAM:CSIG:TYPE:REC?
	Returns CSTYPE_SDH
See Also	SENSe:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:EXPexted?

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:DAPI:RECeived?

Description	This query returns the FlexE Path OAM connectivity verification DAPI received message
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Connectivity Verification > DAPI - Received Message
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:DAPI:RECeived?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received message.
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:DAPI:REC?

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:RX:CVM:COUNt?

Description	This query returns the FlexE Path OAM Connectivity Verification function RX CVM count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Connectivity Verification > RX CVM - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:RX:CVM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the RX CVM count
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:RX:CVM:COUN?

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:RX:CVSTatus?

Description	This query returns the FlexE Path OAM Connectivity Verification function status
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Connectivity Verification > CV Status
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:RX:CVSTatus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Connectivity Verification function status
	PENDING: Pending
	NORMAL: Normal
	SAPI_M: SAPI Mismatch
	DAPI_M: DAPI Mismatch
	SAPI_DAPI_M: SAPI and DAPI Mismatch
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:RX:CVST?
	Returns: PENDING
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:RX:CCSTatus?

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:SAPI:RECeived?

Description	This query returns the FlexE Path OAM connectivity verification SAPI received message
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Connectivity Verification > SAPI - Received Message
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:SAPI:RECeived?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received message.
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:SAPI:REC?

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:TX:CVM:COUNt?

Description	This query returns the FlexE Path OAM Connectivity Verification function TX CVM count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Connectivity Verification > TX CVM - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:TX:CVM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TX CVM count
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:TX:CVM:COUN?

:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:AVERage?

Description	This query returns the FlexE Path OAM Delay Measurent function Average delay in nanosecond (ns)
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Delay Measurent > Delay - Average
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:AVERage?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Delay Measurement Average delay
Example(s)	FETC:DATA:TEL:FETH:POAM:DEL:RX:AVER?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:LAST?

:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:DMR:COUNt?

Description	This query returns the FlexE Path OAM Delay Measurent function RX 2DMR count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Delay Measurent > RX 2DMR - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:DMR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the RX 2DMR count
Example(s)	FETC:DATA:TEL:FETH:POAM:DEL:RX:DMR:COUN?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:RX:CCM:COUNt?

:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:LAST?

Description	This query returns the FlexE Path OAM Delay Measurent function Last delay in nanosecond (ns)
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Delay Measurent > Delay - Last
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:LAST?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Delay Measurement Last delay
Example(s)	FETC:DATA:TEL:FETH:POAM:DEL:RX:LAST?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:AVERage?

:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:MAXimum?

Description	This query returns the FlexE Path OAM Delay Measurent function Maximum delay in nanosecond (ns)
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Delay Measurent > Delay - Maximum
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:MAXimum?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Delay Measurement Maximum delay
Example(s)	FETC:DATA:TEL:FETH:POAM:DEL:RX:MAX?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:LAST?

:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:MINimum?

Description	This query returns the FlexE Path OAM Delay Measurent function Minimum delay in nanosecond (ns)
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Delay Measurent > Delay - Minimum
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:MINimum?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Delay Measurement Minimum delay
Example(s)	FETC:DATA:TEL:FETH:POAM:DEL:RX:MIN?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:MAXimum?

:FETCh:DATA:TELecom:FETHernet:POAM:DELay:TX:DMM:COUNt?

Description	This query returns the FlexE Path OAM Delay Measurent function TX 2DMM count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Delay Measurent > TX 2DMM - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:DELay:TX:DMM:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TX 2DMM count
Example(s)	FETC:DATA:TEL:FETH:POAM:DEL:TX:DMM:COUN?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:TX:CCM:COUNt?

:FETCh:DATA:TELecom:FETHernet:POAM:DELay:TX:DSTatus?

Description	This query returns the FlexE Path OAM Delay Measurement function status
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Path OAM
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:DELay:TX:DSTatus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	ABOR: Aborted
	COMP: Completed
	IDLE: Idle
	INPR: In Progress
Example(s)	FETC:DATA:TEL:FETH:POAM:DEL:TX:DST?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:RX:CCSTatus?

:FETCh:DATA:TELecom:FETHernet:POAM:THReshold:VERDict ?

Description	This query returns status of the verdict, for a given FlexE Path OAM.
	Navigation Path: Results -> Summary -> Path OAM
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:THReshold:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the verdict, for FlexE Path OAM.
	PASS, Verdict is pass.
	FAIL, Verdict is fail.
	UNDEFINED, Undefined verdict.
Example(s)	FETC:DATA:TEL:FETH:POAM:THR:VERD?
See Also	FETCh:DATA:TELecom:FETHernet:CLIent:THReshold:VERDict?

Alarms/Errors

:FETCh:DATA:TELecom:ALARm:CURRent?

Description	This query returns the current status of all alarms related to the test such as Port, Ethernet, Pattern and Other. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ALARm:CURRent? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all alarms related to the selected test and all the tests.
	1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, GFPChannel, GFPFrame, HOPTCM, LINE, LOP, LOPTCM, LOPTU3, OAM, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, RSFEC, SECTION, SYNCE, WIS, XCODING
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>

:FETCh:DATA:TELecom:ALARm:CURRent?

Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current alarmed status of the selected test and all the tests.
Example(s)	FETC:DATA:TEL:ALAR:CURR? PORT
	FETC:DATA:TEL:ALAR:CURR? ODU0, 3
See Also	FETCh:DATA:TELecom:ALARm:HISTory?
	FETCh:DATA:TELecom:ALARm:SEConds?

:FETCh:DATA:TELecom:ALARm:HISTory?

Description	This query returns the history status of all alarms related to the test such as Port, Ethernet, Pattern and Other. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ALARm:HISTory? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all alarms related to the selected test and all the tests.
	1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, GFPChannel, GFPFrame, HOPTCM, LINE, LOP, LOPTCM, LOPTU3, OAM, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, RSFEC, SECTION, SYNCE, WIS, XCODING
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the alarmed history status of the selected test and all the tests.
Example(s)	FETC:DATA:TEL:ALAR:HIST? PORT
	FETC:DATA:TEL:ALAR:HIST? ODU0, 3
See Also	FETCh:DATA:TELecom:ALARm:CURRent?
	FETCh:DATA:TELecom:ALARm:SEConds?

:FETCh:DATA:TELecom:ALARm:SEConds?

Description	This query returns the number of seconds within which all alarms related to the test such as Port, Ethernet, Pattern and Other. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ALARm:SEConds? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all alarms related to the selected test and all the tests.
	1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, GFPChannel, GFPFrame, HOPTCM, LINE, LOP, LOPTCM, LOPTU3, OAM, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, RSFEC, SECTION, SYNCE, WIS, XCODING
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of seconds within which the selected test alarms and all the test alarms occurred.
Example(s)	FETC:DATA:TEL:ALAR:SEC? PORT
	FETC:DATA:TEL:ALAR:SEC? ODU0, 3
See Also	FETCh:DATA:TELecom:ALARm:HISTory?
	FETCh:DATA:TELecom:ALARm:CURRent?

:FETCh:DATA:TELecom:CAUI:ALARm:GLOBal:CURRent?

Description	This query returns the current status of Interface (Parallel - global) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:CAUI:ALARm:GLOBal:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm.
	FREQuency: Frequency
	LOC: LOC Lane
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CAUI:ALAR:GLOB:CURR? FREQ
See Also	FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:HISTory?

:FETCh:DATA:TELecom:CAUI:ALARm:GLOBal:HISTory?

Description	This query returns the history status of Interface (Parallel - global) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:CAUI:ALARm:GLOBal:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FREQuency: Frequency
	LOC: LOC Lane
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CAUI:ALAR:GLOB:HIST? FREQ
See Also	FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:CURRent?

:FETCh:DATA:TELecom:CAUI:ALARm:GLOBal:TX:STATus?

Description	This query returns the current status of global CAUI Lanes alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Setup > TX/RX
	Navigation Path: Setup > OTN SONET/SDH BERT > Test Configurator > Setup > TX/RX
Syntax	:FETCh:DATA:TELecom:CAUI:ALARm:GLOBal:TX:STATus?
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Current status of CAUI alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:CAUI:ALAR:GLOBal:TX:STATus?
See Also	FETCh:DATA:TELecom:OPTical:MODule:STATus?

:FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?

Description	This query returns the current status of Interface (Parallel - per lane) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FREQuency: Frequency
	LOC: LOC Lane
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CAUI:ALAR:LANE:CURR? 1,LOC
	FETC:DATA:TEL:CAUI:ALAR:LANE:CURR? 1,FREQ
See Also	FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:CURRent?

:FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?

Description	This query returns the history status of Interface (Parallel - per lane) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FREQuency: Frequency
	LOC: LOC Lane
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CAUI:ALAR:LANE:HIST? 1,LOC
	FETC:DATA:TEL:CAUI:ALAR:LANE:HIST? 1,FREQ
See Also	FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:HISTory?

:FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

Description	This query returns the number of seconds within which Interface (Parallel - per lane) alarm occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FREQuency: Frequency
	LOC: LOC Lane
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:CAUI:ALAR:LANE:SEC? 1,LOC
	FETC:DATA:TEL:CAUI:ALAR:LANE:SEC? 1,FREQ
See Also	FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:SEConds?

:FETCh:DATA:TELecom:CPRI:ALARm:CURRent?

Description	This query returns the current status of CPRI alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Alarms
Syntax	:FETCh:DATA:TELecom:CPRI:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LOF
	RLOS: R-LOS
	RLOF: R-LOF
	RAI
	SDI
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:ALAR:CURR?
See Also	FETCH:DATA:TELecom:CPRI:ALARm:HISTory?

:FETCh:DATA:TELecom:CPRI:ALARm:HISTory?

Description	This query returns the history status of CPRI alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Alarms
Syntax	:FETCh:DATA:TELecom:CPRI:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LOF
	RLOS: R-LOS
	RLOF: R-LOF
	RAI
	SDI
Response Syntax	<History Status>
Response(s)	**History Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:ALAR:HIST?
See Also	FETCh:DATA:TELecom:CPRI:ALARm:CURRent?

:FETCh:DATA:TELecom:CPRI:ALARm:SEConds?

Description	This query returns the number of seconds within which CPRI alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Alarms
Syntax	:FETCh:DATA:TELecom:CPRI:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LOF
	RLOS: R-LOS
	RLOF: R-LOF
	RAI
	SDI
Response Syntax	<seconds>
Response(s)	**seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:CPRI:ALAR:SEC?
See Also	FETCh:DATA:TELecom:CPRI:ERRor:SEConds?

:FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

Description	This query returns the count of CPRI errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Errors
	Navigation Path: Results > Alarms/Errors > Interface > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS: FAS (CPRI)
	K307: K30.7 (Interface)
	66BBlock: 66B Block (Interface)
	SYNCHEADER : Sync Header (Interface)
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:CPRI:ERR:COUNT? FAS
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:ERRor:CURRent?

Description	This query returns the current status of CPRI error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Errors
	Navigation Path: Results > Alarms/Errors > Interface > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS: FAS (CPRI)
	K307: K30.7 (Interface)
	66BBlock: 66B Block (Interface)
	SYNCHEADER : Sync Header (Interface)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:ERR:CURR? FAS
See Also	FETCh:DATA:TELecom:CPRI:ERRor:HISTory?

:FETCh:DATA:TELecom:CPRI:ERRor:HISTory?

Description	This query returns the history status of CPRI error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Errors
	Navigation Path: Results > Alarms/Errors > Interface > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS: FAS (CPRI)
	K307: K30.7 (Interface)
	66BBlock: 66B Block (Interface)
	SYNCHEADER : Sync Header (Interface)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:ERR:HIST? FAS
See Also	FETCh:DATA:TELecom:CPRI:ERRor:CURRent?

:FETCh:DATA:TELecom:CPRI:ERRor:RATE?

Description	This query returns the current rate of CPRI error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Errors
	Navigation Path: Results > Alarms/Errors > Interface > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS: FAS (CPRI)
	K307: K30.7 (Interface)
	66BBlock: 66B Block (Interface)
	SYNCHEADER : Sync Header (Interface)
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:CPRI:ERR:RATE? FAS
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:RATE?

:FETCh:DATA:TELecom:CPRI:ERRor:SEConds?

Description	This query returns the number of seconds within which CPRI error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > CPRI > Errors
	Navigation Path: Results > Alarms/Errors > Interface > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS: FAS (CPRI)
	K307: K30.7 (Interface)
	66BBlock: 66B Block (Interface)
	SYNCHEADER : Sync Header (Interface)
Response Syntax	<seconds>
Response(s)	**seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:CPRI:ERR:SEC? FAS
See Also	FETCh:DATA:TELecom:CPRI:ALARm:SEConds?

:FETCh:DATA:TELecom:CPRI:FEC:ERRor:COUNt?

Description	This query returns the count of FEC error for CPRI 24.3G.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:FEC:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FEC the error:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FSERR: Pre-FEC-SYMB
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the total count of FEC error.
Example(s)	FETC:DATA:TEL:CPRI:FEC:ERR:COUN? FUCW
See Also	FETCh:DATA:TELecom:CPRI:FEC:ERRor:RATE?

:FETCh:DATA:TELecom:CPRI:FEC:ERRor:CURRent?

Description	This query returns the current status of FEC error for CPRI 24.3G.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:FEC:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FUCW: FEC-UNCOR-CW
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occured in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:FEC:ERR:CURR? FUCW
See Also	FETCh:DATA:TELecom:CPRI:FEC:ERRor:HISTory?

:FETCh:DATA:TELecom:CPRI:FEC:ERRor:HISTory?

Description	This query returns the history status of FEC error for CPRI 24.3G.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:FEC:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FUCW: FEC-UNCOR-CW
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occured during the test.
	ABSENT: No alarm has occured during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:HIST? FUCW
See Also	FETCh:DATA:TELecom:CPRI:FEC:ERRor:CURRent?

:FETCh:DATA:TELecom:CPRI:FEC:ERRor:RATE?

Description	This query returns the rate of FEC error for CPRI 24.3G.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:FEC:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the FEC error:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FSERR: Pre-FEC-SYMB
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:CPRI:FEC:ERR:RATE? FUCW
See Also	FETCh:DATA:TELecom:CPRI:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:FEC:ERRor:SEConds?

Description	This query returns the seconds of FEC error for CPRI 24.3G.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:FEC:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FEC the error:
	FUCW: FEC-UNCOR-CW
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the total number of seconds during which errors occur on FEC
Example(s)	FETC:DATA:TEL:CPRI:FEC:ERR:SEC? FUCW
See Also	FETCh:DATA:TELecom:CPRI:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:COUNt?

Description	This query returns the count of an Interface (CPRI) error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:CPRI:INT:ERR:COUN? CV
See Also	FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:CURRent?

Description	This query returns the current status of an Interface (CPRI) error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:INT:ERR:CURR? CV
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:HISTory?

:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:HISTory?

Description	This query returns the history status of an Interface (CPRI) error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
Example(s)	FETC:DATA:TEL:CPRI:INT:ERR:HIST? CV
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:CURRent?

:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:RATE?

Description	This query returns the rate of an Interface (CPRI) error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of errors.
Example(s)	FETC:DATA:TEL:CPRI:INT:ERR:RATE? CV
See Also	FETCh:DATA:TELecom:CPRI:ERRor:RATE?

:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:SEConds?

Description	This query returns the number of seconds within which an Interface (CPRI) error occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:INTerface:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:CPRI:INT:ERR:SEC? CV
See Also	FETCh:DATA:TELecom:CPRI:ERRor:SEConds?

:FETCh:DATA:TELecom:CPRI:OBSai:ALARm:CURRent?

Description	This query returns the current status of OBSAI alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Alarms
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LOF
	RP3: RP3 Address Mismatch
Response Syntax	<Current Status>
Response(s)	**Current Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:ALAR:CURR? LOF
See Also	FETCh:DATA:TELecom:CPRI:ALARm:HISTory?

:FETCh:DATA:TELecom:CPRI:OBSai:ALARm:HISTory?

Description	This query returns the history status of OBSAI alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Alarms
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LOF
	RP3: RP3 Address Mismatch
Response Syntax	<History Status>
Response(s)	**History Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:ALAR:HIST? LOF
See Also	FETCh:DATA:TELecom:CPRI:ALARm:CURRent?

:FETCh:DATA:TELecom:CPRI:OBSai:ALARm:SEConds?

Description	This query returns the number of seconds within which OBSAI alarm occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Alarms
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LOF
	RP3: RP3 Address Mismatch
Response Syntax	<seconds>
Response(s)	**seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:ALAR:SEC? LOF
See Also	FETCh:DATA:TELecom:CPRI:ERRor:SEConds?

:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:COUNt?

Description	This query returns the count of OBSAI error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CRC
	FAS
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:ERR:COUNT? FAS
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:CURRent?

Description	This query returns the current status of OBSAI error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CRC
	FAS
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:ERR:CURR? FAS
See Also	FETCh:DATA:TELecom:CPRI:ERRor:HISTory?

:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:HISTory?

Description	This query returns the history status of OBSAI error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CRC
	FAS
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:ERR:HIST? FAS
See Also	FETCh:DATA:TELecom:CPRI:ERRor:CURRent?

:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:RATE?

Description	This query returns the reate of OBSAI error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CRC
	FAS
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:ERR:RATE? FAS
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:RATE?

:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:SEConds?

Description	This query returns the number of seconds within which OBSAI error occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > OBSAI > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:ERRor:SEConds? \<wsp\>\<Error\>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA\> element.
	Selects the error:
	CRC
	FAS
Response Syntax	\<Seconds\>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA\> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:CPRI:OBS:ERR:SEC? FAS
See Also	FETCh:DATA:TELecom:CPRI:ALARm:SEConds?

:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:COUNt?

Description	This query returns the count of Interface (OBSAI) errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV: CV
	K307: K30.7
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:INT:ERR:COUN? CV
See Also	FETCh:DATA:TELecom:CPRI:ERRor:COUNt?

:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:CURRent ?

Description	This query returns the current status of Interface (OBSAI) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV: CV
	K307: K30.7
Response Syntax	<Current Status>
Response(s)	**Current Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:INT:ERR:CURR? CV
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:HISTory?

:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:HISTory?

Description	This query returns the history status of Interface (OBSAI) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV: CV
	K307: K30.7
Response Syntax	<History Status>
Response(s)	**History Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:INT:ERR:HIST? CV
See Also	FETCh:DATA:TELecom:CPRI:INTerface:ERRor:CURRent?

:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:RATE?

Description	This query returns the current rate of Interface (OBSAI) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV: CV
	K307: K30.7
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:INT:ERR:RATE? CV
See Also	FETCh:DATA:TELecom:CPRI:ERRor:RATE?

:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:SEConds?

Description	This query returns the number of seconds within which Interface (OBSAI) error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CV: CV
	K307: K30.7
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:CPRI:OBSAI:INT:ERR:SEC? CV
See Also	FETCh:DATA:TELecom:CPRI:ERRor:SEConds?

:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:COUNt?

Description	This query returns the total count within which physical error occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > DCO > Media RX FEC > Errors > Count
Syntax	:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of Media RX error.
	FCBits: FEC Correctable Bits
	FUF: FEC Uncorrectable Frames
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Total count of Media RX FEC error for per lane configuration.
Example(s)	FETCh:DATA:TEL:DCO:ERR:MED:RX:COUN? FUF
See Also	FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:RATE?

:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:CURRent?

Description	This query returns the current status of DCO/Media RX FEC error. At *RST condition, this value is set to device-dependent. Navigation Path: Results > Alarms/Errors > DCO > Media RX FEC > Errors
Syntax	:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:CURRent? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: FCBits: FEC Correctable Bits FUF: FEC Uncorrectable Frames
Response Syntax	<Current>
Response(s)	**Current**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the current error status: PRESENT: An error has occurred in the last second. ABSENT: No error has occurred in the last second. INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:DCO:ERR:MED:RX:CURR? FUF
See Also	FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:HISTory?

:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:HISTory?

Description	This query returns the history status of DCO/Media RX FEC error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > DCO > Media RX FEC > Errors
Syntax	:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCBits: FEC Correctable Bits
	FUF: FEC Uncorrectable Frames
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:DCO:ERR:MED:RX:CURR? FUF
See Also	FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:CURRent?

:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:SEConds?

Description	This query returns the number of seconds within which DCO Media RX FEC error occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > DCO > Media RX FEC > Errors > Seconds
Syntax	:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of Media RX FEC error.
	FUF: FEC Uncorrectable Frames
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Total number of seconds for Media RX FEC Error.
Example(s)	FETC:DATA:TEL:DCO:ERR:MED:RX:SEC? FUF
See Also	FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:RATE?

:FETCh:DATA:TELecom:DSN:ALARm:DS[1..n]:CURRent?

Description	This query returns the current status of DS1/DS3 alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Alarms
Syntax	:FETCh:DATA:TELecom:DSN:ALARm:DS[1..n]:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AIS
	IDLE1: Idle (DS3)
	OOF
	RAI: RAI (DS1)
	RDI: RDI (DS3)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:DSN:ALAR:DS1:CURR? AIS
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE
	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]

:FETCh:DATA:TELecom:DSN:ALARm:DS[1..n]:HISTory?

Description	This query returns the history status of DS1/DS3 alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Alarms
Syntax	:FETCh:DATA:TELecom:DSN:ALARm:DS[1..n]:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AIS
	IDLE1: Idle (DS3)
	OOF
	RAI: RAI (DS1)
	RDI: RDI (DS3)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:DSN:ALAR:DS1:HIST? AIS
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE
	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]

:FETCh:DATA:TELecom:DSN:ALARm:DS[1..n]:SEConds?

Description	This query returns the number of seconds within which DS1/DS3 alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Alarms
Syntax	:FETCh:DATA:TELecom:DSN:ALARm:DS[1..n]:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AIS
	IDLE1: Idle (DS3)
	OOF
	RAI: RAI (DS1)
	RDI: RDI (DS3)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:DSN:ALAR:DS1:SEC? AIS
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE
	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]

:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:COUNt?

Description	This query returns the count of DS1/DS3 errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Errors
Syntax	:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:DSN:ERR:DS1:COUN? CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:INJect

:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:CURRent?

Description	This query returns the current status of DS1/DS3 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Errors
Syntax	:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:DSN:ERR:DS1:CURR? CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:INJect

:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:HISTory?

Description	This query returns the history status of DS1/DS3 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Errors
Syntax	:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:DSN:ERR:DS1:HIST? CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:INJect

:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:RATE?

Description	This query returns the current rate of DS1/DS3 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Errors
Syntax	:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:DSN:ERR:DS1:RATE? CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:INJect

:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:SEConds?

Description	This query returns the number of seconds within which DS1/DS3 error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > DS1/DS3 > Errors
Syntax	:FETCh:DATA:TELecom:DSN:ERRor:DS[1..n]:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:DSN:ERR:DS1:SEC? CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:INJect

:FETCh:DATA:TELecom:ELECtrical:ALARm:PORT:CURRent?

Description	This query returns the current status of electrical Interface alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:ELECtrical:ALARm:PORT:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOS
	FREQuency: Frequency
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ELEC:ALAR:PORT:CURR? FREQ
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:ELECtrical:ALARm:PORT:HISTory?

Description	This query returns the history status of electrical Interface error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:ELECtrical:ALARm:PORT:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOS
	FREQuency: Frequency
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ELEC:ALAR:PORT:HIST? FREQ
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:ELECtrical:ALARm:PORT:SEConds?

Description	This query returns the number of seconds within which electrical Interface alarm occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:ELECtrical:ALARm:PORT:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOS
	FREQuency: Frequency
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ELEC:ALAR:PORT:SEC? FREQ
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:COUNt?

Description	This query returns the count of an electrical Interface error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BPV
	EXZ
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:ELEC:ERR:PORT:COUN? BPV
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:CURRent?

Description	This query returns the current status of an electrical Interface error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BPV
	EXZ
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ELEC:ERR:PORT:CURR? BPV
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:HISTory?

Description	This query returns the history status of an electrical Interface error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BPV
	EXZ
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ELEC:ERR:PORT:HIST? BPV
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:RATE?

Description	This query returns the rate of an electrical Interface error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BPV
	EXZ
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:ELEC:ERR:PORT:RATE? BPV
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:SEConds?

Description	This query returns the number of seconds within which and electrical Interface error occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Errors
Syntax	:FETCh:DATA:TELecom:ELECtrical:ERRor:PORT:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BPV
	EXZ
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ELEC:ERR:PORT:SEC? BPV
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:COUNt:TOTal?

Description	This query returns the total count of Ethernet - PCS Lanes (EoOTN) errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > PCS Lanes > Errors - Total
Syntax	:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:COUNt:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	eturns the total count of errors.
Example(s)	FETC:DATA:TEL:EOTN:ERR:PHYS:COUN:TOTal? OTNBIP8
See Also	FETCH:DATA:TELecom:EOTN:ERRor:PHYSical:CURRent?

:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:COUNt?

Description	This query returns the count of Ethernet - PCS Lanes (EoOTN) errors (per lane).
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:COUNt? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:EOTN:ERR:PHYS:COUN? 1, OTNBIP8
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:CURRent?

:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:CURRent?

Description	This query returns the current status of Ethernet - PCS Lanes (EoOTN) error (per lane).
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:CURRent? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:ERR:PHYS:CURR? 1, OTNBIP8
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:HISTory?

Description	This query returns the history status of Ethernet - PCS Lanes (EoOTN) error (per lane).
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:HISTory? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:ERR:PHYS:HIST? 1, OTNBIP8
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE:TOTal?

Description	This query returns the total rate of Ethernet - PCS Lanes (EoOTN) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the total error rate.
Example(s)	FETC:DATA:TEL:EOTN:ERR:PHYS:RATE:TOTal? OTNBIP8
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE?

Description	This query returns the current rate of Ethernet - PCS Lanes (EoOTN) error (per lane).
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:EOTN:ERR:PHYS:RATE? 1, OTNBIP8
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:SEConds?

Description	This query returns the number of seconds within which Ethernet - PCS Lanes (EoOTN) error occurred (per lane).
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:SEConds? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:EOTN:ERR:PHYS:SEC? 1, OTNBIP8
See Also	FETCH:DATA:TELecom:EOTN:ERRor:PHYSical:COUNt?

:FETCh:DATA:TELecom:EOTN:ETHernet:ALARm:CURRent?

Description	This query returns the current status of Ethernet (EoOTN) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LFAR: L Fault Rcd
	LFAD: L Fault Det
	RFAult: Remote Fault
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ALAR:CURR? RFA
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:EOTN:ETHernet:ALARm:HISTory?

Description	This query returns the history status of Ethernet (EoOTN) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LFAR: L Fault Rcd
	LFAD: L Fault Det
	RFAult: Remote Fault
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ALAR:HIST? RFA
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:CURRent?

:FETCh:DATA:TELecom:EOTN:ETHernet:ALARm:SEConds?

Description	This query returns the number of seconds within which Ethernet (EoOTN) alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LFAR: L Fault Rcd
	LFAD: L Fault Det
	RFAult: Remote Fault
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ALAR:SEC? RFA
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:COUNt?

Description	This query returns the count of Ethernet (EoOTN) errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	SYMBol: Symbol
	IDLE: Idle
	FCARrier: False Carrier
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ERR:COUNT? IDLE
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:CURRent?

Description	This query returns the current status of Ethernet (EoOTN) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	SYMBol: Symbol
	IDLE: Idle
	FCARrier: False Carrier
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ERR:CURR? IDLE
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:HISTory?

Description	This query returns the history status of Ethernet (EoOTN) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	SYMBol: Symbol
	IDLE: Idle
	FCARrier: False Carrier
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ERR:HIST? IDLE
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:RATE?

Description	This query returns the current rate of Ethernet (EoOTN) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	SYMBol: Symbol
	IDLE: Idle
	FCARrier: False Carrier
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ERR:RATE? IDLE
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:SEConds?

Description	This query returns the number of seconds within which Ethernet (EoOTN) error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:ETHernet:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	SYMBol: Symbol
	IDLE: Idle
	FCARrier: False Carrier
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:EOTN:ETH:ERR:SEC? IDLE
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:CURRent?

Description	This query returns the current status of Transcoding alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Transcoding > Alarms
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	HIBER1027B: Hi-BER1027B
	LOBL1027B
	LOAML1027B
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ALAR:CURR? LOBL1027B
See Also	FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:CURRent?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:HISTory?

Description	This query returns the history status of Transcoding alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Transcoding > Alarms
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	HIBER1027B: Hi-BER1027B
	LOBL1027B
	LOAML1027B
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ALAR:HIST? LOBL1027B
See Also	FETCH:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:HISTory?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:SEConds?

Description	This query returns the number of seconds within which Transcoding alarm occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Transcoding > Alarms
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	HIBER1027B: Hi-BER1027B
	LOBL1027B
	LOAML1027B
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ALAR:SEC? LOBL1027B
See Also	FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:SEConds?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor: COUNt?

Description	This query returns the count of Transcoding errors.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Transcoding > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	INVALFLAG: Inv. Flag
	MSEQV
	POSV
	SEQV
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ERR:COUN? PCSBIP8MASK
See Also	FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:HISTory?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor: CURRent?

Description	This query returns the current status of Transcoding error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet (Ethernet) > Transcoding > Errors
	Navigation Path: Results > Alarms/Errors (Ethernet) > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	INVALFLAG: Inv. Flag
	MSEQV
	OTNBIP8: OTN BIP-8 (PCS Lanes)
	PCSBIP8MASK: PCS BIP-8 Mask (PCS Lanes)
	POSV
	SEQV
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ERR:CURR? PCSBIP8MASK
See Also	FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:CURRent?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor: HISTory?

Description	This query returns the history status of the EOTN error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors (Ethernet) > Ethernet > Transcoding > Errors
	Navigation Path: Results > Alarms/Errors (Ethernet) > Ethernet > PCS Lanes > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	INVALFLAG: Inv. Flag
	MSEQV
	OTNBIP8: OTN BIP-8 (PCS Lanes)
	PCSBIP8MASK: PCS BIP-8 Mask (PCS Lanes)
	POSV
	SEQV
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ERR:HIST? PCSBIP8MASK
See Also	FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:HISTory?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor: RATE?

Description	This query returns the rate value of the EOTN error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Transcoding > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	INVALFLAG: Inv. Flag
	MSEQV
	POSV
	SEQV
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	eturns the current error rate.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ERR:RATE? PCSBIP8MASK
See Also	FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:HISTory?

:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor: SEConds?

Description	This query returns the seconds value of the EOTN error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Transcoding > Errors
Syntax	:FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	INVALFLAG: Inv. Flag
	MSEQV
	POSV
	SEQV
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:EOTN:XCOD:TRAN:RX:ERR:SEC? PCSBIP8MASK
See Also	FETCh:DATA:TELecom:EOTN:XCODing:TRANscode:RX:ALARm:SEConds?

:FETCh:DATA:TELecom:ERRor:COUNt:TOTal?

Description	This query returns the total count of all errors related to the test such as Ethernet, Pattern and Other. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ERRor:COUNt:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all errors related to the selected test and all the tests.
	Retrieves all error related to OTL, XCODING, or PCS.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the total error count for the selected test errors and all the test errors.
Example(s)	FETC:DATA:TEL:ERR:COUN:TOT? OTL
See Also	FETCh:DATA:TELecom:ERRor:HISTory?
	FETCh:DATA:TELecom:ERRor:CURRent?
	FETCh:DATA:TELecom:ERRor:SEConds?
	FETCh:DATA:TELecom:ERRor:RATE?

:FETCh:DATA:TELecom:ERRor:COUNt?

Description	This query returns the count of all errors related to the test such as Ethernet, Pattern and Other. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ERRor:COUNt? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all errors related to the selected test and all the tests.
	1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, FEC, GFPChannel, GFPFrame, HOPTCM, IPUDP, LINE, LOP, LOPTCM, LOPTU3, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, QOSDTS, QOSDUALPORT, QOSMETRICS, RSFEC, SECTION, SYNCE, WIS, XCODING
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Count>

:FETCh:DATA:TELecom:ERRor:COUNt?

Response(s)	Count:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the error count for the selected test errors and all the test errors.
Example(s)	FETC:DATA:TEL:ERR:COUN? ODU3
	FETC:DATA:TEL:ERR:COUN? ODU3, 3
See Also	FETCh:DATA:TELecom:ERRor:HISTory?
	FETCh:DATA:TELecom:ERRor:CURRent?
	FETCh:DATA:TELecom:ERRor:SEConds?
	FETCh:DATA:TELecom:ERRor:RATE?

:FETCh:DATA:TELecom:ERRor:CURRent?

Description	This query returns the current status of all errors related to the test such as Ethernet, Pattern and Other. It also returns the combined status for all the tests. At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ERRor:CURRent? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects all errors related to the selected test and all the tests. 1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, FEC, GFPChannel, GFPFrame, HOPTCM, IPUDP, LINE, LOP, LOPTCM, LOPTU3, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, QOSDTS, QOSDUALPORT, QOSMETRICS, RSFEC, SECTION, SYNCE, WIS, XCODING **Channel Number or Client ID**: The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only. For Multi-Channel OTN, selects the channel number. For FlexO BERT, selects the client ID.
Response Syntax	<Current>

:FETCh:DATA:TELecom:ERRor:CURRent?

Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current error status of the selected test and all the tests.
Example(s)	FETC:DATA:TEL:ERR:CURR? ODU3
	FETC:DATA:TEL:ERR:CURR? ODU3, 3
See Also	FETCh:DATA:TELecom:ERRor:HISTory?
	FETCh:DATA:TELecom:ERRor:SEConds?
	FETCh:DATA:TELecom:ERRor:RATE?
	FETCh:DATA:TELecom:ERRor:COUNT?

:FETCh:DATA:TELecom:ERRor:HISTory?

Description	This query returns the history status of all errors related to the test such as Ethernet, Pattern and Other. It also returns the combined status for all the tests. At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ERRor:HISTory? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects all errors related to the selected test and all the tests. 1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, FEC, GFPChannel, GFPFrame, HOPTCM, IPUDP, LINE, LOP, LOPTCM, LOPTU3, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, QOSDTS, QOSDUALPORT, QOSMETRICS, RSFEC, SECTION, SYNCE, WIS, XCODING **Channel Number or Client ID**: The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only. For Multi-Channel OTN, selects the channel number. For FlexO BERT, selects the client ID.
Response Syntax	<History>

:FETCh:DATA:TELecom:ERRor:HISTory?

Response(s)   **History**:

The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.

Returns the error history status of the selected test and all the tests.

Example(s)   FETC:DATA:TEL:ERR:HIST? ODU3

FETC:DATA:TEL:ERR:HIST? ODU3, 3

See Also   FETCh:DATA:TELecom:ERRor:CURRent?

FETCh:DATA:TELecom:ERRor:SEConds?

FETCh:DATA:TELecom:ERRor:RATE?

FETCh:DATA:TELecom:ERRor:COUNT?

:FETCh:DATA:TELecom:ERRor:RATE:TOTal?

Description	This query returns the total current rate of all errors related to the test such as Ethernet, Pattern and Other. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ERRor:RATE:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all errors related to the selected test and all the tests.
	Retrieves all error related to OTL, XCODING, or PCS.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the total current error rate for the selected test errors and all the test errors.
Example(s)	FETC:DATA:TEL:ERR:RATE:TOT? OTL
See Also	FETCh:DATA:TELecom:ERRor:HISTory?
	FETCh:DATA:TELecom:ERRor:CURRent?
	FETCh:DATA:TELecom:ERRor:SEConds?
	FETCh:DATA:TELecom:ERRor:COUNT?

:FETCh:DATA:TELecom:ERRor:RATE?

Description	This query returns the current rate of all errors related to the test such as Ethernet, Pattern and Other. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ERRor:RATE? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all errors related to the selected test and all the tests.
	1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, FEC, GFPChannel, GFPFrame, HOPTCM, IPUDP, LINE, LOP, LOPTCM, LOPTU3, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, QOSDTS, QOSDUALPORT, QOSMETRICS, RSFEC, SECTION, SYNCE, WIS, XCODING
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Rate>

:FETCh:DATA:TELecom:ERRor:RATE?

Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current error rate for the selected test errors and all the test errors.
Example(s)	FETC:DATA:TEL:ERR:RATE? ODU3
	FETC:DATA:TEL:ERR:RATE? ODU3, 3
See Also	FETCh:DATA:TELecom:ERRor:HISTory?
	FETCh:DATA:TELecom:ERRor:CURRent?
	FETCh:DATA:TELecom:ERRor:SEConds?
	FETCh:DATA:TELecom:ERRor:COUNT?

:FETCh:DATA:TELecom:ERRor:SEConds?

Description	This query returns the number of seconds within which all errors related to the test such as Ethernet, Pattern and Other occurred. It also returns the combined status for all the tests.
	At *RST condition, this value is device dependent.
Syntax	:FETCh:DATA:TELecom:ERRor:SEConds? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects all errors related to the selected test and all the tests.
	1588PTP, CLOCK, CPRI, DS1, DS3, E1, E2, E3, E4, ELECTRICAL, ETHernet, FCHannel, FEC, GFPChannel, GFPFrame, HOPTCM, IPUDP, LINE, LOP, LOPTCM, LOPTU3, ODU0, ODU0GMP, ODU1, ODU1E, ODU1ETCM, ODU1F, ODU1FTCM, ODU2, ODU2E, ODU2ETCM, ODU2F, ODU2FTCM, ODU2GMP, ODU3, ODU3E1, ODU3E1TCM, ODU3E2, ODU3E2TCM, ODU3GMP, ODU4, ODU4GMP, ODU4TCM, ODUFLEX, ODUFLEXTCM, ODUTCM0, ODUTCM1, ODUTCM2, ODUTCM3, OPTICAL, OPU0, OPU1, OPU1E, OPU1F, OPU2, OPU2E, OPU2F, OPU3, OPU3E1, OPU3E2, OPU4, OPUFLEX, OTL, OTU1, OTU1E, OTU1F, OTU2, OTU2E, OTU2F, OTU3, OTU3E1, OTU3E2, OTU4, PATH, PATTern, PCS, PORT, QOSDTS, QOSDUALPORT, QOSMETRICS, RSFEC, SECTION, SYNCE, WIS, XCODING
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>

:FETCh:DATA:TELecom:ERRor:SEConds?

Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the number of seconds within which the selected test errors and all the test errors occurred.
Example(s)	FETC:DATA:TEL:ERR:SEC? ODU3
	FETC:DATA:TEL:ERR:SEC? ODU3, 3
See Also	FETCh:DATA:TELecom:ERRor:HISTory?
	FETCh:DATA:TELecom:ERRor:CURRent?
	FETCh:DATA:TELecom:ERRor:RATE?
	FETCh:DATA:TELecom:ERRor:COUNT?

:FETCh:DATA:TELecom:ETHernet:ALARm:LRATe:GLOBal:CURRent?

Description	This query returns the current status of Ethernet alarm (rates up to 25G or FlexE client).
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Alarms
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:LRATe:GLOBal:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	HIBer: Hi-BER
	LDOWn: Link Down
	LFAult: Local Fault
	LFAD: L Fault Det
	LFAR: L Fault Rcd
	RFAult: Remote Fault
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:LRAT:GLOB:CURR? LDOWN
See Also	FETCH:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory?
	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ALARm:LRATe:GLOBal:HISTory?

Description	This query returns the history status of the Ethernet alarm (rates up to 25G or FlexE client).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Alarms
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:LRATe:GLOBal:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	HIBer: Hi-BER
	LDOWn: Link Down
	LFAult: Local Fault
	LFAD: L Fault Det
	LFAR: L Fault Rcd
	RFAult: Remote Fault
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of ethernet alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ALAR:LRAT:GLOB:HIST? LDOWN
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:CURRent?
	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ALARm:LRATe:GLOBal:SEConds?

Description	This query returns the number of seconds within which an Ethernet alarm occurred (rates up to 25G or FlexE client).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Alarms
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:LRATe:GLOBal:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	HIBer: Hi-BER
	LDOWn: Link Down
	LFAult: Local Fault
	LFAD: L Fault Det
	LFAR: L Fault Rcd
	RFAult: Remote Fault
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the number of seconds of ethernet alarm.
Example(s)	FETC:DATA:TEL:ETH:ALAR:LRAT:GLOB:SEC? LDOWN
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory?
	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ALARm:MAC:CURRent?

Description	This query returns the current status of Ethernet (FlexE Client) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:MAC:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	NTRAFFIC: No Traffic.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:MAC:CURR? NTRAFFIC

:FETCh:DATA:TELecom:ETHernet:ALARm:MAC:HISTory?

Description	This query returns the history status of Ethernet (FlexE Client) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:MAC:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	NTRAFFIC: No Traffic
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ALAR:ERR:MAC:HIST? NTRAFFIC

:FETCh:DATA:TELecom:ETHernet:ALARm:MAC:SEConds?

Description	This query returns the number of seconds within which Ethernet (FlexE Client) alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:MAC:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	NTRAFFIC:No Traffic
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ALAR:MAC:SEC? NTRAFFIC

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:CURRent?

Description	This query returns the current status of PCS Lanes (per lane) alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Alarms
	Navigation Path: Functions > 40/50/100/400G Advanced > Lanes Mapping & Skew > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:CURRent? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOAML
	LOBL
	SKEW: Exc. Skew
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:PHYS:CURR? 1, LOBL
See Also	FETCH:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:CURRent?

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:CURRent?

Description	This query returns the current status of Ethernet/PCS (global) alarm (parallel interfaces or serial interfaces 25G and up).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Alarms
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > PHY > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:CURRent? <wsp><Alarm>
Parameter(s)	Alarm:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	- For parallel/serial interfaces:
	HISer: Hi-SER
	LOA
	- For parallel interfaces:
	HIBer: Hi-BER
	INVM: Inv. Mapping
	LDSERD: L Deg SER Det (400G)
	LDSERR: L Deg SER Rcd (400G)
	LDOWn: Link Down
	LFAD: L Fault Det
	LFAR: L Fault Rcd
	LOAML
	LOBL
	RDSER: R Deg SER (400G)
	RFAult: Remote Fault
	SKEW: Exc. Skew
Response Syntax	<Current>

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:CURRent?

Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:PHYS:GLOB:CURR? LOA
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory?

Description	This query returns the history status of Ethernet/PCS (global) alarm (parallel interfaces or serial interfaces 25G and up).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Alarms
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > PHY > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	- For parallel/serial interfaces:
	HISer: Hi-SER
	LOA
	- For parallel interfaces:
	HIBer: Hi-BER
	INVM: Inv. Mapping
	LDSERD: L Deg SER Det (400G)
	LDSERR: L Deg SER Rcd (400G)
	LDOWn: Link Down
	LFAD: L Fault Det
	LFAR: L Fault Rcd
	LOAML
	LOBL
	RDSER: R Deg SER (400G)
	RFAult: Remote Fault
	SKEW: Exc. Skew
Response Syntax	<History>

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HIStory?

Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:PHYS:GLOB:HIST? LOA
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:CURRent?

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:SEConds?

Description	This query returns the number of seconds within which Ethernet/PCS (global) alarm occurred (parallel interfaces or serial interfaces 25G and up).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Alarms
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > PHY > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	- For parallel/serial interfaces:
	HISer: Hi-SER
	LOA
	- For parallel interfaces:
	HIBer: Hi-BER
	INVM: Inv. Mapping
	LDSERD: L Deg SER Det (400G)
	LDSERR: L Deg SER Rcd (400G)
	LDOWn: Link Down
	LFAD: L Fault Det
	LFAR: L Fault Rcd
	RDSER: R Deg SER (400G)
	RFAult: Remote Fault
Response Syntax	<Seconds>

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:SEConds?

Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ALAR:PHYS:GLOB:SEC? LOA
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:HISTory?

Description	This query returns the history status of PCS Lanes (per lane) alarm occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Alarms
	Navigation Path: Functions > 40/50/100/400G Advanced > Lanes Mapping & Skew > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:HISTory? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOAML
	LOBL
	SKEW: Exc. Skew
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:PHYS:HIST? 1, LOBL
See Also	FETCH:DATA:TELecom:ETHernet:ALARm:PHYSical:CURRent?

:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:SEConds?

Description	This query returns the number of seconds within which PCS Lanes (per lane) alarm occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Alarms
	Navigation Path: Functions > 40/50/100/400G Advanced > Lanes Mapping & Skew > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:SEConds? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOAML
	LOBL
	SKEW: Exc. Skew
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ALAR:PHYS:SEC? 1, LOBL
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:SEConds?

:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:CURRent?

Description	This query returns the current status of FEC Lanes (per lane) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:CURRent? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FCLOAML: FEC-LOAML
	FECSKEW: FEC Exc. Skew
Response Syntax	<Current Status>
Response(s)	**Current Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
	MASKED: An alarm of higher priority is present.
Example(s)	FETC:DATA:TEL:ETH:ALAR:RSF:CURR? FCLOAML
See Also	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:HISTory?

:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:CURRent?

Description	This query returns the current status of RS-FEC alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FCLOA: FEC-LOA
	FECDESER: FEC Degraded SER
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
	MASKED: An alarm of higher priority is present.
Example(s)	FETC:DATA:TEL:ETH:ALAR:RSF:GLOB:CURR? FCLOA
See Also	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:HISTory?

Description	This query returns the history status of RS-FEC alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FCLOA: FEC-LOA
	FECDESER: FEC Degraded SER
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:RSF:GLOB:HIST? FCLOA
See Also	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:CURRent?

:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:SECo nds?

Description	This query returns the number of seconds within which RS-FEC alarm occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FCLOA: FEC-LOA
	FECDESER: FEC Degraded SER
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ALAR:RSF:GLOB:SEC? FCLOA
See Also	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:HISTory?

Description	This query returns the history status of FEC Lanes (per lane) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:HISTory? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FCLOAML: FEC-LOAML
	FECSKEW: FEC Exc. Skew
Response Syntax	<History Status>
Response(s)	**History Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:RSF:HIST? FCLOAML
See Also	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:CURRent?

:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:SEConds?

Description	This query returns the number of seconds within which FEC Lanes (per lane) alarm occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Alarms
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:SEConds? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FCLOAML: FEC-LOAML
	FECSKEW: FEC Exc. Skew
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ALAR:RSF:SEC? FCLOAML
See Also	:FETCh:DATA:TELecom:ETHernet:ALARm:RSFec:HISTory?

:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:CURRent?

Description	This query returns the current status of WIS alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AISL: AIS-L
	AISP: AIS-P
	EPCD: EPC-D
	EPPD: EPP-D
	EPSD: EPS-D
	LCDP: LCD-P
	LOPP: LOP-P
	LOF
	PLMP: PLM-P
	RDIL: RDI-L
	RDIP: RDI-P
	SEF
	UNEQp: UNEQ-P
	WLINk: WIS Link Down
Response Syntax	<Current>

:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:CURRent?

Response(s)	Current:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:WIS:CURR? SEF
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:WIS:HISTory?

:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:HISTory?

Description	This query returns the history status of WIS alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AISL: AIS-L
	AISP: AIS-P
	EPCD: EPC-D
	EPPD: EPP-D
	EPSD: EPS-D
	LCDP: LCD-P
	LOPP: LOP-P
	LOF
	PLMP: PLM-P
	RDIL: RDI-L
	RDIP: RDI-P
	SEF
	UNEQp: UNEQ-P
	WLINk: WIS Link Down
Response Syntax	<History>

:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:HISTory?

Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ALAR:WIS:HIST? SEF
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:WIS:CURRent?

:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:SEConds?

Description	This query returns the number of seconds within which WIS alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Alarms
Syntax	:FETCh:DATA:TELecom:ETHernet:ALARm:WIS:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AISL: AIS-L
	AISP: AIS-P
	EPCD: EPC-D
	EPPD: EPP-D
	EPSD: EPS-D
	LCDP: LCD-P
	LOPP: LOP-P
	LOF
	PLMP: PLM-P
	RDIL: RDI-L
	RDIP: RDI-P
	SEF
	UNEQp: UNEQ-P
	WLINk: WIS Link Down
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ALAR:WIS:SEC? SEF
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:WIS:History?

:FETCh:DATA:TELecom:ETHernet:COFFset:ALARm:CURRent?

Description	This query returns the current status of the Client Frequency alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODUflex > BER > Alarms > Client Frequency
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms > Client frequency
Syntax	:FETCh:DATA:TELecom:ETHernet:COFFset:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CFRequency: Client Frequency
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:COFF:ALAR:CURR? CFR
See Also	FETCh:DATA:TELecom:ETHernet:COFFset:ALARm: SEConds?

:FETCh:DATA:TELecom:ETHernet:COFFset:ALARm:HISTory?

Description	This query returns the history status of the Client Frequency alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODUflex > BER > Alarms > Client Frequency
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms > Client frequency
Syntax	:FETCh:DATA:TELecom:ETHernet:COFFset:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CFRequency: Client Frequency
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:COFF:ALAR:HIST? CFR
See Also	FETCh:DATA:TELecom:ETHernet:COFFset:ALARm: SEConds?

:FETCh:DATA:TELecom:ETHernet:COFFset:ALARm:SEConds?

Description	This query returns the number of seconds within which a Client Frequency alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODUflex > BER > Alarms > Client Frequency
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms > Client frequency
Syntax	:FETCh:DATA:TELecom:ETHernet:COFFset:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CFRequency: Client Frequency
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:COFF:ALAR:SEC? CFR
See Also	FETCh:DATA:TELecom:ETHernet:COFFset:ALARm: HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer :COUNt?

Description	This query returns the count of QoS Metrics per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequece.
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer:COUNt? <wsp><Service>, <Metric>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number from 1 to 10.
	Metric:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the metric:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count.
Example(s)	FETC:DATA:TEL:ETH:ERR:DUAL:SAN:COUN? 1, FLOSs,P1TOP2
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer :CURRent?

Description	This query returns the current status of QoS Metrics per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequece
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer:CURRent? <wsp><Stream>, <Metric>, <Direction>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number from 1 to 10.
	Metric:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the metric:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Current>

:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer :CURRent?

Response(s)	Current:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:DUAL:SAN:CURR? 1, FLOSs,P1TOP2
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer :HISTory?

Description	This query returns the history status of QoS Metrics per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequece
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer:HISTory? <wsp><Service>, <Metric>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Slects the service number from 1 to 10.
	Metric:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the metric:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<History>

:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer :HISTory?

Response(s)	History:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:DUAL:SAN:HIST? 1, FLOSs,P1TOP2
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer :RATE?

Description	This query returns the current rate of QoS Metrics per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequece - Rate
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer:RATE? <wsp><Service>, <Metric>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number from 1 to 10.
	Metric:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the metric:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:ETH:ERR:DUAL:SAN:RATE? 1, FLOSs,P1TOP2
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer :SEConds?

Description	This query returns the number of seconds of QoS Metric occurrences per direction for dual port.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequece - Seconds
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:DUALport:SANalyzer:SEConds? <wsp><Service>, <Metric>, <Direction>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the service number from 1 to 10.
	Metric:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the metric:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the port direction:
	P1TOP2: P1 to P2
	P2TOP1: P2 to P1
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:ETH:ERR:DUAL:SAN:SEC? 1, FLOSs,P1TOP2
See Also	FETCH:DATA:TELecom:EOTN:ERRor:PHYSical:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:COUNt?

Description	This query returns the count of IP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	IPCHecksum: IP Chksum
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:ETH:ERR:IPPR:COUN? IPCH
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:CURRent?

Description	This query returns the current status of IP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	IPCHecksum: IP Chksum
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:IPPR:CURR? IPCH
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:HISTory?

Description	This query returns the history status of IP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	IPCHecksum: IP Chksum
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:IPPR:HIST? IPCH
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:RATE?

Description	This query returns the rate of IP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	IPCHecksum: IP Chksum
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:ETH:ERR:IPPR:RATE? IPCH
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:SEConds?

Description	This query returns the number of seconds within which IP error occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/UDP/TCP > IP Checksum
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	IPCHecksum: IP Chksum
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ERR:IPPR:SEC? IPCH
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:SEConds?

:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:COUNt ?

Description	This query returns the count of the specified error (rates up to 25G or FlexE client).
	Navigation Path: Results > Alarms/Errors > Ethernet > Errors
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: BLOCK or 66B BLOCK
	FCARrier: False carrier
	IDLE: Idle
	SYMBol: Symbol
	TERRor: Total Error
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Reports the count of ethernet error.
Example(s)	FETC:DATA:TEL:ETH:ERR:LRAT:GLOB:COUN? BLOCK
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory?
	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:CURRent?

Description	This query returns the current status of the specified error (rates up to 25G or FlexE client). Navigation Path: Results > Alarms/Errors > Ethernet > Errors Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:CURRent? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: BLOCk: BLOCK or 66B BLOCK FCARrier: False carrier IDLE: Idle SYMBol: Symbol TERRor: Total Error
Response Syntax	<Current Status>
Response(s)	**Current Status**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Reports the current status of ethernet error. PRESENT, indicates that at least one error has occurred in the last second. ABSENT, indicates that no error occurred. INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ERR:LRAT:GLOB:CURR? BLOCK
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory? SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:HISTory?

Description	This query returns the history status of the specified error (rates up to 25G or FlexE client)s.
	Navigation Path: Results > Alarms/Errors > Ethernet > Errors
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: BLOCK or 66B BLOCK
	FCARrier: False carrier
	IDLE: Idle
	SYMBol: Symbol
	TERRor: Total Error
Response Syntax	<History Status>
Response(s)	**History Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of ethernet error.
	PRESENT, indicates that at least one error has occurred.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ERR:LRAT:GLOB:HIST? BLOCK
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory?
	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:RATE?

Description	This query returns the rate of the specified error (rates up to 25G or FlexE client).
	Navigation Path: Results > Alarms/Errors > Ethernet > Errors
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: BLOCK or 66B BLOCK
	FCARrier: False carrier
	IDLE: Idle
	SYMBol: Symbol
	TERRor: Total Error
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Reports the rate of ethernet error.
Example(s)	FETC:DATA:TEL:ETH:ERR:LRAT:GLOB:RATE? BLOCK
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:PHYSical:GLOBal:HISTory? LOA
	SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:SEConds?

Description	This query returns the cumulative duration in seconds of the specified error (rates up to 25G or FlexE client). Navigation Path: Results > Alarms/Errors > Ethernet > Errors Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:LRATe:GLOBal:SEConds? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: BLOCk: BLOCK or 66B BLOCK FCARrier: False carrier IDLE: Idle SYMBol: Symbol TERRor: Total Error
Response Syntax	<Seconds>
Response(s)	**Seconds**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Reports the Seconds of ethernet error. PRESENT, indicates that at least one error has occurred. ABSENT, indicates that no error occurred. INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ERR:LRAT:GLOB:SEC? BLOCK
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory? SOURce:DATA:TELecom:FETHernet:CLIent:IDentifier

:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:COUNt?

Description	This query returns the count of Ethernet error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Errors
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:COUNt? <wsp><Error>
Parameter(s)	**Error:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of MAC (Media Access Control) error.
	FCS: Frame Check Sequence.
	JABBer: Jabber/Giant.
	OVERsize: Oversize.
	RUNT: Runt.
	UNDersize: Undersize.
	ALIGnment: Alignment.
Response Syntax	<Count>
Response(s)	**Count:**
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Reports the count of MAC error.
Example(s)	FETC:DATA:TEL:ETH:ERR:MAC:COUN? JABB
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:MAC:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:CURRent?

Description	This query returns the current Ethernet error status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Errors
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of MAC (Media Access Control) error.
	FCS: Frame Check Sequence.
	JABBer: Jabber/Giant.
	OVERsize: Oversize.
	RUNT: Runt.
	UNDersize: Undersize.
	ALIGnment: Alignment.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current status of MAC error.
	PRESENT, indicates that at least one error has occurred in the last second.
	ABSENT, indicates that there is no error.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ERR:MAC:CURR? JABB
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:MAC:SEConds?

:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:HISTory?

Description	This query returns the history Ethernet error status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Errors
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of MAC (Media Access Control) error.
	FCS: Frame Check Sequence.
	JABBer: Jabber/Giant.
	OVERsize: Oversize.
	RUNT: Runt.
	UNDersize: Undersize.
	ALIGnment: Alignment.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of MAC error.
	PRESENT, indicates that at least one error has occurred.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ERR:MAC:HIST? JABB
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:MAC:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:RATE?

Description	This query returns the current Ethernet error rate.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Errors
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of MAC (Media Access Control) error.
	FCS: Frame Check Sequence.
	JABBer: Jabber/Giant.
	OVERsize: Oversize.
	RUNT: Runt.
	UNDersize: Undersize.
	ALIGnment: Alignment.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Reports the current rate of MAC error.
Example(s)	FETC:DATA:TEL:ETH:ERR:MAC:RATE? JABB
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:MAC:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:SEConds?

Description	This query returns the number of Ethernet error seconds.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Ethernet > Error
	Navigation Path: Results > Alarms/Errors > Client > Ethernet > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:MAC:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of MAC (Media Access Control) error.
	FCS: Frame Check Sequence.
	JABBer: Jabber/Giant.
	OVERsize: Oversize.
	RUNT: Runt.
	UNDersize: Undersize.
	ALIGnment: Alignment.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the number of seconds of MAC error.
Example(s)	FETC:DATA:TEL:ETH:ERR:MAC:SEC? JABB
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:MAC:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:COUNt:TOTal?

Description	This query returns the total count within which physical error occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:COUNt:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of PCS error.
	BIP8: BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	INVALIDMARKER: Inv. Marker
	FCCW: FEC Correctable Codeword
	FSERR: FEC SYMBOL
	FUCW: FEC Uncorrectable Code Words
	FUF: FEC Uncorrectable Frames
	ICWM: Invalid Codeword Marker
	PFBE: Pre-FEC-Bit
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Total count of PCS/FEC error for per lane configuration.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:COUN:TOT? BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:COUNt?

Description	This query returns the count of Ethernet / PCS Lanes (per lane) errors.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:COUNt? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	FSERR: FEC SYMBOL
	INVALIDMARKER: Invalid Marker
	PFBE: Pre-FEC-Bit
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:COUN? 1, BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:CURRent?

Description	This query returns the current status of Ethernet / PCS Lanes (per lane) error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:CURRent? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	INVALIDMARKER: Invalid Marker
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:CURR? 1, BIP8
See Also	FETCH:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:CURRent?

Description	This query returns the current status of Ethernet/PCS (global) error (parallel interfaces or serial interfaces 25G and up).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: PCS BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	INVALIDMARKER: Inv. Marker
	FUCW: FEC Uncorrectable Code Words
	FUF: FEC Uncorrectable Frames
	ICWM: Inv-CW-Marker
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:GLOB:CURR? BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HIS Tory?

Description	This query returns the history status of Ethernet/PCS (global) error (parallel interfaces or serial interfaces 25G and up).
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: PCS BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	INVALIDMARKER: Inv. Marker
	FUCW: FEC Uncorrectable Code Words
	FUF: FEC Uncorrectable Frames
	ICWM: Inv-CW-Marker
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:GLOB:HIST? BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory?

Description	This query returns the history status of Ethernet / PCS Lanes (per lane) error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:HISTory? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	INVALIDMARKER: Invalid Marker
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:HIST? 1, BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:RATE:TOTal ?

Description	This query returns the total current rate of Ethernet / PCS Lanes (per lane) error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:RATE:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	INVALIDMARKER: Invalid Marker
	FUCW: FEC Uncorrectable Code Words
	FUF: FEC Uncorrectable Frames
	FCCW: FEC Correctable Codeword
	FSERR: FEC Symbol
	ICWM: Invalid Codeword Marker
	PFBE: Pre-FEC-Bit
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:RATE:TOT? BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:RATE?

Description	This query returns the current rate of Ethernet / PCS Lanes (per lane) error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:RATE? <wsp><Error>, <Alarm>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	FSERR: FEC SYMBOL
	INVALIDMARKER: Invalid Marker
	PFBE: Pre-FEC-Bit
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:RATE? 1, BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:SEConds:TOTal?

Description	This query returns the total number of seconds within which physical error occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:SEConds:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of PCS error.
	BLOCk: Block or 66B Block for 40G/100G/400G
	FUCW: FEC Uncorrectable Code Words
	FUF: FEC Uncorrectable Frames
	ICWM: Invalid Codeword Marker
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Total number of seconds during which errors occur on PCS lanes
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:SEC:TOT? BLOCK
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:COUNt:TOTAL?

:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:SEConds?

Description	This query returns the number of seconds within which Ethernet / PCS Lanes error (per lane) occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > PCS Lanes > Errors
	Navigation Path: Functions > 40G/50G/100G/400G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:SEConds? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIP8: BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	INVALIDMARKER: Invalid Marker
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:ETH:ERR:PHYS:SEC? 1, BIP8
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:COUNt?

Description	This query returns the count of FEC Lanes (per lane) errors.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:COUNt? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
	PREFECBIT: Pre-FEC-Bit
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:COUN? 1,FCSY
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFecl:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:CURRent?

Description	This query returns the current status of FEC Lanes (per lane) error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:CURRent? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
	PREFECBIT: Pre-FEC-Bit
Response Syntax	<Current Status>
Response(s)	**Current Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
	MASKED: An alarm of higher priority is present.
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:CURR? FCSY
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFecl:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:COUNt?

Description	This query returns the count within which an RS-FEC error occurred
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of RS-FEC error
	FCCW: FEC-CORR-CW
	FUCW: FEC-UNCORR-CW
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Reports the count of an RS-FEC error
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:GLOB:COUN? FCCW
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:CURRent?

Description	This query returns the current status of an RS-FEC error
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of RS-FEC error
	FCCW: FEC-CORR-CW
	FUCW: FEC-UNCORR-CW
Response Syntax	<Current Status>
Response(s)	**Current Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current status of an RS-FEC error
	PRESENT, indicates that at least one error has occurred in the last second.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
	MASKED, indicates that an alarm/error of higher priority is present
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:GLOB:CURR? FCCW
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:HISTory?

Description	This query returns the history status of an RS-FEC error
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:HISTory? \<wsp>\<Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the type of RS-FEC error
	FCCW: FEC-CORR-CW
	FUCW: FEC-UNCORR-CW
Response Syntax	\<History Status>
Response(s)	**History Status**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA> element.
	Reports the history status of an RS-FEC error
	PRESENT, indicates that at least one error has occurred.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:GLOB:HIST? FCCW
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:RATE?

Description	This query returns the rate within which an RS-FEC error occurred
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of RS-FEC error
	FCCW: FEC-CORR-CW
	FUCW: FEC-UNCORR-CW
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Reports the rate of an RS-FEC error
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:GLOB:RATE? FCCW
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:SEConds?

Description	This query returns the number of seconds within which an RS-FEC error occurred
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of RS-FEC error
	FCCW: FEC-CORR-CW
	FUCW: FEC-UNCORR-CW
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the Seconds of an RS-FEC error.
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:GLOB:SEC? FCCW
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:GLOBal:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:HISTory?

Description	This query returns the history status of FEC Lanes (per lane) error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:HISTory? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
	PREFECBIT: Pre-FEC-Bit
Response Syntax	<History Status>
Response(s)	**History Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:HIST? FCSY
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:RATE?

Description	This query returns the current rate of FEC Lanes (per lane) errors.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:RATE? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
	PREFECBIT: Pre-FEC-Bit
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:RATE? 1,FCSY
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:SEConds?

Description	This query returns the number of seconds within which FEC Lanes (per lane) error occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > RS-FEC > FEC Lanes > Errors
	Navigation Path: Results > Alarms/Errors > PHY > RS-FEC > FEC Lanes > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:SEConds? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Select the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
	PREFECBIT: Pre-FEC-Bit
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:ETH:ERR:RSF:SEC? FCSY
See Also	:FETCh:DATA:TELecom:ETHernet:ERRor:RSFec:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:STReam:CURRent?

Description	This query returns the current status of QoS Metrics error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > QoS Metrics > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:STReam:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:STR:CURR? FLOS
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:STReam:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:STReam:HISTory?

Description	This query returns the history status of QoS Metrics error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > QoS Metrics > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:STReam:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:STR:HIST? FLOS
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:STReam:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:COUNt?

Description	This query returns the count of TCP (TCP Chksum) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:ETH:ERR:TCPP:COUN?
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:CURRent?

Description	This query returns the current status of TCP (TCP Chksum) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:CURRent?
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:TCPP:CURR?
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:HISTory?

Description	This query returns the history status of TCP (TCP Chksum) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:HISTory?
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:TCPP:HIST?
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:SEConds?

:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:RATE?

Description	This query returns the rate of TCP (TCP Chksum) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:ETH:ERR:TCPP:RATE?
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:SEConds?

Description	This query returns the number of seconds within which TCP (TCP Cheksum)
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > IP/UDP/TCP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ERR:TCPP:SEC?
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:TCPProtocol:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:COUNt?

Description	This query returns the count of UDP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/TCP/UDP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	UDPChecksum: UDP Cheksum
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:ETH:ERR:UDPP:COUN? UDPC
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:CURRent?

Description	This query returns the current status of UDP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/TCP/UDP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	UDPChecksum: UDP Cheksum
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:UDPP:CURR? UDPC
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:HISTory?

Description	This query returns the history status of UDP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/TCP/UDP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	UDPChecksum: UDP Cheksum
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:UDPP:HIST? UDPC
See Also	FETCH:DATA:TELecom:ETHernet:ERRor:IPPRotocol:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:RATE?

Description	This query returns the rate of UDP error.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/TCP/UDP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	UDPChecksum: UDP Cheksum
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:ETH:ERR:UDPP:RATE? UDPC
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:SEConds?

Description	This query returns the number of seconds within which UDP alarm occurred.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > IP/TCP/UDP > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:UDPProtocol:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	UDPChecksum: UDP Cheksum
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:ETH:ERR:UDPP:SEC? UDPC
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:IPPRotocol:SEConds?

:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:COUNt?

Description	This query returns the count of WIS errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B1
	B2
	B3
	REIL: REI-L
	REIP: REI-P
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:ETH:ERR:WIS:COUN? REIP
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:WIS:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:CURRent?

Description	This query returns the current status of WIS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B1
	B2
	B3
	REIL: REI-L
	REIP: REI-P
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:WIS:CURR? REIP
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:WIS:SEConds?

:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:HISTory?

Description	This query returns the history status of WIS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B1
	B2
	B3
	REIL: REI-L
	REIP: REI-P
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:WIS:HIST? REIP
See Also	FETCh:DATA:TELecom:ETHernet:ALARm:WIS:SEConds?

:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:RATE?

Description	This query returns the current rate of WIS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B1
	B2
	B3
	REIL: REI-L
	REIP: REI-P
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:ETH:ERR:WIS:RATE? REIP
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:WIS:COUNt?

:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:SEConds?

Description	This query returns the number of seconds within which WIS error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > WIS > Errors
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:WIS:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B1
	B2
	B3
	REIL: REI-L
	REIP: REI-P
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:ETH:ERR:WIS:SEC? REIP
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:WIS:CURRent?

:FETCh:DATA:TELecom:FETHernet:GROup:ALARm:CURRent?

Description	This query returns the current status of GlexE Group alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Group > FlexE Group > Alarms
Syntax	:FETCh:DATA:TELecom:FETHernet:GROup:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CALMIS: Calendar Mismatch
	GRPDOWN: FlexE Group Down
	ILLCL: Illegal Client
	INCONSISTCAL: Inconsistent Calendar
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:GRO:ALAR:CURR? GRDOWN

:FETCh:DATA:TELecom:FETHernet:GROup:ALARm:HISTory?

Description	This query returns the history status of GlexE Group alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Group > FlexE Group > Alarms
Syntax	:FETCh:DATA:TELecom:FETHernet:GROup:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CALMIS: Calendar Mismatch
	GRPDOWN: FlexE Group Down
	ILLCL: Illegal Client
	INCONSISTCAL: Inconsistent Calendar
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:GRO:ALAR:HIST? GRDOWN

:FETCh:DATA:TELecom:FETHernet:GROup:ALARm:SEConds?

Description	This query returns the number of seconds within which GlexE Group alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Group > FlexE Group > Alarms - Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:GROup:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CALMIS: Calendar Mismatch
	GRPDOWN: FlexE Group Down
	ILLCL: Illegal Client
	INCONSISTCAL: Inconsistent Calendar
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:FETH:GRO:ALAR:SEC? INCONSISTCAL

:FETCh:DATA:TELecom:FETHernet:PHY:ALARm:CURRent?

Description	Returns the current state of a FlexE per PHY Alarm.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Alarms
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ALARm:CURRent? <wsp><PHY Number / Instance number>, <Alarm>
Parameter(s)	**PHY Number / Instance number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information.
	Incase of 400G, this parameter will behave as instance number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY alarm.
	EXCESPHYSKEW: Excessive PHY Skew alarm.
	LOSSFLOCK: Loss of Frame Lock alarm.
	LOSSMFLOCK: Loss of Multiframe Lock alarm.
	LOSSPHYNBLOCK: Loss of PHY Number Lock alarm.
	GRPNBMIS: Group Number Mismatch alarm.
	REMPHYFAULT: Remote PHY Fault alarm.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current status of FlexE per PHY alarm.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FETH:PHY:ALAR:CURR? 22,EXCESPHYSKEW

:FETCh:DATA:TELecom:FETHernet:PHY:ALARm:HISTory?

Description	Returns the history state of a FlexE per PHY Alarm.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Alarms
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ALARm:HISTory? <wsp><PHY Number/ Instance number>, <Alarm>
Parameter(s)	**PHY Number/ Instance number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information
	Incase of 400G, this parameter will behave as instance number
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY alarm.
	EXCESPHYSKEW: Excessive PHY Skew alarm.
	LOSSFLOCK: Loss of Frame Lock alarm.
	LOSSMFLOCK: Loss of Multiframe Lock alarm.
	LOSSPHYNBLOCK: Loss of PHY Number Lock alarm.
	GRPNBMIS: Group Number Mismatch alarm.
	REMPHYFAULT: Remote PHY Fault alarm.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history status of FlexE per PHY alarm.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FETH:PHY:ALAR:HIST? 22,LOSSFLOCK

:FETCh:DATA:TELecom:FETHernet:PHY:ALARm:SEConds?

Description	This query returns the number of seconds within which the Flexe per PHY alarm occurred.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Alarms - Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ALARm:SEConds? <wsp><PHY Number / Instance Number>, <Alarm>
Parameter(s)	**PHY Number / Instance Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information
	Incase of 400G, this parameter will behave as instance number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY alarm.
	EXCESPHYSKEW: Excessive PHY Skew alarm.
	LOSSFLOCK: Loss of Frame Lock alarm.
	LOSSMFLOCK: Loss of Multiframe Lock alarm.
	LOSSPHYNBLOCK: Loss of PHY Number Lock alarm.
	GRPNBMIS: Group Number Mismatch alarm.
	REMPHYFAULT: Remote PHY Fault alarm.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	returns the number of seconds within which the Flexe Group alarm occurred.
Example(s)	FETC:DATA:TEL:FETH:PHY:ALAR:SEC? 22,LOSSPHYNBLOCK

:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:COUNt?

Description	Returns the count of FlexE per PHY Error.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Errors > Count
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:COUNt? <wsp><PHY Number>, <Error>
Parameter(s)	**PHY Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY error.
	OHCRC: Invalid OH CRC error.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of FlexE per PHY error.
Example(s)	FETC:DATA:TEL:FETH:PHY:ERR:COUN? 123,OHCRC

:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:CURRent?

Description	Returns the current state of a FlexE per PHY Error.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Errors
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:CURRent? <wsp><PHY Number>, <Error>
Parameter(s)	**PHY Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY error.
	OHCRC: Invalid OH CRC error.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current status of FlexE per PHY error.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FETH:PHY:ERR:CURR? 123,OHCRC

:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:HISTory?

Description	Returns the history state of a FlexE per PHY Error.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Errors
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:HISTory? <wsp><PHY Number>, <Error>
Parameter(s)	**PHY Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY error.
	OHCRC: Invalid OH CRC error.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history status of FlexE per PHY error.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FETH:PHY:ERR:HIST? 123,OHCRC

:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:RATE?

Description	Returns the current rate of a FlexE per PHY Error.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Errors > Rate
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:RATE? <wsp><PHY Number>, <Error>
Parameter(s)	**PHY Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY error.
	OHCRC: Invalid OH CRC error.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current rate of a FlexE per PHY error.
Example(s)	FETC:DATA:TEL:FETH:PHY:ERR:RATE? 123,OHCRC

:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:SEConds?

Description	Returns the number of seconds of FlexE per PHY Error.
	Navigation Path: Results > Alarms/Errors > Group > PHYs > Errors > Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:PHY:ERRor:SEConds? <wsp><PHY Number>, <Error>
Parameter(s)	**PHY Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the PHY number from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexE per PHY error.
	OHCRC: Invalid OH CRC error.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of FlexE per PHY error.
Example(s)	FETC:DATA:TEL:FETH:PHY:ERR:SEC? 123,OHCRC

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:CURRent?

Description	This query returns the current status of the specified FlexE Path OAM Basic OAM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Basic OAM > Alarms - Current
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	BCSLF: Basic OAM Client Signal Local Fault
	BCSLPI: Basic OAM Client Signal Low Power Indication
	BCSRF: Basic OAM Client Signal Remote Fault
	BLOCONT: Basic OAM Loss Of Continuity
	BRDI: Basic OAM Remote Defect Indication
	BUPER: Basic OAM Unexpected Period
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ALAR:CURR? BLOCONT

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:HISTory?

Description	This query returns the history status of the specified FlexE Path OAM Basic OAM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Basic OAM > Alarms - History
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	BCSLF: Basic OAM Client Signal Local Fault
	BCSLPI: Basic OAM Client Signal Low Power Indication
	BCSRF: Basic OAM Client Signal Remote Fault
	BLOCONT: Basic OAM Loss Of Continuity
	BRDI: Basic OAM Remote Defect Indication
	BUPER: Basic OAM Unexpected Period
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ALAR:HIST? BLOCONT

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:SEConds?

Description	This query returns the number of seconds within which the specified FlexE Path OAM Basic OAM alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Basic OAM > Alarms - Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	BCSLF: Basic OAM Client Signal Local Fault
	BCSLPI: Basic OAM Client Signal Low Power Indication
	BCSRF: Basic OAM Client Signal Remote Fault
	BLOCONT: Basic OAM Loss Of Continuity
	BRDI: Basic OAM Remote Defect Indication
	BUPER: Basic OAM Unexpected Period
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ALAR:SEC? BLOCONT

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:COUNt?

Description	This query returns the count of the specified FlexE Path OAM Basic OAM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Basic OAM > Errors - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ERR:COUN? BBIP8
See Also	FETCh:DATA:TELecom:FETHernet:POAM:ERRor:COUNt?

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:CURRent?

Description	This query returns the current status of the specified FlexE Path OAM Basic OAM error. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > Path OAM > Basic OAM > Errors - Current
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: BBIP8: Basic OAM Bit Interleaved Parity BREI: Basic OAM Remote Error Indication
Response Syntax	<Current>
Response(s)	**Current**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the current error status: PRESENT: An error has occurred in the last second. ABSENT: No error has occurred in the last second. INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ERR:CURR? BBIP8
See Also	FETCh:DATA:TELecom:FETHernet:POAM:ERRor:CURRent?

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:HISTory?

Description	This query returns the history status of the specified FlexE Path OAM Basic OAM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM> Basic OAM > Errors - History
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ERR:HIST? BBIP8
See Also	FETCh:DATA:TELecom:FETHernet:POAM:ERRor:HISTory?

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:RATE?

Description	This query returns the rate of the specified FlexE Path OAM Basic OAM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Basic OAM > Errors - Rate
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ERR:RATE? BBIP8
See Also	FETCh:DATA:TELecom:FETHernet:POAM:ERRor:RATE?

:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:SEConds?

Description	This query returns the number of seconds within which the specified FlexE Path OAM Basic OAM error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Basic OAM > Errors - Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:FETH:POAM:BOAM:ERR:SEC? BBIP8
See Also	FETCh:DATA:TELecom:FETHernet:POAM:ERRor:SEConds?

:FETCh:DATA:TELecom:FETHernet:POAM:CSIGnal:ALARm:CURRent?

Description	This query returns the current status of the specified FlexE Path OAM Client Signal alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Client Signal > Alarms - Current
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CSIGnal:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CSTYPEM: Client Signal type Mismatch
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:CSIG:ALAR:CURR? CSTM

:FETCh:DATA:TELecom:FETHernet:POAM:CSIGnal:ALARm:HISTory?

Description	This query returns the history status of the specified FlexE Path OAM Client Signal alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Client Signal > Alarms - History
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CSIGnal:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CSTYPEM: Client Signal type Mismatch
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:CSIG:ALAR:HIST? CSTM

:FETCh:DATA:TELecom:FETHernet:POAM:CSIGnal:ALARm:SEConds?

Description	This query returns the number of seconds within which the specified FlexE Path OAM Client Signal alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Client Signal > Alarms - Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CSIGnal:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CSTYPEM: Client Signal type Mismatch
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:FETH:POAM:CSIG:ALAR:SEC? CSTM

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:ALARm:CURRent?

Description	This query returns the current status of the specified FlexE Path OAM Connectivity Verification alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Connectivity Verification > Alarms - Current
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	DAPIMismatch: Dapi Mismatch
	SAPIMismatch: Sapi Mismatch
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:ALAR:CURR? DAPIMi

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:ALARm:HISTory?

Description	This query returns the history status of the specified FlexE Path OAM Connectivity Verification alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Connectivity Verification > Alarms - History
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	DAPIMismatch: Dapi Mismatch
	SAPIMismatch: Sapi Mismatch
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:ALAR:HIST? DAPIM

:FETCh:DATA:TELecom:FETHernet:POAM:CVER:ALARm:SECo nds?

Description	This query returns the number of seconds within which the specified FlexE Path OAM Connectivity Verification alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Connectivity Verification > Alarms - Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:CVER:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	DAPIMismatch: Dapi Mismatch
	SAPIMismatch: Dapi Mismatch
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:FETH:POAM:CVER:ALAR:SEC? DAPIM

:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:COUNt?

Description	This query returns the count of the specified FlexE Path OAM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Errors - Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	PCRC4: Path OAM Cyclic Redundancy Check over 4 bits
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of error.
Example(s)	FETC:DATA:TEL:FETH:POAM:ERR:COUN? PCRC4
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:COUNt?

:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:CURRent?

Description	This query returns the current status of the specified FlexE Path OAM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Errors - Current
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	PCRC4: Path OAM Cyclic Redundancy Check over 4 bits
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:ERR:CURR? PCRC4
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:CURRent?

:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:HISTory?

Description	This query returns the history status of the specified FlexE Path OAM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM> Errors - History
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	PCRC4: Path OAM Cyclic Redundancy Check over 4 bits
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FETH:POAM:ERR:HIST? PCRC4
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:HISTory?

:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:RATE?

Description	This query returns the rate of the specified FlexE Path OAM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Path OAM > Errors - Rate
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	PCRC4: Path OAM Cyclic Redundancy Check over 4 bits
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	FETC:DATA:TEL:FETH:POAM:ERR:RATE? PCRC4
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:RATE?

:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:SEConds?

Description	This query returns the number of seconds within which the specified FlexE Path OAM error occurred. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > Path OAM > Errors - Seconds
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: PCRC4: Path OAM Cyclic Redundancy Check over 4 bits
Response Syntax	<Seconds>
Response(s)	**Seconds**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:FETH:POAM:ERR:SEC? PCRC4
See Also	FETCh:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:SEConds?

:FETCh:DATA:TELecom:FIBer:ALARm:PHYSical:CURRent?

Description	This query returns the current status of Fibre Channel alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Alarms
Syntax	:FETCh:DATA:TELecom:FIBer:ALARm:PHYSical:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LFAult: Local Fault
	LFAD: Local Fault Detected (FC 10X)
	LFAR: Local Fault Received (FC 10X)
	RFAult: Remote Fault (FC 10X)
	LOCWS: LOCWS (FC 32X)
	RD: RD (64X)
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FIB:ALAR:PHYS:CURR? LDOW
	Returns the current status of physical alarm.
See Also	FETCH:DATA:TELecom:SOAM:ALARm:SEConds?

:FETCh:DATA:TELecom:FIBer:ALARm:PHYSical:HISTory?

Description	This query returns the history status of Fibre Channel alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Alarms
Syntax	:FETCh:DATA:TELecom:FIBer:ALARm:PHYSical:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LFAult: Local Fault
	LFAD: Local Fault Detected (FC 10X)
	LFAR: Local Fault Received (FC 10X)
	RFAult: Remote Fault (FC 10X)
	LOCWS: LOCWS (FC 32X)
	RD: RD (64X)
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FIB:ALAR:PHYS:HIST? LDOW
See Also	FETCh:DATA:TELecom:SOAM:ALARm:CURRent?

:FETCh:DATA:TELecom:FIBer:ALARm:PHYSical:SEConds?

Description	This query returns the number of seconds within which Fibre Channel alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Alarms
Syntax	:FETCh:DATA:TELecom:FIBer:ALARm:PHYSical:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LDOWn: Link Down
	LFAult: Local Fault
	LFAD: Local Fault Detected (FC 10X)
	LFAR: Local Fault Received (FC 10X)
	RFAult: Remote Fault (FC 10X)
	LOCWS: LOCWS (FC 32X)
	RD: RD (64X)
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:FIB:ALAR:PHYS:SEC? LDOW
See Also	FETCh:DATA:TELecom:SOAM:ALARm:HISTory?

:FETCh:DATA:TELecom:FIBer:ERRor:FC:COUNt?

Description	This query returns the count of Fibre Channel errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:FC:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCS
	OVERsize: Oversize
	UNDersize: Undersize
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:FIB:ERR:FC:COUN? OVER
	Returns the count of FC error.
See Also	FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:COUNt?

:FETCh:DATA:TELecom:FIBer:ERRor:FC:CURRent?

Description	This query returns the current status of Fibre Channel error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:FC:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCS
	OVERsize: Oversize
	UNDersize: Undersize
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FIB:ERR:FC:CURR? OVER
	Returns the current FC status.
See Also	FETCH:DATA:TELecom:FIBer:ERRor:PHYSical:CURRent?

:FETCh:DATA:TELecom:FIBer:ERRor:FC:HISTory?

Description	This query returns the history status of Fibre Channel error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:FC:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCS
	OVERsize: Oversize
	UNDersize: Undersize
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FIB:ERR:FC:HIST? OVER
	Returns the history status of FC error.
See Also	FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:FIBer:ERRor:FC:RATE?

Description	This query returns the current rate of Fibre Channel error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:FC:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCS
	OVERsize: Oversize
	UNDersize: Undersize
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:FIB:ERR:FC:RATE? OVER
	Returns the current rate of FC error.
See Also	FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:FIBer:ERRor:FC:SEConds?

Description	This query returns the number of seconds within which Fibre Channel error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:FC:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCS
	OVERsize: Oversize
	UNDersize: Undersize
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:FIB:ERR:FC:SEC? OVER
	Returns the number of seconds of FC error.
See Also	FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:SEConds?

:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:COUNt?

Description	This query returns the count of Fibre Channel errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: Block (FC 10X/16X) or 66B BLOCK (FC 32X)
	SYMbol: Symbol (FC 1X/2X/4X/8X)
	FCCW: FEC-COR-CW (FC 32X)
	FUCW: FEC-UNCOR-CW (FC 32X)
	PFSERR: Pre-FEC-SYMB (FC 32X)
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:FIB:ERR:PHYS:COUN? BLOC
	Returns the count of physical error.
See Also	FETCh:DATA:TELecom:FIBer:ERRor:FC:COUNt?

:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:CURRent?

Description	This query returns the current status of Fibre Channel error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: Block (FC 10X/16X) or 66B BLOCK (FC 32X)
	SYMbol: Symbol (FC 1X/2X/4X/8X)
	FUCW: FEC-UNCOR-CW (FC 32X)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FIB:ERR:PHYS:CURR? BLOC
	Returns the current status of physical error.
See Also	FETCh:DATA:TELecom:FIBer:ERRor:FC:CURRent?

:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:HISTory?

Description	This query returns the history status of Fibre Channel error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: Block (FC 10X/16X) or 66B BLOCK (FC 32X)
	SYMbol: Symbol (FC 1X/2X/4X/8X)
	FUCW: FEC-UNCOR-CW (FC 32X)
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:FIB:ERR:PHYS:HIST? BLOC
	Returns the history status of physical error.
See Also	FETCH:DATA:TELecom:FIBer:ERRor:FC:HISTory?

:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:RATE?

Description	This query returns the current rate of Fibre Channel error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: Block (FC 10X/16X) or 66B BLOCK (FC 32X)
	SYMbol: Symbol (FC 1X/2X/4X/8X)
	FCCW: FEC-COR-CW (FC 32X)
	FUCW: FEC-UNCOR-CW (FC 32X)
	PFSERR: Pre-FEC-SYMB (FC 32X)
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:FIB:ERR:PHYS:RATE? BLOC
	Returns the current rate of physical error.
See Also	FETCh:DATA:TELecom:FIBer:ERRor:FC:RATE?

:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:SEConds?

Description	This query returns the number of seconds within which Fibre Channel error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Fibre Channel > Errors
Syntax	:FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BLOCk: Block (FC 10X/16X) or 66B BLOCK (FC 32X)
	SYMbol: Symbol (FC 1X/2X/4X/8X)
	FUCW: FEC-UNCOR-CW (FC 32X)
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:FIB:ERR:PHYS:SEC? BLOC
See Also	FETCh:DATA:TELecom:FIBer:ERRor:FC:SEConds?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt?

Description	This query returns the count of FEC error for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose count is to be retrieved.
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Reports the count of FEC error.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:COUN? CORR
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:COUNt?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:CURR?

Description	This query returns the current status of FEC error for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:CURR? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error whose status is to be retrieved.
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current status of FEC error.
	PRESENT, indicates that at least one error has occurred.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:CURR? CORR
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:CURRent?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:HISTory?

Description	This query returns the history status of FEC error for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error whose status is to be retrieved.
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of FEC error.
	PRESENT, indicates that at least one error has occurred.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:HIST? FCCW
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:HISTory?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:COUNt?

Description	This query returns the count of FEC error for a specified lane for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:COUNt? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose count is to be retrieved.
	FCSYmb: FEC correctable symbol error
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Reports the count of FEC error for the specified lane.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:LANE:COUN? 1, SYMB
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:CURRent?

Description	This query returns the current status of FEC Lane error for a specified lane for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:CURRent? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose status is to be retrieved.
	FCSYmb: FEC correctable symbol error
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current status of FEC error for the specified lane.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:LANE:CURR? 1, SYMB
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:CURRent?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:HISTory?

Description	This query returns the history status of FEC Lane error for a specified lane for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:HISTory? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose status is to be retrieved.
	FCSYmb: FEC correctable symbol error
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of FEC error for the specified lane.
	PRESENT, indicates that at least one error has occurred in the last second.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:LANE:HIST? 1, FCSY
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:HISTory?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:RATE?

Description	This query returns the rate of FEC error for a specified lane for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:RATE? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose rate is to be retrieved.
	FCSYmb: FEC correctable symbol error
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Reports the rate of FEC error for the specified lane.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:LANE:RATE? 1, SYMB
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:RATE?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:SEConds?

Description	This query returns the number of seconds within which the FEC error occurred for a specified lane for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:SEConds? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose number of seconds in error is to be retrieved.
	FCSYmb: FEC correctable symbol error
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the number of seconds of FEC error for the specified lane.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:LANE:SEC? 1, SYMB
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:SEConds?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:RATe?

Description	This query returns the rate of FEC error for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:RATe? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose rate is to be retrieved.
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Reports the rate of FEC error.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:RATE? CORR
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:RATE?

:FETCh:DATA:TELecom:FOTN:FEC:ERRor:SEConds?

Description	This query returns the number of seconds within which the FEC error occurred for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FEC:ERRor:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose number of seconds in error is to be retrieved.
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the number of seconds of FEC error.
Example(s)	FETC:DATA:TEL:FOTN:FEC:ERR:SEC? CORR
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:LANE:SEConds?

:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:CURRent?

Description	This query returns the current status of FOIC alarm.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm whose status is to be retrieved.
	LOA: Loss of Alignment
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current status of FOIC alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ALAR:CURR? LOA
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:CURRent?

:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:HISTory?

Description	This query returns the history status of FOIC alarm.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm whose status is to be retrieved
	LOA: Loss of Alignment
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of FOIC alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ALAR:HIST? LOA
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:HISTory?

:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:CURRent?

Description	This query returns the current status of FOIC Lane alarm for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:CURRent? <wsp><Lane Number>, <Alarm>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm type whose status is to be retrieved.
	EXCessiveSKEW: Excessive Skew
	LOAML: Loss of Alignment Marker Lock
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current status of FOIC alarm for the specified lane.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ALAR:LANE:CURR? 1, LOAML
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ALARm:CURRent?

:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:HISTory?

Description	This query returns the history status of FOIC Lane alarm for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:HISTory? <wsp><Lane Number>, <Alarm>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm type whose status is to be retrieved.
	EXCessiveSKEW: Excessive Skew
	LOAML: Loss of Alignment Marker Lock
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of FOIC alarm for the specified lane.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ALAR:LANE:HIST? 1, LOAML
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ALARm:HISTory?

:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:SEConds?

Description	This query returns the number of seconds within which the FOIC alarm occurred for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:SEConds? <wsp><Lane Number>, <Alarm>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm type whose number of seconds in alarm is to be retrieved.
	EXCessiveSKEW: Excessive Skew
	LOAML: Loss of Alignment Marker Lock
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the number of seconds of FOIC alarm for the specified lane.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ALAR:LANE:SEC? 1, LOAML
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ALARm:SEConds?

:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:SEConds?

Description	This query returns the number of seconds within which the FOIC alarm occurred.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm type whose number of seconds in alarm is to be retrieved.
	LOA: Loss of Alignment
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the number of seconds of FOIC alarm.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ALAR:SEC? LOA
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:COUNt?

Description	This query returns the count of FOIC error for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:COUNt? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose count is to be retrieved.
	INVMARKER: Invalid Marker
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Reports the count of FOIC error for the specified lane.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ERR:LANE:COUN? 1, INVMARKER
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:RATE?

:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:CURRent?

Description	This query returns the current status of FOIC Lane error for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:CURRent? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose status is to be retrieved.
	INVMARKER: Invalid Marker
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the current status of FOIC error for the specified lane.
	PRESENT, indicates that at least one error has occurred in the last second.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ERR:LANE:CURR? 1, INVMARKER
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:HISTory?

:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:HISTory?

Description	This query returns the history status of FOIC Lane error for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:HISTory? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose status is to be retrieved.
	INVMARKER: Invalid Marker
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Reports the history status of FOIC error for the specified lane.
	PRESENT, indicates that at least one error has occurred in the last second.
	ABSENT, indicates that no error occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ERR:LANE:HIST? 1, INVMARKER
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:CURRent?

:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:RATE?

Description	This query returns the rate of FOIC error for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:RATE? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose rate is to be retrieved.
	INVMARKER: Invalid Marker
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Reports the rate of FOIC error for the specified lane.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ERR:LANE:RATE? 1, INVMARKER
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:SEConds?

:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:SEConds?

Description	This query returns the number of seconds within which the FOIC error occurred for a specified lane.
	Navigation Path: Results > Alarms/Errors > FOICx.y > Lane > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:SEConds? <wsp><Lane Number>, <Error>
Parameter(s)	**Lane Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error type whose number of seconds in error is to be retrieved.
	INVMARKER: Invalid Marker
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Reports the number of seconds of FOIC error for the specified lane.
Example(s)	FETC:DATA:TEL:FOTN:FOIC:ERR:LANE:SEC? 1, INVMARKER
See Also	FETCh:DATA:TELecom:FOTN:FOIC:ERRor:LANE:HISTory?

:FETCh:DATA:TELecom:FOTN:GROup:ALARm:CURRent?

Description	Returns the current state of a FlexO Group Alarm.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:GROup:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO Group alarm.
	GRPDOWN: FlexO Group Down
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current status of FlexO Group alarm.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:GRO:ALAR:CURR? GRPDOWN
See Also	FETCh:DATA:TELecom:FOTN:GROup:ALARm:HISTory?
	FETCh:DATA:TELecom:FOTN:GROup:ALARm:SEConds?
	FETCh:DATA:TELecom:FOTN:INSTance:ALARm:CURRent?

:FETCh:DATA:TELecom:FOTN:GROup:ALARm:HISTory?

Description	Returns the history state of a FlexO Group Alarm.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:GROup:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO Group alarm
	GRPDOWN: FlexO Group Down
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history state of FlexO Group alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:GRO:ALAR:HIST? GRPDOWN
See Also	FETCh:DATA:TELecom:FOTN:GROup:ALARm:CURRent?
	FETCh:DATA:TELecom:FOTN:GROup:ALARm:SEConds?
	FETCh:DATA:TELecom:FOTN:INSTance:ALARm:HISTory?

:FETCh:DATA:TELecom:FOTN:GROup:ALARm:SEConds?

Description	Returns the number of seconds within which the FlexO Group alarm occurred.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Alarms > Seconds
Syntax	:FETCh:DATA:TELecom:FOTN:GROup:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO Group alarm
	GRPDOWN: FlexO Group Down
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds within which the FlexO Group alarm occurred.
Example(s)	FETC:DATA:TEL:FOTN:GRO:ALAR:SEC? GRPDOWN
See Also	FETCh:DATA:TELecom:FOTN:GROup:ALARm:CURRent?
	FETCh:DATA:TELecom:FOTN:GROup:ALARm:HISTory?
	FETCh:DATA:TELecom:FOTN:INSTance:ALARm:SEConds?

:FETCh:DATA:TELecom:FOTN:INSTance:ALARm:CURRent?

Description	Returns the current state of a FlexO Instance Alarm.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:INSTance:ALARm:CURRent? <wsp><Instance ID>, <Alarm>
Parameter(s)	**Instance ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the instance ID from which we want to retrieve the information
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO instance alarm.
	LOM: Loss Of Multiframe
	OOM: Out Of Multiframe
	GIDM: Group ID Mismatch
	IIDM: Instance ID Mismatch
	MAPMismatch: MAP Mismatch
	RPF: Remote PHY Fault
	EXCESINSTSKEW: Excessive Instance Skew alarm
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current status of FlexO instance alarm.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:INST:ALAR:CURR? 28,LOM
See Also	FETCh:DATA:TELecom:FOTN:INSTance:ALARm:HISTory?
	FETCh:DATA:TELecom:FOTN:INSTance:ALARm:SEConds?
	FETCh:DATA:TELecom:FOTN:GROup:ALARm:CURRent?

:FETCh:DATA:TELecom:FOTN:INSTance:ALARm:HISTory?

Description	Returns the history state of a FlexO instance Alarm.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Alarms
Syntax	:FETCh:DATA:TELecom:FOTN:INSTance:ALARm:HISTory? <wsp><Instance ID>, <Alarm>
Parameter(s)	**Instance ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the instance ID from which we want to retrieve the information
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO instance alarm.
	LOM: Loss Of Multiframe
	OOM: Out Of Multiframe
	GIDM: Group ID Mismatch
	IIDM: Instance ID Mismatch
	MAPMismatch: MAP Mismatch
	RPF: Remote PHY Fault
	EXCESINSTSKEW: Excessive Instance Skew alarm
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history status of FlexO instance alarm.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:INST:ALAR:HIST? 28,LOM
See Also	FETCh:DATA:TELecom:FOTN:INSTance:ALARm:CURRent?
	FETCh:DATA:TELecom:FOTN:INSTance:ALARm:SEConds?
	ETCh:DATA:TELecom:FOTN:GROup:ALARm:HISTory?

:FETCh:DATA:TELecom:FOTN:INSTance:ALARm:SEConds?

Description
This query returns the number of seconds within which the FlexO instance alarm occurred.

Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Alarms > Seconds

Syntax
:FETCh:DATA:TELecom:FOTN:INSTance:ALARm:SEConds? <wsp><Instance ID>, <Alarm>

Parameter(s)
Instance ID:

The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.

Specify the instance ID from which we want to retrieve the information

Alarm:

The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the type of FlexO instance alarm.

LOM: Loss Of Multiframe

OOM: Out Of Multiframe

GIDM: Group ID Mismatch

IIDM: Instance ID Mismatch

MAPMismatch: MAP Mismatch

RPF: Remote PHY Fault

EXCESINSTSKEW: Excessive Instance Skew alarm

Response Syntax
<Seconds>

Response(s)
Seconds:

The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.

Returns the number of seconds within which the FlexO instance alarm occurred.

Example(s)
FETC:DATA:TEL:FOTN:INST:ALAR:SEC?28,LOM

FETCh:DATA:TELecom:FOTN:GROup:ALARm:SEConds?

:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:COUNt?

Description	Returns the count of FlexO instance Error.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Errors > Count
Syntax	:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:COUNt? <wsp><Instance ID>, <Error>
Parameter(s)	**Instance ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the instance ID from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO instance error.
	MFAS: Multi-frame error
	OHCRC: Invalid OH CRC error
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of FlexO instance error
Example(s)	FETC:DATA:TEL:FOTN:INST:ERR:COUN?28,OHCRC
See Also	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:CURRent?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:HISTory?

	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:SEConds?

:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:CURRent?

Description	Returns the current state of a FlexO instance Error.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:CURRent? <wsp><Instance ID>, <Error>
Parameter(s)	**Instance ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the instance ID from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO instance error.
	MFAS: Multi-frame error
	OHCRC: Invalid OH CRC error
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current status of FlexO instance error.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:INST:ERR:CURR?28,OHCRC
See Also	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:COUNt?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:HISTory?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:RATe?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:SEConds?

:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:HISTory?

Description	Returns the history state of a FlexO instance Error.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Errors
Syntax	:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:HISTory? <wsp><Instance ID>, <Error>
Parameter(s)	**Instance ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the instance ID from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO instance error.
	MFAS: Multi-frame error
	OHCRC: Invalid OH CRC error
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history status of FlexO instance error.
	PRESENT, indicates that at least one alarm has occurred in the last second.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:FOTN:INST:ERR:HIST?28,OHCRC
See Also	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:CURRent?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:COUNt?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:RATe?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:SEConds?

:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:RATe?

Description	Returns the current rate of a FlexO instance Error.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Errors > Rate
Syntax	:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:RATe? <wsp><Instance ID>, <Error>
Parameter(s)	**Instance ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the instance ID from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO instance error.
	MFAS: Multi-frame error
	OHCRC: Invalid OH CRC error
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current rate of a FlexO instance error.
Example(s)	FETC:DATA:TEL:FOTN:INST:ERR:RAT?28,OHCRC
See Also	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:CURRent?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:COUNt?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:HISTory?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:SEConds?

:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:SEConds?

Description	Returns the number of seconds of FlexO instance Error.
	Navigation Path: Results > Alarms/Errors > FlexO > FlexO > Group > Errors > Seconds
Syntax	:FETCh:DATA:TELecom:FOTN:INSTance:ERRor:SEConds? <wsp><Instance ID>, <Error>
Parameter(s)	**Instance ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Specify the instance ID from which we want to retrieve the information.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FlexO instance error.
	MFAS: Multi-frame error
	OHCRC: Invalid OH CRC error
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of FlexO instance error.
Example(s)	FETC:DATA:TEL:FETH:PHY:ERR:SEC?28,OHCRC
See Also	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:CURRent?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:COUNt?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:HISTory?
	FETCh:DATA:TELecom:FOTN:INSTance:ERRor:RATe?

:FETCh:DATA:TELecom:GFP:ALARm:CHANnel:CURRent?

Description	This query returns the current status of GFP (Payload) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Alarms
Syntax	:FETCh:DATA:TELecom:GFP:ALARm:CHANnel:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CMF: GFP-User-Define CMF
	DCI: GFP-DCI
	FDI: GFP-FDI
	LOCCS: GFP-LOCCS
	LOCS: GFP-LOCS
	RDI: GFP-RDI
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:GFP:ALAR:CHAN:CURR? LOCS
See Also	FETCh:DATA:TELecom:GFP:ALARm:CHANnel:HISTory?

:FETCh:DATA:TELecom:GFP:ALARm:CHANnel:HISTory?

Description	This query returns the history status of GFP (Payload) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Alarms
Syntax	:FETCh:DATA:TELecom:GFP:ALARm:CHANnel:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CMF: GFP-User-Define CMF
	DCI: GFP-DCI
	FDI: GFP-FDI
	LOCCS: GFP-LOCCS
	LOCS: GFP-LOCS
	RDI: GFP-RDI
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:GFP:ALAR:CHAN:HIST? LOCS
See Also	FETCh:DATA:TELecom:GFP:ALARm:CHANnel:CURRent?

:FETCh:DATA:TELecom:GFP:ALARm:CHANnel:SEConds?

Description	This query returns the number of seconds within which GFP (Payload) alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Alarms
Syntax	:FETCh:DATA:TELecom:GFP:ALARm:CHANnel:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	CMF: GFP-User-Define CMF
	DCI: GFP-DCI
	FDI: GFP-FDI
	LOCCS: GFP-LOCCS
	LOCS: GFP-LOCS
	RDI: GFP-RDI
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:GFP:ALAR:CHAN:SEC? LOCS
See Also	FETCh:DATA:TELecom:GFP:ALARm:CHANnel:CURRent?

:FETCh:DATA:TELecom:GFP:ALARm:FRAMe:CURRent?

Description	his query returns the current status of GFP (Core Header) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Alarms
Syntax	:FETCh:DATA:TELecom:GFP:ALARm:FRAMe:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	EXM: GFP-EXM
	LFD: GFP-LFD
	UPM: GFP-UPM
Response Syntax	<current>
Response(s)	**current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:GFP:ALAR:FRAM:CURR? LFD
See Also	FETCh:DATA:TELecom:GFP:ALARm:FRAMe:HISTory?

:FETCh:DATA:TELecom:GFP:ALARm:FRAMe:HISTory?

Description	This query returns the history status of GFP (Core Header) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Alarms
Syntax	:FETCh:DATA:TELecom:GFP:ALARm:FRAMe:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	EXM: GFP-EXM
	LFD: GFP-LFD
	UPM: GFP-UPM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:GFP:ALAR:FRAM:HIST? LFD
See Also	FETCh:DATA:TELecom:GFP:ALARm:FRAMe:CURRent?

:FETCh:DATA:TELecom:GFP:ALARm:FRAMe:SEConds?

Description	This query returns the number of seconds within which GFP (Core Header) alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Alarms
Syntax	:FETCh:DATA:TELecom:GFP:ALARm:FRAMe:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	EXM: GFP-EXM
	LFD: GFP-LFD
	UPM: GFP-UPM
Response Syntax	<seconds>
Response(s)	**seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:GFP:ALAR:FRAM:SEC? LFD
See Also	FETCh:DATA:TELecom:GFP:ALARm:FRAMe:CURRent?

:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:COUNt?

Description	This query returns the count of GFP (Payload) errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TCORRect: GFP-tHEC-CORR
	SUPERBLOCKCORR: GFP-SB-CORR
	ECORRect: GFP-eHEC-CORR
	SUPERBLOCKUNCORR: GFP-SB-UNCORR
	GFP10BERR: GFP-10B_ERR
	PFCS: GFP-pFCS
Response Syntax	<COUNT>
Response(s)	**COUNT**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:GFP:ERR:CHAN:COUN? TCORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:CHANnel:RATE?

:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:CURRent?

Description	This query returns the current status of GFP (Payload) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TCORRect: GFP-tHEC-CORR
	SUPERBLOCKCORR: GFP-SB-CORR
	ECORRect: GFP-eHEC-CORR
	SUPERBLOCKUNCORR: GFP-SB-UNCORR
	GFP10BERR: GFP-10B_ERR
	PFCS: GFP-pFCS
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:GFP:ERR:CHAN:CURR? TCORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:CHANnel:HISTory?

:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:HISTory?

Description	This query returns the history status of GFP (Payload) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TCORRect: GFP-tHEC-CORR
	SUPERBLOCKCORR: GFP-SB-CORR
	ECORRect: GFP-eHEC-CORR
	SUPERBLOCKUNCORR: GFP-SB-UNCORR
	GFP10BERR: GFP-10B_ERR
	PFCS: GFP-pFCS
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history status of error Analysis for Channel.
	PRESENT, indicates that at least one GFP error is present.
	ABSENT, indicates that there is no GFP error
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:GFP:ERR:CHAN:HIST? TCORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:CHANnel:CURRent?

:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:RATE?

Description	This query returns the current rate of GFP (Payload) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TCORRect: GFP-tHEC-CORR
	SUPERBLOCKCORR: GFP-SB-CORR
	ECORRect: GFP-eHEC-CORR
	SUPERBLOCKUNCORR: GFP-SB-UNCORR
	GFP10BERR: GFP-10B_ERR
	PFCS: GFP-pFCS
Response Syntax	<RATE>
Response(s)	**RATE**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:GFP:ERR:CHAN:RATE? TCORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:CHANnel:COUNt?

:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:SEConds?

Description	This query returns the number of seconds within which GFP (Payload) error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:CHANnel:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TCORRect: GFP-tHEC-CORR
	SUPERBLOCKCORR: GFP-SB-CORR
	ECORRect: GFP-eHEC-CORR
	SUPERBLOCKUNCORR: GFP-SB-UNCORR
	GFP10BERR: GFP-10B_ERR
	PFCS: GFP-pFCS
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:GFP:ERR:CHAN:SEC? TCORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:CHANnel:CURRent?

:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:COUNt?

Description	This query returns the count of GFP (Core Header and Payload) errors. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:COUNt? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: For Core Header: CORRectable: GFP-cHEC-CORR UCORrectable: GFP-cHEC-UNCORR For Payload: EUCORRect: GFP-eHEC-UNCORR PFCS: GFP-pFCS TUCORRect: GFP-tHEC-UNCORR
Response Syntax	<COUNT>
Response(s)	**COUNT**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the count of errors.
Example(s)	FETC:DATA:TEL:GFP:ERR:FRAM:COUN? CORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:FRAMe:RATE?

:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:CURRent?

Description	This query returns the current status of GFP (Core Header and Payload) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	For Core Header:
	CORRectable: GFP-cHEC-CORR
	UCORrectable: GFP-cHEC-UNCORR
	For Payload:
	EUCORRect: GFP-eHEC-UNCORR
	PFCS: GFP-pFCS
	TUCORRect: GFP-tHEC-UNCORR
Response Syntax	<current>
Response(s)	**current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:GFP:ERR:FRAM:CURR? CORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:FRAMe:HISTory?

:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:HISTory?

Description	This query returns the history status of GFP (Core Header and Payload) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	For Core Header:
	CORRectable: GFP-cHEC-CORR
	UCORrectable: GFP-cHEC-UNCORR
	For Payload:
	EUCORRect: GFP-eHEC-UNCORR
	PFCS: GFP-pFCS
	TUCORRect: GFP-tHEC-UNCORR
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:GFP:ERR:FRAM:HIST? CORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:FRAMe:CURRent?

:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:RATE?

Description	This query returns the current rate of GFP (Core Header and Payload) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	For Core Header:
	CORRectable: GFP-cHEC-CORR
	UCORrectable: GFP-cHEC-UNCORR
	For Payload:
	EUCORRect: GFP-eHEC-UNCORR
	PFCS: GFP-pFCS
	TUCORRect: GFP-tHEC-UNCORR
Response Syntax	<RATE>
Response(s)	**RATE**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:GFP:ERR:FRAM:RATE? CORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:FRAMe:COUNt?

:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:SEConds?

Description	This query returns the number of seconds within which GFP (Core Header and Payload) error occurred. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > GFP > Errors
Syntax	:FETCh:DATA:TELecom:GFP:ERRor:FRAMe:SEConds? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: For Core Header: CORRectable: GFP-cHEC-CORR UCORrectable: GFP-cHEC-UNCORR For Payload: EUCORRect: GFP-eHEC-UNCORR PFCS: GFP-pFCS TUCORRect: GFP-tHEC-UNCORR
Response Syntax	<seconds>
Response(s)	**seconds**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:GFP:ERR:FRAM:SEC? CORR
See Also	FETCh:DATA:TELecom:GFP:ERRor:FRAMe:RATE?

:FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:CURRent?

Description	This query returns the current status of Interface (Parallel - global) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOS
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT:TYPE LOS
	FETC:DATA:TEL:OPT:ALAR:PORT:GLOB:CURR? LOS
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:HISTory ?

Description	This query returns the history status of Interface (Parallel - global) alarm.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:OPTical:ALARm:PORT:GLOBal:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOS
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT:TYPE LOS
	FETC:DATA:TEL:OPT:ALAR:PORT:GLOB:HIST? LOS
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:OPTical:ALARm:RX:CURRent?

Description	This query returns the current status of optical Interface (serial/parallel) alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarms
Syntax	:FETCh:DATA:TELecom:OPTical:ALARm:RX:CURRent? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number. Use lane 0 for a serial interface.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FREQuency: Frequency (serial interfaces)
	LOS: LOS (serial/parallel interfaces)
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OPT:ALAR:RX:CURR? 1, LOS
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:OPTical:ALARm:RX:HISTory?

Description	This query returns the history status of optical Inteface (serial/parallel) alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface > Alarm
Syntax	:FETCh:DATA:TELecom:OPTical:ALARm:RX:HISTory?[<wsp><Lane>], <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number. Use lane 0 for a serial interface.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FREQuency: Frequency (serial interfaces)
	LOS: LOS (serial/parallel interfaces)
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OPT:ALAR:RX:HIST? 1, LOS
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:OPTical:ALARm:RX:SEConds?

Description	This query returns the number of seconds within which optical Interface (serial/parallel) alarm occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarm/Errors > Interface
Syntax	:FETCh:DATA:TELecom:OPTical:ALARm:RX:SEConds? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number. Use lane 0 for a serial interface.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	FREQuency: Frequency (serial interfaces)
	LOS: LOS (serial/parallel interfaces)
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OPT:ALAR:RX:SEC? 1, LOS
See Also	FETCh:DATA:TELecom:CAUI:ALARm:LANE:HISTory?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:CURRent?
	FETCh:DATA:TELecom:CAUI:ALARm:LANE:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:CURRent?

Description	This query returns the current status of ODU alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > Alarms
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:CURRent? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LOCK
	OOCI: OCI
	OTIM: TIM
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:CURRent?

Response(s)	Current:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:CURR? OAIS
	FETC:DATA:TEL:OTN:ALAR:ODU100:CURR? OAIS, 3
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:CURRent?

Description	This query returns the current status of ODU1e/2e/3e1/3e2 alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1e/2e/3e1/3e2 > Alarms
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LOCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU3:E1:CURR? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:HISTory?

Description	This query returns the history status of ODU1e/2e/3e1/3e2 alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1e/2e/3e1/3e2 > Alarms
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LOCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU3:E1:HIST? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:SEConds?

Description	This query returns the number of seconds within which ODU1e/2e/3e1/3e2 alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1e/2e/3e1/3e2 > Alarms
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LOCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU3:E1:SEC? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1. .n]:CURRent?

Description	This query returns the current status of ODU1e/2e/3e1/3e2 TCM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1e/2e/3e1/3e2 TCM > Alarms
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:CURR? TLTC
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1.
.n]:HISTory?

Description	This query returns the history status of ODU1e/2e/3e1/3e2 TCM alarm. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > ODU1e/2e/3e1/3e2 TCM > Alarms NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the alarm: TBDI: BDI TBIAE: BIAE TIAE: IAE TLTC: LTC TTIM: TIM
Response Syntax	<History>
Response(s)	**History**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the history alarm status: PRESENT: At least one alarm has occurred during the test. ABSENT: No alarm has occurred during the test. INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:HIST? TLTC
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:SEConds?

Description	This query returns the number of seconds within which ODU1e/2e/3e1/3e2 TCM alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1e/2e/3e1/3e2 TCM > Alarms
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:SEC? TLTC
See Also	FETCh:DATA:TELecom:OTN:ERRor:[1..n]:E[1..n]:TCM[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:CURRent?

Description	This query returns the current status of ODU1f/2f alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:F:CURR? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:HISTory?

Description	This query returns the history status of ODU1f/2f alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:F:HIST? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:SEConds?

Description	This query returns the number of seconds within which ODU1f/2f alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:F:SEC? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:CURRent?

Description	This query returns the current status of ODU1f/2f TCM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:CURR? TLTC
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:HISTory?

Description	This query returns the history status of ODU1f/2f TCM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:HIST? TLTC
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:SEConds?

Description	This query returns the number of seconds within which ODU1f/2f TCM alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:SEC? TLTC
See Also	FETCh:DATA:TELecom:OTN:ERRor:[1..n]:E[1..n]:TCM[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:HISTory?

Description	This query returns the history status of the Optical Data Unit (ODU) alarm.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > ODU
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:HISTory? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of Optical Data Unit (ODU) alarm.
	OAIS, ODU - Alarm Indication Signal
	OBDi, ODU - Backward Defect indication
	OLCK, ODU - LOCK
	OOCI, ODU - Open Connection Indication
	OFSF, ODU - Forward Signal Fail
	OBSF, ODU - Backward Signal Fail
	OTIM, ODU - Trace Identification Mismatch
	OFSD, ODU - Forward Signal Degrade
	OBSD: ODU - Backward Signal Degrade
	LOFLom, ODU-Loss of Frame Loss of Multiframe
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:HISTory?

Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history status of the Optical Data Unit (ODU) alarm.
	PRESENT, indicates that at least one alarm has occurred.
	ABSENT, indicates that no alarm occurred.
	INACTIVE, indicates that the test did not run yet.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:HIST? OAIS
	FETC:DATA:TEL:OTN:ALAR:ODU100:HIST? OAIS, 3
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

Description	This query returns the number of seconds within which the Optical Data Unit (ODU) alarm occurred.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > ODU
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of Optical Data Unit (ODU) alarm.
	OAIS: ODU - Alarm Indication Signal
	OBDi: ODU - Backward Defect indication
	OLCK: ODU - LOCK
	OOCI: ODU - Open Connection Indication
	OFSF: ODU - Forward Signal Fail
	OBSF: ODU - Backward Signal Fail
	OTIM: ODU - Trace Identification Mismatch
	OFSD: ODU-FSD (ODU - Forward Signal Degrade
	OBSD: ODU - Backward Signal Degrade
	LOFLom: ODU-Loss of Frame Loss of Multiframe
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:SEConds?

Response(s)	Seconds:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of the Optical Data Unit (ODU) alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:SEC? OAIS
	FETC:DATA:TEL:OTN:ALAR:ODU100:SEC? OAIS, 3
See Also	FETCH:DATA:TELecom:OTN:ALARm:ODU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:CUR Rent?

Description	This query returns the current status of ODU TCM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:TCM1:CURR? TLTC
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:HISTory?

Description	This query returns the history status of ODU TCM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:TCM1:HIST? TLTC
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:SEC onds?

Description	This query returns the number of seconds within which ODU TCM alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
	TTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:ODU1:TCM1:SEC? TLTC
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

Description	This query returns the current status of OPU / OPU3e1/e2 alarm.
	At *RST condition, this value is device dependent.
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOOMFI
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OOMFI
	OPLM: PLM
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

Response(s)	Current:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:CURR? OPLM
	FETC:DATA:TEL:OTN:ALAR:OPU100:CURR? OPLM, 3
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:CURRent?

Description	This query returns the current status of OPU1e/2e alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU1e/2e > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OPLM: PLM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:E:CURR? OPLM
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:HISTory?

Description	This query returns the history status of OPU1e/2e alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU1e/2e > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OPLM: PLM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:E:HIST? OPLM
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:SEConds?

Description	This query returns the number of seconds within which OPU1e/2e alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU1e/2e > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OPLM: PLM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:E:SEC? OPLM
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:CURRent?

Description	This query returns the current status of OPU1f/2f alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OPLM: PLM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:F:CURR? OPLM
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:HISTory?

Description	This query returns the history status of OPU1f/2f alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OPLM: PLM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:F:HIST? OPLM
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:SEConds?

Description	This query returns the number of seconds within which OPU1f/2f alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OPLM: PLM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:F:SEC? OPLM
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:HISTory?

Description	This query returns the history status of OPU / OPU3e1/e2 alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU / OPU3e1/e2 > Alarms
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:HISTory? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOOMFI
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OOMFI
	OPLM: PLM
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:HISTory?

Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:HIST? OPLM
	FETC:DATA:TEL:OTN:ALAR:OPU100:HIST? OPLM, 3
See Also	FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:SEConds?

Description	This query returns the number of seconds within which OPU / OPU3e1/e2 alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU / OPU3e1/e2 > Alarms
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OPU[1..n]:SEConds? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOOMFI
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
	OOMFI
	OPLM: PLM
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OPU1:SEC? OPLM
	FETC:DATA:TEL:OTN:ALAR:OPU100:SEC? OPLM, 3
See Also	FETCH:DATA:TELecom:OTN:ALARm:OPU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:CURRent?

Description	This query returns the current status of OTU alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Alarms
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCN.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU3:CURR? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:CURRent?

Description	This query returns the current status of OTU1e/2e/3e1/3e2 alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Alarms
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU3:E1:CURR? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:HISTory ?

Description	This query returns the history status of OTU1e/2e/3e1/3e2 alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Alarms
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU3:E1:HIST? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:SEConds?

Description	This query returns the number of seconds within which OTU1e/2e/3e1/3e2 alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Alarms
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU3:E1:SEC? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:CURRent?

Description	This query returns the current status of OTU1f/2f alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU1:F:CURR? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:HISTory?

Description	This query returns the history status of OTU1f/2f alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU1:F:HIST? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:SEConds?

Description	This query returns the number of seconds within which OTU1f/2f alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU1:F:SEC? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:HISTory?

Description	This query returns the history status of OTU alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Alarms
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCN.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU3:HIST? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:SEConds?

Description	This query returns the number of seconds within which OTU alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Alarms
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCN.
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOM
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:OTU3:SEC? OAIS
See Also	FETCh:DATA:TELecom:OTN:ALARm:OTU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:CURRent?

Description	This query returns the current status of OTL (per lane) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:CURRent? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOR
	OOF
	OOR
	SKEW: Exc. Skew
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:PHYS:CURR? 1, SKEW
	FETC:DATA:TEL:OTN:ALAR:PHYS:CURR? 1, OOF
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:GLOBal:CURRent?

Description	This query returns the current status of OTL (global) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:GLOBal:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOL
	LOR
	OOF
	OOR
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:PHYS:GLOB:CURR? LOL
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:GLOBal:HISTory ?

Description	This query returns the history status of OTL (global) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:GLOBal:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOL
	LOR
	OOF
	OOR
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:PHYS:GLOB:HIST? LOL
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:GLOBal:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:GLOBal:SEConds?

Description	This query returns the number of seconds within which OTL (global) alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:GLOBal:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOL
	LOR
	OOF
	OOR
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:PHYS:GLOB:SEC? LOL
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:SEConds?

:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:HISTory?

Description	This query returns the history status of OTL (per lane) alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:HISTory? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for the history status of physical alarm. The range for the virtual lane is from 0 to 19.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOR
	OOF
	OOR
	SKEW: Exc. Skew
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ALAR:PHYS:HIST? 1, SKEW
	FETC:DATA:TEL:OTN:ALAR:PHYS:HIST? 1, LOF
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:CURRent?

:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:SEConds?

Description	This query returns the number of seconds within which OTL (per lane) alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Alarms
Syntax	:FETCh:DATA:TELecom:OTN:ALARm:PHYSical:SEConds? <wsp><Lane>, <Alarm>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for the number of seconds of physical alarm. The range for the virtual lane is from 0 to 19.
	Alarm:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	LOF
	LOR
	OOF
	OOR
	SKEW: Exc. Skew
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ALAR:PHYS:SEC? 1, SKEW
	FETC:DATA:TEL:OTN:ALAR:PHYS:SEC? 1, OOR
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:OTN:ERRor:FEC:COUNt?

Description	This query returns the count of FEC errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:FEC:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15
	SOUR:DATA:TEL:OTN:ERR:FEC:INJ
	FETC:DATA:TEL:OTN:ERR:FEC:COUN? FCCW
See Also	FETCh:DATA:TELecom:OTN:ERRor:FEC:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:FEC:CURRent?

Description	This query returns the current status of FEC error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:FEC:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15
	SOUR:DATA:TEL:OTN:ERR:FEC:INJ
	FETC:DATA:TEL:OTN:ERR:FEC:CURR? FCCW
See Also	FETCh:DATA:TELecom:OTN:ERRor:FEC:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:FEC:HISTory?

Description	This query returns the history status of FEC error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:FEC:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15
	SOUR:DATA:TEL:OTN:ERR:FEC:INJ
	FETC:DATA:TEL:OTN:ERR:FEC:HIST? FCCW
See Also	FETCh:DATA:TELecom:OTN:ERRor:FEC:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:FEC:RATE?

Description	This query returns the current rate of FEC error. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:FEC:RATE? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: FCBit: FEC-CORR-BIT FCCW: FEC-CORR-CW FCSTRESS: FCSTRESS FCSYmb: FEC-CORR-SYMB FUCW: FEC-UNCORR-CW
Response Syntax	<Rate>
Response(s)	**Rate**: The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element. Returns the current error rate.
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15 SOUR:DATA:TEL:OTN:ERR:FEC:INJ FETC:DATA:TEL:OTN:ERR:FEC:RATE? FCCW
See Also	FETCh:DATA:TELecom:OTN:ERRor:FEC:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:FEC:SEConds?

Description	This query returns the number of seconds within which FEC error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > FEC > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:FEC:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15
	SOUR:DATA:TEL:OTN:ERR:FEC:INJ
	FETC:DATA:TEL:OTN:ERR:FEC:SEC? FCCW
See Also	FETCh:DATA:TELecom:OTN:ERRor:FEC:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:COUNt?

Description	TThis query returns the count of ODU errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > Errors
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:COUNt? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OBIP8: BIP-8
	OBEI: BEI
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:COUN? OBIP8
	FETC:DATA:TEL:OTN:ERR:ODU100:COUN? OBIP8, 3
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:RATE?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:CURRent?

Description	This query returns the current status of ODU error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > Errors
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:CURRent? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OBIP8: BIP-8
	OBEI: BEI
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:CURR? OBIP8
	FETC:DATA:TEL:OTN:ERR:ODU100:CURR? OBIP8, 3
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:COUNt?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:COUNt?

Description	This query returns the count of ODU1e/2e/3e1/3e2 errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1e/2e/3e1/3e2 > Errors
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OBIP8: BIP-8
	OBEI: BEI
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AMO 15

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:SEConds?

Description	This query returns the number of seconds within which ODU1f/2f error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:ODU1:F:SEC? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:COUNt?

Description	This query returns the count of ODU1f/2f TCM errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:ODU1:F:TCM1:COUN? TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:CURRent?

Description	This query returns the current status of ODU1f/2f TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:INJ

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:HIS Tory?

Description	This query returns the history status of ODU1f/2f TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:INJ

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:RATE?

Description	This query returns the current rate of ODU1f/2f TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:ODU1:F:TCM1:RATE? TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:SE Conds?

Description	This query returns the number of seconds within which ODU1f/2f TCM error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU1f/2f TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:ODU1:F:TCM1:SEC? TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:HISTory?

Description	This query returns the history status of ODU error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > Errors
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:HISTory? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OBIP8: BIP-8
	OBEI: BEI
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:HIST? OBIP8
	FETC:DATA:TEL:OTN:ERR:ODU100:HIST? OBIP8, 3
See Also	FETCH:DATA:TELecom:OTN:ERRor:ODU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:RATE?

Description	This query returns the current rate of ODU error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > Errors
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:RATE? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OBIP8: BIP-8
	OBEI: BEI
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:RATE? OBIP8
	FETC:DATA:TEL:OTN:ERR:ODU100:RATE? OBIP8, 3
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:COUNt?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:SEConds?

Description	This query returns the number of seconds within which ODU error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > Errors
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:SEConds? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OBIP8: BIP-8
	OBEI: BEI
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:SEC? OBIP8
	FETC:DATA:TEL:OTN:ERR:ODU100:SEC? OBIP8, 3
See Also	FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:COUNt?

Description	This query returns the count of ODU TCM errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:TCM1:COUN? TBIP8
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:CURRent?

Description	This query returns the current status of ODU TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:TCM1:CURR? TBIP8
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:HISTory?

Description	This query returns the history status of ODU TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:TCM1:HIST? TBIP8
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:RATE?

Description	This query returns the current rate of ODU TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:TCM1:RATE? TBIP8
See Also	FETCH:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:SECo nds?

Description	This query returns the number of seconds within which ODU TCM error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU TCM > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:OTN:ERR:ODU1:TCM1:SEC? TBIP8
See Also	FETCh:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:COUNt?

Description	This query returns the count of OPU / OPU3e1/e2 errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU / OPU3e1/e2 > Errors
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OMFI
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:OTN:ERR:OPU1:COUNT? OMFI
See Also	FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:CURRent?

Description	This query returns the current status of OPU / OPU3e1/e2 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU / OPU3e1/e2 > Errors
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OMFI
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:OPU1:CURR? OMFI
See Also	FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:HISTory?

Description	This query returns the history status of OPU / OPU3e1/e2 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU / OPU3e1/e2 > Errors
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OMFI
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:OPU1:HIST? OMFI
See Also	FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:RATE?

Description	This query returns the current rate of OPU / OPU3e1/e2 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU / OPU3e1/e2 > Errors
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OMFI
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:OTN:ERR:OPU1:RATE? OMFI
See Also	FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:SEConds?

Description	This query returns the number of seconds within which OPU / OPU3e1/e2 error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OPU / OPU3e1/e2 > Errors
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	OMFI
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:OTN:ERR:OPU1:SEC? OMFI
See Also	FETCh:DATA:TELecom:OTN:ERRor:OPU[1..n]:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:COUNt?

Description	This query returns the count of OTU errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Errors
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:OTN:ERR:OTU3:COUN? OBIP8
See Also	FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:CURRent?

Description	This query returns the current status of OTU error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Errors
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:OTU3:CURR? OBIP8
See Also	FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:SEConds?

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:COUNt?

Description	This query returns the count of OTU1e/2e/3e1/3e2 errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Errors
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:INJ
	FETC:DATA:TEL:OTN:ERR:OTU3:E1:COUN? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:CURRent?

Description	This query returns the current status of OTU1e/2e/3e1/3e2 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Errors
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:INJ
	FETC:DATA:TEL:OTN:ERR:OTU3:E1:CURR? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:HISTory?

Description	This query returns the history status of OTU1e/2e/3e1/3e2 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Errors
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:INJ
	FETC:DATA:TEL:OTN:ERR:OTU3:E1:HIST? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:RATE?

Description	This query returns the current rate of OTU1e/2e/3e1/3e2 error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Errors
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:INJ
	FETC:DATA:TEL:OTN:ERR:OTU3:E1:RATE? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:SEConds?

Description	This query returns the number of seconds within which OTU1e/2e/3e1/3e2 error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1e/2e/3e1/3e2 > Errors
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:INJ
	FETC:DATA:TEL:OTN:ERR:OTU3:E1:SEC? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:COUNt?

Description	This query returns the count of OTU1f/2f errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:OTU1:F:COUN? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:CURRent?

Description	This query returns the current status of OTU1f/2f error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:OTU1:F:CURR? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:HISTory?

Description	This query returns the history status of OTU1f/2f error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:OTU1:F:HIST? OBIP8

	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:RATE?

Description	This query returns the current rate of OTU1f/2f error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:OTU1:F:RATE? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:SEConds?

Description	This query returns the number of seconds within which OTU1f/2f error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU1f/2f > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:INJ
	FETC:DATA:TEL:OTN:ERR:OTU1:F:SEC? OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE

	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:HISTory?

Description	This query returns the history status of OTU error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Errors
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:OTU3:HIST? OBIP8
See Also	FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:RATE?

Description	This query returns the current rate of OTU error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Errors
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:OTN:ERR:OTU3:RATE? OBIP8
See Also	FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:COUNt?

:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:SEConds?

Description	This query returns the number of seconds within which OTU error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTU > Errors
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:OTN:ERR:OTU3:SEC? OBIP8
See Also	FETCh:DATA:TELecom:OTN:ERRor:OTU[1..n]:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:COUNt:TOTal?

Description	This query returns the total count of OTL errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors - Total
	Navigation Path: Functions > 40G Advanced > Lanes Mapping & Skew > Error - Total
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:COUNt:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:COUN:TOT? FAS
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:COUNt?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:COUNt?

Description	This query returns the count of OTL (per lane) errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors
	Navigation Path: Functions > 40G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:COUNt? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:COUN? 1, FAS
	FETC:DATA:TEL:OTN:ERR:PHYS:COUN? 1, LLM
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:CURRent?

Description	This query returns the current status of OTL (per lane) error. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > OTL > Errors Navigation Path: Functions > 40G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:CURRent? <wsp><Lane>, <Error>
Parameter(s)	**Lane**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the lane number. **Error**: The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error: FAS LLM: Invalid Marker
Response Syntax	<Current>
Response(s)	**Current**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the current error status: PRESENT: An error has occurred in the last second. ABSENT: No error has occurred in the last second. INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:CURR? 1, FAS FETC:DATA:TEL:OTN:ERR:PHYS:CURR? 1, LLM
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:HIStory?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:GLOBal:CURRent?

Description	This query returns the current status of OTL (global) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:GLOBal:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:GLOB:CURR? FAS
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:GLOBal:HISTory?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:GLOBal:HISTory?

Description	This query returns the history status of OTL (global) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:GLOBal:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:GLOB:HIST?? FAS

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:HISTory?

Description	This query returns the history status of OTL (per lane) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors
	Navigation Path: Functions > 40G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:HISTory? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:HIST? 1, FAS
	FETC:DATA:TEL:OTN:ERR:PHYS:HIST? 1, LLM
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:CURRent?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE:TOTal?

Description	This query returns the total rate of OTL error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors - Total
	Navigation Path: Functions > 40G Advanced > Lanes Mapping & Skew > Error - Total
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE:TOTal? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:RATE:TOT? FAS
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE?

Description	This query returns the current rate of OTL (per lane) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors
	Navigation Path: Functions > 40G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for the current rate of physical error. The range for the virtual lane is from 0 to 19.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:RATE? 1, FAS
	FETC:DATA:TEL:OTN:ERR:PHYS:RATE? 1, LLM
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:COUNt?

:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:SEConds?

Description	This query returns the number of seconds within which OTL (per lane) error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > OTL > Errors
	Navigation Path: Functions > 40G Advanced > Lanes Mapping & Skew > Error
Syntax	:FETCh:DATA:TELecom:OTN:ERRor:PHYSical:SEConds? <wsp><Lane>, <Error>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for the number of seconds of physical error. The range for the virtual lane is from 0 to 19.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FAS
	LLM: Invalid Marker
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:OTN:ERR:PHYS:SEC? 1, FAS
	FETC:DATA:TEL:OTN:ERR:PHYS:SEC? 1, LLM
See Also	FETCh:DATA:TELecom:OTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ALARm:CURRent?

Description	This query returns the current status of GMP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GMP > Alarms - OOS
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms - Client Frequency
	Navigation Path: Results > Alarms/Errors > ODUflex > BER > Alarms - Client Frequency
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ALARm:CURRent? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	GMPOOS: OOS
	CFRequency: Client Frequency
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ALAR:CURR? GMPOOS
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ALAR:CURR? GMPOOS, 3
See Also	FETCH:DATA:TELecom:OTN:ODU:GMP:RX:ALARm:HISTory?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ALARm:HISTory?

Description	This query returns the history status of GMP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GMP > Alarms - OOS
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms - Client Frequency
	Navigation Path: Results > Alarms/Errors > ODUflex > BER > Alarms - Client Frequency
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ALARm:HISTory? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	GMPOOS: OOS
	CFRequency: Client Frequency
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ALAR:HIST? GMPOOS
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ALAR:HIST? GMPOOS, 3
See Also	FETCH:DATA:TELecom:OTN:ODU:GMP:RX:ALARm:CURRent?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ALARm:SECo nds?

Description	This query returns the number of seconds within which GMP alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > GMP > Alarms - OOS
	Navigation Path: Results > Alarms/Errors > Ethernet > Ethernet > Alarms - Client Frequency
	Navigation Path: Results > Alarms/Errors > ODUflex > BER > Alarms - Client Frequency
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ALARm:SEConds? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	GMPOOS: OOS
	CFRequency: Client Frequency
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ALAR:SEC? GMPOOS
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ALAR:SEC? GMPOOS, 3
See Also	FETCh:DATA:TELecom:OTN:ODU:GMP:RX:ALARm:HISTory?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:COUNt?

Description	This query returns the count of GMP errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > GMP > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:COUNt? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CMCRC8: Cm-CRC-8
	CNDCRC5: CnD-CRC-5
	CMCRC6: Cm-CRC-6
	CNDCRC9: CnD-CRC-9
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:COUN? CMCRC8
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:COUN? CMCRC8, 3
See Also	FETCH:DATA:TELecom:OTN:ODU:GMP:RX:ERRor:HISTory?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:CURRent?

Description	This query returns the current status of GMP error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > GMP > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:CURRent? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CMCRC8: Cm-CRC-8
	CNDCRC5: CnD-CRC-5
	CMCRC6: Cm-CRC-6
	CNDCRC9: CnD-CRC-9
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:CURR? CMCRC8
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:CURR? CMCRC8, 3
See Also	FETCh:DATA:TELecom:OTN:ODU:GMP:RX:ERRor:HISTory?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:HISTory?

Description	This query returns the history status of GMP error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > GMP > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:HISTory? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CMCRC8: Cm-CRC-8
	CNDCRC5: CnD-CRC-5
	CMCRC6: Cm-CRC-6
	CNDCRC9: CnD-CRC-9
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:HIST? CMCRC8
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:HIST? CMCRC8, 3
See Also	FETCh:DATA:TELecom:OTN:ODU:GMP:RX:ERRor:CURRent?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:RATE?

Description	This query returns the current rate of GMP error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > GMP > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:RATE? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CMCRC8: Cm-CRC-8
	CNDCRC5: CnD-CRC-5
	CMCRC6: Cm-CRC-6
	CNDCRC9: CnD-CRC-9
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:RATE? CMCRC8
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:RATE? CMCRC8, 3
See Also	FETCh:DATA:TELecom:OTN:ODU:GMP:RX:ERRor:HISTory?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:SEConds?

Description	This query returns the number of seconds within which GMP error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > ODU > GMP > Errors
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:GMP:RX:ERRor:SEConds? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CMCRC8: Cm-CRC-8
	CNDCRC5: CnD-CRC-5
	CMCRC6: Cm-CRC-6
	CNDCRC9: CnD-CRC-9
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:SEC? CMCRC8
	FETC:DATA:TEL:OTN:ODU4:GMP:RX:ERR:SEC? CMCRC8, 3
See Also	FETCh:DATA:TELecom:OTN:ODU:GMP:RX:ERRor:HISTory?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:CURRent?

Description	This query returns the current status of PTP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Unusable
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:CURRent? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PTSUNUSABLE: Unusable
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:CURRent? PTSUNUSABLE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:CURRent?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:HISTory ?

Description	This query returns the history status of PTP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Unusable
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:HISTory? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PTSUNUSABLE: Unusable
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:HISTory? PTSUNUSABLE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:HISTory?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:SECond?

Description	This query returns the number of seconds within which PTP alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Unusable
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:SECond? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PTSUNUSABLE: Unusable
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:SECond? PTSUNUSABLE
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:SECond?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:CURRent?

Description	This query returns the current status of PTP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Domain Mismatch | Loss Announce | QL Mismatch
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:CURRent? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	DOMAINMISM: Domain Mismatch
	PTSLOSANN: Loss Announce
	QLMISM: QL Mismatch
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:CURRent? PTSLOSANN
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:CURRent?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:HIStory?

Description	This query returns the history status of PTP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Domain Mismatch | Loss Announce | QL Mismatch
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:HISTory? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	DOMAINMISM: Domain Mismatch
	PTSLOSANN: Loss Announce
	QLMISM: QL Mismatch
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:HISTory? PTSLOSANN
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:HISTory?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:SECond?

Description	This query returns the number of seconds within which PTP alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Domain Mismatch | Loss Announce | QL Mismatch
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:SECond? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	QLMISM: QL Mismatch
	PTSLOSANN: Loss Announce
	DOMAINMISM: Domain Mismatch
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:MESSage:SECond? PTSLOSANN
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:SECond?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage :CURRent?

Description	This query returns the current status of PTP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Loss Sync
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:CURRent? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PTSSYNCLOS: Loss Sync
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:CURRent? PTSSYNCLOS
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:HISTory?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage :HISTory?

Description	This query returns the history status of PTP alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Loss Sync
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PTSSYNCLOS: Loss Sync
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:HISTory? PTSSYNCLOS
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:HISTory?

:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage :SECond?

Description	This query returns the number of seconds within which PTP alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > PTP > Alarms - Loss Sync
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:SECond? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	PTSSYNCLOS: Loss Sync
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SYNMessage:SECond? PTSSYNCLOS
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:IPDV:CURRent?

:FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:CURRent?

Description	This query returns the current status of SyncE alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > SyncE > Alarms
Syntax	:FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	ESMCLOSS: ESMC Loss
	QLMISMATCH: QL Mismatch
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PACK:SYNC:ALAR:CURR? ESMCLOSS
See Also	FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:HISTory?

:FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:HISTory?

Description	This query returns the history status of SyncE alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > SyncE > Alarms
Syntax	:FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	ESMCLOSS: ESMC Loss
	QLMISMATCH: QL Mismatch
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PACK:SYNC:ALAR:HIST? ESMCLOSS
See Also	FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:SEConds?

:FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:SEConds?

Description	This query returns the number of seconds within which SyncE alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > SyncE > Alarms
Syntax	:FETCh:DATA:TELecom:PACKetsync:SYNCe:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	ESMCLOSS: ESMC Loss
	QLMISMATCH: QL Mismatch
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:PACK:SYNC:ALAR:SEC? ESMCLOSS
See Also	FETCH:DATA:TELecom:PACKetsync:SYNCe:ALARm:CURRent?

:FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:RX:RATE:VERDict?

Description	This query returns ESMC Rx Rate Verdict status.
	At *RST condition, this value is set to down.
	Navigation Path: Test App > SyncE > Setup > Results > Summary > ESMC Port1 > ESMC RX Rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:RX:RATE:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns ESMC Rx rate verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:PACK:SYNC:ESMC:RX:RATE:VERD?
See Also	FETCh:DATA:TELecom:TEST:STATus:VERDict?

:FETCh:DATA:TELecom:PACKetsync:SYNCe:RX:LAST:QL:VERDict?

Description	This query returns RX Last QL Verdict status.
	At *RST condition, this value is set to down.
	Navigation Path: Test App > SyncE > Result> Summary > ESMC-Port 1> RX>Last QL Message
Syntax	:FETCh:DATA:TELecom:PACKetsync:SYNCe:RX:LAST:QL:VERDict?
Response Syntax	<Verdict>
Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Rx Last QL verdict status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:PACK:SYNC:RX:LAST:QL:VERD?
See Also	FETCh:DATA:TELecom:PACKetsync:SYNCe:ESMC:RX:RATE:VERDict?

:FETCh:DATA:TELecom:PATTern:ALARm:PATTern:CURRent?

Description	This query returns the current status of BER alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BER > Alarms
	Navigation Path: Results > Alarms/Errors > BER > Alarms
Syntax	:FETCh:DATA:TELecom:PATTern:ALARm:PATTern:CURRent? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	NTRaffic: No Traffic
	PLOSs: Pattern Loss
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PATT:ALAR:PATT:CURR? PLOS
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds?

:FETCh:DATA:TELecom:PATTern:ALARm:PATTern:HISTory?

Description	This query returns the history status of BER alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BER > Alarms
	Navigation Path: Results > Alarms/Errors > BER > Alarms
Syntax	:FETCh:DATA:TELecom:PATTern:ALARm:PATTern:HISTory? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	NTRaffic: No Traffic
	PLOSs: Pattern Loss
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:PATT:ALAR:PATT:HIST? PLOS
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:CURRent?

:FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds?

Description	This query returns the number of seconds within which BER alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BER > Alarms
	Navigation Path: Results > Alarms/Errors > BER > Alarms
Syntax	:FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds? <wsp><Alarm>,[<Channel Number or Client ID>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	NTRaffic: No Traffic
	PLOSs: Pattern Loss
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:PATT:ALAR:PATT:SEC? PLOS
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:HISTory?

:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:COUNt?

Description	This query returns the count of BER errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BERT/BER > Errors
	Navigation Path: Results > Alarms/Errors > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:COUNt? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
	PATTern: Pattern Error
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:AMO 25
	SOUR:DATA:TEL:PATT:ERR:PATT:INJ
	FETC:DATA:TEL:PATT:ERR:PATT:COUN? BIT
See Also	FETCH:DATA:TELecom:PATTern:ERRor:PATTern:HISTory?

:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:CURRent?

Description	This query returns the current status of BER error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BERT/BER > Errors
	Navigation Path: Results > Alarms/Errors > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:CURRent? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
	PATTern: Pattern Error
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Current>

:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:CURRent?

Response(s) Current:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the current error status:

PRESENT: An error has occurred in the last second.

ABSENT: No error has occurred in the last second.

INACTIVE: No test result available.

Example(s) SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT

SOUR:DATA:TEL:PATT:ERR:PATT:AMO 25

SOUR:DATA:TEL:PATT:ERR:PATT:INJ

FETC:DATA:TEL:PATT:ERR:PATT:CURR? BIT

See Also FETCh:DATA:TELecom:PATTern:ERRor:PATTern:RATE?

:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:HISTory?

Description	This query returns the history status of BER error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BERT/BER > Errors
	Navigation Path: Results > Alarms/Errors > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:HISTory? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
	PATTern: Pattern Error
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<History>

:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:HISTory?

Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:AMO 25
	SOUR:DATA:TEL:PATT:ERR:PATT:INJ
	FETC:DATA:TEL:PATT:ERR:PATT:HIST? BIT
See Also	FETCh:DATA:TELecom:PATTern:ERRor:PATTern:COUNt?

:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:RATE?

Description	This query returns the current rate of BER error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > BERT/BER > Errors
	Navigation Path: Results > Alarms/Errors > BER > Errors
Syntax	:FETCh:DATA:TELecom:PATTern:ERRor:PATTern:RATE? <wsp><Error>,[<Channel Number or Client ID>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	BIT: Bit Error
	MISMATCH0: Mismatch '0'
	MISMATCH1: Mismatch '1'
	PATTern: Pattern Error
	Channel Number or Client ID:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Optional parameter, applicable to Multi-Channel OTN and FlexO BERT only.
	For Multi-Channel OTN, selects the channel number.
	For FlexO BERT, selects the client ID.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:AMO 25
	SOUR:DATA:TEL:PATT:ERR:PATT:INJ

:FETCh:DATA:TELecom:PDH:ERRor:E[1..n]:CURRent?

Description
This query returns the current status of E1/E2/E3/E4 error.

At *RST condition, this value is device dependent.

Navigation Path: Results > Alarms/Errors > E1/E2/E3/E4 > Errors

Syntax
:FETCh:DATA:TELecom:PDH:ERRor:E[1..n]:CURRent? <wsp><Error>

Parameter(s)
Error:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the error:

CRC4: CRC-4 (E1)

EBIT: E-Bit (E1)

FAS

Response Syntax
<Current>

Response(s)
Current:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the current error status:

PRESENT: An error has occurred in the last second.

ABSENT: No error has occurred in the last second.

INACTIVE: No test result available.

Example(s)
FETC:DATA:TEL:PDH:ERR:E1:CURR? FAS

	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:INJect

:FETCh:DATA:TELecom:PDH:ERRor:E[1..n]:SEConds?

Description	This query returns the number of seconds within which E1/E2/E3/E4 error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > E1/E2/E3/E4 > Errors
Syntax	:FETCh:DATA:TELecom:PDH:ERRor:E[1..n]:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	CRC4: CRC-4 (E1)
	EBIT: E-Bit (E1)
	FAS
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:PDH:ERR:E1:SEC? FAS
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE

:FETCh:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:CURRent?

Description	This query returns the current status of STS/AU Path alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > STS/AU Path > Alarms
Syntax	:FETCh:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SONET | SDH):
	AIS: AIS-P | AU-AIS
	EPCD1: ERDI-PCD | HP-ERDI-C
	EPPD1: ERDI-PPD | HP-ERDI-PD
	EPSD1: ERDI-PSD | HP-ERDI-SD
	LOM: H4-LOM | H4-LOM
	LOP: LOP-P | AU-LOP
	PDI: PDI-P (SONET only)
	PLM: PLM-P | HP-PLM
	RDI: RDI-P | HP-RDI
	TIM: TIM-P | HP-TIM
	UNEQ: UNEQ-P | HP-UNEQ
Response Syntax	<Current>

:FETCh:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:CURRent?

Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH ON
	FETC:DATA:TEL:SDHS:ALAR:HOP:PATH:CURR? AIS

:FETCh:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:HISTory?

Description	This query returns the history status of TU-3 Path alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > TU-3 > Alarms
Syntax	:FETCh:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SDH):
	AIS: TU-AIS
	ECD: LP-ERDI-CD
	EPD: LP-ERDI-PD
	ESD: LP-ERDI-SD
	LOP: TU-LOP
	LPPLm: LP-PLM
	LPRDi: LP-RDI
	LPTim: LP-TIM
	UNEQ: LP-UNEQ
Response Syntax	<History>

:FETCh:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:HISTory?

Response(s)	History:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH ON
	FETC:DATA:TEL:SDHS:ALAR:LOPT:PATH:HIST? AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE
	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

:FETCh:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:SEConds?

Description	This query returns the number of seconds within which TU-3 Path alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > TU-3 > Alarms
Syntax	:FETCh:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SDH):
	AIS: TU-AIS
	ECD: LP-ERDI-CD
	EPD: LP-ERDI-PD
	ESD: LP-ERDI-SD
	LOP: TU-LOP
	LPPLm: LP-PLM
	LPRDi: LP-RDI
	LPTim: LP-TIM
	UNEQ: LP-UNEQ
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH ON
	FETC:DATA:TEL:SDHS:ALAR:LOPT:PATH:SEC? AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE
	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

:FETCh:DATA:TELecom:SDHSonet:ALARm:SECTion:CURRent?

Description	This query returns the current status of Section/RS alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Section/RS > Alarms
Syntax	:FETCh:DATA:TELecom:SDHSonet:ALARm:SECTion:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SONET | SDH):
	LOF1: LOF-S | RS-LOF
	SEF1: SEF
	TIMS: TIM-S | RS-TIM
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE LOF1
	SOUR:DATA:TEL:SDHS:ALAR:SECT ON
	FETC:DATA:TEL:SDHS:ALAR:SECT:CURR? LOF1

:FETCh:DATA:TELecom:SDHSonet:ALARm:SECTion:HISTory?

Description	This query returns the history status of Section/RS alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Section/RS > Alarms
Syntax	:FETCh:DATA:TELecom:SDHSonet:ALARm:SECTion:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SONET | SDH):
	LOF1: LOF-S | RS-LOF
	SEF1: SEF
	TIMS: TIM-S | RS-TIM
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE LOF1
	SOUR:DATA:TEL:SDHS:ALAR:SECT ON
	FETC:DATA:TEL:SDHS:ALAR:SECT:HIST? LOF1

	SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion

:FETCh:DATA:TELecom:SDHSonet:ALARm:SECTion:SEConds?

Description	This query returns the number of seconds within which Section/RS alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Section/RS > Alarms
Syntax	:FETCh:DATA:TELecom:SDHSonet:ALARm:SECTion:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SONET | SDH):
	LOF1: LOF-S	RS-LOF
	SEF1: SEF
	TIMS: TIM-S	RS-TIM
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE LOF1
	SOUR:DATA:TEL:SDHS:ALAR:SECT ON
	FETC:DATA:TEL:SDHS:ALAR:SECT:SEC? LOF1

:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:COUNt?

Description	This query returns the count of High Order Path (HOP) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Alarms/Errors > SONET > STS > Errors
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Alarms/Errors > SDH > AU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of HOP (High Order Path) error.
	B3: B3 (ERROR)
	REI: Remote Error Indicator - Path
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of High Order Path (HOP) error.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:HOP:PATH:COUN? B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:CURRent?

Description	This query returns the current status of High Order Path (HOP) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Alarms/Errors > SONET > STS > Errors
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Alarms/Errors > SDH > AU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of HOP (High Order Path) error.
	B3: B3 (ERROR)
	REI: Remote Error Indicator - Path
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current status of High Order Path (HOP) error.
	PRESENT, indicates that at least one error has occurred in the last second.
	ABSENT, indicates that there is no error.
	INACTIVE, indicates that the test is not running.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:INJ

:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:RATE?

Description	This query returns the current rate of High Order Path (HOP) error.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Alarms/Errors > SONET > STS > Errors
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Alarms/Errors > SDH > AU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of HOP (High Order Path) error.
	B3: B3 (ERROR)
	REI: Remote Error Indicator - Path
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current rate of High Order Path (HOP) error.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:HOP:PATH:RATE? B3

	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:COUNt?

Description

This query returns the count of STS/AU Path TCM errors.

At *RST condition, this value is device dependent.

Navigation Path: Results > Alarms/Errors > STS/AU Path TCM > Errors

Syntax

:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:COUNt? <wsp><Error>

Parameter(s)

Error:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the error:

LIEC: TC-IEC-P | HPTC-IEC

LOEI: TC-OEI-P | HPTC-OEI

LREI: TC-REI-P | HPTC-REI

LVIOL: TC-VIOL-P | HPTC-VIOL

Response Syntax

<Count>

Response(s)

Count:

The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.

Returns the count of errors.

Example(s)

SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:TYPE LOEI

SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AMO 15

SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:INJ

FETC:DATA:TEL:SDHS:ERR:HOP:TCM:COUN? LIEC

:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:CURRent?

Description	This query returns the current status of STS/AU Path TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > STS/AU Path TCM > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	LIEC: TC-IEC-P | HPTC-IEC
	LOEI: TC-OEI-P | HPTC-OEI
	LREI: TC-REI-P | HPTC-REI
	LVIOL: TC-VIOL-P | HPTC-VIOL
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:INJ

:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:CURRent?

Description	This query returns the current status of Line/MS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Line/MS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B2
	REI: REI-L | MS-REI
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LINE:INJ

	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:HISTory?

Description	This query returns the history status of Line/MS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Line/MS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B2
	REI: REI-L | MS-REI
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LINE:INJ
	FETC:DATA:TEL:SDHS:ERR:LINE:HIST? B2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:RATE?

Description	This query returns the current rate of Line/MS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Line/MS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B2
	REI: REI-L | MS-REI
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LINE:INJ
	FETC:DATA:TEL:SDHS:ERR:LINE:RATE? B2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:SEConds?

Description	This query returns the number of seconds within which Line/MS error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Line/MS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LINE:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B2
	REI: REI-L | MS-REI
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LINE:INJ
	FETC:DATA:TEL:SDHS:ERR:LINE:SEC? B2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:COUNt?

Description	This query returns the count of VT/TU Path error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:PATH:COUN? BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:CURRent?

Description	This query returns the current status of VT/TU Path error.
	At *RST condition, this value is device dependent.
	Navigation Results > Alarms/Errors > VT/TU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	BIP2: BIP-2
	LPRei: REI-V	LP-REI
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:PATH:CURR? BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:HISTory?

Description	This query returns the history status of VT/TU Path error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:PATH:HIST? BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:RATE?

Description	This query returns the current rate of VT/TU Path error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:PATH:RATE? BIP2
See Also	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:MANual:TYPE?
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AMOunt?
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:SEConds?

Description	This query returns the number of seconds within which VT/TU Path error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:PATH:SEC? BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:COUNt?

Description	This query returns the count of VT/TU Path TCM errors.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU Path TCM > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LVIOL: TC-VIOL-V | LPTC-VIOL
	LIEC (not supported)
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:TCM:COUN? LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:CURRent?

Description	This query returns the current status of VT/TU Path TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU Path TCM > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LVIOL: TC-VIOL-V | LPTC-VIOL
	LIEC (not supported)
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:TCM:CURR? LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:HISTory?

Description	This query returns the history status of VT/TU Path TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU Path TCM > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LVIOL: TC-VIOL-V | LPTC-VIOL
	LIEC (not supported)
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:TCM:HIST? LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:RATE?

Description	This query returns the current rate of VT/TU Path TCM error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU Path TCM > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LVIOL: TC-VIOL-V | LPTC-VIOL
	LIEC (not supported)
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:TCM:RATE? LOEI
See Also	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:SEConds?

Description	This query returns the number of seconds within which VT/TU Path TCM error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > VT/TU Path TCM > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LVIOL: TC-VIOL-V | LPTC-VIOL
	LIEC (not supported)
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:INJ
	FETC:DATA:TEL:SDHS:ERR:LOP:TCM:SEC? LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:COUNt?

Description	This query returns the count of TU-3 Path error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > TU-3 > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:COUNt? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B3
	REI: LP-REI
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOPT:PATH:COUN? B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:CURRent?

Description	This query returns the current status of TU-3 Path error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > TU-3 > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B3
	REI: LP-REI
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOPT:PATH:CURR? B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:HISTory ?

Description	This query returns the history status of TU-3 Path error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > TU-3 > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B3
	REI: LP-REI
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOPT:PATH:HIST? B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:RATE?

Description	This query returns the current rate of TU-3 Path error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > TU-3 > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B3
	REI: LP-REI
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOPT:PATH:RATE? B3
See Also	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:SEConds?

Description	This query returns the number of seconds within which TU-3 Path error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > TU-3 > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	B3
	REI: LP-REI
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:INJ
	FETC:DATA:TEL:SDHS:ERR:LOPT:PATH:SEC? B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:COUNt?

Description	This query returns the count of Section/RS errors. At *RST condition, this value is device dependent. Navigation Path: Results > Alarms/Errors > Section/RS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:COUNt? <wsp><Error>
Parameter(s)	**Error**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error (SONET | SDH): B1 FAS: FAS-S | RS-FAS
Response Syntax	<Count>
Response(s)	**Count**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the count of errors.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1 SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15 SOUR:DATA:TEL:SDHS:ERR:SECT:INJ FETC:DATA:TEL:SDHS:ERR:SECT:COUN? B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:CURRent?

Description	This query returns the current status of Section/RS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Section/RS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:CURRent? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	B1
	FAS: FAS-S | RS-FAS
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:SECT:INJ
	FETC:DATA:TEL:SDHS:ERR:SECT:CURR? B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:HISTory?

Description	This query returns the history status of Section/RS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Section/RS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:HISTory? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	B1
	FAS: FAS-S | RS-FAS
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:SECT:INJ
	FETC:DATA:TEL:SDHS:ERR:SECT:HIST? B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:RATE?

Description	This query returns the current rate of Section/RS error.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Section/RS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	B1
	FAS: FAS-S | RS-FAS
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:SECT:INJ
	FETC:DATA:TEL:SDHS:ERR:SECT:RATE? B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:INJect

:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:SEConds?

Description	This query returns the number of seconds within which Section/RS error occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Section/RS > Errors
Syntax	:FETCh:DATA:TELecom:SDHSonet:ERRor:SECTion:SEConds? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error (SONET | SDH):
	B1
	FAS: FAS-S | RS-FAS
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:SECT:INJ
	FETC:DATA:TEL:SDHS:ERR:SECT:SEC? B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:INJect

:FETCh:DATA:TELecom:SOAM:ALARm:CURRent?

Description	This query returns the current status of an OAM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > S-OAM/MPLS-TP OAM > Alarms
Syntax	:FETCh:DATA:TELecom:SOAM:ALARm:CURRent? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AIS
	CCMLEV: Unexp MEG Lvl
	CCMLOC: Loss Continuity
	CCMMEP: Unexp MEP
	CCMMIS: Mismerge
	CCMPER: Unexp Period
	CFDI: C-FDI
	CLOS: C-LOS
	CRDI: C-RDI
	LCK
	RDI
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:SOAM:ALARm:CURR? CCMLOC
See Also	FETCh:DATA:TELecom:SOAM:ALARm:SEConds?

:FETCh:DATA:TELecom:SOAM:ALARm:HISTory?

Description	This query returns the history status of an OAM alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > S-OAM/MPLS-TP OAM > Alarms
Syntax	:FETCh:DATA:TELecom:SOAM:ALARm:HISTory? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AIS
	CCMLEV: Unexp MEG Lvl
	CCMLOC: Loss Continuity
	CCMMEP: Unexp MEP
	CCMMIS: Mismerge
	CCMPER: Unexp Period
	CFDI: C-FDI
	CLOS: C-LOS
	CRDI: C-RDI
	LCK
	RDI
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:SOAM:ALARm:HIST? CcmLoc
See Also	FETCh:DATA:TELecom:SOAM:ALARm:CURRent?

:FETCh:DATA:TELecom:SOAM:ALARm:SEConds?

Description	This query returns the number of seconds within which OAM alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarm/Errors > S-OAM/MPLS-TP OAM > Alarms
Syntax	:FETCh:DATA:TELecom:SOAM:ALARm:SEConds? <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm:
	AIS
	CCMLEV: Unexp MEG Lvl
	CCMLOC: Loss Continuity
	CCMMEP: Unexp MEP
	CCMMIS: Mismerge
	CCMPER: Unexp Period
	CFDI: C-FDI
	CLOS: C-LOS
	CRDI: C-RDI
	LCK
	RDI
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	FETC:DATA:TEL:SOAM:ALARm:SEC? CcmLoc
See Also	FETCh:DATA:TELecom:SOAM:ALARm:HISTory?

:INPut:TELecom:BACKplane:ALARm:STATus:CURRent?

Description	This query returns the current status of Clock alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Clock > Alarms
Syntax	:INPut:TELecom:BACKplane:ALARm:STATus:CURRent?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current alarm status:
	PRESENT: An alarm has occurred in the last second.
	ABSENT: No alarm has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	INP:TEL:BACK:ALAR:STAT:CURR?
See Also	INPut:TELecom:BACKplane:ALARm:STATus:HISTory?

:INPut:TELecom:BACKplane:ALARm:STATus:HISTory?

Description	This query returns the history status of Clock alarm.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Clock > Alarms
Syntax	:INPut:TELecom:BACKplane:ALARm:STATus:HISTory?
Response Syntax	<History>
Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history alarm status:
	PRESENT: At least one alarm has occurred during the test.
	ABSENT: No alarm has occurred during the test.
	INACTIVE: No test result available.
Example(s)	INP:TEL:BACK:ALAR:STAT:HIST?
See Also	INPut:TELecom:BACKplane:ALARm:STATus:SEConds?

:INPut:TELecom:BACKplane:ALARm:STATus:SEConds?

Description	This query returns the number of seconds within which Clock alarm occurred.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Clock > Alarms
Syntax	:INPut:TELecom:BACKplane:ALARm:STATus:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in alarm.
Example(s)	INP:TEL:BACK:ALAR:STAT:SEC?
See Also	INPut:TELecom:BACKplane:ALARm:STATus:CURRent?

:SENSe:DATA:TELecom:FETHernet:POAM:BOAM:CSLPi:ENABle

Description	This command enables/disables the FlexE Path OAM Basic Oam CS_LPI monitoring
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Path OAM > CS_LPI Monitoring
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:BOAM:CSLPi:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Seconds>
Example(s)	SENS:DATA:TEL:FETH:POAM:BOAM:CSLP:ENAB OFF
	SENS:DATA:TEL:FETH:POAM:BOAM:CSLP:ENAB?
	Returns: 0

:SENSe:DATA:TELecom:FETHernet:POAM:BOAM:CSLPi:ENABle?

Description	This query returns the enable/disable status of FlexE Path OAM Basic Oam CS_LPI Monitoring
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Path OAM > CS_LPI Monitoring
Syntax	:SENSe:DATA:TELecom:FETHernet:POAM:BOAM:CSLPi:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SENS:DATA:TEL:FETH:POAM:BOAM:CSLP:ENAB OFF
	SENS:DATA:TEL:FETH:POAM:BOAM:CSLP:ENAB?
	Returns: 0

:SENSe:DATA:TELecom:OTN:OPU[1..n]:MSIM

Description	This command enables/disables the Optical Payload Unit-MSIM Monitoring status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > ODU > OPU > MSIM Monitoring
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:MSIM <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the OPU-PLM (Optical Payload Unit-MSIM Monitoring status).
	ON, enables the Optical Payload Unit-MSIM Monitoring status.
	OFF, disables the Optical Payload Unit-MSIM Monitoring status.
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:OTN:OPU1:MSIM ON
	SENS:DATA:TEL:OTN:OPU1:MSIM?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:MSIM?

Description	This query returns the status of the Optical Payload Unit-MSIM Monitoring status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > ODU > OPU > MSIM Monitoring
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:MSIM?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Optical Payload Unit-MSIM Monitoring status.
	1, Optical Payload Unit-MSIM Monitoring status is enabled.
	0, Optical Payload Unit-MSIM Monitoring status is disabled.
Example(s)	SENS:DATA:TEL:OTN:OPU1:MSIM ON
	SENS:DATA:TEL:OTN:OPU1:MSIM?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OPU[1..n]:PCODe

:SOURce:DATA:TELecom:CPRI:ALARm:DEFect

Description	This command selects the continuous CPRI alarm Defect to be injected.
	At *RST condition, this Defect type LOF.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:ALARm:DEFect[<wsp><Alarm>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOF
	RLOS: R-LOS
	RLOF: R-LOF
	RAI
	SDI
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:CPRI:ALAR:DEF LOF
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:RATE

:SOURce:DATA:TELecom:CPRI:ALARm:DEFect?

Description	This query returns the continuous CPRI alarm Defect to be injected. At *RST condition, this Defect type LOF. Navigation Path: Results > Alarms/Errors > Injection > CPRI > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:ALARm:DEFect?
Response Syntax	<Alarm>
Response(s)	**Alarm**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the alarm to be injected: LOF RLOS: R-LOS RLOF: R-LOF RAI SDI
Example(s)	SOUR:DATa:TEL:CPRI:ALAR:DEF?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:ALARm:GENerate

Description	This command enables/disables the continuous CPRI alarm injection.
	At *RST condition, this value is set to off.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:ALARm:GENerate <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Alarm>
Example(s)	SOUR:DATA:TEL:CPRI:ALAR:GEN ON
See Also	SOURce:DATA:TELecom:CPRI:ALARm:GENerate?

:SOURce:DATA:TELecom:CPRI:ALARm:GENerate?

Description	This query returns the enable/disable status of the continuous CPRI alarm injection.
	At *RST condition, this value is set to off.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:ALARm:GENerate?
Response Syntax	<set>
Response(s)	**set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:ALAR:GEN ON?
See Also	SOURce:DATA:TELecom:CPRI:ALARm:GENerate ON

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate CPRI error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<set>
Example(s)	SOUR:DATA:TEL:CPRI:ERR:AUT ON
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:CONTinuous

Description	This command selects the automated CPRI error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<set>
Example(s)	SOUR:DATA:TEL:CPRI:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated CPRI error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:CPRI:ERR:AUT:CONT?
	Returns Injection: ON/OFF
See Also	SOURce:DATA:TELecom:CPRI:VERDict:ENABle

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:DEFect

Description	This command sets the automated CPRI error Defect to be injected.
	At *RST condition, this Defect type FAS.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:DEFect <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
Response Syntax	<Mode>
Example(s)	SOUR:DATa:TEL:CPRI:ERR:AUT:DEF FAS
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:DEFect?

Description	This query returns the automated CPRI error Defect to be injected.
	At *RST condition, this Defect type FAS.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:DEFect?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
Example(s)	SOUR:DATa:TEL:CPRI:ERR:AUT:DEF?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:RATE

Description	This command sets the automated CPRI error Rate to be injected.
	At *RST condition, this value is set to 1.0E-07.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:RATE[<wsp><RATE>]
Parameter(s)	RATE:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected:
	1.0E-07 to 5.0E-01
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Error>
Example(s)	SOUR:DATa:TEL:CPRI:ERR:AUT:RATE
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:RATE

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:RATE?

Description	This query returns the automated CPRI error Rate to be injected.
	At *RST condition, this value is set to 1.0E-07.
	Navigation Path:Results > Alarms/Errors > Injection > CPRI > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATa:TEL:CPRI:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:RATE?

:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate CPRI error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:ERR:AUT ON
	SOUR:DATA:TEL:CPRI:ERR:AUT?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated?

:SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt

Description	This command sets the manual CPRI error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Inject>
Example(s)	SOUR:DATa:TEL:CPRI:ERR:MAN:AMO
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt?

Description	This query returns the manual CPRI error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > _ > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt?[<wsp><Vaue>]
Parameter(s)	**Vaue**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATa:TEL:CPRI:ERR:MAN:AMO?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt?

:SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect

Description	This command sets the manual CPRI error Defect to be injected.
	At *RST condition, this defect type is FAS.
	Navigation Path: Results > Alarms/Errors > Injection > CPRI > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
	66BBLOCK
	SYNCHEADER
Response Syntax	<Amount>
Example(s)	SOUR:DATa:TEL:CPRI:ERR:MAN:DEF FAS
See Also	SOURce:DATA:TELecom:CPRI:ALARm:DEFect?

:SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

Description	This query returns the manual CPRI error Defect to be injected.
	At *RST condition, this defect type is FAS.
	Navigation Path: Results > Alarms/Errors > Injection > _ > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
Example(s)	SOUR:DATa:TEL:CPRI:ERR:MAN:DEF?
See Also	SOURce:DATA:TELecom:CPRI:ALARm:DEFect?

:SOURce:DATA:TELecom:CPRI:ERRor:MANual:INJect

Description	This command enables/disables the manual CPRI error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > _ > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:ERRor:MANual:INJect
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:CPRI:ERR:MAN:INJect
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:INJect

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt

Description	This command sets the amount of RS-FEC error to be injected for CPRI 24.3G.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Global Injection > Layer (RS-FEC) > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of FEC error to be injected.
	DEFault: Default amount of RS-FEC error
	MAXimum: Greatest supported amount
	MINimum: Smallest supported amount
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AMO 50
	SOUR:DATA:TEL:CPRI:FEC:ERR:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE
	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt
	SOURce:DATA:TELecom:CPRI:FEC:ERRor:INJect

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt?

Description	This query returns the manual RS-FEC error Amount to be injected for CPRI 24.3G.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AMO 50
	SOUR:DATA:TEL:CPRI:FEC:ERR:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE
	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt
	SOURce:DATA:TELecom:CPRI:FEC:ERRor:INJect

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated

Description	This command enables/disables the rate/Max Rate RS-FEC error injection for CPRI 24.3G.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT OFF
	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT?
	Returns: 0
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:CONTinuous

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:CONTinuous

Description	This command sets the automated RS-FEC error Mode for CPRI 24.3G: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:CONT OFF
	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:CONT?
	Returns: 0
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated RS-FEC error Mode for CPRI 24.3G: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:CONT ON
	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated?

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:RATE

Description	This command serts the automated RS-FEC error Rate to be injected for CPRI 24.3G.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of FEC error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:RATE MIN
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:RATE?

Description	This query returns the automated RS-FEC error Rate to be injected for CPRI 24.3G. At *RST condition, this value is set to 1.0E-02. Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. This parameter is optional. If no token is specified, the current injection rate is returned. MAXimum: Biggest rate MINimum: Smallest rate DEFault: Default rate
Response Syntax	<Error>
Response(s)	**Error**: The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element. Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:RATE
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt?

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:TYPE

Description	This command selects the automated RS-FEC error Defect to be injected for CPRI 24.3G.
	At *RST condition, this value is set to FSERR.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:TYPE \<wsp>\<Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the FEC error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FSERR: Pre-FEC-SYMB
Response Syntax	\<Error>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:TYPE FSERR
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:TYPE?

Description	This query returns the automated RS-FEC error Defect to be injected for CPRI 24.3G.
	At *RST condition, this value is set to FSERR.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the FEC error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FSERR: Pre-FEC-SYMB
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT:TYPE?
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE?

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated?

Description	This query returns the enable/disable status of the rate/Max Rate RS-FEC error injection for CPRI 24.3G.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT ON
	SOUR:DATA:TEL:CPRI:FEC:ERR:AUT?
	Returns: 0
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:INJect

Description	This command enables/disables the manual RS-FEC error injection for CPRI 24.3G.
	This command is an event and has no associated # RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > Layer (RS-FEC) > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:INJ
See Also	SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE?
	SOURce:DATA:TELecom:CPRI:FEC:ERRor:AMOunt?

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE

Description	This command selects the manual RS-FEC error defect to be injected for CPRI 24.3G
	At *RST condition, this value is set to FSERR.
	Navigation Path: Alarms/Errors > Injection > Layer (RS-FEC) > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the FEC error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FSERR: Pre-FEC-SYMB
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:MAN:TYPE FUCW
	SOUR:DATA:TEL:CPRI:FEC:ERR:MAN:TYPE?
	Returns: FUCW
See Also	SOUR:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE
	SOUR:DATA:TELecom:CPRI:FEC:ERRor:AMOunt
	SOUR:DATA:TELecom:CPRI:FEC:ERRor:INJect

:SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE?

Description	This query returns the manual RS-FEC error Defect to be injected for CPRI 24.3G.
	At *RST condition, this value is set to FSERR.
	Navigation Path: Alarms/Errors > Injection > Layer (RS-FEC) > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the FEC error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FSERR: Pre-FEC-SYMB
Example(s)	SOUR:DATA:TEL:CPRI:FEC:ERR:MAN:TYPE FSERR
	SOUR:DATA:TEL:CPRI:FEC:ERR:MAN:TYPE?
	Returns: FSERR
See Also	SOUR:DATA:TELecom:CPRI:FEC:ERRor:MANual:TYPE
	SOUR:DATA:TELecom:CPRI:FEC:ERRor:AMOunt
	SOUR:DATA:TELecom:CPRI:FEC:ERRor:INJect

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate Interface (CPRI) error injection. At *RST condition, this value is set to OFF. Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Starts/stops the automated Rate/Max Rate error Injection. ON: Enables error injection. OFF: Disables error injection.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:CPRI:INT:ERR:AUT ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:CONTinuous

Description	This command sets the automated Interface (CPRI) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:CPRI:INT:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:INJect

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated Interface (CPRI) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:CPRI:INT:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated?

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:RATE

Description	This command sets the automated Interface (CPRI) error Rate to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:RATE <wsp><RATE>
Parameter(s)	RATE:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected. Range is 1.0E-09 to 2.2E-04.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Mode>
Example(s)	SOUR:DATa:TEL:CPRI:INT:ERR:AUT:RATE
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:R ATE?

Description	This query returns the automated Interface (CPRI) error Rate to be injected.
	At *RST condition, this value is set to 1.0E-09.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATa:TEL:CPRI:INT:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:CPRI:RTD:TOFFset

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:TYPE

Description	This command selects the automated Interface (CPRI) error Defect to be injected.
	At *RST condition, this Defect type CV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:TYPE <wsp><Defect>
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CV: Code Violation
	K307: K30.7
	66BBlock: 66B Block
	SYNCHEADER: Sync Header
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:CPRI:INT:ERR:AUT:TYPE CV
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:TYPE?

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:TYPE?

Description	This query returns the automated Interface (CPRI) error Defect to be injected.
	At *RST condition, this Defect type CV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:TYPE?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CV: Code Violation
	K307: K30.7
	66BBLOCK: 66B Block
	SYNCHEADER: Sync Header
Example(s)	SOUR:DATA:TEL:CPRI:INT:ERR:AUT:TYPE CV
	SOUR:DATA:TEL:CPRI:INT:ERR:AUT:TYPE?
	Returns: CV
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Interface (CPRI) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated?
Response Syntax	\<Status\>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:INT:ERR:AUT?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated?

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt

Description	This command sets the manual Interface (CPRI) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Status>
Example(s)	SOUR:DATa:TEL:CPRI:INT:ERR:MAN:AMO
See Also	SOURce:DATA:TELecom:CPRI:RTD:TOFFset

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt?

Description	This query returns the manual Interface (CPRI) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATa:TEL:CPRI:INT:ERR:MAN:AMO?
See Also	SOURce:DATA:TELecom:CPRI:RTD:TOFFset?

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:INJect

Description	This command enables/disables the manual Interface (CPRI) error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:CPRI:INT:ERR:MAN:INJ
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:INJect

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:TYPE

Description	This command selects the manual Interface (CPRI) error Defect to be injected.
	At *RST condition, this Defect type CV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:TYPE <wsp><Defect>
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CV: Code Violation
	K307: K30.7
	66BBlock: 66B Block
	SYNCHEADER: Sync Header
Response Syntax	<Amount>
Example(s)	SOUR:DATa:TEL:CPRI:INT:ERR:MAN:TYPE CV
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:TYPE ?

Description	This query returns the manual Interface (CPRI) error Defect to be injected.
	At *RST condition, this Defect type CV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:TYPE?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CV: Code Violation
	K307: K30.7
	66BBLOCK: 66B Block
	SYNCHEADER: Sync Header
Example(s)	SOUR:DATa:TEL:CPRI:INT:ERR:MAN:TYPE?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:DEFect

Description	This command selects the continuous OBSAI alarm Defect to be injected.
	At *RST condition, this defect type is LOF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:DEFect[<wsp><Alarm>]
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOF
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ALAR:DEF LOF
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:RATE

:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:DEFect?

Description	This query returns the continuous OBSAI alarm Defect to be injected.
	At *RST condition, this Defect type LOF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:DEFect?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOF
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:ALAR:DEF?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:GENerate

Description	This command enables/disables the continuous OBSAI alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:GENerate \<wsp>\<Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	SStarts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	\<Alarm>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ALAR:GEN ON
See Also	SOURce:DATA:TELecom:CPRI:ALARm:GENerate?

:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:GENerate?

Description	This query returns the enable/disable status of the continuous OBSAI alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ALARm:GENerate?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ALAR:GEN ON?
See Also	SOURce:DATA:TELecom:CPRI:ALARm:GENerate ON

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate OBSAI error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ERR:AUT ON
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:CONTinuous

Description	This command sets the automated OBSAI error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated OBSAI error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:CPRI:VERDict:ENABle

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:DEFect

Description	This command selects the automated OBSAI error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:DEFect <wsp><Defect>
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
Response Syntax	<Set>
Example(s)	SOUR:DATa:TEL:CPRI:ERR:AUT:DEF FAS
See Also	SOURce[1..n]:DATA:TELecom:CPRI:ERRor:MANual:DEFect

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:DEFect?

Description	This query returns the automated OBSAI error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:DEFect?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:ERR:AUT:DEF?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:RATE

Description	This command sets the automated OBSAI error Rate to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Defect>
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:ERR:AUT:RATE 1.0E-04
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:RATE

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:RATE ?

Description	This query returns the automated OBSAI error Rate to be injected.
	At *RST condition, this value is set to 1.0E-07.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated:RATE?

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate OBSAI error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:AUTomated?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ERR:AUT ON
	SOUR:DATA:TEL:CPRI:OBSAI:ERR:AUT?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated?

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:AMOunt

Description	This command sets the manual OBSAI error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Status>
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:ERR:MAN:AMO 1
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:AMOunt ?

Description	This query returns the manual OBSAI error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:ERR:MAN:AMO?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt?

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:DEFect

Description	This command selects the automated OBSAI error Defect to be injected.
	At *RST condition, this Defect type FAS.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:DEFect <wsp><Defect>
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
Response Syntax	<Amount>
Example(s)	SOUR:DATa:TEL:CPRI:ERR:MAN:DEF FAS
See Also	SOURce[1..n]:DATA:TELecom:CPRI:ALARm:DEFect

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:DEFect?

Description	This query returns the automated OBSAI error Defect to be injected.
	At *RST condition, this Defect type FAS.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:DEFect?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:ERR:MAN:DEF?
See Also	SOURce:DATA:TELecom:CPRI:ALARm:DEFect?

:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:INJect

Description	This command enables/disables the manual OBSAI error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > OBSAI > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:ERRor:MANual:INJect
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:ERR:MAN:INJect
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:INJect

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate Interface (OBSAI) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:INT:ERR:AUT ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:CONTinuous

Description	This command sets the automated Interface (OBSAI) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:INT:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:INJect

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated Interface (OBSAI) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Mode
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:INT:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:AUTomated?

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:RATE

Description	This command sets the automated Interface (OBSAI) error Rate to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Set>
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:AUT:RATE
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:RATE?

Description	This query returns the automated Interface (OBSAI) error Rate to be injected.
	At *RST condition, this value is set to 1.0E-09.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:CPRI:RTD:TOFFset

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:TYPE

Description	This command selects the automated Interface (OBSAI) error Defect to be injected. At *RST condition, this Defect type CV. Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:TYPE <wsp><Defect>
Parameter(s)	**Defect**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error to be injected: CV: Code Violation K307: K30.7
Response Syntax	<Rate>
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:MAN:TYPE CV
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:TYPE?

Description	This query returns the automated Interface (OBSAI) error Defect to be injected.
	At *RST condition, this Defect type CV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated:TYPE?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CV: Code Violation
	K307: K30.7
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:MAN:TYPE CV
	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:MAN:TYPE?
	Returns: CV
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Interface (OBSAI) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:AUTomated?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:INT:ERR:AUT?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated?

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANua l:AMOunt

Description	This command sets the manual Interface (OBSAI) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:AMOunt[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Status>
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:MAN:AMO
See Also	SOURce:DATA:TELecom:CPRI:RTD:TOFFset

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:AMOunt?

Description	This query returns the manual Interface (OBSAI) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error.
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:MAN:AMO?
See Also	SOURce:DATA:TELecom:CPRI:RTD:TOFFset?

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:INJect

Description	This command enables/disables the manual Interface (OBSAI) error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:CPRI:OBSAI:INT:ERR:MAN:INJ
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:INJect

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:TYPE

Description	This command selects the manual Interface (OBSAI) error Defect to be injected.
	At *RST condition, this Defect type CV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:TYPE <wsp><Defect>
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CV: Code Violation
	K307: K30.7
Response Syntax	<Amount>
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:MAN:TYPE CV
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:TYPE?

Description	This query returns the manual Interface (OBSAI) error Defect to be injected.
	At *RST condition, this Defect type CV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:CPRI:OBSai:INTerface:ERRor:MANual:TYPE?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CV: Code Violation
	K307: K30.7
Example(s)	SOUR:DATa:TEL:CPRI:OBSAI:INT:ERR:MAN:TYPE?
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:DEFect?

:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]

Description	This command enables/disables the continuous DS1/DS3 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:DSN:ALAR:DS1 ON
See Also	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE
	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]?

:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE

Description	This command selects the continuous DS1/DS3 alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	AIS
	IDLE1: Idle (DS3)
	OOF
	RAI: RAI (DS1)
	RDI: RDI (DS3)
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:DSN:ALAR:DS1:TYPE AIS
See Also	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE?

:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE?

Description	This query returns the continuous DS1/DS3 alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	AIS
	IDLE1: Idle (DS3)
	OOF
	RAI: RAI (DS1)
	RDI: RDI (DS3)
Example(s)	SOUR:DATA:TEL:DSN:ALAR:DS1:TYPE AIS
	SOUR:DATA:TEL:DSN:ALAR:DS1:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE

:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]?

Description	This query returns the enable/disable status of the continuous DS1/DS3 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:DSN:ALAR:DS1 ON
	SOUR:DATA:TEL:DSN:ALAR:DS1?
	Returns: 1
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE
	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt

Description	This command sets the manual DS1/DS3 error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection >DS1/DS3 > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AMO 15
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt?

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt?

Description	This query returns the manual DS1/DS3 error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AMO 15
	SOUR:DATA:TEL:DSN:ERR:DS1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate DS1/DS3 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT ON
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated?

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:CONTinuous

Description	This command selects the automated DS1/DS3 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Mode
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode: ON for Max Rate and OFF for Rate.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:CONT ON
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:CONtinuous?

Description	This query returns the automated DS1/DS3 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Mode
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:CONTinuous?
Response Syntax	\<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:TYPE CRC6
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:CONT ON
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:CONTinuous

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:RATE

Description	This command sets the automated DS1/DS3 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE?
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:RATE?

Description	This query returns the automated DS1/DS3 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:TYPE CRC6
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:TYPE

Description	This command selects the automated DS1/DS3 error Defect to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:TYPE CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE?
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:TYPE?

Description	This query returns the manual DS1/DS3 error Defect to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:TYPE CRC6
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:TYPE?
	Returns: CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate DS1/DS3 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:TYPE CRC6
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT ON
	SOUR:DATA:TEL:DSN:ERR:DS1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:INJect

Description	This command enables/disables the manual DS1/DS3 error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:MAN:TYPE CRC6
	SOUR:DATA:TEL:DSN:ERR:DS1:AMO 15
	SOUR:DATA:TEL:DSN:ERR:DS1:INJ
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:AMOunt

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE

Description	This command selects the manual DS1/DS3 error Defect to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:MAN:TYPE CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE?

Description	This query returns the manual _ error Defect to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > DS1/DS3 > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected.
	CBIT: CP-Bit (DS3)
	CRC6: CRC-6 (DS1)
	FBIT: F-Bit (DS3)
	FEBE: FEBE (DS3)
	FRBIT: Framing Bit (DS1)
	OOF
	PBIT: P-Bit (DS3)
Example(s)	SOUR:DATA:TEL:DSN:ERR:DS1:MAN:TYPE CRC6
	SOUR:DATA:TEL:DSN:ERR:DS1:MAN:TYPE?
	Returns: CRC6
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:ELECtrical:ALARm:PORT

Description	This command enables/disables the continuous electrical Interface alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ELECtrical:ALARm:PORT <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enabled
	OFF: Disabed
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ELEC:ALAR:PORT ON
	SOUR:DATA:TEL:ELEC:ALAR:PORT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ELECtrical:ALARm:PORT:TYPE?

:SOURce:DATA:TELecom:ELECtrical:ALARm:PORT:TYPE?

Description	This query returns the continuous Interface (Electrical) alarm Defect to be injected.
	At *RST condition, this value is set to LOS.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:ELECtrical:ALARm:PORT:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOS
Example(s)	SOUR:DATA:TEL:ELEC:ALAR:PORT:TYPE?
	Returns: LOS
See Also	SOURce:DATA:TELecom:OPTical:ALARm:PORT?

:SOURce:DATA:TELecom:ELECtrical:ALARm:PORT?

Description	This query returns the enable/disable status of the continuous electrical Interface alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ELECtrical:ALARm:PORT?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ELEC:ALAR:PORT ON
	SOUR:DATA:TEL:ELEC:ALAR:PORT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ELECtrical:ALARm:PORT:TYPE?

:SOURce:DATA:TELecom:ELECtrical:ERRor:AMOunt

Description	This command sets the manual Interface (Electrical) error Amount to be injected.
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ELEC:ERR:MAN:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:AMO 15
	SOUR:DATA:TEL:ELEC:ERR:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:ELECtrical:ERRor:AMOunt?

Description	This query returns the manual Interface (Electrical) error Amount to be injected.
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AMOunt?[<wsp><Error>]
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error.
Example(s)	SOUR:DATA:TEL:ELEC:ERR:MAN:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:AMO 15
	SOUR:DATA:TEL:ELEC:ERR:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt

:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate Interface (Electrical) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ELEC:ERR:AUT:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:AUT ON
	SOUR:DATA:TEL:ELEC:ERR:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated?

:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:RATE

Description	TThis command sets the automated Interface (Electrical) error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ELEC:ERR:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:ELEC:ERR:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE?
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:RATE?

Description	This query returns the automated Interface (Electrical) error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error.
Example(s)	SOUR:DATA:TEL:ELEC:ERR:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:ELEC:ERR:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:TYPE

Description	This command selects the automated Interface (Electrical) error Defect to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BPV
	EXZ
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:ELEC:ERR:AUT:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:AUT:TYPE?
	Returns: BPV
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE?
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:TYPE?

Description	This query returns the automated Interface (Electrical) error Defect to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BPV
	EXZ
Example(s)	SOUR:DATA:TEL:ELEC:ERR:AUT:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:AUT:TYPE?
	Returns: BPV
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Interface (Electrical) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ELEC:ERR:AUT:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:AUT ON
	SOUR:DATA:TEL:ELEC:ERR:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:TYPE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated:RATE
	SOURce:DATA:TELecom:DSN:ERRor:DS1:AUTomated

:SOURce:DATA:TELecom:ELECtrical:ERRor:INJect

Description	This command enables/disables the manual Interface (Electrical) error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ELEC:ERR:MAN:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:AMO 15
	SOUR:DATA:TEL:ELEC:ERR:INJ
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt

:SOURce:DATA:TELecom:ELECtrical:ERRor:MANual:TYPE

Description	This command selects the manual Interface (Electrical) error Defect to be injected.
	At *RST condition, this value is set to BPV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BPV
	EXZ
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ELEC:ERR:MAN:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:MAN:TYPE?
	Returns: BPV
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:ELECtrical:ERRor:MANual:TYPE?

Description	This query returns the manual Interface (Electrical) error Defect to be injected.
	At *RST condition, this value is set to BPV.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ELECtrical:ERRor:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BPV
	EXZ
Example(s)	SOUR:DATA:TEL:ELEC:ERR:MAN:TYPE BPV
	SOUR:DATA:TEL:ELEC:ERR:MAN:TYPE?
	Returns: BPV
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:ALANes

Description	This command enables/disables the selection of all lanes for transcoding error injection purposes.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Transcoding > All Lanes
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:ALANes <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:ALAN ON
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:LANE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:ALANes?

Description	This query returns the enable/disable selection status of all lanes for transcoding error injection purposes.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (Transcoding) > All Lanes
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:ALANes?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:ALAN?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:LANE?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate Transcoding (per Lane) error injection.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT ON
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:CONTinuous

Description	This command sets the automated Transcoding (per Lane) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Mode
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:CONTinuous

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated Transcoding (per Lane) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Mode
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:RATE

Description	This command sets the automated Transcoding (per Lane) error Rate to be injected.
	At *RST condition, the value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:RATE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:RATE?

Description	This query returns the automated Transcoding (per Lane) error Rate to be injected.
	At *RST condition, the value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:RATE?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:TYPE

Description	This command selects the automated Transcoding (per Lane) error Defect to be injected.
	At *RST condition, the value is set to Invalid Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT:TYPE OTNBIP8
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:TYPE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:TYPE?

Description	This query returns the automated Transcoding (per Lane) error Defect to be injected.
	At *RST condition, the value is set to Invalid Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT:TYPE OTNBIP8
	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT:TYPE? Returns: OTNBIP8
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:TYPE?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Transcoding (per Lane) error injection.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of EOTN automated error generation.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:AUT?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated

Description	This command enables/disables the Rate/Max Rate Transcoding (global) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT ON
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:CONTinuous

Description	This command sets the automated Transcoding (global) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Mode
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT:CONT ON
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:CONTinuous

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:CONTinuous?

Description	This query returns the automated Transcoding (global) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Mode
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT:CONT?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:RATE

Description	This command sets the automated Transcoding (global) error Rate to be injected.
	At *RST condition, the value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:RATE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:RATE?

Description	This query returns the automated Transcoding (global) error Rate to be injected.
	At *RST condition, the value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	Rate:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Rate>
Response(s)	Rate:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT:RATE?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:RATE?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:TYPE

Description	This command selects the automated Transcoding (global) error Defect to be injected.
	At *RST condition, the value is set to Inv. Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	INVALFLAG: Inv. Flag
	MSEQV
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT:TYPE MSEQV
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:TYPE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:TYPE?

Description	This query returns the automated Transcoding (global) error Defect to be injected.
	At *RST condition, the value is set to Inv. Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	INVALFLAG: Inv. Flag
	MSEQV
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT:TYPE?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated:TYPE?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Transcoding (global) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:AUT?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:AUTomated?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:AMOunt

Description	This command sets the manual Transcoding (global) error Amount to be injected.
	At *RST condition, the value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:MAN:AMO 25
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:AMOunt?

Description	This query returns the manual Transcoding (global) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:MAN:AMO?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:AMOunt?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:INJect

Description	This command enables/disables the manual Transcoding (global) error injection.
	This command is not associated with any *RST condition.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:MAN:INJ
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:INJect

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:TYPE

Description	This command selects the manual Transcoding (global) error Defect to be injected.
	At *RST condition, the value is set to Inv. Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	INVALFLAG: Inv. Flag
	MSEQV
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:MAN:TYPE MSEQV
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MA Nual:TYPE?

Description	This query returns the manual Transcoding (global) error Defect to be injected.
	At *RST condition, the value is set to Inv. Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:TYPE?
Response Syntax	\<Error\>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the error to be injected:
	INVALFLAG: Inv. Flag
	MSEQV
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:GLOB:MAN:TYPE?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:TYPE?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:LANE

Description	This command enables/disables the selection of a lane for Transcoding error injection purposes.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (Transcoding) > Lane
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selets the lane number.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables a lane.
	ON: Enables the particular lane.
	OFF: Disables the particular lane.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:LANE 1, ON
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:ALANes

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:LANE?

Description	This query returns the enables/disables selection stutus of a lane for Transcoding error injection purposes.
	At *RST condition, the value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (Transcoding) > Lane
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of a particular lane.
	1: Particular lane is enabled.
	0: Particular lane is disabled.
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:LANE? 1
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:ALANes?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:AMOunt

Description	This command sets the manual Transcoding (per Lane) error Amount to be injected.
	At *RST condition, the value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:MAN:AMO 25
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:AMOunt

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:AMOunt?

Description	This query returns the manual Transcoding (per Lane) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:MAN:AMO?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:AMOunt?

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:IN Ject

Description	This command enables/disables the manual Transcoding (per Lane) error injection. This is an event and not associated with any *RST condition. Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:MAN:INJ
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:INJect

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:TYPE

Description	This command selects the automated Transcoding (per Lane) error Defect to be injected.
	At *RST condition, the value is set to Invalid Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:MAN:TYPE PCSBIP8MASK
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:TYPE

:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:TYPE?

Description	This query returns the automated Transcoding (per Lane) error Defect to be injected.
	At *RST condition, the value is set to Invalid Flag.
	Navigation Path: Results > Alarms/Errors > Injection > Transcoding > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:MANual:TYPE?
Response Syntax	\<Error\>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the error to be injected:
	OTNBIP8: OTN BIP-8
	PCSBIP8MASK: PCS BIP-8 Mask
Example(s)	SOUR:DATA:TEL:EOTN:TRAN:ERR:MAN:TYPE?
See Also	SOURce:DATA:TELecom:EOTN:TRANscode:ERRor:GLOBal:MANual:TYPE?

:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe

Description	This command enables/disables the continuous Ethernet alarm injection (rates up to 25G or FlexE client).
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FLexE - Client > Ethernet > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON, Enables alarm generation.
	OFF, Disables alarm generation.
Response Syntax	<Error>
Example(s)	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE LDOWN
	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe ON
	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe?
	Return: 1
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE

:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE

Description	This command selects the continuous alarm Defect to be injected (rates up to 25G or FlexE client).
	*RST condition, Value is set to LDOWN.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FLexE - Client > Ethernet > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE <wsp><Alarm Type>
Parameter(s)	**Alarm Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LDOWn: Link Down
	LFAult: Local Fault
	RFAult: Remote Fault
Response Syntax	<Error>
Example(s)	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE LDOWN
	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE?
	Returns: LDOWN
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe

:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE?

Description	This query returns the continuous alarm Defect to be injected (rates up to 25G or FlexE client).
	*RST condition, Value is set to LDOWN.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FLexE - Client > Ethernet > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE?
Response Syntax	<Alarm type>
Response(s)	**Alarm type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LDOWn: Link Down
	LFAult: Local Fault
	RFAult: Remote Fault
Example(s)	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE LDOWN
	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE?
	Returns: LDOWN
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe?

:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe?

Description	This query returns the enable/disable status of the continuous Ethernet alarm injection (rates up to 25G or FlexE client).
	This query is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FLexE - Client > Ethernet > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:LRATe?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1, Alarm generation is enabled.
	0, Alarm generation is disabled.
Example(s)	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE LDOWN
	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe ON
	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:LRATe:TYPE?

:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical

Description	This command enables/disables the continuous Ethernet (40G and up) alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ALAR:PHYS ON
	SOUR:DATA:TEL:ETH:ALAR:PHYS?
	Returns: 1
See Also	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated?

:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE

Description	This command selects the continuous Ethernet (40G and up) alarm Defect to be injected.
	At *RST condition, this value is set to LDOWn.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LDOWn: Link Down
	LFAult: Local Fault
	RFAult: Remote Fault
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ALAR:PHYS:TYPE LFA
	SOUR:DATA:TEL:ETH:ALAR:PHYS:TYPE?
	Returns: LFAULT
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE?

:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE?

Description	This query returns the continuous Ethernet (40G and up) alarm Defect to be injected.
	At *RST condition, this value is set to LDOWn.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LDOWn: Link Down
	LFAult: Local Fault
	RFAult: Remote Fault
Example(s)	SOUR:DATA:TEL:ETH:ALAR:PHYS:TYPE LFA
	SOUR:DATA:TEL:ETH:ALAR:PHYS:TYPE?
	Returns: LFAULT
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE

:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical?

Description	This query returns the enable/disable status of the continuous Ethernet (40G and up) alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:ALAR:PHYS OFF
	SOUR:DATA:TEL:ETH:ALAR:PHYS?
	Returns: 0
See Also	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:AUTomated?

:SOURce:DATA:TELecom:ETHernet:ALARm:THReshold

Description	This command sets the Alarm Threshold value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > PCS Lanes > Skew Alarm Threshold
	Navigation Path: Results > Alarms/Errors > RS-FEC > Skew Alarm Threshold
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Skew Alarm Threshold
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets Skew Alarm Threshold.
	MAXimum
	MINimum
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ETH:ALAR:THR 20
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX

:SOURce:DATA:TELecom:ETHernet:ALARm:THReshold:DEFault

Description	This command resets the Alarm Threshold value to its default value.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > PCS Lanes > Skew Alarm Threshold Default (button)
	Navigation Path: Results > Alarms/Errors > RS-FEC > Skew Alarm Threshold Default (button)
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Skew Alarm Threshold Default (button)
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:THReshold:DEFault
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ETH:ALAR:THR:DEF
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:THReshold

:SOURce:DATA:TELecom:ETHernet:ALARm:THReshold?

Description	This query returns the Alarm Threshold value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > PCS Lanes > PCS Lanes > Skew Alarm Threshold
	Navigation Path: Results > Alarms/Errors > RS-FEC > Skew Alarm Threshold
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Skew Alarm Threshold
Syntax	:SOURce:DATA:TELecom:ETHernet:ALARm:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Return the skew alarm threshold.
	MAXimum
	MINimum
Response Syntax	<Skew Alarm Threshold>
Response(s)	**Skew Alarm Threshold**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Skew Alarm Threshold.
Example(s)	SOUR:DATA:TEL:ETH:ALAR:THR 20
	SOUR:DATA:TEL:ETH:ALAR:THR?
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX?

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AMOunt

Description	This command sets the manual Ethernet/PCS error Amount to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Manual > Amount
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AMOunt <wsp><Amount>
Parameter(s)	Amount:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported amount
	MINimum: Smallest supported amount
	DEFault: Default amount
Response Syntax	<Skew Alarm Threshold>
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AMO 50
	SOUR:DATA:TEL:ETH:ERR:LRATe:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt?
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AMOunt?

Description	This query returns the manual Ethernet/PCS error Amount to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Manual > Amount
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AMO 50
	SOUR:DATA:TEL:ETH:ERR:LRATe:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:TYPE?
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated

Description	This command enables/disables the Rate/Max Rate Ethernet/PCS error injection (rates up to 25G or FlexE client).
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON,Enables the Atomated error type.
	OFF,Disables the Atomated error type.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT ON
	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated: CONTinuous

Description	This command sets the automated Ethernet/PCS error Mode (rates up to 25G or FlexE client): ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Mode
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode: ON for Max Rate and OFF for Rate.
	ON,Enables the continuous rate.
	OFF,Disables the continuous rate.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:CONT OFF
	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:CONT?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:RATE?

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated: CONTinuous?

Description	This query returns the automated Ethernet/PCS error Mode (rates up to 25G or FlexE client): ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Mode
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode: ON for Max Rate and OFF for Rate.
	1, Continuous rate is enabled.
	0, Continuous rate is disabled.
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:CONT ON
	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated: RATE

Description	This command sets the automated Ethernet/PCS error Rate to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:RATE MIN
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated: RATE?

Description	This query returns the automated Eternet/PCS error Rate to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:RATE?
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt?

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated: TYPE

Description	This command selects the automated Ethernet/PCS error Defect to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BLOCk: Block
	SYMBol: Symbol
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:TYPE SYMBOL
	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:TYPE?
	Returns: SYMBOL
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:MANual:TYPE?

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated: TYPE?

Description	This query returns the automated Ethernet/PCS error Defect to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BLOCk: Block
	SYMBol: Symbol
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:TYPE SYMBOL
	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT:TYPE?
	Returns: SYMBOL
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:MANual:TYPE?

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Ethernet/PCS error injection (rates up to 25G or FlexE client).
	This query is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1, Automated error type is Enabled.
	0, Automated error type is Disabled.
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT ON
	SOUR:DATA:TEL:ETH:ERR:LRATe:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:INJect

Description	This command enables/disables the manual Ethernet/PCS error injection (rates up to 25G or FlexE client).
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Manual > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:INJ
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:TYPE?
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:MANual:TYPE

Description	This command selects the manual Ethernet/PCS error Defect to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Manual > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BLOCk: Block
	SYMBol: Symbol
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:MAN:TYPE SYMBOL
	SOUR:DATA:TEL:ETH:ERR:LRATe:MAN:TYPE?
	Returns: SYMBOL
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:MANual:TYPE?

Description	This query returns the manual Ethernet/PCS error Defect to be injected (rates up to 25G or FlexE client).
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet/PCS > Error > Manual > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:MANual:TYPE?
Response Syntax	\<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BLOCk: Block
	SYMBol: Symbol
Example(s)	SOUR:DATA:TEL:ETH:ERR:LRATe:MAN:TYPE SYMBOL
	SOUR:DATA:TEL:ETH:ERR:LRATe:MAN:TYPE?
	Returns: SYMBOL
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt

Description	This command sets the manual Ethernet error Amount to be injected.
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Amount
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AMO 50
	SOUR:DATA:TEL:ETH:ERR:MAC:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt?
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt?

Description	This query returns the manual Ethernet error Amount to be injected.
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Amount
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AMO 50
	SOUR:DATA:TEL:ETH:ERR:MAC:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:TYPE?
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated

Description	This command enables/disables the Rate/Max Rate Ethernet error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT OFF
	SOUR:DATA:TEL:ETH:ERR:MAC:AUT?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous

Description	This command sets the automated Ethernet error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Mode
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode: ON for Max Rate and OFF for Rate.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:CONT OFF
	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:CONT?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:RATE?

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous?

Description	This query returns the automated Ethernet error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode: ON for Max Rate and OFF for Rate.
	1, Returns the status of continuous rate as ON.
	0, Returns the status of continuous rate as OFF.
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:CONT ON
	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:RATE

Description	This command sets the automated Ethernet error Rate to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:RATE MIN
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:RATE?

Description	This query returns the automated Ethernet error Rate to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:RATE?
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt?

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:TYPE

Description	This command selects the automated Ethernet error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:TYPE <wsp><Defect>
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCS
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:TYPE FCS
	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:TYPE?
	Returns: FCS
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:TYPE?

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:TYPE?

Description	This query returns the automated Ethernet error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCS
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT:TYPE?
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:MANual:TYPE?

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Ethernet error injection.
	This query is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:AUT ON
	SOUR:DATA:TEL:ETH:ERR:MAC:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

Description	This command enables/disables the manual Ethernet error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:INJ
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:TYPE?
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:MANual:TYPE

Description	This command selects the manual Ethernet error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCS
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:MAN:TYPE?
	Returns: FCS
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:MANual:TYPE ?

Description	This query returns the manual Ethernet error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Ethernet > Error > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > Ethernet > Error > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCS
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:MAN:TYPE?
	Returns: FCS
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:OVERsize

Description	This command allows monitoring of the Oversize frame errors.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Ethernet > Oversized Monitoring
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:OVERsize <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Allows monitoring of the Oversize frame errors.
	ON, sets the oversize frame error to ON.
	OFF, sets the oversize frame error to OFF.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:OVER ON
	SOUR:DATA:TEL:ETH:ERR:MAC:OVER?
	Returns: 1
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:MAC:CURRent?

:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:OVERsize?

Description	This query returns the status of the monitoring of the Oversize frame errors.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Ethernet > Oversized Monitoring
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:MAC:OVERsize?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the monitoring of Oversize frame errors.
	1, oversize frame error is ON.
	0, oversize frame error is OFF.
Example(s)	SOUR:DATA:TEL:ETH:ERR:MAC:OVER ON
	SOUR:DATA:TEL:ETH:ERR:MAC:OVER?
	Returns: 1
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:MAC:CURRent?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:ALANes

Description	This command enables/disables the selection of all lanes for PCS error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > All Lanes
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > All Lanes
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:ALANes <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:ALAN ON
	SOUR:DATA:TEL:ETH:ERR:PHYS:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:LANE?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:ALANes?

Description	This query returns the enable/disable selection status of all lanes for PCS error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > All Lanes
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > All Lanes
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:ALANes?
Response Syntax	<Lane>
Response(s)	**Lane**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:ALAN ON
	SOUR:DATA:TEL:ETH:ERR:PHYS:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:LANE

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt

Description	This command sets the amount of physical error to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Global Injection > Layer (PCS/FEC/RS-FEC) > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	DEFault: Default amount of physical error
	MAXimum: Grestest supported amount
	MINimum: Smalles supported amount
Response Syntax	<Lane>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AMO 50
	SOUR:DATA:TEL:ETH:ERR:PHYS:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE?
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt?
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt?

Description	This query returns the manual Ethernet / PCS/ RS-FEC Lanes error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Manual > Amount
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AMO 50
	SOUR:DATA:TEL:ETH:ERR:PHYS:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated

Description	This command enables/disables the Rate/Max Rate Ethernet / PCS / RS-FEC Lanes error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated \<wsp>\<Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	\<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT OFF
	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:CONTinuous

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:CONTinuous

Description	This command sets the automated Ethernet / PCS / RS-FEC Lanes error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Mode
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:CONT OFF
	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:CONT?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:CONTinuous?

Description	This query returns the automated Ethernet / PCS / RS-FEC Lanes error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Mode
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:CONT ON
	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:RATE

Description	This command sets the automated Ethernet / PCS / RS-FEC Lanes error Rate to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:RATE MIN
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:RATE?

Description	This query returns the automated Ethernet / PCS / RS-FEC Lanes error Rate to be injected.
	At *RST condition, this value is set to 1.0E-02.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest rate
	MINimum: Smallest rate
	DEFault: Default rate
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:RATE?
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:TYPE

Description	This command selects the automated Ethernet / PCS / RS-FEC Lanes error Defect to be injected.
	At *RST condition, this value is set to Invalid Marker.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	SSelects the error to be injected:
	BIP8: PCS BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	FCCW: FEC-COR-CW
	FSERR: FEC-SYMB
	FUCW: FEC-UNCOR-CW
	INVALIDMARKER: Inv. Marker
	ICWM: Invalid Codeword Marker
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:TYPE BLOCK
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:TYPE?

Description	This query returns the automated Ethernet / PCS / RS-FEC Lanes error Defect to be injected.
	At *RST condition, this value is set to Invalid Marker.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BIP8: PCS BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	FCCW: FEC-COR-CW
	FSERR: FEC-SYMB
	FUCW: FEC-UNCOR-CW
	INVALIDMARKER: Inv. Marker
	ICWM: Invalid Codeword Marker
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT:TYPE?
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Ethernet / PCS / RS-FEC Lanes error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT ON
	SOUR:DATA:TEL:ETH:ERR:PHYS:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:INJect

Description	This command enables/disables the manual Ethernet / PCS / RS-FEC Lanes error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Manual > Inject
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:INJ
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:TYPE?
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:LANE

Description	This command enables/disables the selection of a lane for PCS / RS-FEC error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Lane
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Lane
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the lane number for which injection is to be done for PCS errors.
	Set:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the per lane status for PCS errors.
	ON, Enables the particular lane.
	OFF, Disables the particular lane.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:LANE 1, ON
	SOUR:DATA:TEL:ETH:ERR:PHYS:LANE? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:ALANes?

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:LANE?

Description	This query returns the enable/disable selection status of a lane for PCS / RS-FEC error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Lane
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Lane
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the lane number for which injection is to be done for PCS errors.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of particular lane for PCS errors.
	1, Status of a particular lane is enabled.
	0, Status of a particular lane is disabled.
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:LANE 1, ON
	SOUR:DATA:TEL:ETH:ERR:PHYS:LANE? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:ALANes

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE

Description	This command selects the manual Ethernet / PCS / RS-FEC Lanes error Defect to be injected.
	At *RST condition, this value is set to INVALIDMARKER.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Manual > Defect
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BIP8: PCS BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	FCCW: FEC-COR-CW
	FSERR: FEC-SYMB
	FUCW: FEC-UNCOR-CW
	INVALIDMARKER: Inv. Marker
	ICWM: Invalid Codeword Marker
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:MAN:TYPE BLOC
	SOUR:DATA:TEL:ETH:ERR:PHYS:MAN:TYPE?
	Returns: BLOCk
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE?

Description	This query returns the manual Ethernet / PCS / RS-FEC Lanes error Defect to be injected.
	At *RST condition, this value is set to BLOCk.
	Navigation Path: Results > Alarms/Errors > Injection > PCS > Error > Manual > Defect
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BIP8: PCS BIP-8
	BLOCk: Block or 66B Block for 40G/100G/400G
	FCCW: FEC-COR-CW
	FSERR: FEC-SYMB
	FUCW: FEC-UNCOR-CW
	INVALIDMARKER: Inv. Marker
	ICWM: Invalid Codeword Marker
Example(s)	SOUR:DATA:TEL:ETH:ERR:PHYS:MAN:TYPE BLOC
	SOUR:DATA:TEL:ETH:ERR:PHYS:MAN:TYPE?
	Returns: BLOCk
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:MANual:TYPE
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AMOunt
	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:ALANes

Description	This command enables/disables the selection of all lanes for RS-FEC error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Lane - All
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:ALANes <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:ALAN ON
	SOUR:DATA:TEL:ETH:ERR:RSF:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:LANE?

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:ALANes?

Description	This query returns the enable/disable selection status of all lanes for RS-FEC error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Lane - All
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:ALANes?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:ALAN ON
	SOUR:DATA:TEL:ETH:ERR:RSF:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:LANE

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated

Description	This command enables/disables the Rate/Max Rate RS-FEC error injection for selected lane(s).
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT OFF
	SOUR:DATA:TEL:ETH:ERR:RSF:AUT?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:CONTinuous

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:CONTinuous

Description	This command sets the automated RS-FEC error mode for selected lane(s): ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:CONT OFF
	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:CONT?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated: CONTinuous?

Description	This query returns the automated RS-FEC error mode for selected lane(s): ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:CONT ON
	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated?

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:RATE

Description	This command sets the automated RS-FEC error injection rate for selected lane(s).
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:RATE MIN
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:PHYSical:AUTomated:CONTinuous

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated: RATE?

Description	This query returns the automated RS-FEC error injection rate for selected lane(s).
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest rate
	MINimum: Smallest rate
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:RATE?
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated: TYPE

Description	This command selects the automated RS-FEC error Defect for selected lane(s).
	At *RST condition, this value is set to Invalid Marker.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:TYPE FCCW
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:TYPE

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated: TYPE?

Description	This query returns the automated RS-FEC error Defect for selected lane(s).
	At *RST condition, this value is set to Invalid Marker.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT:TYPE?
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:TYPE?

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate RS-FEC error injection for selected lane(s).
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:AUT ON
	SOUR:DATA:TEL:ETH:ERR:RSF:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:LANE

Description	This command enables/disables the selection of a lane for RS-FEC error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Lane
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
	Set:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables the selected lane for coming error injections.
	ON: Enables the particular lane.
	OFF: Disables the particular lane.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:LANE 1, ON
	SOUR:DATA:TEL:ETH:ERR:RSF:LANE? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:ALANes?

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:LANE?

Description	This query returns the enable/disable selection status of a lane for RS-FEC error injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Lane
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status of a lane for error injection.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:LANE 1, ON
	SOUR:DATA:TEL:ETH:ERR:RSF:LANE? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:ALANes

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:AMOunt

Description	This command sets the amount of physical error to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Global Injection > Layer (RS-FEC) > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	DEFault: Default amount of physical error
	MAXimum: Grestest supported amount
	MINimum: Smalles supported amount
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:AMO 50
	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:AMOunt?

Description	This query returns the manual RS-FEC error Amount to be injected for selected lane(s).
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:AMO 50
	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:INJect

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:INJect

Description	This command enables/disables the manual RS-FEC error injection for selected lane(s).
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:INJ
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:TYPE?
	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:AMOunt?

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:TYPE

Description	This command selects the manual RS-FEC error Defect to be injected for selected lane(s).
	At *RST condition, this value is set to Invalid Marker.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:TYPE FUCW
	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:TYPE?
	Returns: FUCW

:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:TYPE?

Description	This query returns the manual RS-FEC error Defect to be injected for selected lane(s).
	At *RST condition, this value is set to Invalid Marker.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Selects the error to be injected:
	FCCW: FEC-COR-CW
	FUCW: FEC-UNCOR-CW
	FCSYmb: FEC-SYMB
	FECINVALIDMARKER: FEC Inv. Marker
Example(s)	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:TYPE FUCW
	SOUR:DATA:TEL:ETH:ERR:RSF:MAN:TYPE?
	Returns: FUCW
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:RSFec:MANual:INJect

:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical

Description	This command enables/disables the continuous PCS (400G) alarm generation.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Global Injection > PCS > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS OFF
	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS?
	Returns: 0
See Also	SOUR:DATA:TEL:ETH:ALAR:PHYS OFF
	SOUR:DATA:TEL:ETH:ALAR:PHYS?

:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical:TYPE

Description	This command selects the continuous PCS (400G) alarm Defect to be injected.
	At *RST condition, this value is set to LDSERR.
	Navigation Path: Results > Alarms/Errors > Global Injection > PCS > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LDSERR: L Deg SER Rcd
	RDSER: R Deg SER
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS:TYPE RDSER
	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS:TYPE?
	Returns: RDSER
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE

:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical:TYPE?

Description	This query returns the enable/disable status of the continuous PCS (400G) alarm Defect to be injected.
	At *RST condition, this value is set to LDSERR.
	Navigation Path: Results > Alarms/Errors > Global Injection > PCS > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LDSERR: L Deg SER Rcd
	RDSER: R Deg SER
Example(s)	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS:TYPE RDSER
	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS:TYPE?
	Returns: RDSER
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE?

:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical?

Description	This query returns the enable/disable status of the continuous PCS (400G) alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Global Injection > PCS > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:ETHernet:PCS:ALARm:PHYSical?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS OFF
	SOUR:DATA:TEL:ETH:PCS:ALAR:PHYS?
	Returns: 0
See Also	SOUR:DATA:TEL:ETH:ALAR:PHYS OFF
	SOUR:DATA:TEL:ETH:ALAR:PHYS?

:SOURce:DATA:TELecom:ETHernet:WIS:PLMuneq

Description	This command enables/disables the Payload Label Mismatch - Path/Unequipped - Path (PLM-P / UNEQ-P) generation.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > WIS > PLM-P/UNEQ-P (10GEWAN)
Syntax	:SOURce:DATA:TELecom:ETHernet:WIS:PLMuneq <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:ETH:WIS:PLM ON
	SOUR:DATA:TEL:ETH:WIS:PLM?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:WIS:TRACe?

:SOURce:DATA:TELecom:ETHernet:WIS:PLMuneq?

Description	This query returns the status of Payload Label Mismatch - Path/Unequipped - Path (PLM-P / UNEQ-P) generation.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > WIS > PLM-P/UNEQ-P (10GEWAN)
Syntax	:SOURce:DATA:TELecom:ETHernet:WIS:PLMuneq?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Plm/Uneq.
	1, Plm/Uneq enabled.
	0, Plm/Uneq disabled.
Example(s)	SOUR:DATA:TEL:ETH:WIS:PLM ON
	SOUR:DATA:TEL:ETH:WIS:PLM?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:WIS:TRACe

:SOURce:DATA:TELecom:FETHernet:PHY:ALARm

Description	This command enables/disables the continuous FlexE - Group alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarms > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ALARm <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: enables alarm injection
	OFF: disables alarm injection
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ALAR ON
	SOUR:DATA:TEL:FETH:PHY:ALAR?
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT?
	SOUR:DATA:TEL:FETH:PHY:ALAR?

:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:SPHY

Description	This command selects the PHY number for FlexE - Group alarm injection.
	At *RST condition, this value is set to 0.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarm > PHY
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:SPHY <wsp><Phynumber>, <Status>
Parameter(s)	**Phynumber**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PHY number.
	Status:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables a PHY for injection.
	ON: sets selected phy injection to on
	OFF: sets selected phy injection to off
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY 2, ON
	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY?
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY
	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY?
	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY?

:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:SPHY?

Description	This query returns if the PHY number is selected for FlexE - Group alarm injection.
	At *RST condition, this value is set to 0.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarm > PHY
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:SPHY? <wsp><Phynumber>
Parameter(s)	**Phynumber**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PHY number.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disables status of a PHY for injection.
Example(s)	LINS:SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY 2, ON
	LINS:SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY?
	Returns: 1
See Also	LINS:SOUR:DATA:TEL:FLEXE:PHY:ERR:SEL?
	LINS:SOUR:DATA:TEL:FLEXE:PHY:ALAR:SELP?

:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:TYPE

Description	This command selects the continuous FlexE - Group alarm Defect to be injected.
	At *RST condition, this alarm type is set to REMPHYFAULT
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarms > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:TYPE <wsp><Alarmtype>
Parameter(s)	**Alarmtype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOSSFLOCK: Loss of OH Frame Lock
	LOSSMFLOCK: Loss of OH MF Lock
	REMPHYFAULT: Remote PHY Fault
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ALAR:TYPE LOSSFLOCK
	SOUR:DATA:TEL:FETH:PHY:ALAR:TYPE?
	Returns: LOSSFLOCK
See Also	SOUR:DATA:TEL:FETH:PHY:ALAR:TYPE?
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE?

:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:TYPE?

Description	This query returns the continuous FlexE - Group alarm Defect to be injected.
	At *RST condition, this Defect type REMPHYFAULT
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarms > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ALARm:TYPE?
Response Syntax	<Alarmtype>
Response(s)	**Alarmtype**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns FlexE Group PHY alarm.
	REMPHYFAULT: Remote PHY Fault
	LOSSFLOCK: Loss of OH Frame Lock
	LOSSMFLOCK: Loss of OH MF Lock
Example(s)	SOUR:DATA:TEL:FETH:PHY:ALAR:TYPE LOSSFLOCK
	SOUR:DATA:TEL:FETH:PHY:ALAR:TYPE?
	Returns: LOSSFLOCK
See Also	SOUR:DATA:TEL:FETH:PHY:ALAR:TYPE
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE?

:SOURce:DATA:TELecom:FETHernet:PHY:ALARm?

Description	This query returns the enable/disable status of the continuous FlexE - Group alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarms > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ALARm?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:PHY:ALAR ON
	SOUR:DATA:TEL:FETH:PHY:ALAR?
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT?
	SOUR:DATA:TEL:FETH:PHY:ALAR

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate FlexE - Group error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT ON
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT?
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT?

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:CONTinuous

Description	This command sets the automated FlexE - Group error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Mode
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:CONTinuous \<wsp>\<Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	\<Status>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:CONT ?
	Returns: 1

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated FlexE - Group error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Mode
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:CONT ?
	Returns: 1

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:RATE

Description	This command sets the automated FlexE - Group error Rate to be injected.
	At *RST condition, this value is set to 1.0E-4.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:RATE MAX
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:RATE?
	Returns: 1.0E-2
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:RATE?

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:RATE?

Description	This query returns the automated FlexE - Group error Rate to be injected.
	At *RST condition, this value is set to 1.0E-4.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	Rate:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	Rate:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:RATE MAX
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:RATE?
	Returns: 1.0E-2
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:RATE

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:TYPE

Description	This command selects the automated FlexE - Group error Defect to be injected.
	At *RST condition, this Defect type is set to OHCRC
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:TYPE <wsp><Defect>
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OHCRC
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE OHCRC
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE?
	Returns: OHCRC
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE?

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:TYPE?

Description	This query returns the automated FlexE - Group error Defect to be injected.
	At *RST condition, this Defect type OHCRC.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated:TYPE?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OHCRC
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE OHCRC
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE?
	Returns: OHCRC
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT:TYPE

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate FlexE - Group error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:AUT ON
	SOUR:DATA:TEL:FETH:PHY:ERR:AUT?
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:AUT

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:AMOunt

Description	This command sets the manual FlexE - Group error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO 12
	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO?
	Returns: 12
	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO MAX
	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO? MAX
	Returns: 50
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO?

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:AMOunt?

Description	This query returns the manual FlexE - Group error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO 12
	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO?
	Returns: 12
	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO MAX
	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO? MAX
	Returns: 50
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:AMO

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:INJect

Description	This command enables/disables the manual FlexE - Group error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:SEL 2, on
	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:INJ
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:SEL

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:TYPE

Description	This command selects the manual FlexE Group error Defect to be injected.
	At *RST condition, this value is set to OHCRC
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OHCRC
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:TYPE OHCRC
	SOUR:DATA:TEL:FETH:GRO:PHY:ERR:MAN:TYPE?
	Returns: OHCRC
See Also	SOUR:DATA:TEL:FETH:GRO:PHY:ERR:MAN:TYPE?

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:TYPE?

Description	This query returns the manual FlexE Group error Defect to be injected.
	At *RST condition, this value is set to OHCRC
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:MANual:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OHCRC
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:TYPE OHCRC
	SOUR:DATA:TEL:FETH:GRO:PHY:ERR:MAN:TYPE?
	Returns: OHCRC
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:MAN:TYPE

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:SPHY

Description	This command selects the PHY number for FlexE - Group error injection.
	At *RST condition, this value is set to 0.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > PHY
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:SPHY <wsp><Phynumber>, <Status>
Parameter(s)	**Phynumber**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PHY number.
	Status:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables a PHY for injection.
	ON: sets selected phy injection to on
	OFF: sets selected phy injection to off
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY 2, ON
	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY? 2
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY?
	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY
	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY?

:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:SPHY?

Description	This query returns if the PHY number is selected for FlexE - Group error injection.
	At *RST condition, this value is set to 0.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Error > PHY
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:ERRor:SPHY? <wsp><Phynumber>
Parameter(s)	**Phynumber**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PHY number.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disables status of a PHY for injection.
Example(s)	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY 2, ON
	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY? 2
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY
	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY
	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY?

:SOURce:DATA:TELecom:FETHernet:PHY:SINStance

Description	This command selects the Instance number for FlexE - Group alarm/ error injection.
	At *RST condition, this value is set to 0.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarm/Error > PHY / Instance
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:SINStance <wsp><PHY>, <Instance>, <Status>
Parameter(s)	**PHY**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PHY number.
	Instance:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Instance number.
	Status:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables a Instance for injection.
	ON: sets selected instance injection to on
	OFF: sets selected Instance injection to off
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:PHY:SINS 1,0,ON
	SOUR:DATA:TEL:FETH:PHY:SINS? 1,0
	Returns: 1
See Also	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY
	SOUR:DATA:TEL:FETH:PHY:ERR:SPHY?
	SOUR:DATA:TEL:FETH:PHY:ALAR:SPHY?

:SOURce:DATA:TELecom:FETHernet:PHY:SINStance?

Description	This query returns if the Instance number is selected for FlexE - Group alarm/error injection.
	At *RST condition, this value is set to 0.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Group > Alarm/Error > PHY / Instance
Syntax	:SOURce:DATA:TELecom:FETHernet:PHY:SINStance? <wsp><PHY>, <Instance>
Parameter(s)	**PHY**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PHY number.
	Instance:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Instance number.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disables status of a Instance for injection.
Example(s)	SOUR:DATA:TEL:FETH:PHY:SINS 1,0,ON
	SOUR:DATA:TEL:FETH:PHY:SINS? 1,0
	Returns: 1
See Also	LINS:SOUR:DATA:TEL:FLEXE:PHY:ERR:SEL?
	LINS:SOUR:DATA:TEL:FLEXE:PHY:ALAR:SELP?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm

Description	This command enables/disables the continuous FlexE - Path OAM Basic OAM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Alarms > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: enables alarm injection
	OFF: disables alarm injection
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR ON
	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:TYPE

Description	This command selects the continuous FlexE - Path OAM Basic OAM alarm Defect to be injected.
	At *RST condition, this alarm type is set to REMPHYFAULT
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Alarms > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:TYPE <wsp><Alarm Type>
Parameter(s)	**Alarm Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	BCSLF: Basic OAM Client Signal Local Fault
	BCSLPI: Basic OAM Client Signal Low Power Indication
	BCSRF: Basic OAM Client Signal Remote Fault
	BLOCONT: Basic OAM Loss Of Continuity
	BRDI: Basic OAM Remote Defect Indication
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR:TYPE BCSLF
	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR:TYPE?
	Returns: BCSLF
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:TYPE?

Description	This query returns the continuous FlexE - Path OAM Basic OAM alarm Defect to be injected.
	At *RST condition, this Defect type BLOCONT
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Alarms > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:TYPE?
Response Syntax	<Alarm Type>
Response(s)	**Alarm Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns FlexE Path OAM BOAM alarm.
	BCSLF: Basic OAM Client Signal Local Fault
	BCSLPI: Basic OAM Client Signal Low Power Indication
	BCSRF: Basic OAM Client Signal Remote Fault
	BLOCONT: Basic OAM Loss Of Continuity
	BRDI: Basic OAM Remote Defect Indication
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR:TYPE BCSLF
	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR:TYPE?
	Returns: BCSLF
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm:TYPE

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm?

Description	This query returns the enable/disable status of the continuous FlexE - Path OAM Basic OAM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Alarms > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR ON
	SOUR:DATA:TEL:FETH:POAM:BOAM:ALAR?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ALARm

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate FlexE - Path OAM Basic OAM error injection. At *RST condition, this value is set to OFF. Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Starts/stops the automated Rate/Max Rate error Injection. ON: Enables error injection. OFF: Disables error injection.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT ON SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT? Returns: ON
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:CONTinuous

Description	This command sets the automated FlexE - Path OAM Basic OAM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Mode
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated FlexE - Path OAM Basic OAM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Mode
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:CONTinuous

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:RATE

Description	This command sets the automated FlexE - Path OAM Basic OAM error Rate to be injected.
	At *RST condition, this value is set to 1.0E-4.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:RATE MAX
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:RATE?
	Returns: 1.0E-2
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:RATE?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:RATE?

Description	This query returns the automated FlexE - Path OAM Basic OAM error Rate to be injected.
	At *RST condition, this value is set to 1.0E-4.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	Rate:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	Rate:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:RATE MAX
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:RATE?
	Returns: 1.0E-2
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:RATE

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:TYPE

Description	This command selects the automated FlexE - Path OAM Basic OAM error Defect to be injected.
	At *RST condition, this Defect type is set to BBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate >Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:TYPE BREI
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:TYPE?
	Returns: BREI
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:TYPE?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:TYPE?

Description	This query returns the automated FlexE - Path OAM Basic OAM error Defect to be injected.
	At *RST condition, this Defect type OHCRC.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:TYPE BREI
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT:TYPE?
	Returns: BREI
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated:TYPE

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate FlexE - Path OAM Basic OAM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated?
Response Syntax	\<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT ON
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:AMOunt

Description	This command sets the manual FlexE - Path OAM Basic OAM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO 12
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO?
	Returns: 12
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO MAX
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:AMOunt?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:AMOunt?

Description	This query returns the manual FlexE - Path OAM Basic OAM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:AMOunt?[\<wsp>\<Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	\<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO 12
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO?
	Returns: 12
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO? MAX
	Returns: 50
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO MAX
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:INJect

Description	This command enables/disables the manual FlexE - Path OAM Basic OAM error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:INJ
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:AUTomated

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:TYPE

Description	This command selects the manual FlexE - Path OAM Basic OAM error Defect to be injected.
	At *RST condition, this Defect type is set to BBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual >Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:TYPE BREI
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:TYPE?
	Returns: BREI
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:TYPE?

:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:TYPE?

Description	This query returns the manual FlexE - Path OAM Basic OAM error Defect to be injected.
	At *RST condition, this Defect type is set to BBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual >Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BBIP8: Basic OAM Bit Interleaved Parity
	BREI: Basic OAM Remote Error Indication
Example(s)	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:TYPE BREI
	SOUR:DATA:TEL:FETH:POAM:BOAM:ERR:MAN:TYPE?
	Returns: BREI
See Also	SOURce:DATA:TELecom:FETHernet:POAM:BOAM:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate FlexE - Path OAM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT ON
	SOUR:DATA:TEL:FETH:POAM:ERR:AUT?
	Returns: ON

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated :CONTinuous

Description	This command sets the automated FlexE - Path OAM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Mode
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:CONT?
	Returns: 1

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated :CONTinuous?

Description	This query returns the automated FlexE - Path OAM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Mode
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FETH:POAM::ERR:AUT:CONT?
	Returns: 1

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated:RATE

Description	This command sets the automated FlexE - Path OAMerror Rate to be injected.
	At *RST condition, this value is set to 1.0E-4.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:RATE MAX
	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:RATE?
	Returns: 1.0E-2

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated :RATE?

Description	This query returns the automated FlexE - Path OAM error Rate to be injected.
	At *RST condition, this value is set to 1.0E-4.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
	DEFault: Default rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:RATE MAX
	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:RATE?
	Returns: 1.0E-2

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated :TYPE

Description	This command selects the automated FlexE - Path OAM error Defect to be injected.
	At *RST condition, this Defect type is set to BBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate >Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CRC4: Cyclic Redundancy Check over 4 bits
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:TYPE CRC4
	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:TYPE?
	Returns: CRC4

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated :TYPE?

Description	This query returns the automated FlexE - Path OAM error Defect to be injected.
	At *RST condition, this Defect type OHCRC.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Selects the error to be injected:
	CRC4: Cyclic Redundancy Check over 4 bits
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:TYPE CRC4
	SOUR:DATA:TEL:FETH:POAM:ERR:AUT:TYPE?
	Returns: CRC4

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated ?

Description	This query returns the enable/disable status of the Rate/Max Rate FlexE - Path OAM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:AUT ON
	SOUR:DATA:TEL:FETH:POAM:ERR:AUT?
	Returns: 1

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:AMOunt

Description	This command sets the manual FlexE - Path OAM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO 12
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO?
	Returns: 12
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO MAX
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO?
	Returns: 50

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:AMOunt?

Description	This query returns the manual FlexE - Path OAM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO 12
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO?
	Returns: 12
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO MAX
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:AMO?
	Returns: 50

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:INJect

Description	This command enables/disables the manual FlexE - Path OAMerror injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:INJ

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:TYPE

Description	This command selects the manual FlexE - Path OAM error Defect to be injected.
	At *RST condition, this Defect type is set to BBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual >Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CRC4: Cyclic Redundancy Check over 4 bits
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:TYPE BREI
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:TYPE?
	Returns: BREI

:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:TYPE?

Description	This query returns the manual FlexE - Path OAM error Defect to be injected.
	At *RST condition, this Defect type is set to BBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - POAM > Error > Manual >Defect
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:ERRor:MANual:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Selects the error to be injected:
	CRC4: Cyclic Redundancy Check over 4 bits
Example(s)	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:TYPE CRC4
	SOUR:DATA:TEL:FETH:POAM:ERR:MAN:TYPE?
	Returns: BREI

:SOURce:DATA:TELecom:FIBer:ALARm:RSFec

Description	This command enables/disables the continuous RS-FEC (64G) alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC> Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ALARm:RSFec <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:FIB:ALAR:RSF ON
See Also	SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:TYPE

:SOURce:DATA:TELecom:FIBer:ALARm:RSFec:TYPE?

Description	This query returns the continuous Fiber Channel RS-FEC (64G) alarm Defect to be injected.
	At *RST condition, this value is set to RD.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ALARm:RSFec:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	RD: Remote Degrade
Example(s)	SOUR:DATA:TEL:FIB:ALAR:RSF:TYPE?
	Returns: RD
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical:TYPE

:SOURce:DATA:TELecom:FIBer:ALARm:RSFec?

Description	This query returns the enable/disable status of the continuous RS-FEC (64G) alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC> Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ALARm:RSFec?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FIB:ALAR:RSF ON
	SOUR:DATA:TEL:FIB:ALAR:RSF?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:ALARm:RSFec:TYPE?

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate Fibre Channel error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT ON
	SOUR:DATA:TEL:FIB:ERR:AUT?
	Returns: ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:CONTinuous

Description	This command selects the automated Fibre Channel error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Mode
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FIB:ERR:AUT:CONT?
	Returns: ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:CONTinuous

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated Fibre Channel error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Fiber Channel > Results > Layer (Fibre Channel) > Type (Errors) > Mode (MaxRate)
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:CONTinuous?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT:CONT ON
	SOUR:DATA:TEL:FIB:ERR:AUT:CONT?
	Returns: ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:RATE

Description	This command sets the automated Fibre Channel error Rate to be injected.
	At *RST condition, this value is set to 0.0001.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:RATE <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the rate of error to be injected.
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT:RATE 0.00065
	SOUR:DATA:TEL:FIB:ERR:AUT:RATE?
	Returns: 0.00065
See Also	FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:RATE

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:RATE?

Description	This query returns the automated Fibre Channel error Rate to be injected.
	At *RST condition, this value is set to 0.0001.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:RATE?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT:RATE 0.00065
	SOUR:DATA:TEL:FIB:ERR:AUT:RATE?
	Returns: 0.00065
See Also	FETCh:DATA:TELecom:FIBer:ERRor:PHYSical:RATE?

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:TYPE

Description	This command sets the automated Fibre Channel error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCS
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT:TYPE FCS
	SOUR:DATA:TEL:FIB:ERR:AUT:TYPE?
	Returns: FCS
See Also	SOURce:DATA:TELecom:FIBer:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:TYPE?

Description	This query returns the manual Fibre Channel error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:TYPE?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCS
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT:TYPE FCS
	SOUR:DATA:TEL:FIB:ERR:AUT:TYPE?
	Returns: FCS
See Also	SOURce:DATA:TELecom:FIBer:ERRor:MANual:TYPE?

:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Fibre Channel error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:AUTomated?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FIB:ERR:AUT ON
	SOUR:DATA:TEL:FIB:ERR:AUT?
	Returns: ON
See Also	SOURce:DATA:TELecom:CPRI:ERRor:AUTomated?

:SOURce:DATA:TELecom:FIBer:ERRor:MANual:AMOunt

Description	This command sets the manual Fibre Channel error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:MANual:AMOunt <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the amount of error to be injected.
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:MAN:AMO 30
	SOUR:DATA:TEL:FIB:ERR:MAN:AMO?
	Returns: 30
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:FIBer:ERRor:MANual:AMOunt?

Description	This query returns the manual Fibre Channel error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:MANual:AMOunt?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:FIB:ERR:MAN:AMO 25
	SOUR:DATA:TEL:FIB:ERR:MAN:AMO?
	Returns: 25
See Also	SOURce:DATA:TELecom:CPRI:ERRor:MANual:AMOunt?

:SOURce:DATA:TELecom:FIBer:ERRor:MANual:INJect

Description	This command enables/disables the manual Fibre Channel error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:MANual:INJect
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:MAN:INJ
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:LRATe:INJect

:SOURce:DATA:TELecom:FIBer:ERRor:MANual:TYPE

Description	This command sets the manual Fibre Channel error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:MANual:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCS
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:MAN:TYPE FCS
	SOUR:DATA:TEL:FIB:ERR:MAN:TYPE?
	Returns: FCS
See Also	SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:TYPE

:SOURce:DATA:TELecom:FIBer:ERRor:MANual:TYPE?

Description	This query returns the manual Fibre Channel error Defect to be injected.
	At *RST condition, this value is set to FCS.
	Navigation Path: Results > Alarms/Errors > Injection > Fibre Channel > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:MANual:TYPE?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCS
Example(s)	SOUR:DATA:TEL:FIB:ERR:MAN:TYPE FCS
	SOUR:DATA:TEL:FIB:ERR:MAN:TYPE?
	Returns: FCS
See Also	SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:TYPE?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated

Description	This command enables/disables the Rate/Max Rate RS-FEC error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT ON
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:ERRor:AUTomated

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:CONTinuous

Description	This command selects the automated RE-FEC error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:CONTinuous \<wsp>\<Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode: ON for Max Rate and OFF for Rate.
	ON: Enabled
	OFF: Disabled
Response Syntax	\<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:CONT ON
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIB:ERRor:AUTomated:CONTinuous

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:CONTinuous?

Description	This query returns the automated RS-FEC error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:CONTinuous?
Response Syntax	<GET>
Response(s)	**GET**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode: ON for Max Rate and OFF for Rate.
	1, Continuous RS-FEC error is enabled.
	0, Continuous RS-FEC error is disabled.
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:CONT ON
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:ERRor:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:RATE

Description	This command sets the automated RS-FEC error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected. Choices are 1.0E-09 to 1.0E-02.
	MAXimum, sets error rate to maximum.
	MINimum, sets error rate to minimum.
Response Syntax	<GET>
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:TYPE FCCW
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:RATE?

Description	This query returns the automated RS-FEC error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:TYPE FCCW
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:TYPE

Description	This command sets the automated RS-FEC error Defect to be injected. At *RST condition, this value is set to FCCW. Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:TYPE <wsp><Type>
Parameter(s)	**Type**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the error to be injected: FUCW: FEC-UNCOR-CW FCCW: FEC-COR-CW FSERR: FEC-SYMB
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:TYPE FUCW SOUR:DATA:TEL:FIB:ERR:RSF:AUT:TYPE? Returns: FUCW
See Also	SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:TYPE

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:TYPE?

Description	This query returns the manual RS-FEC error Defect to be injected.
	At *RST condition, this value is set to FCCW.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:TYPE?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FUCW: FEC-UNCOR-CW
	FCCW: FEC-COR-CW
	FSERR: FEC-SYMB
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:TYPE FUCW
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT:TYPE?
	Returns: FUCW
See Also	SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:TYPE?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate RS-FEC error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated?
Response Syntax	<Get>
Response(s)	**Get**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1, automated RS-FEC is enabled.
	0, automated RS-FEC is disabled.
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:AUT ON
	SOUR:DATA:TEL:FIB:ERR:RSF:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:FIBer:ERRor:AUTomated?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:AMOunt

Description	This command sets the manual RS-FEC error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 to 50.
	MAXimum: The maximum value.
	MINimum: The minimum value.
	DEFault: The default value.
Response Syntax	<Get>
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:TYPE FCCW
	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:AMO 15
	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:AMO?
	Return 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:AMOunt ?

Description	This query returns the manual RS-FEC error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of Forward Error Correction (FEC) error.
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:TYPE FCCW
	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:AMO 15
	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt?

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:INJect

Description	This command enables/disables the manual RS-FEC error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:INJ
See Also	SOURce:DATA:TELecom:FIBer:ERRor:MANual:INJect

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:TYPE

Description	This command sets the manual RS-FEC error Defect to be injected.
	At *RST condition, this value is set to FCCW.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FUCW: FEC-UNCOR-CW
	FCCW: FEC-COR-CW
	FSERR: FEC-SYMB
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:TYPE FUCW
	SOUR:DATA:TEL:FIB:ERR:RSF:MAN:TYPE?
	Returns: FUCW
See Also	SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:TYPE

:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:TYPE?

Description	This query returns the manual RS-FEC error Defect to be injected.
	At *RST condition, this value is set to FCCW.
	Navigation Path: Results > Alarms/Errors > Injection > RS-FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FIBer:ERRor:RSFec:MANual:TYPE?
Response Syntax	<GET>
Response(s)	**GET**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FUCW: FEC-UNCOR-CW
	FCCW: FEC-COR-CW
	FSERR: FEC-SYMB
Example(s)	SOUR:DATA:TEL:FIB:RSF:ERR:MAN:TYPE FUCW
	SOUR:DATA:TEL:FIB:RSF:ERR:MAN:TYPE?
	Returns: FUCW
See Also	SOURce:DATA:TELecom:FIBer:ERRor:RSFec:AUTomated:TYPE?

:SOURce:DATA:TELecom:FOTN:FEC:ALANes

Description	This command enables/disables the selection of all lanes for FEC alarms/errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FEC) > All Lanes
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ALANes <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<GET>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ALAN ON
See Also	SOURce:DATA:TELecom:FOTN:FEC:LANE

:SOURce:DATA:TELecom:FOTN:FEC:ALANes?

Description	This query returns the enable/disable selection status of all lanes for FEC alarms/errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FEC) > All Lanes
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ALANes?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ALAN?
See Also	SOURce:DATA:TELecom:FOTN:FEC:LANE?

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt

Description	This command sets the manual FEC error Amount to be injected for FlexO BERT. At *RST condition, this value is set to 1. Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt <wsp><Amount>
Parameter(s)	**Amount**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the amount of error to be injected. Choices are 1 through 50. MAXimum: Biggest supported value. MINimum: Smallest supported value. DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AMO 1
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt?

Description	This query returns the manual FEC error Amount to be injected for FlexO BERT.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AMO?
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated?

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate FEC error injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error generation.
	OFF: Disables error generation.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT ON
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:CONTi nuous

Description	This command sets the automated FEC error Mode: ON for Max Rate and OFF for Rate for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated FEC error Mode: ON for Max Rate and OFF for Rate for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:CONTinuous?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated?

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:RATE

Description	This command sets the automated FEC error Rate to be injected for FlexO BERT.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:RATE?

Description	This query returns the automated FEC error Rate to be injected for FlexO BERT. At *RST condition, this value is set to device-dependent. Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. This parameter is optional. If no token is specified, the current injection rate is returned. MAXimum: Biggest supported value MINimum: Smallest supported value DEFault: Default value.
Response Syntax	<Rate>
Response(s)	**Rate**: The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element. Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:TYPE

Description	This command selects the automated FEC error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to FCSYmb.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCSYmb: FEC correctable symbol error
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT:TYPE FCSY
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:TYPE?

Description	This query returns the automated FEC error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCSYmb: FEC correctable symbol error
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT:TYPE?
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:MANual:TYPE?

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate FEC error injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT?
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:INJect

Description	This command triggers the manual FEC error injection for FlexO BERT.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:INJ
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:MANual:TYPE

Description	This command selects the manual FEC error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to FCSYmb error.
	Navigation Path: Results > Alarms/Errors > Injection >FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCSYmb: FEC correctable symbol error
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:MAN:TYPE FCSY
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AUTomated:TYPE

:SOURce:DATA:TELecom:FOTN:FEC:ERRor:MANual:TYPE?

Description	This query returns the manual FEC error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to FCSYmb error.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:ERRor:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCSYmb: FEC correctable symbol error
	FCCW: FEC correctable code word error
	FUCW: FEC uncorrectable code word error

:SOURce:DATA:TELecom:FOTN:FEC:LANE

Description	This command enables/disables the selection of a lane for FEC alarms/errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FEC) > Lane
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the OTL per lane status.
	ON: Enables the lane.
	OFF: Disables the lane.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:LANE 1, ON
See Also	SOURce:DATA:TELecom:FOTN:FEC:ALANes

:SOURce:DATA:TELecom:FOTN:FEC:LANE?

Description	This query returns the enable/disable selection status of a lane for FEC alarms/errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FEC) > Lane
Syntax	:SOURce:DATA:TELecom:FOTN:FEC:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the selection status of a lane.
	1: The lane is enabled.
	0: The lane is disabled.
Example(s)	SOUR:DATA:TEL:FOTN:FEC:LANE? 1
See Also	SOURce:DATA:TELecom:FOTN:FEC:ALANes?

:SOURce:DATA:TELecom:FOTN:FLXO:ALARm

Description	This command enables/disables the continuous FlexO alarm injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > FlexO > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ALARm <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ALAR ON
See Also	SOURce:DATA:TELecom:FOTN:FLXO:‚ÄãALARm:TYPE

:SOURce:DATA:TELecom:FOTN:FLXO:ALARm:TYPE

Description	This command selects the continuous FlexO alarm to be injected for FlexO BERT.
	At *RST condition, this value is set to LOM.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ALARm:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	GIDM: GroupIDMismatch
	IIDM: InstanceIDMismatch
	LOM: LossOfMultiframe
	MAPM: MAPMismatch
	OOM: OutOfMultiframe
	RPF: RemotePhyFault
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ALAR:TYPE GIDM
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ALARm

:SOURce:DATA:TELecom:FOTN:FLXO:ALARm:TYPE?

Description	This command selects the continuous FlexO alarm Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to LOM.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ALARm:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Selects the alarm to be injected:
	GIDM: GroupIDMismatch
	IIDM: InstanceIDMismatch
	LOM: LossOfMultiframe
	MAPM: MAPMismatch
	OOM: OutOfMultiframe
	RPF: RemotePhyFault
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ALAR:TYPE LOM
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ALARm?

:SOURce:DATA:TELecom:FOTN:FLXO:ALARm?

Description	This query return the enable/disable status of the continuous FlexO alarm injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > FlexO > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ALARm?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ALAR ON
See Also	SOURce:DATA:TELecom:FOTN:FLXO:‚ÄãALARm:TYPE?

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate FlexO error injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error injection.
	ON: Enables error generation.
	OFF: Disables error generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:FLXO:ERR:AUT ON
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous

Description	This command sets the automated FlexO error Mode: ON for Max Rate and OFF for Rate for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Mode
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated FlexO error Mode: ON for MAx Rate and OFF for Rate for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Mode
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated?

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE

Description	This command sets the automated FlexO error Rate to be injected for FlexO BERT.
	At *RST condition, this value is set to device-dependant.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE ?

Description	This query returns the automated FlexO error Rate to be injected for FlexO BERT.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated?

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE

Description	This command selects the automated FlexO error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to MFAS.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	MFAS: MFAS
	OHCRC: OH CRC
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:AUT:TYPE MFAS
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE ?

Description	This query returns the automated FlexO error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to MFAS.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	MFAS: MFAS
	OHCRC: OH CRC
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:AUT:TYPE?
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated?

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate FlexO error injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:AUT?
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:CONTinuous?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:RATE?
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:AUTomated:TYPE?

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:AMOunt

Description	This command sets the manual FlexO error amount to be injected for FlexO BERT.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:MAN:AMO 5
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:INJect
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:AMOunt?

Description	This query returns the manual FlexO error amount to be injected for FlexO BERT.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of errors to be injected.
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:MAN:AMO?
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:INJect
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:TYPE?

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:INJect

Description	This command triggers the manual FlexO error injection for FlexO BERT.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:INJect
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:INJ
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:AMOunt
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:TYPE

Description	This command selects the manual FlexO error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to MFAS error.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	MFAS : MFAS
	OHCRC: OH CRC
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:FLXO:MAN:TYPE MFAS
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:INJect
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:TYPE?

Description	This query returns the mantal FlexO error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to MFAS.
	Navigation Path: Results > Alarms/Errors > Injection > FlexO > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	MFAS
	OH CRC
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:ERR:MAN:TYPE?
See Also	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:INJect
	SOURce:DATA:TELecom:FOTN:FLXO:ERRor:MANual:AMOunt?

:SOURce:DATA:TELecom:FOTN:FLXO:INSTance

Description	This command enables/disables the selection of an instance for alarms/errors injection purposes for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FlexO) > Instance
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:INSTance <wsp><Instance>, <Set>
Parameter(s)	**Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects an instance number.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the Instance.
	ON: Enables the instance.
	OFF: Disables the instance.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:INST 1,ON
See Also	SOURce:DATA:TELecom:FOTN:FOIC:LANE

:SOURce:DATA:TELecom:FOTN:FLXO:INSTance?

Description	This command enables/disables the selection of an instance for alarms/errors injection purposes for FlexO BERT.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FlexO) > Instance
Syntax	:SOURce:DATA:TELecom:FOTN:FLXO:INSTance? <wsp><Instance>
Parameter(s)	**Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects an instance number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enables/disables status of an Instance.
Example(s)	SOUR:DATA:TEL:FOTN:FLXO:INST 1,ON
See Also	SOURce:DATA:TELecom:FOTN:FOIC:LANE

:SOURce:DATA:TELecom:FOTN:FOIC:ALANes

Description	This command enables/disables the selection of all lanes for alarms/errors FOIC injection purposes for FlexO BERT. At *RST condition, this value is set to OFF. Navigation Path: Results > Alarms/Errors > Inject > Layer (FOIC) > All Lanes
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ALANes <wsp><Set>
Parameter(s)	**Set**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Enables/disables the selection of all lanes. ON: Selects all lanes OFF: Unselects all lanes
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ALAN ON
See Also	SOURce:DATA:TELecom:FOTN:FOIC:‚ÄãLANE

:SOURce:DATA:TELecom:FOTN:FOIC:ALANes?

Description	This query returns the enables/disable selection status of all lanes for alarms/errors FOIC injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FOIC) > All Lanes
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ALANes?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ALAN?
See Also	SOURce:DATA:TELecom:FOTN:FOIC:‚ÄãLANE

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AMOunt

Description	This command sets the manual FOIC error amount to be injected for FlexO BERT.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:AMO 1
See Also	SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AMOunt?

Description	This query returns the manual FOIC erreor amount to be injected for FlexO BERT.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optionnal. If no token is specified, the current amount is returned,
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<AMount>
Response(s)	**AMount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:AMO?
See Also	SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated?

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate FOIC error injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error injection.
	ON: Enables error generation.
	OFF: Disables error generation.
Response Syntax	<AMount>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:FOIC:ERR:AUT ON
See Also	SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AMount

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:CONTinuous

Description	This command sets the automated FEC error Mode: ON for Max Rate and OFF for Rate for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Mode
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<AMount>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated FOIC error MOde: ON for Max Rate and OFF for Rate for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Mode
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:CONTinuous?
Response Syntax	\<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated?

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:RATE

Description	This command sets the automated FOIC error Rate to be injected.
	At *RST condition, this value is set to device-dependant.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: BIggest supported value.
	MINimum: Smallest supported value
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FEC:ERR:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TEL:FOTN:FEC:ERRor:AMount

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:RATE ?

Description	This query returns the automated FOIC error Rate to be injected for FlexO BERT.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Rate > Rate
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:AMOunt

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:TYPE

Description	This command selects the automated FOIC error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to INVMARKER
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	INVMARKER: Inv. Marker
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:AUT:TYPE INVMARKER
See Also	SOURce:DATA:TELecom:FOTN:FEC:ERRor:MANual:TYPE

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:TYPE?

Description	This query returns the automated FOIC error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to INVMARKER.
	Navigation Path: Results> Alarms/Errors > Injection > FOIC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	INVMARKER: Inv. Marker
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:AUT:TYPE?
See Also	SOURce:DATA:TELecom:FOTN:FOIC:ERRor:MANual:TYPE?

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate FOIC error injection for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:AUT?
See Also	SOURce:DATA:TELecom:FOTN:FOIC:ERRor:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:INJect

Description	This command triggers the manual FOIC error injection for FlexO BERT.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:INJ

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:MANual:TYPE

Description	This command selects the manual FOIC error Defect to be injected.
	At *RST condition, this value is set to INVMARKER error.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	INVMARKER: Inv. Marker
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:MAN:TYPE INVMARKER
See Also	SOUR:DATA:TEL:FOTN:FEC:ERR:MAN:TYPE

:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:MANual:TYPE?

Description	This query returns the mantal FOIC error Defect to be injected for FlexO BERT.
	At *RST condition, this value is set to INVMARKER.
	Navigation Path: Results > Alarms/Errors > Injection > FOIC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:ERRor:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	INVMARKER: Inv. Marker
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:ERR:MAN:TYPE?
See Also	SOUR:DATA:TEL:FOTN:FEC:ERR:MAN:TYPE

:SOURce:DATA:TELecom:FOTN:FOIC:LANE

Description	This command enables/disables the selection of a lane for FOIC alarms/errors inejction purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FOIC) > Lane
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the FOIC per lane status.
	ON: Enables the lane.
	OFF: Disables the lane.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:LANE 1,ON
See Also	SOURce:DATA:TELecom:OTN:LANE

:SOURce:DATA:TELecom:FOTN:FOIC:LANE:SKEW:THReshold

Description	This command sets the FOIC excessive lane skew alarm threshold.
	At *RST condition, this value is set to 180 ns.
	Navigation Path: Results > Alarm/Errors > FOICx.y > Skew Alarm Threshold (ns)
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:LANE:SKEW:THReshold <wsp><SkewAlarmThreshold>
Parameter(s)	**SkewAlarmThreshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the value of the FOIC excessive lane skew alarm threshold in nanosecond.
	DEFault: To set the default FOIC excessive lane skew alarm threshold
	MINimum: To set the minimum FOIC excessive lane skew alarm threshold
	MAXimum: To set the maximum FOIC excessive lane skew alarm threshold
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:LANE:SKEW:THR 100
	SOUR:DATA:TEL:FOTN:FOIC:LANE:SKEW:THR?
	Returns: 100
	SOUR:DATA:TEL:FOTN:FOIC:LANE:SKEW:THR DEF
	SOUR:DATA:TEL:FOTN:FOIC:LANE:SKEW:THR?
	Returns: 180
See Also	SOURce:DATA:TELecom:FOTN:FOIC:LANE:SKEW:THReshold?

:SOURce:DATA:TELecom:FOTN:FOIC:LANE:SKEW:THReshold?

Description	This query gets the FOIC excessive lane skew alarm threshold configured value,
	At *RST condition, this value is set to 180 ns.
	Navigation Path: Results > Alarm/Errors > FOICx.y > Skew Alarm Threshold (ns)
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:LANE:SKEW:THReshold?[<wsp><Limit>]
Parameter(s)	**Limit**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	When not specified, returns the configured FOIC excessive lane skew alarm threshold value in nanosecond.
	DEFault: Not supported on the query.
	MINimum: Returns the minimum value that can be configured.
	MAXimum: Returns the maximum value that can be configured.
Response Syntax	<ThresholdValue>
Response(s)	**ThresholdValue**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the configured FOIC excessive lane skew alarm threshold value or the minimum/maximum value when the corresponding parameter is used.
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:LANE:SKEW:THR 100
	SOUR:DATA:TEL:FOTN:FOIC:LANE:SKEW:THR?
	Returns: 100
See Also	SOURce:DATA:TELecom:FOTN:FOIC:LANE:SKEW:THReshold
	SOURce:DATA:TELecom:FOTN:FOIC:LANE:SKEW:THReshold:RESet

:SOURce:DATA:TELecom:FOTN:FOIC:LANE?

Description	This query returns the enable/disable seletion status of a lane for FOIC alarms/errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (FOIC) > Lane
Syntax	:SOURce:DATA:TELecom:FOTN:FOIC:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the selection status of a lane.
	1: The lane is enabled.
	0: The lane is disabled.
Example(s)	SOUR:DATA:TEL:FOTN:FOIC:LAN? 1
See Also	SOUR:DATA:TEL:OTN:OTL:LANE?

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel

Description	This command enables/disables the periodic GFP (Payload) alarm injection.
	At *RST condition, this value is OFF.
	Navigation Path:Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel <wsp><SET>
Parameter(s)	**SET**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the periodic alarm Injection.
	ON: Enables the alarm injection.
	OFF: Disables the alarm injection.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN ON
	SOUR:DATA:TEL:GFP:ALAR:CHAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel:UPI?

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:PERiod

Description	This command selects the periodic GFP (Payload) alarm Period for injection.
	At *RST condition, this value is set to 100 ms.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > Period
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:PERiod <wsp><Period>
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the period. Choices are 10 to 1200 ms.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN:PER 100
	SOUR:DATA:TEL:GFP:ALAR:CHAN:PER?
	Returns: 100
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel:TYPE?

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:PERiod?

Description	This query returns the periodic GFP (Payload) alarm Period for injection.
	At *RST condition, this value is set to 100 ms.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > Period
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:PERiod?[<wsp><Period>]
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the period used for injection.
	This parameter is optional. If no token is specified, the current injection period is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns alarm period associated with client management frames.
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN:PER 100
	SOUR:DATA:TEL:GFP:ALAR:CHAN:PER?
	Returns: 100
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel:TYPE

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:TYPE

Description	This command selects the periodic GFP (Payload) alarm Defect to be injected.
	At *RST condition, this value is set to LOCS.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	DCI: GFP-DCI
	FDI: GFP-FDI
	LOCCS: GFP-LOCCS
	LOCS: GFP-LOCS
	RDI: GFP-RDI
	UDCMF: GFP-UserDefined CMF
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN:TYPE LOCS
	SOUR:DATA:TEL:GFP:ALAR:CHAN:TYPE?
	Returns: LOCS
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel:PERiod?

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:TYPE?

Description	This query returns the periodic GFP (Payload) alarm Defect to be injected.
	At *RST condition, this value is set to LOCS.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:TYPE?
Response Syntax	\<Type\>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the alarm to be injected:
	DCI: GFP-DCI
	FDI: GFP-FDI
	LOCCS: GFP-LOCCS
	LOCS: GFP-LOCS
	RDI: GFP-RDI
	UDCMF: GFP-UserDefined CMF
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN:TYPE LOCS
	SOUR:DATA:TEL:GFP:ALAR:CHAN:TYPE?
	Returns: LOCS
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel:PERiod

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:UPI

Description	This command selects the periodic GFP (Payload) alarm User-Defined UPI for injection.
	At *RST condition, this value is set to 0000 0000.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > User-Defined UPI
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:UPI <wsp><UPI>
Parameter(s)	UPI:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the User-Defined UPI.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN:UPI 0
	SOUR:DATA:TEL:GFP:ALAR:CHAN:UPI?
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel?

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:UPI?

Description	This query returns the periodic GFP (Payload) alarm User-Defined UPI for injection.
	At *RST condition, this value is set to 0000 0000.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > User-Defined UPI
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel:UPI?[<wsp><UPI>]
Parameter(s)	**UPI**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<VALUE>
Response(s)	**VALUE**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the client management frames UPI value when User-defined CMF is selected
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN:UPI 0
	SOUR:DATA:TEL:GFP:ALAR:CHAN:UPI?
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel

:SOURce:DATA:TELecom:GFP:ALARm:CHANnel?

Description	This query returns the enable/disable status of the periodic GFP (Payload) alarm injection.
	At *RST condition, this value is OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Periodic > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:CHANnel?
Response Syntax	<VALUE>
Response(s)	**VALUE**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Generation enabled
	0: Generation disabled
Example(s)	SOUR:DATA:TEL:GFP:ALAR:CHAN ON
	SOUR:DATA:TEL:GFP:ALAR:CHAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ALARm:CHANnel:UPI

:SOURce:DATA:TELecom:GFP:ALARm:FRAMe

Description	This command enables/disables the continuous GFP (Core Header) alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:FRAMe <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<VALUE>
Example(s)	SOUR:DATA:TEL:GFP:ALAR:FRAM ON
	SOUR:DATA:TEL:GFP:ALAR:FRAM?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ALARm:FRAMe:TYPE?

:SOURce:DATA:TELecom:GFP:ALARm:FRAMe:TYPE

Description	This command selects the continuous GFP (Core Header) alarm Defect to be injected.
	At *RST condition, this value is set to GFP-LFD.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:FRAMe:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LFD: GFP-LFD
Response Syntax	<VALUE>
Example(s)	SOUR:DATA:TEL:GFP:ALAR:FRAM:TYPE LFD
	SOUR:DATA:TEL:GFP:ALAR:FRAM:TYPE?
	Returns: LFD
See Also	SOURce:DATA:TELecom:GFP:ALARm:FRAMe?

:SOURce:DATA:TELecom:GFP:ALARm:FRAMe:TYPE?

Description	This query returns the continuous GFP (Core Header) alarm Defect to be injected.
	At *RST condition, this value is set to GFP-LFD.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:FRAMe:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LFD: GFP-LFD
Example(s)	SOUR:DATA:TEL:GFP:ALAR:FRAM:TYPE LFD
	SOUR:DATA:TEL:GFP:ALAR:FRAM:TYPE?
	Returns: LFD
See Also	SOURce:DATA:TELecom:GFP:ALARm:FRAMe

:SOURce:DATA:TELecom:GFP:ALARm:FRAMe?

Description	This query returns the enable/disable status of the continuous GFP (Core Header) alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ALARm:FRAMe?
Response Syntax	<SET>
Response(s)	**SET**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:GFP:ALAR:FRAM ON
	SOUR:DATA:TEL:GFP:ALAR:FRAM?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ALARm:FRAMe:TYPE

:SOURce:DATA:TELecom:GFP:CONFig:CMF

Description	This command enables/disables the CMF.
	At *RST condition, this value is ON.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > Alarms/Errors > GFP-F > CMF
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > Alarms/Errors > GFP-T > CMF
Syntax	:SOURce:DATA:TELecom:GFP:CONFig:CMF <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<SET>
Example(s)	SOUR:DATA:TEL:GFP:CONF:CMF ON
	SOUR:DATA:TEL:GFP:CONF:CMF?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE?

:SOURce:DATA:TELecom:GFP:CONFig:CMF?

Description	This query returns the status of CMF.
	At *RST condition, this value is OFF.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > Alarms/Errors > GFP-F > CMF
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > Alarms/Errors > GFP-T > CMF
Syntax	:SOURce:DATA:TELecom:GFP:CONFig:CMF?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the CMF.
	1, returns the CMF as ON.
	0, returns the CMF as OFF.
Example(s)	SOUR:DATA:TEL:GFP:CONF:CMF ON
	SOUR:DATA:TEL:GFP:CONF:CMF?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:CHANnel:CONFig:TYPE

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AMOunt

Description	This command sets the manual GFP (Payload) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 to 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AMO 50
	SOUR:DATA:TEL:GFP:ERR:CHAN:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:MANual:TYPE?

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AMOunt?

Description	This query returns the manual GFP (Payload) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<AMOUNT>
Response(s)	**AMOUNT**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns amount for the GFP manual error to be geneeated for Channel.
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AMO 50
	SOUR:DATA:TEL:GFP:ERR:CHAN:AMO?
	Returns: 50
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:MANual:TYPE

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated

Description	This command enables/disables the Rate/Max Rate GFP (Payload) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Inject
	This query returns the enable/disable status of the Rate/Max Rate GFP error injection.
	Returns the enable/disable injection status.
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables the error injection.
	OFF: Disables the error injection.
Response Syntax	<AMOUNT>
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT ON
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous

Description	This command sets the automated GFP (Payload) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Mode
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<AMOUNT>
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:CONT ON
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated?

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous?

Description	This query returns the automated GFP (Payload) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Mode
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous?
Response Syntax	<SET>
Response(s)	**SET**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:CONT ON
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:RATE

Description	This command sets the automated GFP (Payload) error Rate to be injected.
	At *RST condition, this value is set to 1.0E-01.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<SET>
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:RATE 1.2E-09
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:RATE?
	Returns: 1.2E-09
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:TYPE?

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:RATE?

Description	This query returns the automated GFP (Payload) error Rate to be injected.
	At *RST condition, this value is set to 1.0E-01.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the rate of error to be injected.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<RATE>
Response(s)	**RATE**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the injection rate for the selected GFP automated error for Channel.
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:RATE 1.2E-09
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:RATE?
	Returns: 1.2E-09
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:TYPE

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:TYPE

Description	This command selects the automated GFP (Payload) error Defect to be injected.
	At *RST condition, this value is set to tHEC-CORRectable.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CODERR: GFP-10B_ERR
	ECORRect: GFP-eHEC-CORR
	EUCORRect: GFP-eHEC-UNCORR
	PFCS: GFP-pFCS
	SUCORRPRE: GFP-SB-CORR (Pre)
	SUCORRPOST: GFP-SB-CORR (Post)
	SUUNCORR: GFP-SB-UNCORR
	TCORRect: GFP-tHEC-CORR
	TUCORRect: GFP-tHEC-UNCORR
Response Syntax	<RATE>
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:TYPE TCORR
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:TYPE?
	Returns: TCORR
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:RATE?

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:TYPE?

Description	This query returns the automated GFP (Payload) error Defect to be injected.
	At *RST condition, this value is set to tHEC-CORRectable.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CODERR: GFP-10B_ERR
	ECORRect: GFP-eHEC-CORR
	EUCORRect: GFP-eHEC-UNCORR
	PFCS: GFP-pFCS
	SUCORRPRE: GFP-SB-CORR (Pre)
	SUCORRPOST: GFP-SB-CORR (Post)
	SUUNCORR: GFP-SB-UNCORR
	TCORRect: GFP-tHEC-CORR
	TUCORRect: GFP-tHEC-UNCORR
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:TYPE TCORR
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT:TYPE?
	Returns: TCORR
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:RATE

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate GFP (Payload) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated?
Response Syntax	<SET>
Response(s)	**SET**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT ON
	SOUR:DATA:TEL:GFP:ERR:CHAN:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:INJect

Description	This command enables/disables the manual GFP (Payload) error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:INJect
Response Syntax	<SET>
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:INJ
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AUTomated?

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:MANual:TYPE

Description	This command selects the manual GFP (Payload) error Defect to be injected.
	At *RST condition, this value is set to tHEC-CORRectable.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CODERR: GFP-10B_ERR
	ECORRect: GFP-eHEC-CORR
	EUCORRect: GFP-eHEC-UNCORR
	PFCS: GFP-pFCS
	SUCORRPRE: GFP-SB-CORR (Pre)
	SUCORRPOST: GFP-SB-CORR (Post)
	SUUNCORR: GFP-SB-UNCORR
	TCORRect: GFP-tHEC-CORR
	TUCORRect: GFP-tHEC-UNCORR
Response Syntax	<SET>
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:MAN:TYPE TCORR
	SOUR:DATA:TEL:GFP:ERR:CHAN:MAN:TYPE?
	Returns: TCORR
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AMOunt?

:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:MANual:TYPE?

Description	This query returns the manual GFP (Payload) error Defect to be injected.
	At *RST condition, this value is set to tHEC-CORRectable.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:CHANnel:MANual:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CODERR: GFP-10B_ERR
	ECORRect: GFP-eHEC-CORR
	EUCORRect: GFP-eHEC-UNCORR
	PFCS: GFP-pFCS
	SUCORRPRE: GFP-SB-CORR (Pre)
	SUCORRPOST: GFP-SB-CORR (Post)
	SUUNCORR: GFP-SB-UNCORR
	TCORRect: GFP-tHEC-CORR
	TUCORRect: GFP-tHEC-UNCORR
Example(s)	SOUR:DATA:TEL:GFP:ERR:CHAN:MAN:TYPE TCORR
	SOUR:DATA:TEL:GFP:ERR:CHAN:MAN:TYPE?
	Returns: TCORR
See Also	SOURce:DATA:TELecom:GFP:ERRor:CHANnel:AMOunt

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AMOunt

Description	This command sets the manual GFP (Core Header) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 to 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AMO 40
	SOUR:DATA:TEL:GFP:ERR:FRAM:AMO?
	Returns: 40
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:MANual:TYPE?

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AMOunt?

Description	This query returns the manual GFP (Core Header) error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of GFP error for manual injection for Frame.
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AMO 40
	SOUR:DATA:TEL:GFP:ERR:FRAM:AMO?
	Returns: 40
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:MANual:TYPE

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated

Description	This command enables/disables the Rate/Max Rate GFP (Core Header) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: disables error injection.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT ON
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT?
	Returns: 1
See Also	SOURce:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:CONTinuous

Description	This command sets the automated GFP (Core Header) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Mode
	This query returns the automated GFP error Mode: ON for Max Rate and OFF for Rate.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:CONT ON
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated?

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:CONTinuous?

Description	This query returns the automated GFP (Core Header) error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Mode
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:CONTinuous?
Response Syntax	<SET>
Response(s)	**SET**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:CONT ON
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:RATE

Description	This command sets the automated GFP (Core Header) error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<SET>
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:RATE 1.2E-09
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:RATE?
	Returns: 1.2E-09
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:TYPE?

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:RATE ?

Description	This query returns the automated GFP (Core Header) error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current value is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the injection rate for the selected GFP error for Frame.
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:RATE 1.2E-09
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:RATE?
	Returns: 1.2E-09
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:TYPE

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:TYPE

Description	This command selects the automated GFP (Core Header) error Defect to be injected.
	At *RST condition, this value is set to GFP-cHEC-CORR error.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CORRectable: GFP-cHEC-CORR
	UCORrectable: GFP-cHEC-UNCORR
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:TYPE CORR
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:TYPE?
	Returns: CORR
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:RATE?

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:TYPE?

Description	This query returns the automated GFP (Core Header) error Defect to be injected.
	At *RST condition, this value is set to GFP-cHEC-CORR error.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CORRectable: GFP-cHEC-CORR
	UCORrectable: GFP-cHEC-UNCORR
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:TYPE UCOR
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT:TYPE?
	Returns: UCOR
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated:RATE

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate GFP (Core Header) error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated?
Response Syntax	<SET>
Response(s)	**SET**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT ON
	SOUR:DATA:TEL:GFP:ERR:FRAM:AUT?
	Returns: 1
See Also	SOURce:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:INJect

Description	This command enables/disables the manual GFP (Core Header) error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:INJect
Response Syntax	<SET>
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:INJ
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AUTomated?

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:MANual:TYPE

Description	This command selects the manual GFP (Core Header) error Defect to be injected.
	At *RST condition, this value is set to GFP-cHEC-CORR Frame error.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CORRectable: GFP-cHEC-CORR
	UCORrectable: GFP-cHEC-UNCORR
Response Syntax	<SET>
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:MAN:TYPE UCOR
	SOUR:DATA:TEL:GFP:ERR:FRAM:MAN:TYPE?
	Returns: UCOR
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AMOunt?

:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:MANual:TYPE?

Description	This query returns the manual GFP (Core Header) error Defect to be injected.
	At *RST condition, this value is set to GFP-cHEC-CORR error.
	Navigation Path: Results > Alarms/Errors > Injection > GFP > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:GFP:ERRor:FRAMe:MANual:TYPE?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CORRectable: GFP-cHEC-CORR
	UCORrectable: GFP-cHEC-UNCORR
Example(s)	SOUR:DATA:TEL:GFP:ERR:FRAM:MAN:TYPE CORR
	SOUR:DATA:TEL:GFP:ERR:FRAM:MAN:TYPE?
	Returns: CORR
See Also	SOURce:DATA:TELecom:GFP:ERRor:FRAMe:AMOunt

:SOURce:DATA:TELecom:OPTical:ALARm:PORT

Description	This command enables/disables the continuous Interface alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OPTical:ALARm:PORT <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enabled
	OFF: Disabed
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT ON
	SOUR:DATA:TEL:OPT:ALAR:PORT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical?
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE?

:SOURce:DATA:TELecom:OPTical:ALARm:PORT:ALANes

Description	This command enables/disables the selection of all lanes for alarms injection purposes.
	This command is not associated with any *RST condition.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (Interface) > All lanes
	Navigation Path: Results > Summary (Unframed BERT) > Inject > Layer (Interface) > All lanes
Syntax	:SOURce:DATA:TELecom:OPTical:ALARm:PORT:ALANes <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT:ALAN ON
	SOUR:DATA:TEL:OPT:ALAR:PORT:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTL:LANE
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE

:SOURce:DATA:TELecom:OPTical:ALARm:PORT:ALANes?

Description	This query returns the enable/disable selection status of all lanes for alarm injection purposes.
	This command is not associated with any *RST condition.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (Interface) > All lanes
	Navigation Path: Results > Summary (Unframed BERT) > Inject > Layer (Interface) > All lanes
Syntax	:SOURce:DATA:TELecom:OPTical:ALARm:PORT:ALANes?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT:ALAN ON
	SOUR:DATA:TEL:OPT:ALAR:PORT:ALAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTL:LANE ?
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE

:SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE

Description	This command enables/disables the selection of a lane for Interface alarm injection purposes.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Inject > Interface > Lane
Syntax	:SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of a lane.
	ON: Enables the lane.
	OFF: Disables the lane.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT:LANE 1, ON
	SOUR:DATA:TEL:OPT:ALAR:PORT:LANE? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTL:ALANes
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:ALANes

:SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE?

Description	This query returns the enable/disable selection status of a lane for Interface alarm injection purposes.
	At *RST condition, this value is device-dependent.
	Navigation Path: Results > Alarms/Errors > Inject > Interface > Lane
Syntax	:SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of a lane.
	1: The lane is enabled.
	0: The lane is disabled.
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT:LANE 1, ON
	SOUR:DATA:TEL:OPT:ALAR:PORT:LANE? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTL:ALANes?
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:ALANes

:SOURce:DATA:TELecom:OPTical:ALARm:PORT:TYPE?

Description	This query returns the continuous Interface (Optical) alarm Defect to be injected.
	At *RST condition, this value is set to LOS.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OPTical:ALARm:PORT:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOS
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT:TYPE?
	Returns: LOS
See Also	SOURce:DATA:TELecom:ELECtrical:ALARm:PORT?

:SOURce:DATA:TELecom:OPTical:ALARm:PORT?

Description	This query returns the enable/disable status of the continuous Interface alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Interface > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OPTical:ALARm:PORT?
Response Syntax	\<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OPT:ALAR:PORT ON
	SOUR:DATA:TEL:OPT:ALAR:PORT?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:PHYSical
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE
	SOURce:DATA:TELecom:OPTical:ALARm:PORT:LANE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]

Description	This command enables/disables the continuous ODU alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Inject
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n] <wsp><Inject>
Parameter(s)	Inject:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:ACHAnnel

Description	This query returns if LO ODU alarm injection is done on All Channels for Multi-Channel OTN.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Channel - All
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:ACHAnnel <wsp><AllChannel>
Parameter(s)	**AllChannel**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:ACHA ON
See Also	SOURce:DATA:TEL:OTN:ALAR:ODU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:ACHAnnel?

Description	This query returns if LO ODU alarm injection is done on All Channels for Multi-Channel OTN.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Channel - All
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:ACHAnnel?
Response Syntax	<AllChannel>
Response(s)	**AllChannel**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns an indication that the LO ODU alarm injection is done on ALL channels, in the Multi-Channel OTN test application.
	1, injection is done on all channels.
	0, injection is done on a specific channel.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:ACHA ON
	SOUR:DATA:TEL:OTN:ALAR:ODU1:ACHA?
	Returns: 1
See Also	SOURce:DATA:TEL:OTN:ALAR:ODU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:CHANnel

Description	This command selects the channel used for LO ODU alarm injection, when All Channel is not selected, for Multi-Channel OTN.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Channel
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:CHANnel <wsp><Channel>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the channel for alarm injection.
Response Syntax	<AllChannel>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:CHAN 5
See Also	SOURce:DATA:TEL:OTN:ALAR:ODU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:CHANnel?

Description	This query returns the channel number or client ID used for alarm injection, when All channels is not selected, for Multi-Channel OTN and FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Channel
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:CHANnel?
Response Syntax	<Channel Number or Client ID>
Response(s)	**Channel Number or Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel number or client ID used for alarm injection, when All channels is not selected, for Multi-Channel OTN and FlexO BERT test
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:CHAN 5
	SOUR:DATA:TEL:OTN:ALAR:ODU1:CHAN?
	Returns: 5
See Also	SOURce:DATA:TEL:OTN:ALAR:ODU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]

Description	This command enables/disables the continuous ODU1e/2e/3e1/3e2 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Alarm > Continuous > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]

Description	This command enables/disables the continuous ODU1e/2e/3e1/3e2 TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Alarm > Continuous > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:TYPE

Description	This command selects the continuous ODU1e/2e/3e1/3e2 TCM alarm Defect to be injected.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Alarm > Continuous > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:TYPE?
	Returns: TLTC
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:TYPE?

Description	This query returns the continuous ODU1e/2e/3e1/3e2 TCM alarm Defect to be injected.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Alarm > Continuous > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:TYPE?
	Returns: TLTC
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]?

Description	This query returns the enable/disable status of the continuous ODU1e/2e/3e1/3e2 TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Alarm > Continuous > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TCM[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE

Description	This command selects the continuous ODU1e/2e/3e1/3e2 alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Alarm > Continuous > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LOCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TYPE?
	Returns: OFSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E:[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE?

Description	This query returns the continuous ODU1e/2e/3e1/3e2 alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Alarm > Continuous > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOFLom: LOFLOM
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LOCK
	OOCI: OCI
	OTIM: TIM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TYPE?
	Returns: OFSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]?

Description	This query returns the enable/disable status of the continuous ODU1e/2e/3e1/3e2 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Alarm > Continuous > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU3:E1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F

Description	This command enables/disables the Optical Channel Data Unit (ODU) alarm generation for non-standard rates OTU(1/2)f
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > Global Injection > Layer (ODU(1/2)f) > Type (Alarms) > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F <wsp><Status>
Parameter(s)	Status:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F ON
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]

Description	This command enables/disables the continuous ODU1f/2f TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]: TYPE

Description	This command selects the continuous ODU1f/2f TCM alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:TYPE?
	Returns: TLTC
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]: TYPE?

Description	This query returns the continuous ODU1f/2f TCM alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:TYPE?
	Returns: TLTC
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]?

Description	This query returns the enable/disable status of the continuous ODU1f/2f TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TCM[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TYPE

Description	This command selects the continuous ODU1f/2f TCM alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	OAIS: AIS
	OBDi: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LCK
	OOCI: OCI
	OTIM: TIM
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TYPE?
	Returns: OFSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E:[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TYPE?

Description	This query returns the continuous ODU1f/2f TCM alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	OAIS: AIS
	OBDI: BDI
	OBSD: BSD
	OBSF: BSF
	OFSD: FSD
	OFSF: FSF
	OLCK: LCK
	OOCI: OCI
	OTIM: TIM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TYPE?
	Returns: OFSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F?

Description	This query returns the status of the Optical Data Unit (ODU) alarm generation for non-standard rates OTU(1/2)f
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > Global Injection > Layer (ODU(1/2)f) > Type (Alarm) > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:F?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Optical Data Unit (ODU) alarm generation.
	1, status of Optical Data Unit (ODU) alarm is enabled
	0, status of Optical Data Unit (ODU) alarm is disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:F:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F ON
	SOUR:DATA:TEL:OTN:ALAR:ODU1:F?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:E[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC

Description	This command enables/disables the selection of an OTUC for ODUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (ODUCn) > OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC <wsp><OTUC #>, <Set>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the ODUCn per OTUC status.
	ON: Enables the OTUC.
	OFF: Disables the OTUC.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU200:OTUC 1, ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC:ALL

Description	This command enables/disables the selection of all OTUC for ODUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (ODUCn) > All OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC:ALL <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all OTUC.
	ON: Selects all OTUC
	OFF: Unselects all OTUC
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU200:OTUC:ALL ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC:ALL

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC:ALL?

Description	This query returns the enable/disable selection status of all OTUC for ODUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer(ODUCn) > All OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC:ALL?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all OTUC.
	1: All OTUC are enabled.
	0: None or not all OTUC are enabled.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU200:OTUC:ALL?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC:ALL?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC?

Description	This query returns the enable/disable selection status of an OTUC for ODUCn alarms injection purposes for FlexO BERT. At *RST condition, this value is set to OFF. Navigation Path: Results > Alarms/Errors > Inject > Layer (ODUCn) > OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC? <wsp><OTUC #>
Parameter(s)	**OTUC #**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects OTUC number
Response Syntax	<Set>
Response(s)	**Set**: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the OTUC status for ODUC alarm injection. 1: The OTUC is enabled. 0: The OTUC is disabled.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU200:OTUC? 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]

Description	This command enables/disables the continuous ODU TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:TCM1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU3:TCM1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:TYPE

Description	This command selects the continuous ODU TCM alarm Defect to be injected.
	At *RST condition, this value is set to TLTC.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:TCM1:TYPE TLTC
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:TYPE?

Description	This query returns the continuous ODU TCM alarm Defect to be injected.
	At *RST condition, this value is set to TLTC.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:TYPE?
Response Syntax	\<Alarm\>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the alarm to be injected:
	TBDI: BDI
	TBIAE: BIAE
	TIAE: IAE
	TLTC: LTC
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:TCM1:TYPE TLTC
	SOUR:DATA:TEL:OTN:ALAR:ODU3:TCM1:TYPE?
	Returns: TLTC
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]?

Description	This query returns the enable/disable status of the continuous ODU TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU3:TCM1?
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE

Description	This command selects the continuous ODU alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Defect
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	OAIS: ODU-AIS
	OBDi: ODU-BDI
	OLCK: ODU-LCK
	OOCI: ODU-OCI
	OFSF: ODU-FSF
	OBSF: ODU-BSF
	OFSD: ODU-FSD
	OBSD: ODU-BSD
	LOFLom, ODU-LOFLOM
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1:TYPE?
	Returns: OFSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

Description	This query returns the continuous ODU alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Defect
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	OAIS: ODU-AIS
	OBDi: ODU-BDI
	OLCK: ODU-LCK
	OOCI: ODU-OCI
	OFSF: ODU-FSF
	OBSF: ODU-BSF
	OFSD: ODU-FSD
	OBSD: ODU-BSD
	LOFLom, ODU-LOFLOM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1:TYPE?
	Returns: OFSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]?

Description	This query returns the enable/disable status of the continuous ODU alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Alarm > Continuous > Inject
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:ODU1:TYPE OFSF
	SOUR:DATA:TEL:OTN:ALAR:ODU1 ON
	SOUR:DATA:TEL:OTN:ALAR:ODU1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]

Description	This command enables/disables the continuous OPU / OPU3e1/e2 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Alarm > Continuous > Inject
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n] <wsp><Inject>
Parameter(s)	Inject:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1 ON
	SOUR:DATA:TEL:OTN:ALAR:OPU1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:ACHAnnel

Description	This command selects if LO OPU alarm injection is done on ALL channels, in the Multi-Channel OTN test application.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:ACHAnnel <wsp><AllChannel>
Parameter(s)	**AllChannel**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:ACHA ON
See Also	SOURce:DATA:TEL:OTN:ALAR:OPU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:ACHAnnel?

Description	This query returns if LO OPU alarm injection is done on ALL channels, in the Multi-Channel OTN test application.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:ACHAnnel?
Response Syntax	\<AllChannel\>
Response(s)	**AllChannel**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns an indication that the LO OPU alarm injection is done on ALL channels, in the Multi-Channel OTN test application.
	1, injection is done on all channels.
	0, injection is done on a specific channel.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:ACHA ON
	SOUR:DATA:TEL:OTN:ALAR:OPU1:ACHA?
	Returns: 1
See Also	SOURce:DATA:TEL:OTN:ALAR:OPU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:CHANnel

Description	This command selects the channel number or client ID used for alarm injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:CHANnel <wsp><Channel Number or Client ID>
Parameter(s)	**Channel Number or Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the channel number or client ID used for alarm injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
Response Syntax	<AllChannel>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:CHAN 5
See Also	SOURce:DATA:TEL:OTN:ALAR:OPU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:CHANnel?

Description	This query returns the channel number or client ID used for alarm injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:CHANnel?
Response Syntax	<Channel Number or Client ID>
Response(s)	**Channel Number or Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel number or client ID used for alarm injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
	'n', injection is done on channel or clien ID 'n', when AllCHAnnel is 'OFF'.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:CHAN 5
	SOUR:DATA:TEL:OTN:ALAR:OPU1:CHAN?
	Returns: 5
See Also	SOURce:DATA:TEL:OTN:ALAR:OPU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E

Description	This command enables/disables the continuous OPU1e/2e alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1e/2e > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:E:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1:E ON
	SOUR:DATA:TEL:OTN:ALAR:OPU1:E?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:TYPE

Description	This command selects the continuous OPU1e/2e alarm Defect to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1e/2e > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:E:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1:E:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:TYPE?

Description	This query returns the continuous OPU1e/2e alarm Defect to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1e/2e > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:E:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1:E:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E?

Description	This query returns the enable/disable status of the continuous OPU1e/2e alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1e/2e > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:E?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:E:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1:E ON
	SOUR:DATA:TEL:OTN:ALAR:OPU1:E?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F

Description	This command enables/disables the continuous OPU1f/2f alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1f/2f > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:F:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1:F ON
	SOUR:DATA:TEL:OTN:ALAR:OPU1:F?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:TYPE

Description	This command selects the continuous OPU1f/2f alarm Defect to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1f/2f > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:F:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1:F:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:TYPE?

Description	This query returns the continuous OPU1f/2f alarm Defect to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1f/2f > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:F:TYPE OCSF
	SOUR:DATA:TEL:OTN:ALAR:OPU1:F:TYPE?
	Returns: OCSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F?

Description	This query returns the enable/disable status of the continuous OPU1f/2f alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU1f/2f > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:F?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:F:TYPE OCSF
	SOUR:DATA:TEL:OTN:ALAR:OPU1:F ON
	SOUR:DATA:TEL:OTN:ALAR:OPU1:F?
	Returns: 1

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC

Description	This command enables/disables the selection of an OTUC for OPUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OPUCn) > OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC <wsp><OTUC #>, <Set>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the ODUCn per OTUC status.
	ON: Enables the OTUC.
	OFF: Disables the OTUC.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU200:OTUC 1, ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC:ALL

Description	This command enables/disables the selection of all OTUC for OPUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OPUCn) > All OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC:ALL <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all OTUC.
	ON: Selects all OTUC
	OFF: Unselects all OTUC
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU200:OTUC:ALL ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC:ALL

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC:ALL?

Description	This query returns the enable/disable selection status of all OTUC for OPUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer(OPUCn) > All OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC:ALL?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all OTUC.
	1: All OTUC are enabled.
	0: None or not all OTUC are enabled.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU200:OTUC:ALL?
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC:ALL?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC?

Description	This query returns the enable/disable selection status of an OTUC for OPUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OPUCn) > OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC? <wsp><OTUC #>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the OTUC status for OPUC alarm injection.
	1: The OTUC is enabled.
	0: The OTUC is disabled.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU200:OTUC? 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE

Description	This command selects the continuous OPU / OPU3e1/e2 alarm Defect to be injected.
	At *RST condition, this value is set device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Alarm > Continuous > Defect
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OPU1:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

Description	This query returns the continuous OPU / OPU3e1/e2 alarm Defect to be injected.
	At *RST condition, this value is set device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Alarm > Continuous > Defect
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	OAIS: AIS
	OCSF: CSF
	OMSim: MSIM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:TYPE OCSF
	SOUR:DATA:TEL:OTN:ALAR:OPU1:TYPE?
	Returns: OCSF
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]?

Description	This query returns the enable/disable status of the continuous OPU / OPU3e1/e2 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Alarm > Continuous > Inject
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OPU1:TYPE OCSF
	SOUR:DATA:TEL:OTN:ALAR:OPU1 ON
	SOUR:DATA:TEL:OTN:ALAR:OPU1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]

Description	This command enables/disables the continuous OTU alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU > Alarm > Continuous > Inject
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3 ON
	SOUR:DATA:TEL:OTN:ALAR:OTU3?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]

Description	This command enables/disables the continuous OTU1e/2e/3e1/3e2 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Alarm > Continuous > Inject
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1 ON
	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE

Description	This command selects the continuous OTU1e/2e/3e1/3e2 alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Alarm > Continuous > Defect
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE?

Description	This query returns the continuous OTU1e/2e/3e1/3e2 alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Alarm > Continuous > Defect
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]?

Description	This query returns the enable/disable status of the continuous OTU1e/2e/3e1/3e2 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Alarm > Continuous > Inject
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1 ON
	SOUR:DATA:TEL:OTN:ALAR:OTU3:E1?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F

Description	This command enables/disables the continuous OTU1f/2f alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU1:F:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU1:F ON
	SOUR:DATA:TEL:OTN:ALAR:OTU1:F?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:TYPE

Description	This command selects the continuous OTU1f/2f alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU1:F:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU1:F:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:TYPE?

Description	This query returns the continuous OTU1f/2f alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOF
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU1:F:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU1:F:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F?

Description	This query returns the enable/disable status of the continuous OTU1f/2f alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:F?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU1:F:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU1:F ON
	SOUR:DATA:TEL:OTN:ALAR:OTU1:F?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:E[1..n]

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC

Description	This command enables/disables the selection of an OTUC for OTUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTUCn) > OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC <wsp><OTUC #>, <Set>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the OTUCn per OTUC status.
	ON: Enables the OTUC.
	OFF: Disables the OTUC.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU200:OTUC 1, ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC:ALL

Description	This command enables/disables the selection of all OTUC for OTUCn alarms injection purposes for FlexO BERT. At *RST condition, this value is set to OFF. Navigation Path: Results > Alarms/Errors > Inject > Layer (OTUCn) > All OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC:ALL <wsp><Set>
Parameter(s)	**Set**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Enables/disables the selection of all OTUC. ON: Selects all OTUC OFF: Unselects all OTUC
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU200:OTUC:ALL ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC:ALL

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC:ALL?

Description	This query returns the enable/disable selection status of all OTUC for OTUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer(OTUCn) > All OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC:ALL?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all OTUC.
	1: All OTUC are enabled.
	0: None or not all OTUC are enabled.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU200:OTUC:ALL?
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC:ALL?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC?

Description	This query returns the enable/disable selection status of an OTUC for OTUCn alarms injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTUCn) > OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC? <wsp><OTUC #>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the OTUC status for OTUC alarm injection.
	1: The OTUC is enabled.
	0: The OTUC is disabled.
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU200:OTUC? 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE

Description	This command selects the continuous OTU alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > OTU > Alarm > Continuous > Defect
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOF
	LOFLom
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU3:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE?

Description	This query returns the continuous OTU alarm Defect to be injected.
	At *RST condition, this value is set to OAIS.
	Navigation Path: Results > Alarms/Errors > Injection > OTU > Alarm > Continuous > Defect
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOF
	LOFLom
	LOM
	OAIS: AIS
	OBDi: BDI
	OBIae: BIAE
	OIAE: IAE
	OOF
	OOM
	OTIM: TIM
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3:TYPE OAIS
	SOUR:DATA:TEL:OTN:ALAR:OTU3:TYPE?
	Returns: OAIS
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]?

Description	This query returns the enable/disable status of the continuous OTU alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU > Alarm > Continuous > Inject
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ALAR:OTU3 ON
	SOUR:DATA:TEL:OTN:ALAR:OTU3?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt

Description	This command sets the manual FEC error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 to 50.
	MAXimum: The maximum value.
	MINimum: The minimum value.
	DEFault: The default value.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt?

Description	This query returns the manual FEC error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of Forward Error Correction (FEC) error.
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated

Description	This command enables/disables the Rate/Max Rate FEC error injection
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT ON
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:CONTinuous

Description	This command sets the automated FEC error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:CONTinuous?

Description	This query returns the automated FEC error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE

Description	This command sets the automated FEC error Rate to be injected.
	At *RST condition, this value is set to 1.5E-02.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected. Choices are 1.0E-07 to 1.5E-02.
	MAXimum, sets error rate to maximum.
	MINimum, sets error rate to minimum.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE?

Description	This query returns the automated FEC error Rate to be injected.
	At *RST condition, this value is set to 1.5E-02.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:TYPE

Description	This command selects the automated FEC error Defect to be injected.
	At *RST condition, this value is set to FCCW.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE?
	Returns: FCCW
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:TYPE?

Description	This query returns the automated FEC error Defect to be injected.
	At *RST condition, this value is set to FCCW.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE?
	Returns: FCCW
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate FEC error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT ON
	SOUR:DATA:TEL:OTN:ERR:FEC:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:INJect

Description	This command enables/disables the manual FEC error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:AMO 15
	SOUR:DATA:TEL:OTN:ERR:FEC:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:INJect

:SOURce:DATA:TELecom:OTN:ERRor:FEC:MANual:TYPE

Description	This command selects the manual FEC error Defect to be injected.
	At *RST condition, this value is set to FCCW.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE?
	Returns: FCCW
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:FEC:MANual:TYPE?

Description	This query returns the manual FEC error Defect to be injected.
	At *RST condition, this value is set to FCCW.
	Navigation Path: Results > Alarms/Errors > Injection > FEC > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:FEC:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FCBit: FEC-CORR-BIT
	FCCW: FEC-CORR-CW
	FCSTRESS: FCSTRESS
	FCSYmb: FEC-CORR-SYMB
	FUCW: FEC-UNCORR-CW
Example(s)	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE FCCW
	SOUR:DATA:TEL:OTN:ERR:FEC:MAN:TYPE?
	Returns: FCCW
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE
	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:ACHAnnel

Description	This command selects if LO ODU error injection is done on All Channels for Multi-Channel OTN.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Channel - All
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:ACHAnnel <wsp><AllChannel>
Parameter(s)	**AllChannel**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:ACHA ON
See Also	SOURce:DATA:TEL:OTN:ERR:ODU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:ACHAnnel?

Description	This query returns if LO ODU error injection is done on All Channels for Multi-Channel OTN.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Channel - All
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:ACHAnnel?
Response Syntax	<AllChannel>
Response(s)	**AllChannel**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable All Channgels selection status:
	1: Injection is done on all channels.
	0: Injection is done on a specific channel.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:ACHA ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:ACHA?
	Returns: 1
See Also	SOURce:DATA:TEL:OTN:ERR:ODU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt

Description	This command sets the manual ODU error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU > Error > Manual > Amount
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<AllChannel>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt?

Description	This query returns the manual ODU error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU > Error > Manual > Amount
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate ODU error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Inject
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection
	OFF: Disables error injection
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous

Description	This command sets the automated ODU error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Mode
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous?

Description	This query returns the automated ODU error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Mode
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:R ATE

Description	This command sets the automated ODU error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate > Rate
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Sets to maximum rate.
	MINimum: Sets to minimum rate.
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:R ATE?

Description	This query returns the automated ODU error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate > Rate
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:CONTinuous

Description	This command sets the automated ODU TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:AUT:TCM1:CONT ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:CONTinuous?

Description	This query returns the automated ODU TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:AUT:TCM1:CONT?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:RATE

Description	This command sets the automated ODU TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:AUT:TCM1:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:RATE?

Description	This query returns the automated ODU TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:AUT:TCM1:RATE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:TYPE

Description	This command selects the manual ODU TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:AUT:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:TYPE?

Description	This query returns the manual ODU TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:AUT:TCM1:TYPE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE

Description	This command selects the automated ODU error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Defect
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OBIP8: ODU-BIP-8
	OBEI: ODU-BEI
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE?

Description	This query returns the automated ODU error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Defect
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
	This command selects the automated ODU error Defect to be injected.
	Selects the error to be injected:
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OBIP8: ODU-BIP-8
	OBEI: ODU-BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate ODU error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Inject
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:CHANnel

Description	This command selects the channel number or client ID used for LO ODU error injection, when All Channel is not selected, for Multi-Channel OTN and FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Channel
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:CHANnel <wsp><Channel Number or Client ID>
Parameter(s)	**Channel Number or Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the channel number or client ID used for error injection, when All Channel is not selected, for Multi-Channel OTN and FlexO BERT test.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:CHAN 5
See Also	SOURce:DATA:TEL:OTN:ERR:ODU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:CHANnel?

Description	This query returns the channel number or client ID used for error injection, when All channels is not selected, for Multi-Channel OTN and FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Rate/Max Rate > Channel
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:CHANnel?
Response Syntax	<Channel Number or Client ID>
Response(s)	**Channel Number or Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel number or client ID used for error injection, when All Channel is not selected, for Multi-Channel OTN and FlexO BERT test.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:CHAN 5
	SOUR:DATA:TEL:OTN:ERR:ODU1:CHAN?
	Returns: 5
See Also	SOURce:DATA:TEL:OTN:ERR:ODU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

Description	This command sets the manual ODU1e/2e/3e1/3e2 error Amount to be injected. At *RST condition, this value is set to 1. Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Manual > Amount NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the amount of error to be injected. Choices are 1 through 50. MAXimum: Biggest supported value. MINimum: Smallest supported value. DEFault: Default value.
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE OBIP8 SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AMO 15 SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AMO? Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt?

Description	This query returns the manual ODU1e/2e/3e1/3e2 error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Manual > Amount
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate ODU1e/2e/3e1/3e2 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous

Description	This command sets the automated ODU1e/2e/3e1/3e2 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Mode
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous?

Description	This query returns the automated ODU1e/2e/3e1/3e2 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Mode
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated:RATE

Description	This command sets the automated ODU1e/2e/3e1/3e2 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Rate > Rate
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum, sets the injection rate for the selected ODU to maximum.
	MINimum, sets the injection rate for the selected ODU to minimum.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n:E[1..n]]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE?

Description	This query returns the automated ODU1e/2e/3e1/3e2 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Rate > Rate
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TCM[1..n]:CONTinuous

Description	This command sets the automated ODU1e/2e/3e1/3e2 TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Mode
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TCM[1..n]:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated:TCM[1..n]:CONTinuous?

Description	This query returns the automated ODU1e/2e/3e1/3e2 TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Mode
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TCM[1..n]:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated:TCM[1..n]:RATE

Description	This command sets the automated ODU1e/2e/3e1/3e2 TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Rate > Rate
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TCM[1..n]:RATE \<wsp>\<Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a \<DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	\<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated:TCM[1..n]:RATE?

Description	This query returns the automated ODU1e/2e/3e1/3e2 TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Rate > Rate
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TCM[1..n]:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated:TCM[1..n]:TYPE

Description	This command selects the automated ODU1e/2e/3e1/3e2 TCM error Defect to be injected.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Rate/Max Rate > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
	Returns the error to be injected:
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TCM[1..n]:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated:TCM[1..n]:TYPE?

Description	This query returns the automated ODU1e/2e/3e1/3e2 TCM error Defect to be injected.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Rate/Max Rate > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TCM[1..n]:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TCM1:TYPE?
	Returns: TBIP9
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE

Description	This command selects the automated ODU1e/2e/3e1/3e2 error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OBIP8: BIP-8
	OBEI: BEI
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated:TYPE?

Description	This query returns the automated ODU1e/2e/3e1/3e2 error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OBIP8: BIP-8
	OBEI: BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTo mated?

Description	This query returns the enable/disable status of the Rate/Max Rate ODU1e/2e/3e1/3e2 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:INJect

Description	This command enables/disables the manual ODU1e/2e/3e1/3e2 error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Manual > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANu al:TCM[1..n]:TYPE

Description	This command selects the manual ODU1e/2e/3e1/3e2 TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Manual > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TCM[1..n]:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TCM[1..n]:TYPE?

Description	This query returns the manual ODU1e/2e/3e1/3e2 TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Manual > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TCM[1..n]:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

Description	This command selects the manual ODU1e/2e/3e1/3e2 error Defect to be injected.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Manual > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE \<wsp>\<Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OBIP8: BIP-8
	OBEI: BEI
Response Syntax	\<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANu al:TYPE?

Description	This query returns the manual ODU1e/2e/3e1/3e2 error Defect to be injected.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 > Error > Manual > Defect
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OBIP8: BIP-8
	OBEI: BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1 ..n]:AMOunt

Description	This command sets the manual ODU1e/2e/3e1/3e2 TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Manual > Amount
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Grestest supported amount
	MINimum: Smallest supported amount
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1 ..n]:AMOunt?

Description	This query returns the manual ODU1e/2e/3e1/3e2 TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Manual > Amount
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1..n]:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1 ..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate ODU1e/2e/3e1/3e2 TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Rate/Max Rate > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1..n]:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AUT ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE

	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1 ..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate ODU1e/2e/3e1/3e2 TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Rate/Max Rate > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1..n]:AUTomated?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1 ..n]:INJect

Description	This command enables/disables the manual ODU1e/2e/3e1/3e2 TCM error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1e/2e/3e1/3e2 TCM > Error > Manual > Inject
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:TCM[1..n]:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU3:E1:TCM1:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AMOunt

Description	This command sets the manual ODU1f/2f error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AMOunt?

Description	This query returns the manual ODU1f/2f error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated

Description	This command enables/disables the Rate/Max Rate ODU1f/2f error injection. At *RST condition, this value is set to OFF. Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated <wsp><Inject>
Parameter(s)	**Inject**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Starts/stops the automated Rate/Max Rate error Injection. ON: Enables error injection. OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8 SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:RATE 1.0E-09 SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT ON SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT? Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: CONTinuous

Description	This command sets the automated ODU1f/2f error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: CONTinuous?

Description	This query returns the automated ODU1f/2f error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: RATE

Description	This command sets the automated ODU1f/2f error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n:E[1..n]]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: RATE?

Description	This query returns the automated ODU1f/2f error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TCM[1..n]:CONTinuous

Description	This command sets the automated ODU1f/2f TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TCM[1..n]:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TCM[1..n]:CONTinuous?

Description	This query returns the automated ODU1f/2f TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TCM[1..n]:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:CONT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TCM[1..n]:RATE

Description	This command sets the automated ODU1f/2f TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TCM[1..n]:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TCM[1..n]:RATE?

Description	This query returns the automated ODU1f/2f TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TCM[1..n]:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TCM[1..n]:TYPE

Description	This command selects the automated ODU1f/2f TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TCM[1..n]:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TCM[1..n]:TYPE?

Description	This query returns the automated ODU1f/2f TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TCM[1..n]:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	TBEI: BEI
	TBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE?
	Returns: TBIP9
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TYPE

Description	This command selects the automated ODU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE?
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated: TYPE?

Description	This query returns the automated ODU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OBEI: BEI
	OBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate ODU1f/2f error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:INJect

Description	This command enables/disables the manual ODU1f/2f error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TCM[1..n]:TYPE

Description	This command selects the manual ODU1f/2f TCM error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TCM[1..n]:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	TBEI: BEI
	TBIP8: BIP-8
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TCM[1..n]:TYPE?

Description	This query returns the manual ODU1f/2f TCM error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TCM[1..n]:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	TBEI: BEI
	TBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TYPE

Description	This command selects the manual ODU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TYPE?

Description	This query returns the manual ODU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OBEI: BEI
	OBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AMOunt

Description	This command sets the manual ODU1f/2f TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AMOunt?

Description	This query returns the manual ODU1f/2f TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate ODU1f/2f TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate ODU1f/2f TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:AUT:TCM1:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:INJect

Description	This command enables/disables the manual ODU1f/2f TCM error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:F:TCM[1..n]:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:F:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:F:TCM1:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:INJect

Description	This command enables/disables the manual ODU error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Manual > Inject
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:ODU1:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:INJect

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TCM[1..n]:TYPE

Description	This command selects the manual ODU TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TCM[1..n]:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:MAN:TCM1:TYPE TBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU3:MAN:TCM1:TYPE?
	Returns: TBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TCM[1..n]:TYPE?

Description	This query returns the manual ODU TCM error Defect to be injected.
	At *RST condition, this value is set to TBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TCM[1..n]:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	TBIP8: BIP-8
	TBEI: BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:MAN:TCM1:TYPE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE

Description	This command selects the manual ODU error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Manual > Defect
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OBIP8: ODU-BIP-8
	OBEI: ODU-BEI
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE ?

Description	This query returns the manual ODU error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > ODUn > Error > Manual > Defect
	NOTE: For ODU[1..n], use ODU100 for ODU0, ODU101 for ODUflex, ODU200 for ODUC, ODU300 for ODUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OBIP8: ODU-BIP-8
	OBEI: ODU-BEI
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:ODU1:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC

Description	This command enables/disables the selection of an OTUC for ODUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (ODUCn) > OTUC
	NOTE: For ODU[1..n], use ODU200 for ODUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC <wsp><OTUC #>, <Set>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the ODUCn per OTUC status.
	ON: Enables the OTUC.
	OFF: Disables the OTUC.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU200:OTUC 1, ON
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC:ALL

Description	This command enables/disables the selection of all OTUC for ODUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (ODUCn) > All OTUC
	NOTE: For ODU[1..n], use ODU200 for ODUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC:ALL <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all OTUC.
	ON: Selects all OTUC
	OFF: Unselects all OTUC
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU200:OTUC:ALL ON
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC:ALL

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC:ALL?

Description	This query returns the enable/disable selection status of all OTUC for ODUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer(ODUCn) > All OTUC
	NOTE: For ODU[1..n], use ODU200 for ODUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC:ALL?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all OTUC.
	1: All OTUC are enabled.
	0: None or not all OTUC are enabled.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU200:OTUC:ALL?
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC:ALL?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC?

Description	This query returns the enable/disable selection status of an OTUC for ODUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (ODUCn) > OTUC
	NOTE: For ODU[1..n], use ODU200 for ODUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:OTUC? <wsp><OTU #>
Parameter(s)	**OTU #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the OTUC status for ODUC error injection.
	1: The OTUC is enabled.
	0: The OTUC is disabled.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU200:OTUC? 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AMOunt

Description	This command sets the manual ODU TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 to 50.
	MAXimum: Grestest supported amount
	MINimum: Smallest supported amount
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:TCM1:AMO 1
	SOUR:DATA:TEL:OTN:ERR:ODU3:TCM1:AMO?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AMOunt?

Description	This query returns the manual ODU TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:TCM1:AMO?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate ODU TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:TCM1:AUT ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate ODU TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:TCM1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:ODU3:TCM1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:INJect

Description	This command enables/disables the manual ODU TCM error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > ODU TCM > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:ODU3:TCM1:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:INJect

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:ACHAnnel

Description	This command selects if LO OPU error injection is done on ALL channels, in the Multi-Channel OTN test application.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:ACHAnnel <wsp><AllChannel>
Parameter(s)	**AllChannel**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU1:ACHA ON
See Also	SOURce:DATA:TEL:OTN:ERR:OPU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:ACHAnnel?

Description	This query returns if LO OPU error injection is done on ALL channels, in the Multi-Channel OTN test application.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:ACHAnnel?
Response Syntax	<AllChannel>
Response(s)	**AllChannel**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns an indication that the LO OPU error injection is done on ALL channels, in the Multi-Channel OTN test application.
	1, injection is done on all channels.
	0, injection is done on a specific channel.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU1:ACHA ON
	SOUR:DATA:TEL:OTN:ERR:OPU1:ACHA?
	Returns: 1
See Also	SOURce:DATA:TEL:OTN:ERR:OPU[1..n]:CHAN

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt

Description	This command sets the manual OPU / OPU3e1/e2 error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Manual > Amount
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<AllChannel>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AMO 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt?

Description	This query returns the manual OPU / OPU3e1/e2 error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Manual > Amount
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated

Description

This command enables/disables the Rate/Max Rate OPU / OPU3e1/e2 error injection.

At *RST condition, this value is set to OFF.

Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Rate/Max Rate > Inject

NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.

Syntax

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated <wsp><Inject>

Parameter(s)

Inject:

The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.

Starts/stops the automated Rate/Max Rate error Injection.

ON: Enables error injection.

OFF: Disables error injection.

Response Syntax

<Amount>

Example(s)

SOUR:DATA:TEL:OTN:ERR:OPU3:AUT ON

See Also

SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous

Description	This command sets the automated OPU / OPU3e1/e2 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Mode
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:CONT ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous?

Description	This query returns the automated OPU / OPU3e1/e2 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Mode
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:CONT 1
	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE

Description	This command sets the automated OPU / OPU3e1/e2 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Rate > Rate
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE?

Description	This query returns the automated OPU / OPU3e1/e2 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Rate > Rate
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE

Description	This command selects the automated OPU / OPU3e1/e2 error Defect to be injected.
	At *RST condition, this value is set to OMFI.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Rate/Max Rate > Defect
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OMFI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:TYPE OMFI
	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:TYPE?
	Returns: OMFI
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE?

Description	This query returns the automated OPU / OPU3e1/e2 error Defect to be injected.
	At *RST condition, this value is set to OMFI.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Rate/Max Rate > Defect
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OMFI
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:TYPE OMFI
	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT:TYPE?
	Returns: OMFI
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate OPU / OPU3e1/e2 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Rate/Max Rate > Inject
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:CHANnel

Description	This command selects the channel number or client ID used for error injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:CHANnel <wsp><Channel Number or Client ID>
Parameter(s)	**Channel Number or Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the channel number or client ID used for error injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU1:CHAN 5
See Also	SOURce:DATA:TEL:OTN:ERR:OPU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:CHANnel?

Description	This query returns the channel number or client ID used for error injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Test > Multi-Channel OTN > Results > Alarms/Errors > Global Injection > Layer (ODU)
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:CHANnel?
Response Syntax	<Channel Number or Client ID>
Response(s)	**Channel Number or Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel number or client ID used for error injection, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN and FlexO BERT test.
	'n', injection is done on channel or client ID 'n', when AllCHAnnel is not selected .
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU1:CHAN 5
	SOUR:DATA:TEL:OTN:ERR:OPU1:CHAN?
	Returns: 5
See Also	SOURce:DATA:TEL:OTN:ERR:OPU[1..n]:ACHA

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:INJect

Description	This command enables/disables the manual OPU / OPU3e1/e2 error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Manual > Inject
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:INJect
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU3:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:INJect

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:MANual:TYPE

Description	This command selects the manual OPU / OPU3e1/e2 error Defect to be injected.
	At *RST condition, this value is set to OMFI.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Manual > Defect
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	OMFI
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU1:MAN:TYPE OMFI
	SOUR:DATA:TEL:OTN:ERR:OPU1:MAN:TYPE?
	Returns: OMFI
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:MANual:TYPE ?

Description	This query returns the manual OPU / OPU3e1/e2 error Defect to be injected.
	At *RST condition, this value is set to OMFI.
	Navigation Path: Results > Alarms/Errors > Injection > OPU / OPU3e1/e2 > Error > Manual > Defect
	NOTE: For OPU[1..n], use OPU100 for OPU0, OPU101 for OPUflex, OPU3 for OPU3e1/e2, OPU200 for OPUC, OPU300 for OPUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	OMFI
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU1:MAN:TYPE OMFI
	SOUR:DATA:TEL:OTN:ERR:OPU1:MAN:TYPE?
	Returns: OMFI
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC

Description	This command enables/disables the selection of an OTUC for OPUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OPUCn) > OTUC
	NOTE: For OPU[1..n], use OPU200 for OPUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC <wsp><OTUC #>, <Set>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the ODUCn per OTUC status.
	ON: Enables the OTUC.
	OFF: Disables the OTUC.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU200:OTUC 1, ON
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC:ALL

Description	This command enables/disables the selection of all OTUC for OPUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OPUCn) > All OTUC
	NOTE: For OPU[1..n], use OPU200 for OPUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC:ALL <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all OTUC.
	ON: Selects all OTUC
	OFF: Unselects all OTUC
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU200:OTUC:ALL ON
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC:ALL

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC:ALL?

Description	This query returns the enable/disable selection status of all OTUC for OPUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer(OPUCn) > All OTUC
	NOTE: For OPU[1..n], use OPU200 for OPUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC:ALL?
Response Syntax	<Set>
Response(s)	Set:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all OTUC.
	1: All OTUC are enabled.
	0: None or not all OTUC are enabled.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU200:OTUC:ALL?
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:OTUC:ALL?

:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC?

Description	This query returns the enable/disable selection status of an OTUC for OPUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OPUCn) > OTUC
	NOTE: For OPU[1..n], use OPU200 for OPUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OPU[1..n]:OTUC? <wsp><OTUC #>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the OTUC status for ODUC error injection.
	1: The OTUC is enabled.
	0: The OTUC is disabled.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OPU200:OTUC? 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OPU[1..n]:OTUC?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt

Description	This command sets the manual OTU error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Manual > Amount
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AMO MAX
	SOUR:DATA:TEL:OTN:ERR:OTU3:AMO?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt?

Description	This query returns the manual OTU error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Manual > Amount
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AMO MAX
	SOUR:DATA:TEL:OTN:ERR:OTU3:AMO?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate OTU error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Rate/Max Rate > Inject
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated <wsp><Inject>
Parameter(s)	Inject:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT ON
	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous

Description	This command sets the automated OTU error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Mode
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous?

Description	This query returns the automated OTU error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Mode
	NOTE: For OTU[1..n], use OTU200 for OTUC, OTU300 for OTUCn.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE

Description	This command sets the automated OTU error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:RATE MIN
	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:RATE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE?

Description	This query returns the automated OTU error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:RATE MIN
	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:RATE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:RATE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE

Description	This command selects the automated OTU error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
	MFAS
	OBEI: OTU - BEI
	OBIP8: OTU - BIP-8
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE?

Description	This query returns the automated OTU error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
	MFAS
	OBEI: OTU - BEI
	OBIP8: OTU - BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate OTU error injection. At *RST condition, this value is set to OFF. Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the enable/disable injection status: 1: Enabled 0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:AUT ON SOUR:DATA:TEL:OTN:ERR:OTU3:AUT? Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt

Description	This command sets the manual OTU1e/2e/3e1/3e2 error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Manual > Amount
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt?

Description	This query returns the manual OTU1e/2e/3e1/3e2 error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Manual > Amount
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate OTU1e/2e/3e1/3e2 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Inject
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT?
	Returns: 1

	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous

Description	This command sets the automated OTU1e/2e/3e1/3e2 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Mode
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
	This query returns the automated OTU1e/2e/3e1/3e2 error Mode: ON for Max Rate and OFF for Rate.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous?

Description	This query returns the automated OTU1e/2e/3e1/3e2 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Mode
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTom ated:RATE

Description	This command sets the automated OTU1e/2e/3e1/3e2 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Rate > Rate
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected. Choices are 1.0E-09 through 6.5E-05.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE?
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE?

Description	This query returns the automated OTU1e/2e/3e1/3e2 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Rate > Rate
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE

Description	This command selects the automated OTU1e/2e/3e1/3e2 error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Defect
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS1: FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE?
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE?

Description	This query returns the automated OTU1e/2e/3e1/3e2 error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Defect
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS1: FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate OTU1e/2e/3e1/3e2 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Rate/Max Rate > Inject
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT ON
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect

Description	This command enables/disables the manual OTU1e/2e/3e1/3e2 error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Manual > Inject
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE

Description	This command selects the manual OTU1e/2e/3e1/3e2 error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Manual > Defect
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS1: FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE?

Description	This query returns the manual OTU1e/2e/3e1/3e2 error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1e/2e/3e1/3e2 > Error > Manual > Defect
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS1: FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU3:E1:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AMOunt

Description	This command sets the manual ODU1f/2f TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > ODU1f/2f TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AMOunt?

Description	This query returns the manual OTU1f/2f error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated

Description	This command enables/disables the Rate/Max Rate OTU1f/2f error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT ON
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated: CONTinuous

Description	This command sets the automated OTU1f/2f error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated: CONTinuous?

Description	This query returns the automated OTU1f/2f error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:CONT ON
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated: RATE

Description	This command sets the automated OTU1f/2f error Rate to be injected.
	At *RST condition, this value is set to 6.5E-05.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected. Choices are 1.0E-09 through 6.5E-05.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE?
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated: RATE?

Description	This query returns the automated OTU1f/2f error Rate to be injected.
	At *RST condition, this value is set to 6.5E-05.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated: TYPE

Description	This command selects the automated OTU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS1: FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE?
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated: TYPE?

Description	This query returns the automated OTU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS1: FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate OTU1f/2f error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT ON
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:INJect

Description	This command enables/disables the manual OTU1f/2f error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:AMO 15
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:MANual:TYPE

Description	This command selects the manual OTU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:MANual:TYPE?

Description	This query returns the manual OTU1f/2f error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTU1f/2f > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:F:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
	MFAS
	OBEI: BEI
	OBIP8: BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE OBIP8
	SOUR:DATA:TEL:OTN:ERR:OTU1:F:MAN:TYPE?
	Returns: OBIP8
See Also	SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:INJect

Description	This command enables/disables the manual OTU error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:INJect
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:INJect

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE

Description

This command selects the manual OTU error Defect to be injected.

At *RST condition, this value is set to OBIP8.

Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Manual > Defect

This query returns the manual OTU error Defect to be injected.

Returns the error to be injected:

Syntax

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE <wsp><Error>

Parameter(s)

Error:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the error to be injected:

FAS

MFAS

OBEI: OTU - BEI

OBIP8: OTU - BIP-8

Response Syntax

<Error>

Example(s)

SOUR:DATA:TEL:OTN:ERR:OTU3:MAN:TYPE FAS

SOUR:DATA:TEL:OTN:ERR:OTU3:MAN:TYPE?

Returns: FAS

See Also

SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE?

Description	This query returns the manual OTU error Defect to be injected.
	At *RST condition, this value is set to OBIP8.
	Navigation Path: Results > Alarms/Errors > Injection > OTUn > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
	MFAS
	OBEI: OTU - BEI
	OBIP8: OTU - BIP-8
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU3:MAN:TYPE FAS
	SOUR:DATA:TEL:OTN:ERR:OTU3:MAN:TYPE?
	Returns: FAS
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC

Description	This command enables/disables the selection of an OTUC for OTUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTUCn) > OTUC
	NOTE: For OTU[1..n], use OTU200 for OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC <wsp><OTUC #>, <Set>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the OTUCn per OTUC status.
	ON: Enables the OTUC.
	OFF: Disables the OTUC.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU200:OTUC 1, ON
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC:ALL

Description	This command enables/disables the selection of all OTUC for OTUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTUCn) > All OTUC
	NOTE: For OTU[1..n], use OTU200 for OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC:ALL <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all OTUC.
	ON: Selects all OTUC
	OFF: Unselects all OTUC
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU200:OTUC:ALL ON
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC:ALL

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC:ALL?

Description	This query returns the enable/disable selection status of all OTUC for OTUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer(OTUCn) > All OTUC
	NOTE: For OTU[1..n], use OTU200 for OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC:ALL?
Response Syntax	<Set>
Response(s)	Set:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all OTUC.
	1: All OTUC are enabled.
	0: None or not all OTUC are enabled.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU200:OTUC:ALL?
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC:ALL?

:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC?

Description	This query returns the enable/disable selection status of an OTUC for OTUCn errors injection purposes for FlexO BERT.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTUCn) > OTUC
	NOTE: For OTU[1..n], use OTU200 for OTUC
Syntax	:SOURce:DATA:TELecom:OTN:ERRor:OTU[1..n]:OTUC? <wsp><OTUC #>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the OTUC status for OTUC error injection.
	1: The OTUC is enabled.
	0: The OTUC is disabled.
Example(s)	SOUR:DATA:TEL:OTN:ERR:OTU200:OTUC? 1
See Also	SOURce:DATA:TELecom:OTN:ALARm:OTU[1..n]:OTUC?

:SOURce:DATA:TELecom:OTN:OTL:ALANes

Description	This command enables/disables the selection of all lanes for alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTL) > All Lanes
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ALANes <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables the selection of all lanes.
	ON: Selects all lanes
	OFF: Unselects all lanes
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ALAN ON
See Also	SOURce:DATA:TELecom:OTN:OTL:LANE

:SOURce:DATA:TELecom:OTN:OTL:ALANes?

Description	This query returns the enable/disable selection status of all lanes for alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTL) > All Lanes
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ALANes?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable selection status of all lanes.
	1: All lanes are enabled.
	0: None or not all lanes are enabled.
Example(s)	SOUR:DATA:TEL:OTN:OTL:ALAN?
See Also	SOURce:DATA:TELecom:OTN:OTL:LANE?

:SOURce:DATA:TELecom:OTN:OTL:ALARm

Description	This command enables/disables the continuous OTL alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ALARm <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ALAR ON
See Also	SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm

:SOURce:DATA:TELecom:OTN:OTL:ALARm:TYPE

Description	This command selects the continuous OTL alarm Defect to be injected.
	At *RST condition, this value is set to LOL.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ALARm:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOF
	LOR
	OOF
	OOR
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ALAR:TYPE LOF
See Also	SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE

:SOURce:DATA:TELecom:OTN:OTL:ALARm:TYPE?

Description	This query returns the continuous OTL alarm Defect to be injected.
	At *RST condition, this value is set to LOL.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ALARm:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOF
	LOR
	OOF
	OOR
Example(s)	SOUR:DATA:TEL:OTN:OTL:ALAR:TYPE?
See Also	SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE?

:SOURce:DATA:TELecom:OTN:OTL:ALARm?

Description	This query returns the enable/disable status of the continuous OTL alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ALARm?
Response Syntax	<Injection>
Response(s)	**Injection**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:OTL:ALAR?
See Also	SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm?

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AMOunt

Description	This command sets the manual OTL error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Injection>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AMO 1
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AMOunt

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AMOunt?

Description	This query returns the manual OTL error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AMO?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AMOunt?

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated

Description	This command enables/disables the Rate/Max Rate OTL error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error generation.
	OFF: Disables error generation.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AUTomated

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:CONTinuous

Description	This command sets the automated OTL error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT:CONT ON
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:CONTinuous

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:CONTinuous?

Description	This query returns the automated OTL error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Mode
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT:CONT?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:CONTinuous?

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:RATE

Description	This command sets the automated OTL error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:RATE

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:RATE?

Description	This query returns the automated OTL error Rate to be injected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value.
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT:RATE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:RATE

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:TYPE

Description	This command selects the automated OTL error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
	LLM
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT:TYPE FAS
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:TYPE?

Description	This query returns the automated OTL error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
	LLM
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT:TYPE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:AUTomated:TCM[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate OTL error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:AUT?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:TCM[1..n]:AUTomated?

:SOURce:DATA:TELecom:OTN:OTL:ERRor:INJect

Description	This command enables/disables the manual OTL error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:INJect
Response Syntax	\<Set\>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:INJ
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:INJect

:SOURce:DATA:TELecom:OTN:OTL:ERRor:MANual:TYPE

Description	This command selects the manual OTL error Defect to be injected.
	At *RST condition, this value is set to FAS error.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	FAS
	LLM
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:MAN:TYPE FAS
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TCM[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:OTL:ERRor:MANual:TYPE?

Description	This query returns the manual OTL error Defect to be injected.
	At *RST condition, this value is set to FAS error.
	Navigation Path: Results > Alarms/Errors > Injection > OTL > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:ERRor:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	FAS
	LLM
Example(s)	SOUR:DATA:TEL:OTN:OTL:ERR:MAN:TYPE?
See Also	SOURce:DATA:TELecom:OTN:ERRor:ODU[1..n]:MANual:TCM[1..n]:TYPE

:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm

Description	This command enables/disables the OTL global alarm generation.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > Global Injection > Layer (OTL) > Type (Alarms) > Inject
Syntax	:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:OTL:GLOB:ALAR ON
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]?

:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE

Description	This command selects the type of OTL global alarm.
	At *RST condition, this value is set to LOL.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > Global Injection > Layer (OTL) > Type (Alarms) > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of OTL global alarm.
	LOL
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:OTN:OTL:GLOB:ALAR:TYPE LOL
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE?

Description	This query returns the type of OTL global alarm.
	At *RST condition, this value is set to LOL.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > Global Injection > Layer (OTL) > Type (Alarms) > Defect
Syntax	:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm:TYPE?
Response Syntax	\<Alarm\>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the type of OTL global alarm.
	LOL, LOL is selected as the OTL alarm.
Example(s)	SOUR:DATA:TEL:OTN:OTL:GLOB:ALAR:TYPE?
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]:TYPE?

:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm?

Description	This query returns the enabled or disabled OTL global alarm generation.
	At *RST condition, this value is set to OFF.
	Navigation Path: Test > OTN BERT > Results > Alarms/Errors > Global Injection > Layer (OTL) > Type (Alarms) > Inject
Syntax	:SOURce:DATA:TELecom:OTN:OTL:GLOBal:ALARm?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of OTL global alarm generation.
	1, global alarm generation is enabled.
	0, global alarm generation is disabled.
Example(s)	SOUR:DATA:TEL:OTN:OTL:GLOB:ALAR?
See Also	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]
	SOURce:DATA:TELecom:OTN:ALARm:ODU[1..n]:TCM[1..n]?

:SOURce:DATA:TELecom:OTN:OTL:LANE

Description	This command enables/disables the selection of a lane for OTL alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTL) > Lane
Syntax	:SOURce:DATA:TELecom:OTN:OTL:LANE <wsp><Lane>, <Set>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the OTL per lane status.
	ON: Enables the lane.
	OFF: Disables the lane.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:LANE 1, ON
See Also	SOURce:DATA:TELecom:OTN:OTL:ALANes

:SOURce:DATA:TELecom:OTN:OTL:LANE?

Description	This query returns the enable/disable selection status of a lane for OTL alarms/errors injection purposes.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Inject > Layer (OTL) > Lane
Syntax	:SOURce:DATA:TELecom:OTN:OTL:LANE? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects a lane number.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the selection status of a lane.
	1: The lane is enabled.
	0: The lane is disabled.
Example(s)	SOUR:DATA:TEL:OTN:OTL:LANE? 1
See Also	SOURce:DATA:TELecom:OTN:OTL:ALANes?

:SOURce:DATA:TELecom:OTN:OTUC:NUMBer

Description	This command selects the OTUC # used for subsequent OTU/ODU/OPU commands/queries for FlexO test application.
	At *RST condition, this value is set to device-dependent.
Syntax	:SOURce:DATA:TELecom:OTN:OTUC:NUMBer <wsp><OTUC #>
Parameter(s)	**OTUC #**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OTUC number
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTUC:NUMB 1
	SOUR:DATA:TEL:OTN:OTUC:NUMB?
	Returns 1

:SOURce:DATA:TELecom:OTN:OTUC:NUMBer?

Description	This query returns the OTUC # used for subsequent OTU/ODU/OPU commands/queries for FlexO test application. At *RST condition, this value is set to device-dependent.
Syntax	:SOURce:DATA:TELecom:OTN:OTUC:NUMBer?
Response Syntax	<OTUC #>
Response(s)	**OTUC #**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the selected OTUC number
Example(s)	SOUR:DATA:TEL:OTN:OTUC:NUMB 1 SOUR:DATA:TEL:OTN:OTUC:NUMB? Returns 1

:SOURce:DATA:TELecom:PATTern:ALARm:PATTern

Description	This command enables/disables the continuous BER alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > BER> Alarm > Continuous > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:PATTern:ALARm:PATTern <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<OTUC #>
Example(s)	SOUR:DATA:TEL:PATT:ALAR:PATT ON
	SOUR:DATA:TEL:PATT:ALAR:PATT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt
	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:SOURce:DATA:TELecom:PATTern:ALARm:PATTern:CHANnel

Description	This command selects the channel number or client ID used for pattern alarm injection in the Multi-Channel OTN test application.
	Navigation Path: Results > Summary > BER > Alarms
Syntax	:SOURce:DATA:TELecom:PATTern:ALARm:PATTern:CHANnel <wsp><Channel Number or Client ID>
Parameter(s)	**Channel Number or Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the channel number or client ID used for pattern alarm injection for the Multi-Channel OTN and FlexO BERT test.
Response Syntax	<OTUC #>
Example(s)	SOUR:DATA:TEL:PATT:ALAR:PATT:CHAN 5
See Also	SOURce:DATA:TELecom:PATTern:ALARm:PATTern:CHANnel?

:SOURce:DATA:TELecom:PATTern:ALARm:PATTern:CHANnel?

Description	This query returns the channel number or client ID used for pattern error injection for the Multi-Channel OTN and FlexO BERT test. Navigation Path: Results > Summary > BER > Alarms
Syntax	:SOURce:DATA:TELecom:PATTern:ALARm:PATTern:CHANnel?
Response Syntax	<Channel Number or Client ID>
Response(s)	**Channel Number or Client ID**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the channel number or client ID used for pattern alarm injection for the Multi-Channel OTN and FlexO BERT test.
Example(s)	SOUR:DATA:TEL:PATT:ALAR:PATT:CHAN 3 SOUR:DATA:TEL:PATT:ALAR:PATT:CHAN? Returns 3
See Also	SOURce:DATA:TELecom:PATTern:ALARm:PATTern:CHANnel

:SOURce:DATA:TELecom:PATTern:ALARm:PATTern:TYPE?

Description	This query returns the continuous BER alarm Defect to be injected.
	At *RST condition, this value is set to Pattern Loss.
	Navigation Path: Results > Alarms/Errors > Injection > BER> Alarm > Continuous > Type
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Alarm > Continuous > Type
Syntax	:SOURce:DATA:TELecom:PATTern:ALARm:PATTern:TYPE?
Response Syntax	\<Alarm\>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the alarm to be injected:
	PLOSs: Pattern Loss
Example(s)	SOUR:DATA:TEL:PATT:ALAR:PATT:TYPE PLOS
	SOUR:DATA:TEL:PATT:ALAR:PATT:TYPE?
	Returns: PLOS
See Also	SOURce:DATA:TELecom:PATTern:ALARm:PATTern:TYPE?
	SOURce:DATA:TELecom:PATTern:ALARm:PATTern

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt

Description	This command sets the manual BER error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Manual > Amount
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Alarm>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:AMO 25
	Returns: 25
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt?

Description	This query returns the manual BER error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Manual > Amount
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:AMO?
	Returns: 25
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated

Description	This command enables/disables the Rate/Max Rate BER error injection.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT OFF
	SOUR:DATA:TEL:PATT:ERR:PATT:AUT?
	Returns: 0
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:CONTinuous

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated :CONTinuous

Description	This command selects the automated BER error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Mode
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Mode
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode: ON for Max Rate and OFF for Rate.
	ON: Enabled
	OFF: Disabled
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:CONT OFF
	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:CONT?
	Returns: 0
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated :CONTinuous?

Description	This query returns the automated BER error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Mode
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Mode
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode: ON for Max Rate and OFF for Rate.
	1, Continuous pattern error is enabled.
	0, Continuous pattern error is disabled.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:CONT ON
	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated?

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:RATE

Description	This command sets the automated BER error Rate to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum
	MINimum
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:RATE 1.0E-03
	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:RATE?
	Returns: 1.0E-03
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated :RATE?

Description	This query returns the rate of pattern error to be injected.
	At *RST condition, this value is set to 1.0E-04.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Rate > Rate
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current rate of pattern error to inject is returned.
	MAXimum: Biggest rate
	MINimum: Smallest rate
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:RATE 1.0E-03
	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:RATE?
	Returns: 1.0E-03
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AMOunt?

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated :TYPE

Description	This command selects the automated BER error Defect to be injected.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BIT
	PATTern
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:TYPE BIT
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated :TYPE?

Description	This query returns the automated BER error Defect to be injected.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Rate/Max Rate > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected.
	BIT, bit is selected as automated type pattern error.
	PATTERN, pattern is selected as automated type pattern error.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT:TYPE?
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate BER error injection.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Rate/Max Rate > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1, automated pattern type is enabled.
	0, sets the automated pattern type is disabled.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:AUT ON
	SOUR:DATA:TEL:PATT:ERR:PATT:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:CHANnel

Description	This command selects the channel number or client ID used for pattern error injection for the Multi-Channel OTN and FlexO BERT test.
	Navigation Path: Test > BERT > Results > Summary > BER > Errors
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:CHANnel <wsp><Channel Number or Client ID>
Parameter(s)	**Channel Number or Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the channel number or client ID used for pattern error injection for the Multi-Channel OTN and FlexO BERT test.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:CHAN 5
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:CHANnel?

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:CHANnel?

Description	This query returns the channel used for pattern error injection in the Multi-Channel OTN test application.
	Navigation Path: Test > BERT > Results > Summary > BER > Errors
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:CHANnel?
Response Syntax	<Channel Number or Client ID>
Response(s)	**Channel Number or Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel number or client ID used for pattern error injection for the Multi-Channel OTN and FlexO BERT test.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:CHAN 3
	SOUR:DATA:TEL:PATT:ERR:PATT:CHAN?
	Returns 3
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:CHANnel

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect

Description	This command enables/disables the manual BER error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Manual > Inject
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:INJect
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:INJ
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:TYPE?

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE

Description	This command selects the manual BER error Defect to be injected.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Manual > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BIT
	PATTern
Response Syntax	<Channel Number or Client ID>
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE?
	Returns: BIT
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:TYPE

:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE?

Description	This query returns the manual BER error Defect to be injected.
	At *RST condition, this value is set to BIT.
	Navigation Path: Results > Alarms/Errors > Injection > BER > Error > Manual > Defect
	Navigation Path: Results > Alarms/Errors > Injection > FlexE - Client > BER > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:PATTern:ERRor:PATTern:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BIT, bit is selected as the manual type pattern error.
	PATTERN, pattern is selected as the manual type pattern error.
Example(s)	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE BIT
	SOUR:DATA:TEL:PATT:ERR:PATT:MAN:TYPE?
	Returns: BIT
See Also	SOURce:DATA:TELecom:PATTern:ERRor:PATTern:AUTomated:TYPE?

:SOURce:DATA:TELecom:PDH:ALARm:E[1..n]

Description	This command enables/disables the continuous E1/E2/E3/E4 alarm injection
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:PDH:ALARm:E[1..n] <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:PDH:ALAR:E1 ON
See Also	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE
	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]?

:SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE

Description	This command selects the continuous E1/E2/E3/E4 alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	AIS
	CLOMf: CRC LOMF
	LOF3: LOF
	LOMF
	RAI
	RAIM: RAI MF
	TS16ais: TS16 AIS
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:PDH:ALAR:E1:TYPE AIS
See Also	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE?

:SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE?

Description	This query returns the continuous E1/E2/E3/E4 alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	AIS
	CLOMf: CRC LOMF
	LOF3: LOF
	LOMF
	RAI
	RAIM: RAI MF
	TS16ais: TS16 AIS
Example(s)	SOUR:DATA:TEL:PDH:ALAR:E1:TYPE AIS
	SOUR:DATA:TEL:PDH:ALAR:E1:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE

:SOURce:DATA:TELecom:PDH:ALARm:E[1..n]?

Description	This query returns the enable/disable status of the continuous E1/E2/E3/E4 alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:PDH:ALARm:E[1..n]?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PDH:ALAR:E1:TYPE AIS
	SOUR:DATA:TEL:PDH:ALAR:E1 ON
	SOUR:DATA:TEL:PDH:ALAR:E1?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]:TYPE
	SOURce:DATA:TELecom:PDH:ALARm:E[1..n]

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt

Description	This command sets the manual E1/E2/E3/E4 error Amount to be injected.
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AMO 15
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt?

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt?

Description	This query returns the manual E1/E2/E3/E4 error Amount to be injected.
	At *RST condition, this value is set to MINimum.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:MAN:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:AMO 15
	SOUR:DATA:TEL:PDH:ERR:E1:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated

Description	This command enables/disables the Rate/Max Rate E1/E2/E3/E4 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT ON
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated?

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:CONTinuous

Description	This command sets the automated E1/E2/E3/E4 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Mode
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:CONTinuous <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode: ON for Max Rate and OFF for Rate.
	ON: Enabled
	OFF: Disaled
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:CONT ON
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:CONTinuous?

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:CONTinuous?

Description	This query returns the automated E1/E2/E3/E4 error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Mode
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode: ON for Max Rate and OFF for Rate.
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:CONT ON
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:CONTinuous

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE

Description	This command sets the automated E1/E2/E3/E4 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT:RATE 1.0E-09
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE?
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE ?

Description	This query returns the automated E1/E2/E3/E4 error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE?[<wsp><Rate>]
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:RATE?
	Returns: 1.0E-09
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE

Description	This command selects the automated E1/E2/E3/E4 error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CRC4: CRC-4 (E1)
	EBIT: E-Bit (E1)
	FAS
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT:TYPE FAS
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE?
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE?

Description	This query returns the automated E1/E2/E3/E4 error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	CRC4: CRC-4 (E1)
	EBIT: E-Bit (E1)
	FAS
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:TYPE?
	Returns: FAS
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate E1/E2/E3/E4 error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:AUT:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:AUT:RATE 1.0E-09
	SOUR:DATA:TEL:PDH:ERR:E1:AUT ON
	SOUR:DATA:TEL:PDH:ERR:E1:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated:RATE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AUTomated

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:INJect

Description	This command enables/disables the manual E1/E2/E3/E4 error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:MAN:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:AMO 15
	SOUR:DATA:TEL:PDH:ERR:E1:INJ
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE
	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:AMOunt

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE

Description	This command selects the manual E1/E2/E3/E4 error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	CRC4: CRC-4 (E1)
	EBIT: E-Bit (E1)
	FAS
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:MAN:TYPE FAS
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE?

:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE?

Description	This query returns the manual E1/E2/E3/E4 error Defect to be injected.
	At *RST condition, this value is set to FAS.
	Navigation Path: Results > Alarms/Errors > Injection > E1/E2/E3/E4 > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE?
Response Syntax	\<Error\>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the error to be injected:
	CRC4: CRC-4 (E1)
	EBIT: E-Bit (E1)
	FAS
Example(s)	SOUR:DATA:TEL:PDH:ERR:E1:MAN:TYPE FAS
	SOUR:DATA:TEL:PDH:ERR:E1:MAN:TYPE?
	Returns: FAS
See Also	SOURce:DATA:TELecom:PDH:ERRor:E[1..n]:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

Description	This command enables/disables the continuous STS/AU Path alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH ON
	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE

Description	This command selects the continuous STS/AU Path alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Results > Alarms/Errors > Injection > STS/AU Path > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SONET | SDH) to be injected:
	AIS: AIS-P | AU-AIS
	EPCD1: ERDI-PCD | HP-ERDI-CD
	EPPD1: ERDI-PPD | HP-ERDI-PD
	EPSD1: ERDI-PSD | HP-ERDI-SD
	LOP: LOP-P | AU-LOP
	PDI: PDI-P
	RDI: RDI-P | HP-RDI
	UNEQP1: UNEQ-P | HP-UNEQ
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE?

Description	This query returns the continuous STS/AU Path alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm (SONET | SDH) to be injected:
	AIS: AIS-P | AU-AIS
	EPCD1: ERDI-PCD | HP-ERDI-CD
	EPPD1: ERDI-PPD | HP-ERDI-PD
	EPSD1: ERDI-PSD | HP-ERDI-SD
	LOP: LOP-P | AU-LOP
	PDI: PDI-P
	RDI: RDI-P | HP-RDI
	UNEQP1: UNEQ-P | HP-UNEQ
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH?

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH?

Description	This query returns the enable/disable status of the continuous STS/AU Path alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH ON
	SOUR:DATA:TEL:SDHS:ALAR:HOP:PATH?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM

Description	This command enables/disables the continuous STS/AU Path TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM ON
	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TYPE

Description	This command selects the continuous STS/AU Path TCM alarm Defect to be injected.
	At *RST condition, this value is set to LLTC.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm (SONET | SDH) to be injected:
	LIAIS: TC-IAIS-P | HPTC-IAIS
	LLTC: TC-LTC-P | HPTC-LTC
	LODI: TC-ODI-P | HPTC-ODI
	LRDI: TC-RDI-P | HPTC- RDI
	LUNEQ: TC-UNEQ-P | HPTC-UNEQ
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM:TYPE?
	Returns: LIAIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TYPE?

Description	This query returns the continuous STS/AU Path TCM alarm Defect to be injected.
	At *RST condition, this value is set to LLTC.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM:TYPE?
Response Syntax	\<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA> element.
	Returns the alarm (SONET | SDH) to be injected:
	LIAIS: TC-IAIS-P | HPTC-IAIS
	LLTC: TC-LTC-P | HPTC-LTC
	LODI: TC-ODI-P | HPTC-ODI
	LRDI: TC-RDI-P | HPTC- RDI
	LUNEQ: TC-UNEQ-P | HPTC-UNEQ
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM:TYPE?
	Returns: LIAIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH?

:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM?

Description	This query returns the enable/disable status of the continuous STS/AU Path TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:TCM?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM ON
	SOUR:DATA:TEL:SDHS:ALAR:HOP:TCM?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE

Description	This command enables/disables the continuous Line/MS alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LINE:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LINE ON
	SOUR:DATA:TEL:SDHS:ALAR:LINE?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:LINE:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE:TYPE

Description	This command selects the continuous Line/MS alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	AIS: AIS-L | MS-AIS
	RDI: RDI-L | MS-RDI
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LINE:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LINE:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:LINE

:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE:TYPE?

Description	This query returns the continuous Line/MS alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	AIS: AIS-L | MS-AIS
	RDI: RDI-L | MS-RDI
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LINE:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LINE:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:LINE?

:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE?

Description	This query returns the enable/disable status of the continuous Line/MS alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LINE?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LINE:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LINE ON
	SOUR:DATA:TEL:SDHS:ALAR:LINE?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:LINE:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH

Description	This command enables/disables the continuous VT/TU Path alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables and disables the LOP (Low Order Path) alarm generation.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH ON
	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH:TYPE

Description	This command selects the continuous VT/TU Path alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	AIS: AIS-V | TU-AIS
	EVCD: ERDI-VCD | LP-ERDI-CD
	EVPD: ERDI-VPD | LP-ERDI-PD
	EVSD: ERDI-VSD | LP-ERDI-SD
	LPRFi: RFI-V | LP-RFI
	RDI: RDI-V | LP-RDI
	TULop: LOP-V | TU-LOP
	UNEQp: UNEQ-V | LP-UNEQ
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH?

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH:TYPE?

Description	This query returns the continuous VT/TU Path alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH:TYPE?
Response Syntax	\<Alarm\>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the alarm to be injected:
	AIS: AIS-V | TU-AIS
	EVCD: ERDI-VCD | LP-ERDI-CD
	EVPD: ERDI-VPD | LP-ERDI-PD
	EVSD: ERDI-VSD | LP-ERDI-SD
	LPRFi: RFI-V | LP-RFI
	RDI: RDI-V | LP-RDI
	TULop: LOP-V | TU-LOP
	UNEQp: UNEQ-V | LP-UNEQ
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH?

Description	This query returns the enable/disable status of the continuous VT/TU Path alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:PATH?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH ON
	SOUR:DATA:TEL:SDHS:ALAR:LOP:PATH?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM

Description	This command enables/disables the continuous VT/TU Path TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM ON
	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TYPE

Description	This command selects the continuous VT/TU Path TCM alarm Defect to be injected.
	At *RST condition, this value is set to LIAIS.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LIAIS: TC-AIS-V | LPTC-AIS
	LLTC: TC-LTC-V | LPTC-LTC
	LODI: TC-ODI-V | LPTC-ODI
	LRDI: TC-RDI-V | LPTC-RDI
	LUNEQ: TC-UNEQ-V | LPTC-UNEQ
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM:TYPE?
	Returns: LIAIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TYPE?

Description	This query returns the continuous VT/TU Path TCM alarm Defect to be injected.
	At *RST condition, this value is set to TLTC.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LIAIS: TC-AIS-V | LPTC-AIS
	LLTC: TC-LTC-V | LPTC-LTC
	LODI: TC-ODI-V | LPTC-ODI
	LRDI: TC-RDI-V | LPTC-RDI
	LUNEQ: TC-UNEQ-V | LPTC-UNEQ
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM:TYPE?
	Returns: LIAIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH?

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM?

Description	This query returns the enable/disable status of the continuous VT/TU Path TCM alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOP:TCM?
Response Syntax	\<Inject\>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM:TYPE LIAIS
	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM ON
	SOUR:DATA:TEL:SDHS:ALAR:LOP:TCM?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH

Description	This command enables/disables the continuous TU-3 Path alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH ON
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:TYPE

Description	This command selects the continuous TU-3 Path alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Alarm > Continuous > Defect
	This query returns the continuous TU-3 Path alarm Defect to be injected.
	Returns the alarm to be injected:
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	AIS: TU-AIS
	ECD: LP-ERDI-CD
	EPD: LP-ERDI-PD
	ESD: LP-ERDI-SD
	LOP: TU-LOP
	LPRDi: LP-RDI
	UNEQ: LP-UNEQ
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:TYPE ?

Description	This query returns the continuous TU-3 Path alarm Defect to be injected.
	At *RST condition, this value is set to AIS.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	AIS: TU-AIS
	ECD: LP-ERDI-CD
	EPD: LP-ERDI-PD
	ESD: LP-ERDI-SD
	LOP: TU-LOP
	LPRDi: LP-RDI
	UNEQ: LP-UNEQ
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE?
	Returns: AIS
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH?

:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH?

Description	This query returns the enable/disable status of the continuous TU-3 Path alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:LOPTu:PATH?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH:TYPE AIS
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH ON
	SOUR:DATA:TEL:SDHS:ALAR:LOPT:PATH?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:HOP:PATH:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion

Description	This command enables/disables the continuous Section/RS alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the continuous alarm Injection.
	ON: Enables alarm generation.
	OFF: Disables alarm generation.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE LOF1
	SOUR:DATA:TEL:SDHS:ALAR:SECT ON
	SOUR:DATA:TEL:SDHS:ALAR:SECT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion:TYPE

Description	This command selects the continuous Section/RS alarm Defect to be injected.
	At *RST condition, this value is set to LOF1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion:TYPE <wsp><Alarm>
Parameter(s)	**Alarm**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	LOF1: LOF
	SEF1: SEF
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE LOF1
	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE?
	Returns: LOF1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion?

:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion:TYPE?

Description	This query returns the continuous Section/RS alarm Defect to be injected.
	At *RST condition, this value is set to LOF1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Alarm > Continuous > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	LOF1: LOF
	SEF1: SEF
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE LOF1
	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE?
	Returns: LOF1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion

:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion?

Description	This query returns the enable/disable status of the continuous Section/RS alarm injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Alarm > Continuous > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion?
Response Syntax	\<Set\>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the enable/disable injection status.
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ALAR:SECT:TYPE LOF1
	SOUR:DATA:TEL:SDHS:ALAR:SECT ON
	SOUR:DATA:TEL:SDHS:ALAR:SECT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ALARm:SECTion:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt

Description	This command sets the manual STS/AU Path error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?

Description	This query returns the manual STS/AU Path error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

Description	This command enables/disables the Rate/Max Rate STS/AU Path error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:CONTinuous

Description	This command sets the automated STS/AU Path error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:CONTinuous?

Description	This query returns the automated STS/AU Path error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE

Description	This command sets the automated STS/AU Path error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?

Description	This query returns the automated STS/AU Path error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE

Description	This command selects the automated STS/AU Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B3
	REI: REI-P | HP-REI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?

Description	This query returns the automated STS/AU Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	B3
	REI: REI-P | HP-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate STS/AU Path error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect

Description	This command enables/disables the manual STS/AU Path error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:INJect
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:INJ
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual :TYPE

Description	This command selects the manual STS/AU Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B3
	REI: REI-P | HP-REI
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:MAN:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual :TYPE?

Description	This query returns the manual STS/AU Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	B3
	REI: REI-P | HP-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:HOP:PATH:MAN:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated

Description	This command enables/disables the Rate/Max Rate STS/AU Path TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:CONTinuous

Description	This command sets the automated STS/AU Path TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:CONTinuous?

Description	This query returns the automated STS/AU Path TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:RATE

Description	This command sets the automated STS/AU Path TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:RATE?

Description	This query returns the automated STS/AU Path TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:TYPE

Description	This command selects the automated STS/AU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LIEC.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	LIEC: TC-IEC-P | HPTC-IEC
	LOEI: TC-OEI-P | HPTC-OEI
	LREI: TC-REI-P | HPTC-REI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:TYPE?

Description	This query returns the automated STS/AU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LIEC.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	LIEC: TC-IEC-P | HPTC-IEC
	LOEI: TC-OEI-P | HPTC-OEI
	LREI: TC-REI-P | HPTC-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate STS/AU Path TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:INJect

Description	This command enables/disables the manual STS/AU Path TCM error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:INJ
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual: AMOunt

Description	This command sets the manual STS/AU Path TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual: AMOunt?

Description	This query returns the manual STS/AU Path TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual: TYPE

Description	This command selects the manual STS/AU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LIEC.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	LIEC: TC-IEC-P | HPTC-IEC
	LOEI: TC-OEI-P | HPTC-OEI
	LREI: TC-REI-P | HPTC-REI
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?

:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual: TYPE?

Description	This query returns the manual STS/AU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LIEC.
	Navigation Path: Results > Alarms/Errors > Injection > STS/AU Path TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:TCM:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	LIEC: TC-IEC-P | HPTC-IEC
	LOEI: TC-OEI-P | HPTC-OEI
	LREI: TC-REI-P | HPTC-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:HOP:TCM:MAN:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt

Description	This command sets the manual Line/MS error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt?

Description	This query returns the manual Line/MS error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated

Description	This command enables/disables the Rate/Max Rate Line/MS error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated: CONTinuous

Description	This command sets the automated Line/MS error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated: CONTinuous?

Description	This query returns the automated Line/MS error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:CONTinuous?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE

Description	This command sets the automated Line/MS error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE?

Description	This query returns the automated Line/MS error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE

Description	This command selects the automated Line/MS error Defect to be injected.
	At *RST condition, this value is set to B2.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B2
	REI: REI-L | MS-REI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:TYPE?
	Returns: B2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE?

Description	This query returns the automated Line/MS error Defect to be injected.
	At *RST condition, this value is set to B2.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	B2
	REI: REI-L | MS-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:TYPE?
	Returns: B2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Line/MS error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LINE:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AUTomated:RATE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:INJect

Description	This command enables/disables the manual Line/MS error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LINE:INJect
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE

Description	This command selects the manual Line/MS error Defect to be injected.
	At *RST condition, this value is set to B2.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B2
	REI: REI-L | MS-REI
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE?
	Returns: B2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE ?

Description	This query returns the manual Line/MS error Defect to be injected.
	At *RST condition, this value is set to B2.
	Navigation Path: Results > Alarms/Errors > Injection > Line/MS > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:MANual:TYPE?
Response Syntax	\<Error\>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the error to be injected:
	B2
	REI: REI-L | MS-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE B2
	SOUR:DATA:TEL:SDHS:ERR:LINE:MAN:TYPE?
	Returns: B2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:LINE:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AMOunt

Description	This command sets the manual VT/TU Path error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AMOunt ?

Description	This query returns the manual VT/TU Path error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated

Description	This command enables/disables the Rate/Max Rate VT/TU Path error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUToma ted:CONTinuous

Description	This command sets the automated VT/TU Path error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:CONTinuous?

Description	This query returns the automated VT/TU Path error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:RATE

Description	This command sets the automated VT/TU Path error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:RATE?

Description	This query returns the automated VT/TU Path error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:TYPE

Description	This command selects the automated VT/TU Path error Defect to be injected.
	At *RST condition, this value is set to BIP2.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Rate/Max Rate > Defect
	This query returns the automated VT/TU Path error Defect to be injected.
	Returns the error to be injected:
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:TYPE?
	Returns: BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:TYPE?

Description	This query returns the automated VT/TU Path error Defect to be injected.
	At *RST condition, this value is set to BIP2.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:TYPE?
	Returns: BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate VT/TU Path error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:INJect

Description	This command enables/disables the manual VT/TU Path error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:INJ
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:MANual: TYPE

Description	This command selects the manual VT/TU Path error Defect to be injected.
	At *RST condition, this value is set to BIP2.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE?
	Returns: BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:MANual: TYPE?

Description	This query returns the manual VT/TU Path error Defect to be injected.
	At *RST condition, this value is set to BIP2.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:PATH:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	BIP2: BIP-2
	LPRei: REI-V | LP-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE BIP2
	SOUR:DATA:TEL:SDHS:ERR:LOP:PATH:MAN:TYPE?
	Returns: BIP2
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated

Description	This command enables/disables the Rate/Max Rate VT/TU Path TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:CONTinuous

Description	This command sets the automated VT/TU Path TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:CONTinuous?

Description	This query returns the automated VT/TU Path TCM error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:RATE

Description	This command sets the automated VT/TU Path TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:RATE?

Description	This query returns the automated VT/TU Path TCM error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:TYPE

Description	This command selects the automated VT/TU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LBIP.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	LBIP: TC-BIP-V | LPTC-BIP
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LIEC (not supported)
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:TYPE?

Description	This query returns the automated VT/TU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LBIP.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	LBIP: TC-BIP-V | LPTC-BIP
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LIEC (not supported)
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate VT/TU Path TCM error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:INJect

Description	This command enables/disables the manual VT/TU Path TCM error injection.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:INJ
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual: AMOunt

Description	This command sets the manual VT/TU Path TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual: AMOunt?

Description	This query returns the manual VT/TU Path TCM error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual: TYPE

Description	This command selects the manual VT/TU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LBIP.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	LBIP: TC-BIP-V | LPTC-BIP
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LIEC (not supported)
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual: TYPE?

Description	This query returns the manual VT/TU Path TCM error Defect to be injected.
	At *RST condition, this value is set to LBIP.
	Navigation Path: Results > Alarms/Errors > Injection > VT/TU Path TCM > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOP:TCM:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	LBIP: TC-BIP-V | LPTC-BIP
	LOEI: TC-OEI-V | LPTC-OEI
	LREI: TC-REI-V | LPTC-REI
	LIEC (not supported)
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE LOEI
	SOUR:DATA:TEL:SDHS:ERR:LOP:TCM:MAN:TYPE?
	Returns: LOEI
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AMOunt

Description	This command sets the manual TU-3 Path error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AMOunt?

Description	This query returns the manual TU-3 Path error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AMOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated

Description	This command enables/disables the Rate/Max Rate TU-3 Path error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHS:ERRor:HOP:PATH:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:CONTinuous

Description	This command sets the automated TU-3 Path error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTo mated:CONTinuous?

Description	This query returns the automated TU-3 Path error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:RATE

Description	This command sets the automated TU-3 Path error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:RATE <wsp><Rate>
Parameter(s)	Rate:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported rate
	MINimum: Smallest supported rate
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:RATE?

Description	This query returns the automated TU-3 Path error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:TYPE

Description	This command selects the automated TU-3 Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B3
	REI: LP-REI
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:TYPE?

Description	This query returns the automated TU-3 Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated:TYPE?
Response Syntax	\<Error\>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns the error to be injected:
	B3
	REI: LP-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate TU-3 Path error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:AUTomated?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AUTomated:RATE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:INJect

Description	This command enables/disables the manual TU-3 Path error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:INJect
Response Syntax	\<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:INJ
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:MANual:TYPE

Description	This command selects the manual TU-3 Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B3
	REI: LP-REI
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt?

:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:MANual:TYPE?

Description	This query returns the manual TU-3 Path error Defect to be injected.
	At *RST condition, this value is set to B3.
	Navigation Path: Results > Alarms/Errors > Injection > TU-3 > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:LOPTu:PATH:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	B3
	REI: LP-REI
Example(s)	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE B3
	SOUR:DATA:TEL:SDHS:ERR:LOPT:PATH:MAN:TYPE?
	Returns: B3
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:HOP:PATH:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt

Description	This command sets the manual Section/RS error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount of error to be injected. Choices are 1 through 50.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Error>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt?

Description	This query returns the manual Section/RS error Amount to be injected.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Manual > Amount
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated

Description	This command enables/disables the Rate/Max Rate Section/RS error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated <wsp><Inject>
Parameter(s)	**Inject**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Starts/stops the automated Rate/Max Rate error Injection.
	ON: Enables error injection.
	OFF: Disables error injection.
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:RATE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:CONTinuous

Description	This command sets the automated Section/RS error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:CONTinuous <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the automated error Mode:
	ON: Max Rate
	OFF: Rate
Response Syntax	<Amount>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE?
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:CONTinuous?

Description	This query returns the automated Section/RS error Mode: ON for Max Rate and OFF for Rate.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:CONTinuous?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the automated error Mode:
	1: Max Rate
	0: Rate
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:CONT ON
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE
	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:RATE

Description	This command sets the automated Section/RS error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:RATE <wsp><Rate>
Parameter(s)	**Rate**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the rate of error to be injected.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Mode>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE?

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:RATE?

Description	This query returns the automated Section/RS error Rate to be injected.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Rate > Rate
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:RATE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current injection rate is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the rate of error to be injected.
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:RATE?
	Returns: 1.0E-10
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE

Description	This command selects the automated Section/RS error Defect to be injected.
	At *RST condition, this value is set to B1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B1
	FAS
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:TYPE?
	Returns: B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated?

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE?

Description	This query returns the automated Section/RS error Defect to be injected.
	At *RST condition, this value is set to B1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Rate/Max Rate > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	B1
	FAS
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:TYPE?
	Returns: B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated?

Description	This query returns the enable/disable status of the Rate/Max Rate Section/RS error injection.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Rate/Max Rate > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated?
Response Syntax	<Inject>
Response(s)	**Inject**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable injection status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT:RATE 1.0E-10
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT ON
	SOUR:DATA:TEL:SDHS:ERR:SECT:AUT?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AUTomated:RATE

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:INJect

Description	This command enables/disables the manual Section/RS error injection.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Manual > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:INJect
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:AMO 15
	SOUR:DATA:TEL:SDHS:ERR:SECT:INJ
See Also	SOURce:DATA:TELecom:SDHS:ERRor:SECTion:MANual:TYPE
	SOURce:DATA:TELecom:SDHS:ERRor:SECTion:AMOunt

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE

Description	This command selects the manual Section/RS error Defect to be injected.
	At *RST condition, this value is set to B1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error to be injected:
	B1
	FAS
Response Syntax	<Inject>
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE?
	Returns: B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt?

:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE?

Description	This query returns the manual Section/RS error Defect to be injected.
	At *RST condition, this value is set to B1.
	Navigation Path: Results > Alarms/Errors > Injection > Section/RS > Error > Manual > Defect
Syntax	:SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:MANual:TYPE?
Response Syntax	<Error>
Response(s)	**Error**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the error to be injected:
	B1
	FAS
Example(s)	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE B1
	SOUR:DATA:TEL:SDHS:ERR:SECT:MAN:TYPE?
	Returns: B1
See Also	SOURce:DATA:TELecom:SDHSonet:ERRor:SECTion:AMOunt

:SOURce:DATA:TELecom:SOAM:ALARm:ADDRess:TYPE

Description	This command selects the continuous OAM alarm Address Type for injection.
	At *RST condition, this value is set to Unicast.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Address Type
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:ADDRess:TYPE[<wsp><AdresseType>]
Parameter(s)	**AdresseType**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Address Type:
	MULTicast
	UNIcast
Response Syntax	<Error>
Example(s)	SOURce:DATA:TEL:SOAM:ALAR:ADDR:TYPE MULT
See Also	SOURce:DATA:TELecom:SOAM:ALARm:TYPE?

:SOURce:DATA:TELecom:SOAM:ALARm:ADDRess:TYPE?

Description	This query returns the continuous OAM alarm Address Type for injection.
	At *RST condition, this value is set to Unicast.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Address Type
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:ADDRess:TYPE?
Response Syntax	<AddressType>
Response(s)	**AddressType**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Address Type:
	MULTicast
	UNIcast
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:ADDR:TYPE?
See Also	SOURce:DATA:TELecom:SOAM:ALARm:TYPE

:SOURce:DATA:TELecom:SOAM:ALARm:DEFect

Description	This command selects the continuous OAM alarm Defect to be injected.
	At *RST condition, this value is set to RDI.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Defect
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:DEFect[<wsp><Defect>]
Parameter(s)	**Defect**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the alarm to be injected:
	AIS: AIS
	CDCI: C-DCI
	CFDI: C-FDI
	CLOS: C-LOS
	CRDI: C-RDI
	LCK: LCK
	RDI: RDI
Response Syntax	<AddressType>
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:DEF AIS
See Also	SOURce:DATA:TELecom:SOAM:ALARm:PRIority?

:SOURce:DATA:TELecom:SOAM:ALARm:DEFect?

Description	This query returns the continuous OAM alarm Defect to be injected.
	At *RST condition, this value is RDI.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Defect
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:DEFect?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the alarm to be injected:
	AIS: AIS
	CDCI: C-DCI
	CFDI: C-FDI
	CLOS: C-LOS
	CRDI: C-RDI
	LCK: LCK
	RDI: RDI
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:DEF?
See Also	SOURce:DATA:TELecom:SOAM:ALARm:PRIority

:SOURce:DATA:TELecom:SOAM:ALARm:GENerate

Description	This command sets the alarm injection On or Off.
	At *RST condition, this value is set to off.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Inject
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:GENerate <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Defect>
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:GEN ON
See Also	SOURce:DATA:TELecom:SOAM:ALARm:AMOunt?

:SOURce:DATA:TELecom:SOAM:ALARm:GENerate?

Description	This query returns the transmission period of the CCM frame.
	At *RST condition, this value is set to 10 ms.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Inject
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:GENerate?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of alarm injection.
	1, status of alarm is enabled
	0, status of alarm is disabled
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:GEN?
See Also	SOURce:DATA:TELecom:SOAM:ALARm:AMOunt

:SOURce:DATA:TELecom:SOAM:ALARm:MD:LEVel

Description	This command selects the continuous OAM alarm MD Level for injection.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > MD Level
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:MD:LEVel[<wsp><MD Level>]
Parameter(s)	**MD Level**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the MD Level: 0, 1, 2, 3, 4, 5, 6, or 7.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:MD:LEV 4
See Also	SOURce:DATA:TELecom:SOAM:ALARm:PERiod?

:SOURce:DATA:TELecom:SOAM:ALARm:MD:LEVel?

Description	This query returns the continuous OAM alarm MD Level for injection.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > MD Level
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:MD:LEVel?
Response Syntax	<MD Level>
Response(s)	**MD Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the MD Level: 0, 1, 2, 3, 4, 5, 6, or 7.
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:MD:LEV?
See Also	SOURce:DATA:TELecom:SOAM:ALARm:PERiod

:SOURce:DATA:TELecom:SOAM:ALARm:MEG:LEVel

Description	This command selects the continuous OAM alarm MEG Level for injection.
	At *RST condition, this value is set to 7.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > MEG Level
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:MEG:LEVel[<wsp><MEG Level>]
Parameter(s)	**MEG Level**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the MEG Level: 0, 1, 2, 3, 4, 5, 6, or 7.
Response Syntax	<MD Level>
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:MEG:LEV 4
See Also	SOURce:DATA:TELecom:SOAM:ALARm:DROP:ELIGible?

:SOURce:DATA:TELecom:SOAM:ALARm:MEG:LEVel?

Description	This query returns the continuous OAM alarm MEG Level for injection.
	At *RST condition, this value is set to 7.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > MEG Level
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:MEG:LEVel?
Response Syntax	<MEG Level>
Response(s)	**MEG Level**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the MEG Level: 0, 1, 2, 3, 4, 5, 6, or 7.
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:MEG:LEV?
See Also	SOURce:DATA:TELecom:SOAM:ALARm:DROP:ELIGible

:SOURce:DATA:TELecom:SOAM:ALARm:PERiod

Description	This command selects the continuous OAM alarm Period for injection.
	At *RST condition, this value is set to 1 ms.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Period
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:PERiod[<wsp><Period>]
Parameter(s)	**Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Period:
	P333MS: 3.33 MilliSeconds
	P10MS: 10 MilliSeconds
	P100MS: 100 MilliSeconds
	P1S: 1 Second
	P10S: 10 Seconds
	P1MIN: 1 Minute
	P10MIN: 10 Minutes
Response Syntax	<MEG Level>
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:PER P1MIN
See Also	SOURce:DATA:TELecom:SOAM:ALARm:MD:LEVel?

:SOURce:DATA:TELecom:SOAM:ALARm:PERiod?

Description	This query returns the continuous OAM alarm Period for injection.
	At *RST condition, this value is set to 10 ms.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Period
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:PERiod?
Response Syntax	<Period>
Response(s)	**Period**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Period:
	P333MS: 3.33 MilliSeconds
	P10MS: 10 MilliSeconds
	P100MS: 100 MilliSeconds
	P1S: 1 Second
	P10S: 10 Seconds
	P1MIN: 1 Minute
	P10MIN: 10 Minutes
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:PER?
See Also	SOURce:DATA:TELecom:SOAM:ALARm:MD:LEVel

:SOURce:DATA:TELecom:SOAM:ALARm:PRIority

Description	This command selects the continuous OAM alarm Priority for injection.
	At *RST condition, this value is set to 0.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Priority
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:PRIority <wsp><value>
Parameter(s)	**value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the priority: 0, 1, 2, 3, 4, 5, 6, or 7.
Response Syntax	<Period>
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:PRI 2
See Also	SOURce:DATA:TELecom:SOAM:ALARm:DEFect?

:SOURce:DATA:TELecom:SOAM:ALARm:PRIority?

Description	This query returns the continuous OAM alarm Priority for injection.
	At *RST condition, this value is set to 7.
	Navigation Path: Results > Alarms/Errors > Injection > S-OAM/MPLS-TP OAM > Alarm > Priority
Syntax	:SOURce:DATA:TELecom:SOAM:ALARm:PRIority?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the priority: 0, 1, 2, 3, 4, 5, 6, or 7.
Example(s)	SOUR:DATA:TEL:SOAM:ALAR:PRI?
See Also	SOURce:DATA:TELecom:SOAM:ALARm:DEFect

Traces - SONET/SDH

:FETCh:DATA:TELecom:SDHSonet:HOP:TCAPident:N[1..n]:RECeived?

Description	This query returns the received value for Path Overhead.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Test Configurator > Results > Traces > OC > Traces > > TCM Access Point Identifier > STS Path > Received
	Navigation Path: Setup > SONET/SDH BERT > Test Configurator > Results > Traces > STM > Traces > > TCM Access Point Identifier > AU Path > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:TCAPident:N[1..n]:RECeived?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received 16 or 64 byte format TCM Access Point Identifier message for Path Overhead.
Example(s)	FETC:DATA:TEL:SDHS:HOP:TCAP:N1:RECeived?
	Returns: tcmmessage
See Also	FETCh:DATA:TELecom:SDHSonet:POVerhead:J1:TIM:PATTern:RECeived

:FETCh:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:TIM:PATTern:RECeived?

Description	This query returns the received J2 and J1 value for Low Path Overhead.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Test Configurator > Results > Traces > VT Path (J2) > Received
	Navigation Path: Setup > SONET/SDH BERT > Test Configurator > Results > Traces TU Path (J2) > Received
	Navigation Path: Setup > SONET/SDH BERT > Test Configurator > Results > Traces TU3 Path (J1) > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:OVERhead:J[1..n]:TIM:PATTern:RECeived?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received J2 value for Low Path Overhead
Example(s)	FETC:DATA:TEL:SDHS:LOP:OVER:J2:TIM:PATT:REC?
See Also	FETCh:DATA:TELecom:SDHSonet:SOVerhead:J[1..n]:TIM:PATTern:RECeived

:FETCh:DATA:TELecom:SDHSonet:LOP:TCAPident:N[1..n]:RECeived?

Description	This query returns the received value for Path Overhead.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Test Configurator > Results > Traces > OC > Traces > > TCM Access Point Identifier > STS Path > Received
	Navigation Path: Setup > SONET/SDH BERT > Test Configurator > Results > Traces > STM > Traces > > TCM Access Point Identifier > AU Path > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:TCAPident:N[1..n]:RECeived?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received 16 or 64 byte format TCM Access Point Identifier message for Path Overhead.
Example(s)	FETC:DATA:TEL:SDHS:LOP:TCAP:N2:RECeived?
	Returns: tcmmessage
See Also	FETCh:DATA:TELecom:SDHSonet:POVerhead:J1:TIM:PATTern:RECeived

:FETCh:DATA:TELecom:SDHSonet:POVerhead:J[1..n]:TIM:PATTern:RECeived?

Description	This query returns the received J1 value for Path Overhead.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Traces > SONET > Traces > STS Path (J1) > Received
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Traces > SDH > Traces > AU Path (J1) > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:POVerhead:J[1..n]:TIM:PATTern:RECeived?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received J1 value for Path Overhead.
Example(s)	FETC:DATA:TEL:SDHS:POV:J1:TIM:PATT:REC?
See Also	FETCh:DATA:TELecom:SDHSonet:SOVerhead:J[1..n]:TIM:PATTern:RECeived

:FETCh:DATA:TELecom:SDHSonet:SOVerhead:J[1..n]:TIM:PATTern:RECeived?

Description	This query returns the received J0 value for Section Overhead.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Traces > SONET > Traces > Section (J0) > Received
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Traces > SDH > Traces > RS (J0) > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:SOVerhead:J[1..n]:TIM:PATTern:RECeived?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received J0 value for Section Overhead.
Example(s)	FETC:DATA:TEL:SDHS:SOV:J100:TIM:PATT:REC?
See Also	FETCh:DATA:TELecom:SDHSonet:POVerhead:J1:TIM:PATTern:RECeived

:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:COPY

Description	This event sets the copy Rx to instrument for HOP TCM Path Overhead.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test > SONET/SDH BERT > Results > Traces > OC > TIM-P > Copy RX
	Navigation Path: Test > SONET/SDH BERT > Results > Traces > STM > HPTC-TIM > Copy RX
Syntax	:SENSe:DATA:TELecom:SDHSonet:HOP:TCAPident:COPY
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:SDHS:HOP:TCAP:COPY
See Also	SENSe:DATA:TELecom:SDHSonet:LINE:OVERhead:TIM:COPY

:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:COPY

Description	This command sets the copy Rx to instrument for Low Path Overhead.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test > SONET/SDH BERT > Results > Traces > OC > TIM-V > Copy RX
	Navigation Path: Test > SONET/SDH BERT > Results > Traces > STM > LP-TIM > Copy RX
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:OVERhead:TIM:COPY
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:SDHS:LOP:OVER:TIM:COPY
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:COPY

:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:COPY

Description	This event sets the copy Rx to instrument for LOP TCM Path Overhead.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test > SONET/SDH BERT > Results > Traces > OC > TIM-V > Copy RX
	Navigation Path: Test > SONET/SDH BERT > Results > Traces > STM > LPTC-TIM > Copy RX
Syntax	:SENSe:DATA:TELecom:SDHSonet:LOP:TCAPident:COPY
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:SDHS:LOP:TCAP:COPY
See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:COPY

:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:COPYrx

Description	This command sets the copy Rx to instrument for Path Overhead.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test > OTN SONET/SDH BERT OR SONET/SDH BERT > Results > Traces > SONET > Traces > TIM-P > Copy RX
	Navigation Path: Test > OTN SONET/SDH BERT OR SONET/SDH BERT > Results > Traces > SDH > Traces > HP-TIM > Copy RX
Syntax	:SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:COPYrx
Response Syntax	<Message>

See Also	SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:COPY

:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:COPYrx

Description	This command sets the copy Rx to instrument for Section Overhead.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test > OTN SONET/SDH BERT OR SONET/SDH BERT > Results > Traces > SONET > Traces > TIM-S > Copy RX
	Navigation Path: Test > OTN SONET/SDH BERT OR SONET/SDH BERT > Results > Traces > SDH > Traces > RS-TIM > Copy RX
Syntax	:SENSe:DATA:TELecom:SDHSonet:SECTion:OVERhead:TIM:COPYrx
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:SDHS:SECT:OVER:TIM:COPY
See Also	SENSe:DATA:TELecom:SDHSonet:PATH:OVERhead:TIM:COPY

Traces - OTN

:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI: DAPI:B?

Description	This query returns the ODU1e/2e/3e1/3e2 TCM DAPI Received Message.
	At *RST condition, this value is set to EXFO TCMn DAPI.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Received Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	FETC:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:DAPI:B16?
	Returns: EXFO TCM1 DAPI
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI: OPSPec:B?

Description	This query returns the ODU1e/2e/3e1/3e2 TCM Operator Specific Received Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Received Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	FETC:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:OPSP:B32?
	Returns: EXFO TCM1 OPERATOR SPECIFIC
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

Description	This query returns the ODU1e/2e/3e1/3e2 TCM SAPI Received Message.
	At *RST condition, this value is set to EXFO TCMn SAPI.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > SAPI - Received Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	FETC:DATA:TEL:OTN:ODU3:E1:TCM1:TTI:SAPI:B16?
	Returns: EXFO TCM1 SAPI
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:DAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:DAPI:B?

Description	This query returns the ODU1e/2e/3e1/3e2 DAPI Received Message.
	At *RST condition, this value is set to EXFO ODU DAPI.
	Navigation Path: Results > Traces > OTN > OTU > PM TTI Traces > DAPI
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for over clocked ODU TTI.
Example(s)	FETCh:DATA:TELecom:OTN:ODU3:E1:TTI:DAPI:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:OPSPec:B?

Description	This query returns the ODU1e/2e/3e1/3e2 PM Operator Specific Received Message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > Operator Specific - Received Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for over clocked ODU TTI.
Example(s)	FETCh:DATA:TELecom:OTN:ODU3:E1:TTI:OPSPec:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:SAPI:B?

Description	This query returns the ODU1e/2e/3e1/3e2 PM SAPI received message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > SAPI - Received Message
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TTI:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received message.
Example(s)	FETCh:DATA:TELecom:OTN:ODU3:E1:TTI:SAPI:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:DAPI:B ?

Description	This query returns the ODU1f/2f TCM DAPI Received Message.
	At *RST condition, this value is set to EXFO TCMn DAPI.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Received Message
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	FETC:DATA:TEL:OTN:ODU1:F:TCM1:TTI:DAPI:B?
	Returns: EXFO TCM1 DAPI
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:OPSPec:B?

Description	This query returns the ODU1f/2f TCM Operator Specific Received Message.
	At *RST condition, this value is set to EXFO TCMn OPERATOR SPECIFIC.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > Operator Specific - Received Message
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for the instrument.
Example(s)	FETC:DATA:TEL:OTN:ODU1:F:TCM1:TTI:OPSP:B?
	Returns: EXFO OTU OPERATOR SPECIFIC
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:SAPI:B ?

Description	This query returns the ODU1f/2f TCM SAPI Received Message.
	At *RST condition, this value is set to EXFO TCMn SAPI.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > SAPI - Received Message
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TCM[1..n]:TTI:SAPI:B?
Response Syntax	\<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	FETC:DATA:TEL:OTN:ODU1:F:TCM1:TTI:SAPI:B?
	Returns: EXFO TCM1 SAPI
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:DAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TTI:DAPI:B?

Description	This query returns the received DAPI message for Over Clocked ODU TTI.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > TTI Traces > ODU > PM TTI Traces > DAPI
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TTI:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for over clocked ODU TTI.
Example(s)	FETCh:DATA:TELecom:OTN:ODU1:F:TTI:DAPI:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TTI:OPSPec:B?

Description	This query returns the ODU1f/2f PM Operator Specific Received Message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > Operator Specific - Received Message
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TTI:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for over clocked ODU TTI.
Example(s)	FETCh:DATA:TELecom:OTN:ODU1:F:TTI:OPSPec:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TTI:SAPI:B?

Description	This query returns the ODU1f/2f PM SAPI received message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traces > OTN > ODUn > PM TTI Traces > SAPI - Received Message
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:F:TTI:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for over clocked ODU TTI.
Example(s)	FETCh:DATA:TELecom:OTN:ODU1:F:TTI:SAPI:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:B?

Description	This query returns the ODUn TCM DAPI Received Message.
	At *RST condition, this value is set to EXFO TCMn DAPI.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Received Message
Syntax	:FETCh:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for ODU TCM TTI.

:FETCh:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:SAPI:B?

Description	This query returns the received message for overclocked rates OTU3e1/2.
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Test > OTN BERT > Results > TTI Traces > OTU3e(1/2) > SM TTI Traces > SAPI
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:FETCh:DATA:TELecom:OTN:OTU[1..n]:E[1..n]:TTI:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	FETC:DATA:TEL:OTN:OTU3:E1:TTI:SAPI:B16?
	Returns: EXFO OTU SAPI
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:OTU[1..n]:F:TTI:DAPI:B?

Description	This query returns the OTU1f/2f DAPI Received Message.
	At *RST condition, this value is set to EXFO OTUn DAPI.
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces > DAPI Received Message
Syntax	:FETCh:DATA:TELecom:OTN:OTU[1..n]:F:TTI:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	FETC:DATA:TEL:OTN:OTU1:F:TTI:DAPI:B?
	Returns: EXFO OTU DAPI
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:OTU[1..n]:F:TTI:OPSPec:B?

Description	This query returns the received message for non-standard rates OTU(1/2)f
	At *RST condition, this value is set to EXFO OTU OPERATOR SPECIFIC.
	Navigation Path: Test > OTN BERT > Results > TTI Traces > OTU(1/2)f > SM TTI Traces > Operator Specific
Syntax	:FETCh:DATA:TELecom:OTN:OTU[1..n]:F:TTI:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	FETC:DATA:TEL:OTN:OTU1:F:TTI:OPSP:B?
	Returns: EXFO OTU OPERATOR SPECIFIC
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:OTU[1..n]:F:TTI:SAPI:B?

Description	This query returns the received message for non-standard rates OTU(1/2)f
	At *RST condition, this value is set to EXFO OTU SAPI.
	Navigation Path: Test > OTN BERT > Results > TTI Traces > OTU(1/2)f > SM TTI Traces > SAPI
Syntax	:FETCh:DATA:TELecom:OTN:OTU[1..n]:F:TTI:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message.
Example(s)	FETC:DATA:TEL:OTN:OTU1:F:TTI:SAPI:B?
	Returns: EXFO OTU SAPI
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:SAPI:B?

:FETCh:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:B?

Description	This query returns the OTU DAPI Received Message.
	At *RST condition, this value is set to EXFO OTUn DAPI.
	Navigation Path: Results > Traces > OTN > OTU > SM TTI Traces > DAPI Received Message
Syntax	:FETCh:DATA:TELecom:OTN:OTU[1..n]:TTI:DAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for OTU.
Example(s)	FETC:DATA:TEL:OTN:OTU1:TTI:DAPI:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TTI:OPSPec:B?

:FETCh:DATA:TELecom:OTN:OTU[1..n]:TTI:OPSPec:B?

Description	This query returns the received message for the instrument.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > TTI Traces > OTU > SM TTI Traces > Operator Specific
Syntax	:FETCh:DATA:TELecom:OTN:OTU[1..n]:TTI:OPSPec:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for OTU.
Example(s)	FETC:DATA:TEL:OTN:OTU1:TTI:OPSP:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TTI:OPSPec:B?

:FETCh:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:B?

Description	This query returns the received message for the instrument.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > TTI Traces > OTU > SM TTI Traces > SAPI
Syntax	:FETCh:DATA:TELecom:OTN:OTU[1..n]:TTI:SAPI:B?
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the selected message for OTU.
Example(s)	FETC:DATA:TEL:OTN:OTU1:TTI:SAPI:B?
See Also	FETCh:DATA:TELecom:OTN:ODU[1..n]:TTI:OPSPec:B?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:DAPI:COPY

Description	This command uses the ODU1e/2e/3e1/3e2 TCM DAPI Received Message as the Expected Message.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > Traces > OTN > ODUn > ODUn TCM TTI Traces > TCMn > DAPI - Copy RX
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:TCM[1..n]:TTI:DAPI:COPY

Traces/PT (FlexO)

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLient

Description	This command forces the ODU TTI Traces commands/queries to be applied on all clients (ON) or a single client (OFF) for FlexOTN test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > ODUk > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODUk > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLient <wsp><AllClient>
Parameter(s)	**AllClient**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Selects if the ODU TTI Traces commands/queries are applied on all clients (ON) or a single client (OFF).
Response Syntax	<Message>
Example(s)	SENS:DATA:TEL:OTN:ODU101:TTI:ACLI ON
	SENS:DATA:TEL:OTN:ODU101:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU101:TTI:SAPI:EXP XFO ODU SAPI
	SENS:DATA:TEL:OTN:ODU101:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLient
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLient?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLient?

Description	This query returns if the ODU TTI Traces commands/queries are applied on all clients (ON) or a single client (OFF) for FlexOTN test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > Test Configurator > ODUk > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODUk > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLient?
Response Syntax	<AllClient>
Response(s)	**AllClient**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns an indication that the ODU TTI Traces commands/queries are to be applied on all FlexO clients
	1, ODU TTI Trace commands/queries are applied on all channels.
	0, ODU TTI Trace commands/queries are applied on a specific channels determined by SENS:DATA:TEL:OTN:ODU[1..n]:TTI:CLI.
Example(s)	SENS:DATA:TEL:OTN:ODU101:TTI:ACLI ON
	SENS:DATA:TEL:OTN:ODU101:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU101:TTI:SAPI:EXP XFO ODU SAPI
	SENS:DATA:TEL:OTN:ODU101:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLIent

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent

Description	This command sets the value of the client used by the ODU TTI Traces for FlexOTN test.
	At *RST condition, this value is set to 1.
	When setting a client value, the following command is set to OFF: SENSe[1..n]:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLIent
	Navigation Path: Setup > Test Configurator > ODUk > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODUk > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent <wsp><ClientId>
Parameter(s)	**ClientId**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the client used for ODU TTI Traces, when AllCLIent is not selected, in the FlexOTN test application.
Response Syntax	<AllClient>
Example(s)	SENS:DATA:TEL:OTN:ODU100:TTI:CLI 3
	SENS:DATA:TEL:OTN:ODU100:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP XFO ODU SAPI3
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI3
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent?
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLIent

:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent?

Description	This query returns the value of the client used by the ODU TTI Traces for FlexOTN test.
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > Test Configurator > ODUk > Traces > PM TTI Traces
	Navigation Path: Results > Traces > OTN > ODUk > PM TTI Traces
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent?
Response Syntax	<ClientId>
Response(s)	**ClientId**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the client used for the ODU TTI Trace, when AllCLIent is 'OFF', in the FlexOTN test application.
Example(s)	SENS:DATA:TEL:OTN:ODU100:TTI:CLI 3
	SENS:DATA:TEL:OTN:ODU100:TTI:TIM SAPI,ON
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP XFO ODU SAPI3
	SENS:DATA:TEL:OTN:ODU100:TTI:SAPI:EXP?
	Returns: XFO ODU SAPI3
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:CLIent
	SENSe:DATA:TELecom:OTN:ODU[1..n]:TTI:ACLIent

:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient

Description	This command forces the Payload Type commands/queries to be applied on all clients (ON) or a single client (OFF) for FlexO BERT test. At *RST condition, this value is set to OFF. Navigation Path: Results > PT > ODUk > Client ID
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient <wsp><Client ID>
Parameter(s)	**Client ID**: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Selects if the Payload Type commands/queries are applied on all clients (ON) or a single client (OFF).
Response Syntax	<ClientId>
Example(s)	SENS:DATA:TEL:OTN:OPU101:ACL ON SENS:DATA:TEL:OTN:OPU101:ACL OFF
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent? SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient?

Description	This query returns if the Payload Type commands/queries are applied on all client IDs (ON) or a single client ID (OFF) for FlexO BERT test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > ODU Channels > PT >Global PT
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient?
Response Syntax	<AllClientIds>
Response(s)	**AllClientIds**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns an indication that the Payload Type commands/queries are to be applied on all client IDs.
	1, OPU Payload Type commands/queries are applied on all client IDs.
	0, OPU Payload Type commands/queries are applied on a specific client ID determined by SENSe:DATA:TELecom:OTN:OPU[1..n]:CLient
Example(s)	SENS:DATA:TEL:OTN:OPU101:ACL?
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient
	SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent

:SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent

Description	This command sets the value of the client ID used by the Payload Type for FlexO BERT test.
	When setting a client ID value, the following command is set to OFF: SENSe[1..n]:DATA:TELecom:OTN:OPU[1..n]:ACLient
	At *RST condition, this value is set to 1.
	Navigation Path: Results > PT > ODUk > Client ID
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent <wsp><Client ID>
Parameter(s)	**Client ID**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Global parameter, applicable to FlexO BERT test application
	Selects the client ID.
Response Syntax	<AllClientIds>
Example(s)	SENS:DATA:TEL:OTN:OPU100:ACL?
	Returns: 1
	SENS:DATA:TEL:OTN:OPU101:CLI 2
	SENS:DATA:TEL:OTN:OPU101:ACL?
	Returns: 0
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent?
	SENSe:DATA:TELecom:OTN:OPU[1..n]::ACLient

:SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent?

Description	This query returns the value of the client ID used by the Payload Type, when command AllCHAnnel is 'OFF', for FlexO BERT test.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > PT > ODUk > Client ID
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent?
Response Syntax	<Client ID>
Response(s)	**Client ID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the client ID used for the Payload Type, when command AllCHAnnel is 'OFF', for FlexO BERT test application.
Example(s)	SENS:DATA:TEL:OTN:OPU101:CLI?
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent
	SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient

Logger and Alarms/Errors Logger

:FETCh:DATA:TELecom:LOGGer:EVENts?

Description	This query returns the total number of test events recorded.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Logger
Syntax	:FETCh:DATA:TELecom:LOGGer:EVENts?
Response Syntax	<Event>
Response(s)	**Event**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the total number of test events recorded.
Example(s)	FETC:DATA:TEL:LOGG:EVEN?
See Also	FETCh:DATA:TELecom:LOGGer:LIST?

:FETCh:DATA:TELecom:LOGGer:LIST?

Description	This query returns the list of test events.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Logger
Syntax	:FETCh:DATA:TELecom:LOGGer:LIST?[<wsp><Eventno>]
Parameter(s)	**Eventno**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	If event number is not provided, then the entire event list is returned and if it is provided the event of that particular number from the list Is returned.
Response Syntax	<List>
Response(s)	**List**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the list of test events.
Example(s)	FETC:DATA:TEL:LOGG:LIST?
See Also	FETCh:DATA:TELecom:LOGGer:EVENts?

Performance Monitoring

:FETCh:DATA:TELecom:DSN:DS[1..n]:PM:STATistics?

Description	This query returns the performance monitoring statistics for DS1/DS3 level.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Results > Performance Monitoring > DS1/DS3
Syntax	:FETCh:DATA:TELecom:DSN:DS[1..n]:PM:STATistics? <wsp><Standard>, <Type>, <End>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring standard number.
	G826ISM: G.826 ISM
	M2100ISM: M.2100 ISM
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring statistics.
	BBE: Background Block Error (SES).
	BBER: Background Block Error Ratio (BBER).
	EB: Errored Block (EB).
	EFS: Error Free Seconds (EFS).
	ES: Errored Seconds (ES).
	ESR: Errored Second Ratio (ESR).
	SES: Severely Errored Seconds (SES).
	SESR: Severely Errored Second Ratio (SESR).
	UAS: Unavailable Second (UAS).
	End:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Near-End or Far-End.
	NEND: the standard for Near-End.
	FEND: the standard for Far-End.
Response Syntax	<Statistics>

:FETCh:DATA:TELecom:DSN:DS[1..n]:PM:STATistics?

Response(s)	**Statistics**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the performance monitoring statistics of Digital Signal (DS).
Example(s)	FETC:DATA:TEL:DSN:DS1:PM:STAT? G826ISM,EFS,NEND
See Also	FETCh:DATA:TELecom:SONet:SECTion:PM:STATistics?

:FETCh:DATA:TELecom:PATTern:PM:STATistics?

Description	This query returns the performance monitoring statistics for BERT level.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Results > Performance Monitoring > BERT
Syntax	:FETCh:DATA:TELecom:PATTern:PM:STATistics? <wsp><Standard>, <Type>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring standard number.
	G821: G.821
	M2100OOSM: M.2100 OOSM
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring statistics.
	DM: Degraded Minutes (DM).
	EC: Error Count (EC).
	EFS: Error Free Seconds (EFS).
	ES: Errored Seconds (ES).
	ESR: Errored Second Ratio (ESR).
	SES: Severely Errored Seconds (SES).
	SESR: Severely Errored Second Ratio (SESR).
	UAS: Unavailable Second (UAS).
Response Syntax	<Statistics>
Response(s)	**Statistics**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns performance monitoring statistics of Pattern.
Example(s)	FETC:DATA:TEL:PATT:PM:STAT? G821, EFS
See Also	FETCh:DATA:TELecom:SONet:SECTion:PM:STATistics?

:FETCh:DATA:TELecom:PDH:E[1..n]:PM:STATistics?

Description	This query returns the performance monitoring statistics for E1/E2/E3/E4 level.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Results > Performance Monitoring > E1/E2/E3/E4
Syntax	:FETCh:DATA:TELecom:PDH:E[1..n]:PM:STATistics? <wsp><Standard>, <Type>, <End>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring standard number.
	G826ISM: G.826 ISM
	M2100ISM: M.2100 ISM
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring statistics.
	EFS: Error Free Seconds (EFS).
	EB: Errored Block (EB).
	ES: Errored Seconds (ES).
	SES: Severely Errored Seconds (SES).
	BBE: Background Block Error (SES).
	UAS: Unavailable Second (UAS).
	ESR: Errored Second Ratio (ESR).
	SESR: Severely Errored Second Ratio (SESR).
	BBER: Background Block Error Ratio (BBER).
	End:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Near-End or Far-End.
	NEND: the standard for Near-End.
	FEND: the standard for Far-End.
Response Syntax	<Statistics>

:FETCh:DATA:TELecom:PDH:E[1..n]:PM:STATistics?

Response(s)	**Statistics**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the performance monitoring statistics of European standard for digital transmission levels.
Example(s)	FETC:DATA:TEL:PDH:E1:PM:STAT? G826ISM,EFS,NEND
See Also	FETCh:DATA:TELecom:SONet:SECTion:PM:STATistics?

:FETCh:DATA:TELecom:SDHSonet:HOP:PM:STATistics?

Description	This query returns the performance monitoring statistics for STS-n/AU-n HOP level.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Results > Performance Monitoring > STS-n/AU-n
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:PM:STATistics? <wsp><Standard>, <Type>, <End>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring standard number.
	G828ISM: G.828 ISM
	M2101ISM: M.2101 ISM
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring statistics.
	EFS: Error Free Seconds (EFS).
	EB: Errored Block (EB).
	ES: Errored Seconds (ES).
	SES: Severely Errored Seconds (SES).
	BBE: Background Block Error (SES).
	UAS: Unavailable Second (UAS).
	ESR: Errored Second Ratio (ESR).
	SESR: Severely Errored Second Ratio (SESR).
	BBER: Background Block Error Ratio (BBER).
	SEP: Severely Errored Period (SEP).
	SEPI: Severely Errored Period Intensity (SEPI).
	End:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Near-End or Far-End.
	NEND: the standard for Near-End.
	FEND: the standard for Far-End.
Response Syntax	<Statistics>

:FETCh:DATA:TELecom:SDHSonet:HOP:PM:STATistics?

Response(s)	**Statistics**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the performance monitoring statistics of HOP.
Example(s)	FETC:DATA:TEL:SDHS:HOP:PM:STAT? G828ISM,EFS,NEND
See Also	FETCh:DATA:TEL:SONet:LINE:PM:STATistics?

:FETCh:DATA:TELecom:SDHSonet:LOP:PM:STATistics?

Description	This query returns the performance monitoring statistics for VTn/TU-n LOP level.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Results > Performance Monitoring > VTn/TU-n
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:PM:STATistics? <wsp><Standard>, <Type>, <End>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring standard number.
	G828ISM: G.828 ISM
	M2101ISM: M.2101 ISM
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring statistics.
	EFS: Error Free Seconds (EFS).
	EB: Errored Block (EB).
	ES: Errored Seconds (ES).
	SES: Severely Errored Seconds (SES).
	BBE: Background Block Error (SES).
	UAS: Unavailable Second (UAS).
	ESR: Errored Second Ratio (ESR).
	SESR: Severely Errored Second Ratio (SESR).
	BBER: Background Block Error Ratio (BBER).
	SEP: Severely Errored Period (SEP).
	SEPI: Severely Errored Period Intensity (SEPI).
	End:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Near-End or Far-End.
	NEND: the standard for Near-End.
	FEND: the standard for Far-End.
Response Syntax	<Statistics>

:FETCh:DATA:TELecom:SDHSonet:LOP:PM:STATistics?

Response(s)	**Statistics**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the performance monitoring statistics of Low Order Path (LOP).
Example(s)	FETC:DATA:TEL:SDHS:LOP:PM:STAT? G828ISM,EFS,NEND
See Also	FETCh:DATA:TEL:SON:LINE:PM:STAT?

:FETCh:DATA:TELecom:SDHSonet:LOPTu:PM:STATistics?

Description

This query returns the performance monitoring statistics for TU-3 LOP level.

At *RST condition, this value is device dependent.

Navigation Path: Test > Results > Performance Monitoring > TU-3

Syntax

:FETCh:DATA:TELecom:SDHSonet:LOPTu:PM:STATistics? <wsp><Standard>, <Type>, <End>

Parameter(s)

Standard:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the performance monitoring standard number.

G828ISM: G.828 ISM

M2101ISM: M.2101 ISM

Type:

The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the performance monitoring statistics.

EFS: Error Free Seconds (EFS).

EB: Errored Block (EB).

ES: Errored Seconds (ES).

SES: Severely Errored Seconds (SES).

BBE: Background Block Error (SES).

UAS: Unavailable Second (UAS).

ESR: Errored Second Ratio (ESR).

SESR: Severely Errored Second Ratio (SESR).

BBER: Background Block Error Ratio (BBER).

SEP: Severely Errored Period (SEP).

SEPI: Severely Errored Period Intensity (SEPI).

End:

The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects Near-End or Far-End.

NEND: the standard for Near-End.

FEND: the standard for Far-End.

:FETCh:DATA:TELecom:SDHSonet:LOPTu:PM:STATistics?

Response Syntax	<Statistics>
Response(s)	**Statistics**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the performance monitoring statistics of Low Order Path (LOPTu).
Example(s)	FETC:DATA:TEL:SDHS:LOPT:PM:STAT? G828ISM,EFS,NEND
See Also	FETCh:DATA:TEL:SON:LINE:PM:STAT?

:FETCh:DATA:TELecom:SONet:LINE:PM:STATistics?

Description	This query returns the performance monitoring statistics for Line/MS level.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Results > Performance Monitoring > Line/MS
Syntax	:FETCh:DATA:TELecom:SONet:LINE:PM:STATistics? <wsp><Standard>, <Type>, <End>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring standard number.
	G829ISM: G.829 ISM
	M2101ISM: M.2101 ISM
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring statistics.
	EFS: Error Free Seconds (EFS).
	EB: Errored Block (EB).
	ES: Errored Seconds (ES).
	SES: Severely Errored Seconds (SES).
	BBE: Background Block Error (SES).
	UAS: Unavailable Second (UAS).
	ESR: Errored Second Ratio (ESR).
	SESR: Severely Errored Second Ratio (SESR).
	BBER: Background Block Error Ratio (BBER).
	End:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Near-End or Far-End.
	NEND: the standard for Near-End.
	FEND: the standard for Far-End.
Response Syntax	<Statistics>

:FETCh:DATA:TELecom:SONet:LINE:PM:STATistics?

Response(s)	**Statistics**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the performance monitoring statistics of Line.
Example(s)	FETC:DATA:TEL:SON:LINE:PM:STAT? M2101ISM,ES,NEND
See Also	FETCh:DATA:TELecom:PATTern:PM:STATistics?

:FETCh:DATA:TELecom:SONet:SECTion:PM:STATistics?

Description	This query returns the performance monitoring statistics for Section/RS level.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Results > Performance Monitoring > Section/RS
Syntax	:FETCh:DATA:TELecom:SONet:SECTion:PM:STATistics? <wsp><Standard>, <Type>, <End>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring standard number.
	G829ISM: G.829 ISM
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the performance monitoring statistics.
	EFS: Error Free Seconds (EFS).
	EB: Errored Block (EB).
	ES: Errored Seconds (ES).
	SES: Severely Errored Seconds (SES).
	BBE: Background Block Error (SES).
	UAS: Unavailable Second (UAS).
	ESR: Errored Second Ratio (ESR).
	SESR: Severely Errored Second Ratio (SESR).
	BBER: Background Block Error Ratio (BBER).
	End:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Near-End.
	NEND: the standard for Near-End.
Response Syntax	<Statistics>

:FETCh:DATA:TELecom:SONet:SECTion:PM:STATistics?

Response(s)	**Statistics**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the performance monitoring statistics of Section.
Example(s)	FETC:DATA:TEL:SON:SECT:PM:STAT? G829ISM,EFS,NEND
See Also	FETCh:DATA:TELecom:SDHSonet:HOP:PM:STATistics?

Traffic - Ethernet

:SENSe:DATA:TELecom:ETHernet:FRAMe:COUNt:RX?

Description	This query returns the number of received frames.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Ethernet > RX Count
	Navigation Path: Results > Summary > Traffic > RX Count
Syntax	:SENSe:DATA:TELecom:ETHernet:FRAMe:COUNt:RX? <wsp><Ftype>
Parameter(s)	**Ftype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the frame type
	MULTicast: Multicast
	BROadcast: Broadcast
	UNIcast: Unicast
	NUNicast: Non-Unicast
	FTOTal: Total
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of received frames.
	MULTicast: the frame type as Multicast.
	BROadcast: the frame type as Broadcast.
	UNIcast: the frame type as Unicast.
	NUNicast: the frame type as Non-Unicast.
	FTOtal: the frame type as Total.
Example(s)	SENS:DATA:TEL:ETH:FRAM:COUN:RX? MULT
See Also	SENSe:DATA:TELecom:ETHernet:PACKet:FRAMe:COUNt?

:SENSe:DATA:TELecom:ETHernet:FSIZe:COUNt?

Description	This query returns the total number of all valid and invalid frames received.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Ethernet > Frame Size > RX Count
Syntax	:SENSe:DATA:TELecom:ETHernet:FSIZe:COUNt? <wsp><Ftype>
Parameter(s)	**Ftype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the frame size.
	FLESS64: frame size less than 64.
	F64: frame size equal to 64.
	F65to127: frame size between 65 to 127.
	F128to255: frame size between 128 to 255.
	F256to511: frame size between 256 to 511.
	F512to1023: frame size between 512 to 1023.
	F1024to1518: frame size between 1024 to 1518.
	FMORE1518: frame size more than 1518.
	FSTotal: total frame size.
Response Syntax	<Count>

:SENSe:DATA:TELecom:ETHernet:FSIZe:COUNt?

Response(s)	Count:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total number of all valid and invalid frames received.
	FLESS64: frame size less than 64.
	F64: frame size equal to 64.
	F65TO127: frame size between 65 to 127.
	F128TO255: frame size between 128 to 255.
	F256TO511: frame size between 256 to 511.
	F512TO1023: frame size between 512 to 1023.
	F1024TO1518: frame size between 1024 to 1518.
	FMORE1518: frame size more than 1519.
	FSTotal: total frame size.
Example(s)	SENS:DATA:TEL:ETH:FSIZ:COUN? F64
See Also	SENSe:DATA:TELecom:ETHernet:PACKet:FRAMe:COUNt?

:SENSe:DATA:TELecom:ETHernet:FSIZe:PERCentage?

Description	This query returns the percentage of each frames received.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Ethernet > Frame Size > %
Syntax	:SENSe:DATA:TELecom:ETHernet:FSIZe:PERCentage? <wsp><Ftype>
Parameter(s)	**Ftype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the frame size.
	FLESS64: frame size less than 64.
	F64: frame size equal to 64.
	F65to127: frame size between 65 to 127.
	F128to255: frame size between 128 to 255.
	F256to511: frame size between 256 to 511.
	F512to1023: frame size between 512 to 1023.
	F1024to1518: frame size between 1024 to 1518.
	FMORE1518: frame size more than 1518.
Response Syntax	<Percent>
Response(s)	**Percent**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the percentage of each frame received.
Example(s)	SENS:DATA:TEL:ETH:FSIZ:PERC? F64
See Also	SENSe:DATA:TELecom:ETHernet:FSIZe:COUNt?

:SENSe:DATA:TELecom:ETHernet:PACKet:BANDwidth?

Description	This query returns the Bandwidth for TX/RX.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Ethernet
Syntax	:SENSe:DATA:TELecom:ETHernet:PACKet:BANDwidth? <wsp><FTYP>
Parameter(s)	**FTYP**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the transmitting/receiving bandwidth.
	RX: sets the total of all receiving bandwidth.
	TX: sets the total of all transmitting bandwidth.
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the transmitting/receiving frame bandwidth.
	RX: returns the total of all receiving frame bandwidth.
	TX: returns the total of all transmitting frame bandwidth.
Example(s)	SENS:DATA:TEL:ETH:PACK:BAND? RX
See Also	SENSe:DATA:TELecom:ETHernet:PACKet:LINE:UTILization?

:SENSe:DATA:TELecom:ETHernet:PACKet:FRAMe:COUNt?

Description	This query returns the Frame count for TX/RX.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Traffic
Syntax	:SENSe:DATA:TELecom:ETHernet:PACKet:FRAMe:COUNt? <wsp><FTYP>
Parameter(s)	FTYP:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the number of frames transmitted.
	RX: Gives the total of all received valid and invalid frames.
	TX: Gives the total of all transmitted frames.
Response Syntax	<Count>
Response(s)	Count:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of transmitted or received frames.
	RXCount: Gives the total of all received valid and invalid frames.
	TXCount: Gives the total of all transmitted frames.
Example(s)	SENS:DATA:TEL:ETH:PACK:FRAM:COUN? TX
See Also	SENSe:DATA:TELecom:ETHernet:FSIZe:COUNt?

:SENSe:DATA:TELecom:ETHernet:PACKet:FRAMe:RATE?

Description	This query returns the Frame Rate for TX/RX.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Summary > Traffic
	Navigation Path: Results > Traffic > Ethernet
Syntax	:SENSe:DATA:TELecom:ETHernet:PACKet:FRAMe:RATE? <wsp><FTYP>
Parameter(s)	**FTYP**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the transmitted/received number of frames.
	RX: sets the total of all received frames.
	TX: sets the total of all transmitted frames.
Response Syntax	<Frame Rate>
Response(s)	**Frame Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the transmitting/receiving line utilization.
	RX: returns the total of all receiving line utilization.
	TX: returns the total of all transmitting line utilization.
Example(s)	SENS:DATA:TEL:ETH:PACK:FRAM:RATE? RX
See Also	SENSe:DATA:TELecom:ETHernet:PACKet:BANDwidth?

:SENSe:DATA:TELecom:ETHernet:PACKet:LINE:UTILization?

Description	This query returns the transmitting/receiving line rate utilization.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Ethernet
Syntax	:SENSe:DATA:TELecom:ETHernet:PACKet:LINE:UTILization? <wsp><Direction>
Parameter(s)	**Direction**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the transmitting/receiving line utilization.
	RX: sets the total of all receiving line utilization.
	TX: sets the total of all transmitting line utilization.
Response Syntax	<Utilization>
Response(s)	**Utilization**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the transmitting/receiving line utilization.
	RX: returns the total of all receiving line utilization.
	TX: returns the total of all transmitting line utilization.
Example(s)	SENS:DATA:TEL:ETH:PACK:LINE:UTIL? RX
See Also	SENSe:DATA:TELecom:ETHernet:PACKet:FRAMe:COUNt?

:SOURce:DATA:TELecom:ETHernet:FRAMe:COUNt:TX?

Description	This query returns the number of transmitted frames.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Ethernet > TX Count
	Navigation Path: Results > Summary > Traffic > TX Count
Syntax	:SOURce:DATA:TELecom:ETHernet:FRAMe:COUNt:TX? <wsp><Ftype>
Parameter(s)	**Ftype**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the frame type.
	MULTicast: Multicast
	BROadcast: Broadcast
	UNIcast: Unicast
	NUNicast: Non-Unicast
	FTOTal: Total
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of transmitted frames.
	MULTicast: Multicast as the frame type.
	BROadcast: Broadcast as the frame type.
	UNIcast: Unicast as the frame type.
	NUNicast: Non-Unicast as the frame type.
	FTOtal: Total as the frame type.
Example(s)	SOUR:DATA:TEL:ETH:FRAM:COUN:TX? MULT
See Also	SOURce:DATA:TELecom:ETHernet:FRAMe:COUNt:RX?

Traffic - Flow Control

:FETCh:DATA:TELecom:ETHernet:PACKet:PAUSe:TIME:RX?

Description	This query returns the total number of packet pause time received from the link partner.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:FETCh:DATA:TELecom:ETHernet:PACKet:PAUSe:TIME:RX? <wsp><FTYP>
Parameter(s)	**FTYP**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the pause time.
	TOTALPAUSE: returns the Total pause time.
	LASTPAUSE: sets the Last pause time.
	MINPAUSE: sets the Minimum pause time.
	MAXPAUSE: sets the Maximum pause time.
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total number of pause time received.
Example(s)	FETC:DATA:TEL:ETH:PACK:PAUS:TIME:RX? TOTALPAUSE
See Also	SOURce:DATA:TELecom:ETHernet:FRAMe:COUNt:TX?

:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes:ABORt?

Description	This query returns the number of received pause frames with a Quanta equal to zero; cancelling the pause frames.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes:ABORt?
Response Syntax	<Abort>
Response(s)	**Abort**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of received pause frames.
Example(s)	FETC:DATA:TEL:ETH:PAUS:FRAM:ABOR?
See Also	FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes?

:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes:RX?

Description	This query reports total number of pause frames.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes:RX?
Response Syntax	<FrameRx>
Response(s)	**FrameRx**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of received flow control frames.
Example(s)	FETC:DATA:TEL:ETH:PAUS:FRAM:RX?
See Also	FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes?

:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes:TX?

Description	This query reports total number of pause frames.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes:TX?
Response Syntax	<FrameRx>
Response(s)	**FrameRx**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Pause Time
Example(s)	FETC:DATA:TEL:ETH:PAUS:FRAM:TX?
See Also	FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes?

:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes?

Description	This query returns the number of pause frames.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes?
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Reports the number of pause frames.
Example(s)	FETC:DATA:TEL:ETH:PAUS:FRAM?
See Also	FETCh:DATA:TELecom:ETHernet:PAUSe:FRAMes:ABORt?

:SOURce:DATA:TELecom:ETHernet:PACKet:PAUSe:INJect

Description	This command injects pause time to the link partner.
	This command is an event and is not associated with any *RST condition or a query form.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:SOURce:DATA:TELecom:ETHernet:PACKet:PAUSe:INJect
Response Syntax	<Frames>
Example(s)	SOUR:DATA:TEL:ETH:PACK:PAUS:INJ
See Also	SOURce:DATA:TELecom:ETHernet:ERRor:MAC:INJect

:SOURce:DATA:TELecom:ETHernet:PACKet:PAUSe:TIME

Description	This command sets the total number of packet pause time for the link partner.
	At *RST condition, this value is set to 100 Quanta.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:SOURce:DATA:TELecom:ETHernet:PACKet:PAUSe:TIME <wsp><Pause Time>
Parameter(s)	**Pause Time**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Pause packet time.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Frames>
Example(s)	SOUR:DATA:TEL:ETH:PACK:PAUS:TIME 50
See Also	SOURce:DATA:TELecom:ETHernet:FRAMe:COUNt:TX?

:SOURce:DATA:TELecom:ETHernet:PACKet:PAUSe:TIME?

Description	This query returns the total number of packet pause time received from the link partner.
	At *RST condition, this value is set to 100 Quanta.
	Navigation Path: Results > Traffic > Flow Control
Syntax	:SOURce:DATA:TELecom:ETHernet:PACKet:PAUSe:TIME?[<wsp><Pause Time>]
Parameter(s)	**Pause Time**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Pause packet time.
	This parameter is optional. If no token is specified, the current Packet Pause Time is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the total number of pause time received.
Example(s)	SOUR:DATA:TEL:ETH:PACK:PAUS:TIME 50
	SOUR:DATA:TEL:ETH:PACK:PAUS:TIME?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:FRAMe:COUNt:TX?

:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess

Description	This command sets the destination MAC address.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Flow Control > Pause Injection > Destination Mac Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Sets the destination MAC address.
Response Syntax	<Time>
Example(s)	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR 11:11:11:11:11:11
	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR?
	Returns: 11:11:11:11:11:11
See Also	SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess:ENABle

:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTinat ion:ADDRess:ENABle

Description	This command enables the MAC destination address field.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Traffic > Flow Control > Pause Injection > Destination Mac Address (checkbox)
Syntax	:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess:ENABle \<wsp>\<Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a \<BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	\<Time>
Example(s)	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR:ENAB ON
	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess

:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess:ENABle?

Description	This query returns the MAC destination address field.
	At *RST condition, this value is set to OFF.
	Navigation Path: Results > Traffic > Pause Injection > Destination Mac Address (checkbox)
Syntax	:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR:ENAB ON
	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess?

:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess?

Description	This query returns the destination MAC address.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Traffic > Flow Control > Pause Injection > Destination Mac Address
Syntax	:SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Destination MAC address value.
Example(s)	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR 11:11:11:11:11:11
	SOUR:DATA:TEL:ETH:PINJ:MAC:DEST:ADDR?
	Returns: 11:11:11:11:11:11
See Also	SOURce:DATA:TELecom:ETHernet:PINJection:MAC:DESTination:ADDRess:ENABle?

Traffic - OAM, S-OAM, and MPLS-TP OAM

:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:RX:COUNt?

Description	This query returns the traffic Responder function counts received frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > Responder > Rx Count
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:RX:COUNt? <wsp><Type>
Parameter(s)	**Type:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of responder frame type.
	LBM
	LTM
	DMM
	LMM
	SLM
Response Syntax	<Value>
Response(s)	**Value:**
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the responder Rx frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:RESP:RX:COUNt? LBM
See Also	FETCh:DATA:TELecom:SOAM:LINK:TRACe:RESult:LTR:TIMeout?

:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:RX:TOTal?

Description	This query returns the traffic Responder function Total received frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > Responder > Rx Total
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:RX:TOTal?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the responder total received frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:RESP:RX:TOTal?
See Also	FETCh:DATA:TELecom:SOAM:LINK:TRACe:STATus?

:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:TX:COUNt?

Description	This query returns the traffic Responder counts transmitted frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > Responder > Tx Count
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:TX:COUNt? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of responder frame type.
	LBR
	LTR
	DMR
	LMR
	SLR
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the responder Tx frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:RESP:TX:COUNt? LBR
See Also	FETCh:DATA:TELecom:SOAM:LINK:TRACe:RESult:RX:LTR?

:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:TX:TOTal?

Description	This query returns the traffic Responder function Total transmitted frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > Responder > Tx Total
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:RESPonder:TX:TOTal?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the responder total transmitted frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:RESP:TX:TOTal?
See Also	FETCh:DATA:TELecom:SOAM:LINK:TRACe:RESult:INValid:LTR?

:FETCh:DATA:TELecom:SOAM:TRAFfic:RX:COUNt?

Description	This query returns the traffic monitoring function counts received frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > RX Count
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:RX:COUNt? <wsp><type>
Parameter(s)	**type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of frame type.
	AIS
	CCM
	CSF
	DMR
	LBR
	LCK
	LMR
	LTR
	SLR
	TST
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Rx frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:RX:COUNt? LBR
See Also	FETCh:DATA:TELecom:SOAM:FDELay:MAXimum:DELay:VERD?

:FETCh:DATA:TELecom:SOAM:TRAFfic:RX:TOTal?

Description	This query returns the traffic monitoring function Total received frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > RX Total
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:RX:TOTal?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the total received frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:RX:TOTal?
See Also	FETCh:DATA:TELecom:SOAM:LINK:TRACe:RESult:TX:LTM?

:FETCh:DATA:TELecom:SOAM:TRAFfic:TX:COUNt?

Description	This query returns the traffic monitoring function counts transmitted frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > TX Count
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:TX:COUNt? <wsp><type>
Parameter(s)	**type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of frame:
	AIS
	CCM
	CSF
	DMM
	LBM
	LCK
	LMM
	LTM
	SLM
	TST
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Tx frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:TX:COUNt? LBM
See Also	FETCh:DATA:TELecom:SOAM:FDELay:AVERage:DELay?

:FETCh:DATA:TELecom:SOAM:TRAFfic:TX:TOTal?

Description	This query returns the traffic monitoring function Total transmitted frames.
	At *RST condition, this value is device dependent.
	Nevigation Path:Test > Results > Traffic > S-OAM > TX Total
Syntax	:FETCh:DATA:TELecom:SOAM:TRAFfic:TX:TOTal?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the total transmitted frame Count.
Example(s)	FETC:DATA:TEL:SOAM:TRAF:TX:TOTal?
See Also	FETCh:DATA:TELecom:SOAM:LINK:TRACe:RESult?

Traffic - Path OAM

:FETCh:DATA:TELecom:FETHernet:POAM:RESPonder:RX:DMM:COUNt?

Description	This query returns the FlexE Path OAM Responder function RX 2DMM count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Traffic > Path OAM > Responder 2DMM RX Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:RESPonder:RX:DMM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the RX 2DMM count
Example(s)	FETC:DATA:TEL:FETH:POAM:RESP:RX:DMM:COUN?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:DELay:RX:DMR:COUNt?

:FETCh:DATA:TELecom:FETHernet:POAM:RESPonder:TX:DMR :COUNt?

Description	This query returns the FlexE Path OAM Responder function TX 2DMR count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Traffic > Path OAM > Responder - 2DMR TX Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:RESPonder:TX:DMR:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the TX 2DMR count
Example(s)	FETC:DATA:TEL:FETH:POAM:RESP:TX:DMR:COUN?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:DELay:TX:DMM:COUNt?

FTFL/PT

:FETCh:DATA:TELecom:OTN:OPU[1..n]:E:PCODe:RECeived?

Description	This query returns the corresponding received payload type code for OTU1e/2e rate.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODU1e/2e > PT- Code - Received
Syntax	:FETCh:DATA:TELecom:OTN:OPU[1..n]:E:PCODe:RECeived?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the received payload code.
Example(s)	FETC:DATA:TEL:OTN:OPU1:E:PCOD:REC?
See Also	FETCh:DATA:TELecom:OTN:OPU[1..n]:PTYPe:RECeived?

:FETCh:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe:RECeived?

Description	This query returns the received payload signal type to be generated for OTU1e/2e rate.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODU1e/2e > PT - Payload Type
Syntax	:FETCh:DATA:TELecom:OTN:OPU[1..n]:E:PTYPe:RECeived?
Response Syntax	<Payload>
Response(s)	**Payload**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the received payload type.
Example(s)	FETC:DATA:TEL:OTN:OPU1:E:PTYP:REC?
See Also	FETCh:DATA:TELecom:OTN:OPU[1..n]:PCODe:RECeived?

:FETCh:DATA:TELecom:OTN:OPU[1..n]:F:PCODe:RECeived?

Description	This query returns the corresponding received payload type code.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > FTFL/PT > ODU 1/2F > Payload Type
Syntax	:FETCh:DATA:TELecom:OTN:OPU[1..n]:F:PCODe:RECeived?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the received payload code.
Example(s)	FETC:DATA:TEL:OTN:OPU1:F:PCOD:REC?
See Also	FETCh:DATA:TELecom:OTN:OPU[1..n]:PTYPe:RECeived?

:FETCh:DATA:TELecom:OTN:OPU[1..n]:F:PTYPe:RECeived?

Description	This query returns the received payload signal type to be generated.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > FTFL/PT > ODU 1/2 F > Payload Type
Syntax	:FETCh:DATA:TELecom:OTN:OPU[1..n]:F:PTYPe:RECeived?
Response Syntax	<Payload>
Response(s)	**Payload**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the received payload type.
Example(s)	FETC:DATA:TEL:OTN:OPU1:F:PTYP:REC?
See Also	FETCh:DATA:TELecom:OTN:OPU[1..n]:PCODe:RECeived?

:FETCh:DATA:TELecom:OTN:OPU[1..n]:PCODe:RECeived?

Description	This query returns the received Payload Type code.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > FTFL/PT > ODU > Payload Type
	In Multi-Channel OTN, when accessing an OPU LO, the channel must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]:CHANnel.
	In FlexO BERT, when accessing an OPU LO, the client ID must be set using SENSe:DATA:TELecom:OTN:ODU[1..n]:CLIent
Syntax	:FETCh:DATA:TELecom:OTN:OPU[1..n]:PCODe:RECeived?
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the received Payload Type Code.
Example(s)	OTN BERT:
	FETC:DATA:TEL:OTN:OPU1:PCOD:REC?
	For Multi-Channel OTN:
	SENS:DATA:TEL:OTN:OPU100:CHAN 2
	FETC:DATA:TEL:OTN:OPU100:PCOD:REC?
	For FlexO BERT:
	SENS:DATA:TEL:OTN:OPU101:CLI 2
	FETC:DATA:TEL:OTN:OPU101:PCOD:REC?
See Also	FETCh:DATA:TELecom:OTN:OPU[1..n]:PTYPe:RECeived?
	For Multi-Channel OTN:
	SENSe:DATA:TELecom:OTN:OPU[1..n]:CHANnel
	SENSeDATA:TELecom:OTN:OPU[1..n]:CHANnel?
	For FlexO BERT:
	SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent
	SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent?

:FETCh:DATA:TELecom:OTN:OPU[1..n]:PTYPe:RECeived?

Description	This query returns the received Payload Type.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test > OTN BERT > Results > FTFL/PT > ODU > Payload Type
	In Multi-Channel OTN, when accessing an OPU LO, the channel must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]:CHANnel
	In FlexO BERT, when accessing an OPU LO, the client ID must be set using SENSe:DATA:TELecom:OTN:OPU[1..n]:CLIent
Syntax	:FETCh:DATA:TELecom:OTN:OPU[1..n]:PTYPe:RECeived?
Response Syntax	<Payload Type>

:FETCh:DATA:TELecom:OTN:OPU[1..n]:PTYPe:RECeived?

Response(s)	Payload Type:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the received Payload Type.
	_1485_1001OPU1: (1.485/1.001) Gbit/s SDI mapping into OPU1
	_1485OPU1: 1.485 Gbit/s SDI mapping in to OPU1
	_200GBASER: 200GBASE-R mapping into OPUflex
	_25GBASER: 25GBASE-R mapping into OPUflex
	_2970_1001OPUFLEX: (2.970/1.001) Gbit/s SDI mapping into OPUflex
	_2970OPUFLEX: 2.970 Gbit/s SDI mapping into OPUflex
	_400GBASER: 400GBASE-R mapping into OPUflex
	ASYNchronous: Asynchronous CBR mapping
	ATM: ATM mapping
	BISYnch: Bit synchronous CBR mapping
	BSNTiming: Bit stream without octet timing mapping
	BSTiming: Bit stream with octet timing mapping
	DVBASIOPU0: DVB_ASI mapping into OPU0
	EXPerimental: Experimental mapping
	FC100ODU0: FC-100 into ODU0
	FC1200ODU2E: FC-1200 into ODU2e
	FC1600: FC-1600 mapping into OPUflex
	FC200ODU1: FC-200 into ODU1
	FC3200: FC-3200 mapping into OPUflex
	FC400: FC-400 into ODUflex
	FC800: FC-800 into ODUflex
	FLEXEAWARE: FlexE aware (partial rate) mapping into OPUflex
	FLEXECLIENT: FlexE Client mapping into OPUflex
	GFP1: GFP Mapping
	GFPEOPU2: GFP mapping into extended OPU2

:FETCh:DATA:TELecom:OTN:OPU[1..n]:PTYPe:RECeived?

Response(s)
IBDRMAPPING: IB DDR mapping into ODUflex

IBQDRMAPPING: IB QDR mapping into ODUflex

IBSDRMAPPING: IB SDR mapping into ODUflex

NAVailable: Not available

NULLtest: NULL test signal mapping

OC12STM4ODU0: OC12/STM-4 into ODU0

OC3STM1ODU0: OC3/STM-1 into ODU0

ODUODTUCNTS: ODU multiplex with ODTUCn.ts

ODUODTUJK: ODU multiplex with ODTUjk

ODUODTUKTSODTUJK: ODU multiplex with ODTUk.ts/ODTUjk

PCSCODEWORD: PCS Codeword transparent Ethernet

PRBStest: PRBS test signal mapping

RFSTandard: Reserved for international standardization

RPRopriet: Reserved codes for proprietary use

SBCONESCONOPU0: SBCON/ESCON mapping into OPU0

SDIMAPPING: SDI mapping into OPU0

VCONcate: Virtual Concatenated signal

Example(s)
OTN BERT:

FETC:DATA:TEL:OTN:OPU1:PTYP:REC?

For Multi-Channel OTN:

SENS:DATA:TEL:OTN:OPU100:CHAN 2

FETC:DATA:TEL:OTN:OPU100:PTYP:REC?

For FlexO BERT:

SENS:DATA:TEL:OTN:OPU101:CLI 2

SENSe:DATA:TELecom:OTN:OPU[1..n]:ACLient

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE?

Description	This query returns the received ODU1e/2e/3e1/3e2 FTFL Fault Indication Forward/Backward Code. At *RST condition, this value is set to device-dependent. Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Code NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE? <wsp><FTFL>
Parameter(s)	FTFL: The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element. Selects Forword or Backward: FORWard BACKward
Response Syntax	<Code>
Response(s)	Code: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the received FTFL Fault Indication Code.
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:FTFL:CODE? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:IDENtifier?

Description	This query returns the received ODU1e/2e/3e1/3e2 FTFL Forward/Backward Operator Identifier.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Operator Identifier
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:IDENtifier? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forword or Backward:
	FORWard
	BACKward
Response Syntax	<Identifier>
Response(s)	**Identifier**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received FTFL Operator Identifier.
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:FTFL:IDEN? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDicatio n?

Description	This query returns the received ODU1e/2e/3e1/3e2 FTFL Fault Indication Forward/Backward message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Fault Indication
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forword or Backward:
	FORWard
	BACKward
Response Syntax	<Indication>
Response(s)	**Indication**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the received FTFL Fault Indication message:
	NFAULT: No Fault
	SFAIL: Signal Fail
	SDEGRADE: Signal Degrade
	RESERVED: Reserved
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:FTFL:IND? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:SPECific?

Description	This query returns the received ODU1e/2e/3e1/3e2 FTFL Forward/Backward Operator Specific.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Operator Specific
	NOTE: For :E[1..n]:, use :E: for ODU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:SPECific? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forword or Backward:
	FORWard
	BACKward
Response Syntax	<Specific>
Response(s)	**Specific**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received FTFL Operator Specific.
Example(s)	SENS:DATA:TEL:OTN:ODU3:E1:FTFL:SPEC? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:CODE?

Description	This query returns the received ODU1f/2f FTFL Fault Indication Forward/Backward Code.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Code
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:CODE? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Selects Forword or Backward:
	FORWard
	BACKward
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the received FTFL Fault Indication Code.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:FTFL:CODE? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:IDENtifier?

Description	This query returns the received ODU1f/2f FTFL Forward/Backward Operator Identifier.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Operator Identifier
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:IDENtifier? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forword or Backward:
	FORWard
	BACKward
Response Syntax	<Identifier>
Response(s)	**Identifier**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received FTFL Operator Identifier.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:FTFL:IDEN? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:INDication?

Description	This query returns the received ODU1f/2f FTFL Fault Indication Forward/Backward message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Fault Indication
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:INDication? <wsp><FTFL>
Parameter(s)	**FTFL:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forword or Backward:
	FORWard
	BACKward
Response Syntax	<Indication>
Response(s)	**Indication:**
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the received FTFL Fault Indication message:
	NFAULT: No Fault
	SFAIL: Signal Fail
	SDEGRADE: Signal Degrade
	RESERVED: Reserved
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:FTFL:IND? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:CODE?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:SPECific?

Description	This query returns the received ODU1f/2f FTFL Forward/Backward Operator Specific.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODUn > FTFL > Forward/Backward Operator Specific
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:F:FTFL:SPECific? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forword or Backward:
	FORWard
	BACKward
Response Syntax	<Specific>
Response(s)	**Specific**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received FTFL Operator Specific.
Example(s)	SENS:DATA:TEL:OTN:ODU1:F:FTFL:SPEC? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:E[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE?

Description	This query returns the FTFL Fault Indication Forward/Backward Code.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODU > FTFL > Forward/Backward Fault Indication Code
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE? <wsp><Ftfl>
Parameter(s)	**Ftfl**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forward or Backward:
	FORWard
	BACKward
Response Syntax	<Code>
Response(s)	**Code**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the received FTFL Fault Indication code.
Example(s)	SENS:DATA:TEL:OTN:ODU1:FTFL:CODE? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier?

Description	This query returns the FTFL Forward/Backward Operator Identifier.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODU > FTFL > Forward/Backward Operator Identifier
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:IDENtifier? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forward or Backward:
	FORWard
	BACKward
Response Syntax	<Identifier>
Response(s)	**Identifier**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received FTFL Operator Identifier.
Example(s)	SENS:DATA:TEL:OTN:ODU1:FTFL:IDEN? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

Description	This query returns the FTFL Forward/Backward Fault Identication message.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODU > FTFL > Forward/Backward Fault Indication
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forward or Backward:
	FORWard
	BACKward
Response Syntax	<Indication>
Response(s)	**Indication**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the received FTFL Fault Indication message:
	NFAULT: No Fault
	SFAIL: Signal Fail
	SDEGRADE: Signal Degrade
	RESERVED: Reserved
Example(s)	SENS:DATA:TEL:OTN:ODU1:FTFL:IND? FORW
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:CODE?

:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:SPECific?

Description	This query returns the FTFL Forward/Backward Operator Specific.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FTFL/PT > ODU > FTFL > Forward/Backward Operator Specific
Syntax	:SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:SPECific? <wsp><FTFL>
Parameter(s)	**FTFL**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Forward or Backward:
	FORWard
	BACKward
Response Syntax	<Operator Specific>
Response(s)	**Operator Specific**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the received FTFL Operator Specific.
Example(s)	SENS:DATA:TEL:OTN:ODU1:FTFL:SPEC? FORWard
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:FTFL:INDication?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHAnnel

Description	This command forces the Payload Type commands/queries to be applied on all channels (ON) or a single channel (OFF) for Multi-Channel OTN test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > ODU Channels > PT > Global PT
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHAnnel <wsp><AllChannel>
Parameter(s)	**AllChannel**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Selects if the Payload Type commands/queries are applied on all channels (ON) or a single channel (OFF).
Response Syntax	<Operator Specific>
Example(s)	SENS:DATA:TEL:OTN:OPU100:ACHA ON
	SENS:DATA:TEL:OTN:OPU100:ACHA OFF
See Also	SENS:DATA:TEL:OTN:OPU100:CHAN?
	SENS:DATA:TEL:OTN:OPU100:ACHA?

:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHAnnel?

Description	This query returns if the Payload Type commands/queries are applied on all channels (ON) or a single channel (OFF) for Multi-Channel OTN test.
	At *RST condition, this value is set to OFF.
	Navigation Path: Setup > ODU Channels > PT >Global PT
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHAnnel?
Response Syntax	<AllChannel>
Response(s)	**AllChannel**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns an indication that the Payload Type commands/queries are to be applied on all channels.
	1, OPU Payload Type commands/queries are applied on all channels.
	0, OPU Payload Type commands/queries are applied on a specific channels determined by SENS:DATA:TEL:OTN:OPU[1..n]:CHAN.
Example(s)	SENS:DATA:TEL:OTN:OPU100:ACHA?
See Also	SENS:DATA:TEL:OTN:OPU100:ACHA
	SENS:DATA:TEL:OTN:OPU100:CHAN

:SENSe:DATA:TELecom:OTN:OPU[1..n]:CHANnel

Description	This command sets the value of the channel used by the Payload Type for Multi-Channel OTN test.
	When setting a channel value, the following command is set to OFF: SENSe[1..n]:DATA:TELecom:OTN:OPU[1..n]:ACHAnnel
	At *RST condition, this value is set to 1.
	Navigation Path: Results > PT > ODUk > Channel
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:CHANnel <wsp><Channel Number>
Parameter(s)	**Channel Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Global parameter, applicable to Multi-Channel OTN
	Selects the channel number.
Response Syntax	<AllChannel>
Example(s)	SENS:DATA:TEL:OTN:OPU100:ACHA?
	Returns: 1
	SENS:DATA:TEL:OTN:OPU100:CHAN 2
	SENS:DATA:TEL:OTN:OPU100:ACHA?
	Returns: 0
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:CHAN?
	SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHA

:SENSe:DATA:TELecom:OTN:OPU[1..n]:CHANnel?

Description	This query returns the value of the channel number used by the Payload Type, when command AllCHAnnel is 'OFF', for Multi-Channel OTN test.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > PT > ODUk > Channel
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:CHANnel?
Response Syntax	<Channel Number>
Response(s)	**Channel Number**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel number used for the Payload Type, when command AllCHAnnel is 'OFF', for the Multi-Channel OTN test application.
Example(s)	SENS:DATA:TEL:OTN:OPU100:CHAN?
See Also	SENSe:DATA:TELecom:OTN:OPU[1..n]:CHAN
	SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHA

:SENSe:DATA:TELecom:OTN:OPU[1..n]:COPYrx

Description	This command copies the received Payload Type to the expected Payload Type.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Test > OTN BERT > Results > FTFL/PT > ODU > Payload Type
	NOTE: In Multi-Channel OTN, when copying an OPU LO Payload Type, the channel must be set using SENS:DATA:TEL:OTN:OPU[1..n]:CHAN. The Payload Type can also be copied on all channels by using SENS:DATA:TEL:OTN:OPU[1..n]:ACHA.
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:COPYrx
Response Syntax	<Channel Number>
Example(s)	SENS:DATA:TEL:OTN:OPU1:COPY
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:COPY
	SENSe:DATA:TELecom:OTN:OPU[1..n]:CHAN
	SENSe:DATA:TELecom:OTN:OPU[1..n]:ACHA

:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:COPYrx

Description	This command sets the copy Rx to instrument for OTU1e/2e rate.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > FTFL/PT > ODU1e/2e > PT- Copy RX
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:E:COPYrx
Response Syntax	<Channel Number>
Example(s)	SENS:DATA:TEL:OTN:OPU1:E:COPY
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:COPY

:SENSe:DATA:TELecom:OTN:OPU[1..n]:F:COPYrx

Description	This command sets the copy Rx to instrument for OTU1f/2f rate.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Results > FTFL/PT > ODU1e/2e > PT- Copy RX
Syntax	:SENSe:DATA:TELecom:OTN:OPU[1..n]:F:COPYrx
Response Syntax	<Channel Number>
Example(s)	SENS:DATA:TEL:OTN:OPU1:F:COPY
See Also	SENSe:DATA:TELecom:OTN:ODU[1..n]:TCM[1..n]:TTI:SAPI:COPY

OTL-SDT

:FETCh:DATA:TELecom:OTL:SDT:AVERage?

Description	This query returns the average disruption time FOR OTL.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption.
Syntax	:FETCh:DATA:TELecom:OTL:SDT:AVERage? <wsp><LaneNo>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane ID.
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the average disruption time for the selected lane id.
Example(s)	FETC:DATA:TEL:OTL:SDT:AVER? 1
See Also	FETCh:DATA:TELecom:OTL:SDT:LAST?

:FETCh:DATA:TELecom:OTL:SDT:COUNt?

Description	This query returns the disruption count FOR OTL.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption.
Syntax	:FETCh:DATA:TELecom:OTL:SDT:COUNt? <wsp><LaneNo>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane ID.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of service disruption counts that happened since the beginning of the SDT test for the selected lane id.
Example(s)	FETC:DATA:TEL:OTL:SDT:COUN? 1
See Also	FETCh:DATA:TELecom:OTL:SDT:LAST?

:FETCh:DATA:TELecom:OTL:SDT:DEFect?

Description	This query returns the layer on which service disruption time test isperformed for OTN.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption > Defect
Syntax	:FETCh:DATA:TELecom:OTL:SDT:DEFect?
Response Syntax	<Defect>
Response(s)	**Defect**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	This query returns the layer on which service disruption time test isperformed for OTN for OTL-SDT.
Example(s)	FETC:DATA:TEL:OTL:SDT:DEF?
See Also	FETCh:DATA:TELecom:SDT:DEFect?

:FETCh:DATA:TELecom:OTL:SDT:LANE:DISRuption?

Description	This query returns the number of lane with disruption
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption
Syntax	:FETCh:DATA:TELecom:OTL:SDT:LANE:DISRuption?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the lanes with disruption
Example(s)	FETC:DATA:TEL:OTL:SDT:LANE:DISR?
See Also	FETCh:DATA:TELecom:OTL:SDT:SHORtest?

:FETCh:DATA:TELecom:OTL:SDT:LAST?

Description	This query returns the last disruption time FOR OTL.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption.
Syntax	:FETCh:DATA:TELecom:OTL:SDT:LAST? <wsp><LaneNo>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane ID.
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the last disruption time for the selected lane id.
Example(s)	FETC:DATA:TEL:OTL:SDT:LAST? 1
See Also	FETCh:DATA:TELecom:OTL:SDT:SHORtest?

:FETCh:DATA:TELecom:OTL:SDT:LONGest:DISRuption:DURation?

Description	This query returns the longest disruption duration
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption
Syntax	:FETCh:DATA:TELecom:OTL:SDT:LONGest:DISRuption:DURation?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the longest disruption duration
Example(s)	FETC:DATA:TEL:OTL:SDT:LONG:DISR:DUR?
See Also	FETCh:DATA:TELecom:OTL:SDT:LONGest?

:FETCh:DATA:TELecom:OTL:SDT:LONGest:DISRuption:LANE?

Description	This query returns the longest disruption lane
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption
Syntax	:FETCh:DATA:TELecom:OTL:SDT:LONGest:DISRuption:LANE?
Response Syntax	<Time>
Response(s)	**Time**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the longest disruption lane
Example(s)	FETC:DATA:TEL:OTL:SDT:LONG:DISR:LANE?
See Also	FETCh:DATA:TELecom:OTL:SDT:SHORtest?

:FETCh:DATA:TELecom:OTL:SDT:LONGest?

Description	This query returns the longest disruption time FOR OTL.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption.
Syntax	:FETCh:DATA:TELecom:OTL:SDT:LONGest? <wsp><LaneNo>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane ID.
Response Syntax	<Longest>
Response(s)	**Longest**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the longest disruption time for the selected lane id.
Example(s)	FETC:DATA:TEL:OTL:SDT:LONG? 1
See Also	FETCh:DATA:TELecom:SDT:LONGest?

:FETCh:DATA:TELecom:OTL:SDT:SHORtest?

Description	This query returns the shortest disruption time FOR OTL.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption.
Syntax	:FETCh:DATA:TELecom:OTL:SDT:SHORtest? <wsp><LaneNo>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane ID.
Response Syntax	<Shortest>
Response(s)	**Shortest**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the shortest disruption time for the selected lane id.
Example(s)	FETC:DATA:TEL:OTL:SDT:SHOR? 1
See Also	FETCh:DATA:TELecom:OTL:SDT:LONGest?

:FETCh:DATA:TELecom:OTL:SDT:STATistics?

Description	This query returns the STATISTICS FOR OTL.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption.
Syntax	:FETCh:DATA:TELecom:OTL:SDT:STATistics?
Response Syntax	<Statistics>
Response(s)	**Statistics**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the statistics.
Example(s)	FETC:DATA:TEL:OTL:SDT:STAT?
See Also	FETCh:DATA:TELecom:SDT:SHORtest?

:FETCh:DATA:TELecom:OTL:SDT:TOTal?

Description	This query returns the total disruption time FOR OTL.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > OTN BERT > Results > OTL-SDT > Service disruption.
Syntax	:FETCh:DATA:TELecom:OTL:SDT:TOTal? <wsp><LaneNo>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane ID.
Response Syntax	<Total>
Response(s)	**Total**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total disruption time for the selected lane id.
Example(s)	FETC:DATA:TEL:OTL:SDT:TOT? 1
See Also	FETCh:DATA:TELecom:OTL:SDT:LONGest?

GFP-F/GFP-T

:FETCh:DATA:TELecom:GFP:CHANnel:MISMatch:COUNt?

Description	This query returns the number of frames with fields not matching the Payload Frame Check Sequence identifier.
	At *RST condition, this value is device-dependent.
	Navigation Results > GFP-F/GFP-T > RX Mismatch
Syntax	:FETCh:DATA:TELecom:GFP:CHANnel:MISMatch:COUNt? <wsp><Identifier>
Parameter(s)	**Identifier**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the RX Mismatch identifier.
	PFIMIS: FPI mismatch
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns count of frames for field not matching the Payload FCS Indicator.
Example(s)	FETC:DATA:TEL:GFP:CHAN:MISM:COUN? PFIMIS
See Also	FETCh:DATA:TELecom:GFP:ERRor:CHANnel:RATE?

:FETCh:DATA:TELecom:GFP:OVERview:BANDwidth:RX?

Description	This query returns the Bandwidth usage of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Transport Layer > Bandwidth Usage(%) > RX
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Transport Layer > Bandwidth Usage(%) > RX
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:BANDwidth:RX?
Response Syntax	<RX>
Response(s)	RX:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Bandwidth Percentage of Received frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:BAND:RX?
See Also	FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:TX?

:FETCh:DATA:TELecom:GFP:OVERview:BANDwidth:TX?

Description	This query returns the Bandwidth usage of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Transport Layer > Bandwidth Usage(%) > TX
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Transport Layer > Bandwidth Usage(%) > TX
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:BANDwidth:TX?
Response Syntax	<TX>
Response(s)	TX:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Bandwidth Percentage of Transmitted frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:BAND:TX?
See Also	FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:RX?

:FETCh:DATA:TELecom:GFP:OVERview:COUNt:RX?

Description	This query returns the count of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Frame Type > RX > Count
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Frame Type > RX > Count
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:COUNt:RX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Count of the Received Frames and Bytes.
	DFRames
	MFRames
	IFRames
	TFRames
	RPTiframes
	RPLiframes
	INVFrames
	DISFrames
	DBYTESFORRX
	MBYTESFORRX
	IBYTESFORRX
	TBYTESFORRX
	RPTBYTESFORRX
	DATBYTESFORRX
Response Syntax	<Frames>

:FETCh:DATA:TELecom:GFP:OVERview:COUNt:RX?

Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Count of Received frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:COUN:RX? DFR
See Also	FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:TX?

:FETCh:DATA:TELecom:GFP:OVERview:COUNt:TX?

Description	This query returns the count of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Frame Type > TX > Count
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Frame Type > TX > Count
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:COUNt:TX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Count of the Trasmitted Frames and Bytes.
	DFRames
	MFRames
	IFRames
	TFRames
	DBYTESFORTX
	MBYTESFORTX
	IBYTESFORTX
	TBYTESFORTX
	DATBYTESFORTX
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Count of Transmitted frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:COUN:TX? DFR
See Also	FETCh:DATA:TELecom:GFP:OVERview:BANDwidth:TX?

:FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:RX?

Description	This query returns the Mapping Efficiency of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Transport Layer > Mapping Efficiency (%) > RX
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Transport Layer > Mapping Efficiency (%) > RX
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:RX?
Response Syntax	<RX>
Response(s)	RX:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Mapping Efficiency Percentage of Received frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:EFF:RX?
See Also	FETCh:DATA:TELecom:GFP:OVERview:RATE:TX?

:FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:TX?

Description	This query returns the Mapping Efficiency of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Transport Layer > Mapping Efficiency (%) > TX
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Transport Layer > Mapping Efficiency (%) > TX
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:TX?
Response Syntax	<TX>
Response(s)	TX:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Mapping Efficiency Percentage of Transmitted frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:EFF:TX?
See Also	FETCh:DATA:TELecom:GFP:OVERview:BANDwidth:RX?

:FETCh:DATA:TELecom:GFP:OVERview:RATE:RX?

Description	This query returns the rate of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Frame Type > RX > Rate(Unit/s)
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Frame Type > RX > Rate(Unit/s)
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:RATE:RX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Rate of the Received Frames and Bytes.
	DFRames
	MFRames
	IFRames
	TFRames
	RPTiframes
	RPLiframes
	INVFrames
	DISFrames
	DBYTESFORRX
	MBYTESFORRX
	IBYTESFORRX
	TBYTESFORRX
	RPTBYTESFORRX
	DATBYTESFORRX
Response Syntax	<Frames>

:FETCh:DATA:TELecom:GFP:OVERview:RATE:RX?

Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the Rate of Received frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:RATE:RX? DFR
See Also	FETCh:DATA:TELecom:GFP:OVERview:COUNt:TX?

:FETCh:DATA:TELecom:GFP:OVERview:RATE:TX?

Description	This query returns the rate of frames or payload bytes.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Results > GFP-F > Frame Type > TX > Rate(Unit/s)
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Frame Type > TX > Rate(Unit/s)
Syntax	:FETCh:DATA:TELecom:GFP:OVERview:RATE:TX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Rate of the Trasmitted Frames and Bytes.
	DFRames
	MFRames
	IFRames
	TFRames
	DBYTESFORTX
	MBYTESFORTX
	IBYTESFORTX
	TBYTESFORTX
	DATBYTESFORTX
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the Rate of Transmitted frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:OVER:RATE:TX? DFR
See Also	FETCh:DATA:TELecom:GFP:OVERview:EFFiciency:RX?

:FETCh:DATA:TELecom:GFP:SUPerblock:COUNt:RX?

Description	This query returns the count of frames or payload bytes for superblock.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Superblock > RX > Count
Syntax	:FETCh:DATA:TELecom:GFP:SUPerblock:COUNt:RX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects type of the Received Frames and Bytes for superblock.
	SUPERBLOCKVALID
	SUPERBLOCKINVALID
	SUPERBLOCKTOTAL
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Count of Received frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:SUP:COUN:RX? SuperblockTotal
See Also	FETCh:DATA:TELecom:GFP:OVERview:COUNt:TX?

:FETCh:DATA:TELecom:GFP:SUPerblock:COUNt:TX?

Description	This query returns the count of frames or payload bytes for superblock.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Superblock > TX > Count
Syntax	:FETCh:DATA:TELecom:GFP:SUPerblock:COUNt:TX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects type of the Trasmitted Frames and Bytes for superblock.
	SUPERBLOCKINVALID
	superblockTotal
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Count of Trasmitted frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:SUP:COUN:TX? SUPERBLOCKTOTAL
See Also	FETCh:DATA:TELecom:GFP:OVERview:COUNt:RX?

:FETCh:DATA:TELecom:GFP:SUPerblock:RATE:RX?

Description	This query returns the rate of frames or payload bytes for superblock.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Superblock > RX > Rate(Unit/s)
Syntax	:FETCh:DATA:TELecom:GFP:SUPerblock:RATE:RX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects type of the Received Frames and Bytes for superblock.
	SUPERBLOCKVALID
	SUPERBLOCKINVALID
	SUPERBLOCKTOTAL
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the Rate of Received frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:SUP:RATE:RX? SuperblockTotal
See Also	FETCh:DATA:TELecom:GFP:OVERview:RATE:TX?

:FETCh:DATA:TELecom:GFP:SUPerblock:RATE:TX?

Description	This query returns the rate of frames or payload bytes for superblock.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Results > GFP-T > Superblock > TX > Rate(Unit/s)
Syntax	:FETCh:DATA:TELecom:GFP:SUPerblock:RATE:TX? <wsp><Frames>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects type of the Trasmitted Frames and Bytes for superblock.
	SUPERBLOCKINVALID
Response Syntax	<Frames>
Response(s)	**Frames**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the Rate of Trasmitted frames or payload bytes.
Example(s)	FETC:DATA:TEL:GFP:SUP:RATE:TX? SUPERBLOCKTOTAL
See Also	FETCh:DATA:TELecom:GFP:OVERview:RATE:RX?

:SENSe:DATA:TELecom:GFP:FRAMe:MISMatch:COUNt?

Description	This query returns the number of frames with fields not matching the expected EXI, UPI, and CID.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > GFP-F/GFP-T > RX Mismatch
Syntax	:SENSe:DATA:TELecom:GFP:FRAMe:MISMatch:COUNt? <wsp><Mismatch>
Parameter(s)	**Mismatch**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the RX Mismatch identifier.
	CIDMIS: CID mismatch
	EXIMIS: EXI mismatch
	UPIMIS: UPI mismatch
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count.
Example(s)	SENS:DATA:TEL:GFP:FRAM:MISM:COUN? EXIMIS
See Also	SOURce:TELecom:GFP:ERRor:CHANnel:AUTomated:CONTinuous?

Streams - Throughput

:FETCh:DATA:TELecom:ETHernet:STRream:THRoughput:AVERage:VERDict?

Description	This query returns the average RX Rate throughput verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > RX Rate - Average verdict
	Navigation Path: Results > Streams > Throughput > RX Rate - Average verdict
	Navigation Path: Results > Service Performace > RX Rate - Average verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STRream:THRoughput:AVERage:VERDict? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional
	Selects the direction
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<VERDICT Status>
Response(s)	**VERDICT Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Average Throughput Verdict Status
Example(s)	FETC:DATA:TEL:ETH:STR:THR:AVER:VERD? 1
See Also	FETCh:DATA:TELecom:ETHernet:STRream:OOSequence:VERDict? 1, COUNt

:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:AVERage?

Description	This query returns the average RX Rate throughput.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > RX Rate - Average
	Navigation Path: Results > Streams > Throughput > RX Rate - Average
	Navigation Path: Results > Service Performace > RX Rate - Average
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:AVERage? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the average throughput.
Example(s)	FETC:DATA:TEL:ETH:STR:THR:AVER? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:CURRent?

:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent:TOTal:RXRate?

Description	This query return the total RX Rate throughput.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Stream > Throughput > Total RX Rate
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent:TOTal:RXRate?
Response Syntax	<Total Rx Rate>
Response(s)	**Total Rx Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Total Rx rate value
Example(s)	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent:TOTal:RXRate?
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent?

:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent:VERDict?

Description	This query returns the current RX Rate throughput verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > RX Rate - Current verdict
	Navigation Path: Results > Streams > Throughput > RX Rate - Current verdict
	Navigation Path: Results > Service Performace > RX Rate > Current verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent:VERDict? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional
	Selects the direction
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<VERDICT Status>
Response(s)	**VERDICT Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Current Throughput Verdict Status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:ETH:STR:THR:CURR:VERD? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum:VERDict? 1

:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent?

Description	This query returns the current RX Rate throughput.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > RX Rate - Current
	Navigation Path: Results > Stream > Throughput > RX Rate - Current
	Navigation Path: Results > Service Performace > RX Rate - Current
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the current throughput.
Example(s)	FETC:DATA:TEL:ETH:STR:THR:CURR? 1
See Also	FETCH:DATA:TELecom:ETHernet:STReam:JITTer:AVERage?

:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MAXimum?

Description	This query returns the maximum RX Rate throughput.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > RX Rate - Maximum
	Navigation Path: Results > Stream > Throughput > RX Rate - Maximum
	Navigation Path: Results > Service Performace > RX Rate - Maximum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MAXimum? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum throughput
Example(s)	FETC:DATA:TEL:ETH:STR:THR:MAX? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MINimum?

:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MINimum?

Description	This query returns the minimum RX Rate throughput.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > RX Rate - Minimum
	Navigation Path: Results > Stream > Throughput > RX Rate - Minimum
	Navigation Path: Results > Service Performace > RX Rate - Minimum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MINimum? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the minimum throughput.
Example(s)	FETC:DATA:TEL:ETH:STR:THR:MIN? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum?

Streams - Jitter

:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:AVERage?

Description	This query returns the average measured Jitter delay variation.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Jitter - Average
	Navigation Path: Results > Streams > Jitter - Average.
	Navigation Path: Results > Service Performace > Jitter - Average
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:AVERage? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the average of all valid measured delay variations of jitter.
Example(s)	FETC:DATA:TEL:ETH:STR:JITT:AVER? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent?

:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:CURRent?

Description	This query returns the current measured Jitter delay variation.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Jitter - Current
	Navigation Path: Results > Streams > Jitter - Current
	Navigation Path: Results > Service Performace > Jitter - Current
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:CURRent? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current of all valid measured delay variations of jitter.
Example(s)	FETC:DATA:TEL:ETH:STR:JITT:CURR? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:AVERage?

:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:EStimate?

Description	This query returns the estimate measured Jitter delay variation.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Jitter - Estimate
	Navigation Path: Results > Streams > Jitter - Estimate
	Navigation Path: Results > Service Performace > Jitter - Estimate
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:EStimate? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Estimated>
Response(s)	**Estimated**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the estimated of all valid measured delay variations of jitter.
Example(s)	FETC:DATA:TEL:ETH:STR:JITT:EST? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MAXimum?

:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum:VERDict?

Description	This query returns the Maximum Jitter verdict status.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Jitter - Maximum verdict
	Navigation Path: Results > Streams > Jitter - Maximum verdict
	Navigation Path: Results > Service Performace > Jitter - Maximum verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum:VERDict? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional
	Selects the direction
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<VERDICT Status>
Response(s)	**VERDICT Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the maximum Jitter Verdict Status
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:ETH:STR:JITT:MAX:VERD? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:CURRent:VERDict? 1

:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum?

Description	This query returns the maximum measured Jitter delay variation.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Jitter - Maximum
	Navigation Path: Results > Streams > Jitter - Maximum
	Navigation Path: Results > Service Performace > Jitter - Maximum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MAXimum? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the maximum measured delay variations of jitter.
Example(s)	FETC:DATA:TEL:ETH:STR:JITT:MAX? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MINimum?

:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MINimum?

Description	This query returns the minimum measured Jitter delay variation.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Jitter - Minimum
	Navigation Path: Results > Streams > Jitter - Minimum
	Navigation Path: Results > Service Performace > Jitter - Minimum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:JITTer:MINimum? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the minimum measured delay variations of jitter.
Example(s)	FETC:DATA:TEL:ETH:STR:JITT:MIN? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:MAXimum?

Streams - Latency

:FETCh:DATA:TELecom:ETHernet:STRem:LATency:AVERage?

Description	This query returns the average measured Latency in ms.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Latency - Average
	Navigation Path: Results > Streams > Latency - Average
	Navigation Path: Results > Service Performace > Latency - Average
	Navigation Path: Results > Summary > Latency - Average
Syntax	:FETCh:DATA:TELecom:ETHernet:STRem:LATency:AVERage? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	For EtherBERT, selects the stream 1.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction for Dual Test Set. Not used with EtherBERT.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the average latency
Example(s)	FETC:DATA:TEL:ETH:STR:LAT:AVER? 1
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:SEConds?

:FETCh:DATA:TELecom:ETHernet:STReam:LATency:CURRent?

Description	This query returns the current measured Latency in ms.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Latency - Current
	Navigation Path: Results > Streams > Latency - Current
	Navigation Path: Results > Service Performace > Latency - Current
	Navigation Path: Results > Summary > Latency - Current
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:LATency:CURRent? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	For EtherBERT, selects the stream 1.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction for Dual Test Set. Not used with EtherBERT.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current latency.
Example(s)	FETC:DATA:TEL:ETH:STR:LAT:CURR? 1
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:COUNt?

:FETCh:DATA:TELecom:ETHernet:STReam:LATency:MAXimum:VERDict?

Description	This query returns the maximum measured Latency verdict status.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Latency - Maximum verdict
	Navigation Path: Results > Streams > Latency - Maximum verdict
	Navigation Path: Results > Service Performance > Latency - Maximum verdict
	Navigation Path: Results > Summary > Latency - Maximum - verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:LATency:MAXimum:VERDict? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	For EtherBERT, selects the stream 1.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction for Dual Test Set. Not used with EtherBERT.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<VERDICT Status>
Response(s)	**VERDICT Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Maximum Latency Verdict Status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:ETH:STR:LAT:MAX:VERD? 1
See Also	FETCh:DATA:TELecom:ETHernet:STReam:FLOSs:VERDict? 1, RATE

:FETCh:DATA:TELecom:ETHernet:STReam:LATency:MAXimum?

Description	This query returns the maximum measured Latency in ms.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Latency - Maximum
	Navigation Path: Results > Streams > Latency - Maximum
	Navigation Path: Results > Service Performace > Latency - Maximum
	Navigation Path: Results > Summary > Latency - Maximum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:LATency:MAXimum? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	For EtherBERT, selects the stream 1.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction for Dual Test Set. Not used with EtherBERT.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the maximum latency
Example(s)	FETC:DATA:TEL:ETH:STR:LAT:MAX? 1
See Also	FETCH:DATA:TELecom:ETHernet:ERRor:SANalyzer:HISTory?

:FETCh:DATA:TELecom:ETHernet:STReam:LATency:MINimum ?

Description	This query returns the minimum measured Latency in ms.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Latency - Minimum
	Navigation Path: Results > Streams > Latency - Minimum
	Navigation Path: Results > Service Performace > Latency - Minimum
	Navigation Path: Results > SUmmary > Latency - Minimum
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:LATency:MINimum? <wsp><Stream/Service>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	For EtherBERT, selects the stream 1.
	Direction:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction for Dual Test Set. Not used with EtherBERT.
	(For DTS used both LTOR and RTOL as direction, for Non DTS use LTOR as direction)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the mimum latency
Example(s)	FETC:DATA:TEL:ETH:STR:LAT:MIN? 1
See Also	FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:CURRent?

Streams - Frame Loss / Out-of-Sequence

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:COUNt?

Description	This query returns the count of Frame Loss / Out-of-Sequence.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Frame Loss - Count
	Navigation Path: Results > Streams > Frame Loss / Out-of-Sequence - Count
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequence - Count
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:COUNt? <wsp><Stream/Service>, <Error>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream number from 1 to 16.
	For EtherSAM, selects the service number from 1 to 10.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction. For non-DTS use LTOR as direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Count>

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:COUNt?

Response(s)	Count:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of errors.
Example(s)	FETC:DATA:TEL:ETH:ERR:SAN:COUN? 1, FLOSs
See Also	FETCH:DATA:TELecom:EOTN:ERRor:PHYSical:CURRent?

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:CURRent?

Description	This query returns the current status of Frame Loss / Out-of-Sequence.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Frame Loss current status
	Navigation Path: Results > Streams > Frame Loss / Out-of-Sequence current status
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequence current status
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:CURRent? <wsp><Tgen>, <Error>,[<Direction>]
Parameter(s)	**Tgen**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream number from 1 to 16.
	For EtherSAM, selects the service number from 1 to 10.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction. For non-DTS use LTOR as direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Current>

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:CURRent?

Response(s)	Current:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the current error status:
	PRESENT: An error has occurred in the last second.
	ABSENT: No error has occurred in the last second.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:SAN:CURR? 1, FLOSs
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:HISTory?

Description	This query returns the history status of Frame Loss / Out-of-Sequence.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Frame Loss - Count
	Navigation Path: Results > Streams > Frame Loss / Out-of-Sequence history status
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequence history status
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:HISTory? <wsp><Stream/Service>, <Error>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream number from 1 to 16.
	For EtherSAM, selects the service number from 1 to 10.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction. For non-DTS use LTOR as direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<History>

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:HISTory?

Response(s)	**History**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the history error status:
	PRESENT: At least one error has occurred during the test.
	ABSENT: No error has occurred during the test.
	INACTIVE: No test result available.
Example(s)	FETC:DATA:TEL:ETH:ERR:SAN:HIST? 1, FLOSs
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:RATE?

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:RATE?

Description	This query returns the rate of Frame Loss / Out-of-Sequence.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Frame Loss - Rate
	Navigation Path: Results > Streams > Frame Loss / Out-of-Sequence - Rate
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequence - Rate
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:RATE? <wsp><Stream/Service>, <Error>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream number from 1 to 16.
	For EtherSAM, selects the service number from 1 to 10.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction. For non-DTS use LTOR as direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:ETH:ERR:SAN:RATE? 1, FLOSs
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:HISTory?

:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:SEConds?

Description	This query returns the Seconds of Frame Loss / Out-of-Sequence.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Frame Loss - Seconds
	Navigation Path: Results > Streams > Frame Loss / Out-of-Sequence - Seconds
	Navigation Path: Results > Service Performace > Frame Loss / Out-of-Sequence - Seconds
Syntax	:FETCh:DATA:TELecom:ETHernet:ERRor:SANalyzer:SEConds? <wsp><Stream/Service>, <Error>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream number from 1 to 16.
	For EtherSAM, selects the service number from 1 to 10.
	Error:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FLOSs: Frame Loss
	OUTSequence: Out-of-Seq.
	Direction:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the direction. For non-DTS use LTOR as direction.
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds in error.
Example(s)	FETC:DATA:TEL:ETH:ERR:SAN:SEC? 1, FLOSs
See Also	FETCh:DATA:TELecom:EOTN:ERRor:PHYSical:COUNt?

:FETCh:DATA:TELecom:ETHernet:STReam:FLOSs:VERDict?

Description	This query returns the Frame Loss Count/Rate verdict status
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summmary > Stream > Frame Loss verdict
	Navigation Path: Results > Streams > Frame Loss / Out-of-Sequence > Frame Loss verdict
	Navigation Path: Results > Service Performace > Frame Loss verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:FLOSs:VERDict? <wsp><Stream/Service>, <Type>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Frameloss Type.
	COUNt
	RATE
	Direction:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional
	Selects the direction
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<VERDICT Status>

:FETCh:DATA:TELecom:ETHernet:STReam:FLOSs:VERDict?

Response(s)	**VERDICT Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame Loss Verdict Status.
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:ETH:STR:FLOS:VERD? 1, RATE
See Also	FETCh:DATA:TELecom:ETHernet:STReam:LATency:MAXimum:VERDict? 1

:FETCh:DATA:TELecom:ETHernet:STReam:OOSequence:VERDict?

Description	This query returns the Out Of Sequence Count/Rate verdict status
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Stream > Out-of-Sequence verdict
	Navigation Path: Results > Streams > Frame Loss / Out-of-Sequence > Out-of-Sequence verdict
	Navigation Path: Results > Service Performace > Out-of-Sequence verdict
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:OOSequence:VERDict? <wsp><Stream/Service>, <Type>,[<Direction>]
Parameter(s)	**Stream/Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	For Traffic Gen & Mon, selects the stream from 1 to 16.
	For EtherSAM, selects the Service number 1 to 10.
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Frameloss Type.
	COUNt
	RATE
	Direction:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional
	Selects the direction
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
Response Syntax	<VERDICT Status>

:FETCh:DATA:TELecom:ETHernet:STReam:OOSequence:VERDict?

Response(s)	VERDICT Status: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns the Out Of Sequence Verdict Status. PASS, verdict is Pass. FAIL, verdict is Fail.
Example(s)	FETC:DATA:TEL:ETH:STR:OOS:VERD? 1, COUNt
See Also	FETCh:DATA:TELecom:ETHernet:STReam:THRoughput:AVERage:VERDict? 1

Quality Level (1588 PTP)

:FETCh:DATA:TELecom:PACKetsync:PTP:QL:MESSege:COUNt?

Description	This query returns the count of each Quality Level message
	Navigation Path: Results > Quality Level > count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:QL:MESSege:COUNt? <wsp><Message Count>

:FETCh:DATA:TELecom:PACKetsync:PTP:QL:MESSege:COUNt ?

Parameter(s)	Message Count:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Configure an Expected Quality Level value.

QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)

QLSTUUNK: QL-STU/UNK 82 Synchronized

QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)

QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)

QLINV3: QL-INV3 88 Quality Level Invalid 3

QLSSUATNC:QL-SSU-A/TNC 90 Type I or V slave clock (G.812)

Traceable to Transit Node Clock (G.812 Type V)

QLINV5: QL-INV5 92 Quality Level Invalid 5

QLINV6: QL-INV6 94 Quality Level Invalid 6

QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)

QLINV9: QL-INV9 98 Quality Level Invalid 9

QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)

QLEEC2ST3: QL-EEC2/ST3 102 Ethernet

Traceable to Stratum 3 (G.812 Type IV)

QLEEC1SEC: QL-EEC1/SEC 104 Ethernet

Synchronous Equipment Clock (G.813 or G.8262, Option 1)

QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)

QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)

QLDNUDUS: QL-DNU/DUS 110 Do Not Use

Do Not Use for Synchronization

QLPRCPRS6: QL-PRC/PRS PRS traceable (Recommendation G.811).

QLPRCPRS7: QL-PRC/PRS PRS traceable (Recommendation G.811).

QLPRCPRS135: QL-PRC/PRS PRS traceable (Recommendation G.811).

QLPRCPRS140: QL-PRC/PRS PRS traceable (Recommendation G.811).

QLSSUAST2: QL-SSU-A/ST2 Traceable to Stratum 2 (Recommendation G.812, Type II).

QLSSUBST3E: QL-SSU-B/ST3E Traceable to Stratum 3E (Recommendation G.812, Type III).

QLSECEEC1ST3EEC2165: For use by alternate PTP profiles

QLSECEEC1ST3EEC2248: Default. This clockClass shall be used if none of the other clockClass definitions apply

QLSECEEC1ST3EEC2255: Shall be the clockClass of a slave-only clock

:FETCh:DATA:TELecom:PACKetsync:PTP:QL:MESSege:COUNt ?

Response Syntax	<Count>
Response(s)	**Count**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the count of each Quality Level message
Example(s)	FETC:DATA:TEL:PACK:PTP:QL:MESS:COUN? QLPRC
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:GRANt:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:QL:OTHer?

Description	This query returns the count of other values of Quality Level message.
	Navigation Path: Results > Quality Level > Other
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:QL:OTHer?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of other QL codes.
Example(s)	FETC:DATA:TEL:PACK:PTP:QL:OTH?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:GRANt:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:QL:TOTal?

Description	This query returns the total of Quality Level messages.
	Navigation Path: Results > Quality Level > Total
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:QL:TOTal?
Response Syntax	<Total>
Response(s)	**Total**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the total of Quality Level messages
Example(s)	FETC:DATA:TEL:PACK:PTP:QL:TOT?
See Also	FETCh:DATA:TELecom:PACKetsync:PTPStat:RX:DELay:RESPonse:COUNt?

Quality Level (SyncE)

:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:RATE?

Description	This query returns the rate value of DCO/Media RX FEC error.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Alarms/Errors > DCO > Media RX FEC > Errors > Rate
Syntax	:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:RATE? <wsp><Error>
Parameter(s)	**Error**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the error:
	FCBits: FEC Correctable Bits
	FUF: FEC Uncorrectable Frames
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR3 NUMERIC RESPONSE DATA> element.
	Returns the current error rate.
Example(s)	FETC:DATA:TEL:DCO:ERR:MED:RX:RATE? FUF
See Also	LINS:FETCh:DATA:TELecom:DCO:ERRor:MEDia:RX:COUNt?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:EVENt?

Description	This query returns the RX Event
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > RX Event
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:EVENt? <wsp><QLRX>
Parameter(s)	QLRX:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Configure an Expected Quality Level value.
	QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)
	QLSTUUNK: QL-STU/UNK 82 Synchronized
	QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)
	QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)
	QLINV3: QL-INV3 88 Quality Level Invalid 3
	QLSSUATNC: QL-SSU-A/TNC 90 Type I or V slave clock (G.812)
	Traceable to Transit Node Clock (G.812 Type V)
	QLINV5: QL-INV5 92 Quality Level Invalid 5
	QLINV6: QL-INV6 94 Quality Level Invalid 6
	QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)
	QLINV9: QL-INV9 98 Quality Level Invalid 9
	QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)
	QLEEC2ST3: QL-EEC2/ST3 102 Ethernet
	Traceable to Stratum 3 (G.812 Type IV)
	QLEEC1SEC: QL-EEC1/SEC 104 Ethernet
	Synchronous Equipment Clock (G.813 or G.8262, Option 1)
	QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)
	QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)
	QLDNUDUS: QL-DNU/DUS 110 Do Not Use
	Do Not Use for Synchronization
Response Syntax	<Event>

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:EVENt?

Response(s)	**Event**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns RX Event
Example(s)	SENS:DATA:TEL:PACK:SYNC:QLRX:EVEN? QLSTUUNK
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:EVENt?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:INFormation?

Description	This query returns the RX Information
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > RX Information
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:INFormation? <wsp><QLRX>
Parameter(s)	**QLRX**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Quality Level/PTP Clock Class
	QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)
	QLSTUUNK: QL-STU/UNK 82 Synchronized
	QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)
	QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)
	QLINV3: QL-INV3 88 Quality Level Invalid 3
	QLSSUATNC: QL-SSU-A/TNC 90 Type I or V slave clock (G.812)
	Traceable to Transit Node Clock (G.812 Type V)
	QLINV5: QL-INV5 92 Quality Level Invalid 5
	QLINV6: QL-INV6 94 Quality Level Invalid 6
	QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)
	QLINV9: QL-INV9 98 Quality Level Invalid 9
	QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)
	QLEEC2ST3: QL-EEC2/ST3 102 Ethernet
	Traceable to Stratum 3 (G.812 Type IV)
	QLEEC1SEC: QL-EEC1/SEC 104 Ethernet
	Synchronous Equipment Clock (G.813 or G.8262, Option 1)
	QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)
	QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)
	QLDNUDUS: QL-DNU/DUS 110 Do Not Use
	Do Not Use for Synchronization
Response Syntax	<Information>

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:INFormation?

Response(s)	**Information**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns RX Information
Example(s)	SENS:DATA:TEL:PACK:SYNC:QLRX:INF? QLSTUUNK
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:INFormation?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:EVENt?

Description	This query returns the QLTX Event
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > QLTX Event
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:EVENt? <wsp><QLTX>
Parameter(s)	QLTX:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Configure an Expected Quality Level value.
	QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)
	QLSTUUNK: QL-STU/UNK 82 Synchronized
	QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)
	QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)
	QLINV3: QL-INV3 88 Quality Level Invalid 3
	QLSSUATNC: QL-SSU-A/TNC 90 Type I or V slave clock (G.812)
	Traceable to Transit Node Clock (G.812 Type V)
	QLINV5: QL-INV5 92 Quality Level Invalid 5
	QLINV6: QL-INV6 94 Quality Level Invalid 6
	QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)
	QLINV9: QL-INV9 98 Quality Level Invalid 9
	QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)
	QLEEC2ST3: QL-EEC2/ST3 102 Ethernet
	Traceable to Stratum 3 (G.812 Type IV)
	QLEEC1SEC: QL-EEC1/SEC 104 Ethernet
	Synchronous Equipment Clock (G.813 or G.8262, Option 1)
	QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)
	QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)
	QLDNUDUS: QL-DNU/DUS 110 Do Not Use
	Do Not Use for Synchronization
Response Syntax	<Event>

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:EVENt?

Response(s)	**Event**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns QLTX Event
Example(s)	SENS:DATA:TEL:PACK:SYNC:QLTX:EVEN? QLSTUUNK
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:EVENt?

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:INFormation?

Description	This query returns the QLTX Information
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Test App > SyncE > Results > Quality Level > QL > QLTX Information
Syntax	:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:INFormation? <wsp><QLTX>
Parameter(s)	**QLTX:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Quality Level/PTP Clock Class
	QLPRS: QL-PRS (default) 80 Primary Reference Source Traceable (G.811)
	QLSTUUNK: QL-STU/UNK 82 Synchronized
	QLPRC: QL-PRC 84 Primary Reference Clock Traceable (G.811)
	QLST2: QL-ST2 86 Traceable to Stratum 2 (G.812 Type II)
	QLINV3: QL-INV3 88 Quality Level Invalid 3
	QLSSUATNC: QL-SSU-A/TNC 90 Type I or V slave clock (G.812)
	Traceable to Transit Node Clock (G.812 Type V)
	QLINV5: QL-INV5 92 Quality Level Invalid 5
	QLINV6: QL-INV6 94 Quality Level Invalid 6
	QLSSUB: QL-SSU-B 96 Type VI slave clock (G.812)
	QLINV9: QL-INV9 98 Quality Level Invalid 9
	QLST3E: QL-ST3E 100 Traceable to Stratum 3E (G.812 Type III)
	QLEEC2ST3: QL-EEC2/ST3 102 Ethernet
	Traceable to Stratum 3 (G.812 Type IV)
	QLEEC1SEC: QL-EEC1/SEC 104 Ethernet
	Synchronous Equipment Clock (G.813 or G.8262, Option 1)
	QLSMC: QL-SMC 106 Traceable to SONET Minimum Clock (G.813 or G.8262, Option 2)
	QLPROV: QL-PROV 108 Provisionable by the Network Operator (PNO)
	QLDNUDUS: QL-DNU/DUS 110 Do Not Use
	Do Not Use for Synchronization
Response Syntax	<Information>

:SENSe:DATA:TELecom:PACKetsync:SYNCe:QLTX:INFormation?

Response(s)	**Information**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns QLTX Information
Example(s)	SENS:DATA:TEL:PACK:SYNC:QLTX:INF? QLSTUUNK
See Also	SENSe:DATA:TELecom:PACKetsync:SYNCe:QLRX:INFormation?

Service Configuration - Ramp

:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate:VERDict?

Description	This Query returns Ramp Test Avg. Rx Verdict
	Navigation Path: Setup > EtherSAM > Results > Service CONFig > Ramp > Committed Steps > Average RX Rate
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate:VERDict? <wsp><Service>, <Direction>, <Step>
Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)
	LTORemote: Local to Remote
	RTOLocal: Remote to Local
	P1TOP2: P1 -TO-P2
	P2TOP1: P2 -TO-P1
	Step:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the step:
	1, 2, 3, 4, 5, 6, 7
	CIREIR: CIR+EIR
	TRAFFICPOLicing: Traffic Policing
Response Syntax	<Verdict>

:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate:VERDict?

Response(s)	**Verdict**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Verdict
	PASS, verdict is Pass.
	FAIL, verdict is Fail.
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate:VERDict? 1, LTOR,CIREIR
See Also	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:RTLatency:VERDict?

:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate?

Description	This Query returns Ramp Test Avg. Rx Rate
	Navigation Path: Setup > EtherSAM > Results > Service CONFig > Ramp > Committed Steps > Average RX Rate
Syntax	:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate? <wsp><Service>, <Direction>, <Step>

:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:RAMP:ARXRate?

Parameter(s)	**Service**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Service number 1 or 10.
	Direction:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Direction.
	(For DTS used both LTOR and RTOL as direction, For Non DTS use LTOR as direction and for Dual port topology use P1TOP2 and P2TOP1)

	Sets the type of Burst.
	CBS
	EBS
Response Syntax	<Round Trip Latency>

:FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:RTLatency?

Response(s)	**Round Trip Latency**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Round Trip Latency statistics
Example(s)	FETCh:DATA:TELecom:ETHernet:ESAM:SCOTest:BURSt:RTLatency? 1, LTOR,CBS
See Also	FETCh:DATA:TELecom:ETH:ESAM:BURSt:CBS:TIME?

WIS

:SENSe:DATA:TELecom:ETHernet:WIS:PATH:LABel?

Description	This query returns the path signal label (C2) for WAN.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > WIS > Path Signal Label(C2) (10GEWAN)
Syntax	:SENSe:DATA:TELecom:ETHernet:WIS:PATH:LABel?
Response Syntax	<Label>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label.
	UNEQUIPPED, Unequipped path signal label is selected.
	EQUIPPED, Equipped non-specific path signal label is selected.
	M10ETHERNET, 10 Gbps ethernet (IEEE 802.3) path signal label is selected.
	TSIGNAL, Test signal, ITU-T 0.181 specific mapping path signal label is selected.
Example(s)	SENS:DATA:TEL:ETH:WIS:PATH:LAB?
	Returns: EQUIPPED
See Also	SENSe:DATA:TELecom:ETHernet:WIS:PATH:LABel?

:SENSe:DATA:TELecom:ETHernet:WIS:TRACe?

Description	This query returns the path trace string for the WAN Interface Sublayer (WIS) operation.
	At *RST condition, ASCii is selected as the default type. The type length is device-dependent.
	Navigation Path: Results > WIS > J0/J1 Trace (10GEWAN)
Syntax	:SENSe:DATA:TELecom:ETHernet:WIS:TRACe? <wsp><Trace>
Parameter(s)	**Trace**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the trace.
	J0
	J1
Response Syntax	<String>
Response(s)	**String**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the string for the specific path trace.
Example(s)	SENS:DATA:TEL:ETH:WIS:TRAC? J1
	Returns: EXFO4GigE
See Also	SENSe:DATA:TELecom:ETHernet:WIS:TRACe?

Labels

:FETCh:DATA:TELecom:SDHSonet:HOP:PATH:LABel?

Description	This query returns the expected path signal label for the receiver of High Order Path (HOP).
	At *RST condition, the CONFig is set to a device-dependent value.
	Navigation Path: Test Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Test Configurator > Results > Traces > Sonet/SDH > Labels > STS Path/AU Path > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:PATH:LABel?
Response Syntax	<Label>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label for the receiver.
Example(s)	FETC:DATA:TEL:SDHS:HOP:PATH:LAB?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:PATH:LABel

:FETCh:DATA:TELecom:SDHSonet:LOP:PATH:LABel?

Description	This query returns the expected path signal label for receiver of Low Order Path (LOP).
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Test Setup > SONET/SDH BERT > Test Configurator > Results > Labels > VT Path/TU Path > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:PATH:LABel?
Response Syntax	<Label>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label for the receiver.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:PATH:LAB EQU
	FETC:DATA:TEL:SDHS:LOP:PATH:LAB?
See Also	SOURce:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel?

:FETCh:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel?

Description	This query returns the expected path signal label for receiver of Low Order Path (LOP-TU3).
	At *RST condition, the configuration is set to a device-dependent value.
	Navigation Path: Test Setup > SONET/SDH BERT > Test Configurator > Results > Labels > VT Path/TU Path > Received
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOPTu:PATH:LABel?
Response Syntax	<Label>
Response(s)	**Label**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the path signal label for the receiver.
Example(s)	SOUR:DATA:TEL:SDHS:LOPT:PATH:LAB EQU
	FETC:DATA:TEL:SDHS:LOPT:PATH:LAB?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:PATH:LABel?

PTP Stats

:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:AVERage?

Description	This query returns the Current Inter Packet Delay Variation IPDV Statistics (Sync,Delay Request).
	Navigation Path: Results > PTP Stats > IPDV > Average(ms)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:AVERage? <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Delay Measurement for SyncIPDV OR Delay Request IPDV.
	SYNCIPDV
	DELAYREQIPDV
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Current Inter Packet Delay Variation IPDV Statistics.
Example(s)	FETC:DATA:TEL:PACK:PTP:IPDV:AVER? DELAYREQIPDV
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:TX:SYNC:REQUest:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:CURRent?

Description	This query returns the Current Inter Packet Delay Variation IPDV Statistics (Sync,Delay Request).
	Navigation Path: Results > PTP Stats > IPDV > Currunt(ms)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:CURRent? <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Delay Measurement for SyncIPDV OR Delay Request IPDV.
	SYNCIPDV
	DELAYREQIPDV
Response Syntax	<Current>
Response(s)	**Current**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Current Inter Packet Delay Variation IPDV Statistics.
Example(s)	FETC:DATA:TEL:PACK:PTP:IPDV:CURR? DELAYREQIPDV
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:TX:ANNounce:REQUest:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:MAXimum:VERDict?

Description	This query returns the Status of IPDV Maximum Sync/Delay Req Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > 1588PTP > Results > PTP Stats > IPDV > Maximum
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:MAXimum:VERDict? <wsp><TYPE>
Parameter(s)	**TYPE**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects IPDV Type.
	SYNCIPDV: IPDV Type
	DELAYREQIPDV: IPDV Type
Response Syntax	<Verdict Status>
Response(s)	**Verdict Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Status of IPDV Maximum Sync/Delay Req Verdict
Example(s)	FETCh:DATA:TEL:PACK:PTP:IPDV:MAX:VERDict? DELAYREQIPDV
See Also	SOURce:DATA:TELecom:PACKetsync:PTP:IPDV:THReshold?

:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:MAXimum?

Description	This query returns the Maximum Inter Packet Delay Variation IPDV Statistics (Sync,Delay Request). Navigation Path: Results > PTP Stats > IPDV > Maximum(ms)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:MAXimum? <wsp><Message>
Parameter(s)	**Message**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Delay Measurement for SyncIPDV OR Delay Request IPDV. SYNCIPDV DELAYREQIPDV
Response Syntax	<Maximum>
Response(s)	**Maximum**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the Maximum Inter Packet Delay Variation IPDV Statistics.
Example(s)	FETC:DATA:TEL:PACK:PTP:IPDV:MAX? DELAYREQIPDV
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQUest:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:MINimum?

Description	This query returns the Minimum Inter Packet Delay Variation IPDV Statistics (Sync,Delay Request).
	Navigation Path: Results > PTP Stats > IPDV > Minimum(ms)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:MINimum? <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Delay Measurement for SyncIPDV OR Delay Request IPDV.
	SYNCIPDV
	DELAYREQIPDV
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Minimum Inter Packet Delay Variation IPDV Statistics.
Example(s)	FETC:DATA:TEL:PACK:PTP:IPDV:MIN? DELAYREQIPDV
See Also	FETCH:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQUest:RESPonse:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:STDDev?

Description	This query returns the Standard Deviation Inter Packet Delay Variation IPDV Statistics (Sync,Delay Request)
	Navigation Path: Results > PTP Stats > IPDV > Standard Daviation(ms)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:IPDV:STDDev? <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Delay Measurement for SyncIPDV OR Delay Request IPDV
	SYNCIPDV
	DELAYREQIPDV
Response Syntax	<STDDev>
Response(s)	**STDDev**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Standard Deviation Inter Packet Delay Variation IPDV Statistics
Example(s)	FETC:DATA:TEL:PACK:PTP:IPDV:STDD? DELAYREQIPDV
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:COUNt?

Description	This query returns count of announce messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Announce > Count
	Navigation Path: Results > Quality Level > Total
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of announce messages sent by the Master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:ANN:COUN?
See Also	FETCH:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:CLASs?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:COUNt?

Description	This query returns count of announce grant messages sent by the Master Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Signaling Announce Grant > Count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of announce grant messages sent by the Master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:ANN:GRAN:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:HISTory?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?

Description	This query returns rate of announce grant messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Signaling Announce Grant > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:GRANt:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of announce grant messages sent by the Master Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:ANN:GRAN:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:QL:LAST:CHANge?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:RATE?

Description	This query returns rate of announce messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Announce > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns rate of announce messages sent by the Master Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:ANN:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:TX:SYNC:REQUest:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse: COUNt?

Description	This query returns count of delay response messages sent by the master Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Delay Resp > Count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of delay response messages sent by the master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:DEL:RESP:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:FOLLowup:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:GRANt:COUNt?

Description	This query returns count of delay response grant messages sent by the Master Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Signaling Delay Resp Grant > count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:GRANt:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of delay response grant messages sent by the Master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:DEL:RESP:GRAN:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:SECond?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse: GRANt:RATE?

Description	This query returns rate of delay response grant messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Signaling Delay Resp Grant > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:GRANt:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of delay response grant messages sent by the Master Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:DEL:RESP:GRAN:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:TX:MESSages:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse: RATE?

Description	This query returns rate of delay response messages sent by the master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Delay Resp > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of delay response messages sent by the master Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:DEL:RESP:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:TX:ANNounce:REQUest:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:FOLLowup:COUNt?

Description	This query returns count of Follow up messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Follow Up > count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:FOLLowup:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	returns count of Follow up messages sent by the Master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:FOLL:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:IPDV?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:FOLLowup:RATE?

Description	This query returns rate of Follow up messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Follow Up > Rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:FOLLowup:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of Follow up messages sent by the Master Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:FOLL:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTPStat:RX:FOLLowup:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:COUNt?

Description	This query returns count of Sync messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Sync > count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of Sync messages sent by the Master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:SYNC:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:GMINfo:CLOCk:MODe?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:GRANt:COUNt?

Description	This query returns count of Sync grant messages sent by the Master Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Signaling Sync Grant > count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:GRANt:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of Sync grant messages sent by the Master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:SYNC:GRAN:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:ALARm:CURRent?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:GRANt:RATE?

Description	This query returns rate of Sync grant messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Signaling Sync Grant > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:GRANt:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of Sync grant messages sent by the Master Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:SYNC:GRAN:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:MESSages:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:RATE?

Description	This query returns rate of Sync messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Sync > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of Sync messages sent by the Master Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:SYNC:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQUest:RESPonse:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?

Description	This query returns Total of all types messages sent by the Master Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Rx > Total
	Navigation Path: Results > Summary > Total PTP Messages > RX
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:RX:TOTal:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns Total of all types messages sent by the Master Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:RX:TOT:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:QL:LAST:RECeived?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:ANNounce:REQuest:COUNt?

Description	This query returns count of announce messages sent by the Slave Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Signaling Announce Req > Count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:ANNounce:REQuest:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of announce messages sent by the Slave Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:ANN:REQ:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:QL:MESSege:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:ANNounce:REQuest:RATE?

Description	This query returns rate of announce messages sent by the Slave Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Signaling Announce Req > Rate(messages/s)
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:ANNounce:REQuest:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of announce messages sent by the Slave Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:ANN:REQ:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:ANNounce:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:COUNt?

Description	This query returns count of delay request messages sent by the Slave Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Delay Req > Count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of delay request messages sent by the Slave Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:DEL:REQ:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:GRANt:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:RATE?

Description	This query returns rate of delay request messages sent by the Slave Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Delay Req > Rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of delay request messages sent by the Slave Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:DEL:REQ:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:FOLLowup:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:RESPonse:COUNt?

Description	This query returns count of delay responce messages sent by the Slave Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Signaling Delay Resp Req > count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:RESPonse:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of delay resp-req messages sent by the Slave Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:DEL:REQ:RESP:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RESPonse:COUNt?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:RESPonse:RATE?

Description	This query returns rate of delay response messages sent by the Slave Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Signaling Delay Resp Req > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:DELay:REQuest:RESPonse:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of delay responce messages sent by the Slave Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:DEL:REQ:RESP:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:DELay:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:SYNC:REQuest:COUNt?

Description	This query returns count of Sync messages sent by the Slave Clock
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Signaling Sync Req > count
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:SYNC:REQuest:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of Sync messages sent by the Slave Clock
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:SYNC:REQ:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:QL:OTHer?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:SYNC:REQuest:RATE?

Description	This query returns rate of Sync messages sent by the Slave Clock.
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Signaling Sync Req > rate
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:SYNC:REQuest:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns rate of Sync messages sent by the Slave Clock.
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:SYNC:REQ:RATE?
See Also	FETCh:DATA:TELecom:PACKetsync:PTP:RX:SYNC:RATE?

:FETCh:DATA:TELecom:PACKetsync:PTP:TX:TOTal:COUNt?

Description	This query returns count of all messages by which service being requested.
	Navigation Path: Results > PTP Stats > Count/Rate > Tx > Total
Syntax	:FETCh:DATA:TELecom:PACKetsync:PTP:TX:TOTal:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns count of all messages by which service being requested.
Example(s)	FETC:DATA:TEL:PACK:PTP:TX:TOT:COUN?
See Also	FETCh:DATA:TELecom:PACKetsync:PTPStat:RX:DELay:RESPonse:RATE?

FEC Statistics

:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:CORRectable:PERCent?

Description	This query returns the correctable codeword percentage per symber error of FEC statistics. At *RST condition, this value is set to device-dependent. Navigation Path: Results > FEC Statistics > Symbol Error per Correctable Codeword > %
Syntax	:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:CORRectable:PERCent? <wsp><Symbol>
Parameter(s)	**Symbol**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Selects the number of symbols.
Response Syntax	<Percent>
Response(s)	**Percent**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. Returns the codeword percent for the number of symbols.
Example(s)	FETC:DATA:TEL:ETH:FEC:COD:CORR:PERC? 1
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:CORRectable?

Description	This query returns the correctable codeword count per symber error of FEC statistics.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FEC Statistics > Symbol Error per Correctable Codeword
Syntax	:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:CORRectable? <wsp><Symbol>
Parameter(s)	**Symbol**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the number of symbols.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the codeword count for the number of symbols.
Example(s)	FETC:DATA:TEL:ETH:FEC:COD:CORR? 1
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:EFRee:PERCent?

Description	This query returns the error-free codeword percentage of FEC statistics.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FEC Statistics > Other Statistics > Error-free Codeword > %
Syntax	:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:EFRee:PERCent?
Response Syntax	<Percent>
Response(s)	**Percent**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the codeword percent for error-free codeword.
Example(s)	FETC:DATA:TEL:ETH:FEC:COD:EFR:PERC?
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:EFRee?

Description	This query returns the error-free codeword count of FEC statistics.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FEC Statistics > Other Statistics > Error-free Codeword
Syntax	:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:EFRee?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the error-free codeword count.
Example(s)	FETC:DATA:TEL:ETH:FEC:COD:EFR?
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:UNCorrectable:PERCent?

Description	This query returns the uncorrectable codeword percentage of FEC statistics.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FEC Statistics > Other Statistics > Uncorrectable Codeword > %
Syntax	:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:UNCorrectable:PERCent?
Response Syntax	<Percent>
Response(s)	**Percent**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the codeword percent for uncorrectable codeword.
Example(s)	FETC:DATA:TEL:ETH:FEC:COD:UNC:PERC?
See Also	FETCh:DATA:TELecom:FOTN:FEC:ERRor:COUNt?

:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:UNCorrectable?

Description	This query returns the uncorrectable codeword count of FEC Statistics.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > FEC Statistics > Other Statistics > Uncorrectable Codeword > Codeword Count
Syntax	:FETCh:DATA:TELecom:ETHernet:FEC:CODeword:UNCorrectable?
Response Syntax	<Count>
Response(s)	Count:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the uncorrectable error codeword count.
Example(s)	LINS0:FETC:DATA:TEL:ETH:FEC:COD:UNC?
See Also	FETCh:DATA:TELecom:ETHernet:FEC:CODeword:UNCorrectable:PERCent?

MPLS

:FETCh:DATA:TELecom:ETHernet:STReam:MPLS:FRAMes:RX?

Description	This query returns the label value (RX) for stream.
	Navigation Path: Results > Streams > MPLS > Stream > Lable1 /Label 2 RX
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:MPLS:FRAMes:RX? <wsp><Stream>, <Label Index>
Parameter(s)	**Stream**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream number: 1 to 16
	Label Index:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Label Index.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of RX frames.
Example(s)	FETC:DATA:TEL:ETH:STR:MPLS:FRAM:RX? 1,1
See Also	SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:COUNt?

:FETCh:DATA:TELecom:ETHernet:STRem:MPLS:FRAMes:TX?

Description	This query returns the label value (TX) for stream.
	Navigation Path: Results > Streams > MPLS > Stream > Lable1 /Lable 2 TX
Syntax	:FETCh:DATA:TELecom:ETHernet:STReam:MPLS:FRAMes:TX? <wsp><Number>, <Label Index>
Parameter(s)	**Number**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the stream number: 1 to 16
	Label Index:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Label Index.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the count of TX frames.
Example(s)	FETC:DATA:TEL:ETH:STR:MPLS:FRAM:TX? 1,1
See Also	SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:COUNt?

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:BANDwidth?

Description	This query returns the frame bandwidth of Multi Protocol Label Switching (MPLS) in megabits per second.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Streams > MPLS > Total RX MPLS > Ethernet BW(%)
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:BANDwidth?
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the ethernet bandwidth(RX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:RX:BAND?
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:COUNt?

Description	This query returns total of all Multi Protocol Label Switching (MPLS) received valid and invalid frames.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Streams > MPLS > Total RX MPLS > Frame Count
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count all received valid and invalid frames (RX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:RX:COUN?
See Also	SOURce:DATA:TELecom:ELECtrical:STReam:MPLS:LABel

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:RATE?

Description	This query returns the Multi Protocol Label Switching (MPLS) frame rate in frame per second.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Streams > MPLS > Total RX MPLS > Frame Rate (Frame/s)
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frame rate(RX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:RX:RATE?
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL?

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:UTILizati on?

Description	This query returns the Multi Protocol Label Switching (MPLS) frame utilization in percentage.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Traffic Gen and Mon/EtherSAM > Results > Streams > MPLS > Total RX MPLS > Line Utilization(%)
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:RX:UTILization?
Response Syntax	<Utilization>
Response(s)	**Utilization**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frame utilization(RX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:RX:UTIL?
See Also	SOURce:DATA:TELecom:ETHernet:MPLS:HEADers

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:BANDwidth?

Description	This query returns the frame bandwidth of Multi Protocol Label Switching (MPLS) in megabits per second.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Traffic Gen and Mon/EtherSAM > Results > Streams > MPLS > Total TX MPLS > Ethernet BW(%)
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:BANDwidth?
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the ethernet bandwidth (TX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:TX:BAND?
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp?

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:COUNt?

Description	This query returns total of all Multi Protocol Label Switching (MPLS) received valid and invalid frames.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Traffic Gen and Mon/EtherSAM > Results > Streams > MPLS > Total TX MPLS > Frame Count
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of all received valid and invalid frames (TX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:TX:COUN?
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:RATE?

Description	This query returns the Multi Protocol Label Switching (MPLS) frame rate in frame per second.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Traffic Gen and Mon/EtherSAM > Results > Streams > MPLS > Total TX MPLS > Frame Rate (Frame/s)
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:RATE?
Response Syntax	<Rate>
Response(s)	**Rate**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frame rate (TX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:TX:RATE?
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:COSexp

:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:UTILization?

Description	This query returns the Multi Protocol Label Switching (MPLS) frame utilization in percentage.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Traffic Gen and Mon/EtherSAM > Results > Streams > MPLS > Total TX MPLS > Line Utilization(%)
Syntax	:SENSe:DATA:TELecom:ETHernet:STReam:MPLS:TX:UTILization?
Response Syntax	<Utilization>
Response(s)	**Utilization**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frame utilization (TX).
Example(s)	SOUR:DATA:TEL:ETH:PORT:MPLS ON
	SENS:DATA:TEL:ETH:STR:MPLS:TX:UTIL?
See Also	SOURce:DATA:TELecom:ETHernet:STReam:MPLS:TTL?

S-OAM and MPLS-TP OAM

:FETCh:DATA:TELecom:SOAM:FDELay:AVERage:DELay?

Description	This query returns the S-OAM Traffic Monitoring Statistics Average Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > Average > Delay
	Navigation Path: Results > S-OAM > Frame Delay > Average > Delay
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:AVERage:DELay?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay average Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:AVERage:DELay?
See Also	FETCh:DATA:TELecom:SOAM:TEST:STATus?

:FETCh:DATA:TELecom:SOAM:FDELay:CURRent:DELay?

Description	This query returns the S-OAM Traffic Monitoring Statistics Current Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > Current > Delay
	Navigation Path: Results > S-OAM > Frame Delay > Current > Delay
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:CURRent:DELay?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay current Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:CURRent:DELay?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:INValid:PAYLoad:COUNt?

:FETCh:DATA:TELecom:SOAM:FDELay:FAILed:COUNt:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Fail Count Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Frame Delay > Failed > Count > Pass/Fail Verdict
	Navigation Path: Results > Summary > Results Summary > Frame Delay Measurement > Failed > Pass/Fail Verdict
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:FAILed:COUNt:VERDict?
Response Syntax	<Frame Delay Failed Count VERDICT>
Response(s)	**Frame Delay Failed Count VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Frame Delay Failed Count verdict status.
	Pass
	Fail
Example(s)	FETC:DATA:TEL:SOAM:FDELay:FAILed:COUNt:VERD?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:PERcent:VERD?

:FETCh:DATA:TELecom:SOAM:FDELay:FAILed:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Fail Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Frame Delay > Failed > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:FAILed:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay failed Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:FAILed:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:LBR:TIMeout:COUNt?

:FETCh:DATA:TELecom:SOAM:FDELay:INValid:DMR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Invalid DMR Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > Invalid DMR > Count
	Navigation Path: Results > S-OAM > Frame Delay > Invalid DMR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:INValid:DMR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay Invalid DMR Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:INValid:DMR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:TX:LBM:COUNt?

:FETCh:DATA:TELecom:SOAM:FDELay:MAXimum:DELay:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Maximum Delay Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > Maximum > Delay > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Frame Delay > Maximum > Delay
	Navigation Path: Results > Summary > Results Summary > Frame Delay(ms)(Maximum) > Results > Pass/Fail Verdict
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:MAXimum:DELay:VERDict?
Response Syntax	<Frame Delay Maximum Delay VERDICT>
Response(s)	**Frame Delay Maximum Delay VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Frame Delay Maximum Delay verdict status.
	Pass
	Fail
Example(s)	FETC:DATA:TEL:SOAM:FDELay:MAXimum:DELay:VERD?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:STATus:VERD?

:FETCh:DATA:TELecom:SOAM:FDELay:MAXimum:DELay?

Description	This query returns the S-OAM Traffic Monitoring Statistics Maximum Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > Maximum > Delay
	Navigation Path: Results > S-OAM > Frame Delay > Maximum > Delay
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:MAXimum:DELay?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay maximum Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:MAXimum:DELay?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:FAILed:COUNt?

:FETCh:DATA:TELecom:SOAM:FDELay:MINimum:DELay?

Description	This query returns the S-OAM Traffic Monitoring Statistics Minimum Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > Minimum > Delay
	Navigation Path: Results > S-OAM > Frame Delay > Minimum > Delay
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:MINimum:DELay?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay minimum Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:MINimum:DELay?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:SUCessful:COUNt?

:FETCh:DATA:TELecom:SOAM:FDELay:RX:DMR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics RX DMR Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > RX DMR > Count
	Navigation Path: Results > S-OAM > Frame Delay > RX DMR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:RX:DMR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay Rx DMR Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:RX:DMR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:STATus?

:FETCh:DATA:TELecom:SOAM:FDELay:STATus:VERDict?

Description	This query returns the Frame Delay function shall report a Test Status Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > Status > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Frame Delay > Status
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:STATus:VERDict?
Response Syntax	\<Frame Delay Status VERDICT\>
Response(s)	**Frame Delay Status VERDICT**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA\> element.
	Returns Frame Delay Status verdict status.
	PASS,PASS as Delay Status verdict status is returned.
	FAIL,FAIL as Delay Status verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:STATus:VERD?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:FAILed:COUNt:VERD?

:FETCh:DATA:TELecom:SOAM:FDELay:STATus?

Description	This query returns the Frame Delay function shall report a Test Status.
	At *RST condition, this value is Idle, In Progress, Completed, Aborted.
	Navigation Path: Results > Summary > Frame Delay > Status
	Navigation Path: Results > S-OAM > Frame Delay > Status
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame delay function running status.
	IDLE, selected status as IDLE
	INPROGRESS, selected status as INPROGRESS
	COMPLETED, selected status as COMPLETED
	ABORTED, selected status as ABORTED
Example(s)	FETC:DATA:TEL:SOAM:FDELay:STATus?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:INValid:LBR:COUNt?

:FETCh:DATA:TELecom:SOAM:FDELay:SUCCessful:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Successful Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Frame Delay > Successful > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:SUCCessful:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay successful Count.
Example(s)	FETC:DATA:TEL:SOAM:FDEL:SUCC:COUN?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:RX:LBR:COUNt?

:FETCh:DATA:TELecom:SOAM:FDELay:TX:DMM:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics TX DMM Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Delay > TX DMM > Count
	Navigation Path: Results > S-OAM > Frame Delay > TX DMM > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FDELay:TX:DMM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame delay Tx DMM Count.
Example(s)	FETC:DATA:TEL:SOAM:FDELay:TX:DMM:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:PERcent? FARend

:FETCh:DATA:TELecom:SOAM:FLOSs:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss Near End/Far End Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Loss > Count(NearEnd/FarEnd)
	Navigation Path: Results > S-OAM > Frame Loss > Count(NearEnd/FarEnd)
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:COUNt? <wsp><type>
Parameter(s)	**type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Nearend or farend Frame loss count
	NEAREND: NEARend Frame loss count
	FAREND: FARend Frame loss count
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss NEARend or FARend Count.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:COUNt? NEARend
See Also	FETCh:DATA:TELecom:SOAM:FDELay:TX:DMM:COUNt?

:FETCh:DATA:TELecom:SOAM:FLOSs:FAILed:COUNt:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss Failed Count Pass/Fail Verdict. At *RST condition, this value is device dependent. Navigation Path: Results > S-OAM > Frame Loss > Failed > Count > Pass/Fail Verdict Navigation Path: Results > Summary > Results Summary > Frame Loss Measurement > Failed > Pass/Fail Verdict
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:FAILed:COUNt:VERDict?
Response Syntax	<Frame Loss Failed Count VERDICT>
Response(s)	**Frame Loss Failed Count VERDICT**: The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element. Returns Frame Loss Failed Count verdict status. PASS, PASS as Frame Loss Failed Count verdict status is returned. FAIL, FAIL as Frame Loss Failed Count verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:FAILed:COUNt:VERD?
See Also	FETCh:DATA:TELecom:SOAM:TEST:STATus:VERD?

:FETCh:DATA:TELecom:SOAM:FLOSs:FAILed:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss Failed Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Frame Loss > Failed > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:FAILed:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss failed Count.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:FAILed:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:TEST:SUCessful:COUNt?

:FETCh:DATA:TELecom:SOAM:FLOSs:INValid:LMR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss Invalid LMR Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Loss > Invalid LMR > Count
	Navigation Path: Results > S-OAM > Frame Loss > Invalid LMR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:INValid:LMR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss Invalid LMR Count.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:INValid:LMR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:TEST:INValid:TST:COUNt?

:FETCh:DATA:TELecom:SOAM:FLOSs:PERCent:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss Near End/Far End Percent Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Loss > Percent(NearEnd/FarEnd) > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Frame Loss > Percent(NearEnd/FarEnd)
	Navigation Path: Results > Summary > Results Summary > Frame Loss Ratio > Result (NearEnd/FarEnd) > Pass/Fail Verdict
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:PERCent:VERDict? <wsp><type>
Parameter(s)	**type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Nearend or farend Frame loss count
	NEAREND: NEARend Frame loss count
	FAREND: FARend Frame loss count
Response Syntax	<Frame Loss Farend & NearEnd ratio VERDICT>
Response(s)	**Frame Loss Farend & NearEnd ratio VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Frame Loss Farend & NearEnd ratio verdict status.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:PERcent:VERD? FARend
See Also	FETCh:DATA:TELecom:SOAM:TEST:FAILed:COUNt:VERD?

:FETCh:DATA:TELecom:SOAM:FLOSs:PERCent?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss Near End/Far End Percent.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Loss > Percent(NearEnd/FarEnd)
	Navigation Path: Results > S-OAM > Frame Loss > Percent(NearEnd/FarEnd)
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:PERCent? <wsp><type>
Parameter(s)	**type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Nearend or farend Frame loss count
	NEAREND: NEARend Frame loss count
	FAREND: FARend Frame loss count
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss NEARend or FARend percent.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:PERcent? FARend
See Also	FETCh:DATA:TELecom:SOAM:FDELay:RX:DMR:COUNt?

:FETCh:DATA:TELecom:SOAM:FLOSs:RX:LMR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss RX LMR Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Loss > RX LMR > Count
	Navigation Path: Results > S-OAM > Frame Loss > RX LMR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:RX:LMR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss Rx LMR Count.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:RX:LMR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:TEST:RX:TST:COUNt?

:FETCh:DATA:TELecom:SOAM:FLOSs:STATus:VERDict?

Description	This query returns the Frame Loss function shall report a Test Status Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Loss > Status > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Frame Loss > Status
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:STATus:VERDict?
Response Syntax	<Frame Loss status VERDICT>
Response(s)	**Frame Loss status VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Frame Loss status verdict status
	PASS, PASS as Frame Loss status verdict status is returned.
	FAIL, FAIL as Frame Loss status verdict statusis returned.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:STATus:VERD?
See Also	FETCh:DATA:TELecom:SOAM:LOOPback:FAILed:COUNt:VERD?

:FETCh:DATA:TELecom:SOAM:FLOSs:STATus?

Description	This query returns the Frame Loss function shall report a Test Status.
	At *RST condition, this value is Idle, In Progress, Completed, Aborted
	Navigation Path: Results > Summary > Frame Loss > Status
	Navigation Path: Results > S-OAM > Frame Loss > Status
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Frame loss function running Status.
	IDLE, IDLE is selected as Frame loss function running Status.
	INPROGRESS, INPROGRESS is selected as Frame loss function running Status.
	COMPLETED, COMPLETED is selected as Frame loss function running Status.
	ABORTED, ABORTED is selected as Frame loss function running Status.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:STATus?
See Also	FETCh:DATA:TELecom:SOAM:TEST:FAILed:COUNt?

:FETCh:DATA:TELecom:SOAM:FLOSs:SUCCessful:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss Successful Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Frame Loss > Successful > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:SUCCessful:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss Successful Count.
Example(s)	FETC:DATA:TEL:SOAM:FLOS:SUCC:COUN?
See Also	FETCh:DATA:TELecom:SOAM:TEST:INValid:PAYLoad:COUNt?

:FETCh:DATA:TELecom:SOAM:FLOSs:TX:LMM:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Frame Loss TX LMM Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Frame Loss > TX LMM > Count
	Navigation Path: Results > S-OAM > Frame Loss > TX LMM > Count
Syntax	:FETCh:DATA:TELecom:SOAM:FLOSs:TX:LMM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Frame Loss Tx LMM Count.
Example(s)	FETC:DATA:TEL:SOAM:FLOSs:TX:LMM:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:TEST:TX:TST:COUNt?

:FETCh:DATA:TELecom:SOAM:LOOPback:FAILed:COUNt:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Fail Count Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Loopback > Failed > Count > Pass/Fail Verdict
	Navigation Path: Results > Summary > Results Summary > Loopback
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:FAILed:COUNt:VERDict?
Response Syntax	<Loopback Failed Count VERDICT>
Response(s)	**Loopback Failed Count VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Loopback Failed Count verdict status.
	PASS,PASS as Loopback Failed Count verdict status is returned.
	FAIL,FAIL as Loopback Failed Count verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:FAILed:COUNt:VERD?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:FAILed:COUNt:VERD?

:FETCh:DATA:TELecom:SOAM:LOOPback:FAILed:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Fail Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Loopback > Successful > Count
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:FAILed:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback failed Count.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:FAILed:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:PERcent? FARend

:FETCh:DATA:TELecom:SOAM:LOOPback:INValid:LBR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Invalid LBR Count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > Invalid LBR > Count
	Navigation Path: Results > S-OAM > Loopback > Invalid LBR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:INValid:LBR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback Invalid LBR Count.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:INValid:LBR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:FAILed:COUNt?

:FETCh:DATA:TELecom:SOAM:LOOPback:INValid:PAYLoad:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Invalid Payload Count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > Invalid Payload > Count
	Navigation Path: Results > S-OAM > Loopback > Invalid Payload > Count
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:INValid:PAYLoad:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback invalid payload Count.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:INValid:PAYLoad:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus?

:FETCh:DATA:TELecom:SOAM:LOOPback:LBR:TIMeout:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics LBR TimeOut Count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > LBR Timeout > Count
	Navigation Path: Results > S-OAM > Loopback > LBR Timeout > Count
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:LBR:TIMeout:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback LBR timeout Count.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:LBR:TIMeout:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:SUCessful:COUNt?

:FETCh:DATA:TELecom:SOAM:LOOPback:RX:LBR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics TX LBM Count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > RX LBR > Count
	Navigation Path: Results > S-OAM > Loopback > RX LBR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:RX:LBR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback Rx LBR Count.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:RX:LBR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:INValid:SLR:COUNt?

:FETCh:DATA:TELecom:SOAM:LOOPback:STATus:VERDict?

Description	This query returns the Loopback function shall report a Test Status Pass/Fail Verdict
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > Status > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Loopback > Status
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:STATus:VERDict?
Response Syntax	<Loopback Status VERDICT>
Response(s)	**Loopback Status VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Loopback Status verdict status.
	PASS,PASS as Loopback Status verdict status is returned.
	FAIL,FAIL as Loopback Status verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:STATus:VERD?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:STATus:VERD?

:FETCh:DATA:TELecom:SOAM:LOOPback:STATus?

Description	This query returns the Loopback function shall report a Test Status
	At *RST condition, this value is Idle, In Progress, Completed, Aborted.
	Navigation Path: Results > Summary > Loopback > Status
	Navigation Path: Results > S-OAM > Loopback > Status
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Loopback function running Status.
	IDLE, IDLE is selected as Loopback function running Status.
	INPROGRESS, INPROGRESS is selected as Loopback function running Status.
	COMPLETED,COMPLETED is selected as Loopback function running Status.
	ABORTED, BORTED is selected as Loopback function running Status.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:STATus?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:TX:SLM:COUNt?

:FETCh:DATA:TELecom:SOAM:LOOPback:SUCCessful:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Successful Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Loopback > Successful > Count
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:SUCCessful:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback successful Count.
Example(s)	FETC:DATA:TEL:SOAM:LOOP:SUCC:COUN?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:COUNt? NEARend

:FETCh:DATA:TELecom:SOAM:LOOPback:TX:LBM:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics TX LBM Count
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Loopback > TX LBM > Count
	Navigation Path: Results > S-OAM > Loopback > TX LBM > Count
Syntax	:FETCh:DATA:TELecom:SOAM:LOOPback:TX:LBM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Loopback Tx LBM Count.
Example(s)	FETC:DATA:TEL:SOAM:LOOPback:TX:LBM:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:RX:SLR:COUNt?

:FETCh:DATA:TELecom:SOAM:SLOSs:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss Near End/Far End Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Synthetic Loss > Count(NearEnd/FarEnd)
	Navigation Path: Results > S-OAM > Synthetic Loss > Count(NearEnd/FarEnd)
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:COUNt? <wsp><type>
Parameter(s)	**type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Nearend or farend Synthetic loss count
	NEAREND: NEARend Frame loss count
	FAREND: FARend Frame loss count
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Sythetic Loss NEARend or FARend Count.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:COUNt? NEARend
See Also	FETCh:DATA:TELecom:SOAM:FDELay:MAXimum:DELay?

:FETCh:DATA:TELecom:SOAM:SLOSs:FAILed:COUNt:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss Failed Count Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Synthetic Loss > Failed > Count > Pass/Fail Verdict
	Navigation Path: Results > Summary > Results Summary > Synthetic Loss Measurement > Failed > Pass/Fail Verdict
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:FAILed:COUNt:VERDict?
Response Syntax	<Synthetic Loss Failed Count VERDICT>
Response(s)	**Synthetic Loss Failed Count VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Synthetic Loss Failed Count verdict status.
	PASS, PASS as Synthetic Loss Failed Count verdict status is returned.
	FAIL, FAIL as Synthetic Loss Failed Count verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:FAILed:COUNt:VERD?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:FAILed:COUNt:VERD?

:FETCh:DATA:TELecom:SOAM:SLOSs:FAILed:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss Failed Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Synthetic Loss > Failed > Count
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:FAILed:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Sythetic Loss failed Count.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:FAILed:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:CURRent:DELay?

:FETCh:DATA:TELecom:SOAM:SLOSs:INValid:SLR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss Invalid SLR Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Synthetic Loss > Invalid SLR > Count
	Navigation Path: Results > S-OAM > Synthetic Loss > Invalid SLR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:INValid:SLR:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Sythetic Loss Invalid SLR Count.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:INValid:SLR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:FAILed:COUNt?

:FETCh:DATA:TELecom:SOAM:SLOSs:PERCent:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss Near End/Far End Percent Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Synthetic Loss > Percent(NearEnd/FarEnd) > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Synthetic Loss > Percent(NearEnd/FarEnd)
	Navigation Path: Results > Summary > Results Summary > Synthetic Loss Ratio > Result (NearEnd/FarEnd) > Pass/Fail Verdict
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:PERCent:VERDict? <wsp><type>
Parameter(s)	**type:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Nearend or farend Synthetic loss count
	NEAREND: NEARend Frame loss count
	FAREND: FARend Frame loss count
Response Syntax	<Synthetic Loss Farend & NearEnd ratio VERDICT>
Response(s)	**Synthetic Loss Farend & NearEnd ratio VERDICT:**
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Synthetic Loss Farend & NearEnd verdict status.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:PERCent:VERD? FARend
See Also	FETCh:DATA:TELecom:SOAM:FDELay:MAXimum:DELay:VERD?

:FETCh:DATA:TELecom:SOAM:SLOSs:PERCent?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss Near End/Far End Percent.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Synthetic Loss > Percent(NearEnd/FarEnd)
	Navigation Path: Results > S-OAM > Synthetic Loss > Percent(NearEnd/FarEnd)
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:PERCent? <wsp><type>
Parameter(s)	**type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects Nearend or farend Synthetic loss count
	NEAREND: NEARend Frame loss count
	FAREND: FARend Frame loss count
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Synthetic Loss NEARend or FARend percent.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:PERcent? FARend
See Also	FETCh:DATA:TELecom:SOAM:FDELay:AVERage:DELay?

:FETCh:DATA:TELecom:SOAM:SLOSs:RX:SLR:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss TX SLR Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Synthetic Loss > RX SLR > Count
	Navigation Path: Results > S-OAM > Synthetic Loss > RX SLR > Count
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:RX:SLR:COUNt?
Response Syntax	\<Value\>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA\> element.
	Returns the Sythetic Loss Rx SLR Count.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:RX:SLR:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:SUCessful:COUNt?

:FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?

Description	This query returns the Synthetic Loss function shall report a Test Status Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Synthetic Loss > Status > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Synthetic Loss > Status
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERDict?
Response Syntax	<Synthetic Loss status VERDICT>
Response(s)	**Synthetic Loss status VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Synthetic Loss status verdict status.
	PASS, PASS as Synthetic Loss status verdict status is returned.
	FAIL, FAIL as Synthetic Loss status verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:STATus:VERD?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:STATus:VERD?

:FETCh:DATA:TELecom:SOAM:SLOSs:STATus?

Description	This query returns the Synthetic Loss function shall report a Test Status.
	At *RST condition, this value is Idle, In Progress, Completed, Aborted.
	Navigation Path: Results > Summary > Synthetic Loss > Status
	Navigation Path: Results > S-OAM > Synthetic Loss > Status
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Sythetic loss function running Status.
	IDLE, selected status as IDLE
	INPROGRESS, selected status as INPROGRESS
	COMPLETED, selected status as COMPLETED
	ABORTED, selected status as ABORTED
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:STATus?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:MINimum:DELay?

:FETCh:DATA:TELecom:SOAM:SLOSs:SUCCessful:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss Successful Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Synthetic Loss > Successful > Count
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:SUCCessful:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Sythetic Loss Successful Count.
Example(s)	FETC:DATA:TEL:SOAM:SLOS:SUCC:COUN?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:STATus?

:FETCh:DATA:TELecom:SOAM:SLOSs:TX:SLM:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Synthetic Loss TX SLM Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Synthetic Loss > TX SLM > Count
	Navigation Path: Results > S-OAM > Synthetic Loss > TX SLM > Count
Syntax	:FETCh:DATA:TELecom:SOAM:SLOSs:TX:SLM:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Sythetic Loss Tx SLM Count.
Example(s)	FETC:DATA:TEL:SOAM:SLOSs:TX:SLM:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FDELay:INValid:DMR:COUNt?

:FETCh:DATA:TELecom:SOAM:TEST:FAILed:COUNt:VERDict?

Description	This query returns the S-OAM Traffic Monitoring Statistics Fail Count Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Test > Failed > Count > Pass/Fail Verdict
	Navigation Path: Results > Summary > Results Summary > Test
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:FAILed:COUNt:VERDict?
Response Syntax	<TEST Failed Count VERDICT>
Response(s)	**TEST Failed Count VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Test failed count verdict status.
	PASS, PASS as Test failed count verdict status is returned.
	FAIL, FAIL as Test failed count verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:TEST:FAILed:COUNt:VERD?
See Also	FETCh:DATA:TELecom:SOAM:SLOSs:STATus:VERD?

:FETCh:DATA:TELecom:SOAM:TEST:FAILed:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Fail Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Test > Failed > Count
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:FAILed:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Test failed Count.
Example(s)	FETC:DATA:TEL:SOAM:TEST:FAILed:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:COUNt? NEARend

:FETCh:DATA:TELecom:SOAM:TEST:INValid:PAYLoad:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Invalid Payload Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Test > Invalid Payload > Count
	Navigation Path: Results > S-OAM > Test > Invalid Payload > Count
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:INValid:PAYLoad:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Test Invalid payload Count.
Example(s)	FETC:DATA:TEL:SOAM:TEST:INV:PAYL:COUN?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:FAILed:COUNt?

:FETCh:DATA:TELecom:SOAM:TEST:INValid:TST:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Invalid TST Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Test > Invalid TST > Count
	Navigation Path: Results > S-OAM > Test > Invalid TST > Count
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:INValid:TST:COUNt?
Response Syntax	\<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA> element.
	Returns the Test invalid TST Count.
Example(s)	FETC:DATA:TEL:SOAM:TEST:INValid:TST:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:SUCessful:COUNt?

:FETCh:DATA:TELecom:SOAM:TEST:RX:TST:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics RX TST Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Test > RX TST > Count
	Navigation Path: Results > S-OAM > Test > RX TST > Count
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:RX:TST:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Test Rx TST Count.
Example(s)	FETC:DATA:TEL:SOAM:TEST:RX:TST:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:INValid:LMR:COUNt?

:FETCh:DATA:TELecom:SOAM:TEST:STATus:VERDict?

Description	This query returns the Test function shall report a Test Status Pass/Fail Verdict.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Test > Status > Pass/Fail Verdict
	Navigation Path: Results > S-OAM > Test > Status
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:STATus:VERDict?
Response Syntax	<TEST STATUS VERDICT>
Response(s)	**TEST STATUS VERDICT**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns Test status verdict status.
	PASS,PASS as Test status verdict status is returned.
	FAIL,FAIL as Test status verdict status is returned.
Example(s)	FETC:DATA:TEL:SOAM:TEST:STATus:VERD?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:PERcent:VERD?

:FETCh:DATA:TELecom:SOAM:TEST:STATus?

Description	This query returns the Test function shall report a Test Status.
	At *RST condition, this value is Idle, In Progress, Completed, Aborted.
	Navigation Path: Results > Summary > Test > Status
	Navigation Path: Results > S-OAM > Test > Status
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Test function running Status.
	IDLE, selected status as IDLE
	INPROGRESS, selected status as INPROGRESS
	COMPLETED, selected status as COMPLETED
	ABORTED, selected status as ABORTED
Example(s)	FETC:DATA:TEL:SOAM:TEST:STATus?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:TX:LMM:COUNt?

:FETCh:DATA:TELecom:SOAM:TEST:SUCCessful:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics Successful Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > S-OAM > Test > Successful > Count
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:SUCCessful:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Test successful Count.
Example(s)	FETC:DATA:TEL:SOAM:TEST:SUCC:COUN?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:STATus?

:FETCh:DATA:TELecom:SOAM:TEST:TX:TST:COUNt?

Description	This query returns the S-OAM Traffic Monitoring Statistics TX TST Count.
	At *RST condition, this value is device dependent.
	Navigation Path: Results > Summary > Test > TX TST > Count
	Navigation Path: Results > S-OAM > Test > TX TST > Count
Syntax	:FETCh:DATA:TELecom:SOAM:TEST:TX:TST:COUNt?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Test Tx TST Count.
Example(s)	FETC:DATA:TEL:SOAM:TEST:TX:TST:COUNt?
See Also	FETCh:DATA:TELecom:SOAM:FLOSs:RX:LMR:COUNt?

Link OAM

:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:FPERiod?

Description	This query returns the Remote Error Event Statistics Frame Period.
	At *RST, this value is device dependent.
	Navigation Path: Results > Link OAM > Remote Error Event Statistics > Frame Period
	It Shows: Date and Time Stamp, Window, Threshold, Error Count, Error Running Total, Event Running Total.
Syntax	:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:FPERiod? <wsp><Frame Period>
Parameter(s)	**Frame Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Return Remote Error Event Statistics of Frame Period according to given parameter.
	RDATestamp: Date Stamp.
	RTIMestamp: Time Stamp.
	WINdow: Window.
	RTHreshold: Threshold.
	RCERror: Error Count.
	RTERror: Error Running Total.
	RTEVent: Event Running Total.
Response Syntax	<Frame Period>
Response(s)	**Frame Period**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Return Remote Error Event stats of Frame Period.
Example(s)	FETC:DATA:TEL:LOAM:REM:EVEN:STAT:FPER? RTEVent
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:FRAMe?

Description	This query returns the Remote Error Event Statistics Frame.
	At *RST, this value is device dependent.
	Navigation Path: Results > Link OAM > Remote Error Event Statistics > Frame
	It Shows: Date and Time Stamp, Window, Threshold, Error Count, Error Running Total, Event Running Total.
Syntax	:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:FRAMe? <wsp><Frame>
Parameter(s)	**Frame**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Return Remote Error Event Statistics of Frame according to given parameter.
	RDATestamp: Date Stamp.
	RTIMestamp: Time Stamp.
	WINdow: Window.
	RTHreshold: Threshold.
	RCERror: Error Count.
	RTERror: Error Running Total.
	RTEVent: Event Running Total.
Response Syntax	<Frame>
Response(s)	**Frame**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Return Remote Error Event stats of Frame.
Example(s)	FETC:DATA:TEL:LOAM:REM:EVEN:STAT:FRAM? RTEVent
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:FSECo nd?

Description	This query returns the Remote Error Event Statistics Frame Second.
	At *RST, this value is device dependent.
	Navigation Path: Results > Link OAM > Remote Error Event Statistics > Frame Seconds
	It Shows: Date and Time Stamp, Window, Threshold, Error Count, Error Running Total, Event Running Total.
Syntax	:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:FSECond? <wsp><Frame Second>
Parameter(s)	**Frame Second**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Return Remote Error Event Statistics Of Frame Seconds according to given parameter.
	RDATestamp: Date Stamp.
	RTIMestamp: Time Stamp.
	WINdow: Window.
	RTHreshold: Threshold.
	RCERror: Error Count.
	RTERror: Error Running Total.
	RTEVent: Event Running Total.
Response Syntax	<Frame Second>
Response(s)	**Frame Second**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Return Remote Error Event stats of Frame Second.
Example(s)	FETC:DATA:TEL:LOAM:REM:EVEN:STAT:FSEC? RTEVent
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:SPERi od?

Description	This query returns the Remote Error Event Statistics Symbol Period.
	At *RST, this value is device dependent.
	Navigation Path: Results > Link OAM > Remote Error Event Statistics > Symbol Period
	It Shows: Date and Time Stamp, Window, Threshold, Error Count, Error Running Total, Event Running Total.
Syntax	:FETCh:DATA:TELecom:LOAM:REMote:EVENt:STATistic:SPERiod? <wsp><Symbol Period>
Parameter(s)	**Symbol Period**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Return Remote Error Event Statistics of Symbol Periood according to given parameter.
	RDATestamp: Date Stamp.
	RTIMestamp: Time Stamp.
	WINdow: Window.
	RTHreshold: Threshold.
	RCERror: Error Count.
	RTERror: Error Running Total.
	RTEVent: Event Running Total.
Response Syntax	<Symbol Period>
Response(s)	**Symbol Period**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Return Remote Error Event stats of Symbol Period.
Example(s)	FETC:DATA:TEL:LOAM:REM:EVEN:STAT:SPER? RTEVent
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:FETCh:DATA:TELecom:LOAM:REMote:MAC?

Description	This query returns the Remote MAC Address.
	At *RST, this value is device dependent.
	Navigation Path: Results > Link OAM > Remote MAC Address
Syntax	:FETCh:DATA:TELecom:LOAM:REMote:MAC?
Response Syntax	<MAC Address>
Response(s)	**MAC Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Remote MAC Address.
Example(s)	FETC:DATA:TEL:LOAM:REM:MAC?
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination?

:FETCh:DATA:TELecom:LOAM:REMote:OAMInfo?

Description	This query returns the Remote OAM Information.
	At *RST, this value is device dependent.
	Navigation Path: Results > Link OAM > Remote OAM Information
	It Shows: OAM Version, Revision, Multiplexer Action, Parser Action, OAM Mode, OUI, Maximum OAMPDU Size, Vendor specific information, Unidirectional, Remote Loopback, Variable Retrieval, Link Events.
Syntax	:FETCh:DATA:TELecom:LOAM:REMote:OAMInfo? <wsp><Remote OAMInfo>
Parameter(s)	**Remote OAMInfo**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Return Remote OAM Information according to given parameter.
	OVERsion: OAM Version.
	OREVision: OAM Revision.
	OMACtion: Multiplexer Action.
	OPACtion: Parser Action.
	ROAMode: OAM Mode.
	OUIRemote: Remote OUI.
	OMSize: Maximum OAMPDU Size.
	VSINfo: Vendor Specific Information.
	UNIDir: Unidirectional.
	RLBack: Remote Loopback.
	VRETrival: Variable Retrieval.
	LEVent: Link Events.
Response Syntax	<Remote OAM Information>
Response(s)	**Remote OAM Information**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns Remote OAM Information.
Example(s)	FETC:DATA:TEL:LOAM:REM:OAMI? OVERsion
See Also	FETCh:DATA:TELecom:TSCan:LINK:RATE?

:SOURce:DATA:TELecom:LOAM:ERRor:FRAMe:INJect

Description	This command allows Injecting Error Frames.
	At *RST condition, this value is set to 1.
	Navigation Path: Results > Link OAM > Inject Errored Frames
Syntax	:SOURce:DATA:TELecom:LOAM:ERRor:FRAMe:INJect
Response Syntax	\<Remote OAM Information\>
Example(s)	SOUR:DATA:TEL:LOAM:ERR:FRAM:INJ
See Also	FETCh:DATA:TELecom:PATTern:ALARm:PATTern:SEConds?

SDT (Multi-Channel OTN)

:FETCh:DATA:TELecom:SDT:CHAThreshold?

Description	This query returns the number of channels that crossed the pass/fail verdict threshold, when SDT pass/fail verdict is enabled, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Multi-Channel OTN > Results > SDT > Channels Above Threshold
Syntax	:FETCh:DATA:TELecom:SDT:CHAThreshold?
Response Syntax	<Number of channels that crossed the pass/fail verdict threshold>
Response(s)	**Number of channels that crossed the pass/fail verdict threshold**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of channels that crossed the pass/fail verdict threshold, when SDT pass/fail verdict is enabled, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:CHAT?
See Also	FETCh:DATA:TELecom:SDT:VERD? 3

:FETCh:DATA:TELecom:SDT:CHDIsruption?

Description	This query returns the number of channels that had one or more disruption(s), since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Multi-Channel OTN > Results > SDT > Channels with Disruptions
Syntax	:FETCh:DATA:TELecom:SDT:CHDIsruption?
Response Syntax	<Number of channels in disruption>
Response(s)	**Number of channels in disruption**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of channels that had one or more disruption(s), since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:CHDI?
See Also	FETCh:DATA:TELecom:SDT:LAST? 3
	FETCh:DATA:TEL:SDT:LACH?

:FETCh:DATA:TELecom:SDT:CHMOnitored?

Description	This query returns the number of channels monitored.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Multi-Channel OTN > Results > SDT > Channels Monitored
Syntax	:FETCh:DATA:TELecom:SDT:CHMOnitored?
Response Syntax	<Number of channels monitored>
Response(s)	**Number of channels monitored**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of channels monitored.
Example(s)	FETC:DATA:TEL:SDT:CHMO?

:FETCh:DATA:TELecom:SDT:LACHannel?

Description	This query returns the channel with the last disruption, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Multi-Channel OTN > Results > SDT > Last Disruption (Channel)
Syntax	:FETCh:DATA:TELecom:SDT:LACHannel?
Response Syntax	<Channel>
Response(s)	**Channel**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel with last detected disruption, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:LACH?
See Also	FETCh:DATA:TELecom:SDT:LAST? 3

:FETCh:DATA:TELecom:SDT:LATImestamp?

Description	This query returns the last disruption detection timestamp, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Multi-Channel OTN > Results > SDT > Last Disruption (Duration)
Syntax	:FETCh:DATA:TELecom:SDT:LATImestamp? <wsp><Channel>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is mandatory in the Multi-Channel OTN application, and cannot be specified in other applications.
	The query returns the detection timestamp of the last disruption for the specified channel.
	The numeric channel ranges from [1:n] in function of ODU Mapping.
Response Syntax	<Last timestamp>
Response(s)	**Last timestamp**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the last disruption detection timestamp (local time), since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:LATI? 3
See Also	FETCh:DATA:TELecom:SDT:LAST? 3

:FETCh:DATA:TELecom:SDT:LOCHannel?

Description	This query returns the channel with the longest disruption duration, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Multi-Channel OTN > Results > SDT > Longest Disruption (Channel)
Syntax	:FETCh:DATA:TELecom:SDT:LOCHannel?
Response Syntax	<Channel>
Response(s)	**Channel**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the channel with the longest disruption duration, since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:LOCH?
See Also	FETCh:DATA:TELecom:SDT:LONGest? 3

:FETCh:DATA:TELecom:SDT:LOTImestamp?

Description	This query returns the longest disruption detection timestamp, since test was started/reset.
	At *RST condition, this value is device dependent.
	Navigation Path: Test > Multi-Channel OTN > Results > SDT > Longest Disruption (Duration)
Syntax	:FETCh:DATA:TELecom:SDT:LOTImestamp? <wsp><Channel>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is mandatory in the Multi-Channel OTN application, and cannot be specified in other applications.
	The query returns the detection timestamp of the longest disruption for the specified channel.
	The numeric channel ranges from [1:n] in function of ODU Mapping.
Response Syntax	<Longest timestamp>
Response(s)	**Longest timestamp**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the longest disruption detection timestamp (local time), since test was started/reset.
Example(s)	FETC:DATA:TEL:SDT:LOTI? 3
See Also	FETCh:DATA:TELecom:SDT:LONGest? 3

Messages (OBSAI)

:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:C[1..n]?

Description	This Query returns the OBSAI Message c1 Count.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Messages > RX Frame Clock Burst Details - c1
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:C[1..n]?
Response Syntax	<c1Count>
Response(s)	**c1Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return C1 Count.
Example(s)	FETC:DATA:TEL:CPRI:OBS:MESS:C1?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:RXCount?

:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:RXCount?

Description	This Query returns the OBSAI Message RX Count.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Messages > Message Type - RX Count
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:RXCount? <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the Message Type.
	CONTROL: Control
	MEASUREMENT: Measurement
	WFDD: WCDMA/FDD
	WTDD: WCDMA/TDD
	GEDGE: GSM/EDGE
	TETRA: TETRA
	CDMA2000: CDMA2000
	WLAN: WLAN
	LOOPBACK: Loopback
	FCB: Frame Clock Burst
	ETHERNET: Ethernet
	RTTMESSAGE: RTT Message
	802_16: 802.16
	VHWRESET: Virtual HW Reset
	LTE: LTE
	GPACKET: Generic Packet
	MRTTMESSAGE: Multi-hop RTT Message
	OTHERS: Others
Response Syntax	<Message Type RX Count>

:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:RXCount?

Response(s)	**Message Type RX Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return Message Type RX Count.
Example(s)	FETC:DATA:TEL:CPRI:OBS:MESS:RXC? LTE
See Also	FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:RXCount?

:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:SFN?

Description	This Query returns the OBSAI Message SFN Count.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Messages > RX Frame Clock Burst Details - SFN
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:SFN?
Response Syntax	<SFN Count>
Response(s)	**SFN Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return SFN Count.
Example(s)	FETC:DATA:TEL:CPRI:OBS:MESS:SFN?
See Also	FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:RXCount?

:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:TXCount?

Description	This Query returns the OBSAI Message TX Count.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Results > Messages > Message Type - RX Count
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:MESSages:TXCount? <wsp><Message>
Parameter(s)	**Message**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Select the Message Type.
	WFDD: WCDMA/FDD
	GEDGE: GSM/EDGE
	FCB: Frame Clock Burst
	RTTMESSAGE: RTT Message
	802_16: 802.16
	LTE: LTE
Response Syntax	<Message Type TX Count>
Response(s)	**Message Type TX Count**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return Message Type TX Count.
Example(s)	FETC:DATA:TEL:CPRI:OBS:MESS:TXC? LTE
See Also	FETCh:DATA:TELecom:CPRI:OBSai:SUMMary:TXCount?

APS

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:ARC Hitecture?

Description	This query returns Architecture for Linear Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Linear) > Architecture
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:ARCHitecture?
Response Syntax	\<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a \<CHARACTER RESPONSE DATA> element.
	Returns the Architecture for Linear Switching mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K2:ARCH?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHAN?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BRE Quest?

Description	This query returns Bridge Request for Ring Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Switching Mode (Ring) > Bridge Request
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQuest?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Bridge Request for Ring Switching mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K2:BREQ?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:DNODe?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?

Description	This query returns Channel for Linear Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Switching Mode (Linear) > Channel
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Channel for Linear Switching Mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K1:CHAN?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:SNODe?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:DNODe?

Description	This query returns Destination node Id for Ring Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Switching Mode (Ring) > Destination Node Id
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:DNODe?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Destination Node Id for Ring Switching mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K1:DNODe?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQ?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:OMODe?

Description	This query returns Operation mode for Linear Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Operation Mode
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:OMODe?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Operation mode for Linear Switching mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K2:LIN:OMODe?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQ?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:REQuest?

Description	This query returns the K1 Request for Linear Switching mode for RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Request
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:REQuest?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Request for Linear Switching mode
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K1:LIN:REQ?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQ?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:PCHannel?

Description	This query returns Protected Channel for Linear Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Switching Mode (Linear) > Protected Channel
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:PCHannel?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Protected Channel for Linear Switching mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K2:PCH?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:DNODe?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:RING:OMODe?

Description	This query returns Operation mode for Ring Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Operation Mode
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:RING:OMODe?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Operation mode for Ring Switching mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K2:RING:OMODe?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQ?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:RING:REQuest?

Description	This query returns the K1 Request for Ring Switching mode for RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Request
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:RING:REQuest?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Request for Ring Switching mode
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K1:RING:REQ?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQ?

:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:SNODe?

Description	This query returns Source Node Id for Ring Switching mode RX.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Switching Mode (Ring) > Source Node Id
Syntax	:FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:SNODe?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Source Node Id for Ring Switching mode.
Example(s)	FETC:DATA:TEL:SDHS:ADV:APS:K2:SNODe?
See Also	FETCh:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:SNODe?

:SENSe:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe

Description	This command selects the Switching mode for RX.
	At *RST condition, this value is set to LINEAR.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Switching Mode
Syntax	:SENSe:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Switching Mode.
	LINear
	RING
Response Syntax	<Value>
Example(s)	SENS:DATA:TEL:SDHS:ADV:APS:SMODE LINEAR
	SENS:DATA:TEL:SDHS:ADV:APS:SMODE?
	Returns: LINEAR
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:OMODE

:SENSe:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe?

Description	This query returns the Switching mode for RX.
	At *RST condition, this value is set to LINEAR.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > RX > Switching Mode
Syntax	:SENSe:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Switching mode for RS-MS advance.
	LINEAR - Linear is selected for Switching Mode.
	RING - Ring is selected for Switching Mode.
Example(s)	SENS:DATA:TEL:SDHS:ADV:APS:SMODE LINEAR
	SENS:DATA:TEL:SDHS:ADV:APS:SMODE?
	Returns: LINEAR
See Also	SENS[1..n]:DATA:TEL:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:ARCHitecture

Description	This command sets the Architecture for Linear Switching mode.
	At *RST condition, this value is set to 1TO1
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Linear) > Architecture
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:ARCHitecture <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the K2 Architecture for Linear Switching.
	1TO1: 1+1
	1TON: 1+N
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K2:ARCH 1TO1
	SOUR:DATA:TEL:SDHS:ADV:APS:K2:ARCH?
	Returns: 1TO1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:ARCHitecture?

Description	This query returns the Architecture for Linear switching mode.
	At *RST condition, this value is set to 1TO1
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Linear) > Architecture
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:ARCHitecture?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Linear Swithching Mode Architecture.
	1TO1 - 1+1 Architecture is selected.
	1TON - 1+N Architecture is selected.
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K2:ARCH 1TO1
	SOUR:DATA:TEL:SDHS:ADV:APS:K2:ARCH?
	Returns: 1TO1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BR EQuest

Description	This command sets Bridge Request for Ring Swtiching mode.
	At *RST condition, this value is set to SPATH.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Ring) > Bridge Request
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQuest <wsp><Bridge>
Parameter(s)	**Bridge**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the K2 Bridge Request for Ring Switching.
	SPATh: Short Path
	LPATh: Long Path
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K2:BREQ SPATH
	SOUR:DATA:TEL:SDHS:ADV:APS:K2:BREQ?
	Returns: SPATH
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BR EQuest?

Description	This query returns Bridge Request for Ring Switching mode.
	At *RST condition, this value is set to SPATH.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Ring) > Bridge Request
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:BREQuest?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Bridge Request for Ring Switching mode.
	SPATH - Short Path is selected.
	LPATH - Long Path is selected.
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K2:BREQ SPATH
	SOUR:DATA:TEL:SDHS:ADV:APS:K2:BREQ?
	Returns: SPATH
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

Description	This command selects the K1 Channel for Linear Switching mode.
	At *RST condition, this value is set to NULL.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Linear) > Channel
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the K1 Channel for Linear Switching.
	0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K1:CHAN 1
	SOUR:DATA:TEL:SDHS:ADV:APS:K1:CHAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?

Description	This query returns the K1 Channel for Linear Switching Mode.
	At *RST condition, this value is set to NULL.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Linear) > Channel
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Linear switching mode Channel: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, or 15.
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K1:CHAN 1
	SOUR:DATA:TEL:SDHS:ADV:APS:K1:CHAN?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:D NODe

Description	This comman selects Destination node Id for Ring Switching mode.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Ring) > Destination Node Id
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:DNODe <wsp><Node ID>
Parameter(s)	Node ID:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the K1 Destination Node Id for Ring Switching:
	0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K1:DNOD 1
	SOUR:DATA:TEL:SDHS:ADV:APS:K1:DNOD?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:D NODe?

Description	This query returns Destination node Id for Ring Switching mode.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Ring) > Destination Node Id
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:DNODe?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Destination Node Id for Ring Switching mode: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, or 15.
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K1:DNOD 1
	SOUR:DATA:TEL:SDHS:ADV:APS:K1:DNOD?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:OMODe

Description	This command sets the Operation mode for Linear Switching mode.
	At *RST condition, this value is set to RESERVED000.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Linear) > Operation Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:OMODe <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the K2 Operation Mode for Linear Switching.
	RESERVED000: Reserved (000)
	RESERVED001: Reserved (001)
	RESERVED010: Reserved (010)
	RESERVED011: Reserved (011)
	UNI100: Unidirectional (100)
	BID101: Bidirectional (101)
	MSRDI110: MS-RDI (110)
	MSAIS111: MS-AIS (111)
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K2:LIN:OMODE RESERVED001
	SOUR:DATA:TEL:SDHS:ADV:APS:K2:LIN:OMODE?
	Returns: RESERVED001

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:REQuest

Description	This command selects the K1 Request for Linear Switching Mode.
	At *RST condition, this value is set to NREQUEST0000.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Linear) > Request
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LINear:REQuest <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Linear Request
	NREQUEST0000: No Request (0000)
	DNREVERT0001: Do Not Revert (0001)
	RREQUEST0010: Reverse Request (0010)
	UNUSED0011: Unused (0011)
	EXERCISER0100: Exerciser (0100)
	UNUSED0101: Unused (0101)
	WTRESTORE0110: Wait to restore (0110)
	UNUSED0111: Unused (0111)
	MSWITCH1000: Manual Switch
	UNUSED1001: Unused (1001)
	SDLOW1010: Signal Degrade (1010)
	SDHIGH1011: Signal Degrade - High Priority (1011)
	SFLOW1100: Signal Fail - Low Priority (1100)
	SFHIGH1101: Signal Fail - High Priority (1101)
	FSWITCH1110: Forced Switch (1110)
	LPROTECTION1111: Lockout of Protection (1111)

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:LI Near:REQuest

Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K1:LIN:REQ RREQUEST0010
	SOUR:DATA:TEL:SDHS:ADV:APS:K1:LIN:REQ?

Response(s)

Type:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the Linear Request

NREQUEST0000 - No Request (0000) request type is selected.

DNREVERT0001 - Do Not Revert (0001) request type is selected.

RREQUEST0010 - Reverse Request (0010) request type is selected.

UNUSED0011 - Unused (0011) request type is selected.

EXERCISER0100 - Exerciser (0100) request type is selected.

UNUSED0101 - Unused (0101) request type is selected.

WTRESTORE0110 - Wait to restore (0110) request type is selected.

UNUSED0111 - Unused (0111) request type is selected.

MSWITCH1000 - Manual Switch request type is selected.

UNUSED1001 - Unused (1001) request type is selected.

SDLOW1010 - Signal Degrade (1010) request type is selected.

SDHIGH1011 - Signal Degrade - High Priority (1011) request type is selected.

SFLOW1100 - Signal Fail - Low Priority (1100) request type is selected.

SFHIGH1101 - Signal Fail - High Priority (1101) request type is selected.

FSWITCH1110 - Forced Switch (1110) request type is selected.

LPROTECTION1111 - Lockout of Protection (1111) request type is selected.

Example(s)

SOUR:DATA:TEL:SDHS:ADV:APS:K1:LIN:REQ RREQUEST0010

SOUR:DATA:TEL:SDHS:ADV:APS:K1:LIN:REQ?

Returns: RREQUEST0010

Response Syntax	\<Type\>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K1:RING:REQ RREQUEST0010
	SOUR:DATA:TEL:SDHS:ADV:APS:K1:RING:REQ?
	Returns: RREQUEST0010
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:RI NG:REQuest?

Description	This query returns the K1 request for Ring Switching Mode.
	At *RST condition, this value is set to NREQUEST0000.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Ring) > Request
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:RING:REQuest?
Response Syntax	<Type>

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:RING:REQuest?

Response(s)

Type:

The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.

Returns the Linear Request

NREQUEST0000 - No Request (0000) request type is selected.

DNREVERT0001 - Do Not Revert (0001) request type is selected.

RREQUEST0010 - Reverse Request (0010) request type is selected.

UNUSED0011 - Unused (0011) request type is selected.

EXERCISER0100 - Exerciser (0100) request type is selected.

UNUSED0101 - Unused (0101) request type is selected.

WTRESTORE0110 - Wait to restore (0110) request type is selected.

UNUSED0111 - Unused (0111) request type is selected.

MSWITCH1000 - Manual Switch request type is selected.

UNUSED1001 - Unused (1001) request type is selected.

SDLOW1010 - Signal Degrade (1010) request type is selected.

SDHIGH1011 - Signal Degrade - High Priority (1011) request type is selected.

SFLOW1100 - Signal Fail - Low Priority (1100) request type is selected.

SFHIGH1101 - Signal Fail - High Priority (1101) request type is selected.

FSWITCH1110 - Forced Switch (1110) request type is selected.

LPROTECTION1111 - Lockout of Protection (1111) request type is selected.

Example(s)

SOUR:DATA:TEL:SDHS:ADV:APS:K1:RING:REQ RREQUEST0010

SOUR:DATA:TEL:SDHS:ADV:APS:K1:RING:REQ?

Returns: RREQUEST0010

SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:S NODe

Description	This command selects Source Node Id for Ring Switching mode.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Ring) > Source Node Id
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:SNODe <wsp><Node ID>
Parameter(s)	Node ID:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the K2 Source Node Id for Ring Switching:
	0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15
Response Syntax	<Type>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K2:SNOD 1
	SOUR:DATA:TEL:SDHS:ADV:APS:K2:SNOD?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:S NODe?

Description	This query returns Source Node Id for Ring Switching mode.
	At *RST condition, this value is set to 0.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode (Ring) > Source Node Id
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:SNODe?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Source Node Id for Ring Switching mode:0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, or 15.
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:K2:SNOD 1
	SOUR:DATA:TEL:SDHS:ADV:APS:K2:SNOD?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel?

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe

Description	This command sets the switching mode
	At *RST condition, this value is set to Linear.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Switching Mode.
	LINear
	RING
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:SMODe LINEAR
	SOUR:DATA:TEL:SDHS:ADV:APS:SMODe?
	Returns: LINEAR
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe?

Description	This query returns the switching mode
	At *RST condition, this value is set to Linear.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > APS > TX > Switching Mode
Syntax	:SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:SMODe?
Response Syntax	<Type>
Response(s)	**Type**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Switching mode for RS-MS advance.
	LINEAR - Linear is selected for Switching Mode.
	RING - Ring is selected for Switching Mode.
Example(s)	SOUR:DATA:TEL:SDHS:ADV:APS:SMODe LINEAR
	SOUR:DATA:TEL:SDHS:ADV:APS:SMODe?
	Returns: LINEAR
See Also	SOURce:DATA:TELecom:SDHSonet:ADVanced:APS:K[1..n]:CHANnel

Path OAM APS

:FETCh:DATA:TELecom:FETHernet:POAM:APS:BSIGnal:RECeived?

Description	This query returns the FlexE Path OAM received APS Bridged Signal.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > RX >Bridged Signal
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:BSIGnal:RECeived?
Response Syntax	<Bridged Signal>
Response(s)	**Bridged Signal**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Bridged Signal
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:BSIG:REC?
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:CMCC:REQState:RECeived?

Description	This query returns the FlexE Path OAM received APS Request/State under CMCC (G873.1) standard.
	At *RST condition, this value is set to REQ_STATE_G8731_NR.
	Navigation Path: Functions > Path OAM APS > RX > Request/State
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:CMCC:REQState:RECeived?
Response Syntax	<Request/State>
Response(s)	**Request/State**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Request/State:
	REQ_STATE_G8731_NR: No request
	REQ_STATE_G8731_DNR: Do not revert
	REQ_STATE_G8731_RR: Reverse request
	REQ_STATE_G8731_EXER: Exercise
	REQ_STATE_G8731_WTR: Wait-to-restore
	REQ_STATE_G8731_MS: Manual switch
	REQ_STATE_G8731_SD: Signal degrade
	REQ_STATE_G8731_SF: Signal Fail
	REQ_STATE_G8731_FS: Forced switch
	REQ_STATE_G8731_LOP: Lockout of protection
	REQ_STATE_G8731_RES: Reserved
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:CMCC:REQS:REC?
See Also	SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:ITU:REQState:RECeived?

Description	This query returns the FlexE Path OAM received APS Request/State under ITU(G8331) standard.
	At *RST condition, this value is set to REQ_STATE_G8331_NR.
	Navigation Path: Functions > Path OAM APS > RX > Request/State
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:ITU:REQState:RECeived?
Response Syntax	<Request/State>
Response(s)	**Request/State**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Request/State:
	REQ_STATE_G8331_NR: No request
	REQ_STATE_G8331_DNR: Do not revert
	REQ_STATE_G8331_RR: Reverse request
	REQ_STATE_G8331_EXER: Exercise
	REQ_STATE_G8331_WTR: Wait-to-restore
	REQ_STATE_G8331_MS: Manual switch
	REQ_STATE_G8331_SD: Signal degrade
	REQ_STATE_G8331_SF: Signal Fail
	REQ_STATE_G8331_FS: Forced switch
	REQ_STATE_G8331_LO: Lockout of protection
	REQ_STATE_G8331_RES: Reserved
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:ITU:REQS:REC?
See Also	SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:A:RECeived?

Description	This query returns the FlexE Path OAM received APS Protection Type byte A.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > RX > Protection Type > A
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:A:RECeived?
Response Syntax	<Byte A>
Response(s)	**Byte A**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	returns Byte A:
	PROT_TYPE_A_N_CHAN: No APS Channel
	PROT_TYPE_A_CHAN: APS Channel
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:PROT:A:REC?
	Returns: PROT_TYPE_A_N_CHAN
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:B:RECeived?

Description	This query returns the FlexE Path OAM received APS Protection Type byte B.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > RX > Protection Type > B
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:B:RECeived?
Response Syntax	<Byte B>
Response(s)	**Byte B**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	returns Byte B:
	PROT_TYPE_B_N_PERM_1_N: 1:n (No Permanent Bridge)
	PROT_TYPE_B_PERM_1_1: 1+1 (Permanent Bridge)
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:PROT:B:REC?
	Returns: PROT_TYPE_B_PERM_1_1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:D:RECeived?

Description	This query returns the FlexE Path OAM received APS Protection Type byte D.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > RX > Protection Type > D
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:D:RECeived?
Response Syntax	<Byte D>
Response(s)	**Byte D**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	returns Byte D:
	PROT_TYPE_D_UNIDIR: Unidirectional Switching
	PROT_TYPE_D_BIDIR: Bidirectional Switching
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:PROT:D:REC?
	Returns: PROT_TYPE_D_UNIDIR
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:R:RECeived?

Description	This query returns the FlexE Path OAM received APS Protection Type byte R.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > RX > Protection Type > R
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:PROTection:R:RECeived?
Response Syntax	<Byte R>
Response(s)	**Byte R**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	returns Byte R:
	PROT_TYPE_R_N_REV: Non-Revertive Operation
	PROT_TYPE_R_REV: Revertive Operation
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:PROT:R:REC?
	Returns: PROT_TYPE_R_N_REV
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:RESByte:RECeived?

Description	This query returns the FlexE Path OAM received APS Reserved byte.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > RX > Reserved
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:RESByte:RECeived?
Response Syntax	<Reserved Byte>
Response(s)	**Reserved Byte**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Reserved Byte
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:RESB:REC?
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:RSIGnal:RECeived?

Description	This query returns the FlexE Path OAM received APS Requested Signal.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > RX > Requested Signal
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:RSIGnal:RECeived?
Response Syntax	<Requested Signal>
Response(s)	**Requested Signal**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Requested Signal
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:RSIG:REC?
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:FETCh:DATA:TELecom:FETHernet:POAM:APS:RX:MESSage:COUNt?

Description	This query returns the FlexE Path OAM APS RX message count.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > Path OAM APS > RX > APS - RX Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:RX:MESSage:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns APS RX message count
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:RX:MESS:COUN?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:APS:TX:MESSage:COUNt?

:FETCh:DATA:TELecom:FETHernet:POAM:APS:TX:MESSage:COUNt?

Description	This query returns the FlexE Path OAM APS TX message count.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > Path OAM APS > RX > APS - TX Count
Syntax	:FETCh:DATA:TELecom:FETHernet:POAM:APS:TX:MESSage:COUNt?
Response Syntax	<Value>
Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns APS TX message count
Example(s)	FETC:DATA:TEL:FETH:POAM:APS:TX:MESS:COUN?
See Also	FETCh:DATA:TELecom:FETHernet:POAM:APS:RX:MESSage:COUNt?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:BSIGnal:GENerated

Description	This command sets the FlexE Path OAM generated APS Bridged Signal.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > Path OAM APS > TX >Bridged Signal
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:BSIGnal:GENerated <wsp><Bridged Signal>
Parameter(s)	**Bridged Signal**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Bridged Signal
	MINimum: 0
	MAXimum: 255
	DEFault: 0
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:BSIG:GEN 123
	SOUR:DATA:TEL:FETH:POAM:APS:BSIG:GEN?
	Returns: 123
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:BSIGnal:GENerated?

Description	This query returns the FlexE Path OAM generated APS Bridged Signal.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX >Bridged Signal
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:BSIGnal:GENerated?[<wsp><Bridged Signal Limits>]
Parameter(s)	**Bridged Signal Limits**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the Bridged Signal Limits
	MINimum: 0
	MAXimum: 255
	DEFault: 0
Response Syntax	<Bridged Signal>
Response(s)	**Bridged Signal**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns: the Bridged Signal
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:BSIG:GEN 123
	SOUR:DATA:TEL:FETH:POAM:APS:BSIG:GEN?
	Returns 123
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:CMCC:REQSt ate:GENerated

Description	This command sets the FlexE Path OAM generated APS Request/State under CMCC (G873.1) standard.
	At *RST condition, this value is set to REQ_STATE_G8731_NR
	Navigation Path: Functions > Path OAM APS > TX > Request/State
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:CMCC:REQState:GENerated <wsp><Request/State>
Parameter(s)	**Request/State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Request/State:
	REQ_STATE_G8731_NR: No request
	REQ_STATE_G8731_DNR: Do not revert
	REQ_STATE_G8731_RR: Reverse request
	REQ_STATE_G8731_EXER: Exercise
	REQ_STATE_G8731_WTR: Wait-to-restore
	REQ_STATE_G8731_MS: Manual switch
	REQ_STATE_G8731_SD: Signal degrade
	REQ_STATE_G8731_SF: Signal Fail
	REQ_STATE_G8731_FS: Forced switch
	REQ_STATE_G8731_LOP: Lockout of protection
Response Syntax	<Bridged Signal>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:CMCC:REQS:GEN REQ_STATE_G8731_LOP
	SOUR:DATA:TEL:FETH:POAM:APS:CMCC:REQS:GEN?
	Returns: REQ_STATE_G8731_LOP
See Also	SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:CMCC:REQState:GENerated?

Description	This query returns the FlexE Path OAM generated APS Request/State under CMCC (G873.1) standard.
	At *RST condition, this value is set to REQ_STATE_G8731_NR
	Navigation Path: Functions > Path OAM APS > TX > Request/State
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:CMCC:REQState:GENerated?
Response Syntax	<Request/State>
Response(s)	Request/State:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Request/State:
	REQ_STATE_G8731_NR: No request
	REQ_STATE_G8731_DNR: Do not revert
	REQ_STATE_G8731_RR: Reverse request
	REQ_STATE_G8731_EXER: Exercise
	REQ_STATE_G8731_WTR: Wait-to-restore
	REQ_STATE_G8731_MS: Manual switch
	REQ_STATE_G8731_SD: Signal degrade
	REQ_STATE_G8731_SF: Signal Fail
	REQ_STATE_G8731_FS: Forced switch
	REQ_STATE_G8731_LOP: Lockout of protection
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:CMCC:REQS:GEN REQ_STATE_G8731_LOP
	SOUR:DATA:TEL:FETH:POAM:APS:CMCC:REQS:GEN?
	Returns: REQ_STATE_G8731_LOP
See Also	SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:CONFiguration:APPLy

Description	This command apply trigger to configure all the APS configuration changes.
	This is an event so no *RST condition.
	Navigation Path: Functions > Path OAM APS > Apply Changes
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:CONFiguration:APPLy
Response Syntax	<Request/State>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:CONF:APPL

:SOURce:DATA:TELecom:FETHernet:POAM:APS:ENABle

Description	This command enables/disables the FlexE Path OAM APS Function.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > Path OAM APS > Path OAM APS
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:ENABle <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Request/State>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:APS:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:ENABle?

Description	This query returns the enable/disable status of the FlexE Path OAM APS Function.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > Path OAM APS > Path OAM APS
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:ENABle?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the enable/disable status:
	1: Enabled
	0: Disabled
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:ENAB ON
	SOUR:DATA:TEL:FETH:POAM:APS:ENAB?
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:POAM:DELay:ENABle

:SOURce:DATA:TELecom:FETHernet:POAM:APS:ITU:REQState: GENerated

Description	This command sets the FlexE Path OAM generated APS Request/State under ITU (G8331) standard.
	At *RST condition, this value is set to REQ_STATE_G8331_NR
	Navigation Path: Functions > Path OAM APS > TX > Request/State
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:ITU:REQState:GENerated <wsp><Request/State>
Parameter(s)	**Request/State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Request/State:
	REQ_STATE_G8331_NR: No request
	REQ_STATE_G8331_DNR: Do not revert
	REQ_STATE_G8331_RR: Reverse request
	REQ_STATE_G8331_EXER: Exercise
	REQ_STATE_G8331_WTR: Wait-to-restore
	REQ_STATE_G8331_MS: Manual switch
	REQ_STATE_G8331_SD: Signal degrade
	REQ_STATE_G8331_SFW: Signal Fail on Working
	REQ_STATE_G8331_FS: Forced switch
	REQ_STATE_G8331_SFP: Signal Fail on Protection
	REQ_STATE_G8331_LO: Lockout of protection
Response Syntax	<Status>
Example(s)	OUR:DATA:TEL:FETH:POAM:APS:ITU:REQS:GEN REQ_STATE_G8331_LO
	SOUR:DATA:TEL:FETH:POAM:APS:ITU:REQS:GEN?
	Returns: REQ_STATE_G8331_LO

:SOURce:DATA:TELecom:FETHernet:POAM:APS:ITU:REQState: GENerated?

Description	This query returns the FlexE Path OAM generated APS Request/State under ITU (G8331) standard.
	At *RST condition, this value is set to REQ_STATE_G8331_NR
	Navigation Path: Functions > Path OAM APS > TX > Request/State
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:ITU:REQState:GENerated?
Response Syntax	<Request/State>
Response(s)	Request/State:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Request/State:
	REQ_STATE_G8331_NR: No request
	REQ_STATE_G8331_DNR: Do not revert
	REQ_STATE_G8331_RR: Reverse request
	REQ_STATE_G8331_EXER: Exercise
	REQ_STATE_G8331_WTR: Wait-to-restore
	REQ_STATE_G8331_MS: Manual switch
	REQ_STATE_G8331_SD: Signal degrade
	REQ_STATE_G8331_SF: Signal Fail
	REQ_STATE_G8331_FS: Forced switch
	REQ_STATE_G8331_LO: Lockout of protection
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:ITU:REQS:GEN REQ_STATE_G8331_LO
	SOUR:DATA:TEL:FETH:POAM:APS:ITU:REQS:GEN?
	Returns: REQ_STATE_G8331_LO
See Also	SOURce:DATA:TELecom:FETHernet:POAM:CSIGnal:TYPE:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:A :GENerated

Description	This command sets the FlexE Path OAM generated APS Protection Type byte A.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > A
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:A:GENerated <wsp><Byte A>
Parameter(s)	**Byte A**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Byte A:
	PROT_TYPE_A_N_CHAN: No APS Channel
	PROT_TYPE_A_CHAN: APS Channel
Response Syntax	<Request/State>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:A:GEN PROT_TYPE_A_N_CHAN
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:A:GEN?
	Returns: PROT_TYPE_A_N_CHAN
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:A:GENerated?

Description	This query returns the FlexE Path OAM generated APS Protection Type byte A.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > A
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:A:GENerated?
Response Syntax	<Byte A>
Response(s)	**Byte A**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Byte A:
	PROT_TYPE_A_N_CHAN: No APS Channel
	PROT_TYPE_A_CHAN: APS Channel
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:A:GEN PROT_TYPE_A_N_CHAN
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:A:GEN?
	Returns: PROT_TYPE_A_N_CHAN
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:B :GENerated

Description	This command sets the FlexE Path OAM generated APS Protection Type byte B.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > B
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:B:GENerated <wsp><Byte B>
Parameter(s)	**Byte B**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Byte B:
	PROT_TYPE_B_N_PERM_1_N: 1:n (No Permanent Bridge)
	PROT_TYPE_B_PERM_1_1: 1+1 (Permanent Bridge)
Response Syntax	<Byte A>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:B:GEN PROT_TYPE_B_N_PERM_1_N
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:B:GEN?
	Returns: PROT_TYPE_B_N_PERM_1_N
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:B :GENerated?

Description	This query returns the FlexE Path OAM generated APS Protection Type byte B.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > B
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:B:GENerated?
Response Syntax	<Byte B>
Response(s)	**Byte B**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Byte B:
	PROT_TYPE_B_N_PERM_1_N: 1:n (No Permanent Bridge)
	PROT_TYPE_B_PERM_1_1: 1+1 (Permanent Bridge)
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:B:GEN PROT_TYPE_B_N_PERM_1_N
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:B:GEN?
	Returns: PROT_TYPE_B_N_PERM_1_N
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:D :GENerated

Description	This command sets the FlexE Path OAM generated APS Protection Type byte D.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > D
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:D:GENerated <wsp><Byte D>
Parameter(s)	**Byte D**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets Byte D:
	PROT_TYPE_D_UNIDIR: Unidirectional Switching
	PROT_TYPE_D_BIDIR: Bidirectional Switching
Response Syntax	<Byte B>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:D:GEN PROT_TYPE_D_UNIDIR
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:D:GEN?
	Returns: PROT_TYPE_D_UNIDIR
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:D :GENerated?

Description	This query returns the FlexE Path OAM generated APS Protection Type byte D.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > D
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:D:GENerated?
Response Syntax	<Byte D>
Response(s)	**Byte D**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Byte D:
	PROT_TYPE_D_UNIDIR: Unidirectional Switching
	PROT_TYPE_D_BIDIR: Bidirectional Switching
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:D:GEN PROT_TYPE_D_UNIDIR
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:D:GEN?
	Returns: PROT_TYPE_D_UNIDIR
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:R :GENerated

Description	This command sets the FlexE Path OAM generated APS Protection Type byte R.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > R
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:R:GENerated <wsp><Byte R>
Parameter(s)	**Byte R**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets Byte R:
	PROT_TYPE_R_N_REV: Non-Revertive Operation
	PROT_TYPE_R_REV: Revertive Operation
Response Syntax	<Byte D>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:R:GEN PROT_TYPE_R_N_REV
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:R:GEN?
	Returns: PROT_TYPE_R_N_REV
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:R :GENerated?

Description	This query returns the FlexE Path OAM generated APS Protection Type byte R.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > Path OAM APS > TX > Protection Type > R
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:PROTection:R:GENerated?
Response Syntax	<Byte R>
Response(s)	**Byte R**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Byte R:
	PROT_TYPE_R_N_REV: Non-Revertive Operation
	PROT_TYPE_R_REV: Revertive Operation
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:PROT:R:GEN PROT_TYPE_R_N_REV
	SOUR:DATA:TEL:FETH:POAM:APS:PROT:R:GEN?
	Returns: PROT_TYPE_R_N_REV
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:RESByte:GENerated

Description	This command sets the FlexE Path OAM generated APS Reserved byte.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > Path OAM APS > TX > Reserved
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:RESByte:GENerated <wsp><Reserved Byte>
Parameter(s)	**Reserved Byte**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Reserved Byte
	MINimum: 0
	MAXimum: 255
	DEFault: 0
Response Syntax	<Byte R>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:RESB:GEN 123
	SOUR:DATA:TEL:FETH:POAM:APS:RESB:GEN?
	Returns: 123
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:RESByte:GENerated?

Description	This query returns the FlexE Path OAM generated APS Reserved byte.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > Path OAM APS > TX > Reserved
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:RESByte:GENerated?[<wsp><Reserved Byte Limits>]
Parameter(s)	**Reserved Byte Limits**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the Reserved Byte Limits
	MINimum: 0
	MAXimum: 255
	DEFault: 0
Response Syntax	<Reserved Byte>
Response(s)	**Reserved Byte**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns: the Reserved Byte
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:RESB:GEN 123
	SOUR:DATA:TEL:FETH:POAM:APS:RESB:GEN?
	Returns 123
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:RSIGnal:GENerated

Description	This command sets the FlexE Path OAM generated APS Requested Signal.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > Path OAM APS > TX > Requested Signal
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:RSIGnal:GENerated <wsp><Requested Signal>
Parameter(s)	**Requested Signal**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Requested Signal
	MINimum: 0
	MAXimum: 255
	DEFault: 0
Response Syntax	<Reserved Byte>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:RSIG:GEN 123
	SOUR:DATA:TEL:FETH:POAM:APS:RSIG:GEN?
	Returns: 123
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:RSIGnal:GENerated?

Description	This query returns the FlexE Path OAM generated APS Requested Signal.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > Path OAM APS > TX > Requested Signal
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:RSIGnal:GENerated?[<wsp><Requested Signal Limit>]
Parameter(s)	**Requested Signal Limit**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the Requested Signal
	MINimum: 0
	MAXimum: 255
	DEFault: 0
Response Syntax	<Requested Signal>
Response(s)	**Requested Signal**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Requested Signal
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:RSIG:GEN 123
	SOUR:DATA:TEL:FETH:POAM:APS:RSIG:GEN?
	Returns: 123
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

:SOURce:DATA:TELecom:FETHernet:POAM:APS:STANdard

Description	This command sets the FlexE Path OAM generated APS Request/State Interpretation standard used.
	At *RST condition, this value is set to APS_STANDARD_G873_1
	Navigation Path: Functions > Path OAM APS > Request/State Interpretation
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:STANdard <wsp><Standard>
Parameter(s)	Standard:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Request/State Interpretation standard
	APS_STANDARD_G873_1: CMCC (G873.1) standard
	APS_STANDARD_G8331: ITU (G8331) standard
Response Syntax	<Requested Signal>
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:STAN APS_STANDARD_G8331
	SOUR:DATA:TEL:FETH:POAM:APS:STAN?
	Returns: APS_STANDARD_G8331
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated?

:SOURce:DATA:TELecom:FETHernet:POAM:APS:STANdard?

Description	This query returns the FlexE Path OAM generated APS Request/State Interpretation standard used.
	At *RST condition, this value is set to APS_STANDARD_G873_1
	Navigation Path: Functions > Path OAM APS > Request/State Interpretation
Syntax	:SOURce:DATA:TELecom:FETHernet:POAM:APS:STANdard?
Response Syntax	<Standard>
Response(s)	**Standard**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Request/State Interpretation standard
	APS_STANDARD_G873_1: CMCC (G873.1) standard
	APS_STANDARD_G8331: ITU (G8331) standard
Example(s)	SOUR:DATA:TEL:FETH:POAM:APS:STAN APS_STANDARD_G8331
	SOUR:DATA:TEL:FETH:POAM:APS:STAN?
	Returns: APS_STANDARD_G8331
See Also	SOURce:DATA:TELecom:FETHernet:POAM:APS:REQState:GENerated

OH - OTN

:SENSe:DATA:TELecom:OTN:OH:ODU[1..n]:E[1..n]:OVERhead?

Description	This query returns the overhead byte values for overclocked rates OTU3e1/2.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > OH
Syntax	:SENSe:DATA:TELecom:OTN:OH:ODU[1..n]:E[1..n]:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects overhead bytes.
	Note: The combination of row and column number is used along with overhead byte. For Ex: TCM625, here TCM6 is overhead byte, 2 is row number, and 5 is column number.
	RES21, RES22, RES23, RES49, RES410, RES411, RES412, RES413, RES414, RES115
	TCM625, TCM626, TCM627, TCM528, TCM529, TCM5210, TCM4211, TCM4212,TCM4213, TCM331, TCM332, TCM137,TCM138, TCM139, TCM333, TCM234, TCM235, TCM236
	PM310, PM311, PM312
	EXP313, EXP314,
	GCC141, GCC142, GCC243, GCC244, GCC245
	APSPCC45, APSPCC46, APSPCC47, APSPCC48
	FTFL214
	TCMACT24
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the overhead byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:ODU3:E1:OVER? RES21
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:E[1..n]:OVERhead

:SENSe:DATA:TELecom:OTN:OH:ODU[1..n]:F:OVERhead?

Description	This query returns the overhead byte values for non-standard rates OTU(1/2)F
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > OH
Syntax	:SENSe:DATA:TELecom:OTN:OH:ODU[1..n]:F:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects overhead bytes.
	TCM137, TCM138, TCM139, TCM234, TCM235, TCM236, TCM625, TCM626, TCM627, TCM4211, TCM4212, TCM4213
	Note: The combination of row and column number is used along with overhead byte. For Ex: TCM625, here TCM6 is overhead byte, 2 is row number, and 5 is column number.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the overhead byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:ODU1:F:OVER? RES21
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:E[1..n]:OVERhead

:SENSe:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead?

Description	This query returns the Optical Transport Unit (OTU) overhead byte values for the receiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH
	NOTE: For ODU[1..n], use ODU100 for ODU0 and ODU101 for ODUflex, ODU200 for OTUC, ODU300 for OTUCN.
Syntax	:SENSe:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects ODU overhead bytes.
	APSPCC45, APSPCC46, APSPCC47, APSPCC48
	EXP313, EXP314
	FTFL214
	GCC141, GCC142, GCC243, GCC244
	PM310, PM311, PM312
	PMTcm
	RES115, RES21, RES22, RES410, RES411, RES412, RES413, RES414, RES49
	TCM137, TCM138, TCM139, TCM234, TCM235, TCM236, TCM331, TCM332, TCM333, TCM528, TCM529, TCM625, TCM626, TCM627, TCM4211, TCM4212, TCM4213, TCM5210
	TCMACT24
	Note: The combination of row and column numbers is used along with the overhead byte. For example: TCM625, here TCM6 is the overhead byte, 2 is the row number, and 5 is the column number.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the ODU overhead byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:ODU1:OVER? RES21
See Also	SOURce:DATA:TELecom:OTN:OH:OTU[1..n]:OVERhead

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:E:OVERhead?

Description	This query returns the Optical Payload Unit (OPU) E overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH
Syntax	:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:E:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects OPU overhead bytes.
	RES115
	RES215
	RES315
	RES116
	JC116
	RES216
	JC216
	RES316
	JC316e.
	NJO416
	JC6.
	JC5
	JC4
	JC3
	JC2
	JC1
	RES416
	JC116
	OMFI
	Note: The combination of row and column number is used along with the overhead byte. For Example: RES115, here RES is the overhead byte, 1 is the row number, and 15 is the column number.
Response Syntax	<Value>

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:E:OVERhead?

Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU overhead byte values in hexadecimal format.
	RES115, RES115 is selected as the overhead byte.
	RES215, RES215 is selected as the overhead byte.
	RES315, RES315 is selected as the overhead byte.
	RES116, RES116 is selected as the overhead byte.
	JC116, JC116 as is selected the overhead byte.
	RES216, RES216 is selected as the overhead byte.
	JC216, JC216 is selected as the overhead byte.
	RES316, RES316 is selected as the overhead byte.
	JC316, JC316 is selected as the overhead byte.
	NJO416, NJO416 is selected as overhead byte.
	JC6, JC6 is selected as the overhead byte.
	JC5, JC5 is selected as the overhead byte.
	JC4, JC4 is selected as the overhead byte.
	JC3, JC3 is selected as the overhead byte.
	JC2, JC2 is selected as the overhead byte.
	JC1, JC1 is selected as the overhead byte.
	RES416, RES416 is selected as the overhead byte.
	JC116, JC16 is selected as the overhead byte.
	OMFI, OMFI is selected as the overhead byte.
Example(s)	SENS:DATA:TEL:OTN:OH:OPU1:E:OVER? RES21
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:E:PSI?

Description	This query returns the Optical Payload Unit (OPU) E overhead byte values for the receiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH > OTU/ODU > RX > PSI
Syntax	:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:E:PSI? <wsp><PSI>
Parameter(s)	**PSI**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OPU PSI Bytes.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU PSI byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:OPU1:E:PSI? 21
See Also	SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:PSI

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead?

Description	This query returns the Optical Payload Unit (OPU) F overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH
Syntax	:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects OPU overhead bytes.
	RES115
	RES215
	RES315
	RES116
	JC116
	RES216
	JC216
	RES316
	JC316
	NJO416
	JC6
	JC5
	JC4
	JC3
	JC2
	JC1
	RES416
	JC116
	OMF
	Note: The combination of row and column number is used along with the overhead byte. For Example: RES115, here RES is the overhead byte, 1 is the row number, and 15 is the column number.
Response Syntax	<Value>

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead?

Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU overhead byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:OPU1:F:OVER? RES21
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:F:PSI?

Description	This query returns the Optical Payload Unit (OPU) F overhead byte values for the receiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH > OTU/ODU > RX > PSI
Syntax	:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:F:PSI? <wsp><PSI>
Parameter(s)	**PSI**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OPU PSI Bytes.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU PSI byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:OPU1:F:PSI? 21
See Also	SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:PSI

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:OVERhead?

Description	This query returns the Optical Payload Unit (OPU) overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects OPU overhead bytes.
	RES115
	RES215
	RES315
	RES116
	JC116
	RES216
	JC216
	RES316
	JC316

	JC6
	JC5e.
	JC4
	JC3
	JC2
	JC1
	RES416
	JC116.
	OMFI
	Note: The combination of row and column number is used along with the overhead byte. For Example: RES115, here RES is the overhead byte, 1 is the row number, and 15 is the column number.

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:OVERhead?

Response Syntax	\<Value\>
Response(s)	**Value**: The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA\> element. Returns the OPU overhead byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:OPU:OVER? JC5
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead

:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:PSI?

Description	This query returns the Optical Payload Unit (OPU) overhead byte values for the receiver.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH > OTU/ODU > RX > PSI
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:PSI? <wsp><PSI>
Parameter(s)	**PSI**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OPU PSI Bytes.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU PSI byte values in hexadecimal format.
Example(s)	SENS:DATA:TEL:OTN:OH:OPU:PSI? 21
See Also	SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:PSI

:SENSe:DATA:TELecom:OTN:OH:OTU[1..n]:E[1..n]:OVERhead?

Description	This query returns the overhead byte values for overclocked rates OTU3e1/2.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > OH
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SENSe:DATA:TELecom:OTN:OH:OTU[1..n]:E[1..n]:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects overhead bytes for non standard rates OTU3e1/2.

:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:E:PSI

Description	This command sets the Optical Payload Unit (OPU) E overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH > OTU/ODU > TX > PSI
Syntax	:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:E:PSI <wsp><PSI>, <Value>
Parameter(s)	**PSI**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OPU PSI Bytes.
	Value:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Optical Payload Unit (OPU) PSI byte values.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:OTN:OH:OPU1:E:PSI 115,#HF6
	SOUR:DATA:TEL:OTN:OH:OPU1:E:PSI? 115
	Returns: 246
See Also	SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:PSI?

:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:E:PSI?

Description	This query returns the Optical Payload Unit (OPU) E overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH > OTU/ODU > TX > PSI
Syntax	:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:E:PSI? <wsp><PSI>
Parameter(s)	**PSI**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OPU PSI Bytes.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU PSI byte values in hexadecimal format.
Example(s)	SOUR:DATA:TEL:OTN:OH:OPU1:E:PSI 115,#HF6
	SOUR:DATA:TEL:OTN:OH:OPU1:E:PSI? 115
	Returns: 246
See Also	SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:PSI?

:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead

Description	This command sets the Optical Payload Unit (OPU) F overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH
Syntax	:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead <wsp><Overhead>, <Value>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects OPU overhead bytes.
	JC6
	JC5
	JC3
	JC2
	JC1
	RES416
	JC116
	NJO416
	OMFI
	Value:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Optical Payload Unit (OPU) overhead byte values.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:OTN:OH:OPU1:F:OVER JC6, #HF6
	SOUR:DATA:TEL:OTN:OH:OPU1:F:OVER? JC6
	Returns: 246
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead?

:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead?

Description	This command sets the Optical Payload Unit (OPU) F overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH
Syntax	:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects OPU overhead bytes.
	JC6
	JC5
	JC4.
	JC3
	JC2
	JC1
	RES416
	JC116.
	NJO416
	OMFI
Response Syntax	<Value>

:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:F:OVERhead?

Response(s)

Value:

The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.

Returns the OPU overhead byte values in hexadecimal format.

JC6, JC6 is selected as the overhead byte.

JC5, JC5 is selected as the overhead byte.

JC4, JC4 is selected as the overhead byte.

JC3, JC3 is selected as the overhead byte.

JC2, JC2 is selected as the overhead byte.

JC1, JC1 is selected as the overhead byte.

RES416, RES416 is selected as the overhead byte.

JC116, JC116 is selected as the overhead byte.

NJO416, NJO416 is selected as the overhead byte.

OMFI, OMFI is selected as the overhead byte.

Example(s)

SOUR:DATA:TEL:OTN:OH:OPU1:F:OVER JC6, #HF6

SOUR:DATA:TEL:OTN:OH:OPU1:F:OVER? JC6

Returns: 246

Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU overhead byte values in hexadecimal format.
	JC6, JC6 is selected as the overhead byte.
	JC5, JC5 is selected as the overhead byte.
	JC4, JC4 is selected as the overhead byte.
	JC3, JC3 is selected as the overhead byte.
	JC2, JC2 is selected as the overhead byte.
	JC1, JC1 is selected as the overhead byte.
	RES416, RES416 is selected as the overhead byte.
	JC116, JC116 is selected as the overhead byte.
	NJO416, NJO416 is selected as the overhead byte.
	OMFI, OMFI is selected as the overhead byte.
Example(s)	SOUR:DATA:TEL:OTN:OH:OPU3:OVER JC5, #HF6
	SOUR:DATA:TEL:OTN:OH:OPU3:OVER? JC5
	Returns: 246
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead

:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:PSI

Description	This command sets the Optical Payload Unit (OPU) overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH > OTU/ODU > TX > PSI
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:PSI <wsp><PSI>, <Value>
Parameter(s)	**PSI**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OPU PSI Bytes.
	Value:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Optical Payload Unit (OPU) PSI byte values.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:OTN:OH:OPU1:PSI 115,#HF6
	SOUR:DATA:TEL:OTN:OH:OPU1:PSI? 115
	Returns: 246
See Also	SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:PSI?

:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:PSI?

Description	This query returns the Optical Payload Unit (OPU) overhead byte values for the transmitter.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > OH > OTU/ODU > TX > PSI
	NOTE: For OPU[1..n], use OPU100 for OPU0 and OPU101 for OPUflex, OPU200 for OTUC, OPU300 for OTUCN.
Syntax	:SOURce:DATA:TELecom:OTN:OH:OPU[1..n]:PSI? <wsp><PSI>
Parameter(s)	**PSI**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects OPU PSI Bytes.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the OPU PSI byte values in hexadecimal format.
Example(s)	SOUR:DATA:TEL:OTN:OH:OPU1:PSI 115,#HF6
	SOUR:DATA:TEL:OTN:OH:OPU1:PSI? 115
	Returns: 246
See Also	SENSe:DATA:TELecom:OTN:OH:OPU[1..n]:PSI?

:SOURce:DATA:TELecom:OTN:OH:OTU[1..n]:E[1..n]:OVERhead

Description	This command sets the overhead byte values for overclocked rates OTU3e1/2.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > OH
	NOTE: For :E[1..n]:, use :E: for OTU1e/2e.
Syntax	:SOURce:DATA:TELecom:OTN:OH:OTU[1..n]:E[1..n]:OVERhead <wsp><Overhead>, <Value>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects overhead bytes for non standard rates OTU3e1/2.
	OA111
	OA112
	OA113

OH - SONET/SDH

:SENSe:DATA:TELecom:SDH:OH:MS:OVERhead[1..n]?

Description	This query returns the multiplexer overhead byte values in decimal format for the receiver.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SDH > Transport OH > MS > RX
Syntax	:SENSe:DATA:TELecom:SDH:OH:MS:OVERhead[1..n]? <wsp><Channel>, <Overhead>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the multiplexer overhead channel number for the receiver.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the multiplexer overhead bytes.
	H1 to H3: Respectively H1, H2, or H3 for Pointer
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)
	D4,D5, D6, D7, D8, D9, D10, D11, D12: Respectively D4 to D12 for Data Communications Channel (DCC)
	S1: Synchronization status
	M0: Remote Error Indicator - Line (REI-L)
	M1: Remote Error Indicator - Line (REI-L)
	E2: Orderwire
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the multiplexer overhead byte value for the receiver.
Example(s)	SENS:DATA:TEL:SDH:OH:MS:OVER1? 1, H1
See Also	SENSe:DATA:TELecom:SONet:OH:SECTion:OVERhead

:SENSe:DATA:TELecom:SDH:OH:RS:OVERhead[1..n]?

Description	This query returns the regenerator overhead byte values in decimal format for the receiver.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SDH > Transport OH > RS > RX
Syntax	:SENSe:DATA:TELecom:SDH:OH:RS:OVERhead[1..n]? <wsp><Channel>, <Overhead>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the regenerator overhead channel number for the receiver.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Regenerator Overhead bytes for the receiver.
	A1: F6 hexadecimal value
	A2: 28 hexadecimal value
	J0: J0 trace
	Z0: Growth
	B1: Bit Interleaved Parity code (BIP-8)
	E1: Orderwire
	F1: User
	D1: Data Communications Channel (DCC)
	D2: Data Communications Channel (DCC)
	D3: Data Communications Channel (DCC)
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the regenerator overhead byte value for the receiver.
Example(s)	SENS:DATA:TEL:SDH:OH:RS:OVER1? 1, A1
See Also	SENSe:DATA:TELecom:SONet:OH:LINE:OVERhead?

:SENSe:DATA:TELecom:SDHSonet:OH:HOP:OVERhead?

Description	This query returns the High Order Path (HOP) overhead values in hexadecimal format for the receiver when disabled.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > RX > STS
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SDH > RX > AU
Syntax	:SENSe:DATA:TELecom:SDHSonet:OH:HOP:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the High Order Path (HOP) overhead values for the receiver.
	J1: J1 trace.
	B3: Bit Interleaved Parity code (BIP-8).
	C2: C2
	G1: G1
	F2: F2
	H4: H4
	Z3: Z3
	Z4: Z4
	N1: N1
	F3: F3
	K3: K3
	H1: H1
	H2: H2
	H3: H3
Response Syntax	<Value>

:SENSe:DATA:TELecom:SDHSonet:OH:HOP:OVERhead?

Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the High Order Path (HOP) overhead byte value for the receiver.
Example(s)	SENS:DATA:TEL:SDHS:OH:HOP:OVER? J1
See Also	SENSe:DATA:TELecom:SDH:OH:RS:OVERhead[1..n]

:SENSe:DATA:TELecom:SDHSonet:OH:LOP:OVERhead?

Description	This query returns the Low Order Path (LOP) overhead values in hexadecimal format for the receiver when disabled.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > OC > RX > VT
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > STM > RX > TU
Syntax	:SENSe:DATA:TELecom:SDHSonet:OH:LOP:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Low Order Path (LOP) overhead byte for the receiver.
	V5: VT Path Overhead.
	J2: VT Path Trace.
	Z6: VT Tandem Connection Monitoring.
	Z7: Extended Signal Label.
	N2: Network Operator Byte.
	K4: Extended Signal Label.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Low Order Path (LOP) overhead byte value for the receiver in hexadecimal format..
Example(s)	SENS:DATA:TEL:SDHS:OH:LOP:OVER? V5
See Also	SENSe:DATA:TELecom:SDHSONet:OH:HOP:OVERhead?

:SENSe:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead?

Description	This query returns the Low Order Path (LOP) overhead values in hexadecimal format for the receiver when disabled.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > STM > RX > TU3
Syntax	:SENSe:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the High Order Path (HOP) overhead values.
	J1: J1 trace.
	B3: Bit Interleaved Parity code (BIP-8).
	C2: Path Signal Label.
	G1: Path Status.
	F2: User Channel.
	H4: Multiframe Indicator.
	Z3: Growth.
	Z4: Growth.
	N1: Tandem Connection Monitoring.
	F3: F3
	K3: K3
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Low Order Path (LOPTU) overhead byte value for the receiver in hexadecimal format..
Example(s)	SENS:DATA:TEL:SDHS:OH:LOPT:OVER? J1
See Also	SENSe:DATA:TELecom:SDHSONet:OH:HOP:OVERhead?

:SENSe:DATA:TELecom:SONet:OH:LINE:OVERhead?

Description	This query returns the line overhead byte values in decimal format for the receiver.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > LINE > RX
Syntax	:SENSe:DATA:TELecom:SONet:OH:LINE:OVERhead? <wsp><Timeslot>, <Overhead>
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the line overhead timeslot number for the receiver.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the line overhead bytes.
	H1, H2, H3: Respectively H1, H2, or H3 for Pointer
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)
	D4, D5, D6, D7, D8, D9, D10, D11, D12: Respectively D4 to D12 for Data Communications Channel (DCC.
	S1: Synchronization status
	E2: Orderwire
	Z1 and Z2: Growth
	Byte is specified in two ways.
	In first method standard names are used. Ex: A1, A2.
	In second method an UDrc notation is used, where r is the numerical value of the bytes row in the transport overhead and c is the numerical value of the bytes column in the transport overhead. Ex:UD11, UD12.
	M1: Remote Error Indicator - Line (REI-L)
	M0: Remote Error Indicator - Line (REI-L)
Response Syntax	<Value>

:SENSe:DATA:TELecom:SONet:OH:LINE:OVERhead?

Response(s)	Value: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the line overhead byte value for the receiver.
Example(s)	SENS:DATA:TEL:SON:OH:LINE:OVER? 1, D4
See Also	SENSe:DATA:TELecom:SONet:OH:SECTion:OVERhead?

:SENSe:DATA:TELecom:SONet:OH:SECTion:OVERhead?

Description	This query returns the section overhead byte values in decimal format for the receiver.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > SECTION > RX
Syntax	:SENSe:DATA:TELecom:SONet:OH:SECTion:OVERhead? <wsp><Timeslot>, <Overhead>
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the section overhead timeslot number for the receiver.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the section overhead bytes for the receiver.
	A1: F6 hexadecimal value for A1
	A2: 28 hexadecimal value for A2
	J0: J0 trace
	B1: Bit Interleaved Parity code (BIP-8)
	E1: Orderwire
	F1: User
	D1: Data Communications Channel (DCC)
	D2: Data Communications Channel (DCC)
	D3: Data Communications Channel (DCC)
	Z0: Growth
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the section overhead byte value for the receiver.
Example(s)	SENS:DATA:TEL:SON:OH:SECT:OVER? 1, A1
See Also	SENSe:DATA:TELecom:SONet:OH:LINE:OVERhead?

:SOURce:DATA:TELecom:SDH:OH:MS:OVERhead[1..n]

Description	This command sets the multiplexer overhead byte values in hexadecimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > > SDH > TX > Transport OH > MS
Syntax	:SOURce:DATA:TELecom:SDH:OH:MS:OVERhead[1..n] <wsp><Channel>, <Overhead>,[<Value>]
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the multiplexer overhead channel number for transmitter.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the multiplexer overhead bytes.
	H1 to H3: Respectively H1, H2, or H3 for Pointer
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)
	D4, D5, D6, D7, D8, D9, D10, D11, D12: Respectively D4 to D12 for Data Communications Channel (DCC)
	S1: Synchronization status
	M0: Remote Error Indicator - Line (REI-L)
	M1: Remote Error Indicator - Line (REI-L)
	E2: Orderwire
	Value:
	The program data syntax for the third parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the multiplexer overhead byte values in hexadecimal format.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDH:OH:MS:OVER1 1, H1, #HF6
	SOUR:DATA:TEL:SDH:OH:MS:OVER1? 1, H1
	Returns: 246
See Also	SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead?

:SOURce:DATA:TELecom:SDH:OH:MS:OVERhead[1..n]:DEFault

Description	This command resets the line overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SDH > TX > Transport OH > MS > Default
Syntax	:SOURce:DATA:TELecom:SDH:OH:MS:OVERhead[1..n]:DEFault <wsp><Channel>, <Overhead>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the multiplexer overhead channel number.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the multiplexer overhead bytes.
	H1 to H3: Respectively H1, H2, or H3 for Pointer
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)
	D4, D5, D6, D7, D8, D9, D10, D11, D12: Respectively D4 to D12 for Data Communications Channel (DCC)
	S1: Synchronization status
	M0: Remote Error Indicator - Line (REI-L)
	E2: Orderwire
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDH:OH:MS:OVER1:DEF 1, H1
See Also	SOURce:DATA:TELecom:SONet:OH:RS:OVERhead[1..n]:DEFault

:SOURce:DATA:TELecom:SDH:OH:MS:OVERhead[1..n]?

Description	This query returns the multiplexer overhead byte values in decimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > > SDH > TX > Transport OH > MS
Syntax	:SOURce:DATA:TELecom:SDH:OH:MS:OVERhead[1..n]? <wsp><Channel>, <Overhead>
Parameter(s)	**Channel**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the multiplexer overhead channel number.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the multiplexer overhead bytes.
	H1 to H3: Respectively H1, H2, or H3 for Pointer
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)

:SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead

Description	This command sets the Low Order Path (LOP) overhead values in hexadecimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > OC > TX > VT
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > STM > TX > TU
Syntax	:SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead <wsp><Overhead>,[<Value>]
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Low Order Path (LOP) overhead byte.
	V5: VT Path Overhead.
	J2: VT Path Trace.
	Z6: VT Tandem Connection Monitoring.
	Z7: Extended Signal Label.
	N2: Network Operator Byte.
	K4: Extended Signal Label.
	Value:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Low Order Path (LOP) overhead values in hexadecimal format.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:OH:LOP:OVER V5, #H01
	SOUR:DATA:TEL:SDHS:OH:LOP:OVER? V5
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead?

:SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead:DEFault

Description	This command resets the LOP overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > OC > TX > VT > Default
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > SDH > TX > TU > Default
Syntax	:SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead:DEFault \<wsp>\<Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the Low Order Path (LOP) overhead byte for the receiver.
	V5: VT Path Overhead.
	J2: VT Path Trace.
	Z6: VT Tandem Connection Monitoring.
	Z7: Extended Signal Label.
	N2: Network Operator Byte.
	K4: Extended Signal Label.
Response Syntax	\<Value>
Example(s)	SOUR:DATA:TEL:SDHS:OH:LOP:OVER:DEF V5
See Also	SOURce:DATA:TELecom:SDHSonet:OH:HOP:OVERhead:DEFault

:SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead?

Description	This query returns the Low Order Path (LOP) overhead values in decimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > OC > TX > VT
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > STM > TX > TU
Syntax	:SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Low Order Path (LOP) overhead byte.
	V5: VT Path Overhead.
	J2: VT Path Trace.
	Z6: VT Tandem Connection Monitoring.
	Z7: Extended Signal Label.
	N2: Network Operator Byte.
	K4: Extended Signal Label.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Low Order Path (LOP) overhead byte value in hexadecimal format..
Example(s)	SOUR:DATA:TEL:SDHS:OH:LOP:OVER V5, #H01
	SOUR:DATA:TEL:SDHS:OH:LOP:OVER? V5
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:OH:LOP:OVERhead

:SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead

Description	This command sets the Low Order Path (LOP) overhead values in hexadecimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > STM > TX > TU3
Syntax	:SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead <wsp><Overhead>,[<Value>]
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the High Order Path (HOP) overhead values.
	J1: J1 trace.
	B3: Bit Interleaved Parity code (BIP-8).
	C2: Path Signal Label.
	G1: Path Status.
	F2: User Channel.
	H4: Multiframe Indicator.
	Z3: Growth.
	Z4: Growth.
	N1: Tandem Connection Monitoring.
	F3: F3
	K3: K3
	Value:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the LOP(TU3) overhead values in hexadecimal format.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:OH:LOPT:OVER J1, #H01
	SOUR:DATA:TEL:SDHS:OH:LOPT:OVER? J1
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead?

:SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead:DEFault

Description	This command resets the LOP overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > SDH > TX > TU3 > Default
Syntax	:SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead:DEFault <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the High Order Path (HOP) overhead values for the receiver.
	J1: J1 trace.
	B3: Bit Interleaved Parity code (BIP-8).
	C2: Path Signal Label.
	G1: Path Status.
	F2: User Channel.
	H4: Multiframe Indicator.
	Z3: Growth.
	Z4: Growth.
	N1: Tandem Connection Monitoring.
	F3: F3-
	K3: K3
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:OH:LOPTu:OVER:DEF J1
See Also	SOURce:DATA:TELecom:SDHSonet:OH:HOP:OVERhead:DEFault J1

:SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead?

Description	This query returns the Low Order Path (LOP) overhead values in decimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > OH > STM > TX > TU3
Syntax	:SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead? <wsp><Overhead>
Parameter(s)	**Overhead**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the High Order Path (HOP) overhead values.
	J1: J1 trace.
	B3: Bit Interleaved Parity code (BIP-8).
	C2: Path Signal Label.
	G1: Path Status.
	F2: User Channel.
	H4: Multiframe Indicator.
	Z3: Growth.
	Z4: Growth.
	N1: Tandem Connection Monitoring.
	F3: F3
	K3: K3
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Low Order Path (LOPTU) overhead byte value in hexadecimal format.
Example(s)	SOUR:DATA:TEL:SDHS:OH:LOPT:OVER J1, #H01
	SOUR:DATA:TEL:SDHS:OH:LOPT:OVER? J1
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:OH:LOPTu:OVERhead

:SOURce:DATA:TELecom:SDHSonet:OH:REStore:DEFault

Description	This command it restores the default application.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > TX > Default all OH
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SDH > TX > Default all OH
Syntax	:SOURce:DATA:TELecom:SDHSonet:OH:REStore:DEFault
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:OH:RES:DEF
See Also	SOURce:DATA:TELecom:GFP:OH:RESTore:DEFault
	SOURce:DATA:TELecom:OTN:REStore:DEFault

:SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead

Description	This command sets the line overhead byte values in hexadecimal format.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > LINE > TX
Syntax	:SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead <wsp><Timeslot>, <Overhead>,[<Value>]
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the line overhead timeslot number for transmitter.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the line overhead bytes.
	H1 to H3: respectively H1, H2, or H3
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)
	D4, D5, D6, D7, D8, D9, D10, D11, D12: Respectively D4 to D12 for Data Communications Channel (DCC)
	Z1 and Z2: Respectively Z1 or Z2 for Growth byte
	M1: Remote Error Indicator - Line (REI-L)
	M0: Remote Error Indicator - Line (REI-L)
	S1: S1 byte
	Value:
	The program data syntax for the third parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the line overhead byte values in hexadecimal format.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SON:OH:LINE:OVER 1, D4,#H00
	SOUR:DATA:TEL:SON:OH:LINE:OVER? 1, D4
	Returns: 0
See Also	SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead?

:SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead:DEFault

Description	This command resets the line overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > TX > LINE > Default
Syntax	:SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead:DEFault <wsp><Timeslot>, <Overhead>
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the line overhead timeslot number.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the line overhead bytes.
	Selects the line overhead bytes.
	H1 to H3: Respectively H1, H2, or H3 for Pointer
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)
	D4, D5, D6, D7, D8, D9, D10, D11, D12: Respectively D4 to D12 for Data Communications Channel (DCC)
	Z1 and Z2: Respectively Z1 or Z2 for Growth byte
	M1: Remote Error Indicator - Line (REI-L)
	M0: Remote Error Indicator - Line (REI-L)
	S1: S1 byte
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SON:OH:LINE:OVER:DEF 1, H1
See Also	SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead:DEFault

:SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead?

Description	This query returns the line overhead byte values in decimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > LINE > TX
Syntax	:SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead? <wsp><Timeslot>, <Overhead>
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the line overhead timeslot number.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the line overhead bytes.
	H1 to H3: Respectively H1, H2, or H3
	B2: Bit Interleaved Parity code (BIP-8)
	K1 and K2: Respectively K1 or K2 for Automatic Protection Switching (APS)
	D4, D5, D6, D7, D8, D9, D10, D11, D12: Respectively D4 to D12 for Data Communications Channel (DCC)
	Z1 and Z2: Respectively Z1 or Z2 for Growth byte
	M1: Remote Error Indicator - Line (REI-L)
	M0: Remote Error Indicator - Line (REI-L)
	S1: S1 byte
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the line overhead byte value.
Example(s)	SOUR:DATA:TEL:SON:OH:LINE:OVER 1, D4,#H00
	SOUR:DATA:TEL:SON:OH:LINE:OVER? 1, D4
	Returns: 0
See Also	SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead

:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead

Description	This command sets the section overhead byte values in hexadecimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > SECTION > TX
Syntax	:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead <wsp><Timeslot>, <Overhead>,[<Value>]
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the section overhead timeslot number for transmitter.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the section overhead bytes.
	A1: F6 hexadecimal value
	A2: 28 hexadecimal value
	J0: J0 trace
	B1: Bit Interleaved Parity code (BIP-8)
	E1: Orderwire
	F1: User
	D1: Data Communications Channel (DCC)
	D2: Data Communications Channel (DCC)
	D3: Data Communications Channel (DCC)
	Z0: Growth
	Value:
	The program data syntax for the third parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the section overhead byte values in hexadecimal format.

:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead

Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SON:OH:SECT:OVER 1, A1, #HF6
	SOUR:DATA:TEL:SON:OH:SECT:OVER? 1, A1
	Returns: 246
See Also	SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead?

:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead:DEFault

Description	This command resets the section overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > TX > SECTION > Default
Syntax	:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead:DEFault <wsp><Timeslot>, <Overhead>
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the section overhead timeslot number.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the section overhead bytes.
	A1: F6 hexadecimal value
	A2: 28 hexadecimal value
	J0: J0 trace
	B1: Bit Interleaved Parity code (BIP-8)
	E1: Orderwire
	F1: User
	D1: Data Communications Channel (DCC)
	D2: Data Communications Channel (DCC)
	D3: Data Communications Channel (DCC)
	Z0: Growth
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SON:OH:SECT:OVER:DEF 1,A1
See Also	SOURce:DATA:TELecom:SDHSonet:OH:REStore:DEF

:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead?

Description	This query returns the section overhead byte values in decimal format.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > OH > SONET > SECTION > TX
Syntax	:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead? <wsp><Timeslot>, <Overhead>
Parameter(s)	**Timeslot**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the section overhead timeslot number.
	Overhead:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the section overhead bytes.
	A1: F6 hexadecimal value
	A2: 28 hexadecimal value

	D3: Data Communications Channel (DCC)
	Z0: Growth
Response Syntax	<Value>

:SOURce:DATA:TELecom:SONet:OH:SECTion:OVERhead?

Response(s)	Value: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the section overhead byte value.
Example(s)	SOUR:DATA:TEL:SON:OH:SECT:OVER 1, A1, #HF6 SOUR:DATA:TEL:SON:OH:SECT:OVER? 1, A1 Returns: 246
See Also	SOURce:DATA:TELecom:SONet:OH:LINE:OVERhead

OH - GFP-F/GFP-T

:FETCh:DATA:TELecom:GFP:OH:DFRames?

Description	This query returns selection of the Client Data Frames.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > RX > Frames > Client Data
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > RX > Frames > Client Data
Syntax	:FETCh:DATA:TELecom:GFP:OH:DFRames? <wsp><Dframes>
Parameter(s)	**Dframes**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Data Frames.
	PLI
	CHEC
	PTI
	PFI
	EXI
	UPI
	THEC
	CID
	SPARe
	EHEC
Response Syntax	<Dframes>
Response(s)	**Dframes**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the selection of Data Frames.
Example(s)	FETC:DATA:TEL:GFP:OH:DFR? PLI
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:PFI

:FETCh:DATA:TELecom:GFP:OH:MFRames?

Description	This query returns selection of the Client Management Frames.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > RX > Frames > Client Management
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > RX > Frames > Client Management
Syntax	:FETCh:DATA:TELecom:GFP:OH:MFRames? <wsp><Mframes>
Parameter(s)	**Mframes**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Management Frames.
	PLI
	CHEC
	PTI
	PFI
	EXI
	UPI
	THEC
	CID
	SPARe
	EHEC
Response Syntax	<Mframes>
Response(s)	**Mframes**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the selection of Management Frames.
Example(s)	FETC:DATA:TEL:GFP:OH:MFRames? PLI
See Also	SOURce:DATA:TELecom:GFP:OH:EHEader:SPARe

:FETCh:DATA:TELecom:GFP:OH:RPTiframes?

Description	This query returns selection of Reserved PTI Frames.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > RX > Frames > Reserved PTI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > RX > Frames > Reserved PTI
Syntax	:FETCh:DATA:TELecom:GFP:OH:RPTiframes? <wsp><Rptiframes>
Parameter(s)	**Rptiframes**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Reserved PTI Frames.
	PLI
	CHEC
	PTI
	PFI
	EXI
	UPI
	THEC
	CID
	SPARe
	EHEC
Response Syntax	<Rptiframes>
Response(s)	**Rptiframes**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the selection of Reserved PTI Frames.
Example(s)	FETC:DATA:TEL:GFP:OH:RPT? PLI
See Also	SOURce:DATA:TELecom:GFP:OH:EHEader:CID

:SOURce:DATA:TELecom:GFP:OH:DEFault

Description	This command resets or overwrites the overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Default
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Default
Syntax	:SOURce:DATA:TELecom:GFP:OH:DEFault <wsp><Frames>, <Bytes>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Frame Type.
	DFRames
	MFRames
	Bytes:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Data Frames Bytes.
	PTI
	PFI
	EXI
	UPI
	CID
	SPARe
Response Syntax	<Rptiframes>
Example(s)	SOUR:DATA:TEL:GFP:OH:DEF DFR, PTI
See Also	SOURce:DATA:TELecom:GFP:OH:REStore:DEFault

:SOURce:DATA:TELecom:GFP:OH:EHEader:CID

Description	This command sets the Channel ID.
	At *RST condition, this value is 0000 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Extension Header > CID
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Extension Header > CID
Syntax	:SOURce:DATA:TELecom:GFP:OH:EHEader:CID <wsp><Frames>, <CID>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	CID:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects Channel Id between 0000 0000 to 1111 1111.
	MAXimum,sets Channed Id to maximum value.
	MINimum,sets Channed Id to minimum value.
Response Syntax	<Rptiframes>
Example(s)	SOUR:DATA:TEL:GFP:OH:EHE:CID DFR,#B0
	SOUR:DATA:TEL:GFP:OH:EHE:CID? DFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:UPI?

:SOURce:DATA:TELecom:GFP:OH:EHEader:CID?

Description	This query returns the Channel ID.
	At *RST condition, this value is 0000 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Extension Header > CID
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Extension Header > CID
Syntax	:SOURce:DATA:TELecom:GFP:OH:EHEader:CID? <wsp><Frames>,[<CID>]
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	CID:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current CID value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<CID>
Response(s)	**CID**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Channel ID.
Example(s)	SOUR:DATA:TEL:GFP:OH:EHE:CID DFR,#B0
	SOUR:DATA:TEL:GFP:OH:EHE:CID? DFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:EHEader:SPARe

:SOURce:DATA:TELecom:GFP:OH:EHEader:SPARe

Description	This command sets the Extension Header Spare Field.
	At *RST condition, this value is 0000 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Extension Header > Spare
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Extension Header > Spare
Syntax	:SOURce:DATA:TELecom:GFP:OH:EHEader:SPARe <wsp><Frames>, <Spare>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	Spare:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Spare value between 0000 0000 and 1111 1111
	MAXimum,sets Spare to maximum value.
	MINimum,sets Spare to minimum value.
Response Syntax	<CID>
Example(s)	SOUR:DATA:TEL:GFP:OH:EHE:SPAR DFR,#B0
	SOUR:DATA:TEL:GFP:OH:EHE:SPAR? DFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:EXI?

:SOURce:DATA:TELecom:GFP:OH:EHEader:SPARe?

Description	This query returns the the Extension Header Spare Field value.
	At *RST condition, this value is 0000 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Extension Header > Spare
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Extension Header > Spare
Syntax	:SOURce:DATA:TELecom:GFP:OH:EHEader:SPARe? <wsp><Frames>,[<Spare>]
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	Spare:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current spare value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<SPARe>
Response(s)	**SPARe**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the SPARe value.
Example(s)	SOUR:DATA:TEL:GFP:OH:EHE:SPAR DFR,#B0
	SOUR:DATA:TEL:GFP:OH:EHE:SPAR? DFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:EHEader:CID

:SOURce:DATA:TELecom:GFP:OH:RESTore:DEFault

Description	This command resets or overwrites the overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Default All OH
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Default All OH
Syntax	:SOURce:DATA:TELecom:GFP:OH:RESTore:DEFault
Response Syntax	<SPARe>
Example(s)	SOUR:DATA:TEL:GFP:OH:RESTore:DEF
See Also	SOURce:DATA:TELecom:OTN:OH:ODU[1..n]:OVERhead?
	SOURce:DATA:TELecom:SDHSonet:OH:REStore:DEFault

:SOURce:DATA:TELecom:GFP:OH:THEader:EXI

Description	This command sets the Extension Header Identifier.
	At *RST condition, this value is 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > EXI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > EXI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:EXI <wsp><Frames>, <Exi>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	Exi:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the EXI value between 0000 and 1111
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<SPARe>
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:EXI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:EXI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:EHEader:SPARe?

:SOURce:DATA:TELecom:GFP:OH:THEader:EXI?

Description	This query returns the value of the Extension Header Identifier.
	At *RST condition, this value is 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > EXI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > EXI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:EXI? <wsp><Frames>,[<EXI>]
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	EXI:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current EXI value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Exi>
Response(s)	**Exi**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Extension Header Identifier value.
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:EXI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:EXI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:UPI

:SOURce:DATA:TELecom:GFP:OH:THEader:PFI

Description	This command sets the Payload FCS Indicator.
	At *RST condition, this value is 0.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > PFI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > PFI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:PFI <wsp><Frames>, <Pfi>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	Pfi:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PFI value between 0 and 1
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Exi>
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:PFI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:PFI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:PTI?

:SOURce:DATA:TELecom:GFP:OH:THEader:PFI?

Description	This query returns the Payload FCS Indicator.
	At *RST condition, this value is 0.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > PFI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > PFI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:PFI? <wsp><Frames>,[<PFI>]
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	PFI:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current PTI value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Pfi>
Response(s)	**Pfi**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Payload FCS Indicator.
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:PFI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:PFI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:PTI

:SOURce:DATA:TELecom:GFP:OH:THEader:PTI

Description	This command sets the Type of GFP Client Frame.
	At *RST condition, this value is 000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > PTI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > PTI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:PTI <wsp><Frames>,[<Pti>]
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	Pti:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the PTI value between 000 and 111
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Pfi>
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:PTI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:PTI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:PFI?

:SOURce:DATA:TELecom:GFP:OH:THEader:PTI?

Description	This query returns the Type of GFP Client Frame.
	At *RST condition, this value is 000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > PTI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > PTI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:PTI? <wsp><Frames>,[<PTI>]
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	PTI:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current PFI value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Pti>
Response(s)	**Pti**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Type of GFP Client Frame.
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:PTI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:PTI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:PFI

:SOURce:DATA:TELecom:GFP:OH:THEader:UPI

Description	This command sets the User Payload Identifier.
	At *RST condition, this value is 0000 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > UPI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > UPI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:UPI <wsp><Frames>, <Upi>
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	Upi:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Selects the UPI value between 0000 0000 and 1111 1111
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Pti>
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:UPI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:UPI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:THEader:EXI?

:SOURce:DATA:TELecom:GFP:OH:THEader:UPI?

Description	This query returns the values of User Payload Identifier.
	At *RST condition, this value is 0000 0000.
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (Ethernet(flex/GFP-F)/10GbE) > GFP-F > Functions > OH > GFP-F > Type Header > UPI
	Navigation Path: Setup > OTN BERT > Test Configurator > Modify Structure > Client (1GbE) > GFP-T > Functions > OH > GFP-T > Type Header > UPI
Syntax	:SOURce:DATA:TELecom:GFP:OH:THEader:UPI? <wsp><Frames>,[<UPI>]
Parameter(s)	**Frames**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Client Framing Types.
	DFRames
	MFRames
	UPI:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current UPI value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Upi>
Response(s)	**Upi**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the User Payload Identifier value.
Example(s)	SOUR:DATA:TEL:GFP:OH:THE:UPI MFR,#B0
	SOUR:DATA:TEL:GFP:OH:THE:UPI? MFR
	Returns: 0
See Also	SOURce:DATA:TELecom:GFP:OH:EHEader:CID

OH - FlexE (TX/RX)

:SENSe:DATA:TELecom:FETHernet:OH:BYTE?

Description	This command returns the OH bytes for selected PHY and Frame.
	At *RST condition, this value is device dependant.
	Navigation Path: Functions > OH > RX > FlexE OH Frame Summary - Block 1/2/3/4-5/6-7-8 - [byte]
Syntax	:SENSe:DATA:TELecom:FETHernet:OH:BYTE? <wsp><PHY/Instance>, <Frame>, <OH Byte>

:SENSe:DATA:TELecom:FETHernet:OH:BYTE?

Parameter(s)	
	PHY/Instance:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY Number or Instance Number:
	PHY number for 100GE Interface/Rate
	Instance number for 200GE/400GE Interface/Rate
	Frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Frame number
	OH Byte:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the OH byte value
	B1SH: Block 1 - SH byte
	B1TYPE: Block 1 - Type byte
	B1RPF: Block 1 - RPF bit
	B1SC: Block 1 - SC bit
	B1GROUP: Block 1 - Group byte
	B1OCODE: Block 1 - O code byte
	B1OXO: Block 1 - Oxo code byte
	B2SH: Block 2 - SH byte
	B2PHY: Block 2 - PHY number byte
	B2RES1: Block 2 - Reserved byte 1
	B2RES2: Block 2 - Reserved byte 2
	B2RES3: Block 2 - Reserved byte 3
	B2RES4: Block 2 - Reserved byte 4
	B2RES5: Block 2 - Reserved byte 5
	B2RES6: Block 2 - Reserved byte 6
	B3SH: Block 3 - SH byte

	:SENSe:DATA:TELecom:FETHernet:OH:BYTE?
Parameter(s)	B3CLRES1: Block 3 - Client Reserved byte 1
	B3CLRES2: Block 3 - Client Reserved byte 2
	B3CLRES3: Block 3 - Client Reserved byte 3
	B3CLRES4: Block 3 - Client Reserved byte 4
	B3RES1: Block 3 - Reserved byte 1
	B3RES2: Block 3 - Reserved byte 2
	B3CRC1: Block 3 - CRC-16 first byte
	B3CRC2: Block 3 - CRC-16 second byte
	B4SH: Block 4 - SH byte
	B4MCS1: Block 4 - Management Channel - Section byte 1
	B4MCS2: Block 4 - Management Channel - Section byte 2
	B4MCS3: Block 4 - Management Channel - Section byte 3
	B4MCS4: Block 4 - Management Channel - Section byte 4
	B4MCS5: Block 4 - Management Channel - Section byte 5
	B4MCS6: Block 4 - Management Channel - Section byte 6
	B4MCS7: Block 4 - Management Channel - Section byte 7
	B4MCS8: Block 4 - Management Channel - Section byte 8
	B4RES1: Block 4 - Reserved byte 1
	B4RES2: Block 4 - Reserved byte 2
	B4RES3: Block 4 - Reserved byte 3
	B4RES4: Block 4 - Reserved byte 4
	B4RES5: Block 4 - Reserved byte 5
	B4RES6: Block 4 - Reserved byte 6
	B4RES7: Block 4 - Reserved byte 7
	B4RES8: Block 4 - Reserved byte 8
	B5SH: Block 5 - SH byte
	B5MCS1: Block 5 - Management Channel - Section byte 1
	B5MCS2: Block 5 - Management Channel - Section byte 2
	B5MCS3: Block 5 - Management Channel - Section byte 3

:SENSe:DATA:TELecom:FETHernet:OH:BYTE?

Parameter(s)	B5MCS4: Block 5 - Management Channel - Section byte 4
	B5MCS5: Block 5 - Management Channel - Section byte 5
	B5MCS6: Block 5 - Management Channel - Section byte 6
	B5MCS7: Block 5 - Management Channel - Section byte 7
	B5MCS8: Block 5 - Management Channel - Section byte 8
	B5RES1: Block 5 - Reserved byte 1
	B5RES2: Block 5 - Reserved byte 2
	B5RES3: Block 5 - Reserved byte 3
	B5RES4: Block 5 - Reserved byte 4
	B5RES5: Block 5 - Reserved byte 5
	B5RES6: Block 5 - Reserved byte 6
	B5RES7: Block 5 - Reserved byte 7
	B5RES8: Block 5 - Reserved byte 8
	B6SH: Block 6 - SH byte
	B6MCSTS1: Block 6 - Management Channel - Shim to Shim byte 1
	B6MCSTS2: Block 6 - Management Channel - Shim to Shim byte 2
	B6MCSTS3: Block 6 - Management Channel - Shim to Shim byte 3
	B6MCSTS4: Block 6 - Management Channel - Shim to Shim byte 4
	B6MCSTS5: Block 6 - Management Channel - Shim to Shim byte 5
	B6MCSTS6: Block 6 - Management Channel - Shim to Shim byte 6
	B6MCSTS7: Block 6 - Management Channel - Shim to Shim byte 7
	B6MCSTS8: Block 6 - Management Channel - Shim to Shim byte 8
	B6RES1: Block 6 - Reserved byte 1
	B6RES2: Block 6 - Reserved byte 2
	B6RES3: Block 6 - Reserved byte 3
	B6RES4: Block 6 - Reserved byte 4
	B6RES5: Block 6 - Reserved byte 5
	B6RES6: Block 6 - Reserved byte 6
	B6RES7: Block 6 - Reserved byte 7
	B6RES8: Block 6 - Reserved byte 8

:SENSe:DATA:TELecom:FETHernet:OH:BYTE?

Parameter(s)	B6SC1: Block 6 - Synchronization Channel 1
	B6SC2: Block 6 - Synchronization Channel 2
	B6SC3: Block 6 - Synchronization Channel 3
	B6SC4: Block 6 - Synchronization Channel 4
	B6SC5: Block 6 - Synchronization Channel 5
	B6SC6: Block 6 - Synchronization Channel 6
	B6SC7: Block 6 - Synchronization Channel 7
	B6SC8: Block 6 - Synchronization Channel 8
	B7SH: Block 7 - SH byte
	B7MCSTS1: Block 7 - Management Channel - Shim to Shim byte 1
	B7MCSTS2: Block 7 - Management Channel - Shim to Shim byte 2
	B7MCSTS3: Block 7 - Management Channel - Shim to Shim byte 3
	B7MCSTS4: Block 7 - Management Channel - Shim to Shim byte 4
	B7MCSTS5: Block 7 - Management Channel - Shim to Shim byte 5

:SENSe:DATA:TELecom:FETHernet:OH:BYTE?

Parameter(s)	B8MCSTS5: Block 8 - Management Channel - Shim to Shim byte 5
	B8MCSTS6: Block 8 - Management Channel - Shim to Shim byte 6
	B8MCSTS7: Block 8 - Management Channel - Shim to Shim byte 7
	B8MCSTS8: Block 8 - Management Channel - Shim to Shim byte 8
	B8RES1: Block 8 - Reserved byte 1
	B8RES2: Block 8 - Reserved byte 2
	B8RES3: Block 8 - Reserved byte 3
	B8RES4: Block 8 - Reserved byte 4
	B8RES5: Block 8 - Reserved byte 5
	B8RES6: Block 8 - Reserved byte 6
	B8RES7: Block 8 - Reserved byte 7
	B8RES8: Block 8 - Reserved byte 8
Response Syntax	<Return Value>
Response(s)	Return Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the byte decimal value.
Example(s)	SENS:DATA:TEL:FETH:OH:BYTE? 2,2,B3RES1
	Returns: 255
See Also	SENSe:DATA:TELecom:FETHernet:OH?
	SENSe:DATA:TELecom:FETHernet:OH:PHY:MAP?
	SENSe:DATA:TELecom:FETHernet:OH:REServed?

:SENSe:DATA:TELecom:FETHernet:OH:CLIent:CALendar?

Description	This query returns the current FlexE Client Calendar Configuration as a string containing a coma separated list of
	(Client ID, List of Occupied Calendar Slots)
	Navigation Path: Functions > OH > RX > FlexE OH Frame Summary - Block 3 - Client Calendar
Syntax	:SENSe:DATA:TELecom:FETHernet:OH:CLIent:CALendar? <wsp><PHY>, <Calendar>
Parameter(s)	**PHY**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY Number
	Calendar:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Calendar Value.
	A: Calendar A
	B: Calendar B
Response Syntax	<Return Value>
Response(s)	**Return Value**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the current FlexE Client Calendar Configuration as a string containing a coma separated list of (Client ID, List of Occupied Calendar Slots)
	(1,(0,1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22,23,24,25,26,27,28,29,30,31, 32,33,34,35,36,37,38,39))
Example(s)	SOUR:DATA:TEL:FETH:OH:CLI:CAL? 1,A
See Also	SOURce:DATA:TELecom:FETHernet:CLIent:CALendar:DELete

:SENSe:DATA:TELecom:FETHernet:OH:FMAP?

Description	This query returns the byte value for particular frame in FlexE Map.
	At *RST condition, this value is device dependant.
	Navigation Path: Functions > OH > RX > FlexE OH Frame Summary - Block 2 - FlexE Map
Syntax	:SENSe:DATA:TELecom:FETHernet:OH:FMAP? <wsp><PHY/Instance>, <Frame>
Parameter(s)	**PHY/Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY Number or Instance Number:
	PHY number for 100GE Interface/Rate
	Instance number for 200GE/400GE Interface/Rate
	Frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Frame Number
Response Syntax	<Return Value>
Response(s)	**Return Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the byte decimal value.
Example(s)	SENS:DATA:TEL:FETH:OH:FMAP? 1,1
	Returns: 0
See Also	SENSe:DATA:TELecom:FETHernet:OH?
	SENSe:DATA:TELecom:FETHernet:OH:BYTE?
	SENSe:DATA:TELecom:FETHernet:OH:REServed?

:SENSe:DATA:TELecom:FETHernet:OH:PHY:MAP?

Description	This query returns the byte value for particular frame in PHY Map.
	At *RST condition, this value is device dependant.
	Navigation Path: Functions > OH > RX > FlexE OH Frame Summary - Block 2 - PHY Map
Syntax	:SENSe:DATA:TELecom:FETHernet:OH:PHY:MAP? <wsp><PHY>, <Frame>
Parameter(s)	**PHY**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY number
	Frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Frame Number
Response Syntax	<Return Value>
Response(s)	**Return Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the byte decimal value.
Example(s)	SENS:DATA:TEL:FETH:OH:PHY:MAP? 1,1
	Returns: 0
See Also	SENSe:DATA:TELecom:FETHernet:OH?
	SENSe:DATA:TELecom:FETHernet:OH:BYTE?
	SENSe:DATA:TELecom:FETHernet:OH:REServed?

:SENSe:DATA:TELecom:FETHernet:OH:REServed?

Description	This query returns the OH bytes for Block 1 Reserved.
	At *RST condition, this value is device dependant.
	Navigation Path: Functions > OH > RX > FlexE OH Frame Summary - Block 1 - Res
Syntax	:SENSe:DATA:TELecom:FETHernet:OH:REServed? <wsp><Instance>, <Reserved bit>
Parameter(s)	**Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the instance number
	Reserved bit:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the reserved bit
	B1RES1 block 1 (bit 8) Reserved
	B1RES2 block 1 (bit 9) Reserved
	B1RES3 block 1 (bit 10) Reserved
	B1RES4 block 1 (bit 11) Reserved
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return the Reserved byte value.
Example(s)	SENS:DATA:TEL:FETH:OH:RES? 1,B1RES1
See Also	SOURce:DATA:TELecom:FETHernet:OH

:SENSe:DATA:TELecom:FETHernet:OH?

Description	This query gets CR and CA bits for Block 3 and C bit for Block 1/2/3.
	At *RST condition, this value is set to #HA
	Navigation Path: Functions > OH > RX > FlexE OH Frame Summary - Block 1/2/3 - C/CR/CA
Syntax	:SENSe:DATA:TELecom:FETHernet:OH? <wsp><Calendar>
Parameter(s)	**Calendar:**
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the OH byte value
	CR: Block 3 CR bit
	CA: Block 3 CA bit
	B1C: Block 1 C bit
	B2C: Block 2 C bit
	B3C: Block 3 C bit
Response Syntax	<Value>
Response(s)	**Value:**
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Calendar value.
	A, Calender is A
	B, Calender is B
Example(s)	SENS:DATA:TEL:FETH:OH? CR
	Returns: A
See Also	SENSe:DATA:TELecom:FETHernet:OH:BYTE?
	SENSe:DATA:TELecom:FETHernet:OH:PHY:MAP?
	SENSe:DATA:TELecom:FETHernet:OH:REServed?

:SOURce:DATA:TELecom:FETHernet:OH

Description	This command sets the CR and CA bytes for Block 3.
	At *RST condition, this value is set to #HA
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 3 - CR/CA
Syntax	:SOURce:DATA:TELecom:FETHernet:OH <wsp><Calendar>, <Value>
Parameter(s)	**Calendar**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the OH byte value
	CR: Block 3 CR byte
	CA: Block 3 CA byte
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	A Sets A
	B Sets B
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:FETH:OH CR,A
See Also	SOURce:DATA:TELecom:FETHernet:OH:BYTE
	SOURce:DATA:TELecom:FETHernet:OH:REServed

:SOURce:DATA:TELecom:FETHernet:OH:BYTE

Description	This command sets the OH bytes for selected PHY and Frame.
	At *RST condition, this value is set to #H00
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1/2/3/4-5/6-7-8 - [byte]
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:BYTE <wsp><PHY/Instance>, <Frame>, <OH Byte>,[<Value>]

:SOURce:DATA:TELecom:FETHernet:OH:BYTE

Parameter(s)	**PHY/Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY Number or Instance Number:
	PHY number for 100GE Interface/Rate
	Instance number for 200GE/400GE Interface/Rate
	Frame:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Frame number
	OH Byte:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the OH byte value
	B2RES1: Block 2 - Reserved byte 1
	B2RES2: Block 2 - Reserved byte 2
	B2RES3: Block 2 - Reserved byte 3
	B2RES4: Block 2 - Reserved byte 4
	B2RES5: Block 2 - Reserved byte 5
	B2RES6: Block 2 - Reserved byte 6
	B3CLRES1: Block 3 - Client Reserved byte 1
	B3CLRES2: Block 3 - Client Reserved byte 2
	B3CLRES3: Block 3 - Client Reserved byte 3
	B3CLRES4: Block 3 - Client Reserved byte 4
	B3RES1: Block 3 - Reserved byte 1
	B3RES2: Block 3 - Reserved byte 2
	B4SH: Block 4 - SH byte
	B4MCS1: Block 4 - Management Channel - Section byte 1
	B4MCS2: Block 4 - Management Channel - Section byte 2

Response Syntax	<Return Value>

:SOURce:DATA:TELecom:FETHernet:OH:BYTE?

Response(s)	**Return Value**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the byte decimal value.
Example(s)	SOUR:DATA:TEL:FETH:OH:BYTE 5,10,B2RES3,#HF6 SOUR:DATA:TEL:FETH:OH:BYTE? 5,10,B2RES3 Returns: 246
See Also	SOURce:DATA:TELecom:FETHernet:OH? SOURce:DATA:TELecom:FETHernet:OH:REServed?

:SOURce:DATA:TELecom:FETHernet:OH:DEFault

Description	This command resets or overwrites the FlexE overhead byte values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > OH > Default FlexeE OH
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:DEFault
Response Syntax	<Return Value>
Example(s)	SOUR:DATA:TEL:FETH:OH:DEF

:SOURce:DATA:TELecom:FETHernet:OH:DEFault:BYTE?

Description	This query gets the OH bytes for SH, Type, O Code.
	At *RST condition, this value is set to device dependent.
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1/2/3 - SH, Type, O Code
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:DEFault:BYTE? <wsp><Token>
Parameter(s)	**Token**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	OH Byte name for which value needs to be returned.
	Selects the OH byte value
	B1SH: Block 1 - SH byte
	B1TYPE: Block 1 - Type byte
	B1OCODE: Block 1 - O Code byte
	B2SH: Block 2 - SH byte
	B3SH: Block 3 - SH byte
Response Syntax	<Return Value>
Response(s)	**Return Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the byte decimal value.
Example(s)	SOUR:DATA:TEL:FETH:OH:DEF:BYTE? SH
	Returns: 10
See Also	SOURce:DATA:TELecom:FETHernet:OH?

:SOURce:DATA:TELecom:FETHernet:OH:FMAP?

Description	This query returns the byte value for particular frame in FlexE Map.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 2 - FlexE Map
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:FMAP? <wsp><Frame>
Parameter(s)	**Frame**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Frame Number
Response Syntax	<Return value>
Response(s)	**Return value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return the byte decimal value.
Example(s)	SOUR:DATA:TEL:FETH:OH:FMAP? 1
	Returns: 0
See Also	SENSe:DATA:TELecom:FETHernet:OH?

:SOURce:DATA:TELecom:FETHernet:OH:GROup?

Description	This query returns the group number associated with a FlexE group.
	At *RST condition, this value is device dependant.
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1 Group
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:GROup?[<wsp><Instance>]
Parameter(s)	**Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Instance number for 200GE/400GE Interface/Rate
	Parameter is not required for 100GE Interface/Rate
Response Syntax	<value>
Response(s)	**value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Value to be return
Example(s)	SOURce:DATA:TELecom:FETHernet:OH:GROup? 1
See Also	SOURce:DATA:TELecom:FETHernet:OH:SC? 1

:SOURce:DATA:TELecom:FETHernet:OH:OXO?

Description	This query gets the Oxo bytes for Block 1.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1 OXO code
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:OXO?
Response Syntax	\<Return value\>
Response(s)	**Return value**:
	The response data syntax for the first parameter is defined as a \<NR1 NUMERIC RESPONSE DATA\> element.
	Return the Oxo Code bytes value.
Example(s)	SOUR:DATA:TEL:FETH:OH:OXO?
	Returns: 0
See Also	SENSe:DATA:TELecom:FETHernet:OH:REServed?

:SOURce:DATA:TELecom:FETHernet:OH:PHY:MAP?

Description	This query returns the byte value for particular frame in PHY Map.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 2 - PHY Map
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:PHY:MAP? <wsp><Frame>
Parameter(s)	**Frame**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Frame Number
Response Syntax	<Return value>
Response(s)	**Return value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return the byte decimal value.
Example(s)	SOUR:DATA:TEL:FETH:OH:PHY:MAP? 1
	Returns: 0
See Also	SENSe:DATA:TELecom:FETHernet:OH?

:SOURce:DATA:TELecom:FETHernet:OH:REServed

Description	This command sets the Reserved bytes for Block 1.
	At *RST condition, this value is set to #H1
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1 - Res
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:REServed <wsp><Instance>, <Reserved bit>, <Value>
Parameter(s)	**Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the instance number
	Reserved bit:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the reserved bit
	B1RES1 block 1 (bit 8) Reserved
	B1RES2 block 1 (bit 9) Reserved
	B1RES3 block 1 (bit 10) Reserved
	B1RES4 block 1 (bit 11) Reserved
	Value:
	The program data syntax for the third parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the value for reserved bit
Response Syntax	<Return value>
Example(s)	SOUR:DATA:TEL:FETH:OH:RES 1,B1RES1,#B1
See Also	SOURce:DATA:TELecom:FETHernet:OH
	SOURce:DATA:TELecom:FETHernet:OH:BYTE

:SOURce:DATA:TELecom:FETHernet:OH:REServed?

Description	This command sets the Reserved bytes for Block 1.
	At *RST condition, this value is set to #H1
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1 - Res
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:REServed? <wsp><Instance>, <Reserved bit>
Parameter(s)	**Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the instance number
	Reserved bit:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the reserved bit
	B1RES1 block 1 (bit 8) Reserved
	B1RES2 block 1 (bit 9) Reserved
	B1RES3 block 1 (bit 10) Reserved
	B1RES4 block 1 (bit 11) Reserved
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return the Reserved byte value.
Example(s)	SOUR:DATA:TEL:FETH:OH:RES? 1,B1RES1
See Also	SOURce:DATA:TELecom:FETHernet:OH
	SOURce:DATA:TELecom:FETHernet:OH:BYTE

:SOURce:DATA:TELecom:FETHernet:OH:RPF?

Description	This query gets the RPF bit for Block 1.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1 - RPF
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:RPF? <wsp><PHY/Instance>
Parameter(s)	**PHY/Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY Number or Instance Number:
	PHY number for 100GE Interface/Rate
	Instance number for 200GE/400GE Interface/Rate
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return the RPF bit value.
Example(s)	SOUR:DATA:TEL:FETH:OH:RPF? 1
See Also	SOURce:DATA:TELecom:FETHernet:OH:RES?

:SOURce:DATA:TELecom:FETHernet:OH:SC

Description	This command sets the SC bit for Block 1.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1 - SC
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:SC <wsp><PHY/Instance>, <Value>
Parameter(s)	**PHY/Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY Number or Instance Number:
	PHY number for 100GE Interface/Rate
	Instance number for 200GE/400GE Interface/Rate
	Value:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Value to be set
Response Syntax	<Value>
Example(s)	SOURce:DATA:TELecom:FETHernet:OH:SC 1,1
See Also	SOURce:DATA:TELecom:FETHernet:OH:RES

:SOURce:DATA:TELecom:FETHernet:OH:SC?

Description	This query returns the SC bit for Block 1.
	At *RST condition, this value is set to 0
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 1 - SC
Syntax	:SOURce:DATA:TELecom:FETHernet:OH:SC? <wsp><PHY/Instance>
Parameter(s)	**PHY/Instance**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	PHY Number or Instance Number:
	PHY number for 100GE Interface/Rate
	Instance number for 200GE/400GE Interface/Rate
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Return value
Example(s)	SOURce:DATA:TELecom:FETHernet:OH:SC 1,1
	SOURce:DATA:TELecom:FETHernet:OH:SC? 1
	Returns: 1
See Also	SOURce:DATA:TELecom:FETHernet:OH:RPF?

:SOURce:DATA:TELecom:FETHernet:OH?

Description	This query gets the CR and CA OH bytes for Block 3.
	At *RST condition, this value is set to A
	Navigation Path: Functions > OH > TX > FlexE OH Frame Summary - Block 3 - CR/CA
Syntax	:SOURce:DATA:TELecom:FETHernet:OH? <wsp><Calendar>
Parameter(s)	**Calendar**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects OH byte value
	CR: Block 3 CR byte
	CA: Block 3 CA byte
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the CR or CA Calendar value.
	A, Calender is A
	B, Calender is B
Example(s)	SOUR:DATA:TEL:FETH:OH CA,A
	SOUR:DATA:TEL:FETH:OH? CA
	Returns: A
See Also	SOURce:DATA:TELecom:FETHernet:OH:BYTE?
	SOURce:DATA:TELecom:FETHernet:OH:REServed?

RTD

:FETCh:DATA:TELecom:RTD:COUNt:FAILed?

Description	This query returns the total number of failed measurements.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:FETCh:DATA:TELecom:RTD:COUNt:FAILed?
Response Syntax	<Failed>
Response(s)	**Failed**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total number of failed measurements.
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD ON
	FETC:DATA:TEL:RTD:COUN:FAIL?
See Also	FETCh:DATA:TELecom:RTD:COUNt:SUCCessful?

:FETCh:DATA:TELecom:RTD:COUNt:SUCCessful?

Description	This query returns the total number of successful measurements.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:FETCh:DATA:TELecom:RTD:COUNt:SUCCessful?
Response Syntax	<Successful>
Response(s)	**Successful**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the total number of successful measurements.
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD ON
	FETC:DATA:TEL:RTD:COUN:SUCC?
See Also	FETCh:DATA:TELecom:RTD:COUNt:FAILed?

:FETCh:DATA:TELecom:RTD:DELay:AVERage?

Description	This query returns the average Round Trip Delay value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:FETCh:DATA:TELecom:RTD:DELay:AVERage?
Response Syntax	<Average>
Response(s)	**Average**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the average Round Trip Delay value.
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD ON
	FETC:DATA:TEL:RTD:DEL:AVER?
See Also	FETCh:DATA:TELecom:RTD:DELay:MINimum?

:FETCh:DATA:TELecom:RTD:DELay:LAST?

Description	This query returns the result of the last Round Trip Delay.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:FETCh:DATA:TELecom:RTD:DELay:LAST?
Response Syntax	<Last>
Response(s)	**Last**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the result of the last Round Trip Delay.
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD ON
	FETC:DATA:TEL:RTD:DEL:LAST?
See Also	FETCh:DATA:TELecom:RTD:DELay:MAXimum?

:FETCh:DATA:TELecom:RTD:DELay:MAXimum?

Description	This query returns the maximum Round Trip Delay recorded.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:FETCh:DATA:TELecom:RTD:DELay:MAXimum?
Response Syntax	<Maximum>
Response(s)	**Maximum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum Round Trip Delay recorded.
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD ON
	FETC:DATA:TEL:RTD:DEL:MAX?
See Also	FETCh:DATA:TELecom:RTD:DELay:LAST?

:FETCh:DATA:TELecom:RTD:DELay:MINimum?

Description	This query returns the minimum Round Trip Delay recorded.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:FETCh:DATA:TELecom:RTD:DELay:MINimum?
Response Syntax	<Minimum>
Response(s)	**Minimum**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the minimum Round Trip Delay recorded.
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD ON
	FETC:DATA:TEL:RTD:DEL:MIN?
See Also	FETCh:DATA:TELecom:RTD:DELay:MAXimum?

:FETCh:DATA:TELecom:RTD:DELay:STATus?

Description	This query returns the test status of the Round Trip Delay measurements.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:FETCh:DATA:TELecom:RTD:DELay:STATus?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the test status of the Round Trip Delay measurements.
	READY, Ready indicates that the test is ready to perform RTD measurement.
	RUNNING, Running indicates that the RTD test is running.
	CANCELLED, Cancelled indicates that the RTD test has been stopped before its completion.
	CFAILED, Calibration Failed indicates that the test calibration failed.
Example(s)	SENS:DATA:TEL:RTD:MODE CONT
	SENS:DATA:TEL:RTD ON
	FETC:DATA:TEL:RTD:DEL:STAT?
See Also	FETCh:DATA:TELecom:RTD:DELay:LAST?

:SENSe:DATA:TELecom:RTD

Description	This command enables/disables the round trip delay measurements.
	At *RST condition, this value is set to OFF.
	Navigation Path: OTN BERT > Functions > RTD > Measure Delay
Syntax	:SENSe:DATA:TELecom:RTD <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the round trip delay measurement.
	ON, enables the round trip delay measurement.
	OFF, disables the round trip delay measurement.
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:RTD:MODE CONT
	SENS:DATA:TEL:RTD ON
	SENS:DATA:TEL:RTD?
	Returns: 1
See Also	SENSe:DATA:TELecom:RTD:MODE
	SENSe:DATA:TELecom:RTD:MODE?

:SENSe:DATA:TELecom:RTD:MODE

Description	This command selects the round trip delay test mode.
	At *RST condition, this value is set to SINGle.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:SENSe:DATA:TELecom:RTD:MODE <wsp><Mode>
Parameter(s)	**Mode**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the round trip delay test mode.
	SINGle: Single.
	CONTinuous: Continuous
Response Syntax	<Status>
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD:MODE?
	Returns: SINGLE
See Also	SENSe:DATA:TELecom:RTD
	SENSe:DATA:TELecom:RTD?

:SENSe:DATA:TELecom:RTD:MODE?

Description	This query returns the round trip delay test mode.
	At *RST condition, this value is set to SINGle.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:SENSe:DATA:TELecom:RTD:MODE?
Response Syntax	<Mode>
Response(s)	**Mode**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the round trip delay test mode.
	SINGLE, single mode is selected as the round trip delay.
	CONTINUOUS, continuous mode is selected as the round trip delay.
Example(s)	SENS:DATA:TEL:RTD:MODE CONT
	SENS:DATA:TEL:RTD:MODE?
	Returns: SINGLE
See Also	SENSe:DATA:TELecom:RTD
	SENSe:DATA:TELecom:RTD?

:SENSe:DATA:TELecom:RTD:RESet

Description	This command resets the results and measurement count.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: OTN BERT > Functions > RTD
Syntax	:SENSe:DATA:TELecom:RTD:RESet
Response Syntax	<Mode>
Example(s)	SENS:DATA:TEL:RTD:MODE SING
	SENS:DATA:TEL:RTD ON
	SENS:DATA:TEL:RTD:RES
See Also	FETCh:DATA:TELecom:RTD:COUNt:SUCCessful?

:SENSe:DATA:TELecom:RTD?

Description	This query returns the status of round trip delay measurements.
	At *RST condition, this value is set to OFF.
	Navigation Path: OTN BERT > Functions > RTD > Measure Delay
Syntax	:SENSe:DATA:TELecom:RTD?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the round trip delay measurement.
	1, enables measurement of the round trip delay.
	0, disables measurement of the round trip delay.
Example(s)	SENS:DATA:TEL:RTD:MODE CONT
	SENS:DATA:TEL:RTD ON
	SENS:DATA:TEL:RTD?
	Returns: 1
See Also	SENSe:DATA:TELecom:RTD:MODE
	SENSe:DATA:TELecom:RTD:MODE?

RTD (CPRI Framed L2)

:FETCh:DATA:TELecom:CPRI:OBSai:IDELay?

Description	This Query returns the OBSAI RTT value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > RTT > RRH - Delay
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:IDELay?
Response Syntax	<Internal Delay>
Response(s)	**Internal Delay**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return Internal Delay Value.
Example(s)	FETC:DATA:TEL:CPRI:OBS:IDEL?
See Also	FETCh:DATA:TEL:CPRI:OBS:MESS:C1?

:FETCh:DATA:TELecom:CPRI:OBSai:PROPdelay?

Description	This Query returns the OBSAI RTT Propagation delay value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > RTT > Propagation Delay.
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:PROPdelay? <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Propagation Delay Type
	LAST: Propagation Delay Last
	RMINimum: Propagation Delay Minimum
	RMAXimum:Propagation Delay Maximum
	AVERAGE: Propagation Delay Average
Response Syntax	<Propagation Delay>
Response(s)	**Propagation Delay**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return Propagation Delay Value.
Example(s)	FETC:DATA:TEL:CPRI:OBS:PROP?
See Also	FETCh:DATA:TEL:CPRI:OBS:RXS?

:FETCh:DATA:TELecom:CPRI:OBSai:RTT?

Description	This Query returns the OBSAI RTT value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > RTT > RTT.
Syntax	:FETCh:DATA:TELecom:CPRI:OBSai:RTT? <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	RTT Type
	LAST: RTT Last
	RMINimum: RTT Minimum
	RMAXimum:RTT Maximum
	AVERAGE: RTT Average
Response Syntax	<RTT>
Response(s)	**RTT**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Return RTT Value.
Example(s)	FETC:DATA:TEL:CPRI:OBS:RTT?
See Also	FETCh:DATA:TEL:CPRI:OBS:MESS:C1?

:SENSe:DATA:TELecom:CPRI:RTD:CABLe:AVERage?

Description	This query returns the Maximum count for Cable Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Cable Delay > Average
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:CABLe:AVERage?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Maximum count for Cable Delay.
Example(s)	SENS:DATa:TEL:CPRI:RTD:CABL:AVER?
See Also	SENSe:DATA:TELecom:CPRI:RTD:CABLe:MAXimum?

:SENSe:DATA:TELecom:CPRI:RTD:CABLe:LAST?

Description	This query returns the Last count for Cable Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Cable Delay > Last
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:CABLe:LAST?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Last count for Cable Delay.
Example(s)	SENS:DATa:TEL:CPRI:RTD:CABL:LAST?
See Also	SENSe:DATA:TELecom:CPRI:RTD:CABLe:MINimum?

:SENSe:DATA:TELecom:CPRI:RTD:CABLe:MAXimum?

Description	This query returns the Maximum count for Cable Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Cable Delay > Maximum
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:CABLe:MAXimum?
Response Syntax	<Count>
Response(s)	Count:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Maximum count for Cable Delay.
Example(s)	SENS:DATa:TEL:CPRI:RTD:CABL:MAX?
See Also	SENSe:DATA:TELecom:CPRI:RTD:CABLe:AVERage?

:SENSe:DATA:TELecom:CPRI:RTD:CABLe:MINimum?

Description	This query returns the Minimum count for Cable Delay.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Cable Delay > Mimimum
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:CABLe:MINimum?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Minimum count for Cable Delay.
Example(s)	SENSe:DATa:TEL:CPRI:RTD:CABL:MIN?
See Also	SENSe:DATA:TELecom:CPRI:RTD:CABLe:LAST?

:SENSe:DATA:TELecom:CPRI:RTD:DELay:AVERage?

Description	This query returns the Average count for Delay T14.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Delay T14 > Average
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:DELay:AVERage?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Average count for Delay T14.
Example(s)	SENS:DATa:TEL:CPRI:RTD:DEL:AVER?
See Also	SENSe:DATA:TELecom:CPRI:RTD:DELay:MAXimum?

:SENSe:DATA:TELecom:CPRI:RTD:DELay:LAST?

Description	This query returns the Last count for Delay T14.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Delay T14 > Last
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:DELay:LAST?
Response Syntax	\<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a \<STRING RESPONSE DATA> element.
	Returns the Last count for Delay T14.
Example(s)	SENS:DATa:TEL:CPRI:RTD:DEL:LAST?
See Also	SENSe:DATA:TELecom:CPRI:RTD:DELay:MINimum?

:SENSe:DATA:TELecom:CPRI:RTD:DELay:MAXimum?

Description	This query returns the Maximum count for Delay T14.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Delay T14 > Maximum
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:DELay:MAXimum?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Minimum count for Delay T14.
Example(s)	SENS:DATa:TEL:CPRI:RTD:DEL:MAX?
See Also	SENSe:DATA:TELecom:CPRI:RTD:DELay:AVERage?

:SENSe:DATA:TELecom:CPRI:RTD:DELay:MINimum?

Description	This query returns the Minimum count for Delay T14.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > RTD (CPRI) > Delay T14 > Mimimum
Syntax	:SENSe:DATA:TELecom:CPRI:RTD:DELay:MINimum?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Minimum count for Delay T14.
Example(s)	SENS:DATa:TEL:CPRI:RTD:DEL:MIN?
See Also	SENSe:DATA:TELecom:CPRI:RTD:DELay:LAST?

:SOURce:DATA:TELecom:CPRI:RTD:TOFFset

Description	This Command set toffset Value.
	At *RST condition, this value is 0.00.
	Navigation Path: Functions > RTD (CPRI) > Toffset
Syntax	:SOURce:DATA:TELecom:CPRI:RTD:TOFFset <wsp><Toffset>
Parameter(s)	**Toffset**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Toffset value. Choices are 0 to 66670.
	MAXimum, sets the instrument's greatest supported Toffset value.
	MINimum, sets the instrument's smallest supported Toffset value.
	DEFault, sets the Toffset as default value.
Response Syntax	<Count>
Example(s)	SOUR:DATA:TEL:CPRI:RTD:TOFF
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt

:SOURce:DATA:TELecom:CPRI:RTD:TOFFset?

Description	This Query returns toffset Value.
	At *RST condition, this value is 0.00.
	Navigation Path: Functions > RTD (CPRI) > Toffset
Syntax	:SOURce:DATA:TELecom:CPRI:RTD:TOFFset?[<wsp><Toffset>]
Parameter(s)	**Toffset**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Toffset value is returned.
	MAXimum is used to retrieve the instrument's greatest supported Toffset value.
	MINimum is used to retrieve the instrument's smallest supported Toffset value.
	DEFault is used to retrieve the default Toffset value.
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns toffset Value.
Example(s)	SOUR:DATA:TEL:CPRI:RTD:TOFF?
See Also	SOURce:DATA:TELecom:CPRI:INTerface:ERRor:MANual:AMOunt?

FEAC

:FETCh:DATA:TELecom:DSN:FEAC:LINK?

Description	This query returns the activity for the No Activity (All 1's), Alarm/Status, Loopback and Unassigned parameters during the last second of measurement.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FEAC > Received Messages > Link Activity
Syntax	:FETCh:DATA:TELecom:DSN:FEAC:LINK? <wsp><Activity>
Parameter(s)	**Activity**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the activity for the following parameters during the last second of measurement.
	NOACtivity: No Activity (All 1's).
	ASTatus: Alarm/Status.
	LOOPback: Loopback.
	UNASsigned: Unassigned.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the activity for the selected parameters during the last second of measurement.
	1, selected parameter is present
	0, selected parameter is absent
Example(s)	FETC:DATA:TEL:DSN:FEAC:LINK? LOOP
See Also	FETCh:DATA:TEL:SONet:SECTion:PM:STATistics?

:FETCh:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel?

Description	This query returns the channel Loopback commands for Current or Previous state.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FEAC > Received Messages > Loopback Commands > Current/Previous > Channel
Syntax	:FETCh:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Alarm/Status Unassigned Messages.
	CURRent: Alarm/Status Unassigned Messages for Current state.
	PREVious: Alarm/Status Unassigned Messages for Previous state.
Response Syntax	<Command>
Response(s)	**Command**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the channel loopback commands for Current or Previous state.
Example(s)	FETC:DATA:TEL:DSN:FEAC:LOOP:CHAN? CURR
See Also	FETCh:DATA:TELecom:DSN:FEAC:CONTrol?

:FETCh:DATA:TELecom:DSN:FEAC:LOOPback:CONTrol?

Description	This query returns the control Loopback commands for Current or Previous state.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FEAC > Received Messages > Loopback Commands > Current/Previous > Control
Syntax	:FETCh:DATA:TELecom:DSN:FEAC:LOOPback:CONTrol? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Alarm/Status Unassigned Messages.
	CURRent: Alarm/Status Unassigned Messages for Current state.
	PREVious: Alarm/Status Unassigned Messages for Previous state.
Response Syntax	<Command>
Response(s)	**Command**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the control loopback commands for Current or Previous state.
Example(s)	FETC:DATA:TEL:DSN:FEAC:LOOP:CONT? CURR
See Also	FETCh:DATA:TELecom:DSN:FEAC:CHANnel?

:FETCh:DATA:TELecom:DSN:FEAC:MESSage?

Description	This query returns the Alarm/Status Unassigned Messages.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FEAC > Received Messages > Alarm/Status and Unassigned > Mode(Manual) > Inject
Syntax	:FETCh:DATA:TELecom:DSN:FEAC:MESSage? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Alarm/Status Unassigned Messages.
	CURRent: Alarm/Status Unassigned Messages for Current state.
	PREVious: Alarm/Status Unassigned Messages for Previous state.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Alarm/Status Unassigned Messages.
Example(s)	FETC:DATA:TEL:DSN:FEAC:MESS? CURR
See Also	FETCh:DATA:TEL:SONet:SECTion:PM:STATistics?

:SOURce:DATA:TELecom:DSN:FEAC:CODeword

Description	This command selects the continuous codeword for Alarm/Status Unassigned Messages.
	At *RST condition, this value is set to DS3IR.
	Navigation Path: Functions > FEAC > Generated Messages > Alarm/Status and Unassigned > Codeword
Syntax	:SOURce:DATA:TELecom:DSN:FEAC:CODeword <wsp><Codeword>
Parameter(s)	**Codeword**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the codeword.

	Navigation Path: Functions > FDL > Bit-Oriented Message > Received Messages > Priority > Current/Previous
Syntax	:FETCh:DATA:TELecom:DSN:FDL:PRIority:MESSage? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Alarm/Status Unassigned Messages.
	CURRent: Alarm/Status Unassigned Messages for Current state.
	PREVious: Alarm/Status Unassigned Messages for Previous state.
Response Syntax	<Message>
Response(s)	**Message**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the Alarm/Status Unassigned Messages.
Example(s)	FETC:DATA:TEL:DSN:FDL:PRI:MESS? CURRENT
See Also	FETCh:DATA:TEL:SON:SECTion:PM:STAT?

:FETCh:DATA:TELecom:DSN:FDL:RESPonse:CONTrol?

Description	This query returns the control Loopback commands for Current or Previous state.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Received Messages > Response > Current/Previous
Syntax	:FETCh:DATA:TELecom:DSN:FDL:RESPonse:CONTrol? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Alarm/Status Unassigned Messages.
	CURRent: Alarm/Status Unassigned Messages for Current state.
	PREVious: Alarm/Status Unassigned Messages for Previous state.
Response Syntax	<Command>
Response(s)	**Command**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the control loopback commands for Current or Previous state.
Example(s)	FETC:DATA:TEL:DSN:FDL:RESP:CONT? CURRENT
See Also	FETCh:DATA:TELecom:DSN:FEAC:CHANnel?

:SOURce:DATA:TELecom:DSN:FDL:MANual:INJect

Description	This command sets the manual codeword
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Priority > Inject
Syntax	:SOURce:DATA:TELecom:DSN:FDL:MANual:INJect <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the manual codeword Injection
	ON, enables the manual codeword Injection
	OFF, disables the manual codeword Injection
Response Syntax	<Command>
Example(s)	SOUR:DATA:TEL:DSN:FDL:MAN:INJ ON
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt

:SOURce:DATA:TELecom:DSN:FDL:MANual:INJect?

Description	This query returns the status of manual codeword Injection
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Priority > Inject
Syntax	:SOURce:DATA:TELecom:DSN:FDL:MANual:INJect?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Manual codeword Injection
	1, status of the Manual codeword Injection is enabled.
	0, status of the Manual codeword Injection is disabled.
Example(s)	SOUR:DATA:TEL:DSN:FDL:MAN:INJ ON
	SOUR:DATA:TEL:DSN:FDL:MAN:INJ? Returns: 1
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt

:SOURce:DATA:TELecom:DSN:FDL:PRIority:CODeword

Description	This command selects the manual codeword for Alarm/Status Unassigned Messages.
	At *RST condition, this value is set to DS3IR.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Priority > Codeword
Syntax	:SOURce:DATA:TELecom:DSN:FDL:PRIority:CODeword <wsp><Codeword>
Parameter(s)	**Codeword**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the manual codeword.
	RAI
	RACI
	LOOPACK
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:DSN:FDL:PRI:COD RAI
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODeword?
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt
	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:DSN:FDL:PRIority:CODeword?

Description	This query returns the manual codeword for Alarm/Status Unassigned Messages.
	At *RST condition, this value is set to DS3IR.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Priority > Codeword
Syntax	:SOURce:DATA:TELecom:DSN:FDL:PRIority:CODeword?
Response Syntax	<Codeword>
Response(s)	**Codeword**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the manual codeword.
	RAI, RAI is selected as manual codeword.
	RACI, RACI is selected as manual codeword.
	LOOPACK,LOOPACK is selected as manual codeword.
Example(s)	SOUR:DATA:TEL:DSN:FDL:PRI:COD RAI
	SOUR:DATA:TEL:DSN:FDL:PRI:COD? Returns: RAI
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODeword

	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:DSN:FDL:RESPonse:AMOunt

Description	This command sets the amount for Alarm/Status Unassigned Messages.
	At *RST condition, this value is set to 10.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Command/Response > Amount
Syntax	:SOURce:DATA:TELecom:DSN:FDL:RESPonse:AMOunt <wsp><Amount>
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the amount for Alarm/Status Unassigned Messages.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
	DEFault: Default value
	Choices are 1 through 15.
Response Syntax	<Codeword>
Example(s)	SOUR:DATA:TEL:DSN:FDL:RESP:AMO 10
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt?
	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:DSN:FDL:RESPonse:AMOunt?

Description	This query returns the amount for Alarm/Status Unassigned Messages.
	At *RST condition, this value is set to 10.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Command/Response > Amount
Syntax	:SOURce:DATA:TELecom:DSN:FDL:RESPonse:AMOunt?[<wsp><Amount>]
Parameter(s)	**Amount**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current amount is returned.
	MAXimum: Biggest supported value.
	MINimum: Smallest supported value.
	DEFault: Default value.
Response Syntax	<Amount>
Response(s)	**Amount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the amount for Alarm/Status Unassigned Messages.
Example(s)	SOUR:DATA:TEL:DSN:FDL:RESP:AMO 10
	SOUR:DATA:TEL:DSN:FDL:RESP:AMO? Returns: 10
See Also	SOURce:DATA:TELecom:DSN:FEAC

	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt
	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:DSN:FDL:RESPonse:CODeword

Description	This command selects the manual codeword Response for Alarm/Status Unassigned Messages.
	At *RST condition, this value is set to DS3IR.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Response > Codeword
Syntax	:SOURce:DATA:TELecom:DSN:FDL:RESPonse:CODeword <wsp><Codeword>

:SOURce:DATA:TELecom:DSN:FDL:RESPonse:CODeword

| **Parameter(s)** | **Codeword**:

The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.

Selects the Response codeword.

CICSULILBCK: CiCsuLineLoopback.

DNTUSESYSC: DS3 Eqpt. Failure (SA) (00110010).

ISDNLILBCK: IsdnLineLoopback.

LILPBCKACT: LineLoopbackActivate.

LILBCKDEACT: LineLoopbackDeactivate.

NWLPBCKACT: NetworkLoobackActivate.

NT1PWOFF: Nt1PowerOff.

PAYLLPBCKACT: PayloadLoobackActivate.

PLLPBCKDEACT: PayloadLoopbackDeactivate.

PROTSWTCACK: ProtectionSwitchAcknowledge.

PROTSWLI1: ProtectionSwitchLine1.

PROTSWLI2, PROTSWLI3, PROTSWLI4, PROTSWLI5, PROTSWLI6, PROTSWLI7, PROTSWLI8, PROTSWLI9, PROTSWLI10, PROTSWLI11, PROTSWLI12, PROTSWLI13, PROTSWLI14, PROTSWLI15, PROTSWLI16, PROTSWLI17, PROTSWLI18, PROTSWLI19, PROTSWLI20, PROTSWLI21, PROTSWLI22, PROTSWLI23, PROTSWLI24, PROTSWLI25, PROTSWLI26, PROTSWLI27

PROTSWREL: ProtectionSwitchRelease.

ALLZ: ALLZeros as response code word.

RFCUST000001: ReservedForCustomer000001.

RFCUST000011: ReservedForCustomer000011.

RFCUST000101: ReservedForCustomer000101.

RFCUST011011: ReservedForCustomer011011.

RFNWUS001011: ReservedForNetworkUse001011.

RFNWUS001101: ReservedForNetworkUse001101.

RFNWUS001111: ReservedForNetworkUse001111.

RFNWUE011101: ReservedForNetworkUse011101.

:SOURce:DATA:TELecom:DSN:FDL:RESPonse:CODeword

Parameter(s)	RESNWSYNC: ReservedForNetworkSynchronization.
	SOTMINCLKTRA: SonetMinimumClockTraceabl.
	STRTRACE: StratumTraceable.
	STR2TRA: Stratum2Traceable.
	STR3ETRA: Stratum3ETraceable.
	STR4TRA: Stratum4Traceable.
	SYNCTRAUNKWN: SynchronizationTraceabilityUnknown.
	TMITNODECLK: TransmitNodeClock.
	UNANM011110: UnassignMessage011110.
	UNANM111101: UnassignMessage111101.
	UNANM111111: UnassignMessage111111.
	UNDRST010110: UnderStudyForMaintenance010110.
	UNDRST011010: UnderStudyForMaintenance011010.
	UNIVLBCKDEACT: UniversalLoopbackDeactivate.
Response Syntax	\<Amount\>
Example(s)	SOUR:DATA:TEL:DSN:FDL:RESP:COD CICSULILBCK
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword?

	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:DSN:FDL:RESPonse:CODeword?

Description	This query returns the manual codeword Response for Alarm/Status Unassigned Messages.
	At *RST condition, this value is set to DS3IR.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Response > Codeword
Syntax	:SOURce:DATA:TELecom:DSN:FDL:RESPonse:CODeword?
Response Syntax	<Codeword>
Response(s)	**Codeword**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the response codeword.
Example(s)	SOUR:DATA:TEL:DSN:FDL:RESP:COD CICSULILBCK
	SOUR:DATA:TEL:DSN:FDL:RESP:COD? Returns: CICSULILBCK
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODeword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt
	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:DSN:FDL:RESPonse:INJect

Description	This command sends manual command response of the Alarm/Status Unassigned Messages.
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Functions > FDL > Bit-Oriented Message > Generated Messages > Response > Inject
Syntax	:SOURce:DATA:TELecom:DSN:FDL:RESPonse:INJect
Response Syntax	<Codeword>
Example(s)	SOUR:DATA:TEL:DSN:FDL:RESP:INJ
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt

FDL - Performance Report Message

:FETCh:DATA:TELecom:DSN:FDL:BITevents?

Description	This command Returns the value of PRM Bit Events
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Functions > FDL > Performance Report Message > Received Messages > PRM Bit Events
Syntax	:FETCh:DATA:TELecom:DSN:FDL:BITevents? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of PRM Bit event.
	G3: 5 < CRC Error Event <= 10
	LV: Line Code Violation Event <= 1
	G4: 10 < CRC Error Event <= 100
	U1: Under study for synchronization
	U2: Under study for synchronization
	G5: 100 < CRC Error Event <= 319
	SL: Controlled Slip Event <= 1
	G6: CRC Error Event >= 320
	FE: Frame Sync. Bit Error Event <= 1
	SE: Severely-Errored Framing Event <= 1
	LB: Payload Loopback Activated
	G1: CRC Error Event = 1
	R: Reserved
	G2: 1 < CRC Error Event <= 5
	Nm and Nl: One-second report modulo 4 counter.
Response Syntax	<Value>

:FETCh:DATA:TELecom:DSN:FDL:BITevents?

Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of PRM Bit Events
Example(s)	FETC:DATA:TEL:DSN:FDL:BIT? G1
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:AMOunt

:FETCh:DATA:TELecom:DSN:FDL:CIRCuit?

Description	This query returns the Circuit value
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Functions > FDL > Performance Report Message > Received Messages > Circuit
Syntax	:FETCh:DATA:TELecom:DSN:FDL:CIRCuit?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of Received messages Circuit
Example(s)	FETC:DATA:TEL:DSN:FDL:CIRCuit?
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:AMOunt

:FETCh:DATA:TELecom:DSN:FDL:EVENtcount?

Description	This query returns the value of event count
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > Eventcount
Syntax	:FETCh:DATA:TELecom:DSN:FDL:EVENtcount?
Response Syntax	<Eventcount>
Response(s)	**Eventcount**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the status of event count
Example(s)	FETC:DATA:TEL:DSN:FDL:EVENtcount?
See Also	FETCh:DATA:TEL:SON:SECTion:PM:STAT?

:FETCh:DATA:TELecom:DSN:FDL:LINK?

Description	This query returns the activity for the No Activity (All 1's), Alarm/Status, Loopback and Unassigned parameters during the last second of measurement.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FDL > Performance Report Message > Received Messages > Link Activity
Syntax	:FETCh:DATA:TELecom:DSN:FDL:LINK? <wsp><Activity>
Parameter(s)	**Activity**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the activity for the following parameters during the last second of measurement.
	IDLE: IDLE
	PRIority: PRIORITY
	CR: CR
	UNASSIGNED: UNASsigned
	PRM: PRM
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the activity for the selected parameters during the last second of measurement.
	1, Selected parameter is present
	0, Selected parameter is present
Example(s)	FETC:DATA:TEL:DSN:FDL:LINK? PRM
See Also	FETCh:DATA:TEL:SON:SECTion:PM:STAT?

:FETCh:DATA:TELecom:DSN:FDL:REPortcont?

Description	This command injects the Report content
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Functions > FDL > Performance Report Message > Received Messages > Report Content > Performance Information
Syntax	:FETCh:DATA:TELecom:DSN:FDL:REPortcont? <wsp><Time Line>, <Type>
Parameter(s)	**Time Line**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Time Line for Performance Messages
	Each PRM is listed into four lines called Time:
	T0 represents valid PRM message received in the last second of measurement (bytes 5 and 6).
	T0_1 represents the message one PRM ago (bytes 7 and 8).
	T0_2 represents the message two PRM ago (bytes 9 and 10).
	T0_3 represents the message three PRM ago (bytes 11 and 12).
	Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of PRM Bit event.
	G1: CRC Error Event = 1
	G2: 1 < CRC Error Event <= 5
	G3: 5 < CRC Error Event <= 10
	G4: 10 < CRC Error Event <= 100
	G5: 100 < CRC Error Event <= 319
	G6: CRC Error Event >= 320
	SE: Severely-Errored Framing Event >= 1
	FE: Frame Sync. Bit Error Event >= 1
	LV: Line Code Violation Event >= 1
	SL: Controlled Slip Event >= 1
	LB: Payload Loopback Activated
	U1BIT: Under study for synchronization
	U2BIT: Under study for synchronization
	NM and NL: One-second report modulo 4 counter.
	R: Reserved

:FETCh:DATA:TELecom:DSN:FDL:REPortcont?

Response Syntax	<Value>
Response(s)	**Value**: The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element. Returns the status of Performace Messages
Example(s)	FETC:DATA:TEL:DSN:FDL:REP? T0,G2
See Also	SOURce:DATA:TELecom:DSN:FEAC SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:CODEword SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:AMOunt

:FETCh:DATA:TELecom:DSN:FDL:VALid:EVENtcount?

Description	This query returns the activity for the No Activity (All 1's), Alarm/Status, Loopback and Unassigned parameters during the last second of measurement.
	At *RST condition, this value is device dependent.
	Navigation Path: Functions > FDL > Performance Report Message > Received Messages > Valid Event Count
Syntax	:FETCh:DATA:TELecom:DSN:FDL:VALid:EVENtcount?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the valid eventcount
Example(s)	FETC:DATA:TEL:DSN:FDL:VALid:EVENtcount?
See Also	FETCh:DATA:TEL:SON:SECTion:PM:STAT?

:SOURce:DATA:TELecom:DSN:FDL:ANSI

Description	This command enables/disables the activation of ANSI TI.403
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > ANSI TI.403
Syntax	:SOURce:DATA:TELecom:DSN:FDL:ANSI <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, enables the activation of ANSI TI.403
	OFF, disables the activation of ANSI TI.403
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:DSN:FDL:ANSI ON
See Also	SOURce:DATA:TELecom:DS:ENABled?

:SOURce:DATA:TELecom:DSN:FDL:ANSI?

Description	This query returns status of ANSI TI.403
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > ANSI TI.403
Syntax	:SOURce:DATA:TELecom:DSN:FDL:ANSI?
Response Syntax	\<Status\>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a \<BOOLEAN RESPONSE DATA\> element.
	Returns the of ANSI mode
Example(s)	SOUR:DATA:TEL:DSN:FDL:ANSI ON
	SOUR:DATA:TEL:DSN:FDL:ANSI?
	Returns: 1
See Also	SOURce:DATA:TELecom:DS:ENABled?

:SOURce:DATA:TELecom:DSN:FDL:BITevents:STATus

Description	This command sets the Bit event Status
	At *RST condition, this value is set to off.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > PRM Bit Events
Syntax	:SOURce:DATA:TELecom:DSN:FDL:BITevents:STATus <wsp><Type>, <Set>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of PRM Bit event.
	G3: 5 < CRC Error Event <= 10
	LV: Line Code Violation Event <= 1
	G4: 10 < CRC Error Event <= 100
	U1BIT: Under study for synchronization
	U2BIT: Under study for synchronization
	G5: 100 < CRC Error Event <= 319
	SL: Controlled Slip Event <= 1
	G6: CRC Error Event >= 320
	FE: Frame Sync. Bit Error Event <= 1
	SE: Severely-Errored Framing Event <= 1
	LB: Payload Loopback Activated
	G1: CRC Error Event = 1
	R: Reserved
	G2: 1 < CRC Error Event <= 5
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	ON, enables the activation of PRM Bit event.
	OFF, disables the activation of PRM Bit event.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:DSN:FDL:BIT:STAT G1,ON
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE?

:SOURce:DATA:TELecom:DSN:FDL:BITevents:STATus?

Description	This query returns the Bit event Status
	At *RST condition, this value is set to AIS.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > PRM Bit Events
Syntax	:SOURce:DATA:TELecom:DSN:FDL:BITevents:STATus? <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of PRM Bit event.
	G3: 5 < CRC Error Event <= 10
	LV: Line Code Violation Event <= 1
	G4: 10 < CRC Error Event <= 100
	U1BIT: Under study for synchronization
	U2BIT: Under study for synchronization
	G5: 100 < CRC Error Event <= 319
	SL: Controlled Slip Event <= 1
	G6: CRC Error Event >= 320
	FE: Frame Sync. Bit Error Event <= 1
	SE: Severely-Errored Framing Event <= 1
	LB: Payload Loopback Activated
	G1: CRC Error Event = 1
	R: Reserved
	G2: 1 < CRC Error Event <= 5
	Nm and Nl: One-second report modulo 4 counter.
Response Syntax	<Set>

:SOURce:DATA:TELecom:DSN:FDL:BITevents:STATus?

Response(s)	Set:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of PRM Bit Events
Example(s)	SOUR:DATA:TEL:DSN:FDL:BIT:STAT G1,ON
	SOUR:DATA:TEL:DSN:FDL:BIT:STAT? G1
	Returns: 1
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE

:SOURce:DATA:TELecom:DSN:FDL:CHANnel:TYPE

Description	This command selects the type of Circuit.
	At *RST condition, this value is set to CITONETWORK.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > Circuit
Syntax	:SOURce:DATA:TELecom:DSN:FDL:CHANnel:TYPE <wsp><Type>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the type of FDL Channel Type.
	CITONETWORK: CI To Network
	NETWORKTOCI: Network To CI
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:DSN:FDL:CHAN:TYPE NETWORKTOCI
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE?

:SOURce:DATA:TELecom:DSN:FDL:CHANnel:TYPE?

Description	This query returns the type of Circuit.
	At *RST condition, this value is set to CITONETWORK.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > Circuit
Syntax	:SOURce:DATA:TELecom:DSN:FDL:CHANnel:TYPE?
Response Syntax	<Alarm>
Response(s)	**Alarm**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the type of Digital Signal-level 1(DS1)/Digital Signal-level 3 (DS3) alarm.
	AIS, Alarm Indication Signal (AIS) is selected as Digital Signal-level 1(DS1)/Digital Signal-level 3 (DS3) alarm.
	RAI, Remote Alarm Indicates (RAI) is selected as Digital Signal-level 1(DS1) alarm.
	OOF, Out of Frame (OOF) is selected as Digital Signal-level 1(DS1)/Digital Signal-level 3 (DS3) alarm.
	RDI1, Remote Defect Indicator (RDI) is selected as Digital Signal-level 3 (DS3) alarm.
	IDLE1, IDLE is selected as Digital Signal-level 3 (DS3) alarm.
Example(s)	SOUR:DATA:TEL:DSN:FDL:CHAN:TYPE NETWORKTOCI
	SOUR:DATA:TEL:DSN:FDL:CHAN:TYPE? Returns: NETWORKTOCI
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE

:SOURce:DATA:TELecom:DSN:FDL:INJect

Description	This command injects the FDL Circuit
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > Mode(Single) > Inject
Syntax	:SOURce:DATA:TELecom:DSN:FDL:INJect
Response Syntax	<Alarm>
Example(s)	SOUR:DATA:TEL:DSN:FDL:INJ
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:LOOPback:CHANnel:AMOunt

:SOURce:DATA:TELecom:DSN:FDL:MODE

Description	This command selects the type of Mode.
	At *RST condition, this value is set to AIS.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > Mode(Continous) > Inject
Syntax	:SOURce:DATA:TELecom:DSN:FDL:MODE <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	enables/disables the activation of ANSI TI.403,
	ON,Enables the activation of Continous injection
	OFF, Enables the activation of Continous injection
Response Syntax	<Alarm>
Example(s)	SOUR:DATA:TEL:DSN:FDL:MODE ON
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE?

:SOURce:DATA:TELecom:DSN:FDL:MODE?

Description	This query returns the type of Mode.
	At *RST condition, this value is set to AIS.
	Navigation Path: Functions > FDL > Performance Report Message > Generated Messages > Mode(Continous) > Inject
Syntax	:SOURce:DATA:TELecom:DSN:FDL:MODE?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of Continous mode Injection
Example(s)	SOUR:DATA:TEL:DSN:FDL:MODE ON
	SOUR:DATA:TEL:DSN:FDL:MODE?
	Returns: 1
See Also	SOURce:DATA:TELecom:DSN:ALARm:DS[1..n]:TYPE?

Pointer Adjustment

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:DECRement: COUNt?

Description	This query returns the counts in which negative pointer adjustment is detected for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > Ptr.Decr. Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:COUNt?
Response Syntax	\<Count\>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a \<NR2 NUMERIC RESPONSE DATA\> element.
	Returns the count of negative pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:DECR:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:DECRement: SEConds?

Description	This query returns the number of seconds in which negative pointer adjustment is detected for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > Ptr.Decr. Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of negative pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:DECR:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:COUNt?

Description	This query returns the count in which positive pointer adjustment is detected for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > Ptr.Incr. Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of positive pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:INCR:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SEConds?

Description	This query returns the number of seconds in which positive pointer adjustment is detected for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > Ptr.Incr. Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of positive pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:INCR:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NDF:COUNt?

Description	This query returns the count of New Data Flag (NDF). At *RST condition, this value is device dependent. Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > NDF Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NDF:COUNt?
Response Syntax	<Count>
Response(s)	**Count**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the number of counts of New Data Flag (NDF).
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:NDF:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NDF:SEConds ?

Description	This query returns the number of seconds of New Data Flag (NDF) for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > NDF Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NDF:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of New Data Flag (NDF).
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:NDF:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NNDF:COUNt?

Description	This query returns the count of No New Data Flag (NNDF).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > No NDF Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NNDF:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of counts of No New Data Flag (NNDF).
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:NNDF:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NNDF:SEConds?

Description	This query returns the number of seconds of No New Data Flag (NNDF) for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > No NDF Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:NNDF:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of No New Data Flag (NNDF).
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:NNDF:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:OFFSet?

Description	This query returns the difference between the pointer increment and the pointer decrement for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > Cumulative Offset
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:OFFSet?
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the difference between the pointer increment and the pointer decrement.
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:OFFS?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:VALue?

Description	This query returns the actual pointer value being transmitted for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > Pointer Value
Syntax	:FETCh:DATA:TELecom:SDHSonet:HOP:POINter:VALue?
Response Syntax	<Pointer>
Response(s)	**Pointer**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the actual pointer value being transmitted.
Example(s)	FETC:DATA:TEL:SDHS:HOP:POIN:VAL?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:COUNt?

Description	This query returns the counts in which negative pointer adjustment is detected for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > Ptr.Decr. Count
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > Ptr.Decr. Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of negative pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:DECR:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SEConds?

Description	This query returns the number of seconds in which negative pointer adjustment is detected for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > Ptr.Decr. Seconds
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > Ptr.Decr. Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of negative pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:DECR:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:COUNt?

Description	This query returns the count in which positive pointer adjustment is detected for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > Ptr.Incr. Count
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > Ptr.Incr. Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the count of positive pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:INCR:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SEConds?

Description	This query returns the number of seconds in which positive pointer adjustment is detected for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > Ptr.Incr. Seconds
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > Ptr.Incr. Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of positive pointer adjustment detected.
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:INCR:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NDF:COUNt?

Description	This query returns the count of New Data Flag (NDF).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > NDF Count
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > NDF Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NDF:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of counts of New Data Flag (NDF).
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:NDF:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NDF:SEConds ?

Description	This query returns the number of seconds of New Data Flag (NDF) for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > NDF Seconds
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > NDF Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NDF:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of New Data Flag (NDF).
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:NDF:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NNDF:COUNt ?

Description	This query returns the count of No New Data Flag (NNDF).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > No NDF Count
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > No NDF Count
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NNDF:COUNt?
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of counts of No New Data Flag (NNDF).
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:NNDF:COUN?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NNDF:SEConds?

Description	This query returns the number of seconds of No New Data Flag (NNDF) for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > No NDF Seconds
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > No NDF Seconds
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:NNDF:SEConds?
Response Syntax	<Seconds>
Response(s)	**Seconds**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of seconds of No New Data Flag (NNDF).
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:NNDF:SEC?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:OFFSet?

Description	This query returns the difference between the pointer increment and the pointer decrement for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > Cumulative Offset
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > Cumulative Offset
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:OFFSet?
Response Syntax	<Offset>
Response(s)	**Offset**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the difference between the pointer increment and the pointer decrement.
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:OFFS?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:VALue?

Description	This query returns the actual pointer value being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > VT > Pointer Value
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > RX Pointer Adjustment > TU > Pointer Value
Syntax	:FETCh:DATA:TELecom:SDHSonet:LOP:POINter:VALue?
Response Syntax	<Pointer>
Response(s)	**Pointer**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the actual pointer value being transmitted.
Example(s)	FETC:DATA:TEL:SDHS:LOP:POIN:VAL?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:FETCh:DATA:TELecom:SDHSonet:SEQuence:POINter:STATus?

Description	This query returns the actual pointer status being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Status
Syntax	:FETCh:DATA:TELecom:SDHSonet:SEQuence:POINter:STATus?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the sequence pointer.
	STATPNTR, sequence pointer status is disabled.
	SEQUENCE, sequence pointer status is enabled.
Example(s)	FETC:DATA:TEL:SDHS:SEQuence:POINter:STATus?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement

:FETCh:DATA:TELecom:SDHSonet:SEQuence:POINter:VALue?

Description	This query returns the actual pointer value being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Pointer Value
Syntax	:FETCh:DATA:TELecom:SDHSonet:SEQuence:POINter:VALue?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the sequence pointer value.
Example(s)	FETC:DATA:TEL:SDHS:SEQuence:POINter:VALue?
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement

Description	This command selects the new decrement pointer value for High Order Path (HOP).
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Step > Decrement
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:DECR:SIZE 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:DECR
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:SIZE

Description	This command selects the number of negative pointer adjustment to include into the SONET or SDH for High Order Path (HOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:SIZE <wsp><Size>
Parameter(s)	Size:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the pointer size between 1 through 1000.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:DECR:SIZE 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:DECR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SIZE?

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement :SIZE?

Description	This query returns the selected number of negative pointer adjustment to include into the SONET or SDH for High Order Path (HOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:SIZE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	This parameter is optional.If no token is specified, the current number of negative pointer is returned.
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the pointer size.
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:DECR:SIZE 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:DECR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement

Description	This command selects the new increment pointer value for High Order Path (HOP).
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Step > Increment
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:INCR:SIZE 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:INCR
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement: SIZE

Description	This command selects the number of positive pointer adjustment to include into the SONET or SDH for High Order Path (HOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SIZE <wsp><Size>
Parameter(s)	Size:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the pointer size between 1 through 1000.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:INCR:SIZE 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:INCR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:SIZE?

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement: SIZE?

Description	This query returns the selected number of positive pointer adjustment to include into the SONET or SDH for High Order Path (HOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SIZE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of positive pointer is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the pointer size.
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:INCR:SIZE 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:INCR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:DECRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW

Description	This event sets the new pointer value for High Order Path (HOP).
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Jump > New Pointer > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:VAL 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG

Description	This command selects the status of a new pointer data flag for High Order Path (HOP).
	At *RST condition, this value is set to NNDF.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Jump > New Data Flag
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG <wsp><Flag>
Parameter(s)	**Flag**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the new pointer data flag.
	NNDF: the NNDF (No New Data Flag).
	NDF: the NDF (New Data Flag).
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:FLAG NNDF
	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:FLAG?
	Returns: NNDF
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue?

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG?

Description	This query returns the status of a new pointer data flag for High Order Path (HOP).
	At *RST condition, this value is set to NNDF.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Jump > New Data Flag
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:FLAG?
Response Syntax	<Flag>
Response(s)	**Flag**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the new pointer data flag.
	NNDF, No New Data Flag (NNDF) is selected.
	NDF, New Data Flag (NDF) is selected.
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:FLAG NNDF
	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:FLAG?
	Returns: NNDF
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

Description	This command sets the new pointer value for SONET/SDH of High Order Path (HOP).
	At *RST condition, this value reverts the default value.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Jump > New Pointer
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the new pointer value between 0 through 782.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Flag>
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:VAL 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:VAL?
	Returns: 15
See Also	SOURce:DATA:TEL:SDHSonet:HOP:POINter:NEW

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue ?

Description	This query returns the new pointer value for High Order Path (HOP).
	At *RST condition, this value reverts the default value.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Jump > New Pointer
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional.If no token is specified, the current value of new pointer is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the new pointer value.
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:VAL 15
	SOUR:DATA:TEL:SDHS:HOP:POIN:NEW:VAL?
	Returns: 15
See Also	SOURce:DATA:TEL:SDHSonet:HOP:POINter:NEW?

:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:VALue?

Description	This query returns the actual pointer value being transmitted into the SONET/SDH for High Order Path (HOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > OTN SONET/SDH BERT OR SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Step > Pointer Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:HOP:POINter:VALue?
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the actual pointer value being transmitted.
Example(s)	SOUR:DATA:TEL:SDHS:HOP:POIN:VAL?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SIZE?

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement

Description	This command selects the new decrement pointer value for Low Order Path (LOP).
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Step > Decrement
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Step > Decrement
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:DECR:SIZE 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:DECR
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SIZE

Description	This command selects the number of negative pointer adjustment to include into the SONET or SDH for Low Order Path (LOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Step > Value
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SIZE <wsp><Size>
Parameter(s)	**Size**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the pointer size.
	Choices are 1 through 1000.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:DECR:SIZE 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:DECR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SIZE?

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SIZE?

Description	This query returns the selected number of negative pointer adjustment to include into the SONET or SDH for Low Order Path (LOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Step > Value
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SIZE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the value of pointer size is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the pointer size.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:DECR:SIZE 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:DECR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement

Description	This command selects the new increment pointer value for Low Order Path (LOP).
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Step > Increment
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Step > Increment
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:INCR:SIZE 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:INCR
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SIZE

Description	This command selects the number of positive pointer adjustment to include into the SONET or SDH for Low Order Path (LOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Step > Value
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SIZE <wsp><Size>
Parameter(s)	**Size**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the pointer size.
	Choices are 1 through 1000.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:INCR:SIZE 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:INCR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SIZE?

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement: SIZE?

Description	This query returns the selected number of positive pointer adjustment to include into the SONET or SDH for Low Order Path (LOP).
	At *RST condition, this value is set to 1.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Step > Value
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Step > Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SIZE?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the value of pointer size is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the pointer size.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:INCR:SIZE 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:INCR:SIZE?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement:SIZE

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW

Description	This event sets the new pointer value for Low Order Path (LOP).
	This command is an event and has no associated *RST condition or query form.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Jump > New Pointer > Inject
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Jump > New Pointer > Inject
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:VAL 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:VALue

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

Description	This command selects the status of a new pointer data flag for Low Order Path (LOP).
	At *RST condition, this value is set to NNDF.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Jump > New Data Flag
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Jump > New Data Flag
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG <wsp><Set>
Parameter(s)	**Set**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables New Data Flag:
	NDF: Enables.
	NNDF: Disables.
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:FLAG ON
	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:FLAG?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG?

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG?

Description	This query returns the status of a new pointer data flag for Low Order Path (LOP).
	At *RST condition, this value is set to NNDF.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Jump > New Data Flag
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Jump > New Data Flag
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG?
Response Syntax	<Flag>
Response(s)	**Flag**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of LOP NEW FLAG
	1, New pointer status is enabled
	0, New pointer status is disabled
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:FLAG ON
	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:FLAG?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:VALue

Description	This command sets the new pointer value for SONET/SDH of Low Order Path (LOP).
	At *RST condition, this value reverts the default value.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Jump > New Pointer
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Jump > New Pointer
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:VALue <wsp><Value>
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the new pointer value.
	Choices are 0 through 103.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Flag>
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:VAL 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:VAL?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:VALue?

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:VALue ?

Description	This query returns the new pointer value for Low Order Path (LOP).
	At *RST condition, this value reverts the default value.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Jump > New Pointer
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Jump > New Pointer
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:VALue?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the new pointer value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the new pointer value.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:VAL 15
	SOUR:DATA:TEL:SDHS:LOP:POIN:NEW:VAL?
	Returns: 15
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:VALue

:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:VALue?

Description	This query returns the actual pointer value being transmitted into the SONET/SDH for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > VT > Step > Pointer Value
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > TU > Step > Pointer Value
Syntax	:SOURce:DATA:TELecom:SDHSonet:LOP:POINter:VALue?
Response Syntax	<Size>
Response(s)	**Size**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the actual pointer value being transmitted.
Example(s)	SOUR:DATA:TEL:SDHS:LOP:POIN:VAL?
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:INCRement:SIZE?

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter

Description	This command enables/disables the sequence pointer.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Sequence
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter ON
	SOUR:DATA:TEL:SDHS:SEQuence:POINter?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:INITcool:STATus

Description	This command sets the actual pointer init-cool status being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Init-Cool
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:INITcool:STATus <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Size>
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:INITcool:STATUS ON
	SOUR:DATA:TEL:SDHS:SEQuence:POINter:INITcool:STATUS?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:INITcool:STATus?

Description	This query returns the actual pointer init-cool status being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Init-Cool
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:INITcool:STATus?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the actual pointer init-cool status of Low Order Path (LOP) alarm generation.
	0, actual pointer init-cool status is enabled.
	1, actual pointer init-cool status is disabled.
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:INITcool:STATUS?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PATTern

Description	This command sets the Pattern type for pointer adjustment to include into the SONET/SDH BERT.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Sequence
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PATTern \<wsp>\<Standard>
Parameter(s)	**Standard**:
	The program data syntax for the first parameter is defined as a \<CHARACTER PROGRAM DATA> element.
	Selects the Pattern type for pointer adjustment.
	OPPOSITEPOLARITY: Single pointers of opposite polarity
	DOUBLEPOINTER: Regular pointers plus one double pointer
	MISPOINTER: Regular pointers with one missing pointer
	DOUBLEOPPOLARITY: Double pointers of opposite polarity
	SINGLEPA: Double pointers of opposite polarity
	BURSTPA: Burst pointer adjustment
	PHASETRANS: Phase transient
	PAPATTERN: Periodic pointer adjustment 87-3 pattern
	ADD87: Periodic 87-3 with Add
	CANCEL87: Periodic 87-3 with Cancel
	PACONTINIOUS: Periodic pointer adjustment continuous
	ADDPACONTINIOUS: Periodic pointer adjustment continuous with Add
	CANCELPACONTINIOUS: Periodic pointer adjustment continuous with Cancel
	PER261: Periodic pointer adjustment 26-1 pattern
	ADDPER261: Periodic 26-1 with Add
	CANCELPER261: Periodic 26-1 with Cancel
Response Syntax	\<Set>
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:PATTern PHASETRANS
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG?

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PATTern?

Description	This query returns the Pattern type for pointer adjustment to include into the SONET/SDH BERT.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Sequence
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PATTern?
Response Syntax	<Pattern>

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PATTern?

Response(s)	**Pattern**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Pattern type for pointer adjustment.
	OPPOSITEPOLARITY, Single pointers of opposite polarity is selected.
	DOUBLEPOINTER, Regular pointers plus one double pointer is selected.
	MISPOINTER, Regular pointers with one missing pointer is selected.
	DOUBLEOPPOLARITY, Double pointers of opposite polarity is selected.
	SINGLEPA, Double pointers of opposite polarity is selected.
	BURSTPA, Burst pointer adjustment is selected.
	PHASETRANS, Phase transient is selected.
	PAPATTERN, Periodic pointer adjustment 87-3 pattern is selected.
	ADD87, Periodic 87-3 with Add is selected.
	CANCEL87, Periodic 87-3 with Cancel is selected.
	PACONTINIOUS, Periodic pointer adjustment continuous is selected.
	ADDPACONTINIOUS, Periodic pointer adjustment continuous with Add is selected.
	CANCELPACONTINIOUS, Periodic pointer adjustment continuous with Cancel is selected.
	PER261, Periodic pointer adjustment 26-1 pattern is selected.
	ADDPER261, Periodic 26-1 with Add is selected.
	CANCELPER261, Periodic 26-1 with Cancel is selected.
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:PATTern?
	Returns: PHASETRANS
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PERiodic:STATus

Description	This command sets the actual pointer periodic status being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Periodic
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PERiodic:STATus <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Pattern>
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:PERiodic:STATUS ON
	SOUR:DATA:TEL:SDHS:SEQuence:POINter:PERiodic:STATUS?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:INCRement

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PERiodic:STATus?

Description	This command sets the actual pointer init-cool status being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Periodic
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:PERiodic:STATus?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of actual pointer periodic status.
	0, actual pointer periodic status is enabled.
	1, actual pointer periodic status is disabled.
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:PERiodic:STATUS?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:DECRement

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TIMeline:VALUe

Description	This command sets the Timeline Value status being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > T1(s)
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TIMeline:VALUe <wsp><Type>, <Size>
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Timeline value for pointer adjustment.
	T1: T1
	T2: T2
	T3: T3
	T4: T4
	T5: T5
	T6: T6
	Size:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the Timeline value being transmitted for Low Order Path (LOP).
	Choices are 10 through 30
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:TIMeline:VALUe T1, 10
	SOUR:DATA:TEL:SDHS:SEQuence:POINter:TIMeline:VALUe? T1
	Returns: 10
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TIMeline:VALUe?

Description	This query returns the Timeline Value status being transmitted for Low Order Path (LOP).
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > T1(s)
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TIMeline:VALUe? <wsp><Type>,[<Value>]
Parameter(s)	**Type**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Timeline value for pointer adjustment.
	T1: T1
	T2: T2
	T3: T3
	T4: T4
	T5: T5
	T6: T6
	Value:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the Timeline value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the Timeline value being transmitted for Low Order Path (LOP).
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:TIMeline:VALue?
	Returns: 10
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TYPE

Description	This command sets the Pointer type for pointer adjustment to include into the SONET/SDH BERT. At *RST condition, this value is device dependent. Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Sequence
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TYPE <wsp><Type>
Parameter(s)	**Type**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. Selects the Pointer type for pointer adjustment. INCR DECR
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:TYPE INCR
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TYPE?

Description	This query returns the Pointer type for pointer adjustment to include into the SONET/SDH BERT.
	At *RST condition, this value is device dependent.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Sequence
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter:TYPE?
Response Syntax	<Pointer>
Response(s)	**Pointer**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Pointer type for pointer adjustment.
	INCR, INCR is selected as Pointer type for pointer adjustment
	DECR, DECR is selected as Pointer type for pointer adjustment
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter:TYPE?
	Returns: INCR
See Also	SOURce:DATA:TELecom:SDHSonet:HOP:POINter:NEW:VALue

:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter?

Description	This query returns the status of the sequence pointer.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Setup > SONET/SDH BERT > Functions > Pointer Adjustment > TX Pointer Adjustment > Sequence
Syntax	:SOURce:DATA:TELecom:SDHSonet:SEQuence:POINter?
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the sequence pointer.
	0, sequence pointer is enabled.
	1, sequence pointer is disabled.
Example(s)	SOUR:DATA:TEL:SDHS:SEQuence:POINter ON
	SOUR:DATA:TEL:SDHS:SEQuence:POINter?
	Returns: 1
See Also	SOURce:DATA:TELecom:SDHSonet:LOP:POINter:NEW:FLAG

Spare Bits

:FETCh:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues?

Description	This query returns spare bit values.
	At *RST condition, this value is set to 10.
	Navigation Path: Functions > Spare Bits > RX
Syntax	:FETCh:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues? <wsp><Bits>
Parameter(s)	**Bits**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Gets the Spare bit values.
	BITSI0: Bit S i0
	BITSA4: Bit S a4
	BITSA6: Bit S a6
	BITSA8: Bit S a8
	BITSI1: Bit S i1
	BITSA5: Bit S a5
	BITSA7: Bit S a7
	BITTS16: TS16 Frame 0 Bit 5, 7, 8
	BITTS16B6: TS16 Frame 0 Bit 6
	GBITE: G.742 for E2, G.751 for E3, G.751 for E4
Response Syntax	<Value>

:FETCh:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues?

Response(s)	Value:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the spare bit values
Example(s)	FETC:DATA:TEL:PDH:E:SPAR:VAL? BITSI0
	Returns: 0
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt?
	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues

Description	This command sets the protocol present in the signal structured
	At *RST condition, this value is set to 10.
	Navigation Path: Functions > Spare Bits > TX
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues <wsp><Bits>, <Values>
Parameter(s)	**Bits**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Spare bit values.
	BITSI0: Bit S i0
	BITSA4: Bit S a4
	BITSA6: Bit S a6
	BITSA8: Bit S a8
	BITSI1: Bit S i1
	BITSA5: Bit S a5
	BITSA7: Bit S a7
	BITTS16: TS16 Frame 0 Bit 5, 7, 8
	BITTS16B6: TS16 Frame 0 Bit 6
	GBITE: G.742 for E2, G.751 for E3, G.751 for E4
	Values:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the values for spare bits.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:PDH:E:SPAR:VAL BITSI0, 0
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt?
	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

:SOURce:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues?

Description	This query returns spare bit values.
	At *RST condition, this value is set to 10.
	Navigation Path: Functions > Spare Bits > TX
Syntax	:SOURce:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues? <wsp><Bits>,[<Token>]
Parameter(s)	**Bits**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the Spare bit values.
	BITSI0: Bit S i0
	BITSA4: Bit S a4
	BITSA6: Bit S a6
	BITSA8: Bit S a8
	BITSI1: Bit S i1
	BITSA5: Bit S a5
	BITSA7: Bit S a7
	BITTS16: TS16 Frame 0 Bit 5, 7, 8
	BITTS16B6: TS16 Frame 0 Bit 6
	GBITE: G.742 for E2, G.751 for E3, G.751 for E4
	Token:
	The program data syntax for the second parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Get the Spare bit values.
	MAX: Maximum Value
	MIN: Minimum Value
Response Syntax	<Value>

:SOURce:DATA:TELecom:PDH:E[1..n]:SPARbit:VALues?

Response(s)	Value:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the spare bit values
Example(s)	SOUR:DATA:TEL:PDH:E:SPAR:VAL BITSI0, 0
	SOUR:DATA:TEL:PDH:E:SPAR:VAL? BITSI0
	Returns: 0
See Also	SOURce:DATA:TELecom:DSN:FEAC
	SOURce:DATA:TELecom:DSN:FEAC:MANual:CODEword
	SOURce:DATA:TELecom:DSN:FEAC:MANual:AMOunt
	SOURce:DATA:TELecom:DSN:FEAC:MANual:INJect

40/100/400G Advanced - Lanes Mapping & Skew

:SENSe:DATA:TELecom:OTN:OTL:RX?

Description	This query returns the value of the received bits which depends on the selected link layer.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Functions > 40G Advanced > Lanes Mapping & Skew > Manual Skew RX
Syntax	:SENSe:DATA:TELecom:OTN:OTL:RX? <wsp><Physical Lane>, <Link Layer Type>
Parameter(s)	**Physical Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the physical lane skew. The range for the physical lane is from 0 to 19.
	Link Layer Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Link Layer Type.
	SKEW: SKEW
	LOGicallane: Logicallane
Response Syntax	<Llayer>
Response(s)	**Llayer**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the link layer virtual to physical lane skew for the receiver.
Example(s)	SENS:DATA:TEL:OTN:OTL:RX? 1, SKEW
See Also	SOURce:DATA:TELecom:OTN:OTL:TX?

:SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:DEFault

Description	This command injects the default mapping for the link layer.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Default Mapping (dropdown)
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:DEFault
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:ETH:LLAY:MAPP:DEF
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:MANual

:SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:MANUal

Description	This command selects the Manual Mapping mode for the link layer.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Mapping (dropdown)
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:MANUal
Response Syntax	\<Llayer\>
Example(s)	SOUR:DATA:TEL:ETH:LLAY:MAPP:MAN
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:RANDom

:SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:RANDom

Description	This command injects the random mapping for the link layer.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Random Mapping (dropdown)
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:RANDom
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:ETH:LLAY:MAPP:RAND
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:DEFault

:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:RESet

Description	This command resets the SKEW (Bit Time) for the link layer.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Reset Skew (dropdown)
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:RESet
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:ETH:LLAY:SKEW:RES
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:MAPPing:DEFault

:SOURce:DATA:TELecom:OTN:OTL:MAPPing:DEFault

Description	This command injects the default mapping for the link layer.
	At *RST condition, this value is set to Default Mapping.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Mapping
Syntax	:SOURce:DATA:TELecom:OTN:OTL:MAPPing:DEFault
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:OTN:OTL:MAPP:DEF
See Also	SOURce:DATA:TELecom:OTN:OTL:MAPPing:RANDom

:SOURce:DATA:TELecom:OTN:OTL:MAPPing:MANual

Description	This command selects the Manual Mapping mode for link layer.
	At *RST condition, this value is set to Default Mapping.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Mapping
Syntax	:SOURce:DATA:TELecom:OTN:OTL:MAPPing:MANual
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:OTN:OTL:MAPP:MAN
See Also	SOURce:DATA:TELecom:OTN:OTL:MAPPing:RANDom

:SOURce:DATA:TELecom:OTN:OTL:MAPPing:RANDom

Description	This command injects the random mapping for the link layer.
	At *RST condition, this value is set to Default Mapping.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Mapping
Syntax	:SOURce:DATA:TELecom:OTN:OTL:MAPPing:RANDom
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:OTN:OTL:MAPP:RAND
See Also	SOURce:DATA:TELecom:OTN:OTL:MAPPing:MANual

:SOURce:DATA:TELecom:OTN:OTL:SKEW:RESet

Description	This command resets the SKEW (Bit Time) for the link layer.
	At *RST condition, this value is set to Reset Skew.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Reset Skew (dropdown)
Syntax	:SOURce:DATA:TELecom:OTN:OTL:SKEW:RESet
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:OTN:OTL:SKEW:RES
See Also	SOURce:DATA:TELecom:OTN:OTL:THReshold:DEFault

:SOURce:DATA:TELecom:OTN:OTL:THReshold

Description	This command sets the OTL Threshold Value.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Functions > 40G Advanced > Lanes Mapping & Skew > Skew Alarms Threshold
Syntax	:SOURce:DATA:TELecom:OTN:OTL:THReshold <wsp><Threshold>
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets Skew Threshold.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:OTN:OTL:THR 20
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:THReshold
	SOURce:DATA:TELecom:ETHernet:ALARm:THReshold?

:SOURce:DATA:TELecom:OTN:OTL:THReshold:DEFault

Description	This command resets the OTL Threshold Value to its default value.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: OTN BERT Test > Functions > 40G Advanced > Lanes Mapping & Skew > Skew Alarms Threshold Default
Syntax	:SOURce:DATA:TELecom:OTN:OTL:THReshold:DEFault
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:OTN:OTL:THR:DEF
See Also	SOURce:DATA:TELecom:OTN:OTL:SKEW:RESet

:SOURce:DATA:TELecom:OTN:OTL:THReshold?

Description	This query returns the Alarm Threshold Value for TX.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Functions > 40G Advanced > Lanes Mapping & Skew > Skew Alarms Threshold
Syntax	:SOURce:DATA:TELecom:OTN:OTL:THReshold?[<wsp><Threshold>]
Parameter(s)	**Threshold**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets Skew Threshold.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Skew Alarm Thershold>
Response(s)	**Skew Alarm Thershold**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Skew Threshold.
	MAXimum, indicates maximum as the Skew Threshold.
	MINimum, indicates minimum as the Skew Threshold.
Example(s)	SOUR:DATA:TEL:OTN:OTL:THR 20
	SOUR:DATA:TEL:OTN:OTL:THR?
	Returns: 20
See Also	SOURce:DATA:TELecom:ETHernet:ALARm:THReshold
	SOURce:DATA:TELecom:ETHernet:ALARm:THReshold?

40/100/400G Advanced - CFP4/CFP8/QSFP Control

:SENSe:DATA:TELecom:CFP:TX:STATus?

Description	This query returns the CFP TX status.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > CFP Control > CFP TX Status
Syntax	:SENSe:DATA:TELecom:CFP:TX:STATus? <wsp><Lane>
Parameter(s)	**Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane number.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the CFP TX pins.
	INLOC, indicates the optical lane is in LOC.
	NOTINLOC, indicates the optical lane is not in LOC.
Example(s)	SENS:DATA:TEL:CFP:TX:STAT? 1
See Also	SOURce:DATA:TELecom:CFP:STATus?

:SOURce:DATA:TELecom:CFP:CPWR?

Description	This query returns the Connector Power classes.
	At *RST condition, this value is set to setup-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > CFP Control > Connector Power Class
Syntax	:SOURce:DATA:TELecom:CFP:CPWR?
Response Syntax	<Class>
Response(s)	**Class**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	This query returns the Connector Power Class.
	4_5W, 4.5W is selected as Connector Power Class for CFP4.
	3W, 3W is selected as Connector Power Class for CFP4.
	8W, 8W is selected as Connector Power Class for CFP4.
Example(s)	SOUR:DATA:TEL:CFP:CPWR?
See Also	SOURce:DATA:TELecom:CFP:CPWR?

:SOURce:DATA:TELecom:CFP:CSETting

Description	This command enables/disables Control settings for TX & RX IC RST, TX Disable, Module Low Power Mode, Module Reset, CFP Power Shutdown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 40/100/400G Advanced > CFP Control > CFP Control Pins
Syntax	:SOURce:DATA:TELecom:CFP:CSETting <wsp><State>, <Set>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Control settings.
	TXRXRst: TX & RX IC RST.
	TXDis: TX Disable.
	MOLopwn: Module Low Power Mode.
	MODrst: Module Reset.
	CFPshutdown: CFP Power Shutdown.
	Set:
	The program data syntax for the second parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	enables/disables the selected control settings.
	ON, enables the selected control settings.
	OFF, disables the selected control settings.
Response Syntax	<Class>
Example(s)	SOUR:DATA:TEL:CFP:CSET CFP,ON
	SOUR:DATA:TEL:CFP:CSET? CFP
	Returns: 1
See Also	SOURce:DATA:TELecom:CFP:STATus?

:SOURce:DATA:TELecom:CFP:CSETting?

Description	This query returns the status of Control settings for TX & RX IC RST, TX Disable, Module Low Power Mode, Module Reset, CFP Power Shutdown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 40/100/400G Advanced > CFP Control > CFP Control Pins
Syntax	:SOURce:DATA:TELecom:CFP:CSETting? <wsp><State>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Control settings.
	TXRXRst: TX & RX IC RST.
	TXDis: TX Disable.
	MOLopwn: Module Low Power Mode.
	MODrst: Module Reset.
	CFPshutdown: CFP Power Shutdown.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the state of selected control settings.
	TXRXRST, indicates the TX & RX IC RST.
	TXDIs, indicates the TX Disable.
	MOLopwn, indicates Module Low Power Mode.
	MODRst, indicates Module Reset.
	CFPShutdown, indicates CFP Power Shutdown.
Example(s)	SOUR:DATA:TEL:CFP:CSET MOD,ON
	SOUR:DATA:TEL:CFP:CSET? MOD
	Returns: 1
See Also	SOURce:DATA:TELecom:CFP:STATus?

:SOURce:DATA:TELecom:CFP:RCLock

Description	This command selects the reference clock value.
	At *RST condition, this value is set to setup-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > CFP Control > CFP Reference Clock
Syntax	:SOURce:DATA:TELecom:CFP:RCLock <wsp><Clock>
Parameter(s)	**Clock**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the reference clock value.
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:CFP:RCL 161.1328
See Also	SOURce:DATA:TELecom:CFP:RCLock?

:SOURce:DATA:TELecom:CFP:RCLock?

Description	This query returns the reference clock value.
	At *RST condition, this value is set to setup-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > CFP Control > CFP Reference Clock
Syntax	:SOURce:DATA:TELecom:CFP:RCLock?
Response Syntax	<clockValue>
Response(s)	**clockValue**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	This query returns the reference clock value.
Example(s)	SOUR:DATA:TEL:CFP:RCL?
See Also	SOURce:DATA:TELecom:CFP:RCLock

:SOURce:DATA:TELecom:CFP:STATus?

Description	This query returns the status of the CFP status pins.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > CFP Control > CFP Status Pins
Syntax	:SOURce:DATA:TELecom:CFP:STATus? <wsp><State>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the status of CFP Status Pins.
	HPDstate: HI Power On.
	NREady: Module Ready.
	MFAult: Module Fault.
	MABsent: Module Absent.
	RXLoss: RX Loss of Signal.
	AACtive: Global Alarm.
Response Syntax	<Status>

:SOURce:DATA:TELecom:CFP:STATus?

Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the CFP Status Pins.
	UP, indicates the HI power ON.
	DOWN, indicates the HI power OFF.
	READY, indicates the Module is ready.
	NOTREADY, indicates the Module is not ready.
	NFAULT, indicates the Module is not faulty.
	FAULT, indicates the Module is faulty.
	PRESENT, indicates the CFP Status Pins is present.
	ABSENT, indicates the CFP Status Pins is absent.
	OK, indicates the signal is OK.
	RXLOSS, indicates the loss of signal.
	ALARM, indicates the global alarm is present.
	NOALARM, indicates the global alarm is absent.
Example(s)	SOUR:DATA:TEL:CFP:STAT? HPD
See Also	SOURce:DATA:TELecom:CFP:CPRating
	SOURce:DATA:TELecom:CFP:CPRating?

:SOURce:DATA:TELecom:MDIO:ADDRess

Description	This command sets the address for MDIO/I2C.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:ADDRess <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the MDIO/I2C address.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:MDIO:ADDR #H0005
	SOUR:DATA:TEL:MDIO:ADDR?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:DATA
	SOURce:DATA:TELecom:MDIO:DATA?

:SOURce:DATA:TELecom:MDIO:ADDRess?

Description	This query returns the address for MDIO/I2C.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:ADDRess?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the MDIO/I2C address.
Example(s)	SOUR:DATA:TEL:MDIO:ADDR #H0005
	SOUR:DATA:TEL:MDIO:ADDR?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:DATA
	SOURce:DATA:TELecom:MDIO:DATA?

:SOURce:DATA:TELecom:MDIO:DATA

Description	This command sets the data for MDIO/I2C.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:DATA <wsp><Data>
Parameter(s)	**Data**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the data for MDIO/I2C.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:MDIO:DATA #H0005
	SOUR:DATA:TEL:MDIO:DATA?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:ADDRess
	SOURce:DATA:TELecom:MDIO:ADDRess?

:SOURce:DATA:TELecom:MDIO:DATA?

Description	This query returns the data for MDIO/I2C .
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:DATA?
Response Syntax	<Data>
Response(s)	**Data**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the data for MDIO/I2C.
Example(s)	SOUR:DATA:TEL:MDIO:DATA #H0005
	SOUR:DATA:TEL:MDIO:DATA?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:ADDRess
	SOURce:DATA:TELecom:MDIO:ADDRess?

:SOURce:DATA:TELecom:MDIO:DEVice:ADDRess

Description	This command sets the Device address value of the SFP I2C Access Interface.
	At *RST condition, this value is set to _0XA0.
	Navigation Path: Functions > <rate> Advanced > SFP Control > I2C Access Interface > Device Address
Syntax	:SOURce:DATA:TELecom:MDIO:DEVice:ADDRess <wsp><Device Address>
Parameter(s)	**Device Address**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	_0XA0: _0XA0
	_0XA2: _0XA2
Response Syntax	<Data>
Example(s)	SOUR:DATA:TEL:MDIO:DEV:ADDR _0XA0
	SOUR:DATA:TEL:MDIO:DEV:ADDR?
	Returns: _0XA0
See Also	SOURce:DATA:TELecom:MDIO:PGSelect?

:SOURce:DATA:TELecom:MDIO:DEVice:ADDRess?

Description	This query returns the Device Address value of the SFP I2C Access Interface.
	At *RST condition, this value is set to _0XA0.
	Navigation Path: Functions > <rate> Advanced > SFP Control > I2C Access Interface > Device Address
Syntax	:SOURce:DATA:TELecom:MDIO:DEVice:ADDRess?
Response Syntax	<Device Address>
Response(s)	**Device Address**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the Device Address
	_0XA0: 0xA0
	_0XA2: 0xA2
Example(s)	SOUR:DATA:TEL:MDIO:DEV:ADDR _0XA0
	SOUR:DATA:TEL:MDIO:DEV:ADDR?
	Returns: _0XA0
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe:PGSelect?

:SOURce:DATA:TELecom:MDIO:END:ADDRess

Description	This command sets the end address for MDIO/I2C .
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:END:ADDRess[<wsp><EndAddress>]
Parameter(s)	**EndAddress**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the MDIO/I2C end address.
Response Syntax	<Device Address>
Example(s)	SOUR:DATA:TEL:MDIO:END:ADDR #H0005
	SOUR:DATA:TEL:MDIO:END:ADDR?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:STARt:ADDRess
	SOURce:DATA:TELecom:MDIO:STARt:ADDRess?

:SOURce:DATA:TELecom:MDIO:END:ADDRess?

Description	This query returns the end address for MDIO/I2C .
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:END:ADDRess?
Response Syntax	<EndAddress>
Response(s)	**EndAddress**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the MDIO/I2C end address.
Example(s)	SOUR:DATA:TEL:MDIO:END:ADDR #H0005
	SOUR:DATA:TEL:MDIO:END:ADDR?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:STARt:ADDRess
	SOURce:DATA:TELecom:MDIO:STARt:ADDRess?

:SOURce:DATA:TELecom:MDIO:PGSelect

Description	This command sets the Page Select value of the QSFP I2C Access Interface.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > MDIO Access Interface > Bulk Read > MDIO Access
Syntax	:SOURce:DATA:TELecom:MDIO:PGSelect <wsp><Page Select>
Parameter(s)	**Page Select**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Set Page Selected
Response Syntax	<EndAddress>
Example(s)	SOUR:DATA:TEL:MDIO:PGS 2
	SOUR:DATA:TEL:MDIO:PGS?
	Returns 2
See Also	SOURce:DATA:TELecom:MDIO:PGSelect?

:SOURce:DATA:TELecom:MDIO:PGSelect?

Description	This query returns the Page Select value of the QSFP I2C Access Interface.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > MDIO Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:PGSelect?
Response Syntax	<Page Select>
Response(s)	**Page Select**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Page Selected.
Example(s)	SOUR:DATA:TEL:MDIO:PGS 2
	SOUR:DATA:TEL:MDIO:PGS?
	Returns 2
See Also	SOURce:DATA:TELecom:MDIO:PGSelect

:SOURce:DATA:TELecom:MDIO:READ

Description	This command reads the MDIO/I2C values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:READ
Response Syntax	<Page Select>
Example(s)	SOUR:DATA:TEL:MDIO:READ
See Also	SOURce:DATA:TELecom:MDIO:WRITe

:SOURce:DATA:TELecom:MDIO:STARt:ADDRess

Description	This command sets the start address for MDIO/I2C .
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:STARt:ADDRess[<wsp><StartAddress>]
Parameter(s)	**StartAddress**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the MDIO/I2C start address.
Response Syntax	<Page Select>
Example(s)	SOUR:DATA:TEL:MDIO:STAR:ADDR #H0005
	SOUR:DATA:TEL:MDIO:STAR:ADDR?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:END:ADDRess
	SOURce:DATA:TELecom:MDIO:END:ADDRess?

:SOURce:DATA:TELecom:MDIO:STARt:ADDRess?

Description	This query returns the start address for MDIO/I2C.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:STARt:ADDRess?
Response Syntax	<StartAddress>
Response(s)	**StartAddress**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the MDIO/I2C start address.
Example(s)	SOUR:DATA:TEL:MDIO:STAR:ADDR #H0005
	SOUR:DATA:TEL:MDIO:STAR:ADDR?
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:END:ADDRess
	SOURce:DATA:TELecom:MDIO:END:ADDRess?

:SOURce:DATA:TELecom:MDIO:WRITe

Description	This command writes the MDIO/I2C values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:WRITe
Response Syntax	<StartAddress>
Example(s)	SOUR:DATA:TEL:MDIO:WRIT
See Also	SOURce:DATA:TELecom:MDIO:READ

:SOURce:DATA:TELecom:OSFP:CPWR?

Description	This query returns the OSFP Power Class.
	At *RST condition, this value is set to 8W.
	Navigation Path: Functions > 400G Advanced > OSFP Control > OSFP Power Class
Syntax	:SOURce:DATA:TELecom:OSFP:CPWR?
Response Syntax	<Power class>
Response(s)	**Power class**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	This query returns the OSFP Power Class.
	1.5W,1.5W is selected as Connector Power class for OSFP .
	2W, 2W is selected as Connector Power class for OSFP .
	2.5W, 2.5W is selected as Connector Power class for OSFP .
	3.5W, 3.5W is selected as Connector Power class for OSFP .
	4W, 4W is selected as Connector Power class for OSFP .
	4.5W, 4.5W is selected as Connector Power class for OSFP .
	5W, 5W is selected as Connector Power class for OSFP .
Example(s)	SOUR:DATA:TEL:OSFP:CPWR?
See Also	SOURce:DATA:TELecom:QSFP:CPWR?

:SOURce:DATA:TELecom:OSFP:CSETting

Description	This query returns the status of Control Pin settings for Module Low Power Mode, Module Reset, OSFP Power Shutdown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 400G Advanced > OSFP Control > OSFP Control Pins
Syntax	:SOURce:DATA:TELecom:OSFP:CSETting <wsp><State>, <Status>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Control settings.
	MOLopwn: Module Low Power Mode.
	MODrst: Module Reset.
	OSFPshutdown: OSFP Power Shutdown.
	Status:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Power class>
Example(s)	SOUR:DATA:TEL:OSFP:CSET OSFP,ON
	SOUR:DATA:TEL:OSFP:CSET? OSFP
	Returns: 1
See Also	SOURce:DATA:TELecom:OSFP:STATus?

:SOURce:DATA:TELecom:OSFP:CSETting?

Description	This query returns the status of Control Pin settings for Module Low Power Mode, Module Reset, OSFP Power Shutdown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 400G Advanced > OSFP Control > OSFP Control Pins
Syntax	:SOURce:DATA:TELecom:OSFP:CSETting? <wsp><State>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Control settings.
	MOLopwn: Module Low Power Mode.
	MODrst: Module Reset.
	OSFPshutdown: OSFP Power Shutdown.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the state of selected control settings.
	MOLopwn, indicates Module Low Power Mode.
	MODRst, indicates Module Reset.
	OSFPshutdown, indicates OSFP Power Shutdown.
Example(s)	SOUR:DATA:TEL:OSFP:CSET OSFP,ON
	SOUR:DATA:TEL:OSFP:CSET? OSFP
	Returns: 1
See Also	SOURce:DATA:TELecom:OSFP:STATus?

:SOURce:DATA:TELecom:OSFP:STATus?

Description	This query returns the status of the OSFP status pins.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > 400G Advanced > OSFP Control > OSFP Status Pins
Syntax	:SOURce:DATA:TELecom:OSFP:STATus? <wsp><State>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the status of OSFP Status Pins.
	MABsent: Module Absent.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the OSFP Status Pins.
	PRESENT, indicates the OSFP Status Pins is present.
	ABSENT, indicates the OSFP Status Pins is absent.
Example(s)	SOUR:DATA:TEL:OSFP:STAT? MAB
See Also	SOURce:DATA:TELecom:OSFP:STATus?

:SOURce:DATA:TELecom:QSFP:CPWR?

Description	This query returns the QSFP Power Class.
	At *RST condition, this value is set to 8W.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > QSFP Power Class
Syntax	:SOURce:DATA:TELecom:QSFP:CPWR?
Response Syntax	<Power class>
Response(s)	**Power class**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	This query returns the QSFP Power Class.
	1.5W,1.5W is selected as Connector Power class for QSFP.
	2W, 2W is selected as Connector Power class for QSFP.
	2.5W, 2.5W is selected as Connector Power class for QSFP.
	3.5W, 3.5W is selected as Connector Power class for QSFP.
	4W, 4W is selected as Connector Power class for QSFP.
	4.5W, 4.5W is selected as Connector Power class for QSFP.
	5W, 5W is selected as Connector Power class for QSFP.
Example(s)	SOUR:DATA:TEL:QSFP:CPWR?
See Also	SOURce:DATA:TELecom:QSFP:CPWR?

:SOURce:DATA:TELecom:QSFP:CSETting

Description	This command enables/disables Control Pins for Module Low Power Mode, Module Reset, QSFP Power Shutdown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > QSFP Control Pins
Syntax	:SOURce:DATA:TELecom:QSFP:CSETting <wsp><State>, <Status>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Control settings.
	MOLopwn: Module Low Power Mode.
	MODrst: Module Reset.
	QSFPshutdown: QSFP Power Shutdown.
	Status:
	The program data syntax for the second parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Power class>
Example(s)	SOUR:DATA:TEL:QSFP:CSET QSFP,ON
	SOUR:DATA:TEL:QSFP:CSET? QSFP
	Returns: 1
See Also	SOURce:DATA:TELecom:QSFP:STATus?

:SOURce:DATA:TELecom:QSFP:CSETting?

Description	This query returns the status of Control Pin settings for Module Low Power Mode, Module Reset, QSFP Power Shutdown.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > QSFP Control Pins
Syntax	:SOURce:DATA:TELecom:QSFP:CSETting? <wsp><State>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Control settings.
	MOLopwn: Module Low Power Mode.
	MODrst: Module Reset.
	QSFPshutdown: QSFP Power Shutdown.
Response Syntax	<Set>
Response(s)	**Set**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the state of selected control settings.
	MOLopwn, indicates Module Low Power Mode.
	MODRst, indicates Module Reset.
	QSFPshutdown, indicates QSFP Power Shutdown.
Example(s)	SOUR:DATA:TEL:QSFP:CSET QSFP,ON
	SOUR:DATA:TEL:QSFP:CSET? QSFP
	Returns: 1
See Also	SOURce:DATA:TELecom:QSFP:STATus?

:SOURce:DATA:TELecom:QSFP:STATus?

Description	This query returns the status of the QSFP status pins.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > QSFP Status Pins
Syntax	:SOURce:DATA:TELecom:QSFP:STATus? <wsp><State>
Parameter(s)	**State**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Returns the status of QSFP Status Pins.
	MABsent: Module Absent.
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <CHARACTER RESPONSE DATA> element.
	Returns the status of the QSFP Status Pins.
	PRESENT, indicates the QSFP Status Pins is present.
	ABSENT, indicates the QSFP Status Pins is absent.
Example(s)	SOUR:DATA:TEL:QSFP:STAT? MAB
See Also	SOURce:DATA:TELecom:QSFP:STATus?

Default/Random/Manual Mapping

:SENSe:DATA:TELecom:ETHernet:LLAyer:RX?

Description	This query returns the RX Lane.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX
Syntax	:SENSe:DATA:TELecom:ETHernet:LLAyer:RX? <wsp><Physical Lane>, <Link Layer Type>
Parameter(s)	**Physical Lane**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the physical lane skew. The range for the physical lane is from 0 to 19.
	The Lane number used for the skew is a logical lane number. The Lane number used for PCS is a physical lane number.
	Link Layer Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Link Layer Type.
	SKEW: SKEW
	PCS: PCS
Response Syntax	<Llayer>
Response(s)	**Llayer**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the link layer virtual to physical lane skew for the receiver.
Example(s)	SENS:DATA:TEL:ETH:LLAY:RX? 8,PCS
See Also	SENSe:DATA:TELecom:ETHernet:WIS:TRACe?

:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane

Description	This command sets the applied change(s) to all PCS/Logical Lane at once.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All Lanes
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Selects All lanes.
	ON, enables All lanes.
	OFF, disables All lanes.
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL OFF
	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL?
	Returns: 0
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX

:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX

Description	This command sets the value for all PCS/Logical Lane when the All Lanes check box is selected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX <wsp><SKEW>
Parameter(s)	SKEW:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the skew for all.
Response Syntax	<Llayer>
Example(s)	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL:TX 50
	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL:TX?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane

:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX?

Description	This query returns the value for all PCS/Logical Lane when the All Lanes check box is selected.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX?
Response Syntax	<Skew>
Response(s)	**Skew**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the all lane Skew value.
Example(s)	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL:TX 50
	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL:TX?
	Returns: 50
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane?

:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane?

Description	This query returns the status of the applied change(s) to all PCS/Logical Lane.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All Lanes
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of All lanes selection.
	1, All lane status enabled.
	0, All lane status disabled.
Example(s)	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL ON
	SOUR:DATA:TEL:ETH:LLAY:SKEW:ALLL?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX

:SOURce:DATA:TELecom:ETHernet:LLAYer:TX

Description	This command sets the TX Lane.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Mapping
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:TX <wsp><LaneNo>, <Layer Type>, <Skew Value or Lane Marker Number>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for the selected layer.
	The Lane number used for the skew is a logical lane number. The Lane number used for PCS is a physical lane number.
	Layer Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Link Layer Type.
	SKEW: SKEW
	PCS: PCS
	Skew Value or Lane Marker Number:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	- Sets the Lane Marker number in case Link Layer Type equals PCS
	- Sets the Skew value in case Link Layer Type equals SKEW :
	DEFault: Default skew value
	MAXimum: Maximum skew value
	MINimum: Minimum skew value
	Numerical skew value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:ETH:LLAY:TX 5,PCS,2
	SOUR:DATA:TEL:ETH:LLAY:TX? 5,PCS
	Returns: 2
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane:TX

:SOURce:DATA:TELecom:ETHernet:LLAYer:TX?

Description	This query returns the TX Lane.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Mapping
Syntax	:SOURce:DATA:TELecom:ETHernet:LLAYer:TX? <wsp><LaneNo>, <Layer Type>,[<Skew value Token>]
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the lane for the layer.
	The Lane number used for the skew is a logical lane number. The Lane number used for PCS is a physical lane number.
	Layer Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Link Layer Type.
	SKEW
	PCS
	Skew value Token:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	- Applicable only when Link Layer Type is SKEW
	DEFault: Default skew value
	MAXimum: Maximum skew value
	MINimum: Minimum skew value
Response Syntax	<Llayer>

:SOURce:DATA:TELecom:ETHernet:LLAYer:TX?

Response(s)	Llayer:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	- Returns the skew value for the specified lane number if the Link Layer Type is SKEW
	- Returns the lane marker number mapped to the specified lane number if the Link Layer Type is PCS.
Example(s)	SOUR:DATA:TEL:ETH:LLAY:TX 5,PCS,2
	SOUR:DATA:TEL:ETH:LLAY:TX? 5,PCS
	Returns: 2
See Also	SOURce:DATA:TELecom:ETHernet:LLAYer:SKEW:ALLLane 1

Reset/Manual Skew

:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane

Description	This command sets the All Lane.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All Lanes
Syntax	:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:SKEW:ALLL 1
See Also	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX
	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX?

:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX

Description	This command sets the skew value for all lanes for the transmitted link.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All > Skew Inc/Dec Size
Syntax	:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX <wsp><Skew>
Parameter(s)	**Skew**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the skew for all.
	MAXimum: Maximum
	MINimum: Minimum
Response Syntax	<Set>
Example(s)	SOUR:DATA:TEL:OTN:OTL:SKEW:ALLL:TX 50
See Also	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane
	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane?

:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX?

Description	This query returns the All Lane status for transmitted link.
	At *RST condition, this value is set to 0.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All
Syntax	:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX?[<wsp><Skew>]
Parameter(s)	**Skew**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If unspecified, the current value is returned.
	MAXimum: Maximum
	MINimum: Minimum
Response Syntax	<Skew>
Response(s)	**Skew**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the all lane Skew value.
Example(s)	SOUR:DATA:TEL:OTN:OTL:SKEW:ALLL:TX?
See Also	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane
	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane?

:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane?

Description	This query returns the All Lane status.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > 40/100/400G Advanced > Lanes Mapping & Skew > Manual Skew TX > All Lanes
Syntax	:SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of All lanes selection.
	1, returns the all lane status as ON.
	0, returns the all lane status as OFF.
Example(s)	SOUR:DATA:TEL:OTN:OTL:SKEW:ALLL ON
	SOUR:DATA:TEL:OTN:OTL:SKEW:ALLL?
	Returns: 1
See Also	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX
	SOURce:DATA:TELecom:OTN:OTL:SKEW:ALLLane:TX?

:SOURce:DATA:TELecom:OTN:OTL:TX

Description	This command sets the value of the transmitted bits which depends on the selected link layer type.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Functions > 40G Advanced > Lanes Mapping & Skew > Manual Skew TX
Syntax	:SOURce:DATA:TELecom:OTN:OTL:TX <wsp><LaneNo>, <Link Layer Type>, <TX Value>
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	The Lane used for the skew is a logical lane number.
	The Lane used for LOG is a physical lane number.
	Link Layer Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Link Layer Type.
	SKEW: SKEW
	LOGicallane: Logicallane
	TX Value:
	The program data syntax for the third parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the TX value.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:OTN:OTL:TX 3,SKEW,MIN
	SOUR:DATA:TEL:OTN:OTL:TX 5,LOG,2
See Also	SENSe:DATA:TELecom:OTN:OTL:RX?

:SOURce:DATA:TELecom:OTN:OTL:TX?

Description	This query returns the value of the transmitted bits which depends on the selected link layer.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: OTN BERT Test > Functions > 40G Advanced > Lanes Mapping & Skew > Manual Skew TX
Syntax	:SOURce:DATA:TELecom:OTN:OTL:TX? <wsp><LaneNo>, <Link Layer Type>,[<TX Value>]
Parameter(s)	**LaneNo**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	The Lane used for the skew is a logical lane number.
	The Lane used for LOG is a physical lane number.
	Link Layer Type:
	The program data syntax for the second parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Selects the Link Layer Type.
	SKEW: SKEW
	LOGicallane: Logicallane
	TX Value:
	The program data syntax for the third parameter is defined as a <CHARACTER PROGRAM DATA> element.
	Sets the TX value.
	This parameter is optional. If no token is specified, the current value of transmitted bits is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Llayer>
Response(s)	**Llayer**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the link layer virtual to physical lane skew for the transmitter.
Example(s)	SOUR:DATA:TEL:OTN:OTL:TX? 5,LOG
See Also	SOURce:DATA:TELecom:OTN:OTL:TX?

Bulk Read

:FETCh:DATA:TELecom:MDIO:BULK:READ:INFormation?

Description	This command bulk reads the MDIO/I2C values from given MDIO/I2C address range.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface > Bulk Read > MDIO/I2C Access
Syntax	:FETCh:DATA:TELecom:MDIO:BULK:READ:INFormation?
Response Syntax	<Address and Data>
Response(s)	**Address and Data**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the list of address and data values.
Example(s)	FETC:DATA:TEL:MDIO:BULK:READ:INF?
See Also	SOURce:DATA:TELecom:MDIO:BULK:READ

:SOURce:DATA:TELecom:MDIO:BULK:READ

Description	This command bulk reads the MDIO/I2C values.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:READ
Response Syntax	<Address and Data>
Example(s)	SOUR:DATA:TEL:MDIO:BULK:READ
See Also	SOURce:DATA:TELecom:MDIO:READ

Bulk Write

:SOURce:DATA:TELecom:MDIO:BULK:WRITe

Description	This command writes the Bulk MDIO/I2C values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface > Bulk Write > Bulk Write Button.
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT
See Also	SOURce:DATA:TELecom:MDIO:WRITe

:SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess

Description	This command sets the address for Bulk Write MDIO/I2C.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface > Bulk Write > MDIO/I2C Bulk Write table Address.
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess <wsp><Row>, <Address>
Parameter(s)	**Row**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the row number.
	Address:
	The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the MDIO/I2C address.
Response Syntax	<Rate>
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT:ADDR 1, #H0005
	SOUR:DATA:TEL:MDIO:BULK:WRIT:ADDR? 1
	Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA
	SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA?

:SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess?

Description	This query returns the Bulk Write Address for MDIO/I2C table row.
	At *RST condition, this value is set to 0000.
	NAvigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface > Bulk Write > MDIO/I2C Bulk Write table Address.
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess? <wsp><Row>
Parameter(s)	**Row**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the row number.
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the MDIO/I2C address for row
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT:ADDR? 1
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA
	SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA?

:SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA

Description	This command sets the data for Bulk Write MDIO/I2C. At *RST condition, this value is set to 0000. Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface > Bulk Write > MDIO/I2C Bulk Write table Data.
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA <wsp><Row>, <Data>
Parameter(s)	**Row**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the row number **Data**: The program data syntax for the second parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element. Sets the MDIO/I2C data value
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT:DATA 1, #H0005 SOUR:DATA:TEL:MDIO:BULK:WRIT:DATA? 1 Returns: 5
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess?

:SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA?

Description	This query returns the Bulk Write Data for MDIO/I2C table row.
	At *RST condition, this value is set to 0000.
	NAvigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface > Bulk Write > MDIO/I2C Bulk Write table Data.
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe:DATA? <wsp><Row>
Parameter(s)	**Row**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the row number
Response Syntax	<Data>
Response(s)	**Data**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the MDIO/I2C data value for row
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT:DATA? 1
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess
	SOURce:DATA:TELecom:MDIO:BULK:WRITe:ADDRess?

:SOURce:DATA:TELecom:MDIO:BULK:WRITe:DEFault

Description	This command default 0000 the Bulk MDIO/I2C values.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > <rate> Advanced > CFP/QSFP Control > MDIO/I2C Access Interface > Bulk Write > Default Button.
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe:DEFault
Response Syntax	<Data>
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT:DEF
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe

:SOURce:DATA:TELecom:MDIO:BULK:WRITe:PGSelect

Description	This command sets the Page Select value of the QSFP I2C Access Interface.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > I2C Access Interface > Bulk Write > Page Select
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe:PGSelect <wsp><Page Select>
Parameter(s)	**Page Select**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets Page Selected
Response Syntax	<Data>
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT:PGS 2
	SOUR:DATA:TEL:MDIO:BULK:WRIT:PGS?
	Returns: 2
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe:PGSelect?

:SOURce:DATA:TELecom:MDIO:BULK:WRITe:PGSelect?

Description	This query returns the Page Select value of the QSFP I2C Access Interface.
	At *RST condition, this value is set to 0000.
	Navigation Path: Functions > <rate> Advanced > QSFP Control > I2C Access Interface > Bulk Write > Page Select
Syntax	:SOURce:DATA:TELecom:MDIO:BULK:WRITe:PGSelect?
Response Syntax	<Page Select>
Response(s)	**Page Select**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Page Selected.
Example(s)	SOUR:DATA:TEL:MDIO:BULK:WRIT:PGS 2
	SOUR:DATA:TEL:MDIO:BULK:WRIT:PGS?
	Returns: 2
See Also	SOURce:DATA:TELecom:MDIO:BULK:WRITe:PGSelect

Ping & Trace Route

:FETCh:DATA:TELecom:PING:STATistics:AVERage?

Description	This query returns the average measured round trip time required for a Ping request.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:PING:STATistics:AVERage?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the average measured round trip time required for a Ping request.
Example(s)	FETC:DATA:TEL:PING:STAT:AVER?
See Also	FETCh:DATA:TELecom:PING:STATistics:TX?

:FETCh:DATA:TELecom:PING:STATistics:LOST?

Description	This query returns the percentage of lost packets.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:PING:STATistics:LOST?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the percentage of lost packets.
Example(s)	FETC:DATA:TEL:PING:STAT:LOST?
See Also	FETCh:DATA:TELecom:PING:STATistics:MINimum?

:FETCh:DATA:TELecom:PING:STATistics:MAXimum?

Description	This query returns the maximum measured round trip time required for a Ping request.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:PING:STATistics:MAXimum?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the maximum measured round trip time required for a Ping request.
Example(s)	FETC:DATA:TEL:PING:STAT:MAX?
See Also	FETCh:DATA:TELecom:PING:STATistics:AVERage?

:FETCh:DATA:TELecom:PING:STATistics:MINimum?

Description	This query returns the minimum measured round trip time required for a Ping request. At *RST condition, this value is set to device-dependent. Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:PING:STATistics:MINimum?
Response Syntax	<Result>
Response(s)	**Result**: The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element. Returns the minimum measured round trip time required for a Ping request.
Example(s)	FETC:DATA:TEL:PING:STAT:MIN?
See Also	FETCh:DATA:TELecom:PING:STATistics:MAXimum?

:FETCh:DATA:TELecom:PING:STATistics:RESults?

Description	This query returns the list of Ping Statistics.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results
Syntax	:FETCh:DATA:TELecom:PING:STATistics:RESults?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	This query returns the list of Ping Statistics.
Example(s)	FETC:DATA:TEL:PING:STAT:RES?
See Also	FETCh:DATA:TELecom:PING:STATistics:TX?

:FETCh:DATA:TELecom:PING:STATistics:RX?

Description	This query returns the number of packets received.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:PING:STATistics:RX?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of packets received.
Example(s)	FETC:DATA:TEL:PING:STAT:RX?
See Also	FETCh:DATA:TELecom:PING:STATistics:LOST?

:FETCh:DATA:TELecom:PING:STATistics:TX?

Description	This query returns the number of packets sent.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:PING:STATistics:TX?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of packets sent.
Example(s)	FETC:DATA:TEL:PING:STAT:TX?
See Also	FETCh:DATA:TELecom:PING:STATistics:RX?

:FETCh:DATA:TELecom:TRACe:STATistics:RESults?

Description	This query returns the list of Trace Statistics. At *RST condition, this value is set to device-dependent. Navigation Path: Functions > Ping & Trace Route > Results
Syntax	:FETCh:DATA:TELecom:TRACe:STATistics:RESults?
Response Syntax	<Result>
Response(s)	**Result**: The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element. This query returns the list of Trace Statistics.
Example(s)	FETC:DATA:TEL:TRAC:STAT:RES?
See Also	FETCh:DATA:TELecom:TRACe:STATistics:TX?

:FETCh:DATA:TELecom:TRACe:STATistics:RX?

Description	This query returns the number of packets received.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:TRACe:STATistics:RX?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of packets received.
Example(s)	FETC:DATA:TEL:TRAC:STAT:RX?
See Also	FETCh:DATA:TELecom:TRACe:STATistics:TX?

:FETCh:DATA:TELecom:TRACe:STATistics:TX?

Description	This query returns the number of packets sent.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Ping & Trace Route > Results > Statistics
Syntax	:FETCh:DATA:TELecom:TRACe:STATistics:TX?
Response Syntax	<Result>
Response(s)	**Result**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of packets sent.
Example(s)	FETC:DATA:TEL:TRAC:STAT:TX?
See Also	FETCh:DATA:TELecom:TRACe:STATistics:RX?

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination :IP

Description	This command sets the ping IP destination address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Functions > Ping & Trace Route > Destination IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP <wsp><Address>
Parameter(s)	**Address**:
	The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element.
	Set the ping IP address of the destination.
Response Syntax	<Result>
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP 230.170.18.19
	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP?
	Returns: 230.170.18.19
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination :IP:USTReam

Description	This command sets the stream for ping IP destination address.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > Ping & Trace Route > Destination IP Address > Use Stream
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP:USTReam <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Result>
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP:USTR ON
	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP:USTR?
	Returns: 1
See Also	SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP:USTReam?

Description	This returns the status of the stream for ping IP destination address.
	At *RST condition, this value is set to OFF.
	Navigation Path: Functions > Ping & Trace Route > Destination IP Address > Use Stream
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP:USTReam?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the stream for ping IP destination address.
	1, returns the stream as ON.
	0, returns the stream as OFF.
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP:USTR ON
	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP:USTR?
	Returns: 1
See Also	SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination :IP?

Description	This query returns the ping IP destination address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Functions > Ping & Trace Route > Destination IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:DESTination:IP?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the ping IP destination address in the form of a string.
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP 230.170.18.19
	SOUR:DATA:TEL:PING:CONF:ADDR:DEST:IP?
	Returns: 230.170.18.19
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:IPVersion:DESTination

Description	This command sets the destination ping IP6 address. At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000. Navigation Path: Test > IPV6 > Functions > Ping & Trace Route > Destination IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:IPVersion:DESTination <wsp><Address>
Parameter(s)	**Address**: The program data syntax for the first parameter is defined as a <STRING PROGRAM DATA> element. Set the ping destination IP address.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:IPV:DEST 0000:0000:0000:0000:0000:0000:0000:0000 SOUR:DATA:TEL:PING:CONF:ADDR:IPV:DEST? Returns: 0000:0000:0000:0000:0000:0000:0000:0000.
See Also	SOURce:DATA:TELecom:PING:CONFig:TOUT?

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:IPVersion:DESTination?

Description	This query returns the ping destination IP6 address.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > IPV6 > Functions > Ping & Trace Route > Destination IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:IPVersion:DESTination?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the ping IPV6 destination address in the form of a string.
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:IPV:DEST 0000:0000:0000:0000:0000:0000:0000:0000
	SOUR:DATA:TEL:PING:CONF:ADDR:IPV:DEST?
	Returns: 0000:0000:0000:0000:0000:0000:0000:0000.
See Also	SOURce:DATA:TELecom:PING:CONFig:TOUT?

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:IPVersion:SOURce?

Description	This query returns the ping IP6 destination address.
	At *RST condition, this value is set to 0000:0000:0000:0000:0000:0000:0000:0000.
	Navigation Path: Test > IPV6 > Functions > Ping & Trace Route > Source IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:IPVersion:SOURce?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the ping IPV6 source address in the form of a string.
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:IPV:SOUR?
	Returns: 0000:0000:0000:0000:0000:0000:0000:0000.
See Also	SOURce:DATA:TELecom:PING:CONFig:CONTinuous

:SOURce:DATA:TELecom:PING:CONFig:ADDRess:SOURce:IP?

Description	This query returns the ping IP destination address.
	At *RST condition, this value is set to 0.0.0.0.
	Navigation Path: Test > IPV4 > Functions > Ping & Trace Route > Source IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ADDRess:SOURce:IP?
Response Syntax	<Address>
Response(s)	**Address**:
	The response data syntax for the first parameter is defined as a <STRING RESPONSE DATA> element.
	Returns the ping IPV4 source address in the form of a string.
Example(s)	SOUR:DATA:TEL:PING:CONF:ADDR:SOUR:IP?
See Also	SOURce:DATA:TELecom:TRACe:CONFig:RUN?

:SOURce:DATA:TELecom:PING:CONFig:ATTempts

Description	This command sets the number of attempts of ping requests. Choices are 1 to 100.
	At *RST condition, this value is set to 4.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ATTempts <wsp><Attempts>
Parameter(s)	**Attempts**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the value for the number of attempts.
	MAXimum, sets the value for the number of attempts to maximum.
	MINimum, sets the value for the number of attempts to minimum.
Response Syntax	<Address>
Example(s)	SOUR:DATA:TEL:PING:CONF:ATT 100
	SOUR:DATA:TEL:PING:CONF:ATT?
	Returns: 100
See Also	SOURce:DATA:TELecom:PING:CONFig:CONTinuous

:SOURce:DATA:TELecom:PING:CONFig:ATTempts?

Description	This query returns the number of attempts of ping. Choices are 1 to 100.
	At *RST condition, this value is set to 4.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:ATTempts?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of attempts of ping is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of attempts of ping requests.
Example(s)	SOUR:DATA:TEL:PING:CONF:ATT 100
	SOUR:DATA:TEL:PING:CONF:ATT?
	Returns: 100
See Also	SOURce:DATA:TELecom:PING:CONFig:CONTinuous?

:SOURce:DATA:TELecom:PING:CONFig:CONTinuous

Description	This command sets the Ping attempts to be made as continuous or Fixed (nAttempts).
	At *RST condition, this value is set to Continuous.
	Navigation Path: Functions > Ping & Trace Route > Ping (Attempts dropdown)
Syntax	:SOURce:DATA:TELecom:PING:CONFig:CONTinuous <wsp><Attempts>
Parameter(s)	**Attempts**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Sets the attempts.
	ON: Continuous
	OFF: Fixed (nAttempts)
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:PING:CONF:CONT ON
	SOUR:DATA:TEL:PING:CONF:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:TRACe:CONFig:RUN
	SOURce:DATA:TELecom:TRACe:CONFig:RUN?

:SOURce:DATA:TELecom:PING:CONFig:CONTinuous?

Description	This query returns status of Ping attempts.
	At *RST condition, this value is set to Continuous.
	Navigation Path: Functions > Ping & Trace Route > Ping (Attempts dropdown)
Syntax	:SOURce:DATA:TELecom:PING:CONFig:CONTinuous?
Response Syntax	<Continous>
Response(s)	**Continous**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the Ping attempts as continuous or Fixed (nAttempts).
	1, returns the attempts as continuous.
	0, returns the attempts as Fixed (nAttempts).
Example(s)	SOUR:DATA:TEL:PING:CONF:CONT ON
	SOUR:DATA:TEL:PING:CONF:CONT?
	Returns: 1
See Also	SOURce:DATA:TELecom:TRACe:CONFig:RUN
	SOURce:DATA:TELecom:TRACe:CONFig:RUN?

:SOURce:DATA:TELecom:PING:CONFig:DELay

Description	This command allows you to enter the delay between each attempt (PING). Choices are 100 to 10000 ms.
	At *RST condition, this value is set to 1000 ms.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:DELay <wsp><Delay>
Parameter(s)	**Delay**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the ping delay value.
	MAXimum, ping delay value is set to its maximum.
	MINimum, ping delay value is set to its minimum.
	Choices are 100 to 10000 ms.
Response Syntax	<Continous>
Example(s)	SOUR:DATA:TEL:PING:CONF:DEL 2000
	SOUR:DATA:TEL:PING:CONF:DEL?
	Returns: 2000
See Also	SOURce:DATA:TELecom:PING:CONFig:DSIZe
	SOURce:DATA:TELecom:PING:CONFig:DSIZe?

:SOURce:DATA:TELecom:PING:CONFig:DELay?

Description	This query returns the delay between each attempt (PING). Choices are 100 to 10000 ms.
	At *RST condition, this value is set to 1000 ms.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:DELay?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current delay between each attempt (PING) is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the delay value between each attempt in the PING request.
Example(s)	SOUR:DATA:TEL:PING:CONF:DEL 2000
	SOUR:DATA:TEL:PING:CONF:DEL?
	Returns: 2000
See Also	SOURce:DATA:TELecom:PING:CONFig:DSIZe
	SOURce:DATA:TELecom:PING:CONFig:DSIZe?

:SOURce:DATA:TELecom:PING:CONFig:DSIZe

Description	This command allows you to enter the data size. Choices are 0 to 1472 Bytes.
	At *RST condition, this value is set to 32 bytes.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:DSIZe <wsp><Dsize>
Parameter(s)	**Dsize:**
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the ping frame size value.
	MAXimum, ping frame size value is set to its maximum.
	MINimum,ping frame size value is set to its minimum.
	Choices are 0 to 1472 Bytes
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:PING:CONF:DSIZ 1460
	SOUR:DATA:TEL:PING:CONF:DSIZ?
	Returns: 1460
See Also	SOURce:DATA:TELecom:PING:CONFig:TTL
	SOURce:DATA:TELecom:PING:CONFig:TTL?

:SOURce:DATA:TELecom:PING:CONFig:DSIZe?

Description	This query returns the data size. Choices are 0 to 1472 Bytes.
	At *RST condition, this value is set to 32 bytes.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:DSIZe?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current data size is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the data size value.
Example(s)	SOUR:DATA:TEL:PING:CONF:DSIZ 1460
	SOUR:DATA:TEL:PING:CONF:DSIZ?
	Returns: 1460
See Also	SOURce:DATA:TELecom:PING:CONFig:TTL
	SOURce:DATA:TELecom:PING:CONFig:TTL?

:SOURce:DATA:TELecom:PING:CONFig:FLABel

Description	This command sets the Flow Label Value At *RST condition, this value is set to 0. Navigation Path: Test > IPV6 > Functions > Ping & Trace Route > Flow Label
Syntax	:SOURce:DATA:TELecom:PING:CONFig:FLABel <wsp><Value>
Parameter(s)	**Value**: The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element. Sets the Flow Label Value. MAXimum, Flow Label value is set to its maximum. MINimum, Flow Label value is set to its minimum. Choices are 0 to 1048575.
Response Syntax	<Value>
Example(s)	SOURce:DATA:TELecom:PING:CONFig:FLABel 565 SOURce:DATA:TELecom:PING:CONFig:FLABel? Returns: 565
See Also	SOURce:DATA:TELecom:TRACe:CONFig:RUN SOURce:DATA:TELecom:TRACe:CONFig:RUN?

:SOURce:DATA:TELecom:PING:CONFig:FLABel?

Description	This query returns the Flow Label value for IPV6
	At *RST condition, this value is set to 0
	Navigation Path: Test > IPV6 > Functions > Ping & Trace Route > Flow Label
Syntax	:SOURce:DATA:TELecom:PING:CONFig:FLABel?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current Flow Label value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the Flow label value
Example(s)	SOURce:DATA:TELecom:PING:CONFig:FLABel 565
	SOURce:DATA:TELecom:PING:CONFig:FLABel?
	Returns: 565
See Also	SOURce:DATA:TELecom:TRACe:CONFig:RUN
	SOURce:DATA:TELecom:TRACe:CONFig:RUN?

:SOURce:DATA:TELecom:PING:CONFig:STReam:INDex

Description	This command selects either the interface or a stream as the source IP address.
	Navigation Path: Functions > Ping & Trace Route > Source IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:STReam:INDex <wsp><IP address index>
Parameter(s)	**IP address index**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	0: Selects the Interface IP as source IP
	1 to 16: Selects the corresponding stream IP address.
Response Syntax	<Value>
Example(s)	SOURce:DATA:TELecom:PING:CONFig:STReam:INDex 1
	SOURce:DATA:TELecom:PING:CONFig:STReam:INDex?
	Returns: 1
See Also	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP
	SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:DESTination:IP?

:SOURce:DATA:TELecom:PING:CONFig:STReam:INDex?

Description	This query returns the index of the selected Source IP address.
	Navigation Path: Functions > Ping & Trace Route > Source IP Address
Syntax	:SOURce:DATA:TELecom:PING:CONFig:STReam:INDex?
Response Syntax	<IP address index>
Response(s)	**IP address index**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the index of the selected source IP address.
Example(s)	SOURce:DATA:TELecom:PING:CONFig:STReam:INDex 1
	SOURce:DATA:TELecom:PING:CONFig:STReam:INDex?
	Returns: 1
See Also	:SOURce:DATA:TELecom:ETHernet:PORT:ADDRess:IP?
	:SOURce:DATA:TELecom:ETHernet:NETWork:LOCal:IPVersion:ADDRess?
	:SOURce:DATA:TELecom:ETHernet:STReam:ADDRess:SOURce:IP?
	:SENSe:DATA:TELecom:ETHernet:STReam:DESTination:IPVersion?

:SOURce:DATA:TELecom:PING:CONFig:TOS

Description	This command allows you to enter the type of service.
	At *RST condition, this value is set to 0x00.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:TOS <wsp><TOS>
Parameter(s)	**TOS**:
	The program data syntax for the first parameter is defined as a <NONDECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Ping TOS/DS value.
	Choices are 00 to FF.
Response Syntax	<IP address index>
Example(s)	SOUR:DATA:TEL:PING:CONF:TOS #H00
	SOUR:DATA:TEL:PING:CONF:TOS?
	Returns: 0
See Also	SOURce:DATA:TELecom:PING:CONFig:HCOunt

:SOURce:DATA:TELecom:PING:CONFig:TOS?

Description	This query returns the type of service.
	At *RST condition, this value is set to 0x00.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:TOS?
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the type of service value.
Example(s)	SOUR:DATA:TEL:PING:CONF:TOS #H00
	SOUR:DATA:TEL:PING:CONF:TOS?
	Returns: 0
See Also	SOURce:DATA:TELecom:PING:CONFig:HCOunt?

:SOURce:DATA:TELecom:PING:CONFig:TOUT

Description	This command allows you to enter the maximum time allowed between an ICMP echo and response. Choices are 200 ms to 10000 ms.
	At *RST condition, this value is set to 4000 ms.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:TOUT <wsp><TOUT>
Parameter(s)	TOUT:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the ping time out value.
	MAXimum, the ping time out value is set to its maximum.
	MINimum, the ping time out value is set to its minimum.
	Choices are 200 ms to 10000 ms.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:PING:CONF:TOUT 10000
	SOUR:DATA:TEL:PING:CONF:TOUT?
	Returns: 10000
See Also	SOURce:DATA:TELecom:PING:CONFig:DELay
	SOURce:DATA:TELecom:PING:CONFig:DELay?

:SOURce:DATA:TELecom:PING:CONFig:TOUT?

Description	This query returns the time allowed between an ICMP echo and response. Choices are 200 ms to 10000 ms. At *RST condition, this value is set to 4000 ms. Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:TOUT?[<wsp><Value>]
Parameter(s)	**Value**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. This parameter is optional. If no token is specified, the current time allowed between an ICMP echo and response is returned. MAXimum: Biggest supported value MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the time allowed between an ICMP echo and response.
Example(s)	SOUR:DATA:TEL:PING:CONF:TOUT 10000 SOUR:DATA:TEL:PING:CONF:TOUT? Returns: 10000
See Also	SOURce:DATA:TELecom:PING:CONFig:DELay SOURce:DATA:TELecom:PING:CONFig:DELay?

:SOURce:DATA:TELecom:PING:CONFig:TTL

Description	This Command sets number of hops the packet can go through.
	At *RST condition, this value is set to 128.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:TTL <wsp><Ttl>
Parameter(s)	Ttl:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the ping ttl value.
	MAXimum, ping ttl value is set to its maximum.
	MINimum, ping ttl value is set to its minimum.
	Choices are 1 to 255.
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:PING:CONF:TTL 255
	SOUR:DATA:TEL:PING:CONF:TTL?
	Returns: 255
See Also	SOURce:DATA:TELecom:PING:CONFig:TOS
	SOURce:DATA:TELecom:PING:CONFig:TOS?

:SOURce:DATA:TELecom:PING:CONFig:TTL?

Description	This query returns the maximum number of hops the packet can go through.
	At *RST condition, this value is set to 128.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:CONFig:TTL?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current number of hops the packet can go through is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the number of hops the packet can go through.
Example(s)	SOUR:DATA:TEL:PING:CONF:TTL 255
	SOUR:DATA:TEL:PING:CONF:TTL?
	Returns: 255
See Also	SOURce:DATA:TELecom:PING:CONFig:TOS
	SOURce:DATA:TELecom:PING:CONFig:TOS?

:SOURce:DATA:TELecom:PING:SETup:RUN

Description	This command allows you to run the Ping command.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:SETup:RUN <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:PING:SET:RUN ON
	SOUR:DATA:TEL:PING:SET:RUN?
	Returns: 1
See Also	SOURce:DATA:TELecom:PING:CONFig:TOUT 10000

:SOURce:DATA:TELecom:PING:SETup:RUN?

Description	This query returns the status of the Ping command.
	This query is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > Ping & Trace Route > Ping
Syntax	:SOURce:DATA:TELecom:PING:SETup:RUN?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Ping command.
	0, returns the status of the Ping command as OFF.
	1, returns the status of the Ping command as ON.
Example(s)	SOUR:DATA:TEL:PING:SET:RUN ON
	SOUR:DATA:TEL:PING:SET:RUN?
	Returns: 1
See Also	SOURce:DATA:TELecom:PING:CONFig:TOUT?

:SOURce:DATA:TELecom:TRACe:CONFig:HCOunt

Description	This command allows you to enter the number of network device packets.
	At *RST condition, this value is set to 128.
	Navigation Path: Functions > Ping & Trace Route > Trace Route
Syntax	:SOURce:DATA:TELecom:TRACe:CONFig:HCOunt <wsp><HOP>
Parameter(s)	**HOP**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Trace maximum hop count.
	MAXimum, the hop count value is set to its maximum.
	MINimum, the hop count. value is set to its minimum.
	Choices are from 1 to 255
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:TRAC:CONF:HCO 88
	SOUR:DATA:TEL:TRAC:CONF:HCO?
	Returns: 88
See Also	SOURce:DATA:TELecom:PING:CONFig:TTL
	SOURce:DATA:TELecom:PING:CONFig:TTL?

:SOURce:DATA:TELecom:TRACe:CONFig:HCOunt?

Description	This query returns the maximum network device packets. Choices are from 1 to 255.
	At *RST condition, this value is set to 128.
	Navigation Path: Functions > Ping & Trace Route > Trace Route
Syntax	:SOURce:DATA:TELecom:TRACe:CONFig:HCOunt?[<wsp><Value>]
Parameter(s)	**Value**:
	The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element.
	This parameter is optional. If no token is specified, the current network device packets value is returned.
	MAXimum: Biggest supported value
	MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**:
	The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element.
	Returns the trace maximum hop count.
Example(s)	SOUR:DATA:TEL:TRAC:CONF:HCO 88
	SOUR:DATA:TEL:TRAC:CONF:HCO?
	Returns: 88
See Also	SOURce:DATA:TELecom:PING:CONFig:TTL
	SOURce:DATA:TELecom:PING:CONFig:TTL?

:SOURce:DATA:TELecom:TRACe:CONFig:RUN

Description	This command allows you to run the Trace command.
	This command is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > Ping & Trace Route > Trace Route
Syntax	:SOURce:DATA:TELecom:TRACe:CONFig:RUN <wsp><Status>
Parameter(s)	**Status**:
	The program data syntax for the first parameter is defined as a <BOOLEAN PROGRAM DATA> element.
	Enables/disables:
	ON: Enables
	OFF: Disables
Response Syntax	<Value>
Example(s)	SOUR:DATA:TEL:TRAC:CONF:RUN ON
	SOUR:DATA:TEL:TRAC:CONF:RUN?
	Returns: 1
See Also	SOURce:DATA:TELecom:PING:SETup:RUN
	SOURce:DATA:TELecom:PING:SETup:RUN?

:SOURce:DATA:TELecom:TRACe:CONFig:RUN?

Description	This query returns the status of the Trace command.
	This query is an event and is not associated with an *RST condition or a query form.
	Navigation Path: Functions > Ping & Trace Route > Trace Route
Syntax	:SOURce:DATA:TELecom:TRACe:CONFig:RUN?
Response Syntax	<Status>
Response(s)	**Status**:
	The response data syntax for the first parameter is defined as a <BOOLEAN RESPONSE DATA> element.
	Returns the status of the Trace command.
	0, returns the status of the Trace command as OFF.
	1, returns the status of the Trace command as ON.
Example(s)	SOUR:DATA:TEL:TRAC:CONF:RUN ON
	SOUR:DATA:TEL:TRAC:CONF:RUN?
	Returns: 1
See Also	SOURce:DATA:TELecom:PING:SETup:RUN
	SOURce:DATA:TELecom:PING:SETup:RUN?

:SOURce:DATA:TELecom:TRACe:CONFig:TOUT

Description	This command allows you to enter the maximum time allowed between an ICMP echo and response. Choices are 200 ms to 10000 ms.
	At *RST condition, this value is set to 4000 ms.
	Navigation Path: Functions > Ping & Trace Route > Trace Route
Syntax	:SOURce:DATA:TELecom:TRACe:CONFig:TOUT <wsp><TOUT>
Parameter(s)	**TOUT**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Sets the Trace time out value.
	MAXimum, the trace time out value is set to its maximum.
	MINimum, the trace time out value is set to its minimum.
	Choices are 200 ms to 10000 ms.
Response Syntax	<Status>
Example(s)	SOUR:DATA:TEL:TRAC:CONF:TOUT 10000
	SOUR:DATA:TEL:TRAC:CONF:TOUT?
	Returns: 10000
See Also	SOURce:DATA:TELecom:PING:CONFig:TOUT
	SOURce:DATA:TELecom:PING:CONFig:TOUT?

:SOURce:DATA:TELecom:TRACe:CONFig:TOUT?

Description	This query returns the time allowed between an ICMP echo and response. Choices are 200 ms to 10000 ms. At *RST condition, this value is set to 4000 ms. Navigation Path: Functions > Ping & Trace Route > Trace
Syntax	:SOURce:DATA:TELecom:TRACe:CONFig:TOUT?[<wsp><Value>]
Parameter(s)	**Value**: The program data syntax for the first parameter is defined as a <CHARACTER PROGRAM DATA> element. This parameter is optional. If no token is specified, the current time allowed between an ICMP echo and response is returned. MAXimum: Biggest supported value MINimum: Smallest supported value
Response Syntax	<Value>
Response(s)	**Value**: The response data syntax for the first parameter is defined as a <NR1 NUMERIC RESPONSE DATA> element. Returns the time out value.
Example(s)	SOUR:DATA:TEL:TRAC:CONF:TOUT 10000 SOUR:DATA:TEL:TRAC:CONF:TOUT? Returns: 10000
See Also	SOURce:DATA:TELecom:PING:CONFig:TOUT SOURce:DATA:TELecom:PING:CONFig:TOUT?

Filters

:SENSe:DATA:TELecom:ETHernet:FILTer:FRAMe:BANDwidth?

Description	This command sets the frame bandwidth in megabit per second.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Filters & Packet Capture > Filters > Filter Statistics > Ethernet BW (Mbit/s)
Syntax	:SENSe:DATA:TELecom:ETHernet:FILTer:FRAMe:BANDwidth? <wsp><Filterno>
Parameter(s)	**Filterno**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the filter number from 1 to 10.
Response Syntax	<Bandwidth>
Response(s)	**Bandwidth**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the frame bandwidth.
Example(s)	SENS:DATA:TEL:ETH:FILT:FRAM:BAND? 1
See Also	SENSe:DATA:TELecom:ETHernet:FILTer:FRAMing:RATE?

:SENSe:DATA:TELecom:ETHernet:FILTer:FRAMe:COUNt?

Description	This query returns the number of frames matching the configured filter's criteria.
	At *RST condition, this value is set to device-dependent.
	Navigation Path: Functions > Filters & Packet Capture > Filters > Filter Statistics > Frame Count
Syntax	:SENSe:DATA:TELecom:ETHernet:FILTer:FRAMe:COUNt? <wsp><Filterno>
Parameter(s)	**Filterno**:
	The program data syntax for the first parameter is defined as a <DECIMAL NUMERIC PROGRAM DATA> element.
	Selects the filter number from 1 to 10.
Response Syntax	<Count>
Response(s)	**Count**:
	The response data syntax for the first parameter is defined as a <NR2 NUMERIC RESPONSE DATA> element.
	Returns the number of valid and invalid frames received.
Example(s)	SENS:DATA:TEL:ETH:FILT:FRAM:COUN? 1
See Also	SENSe:DATA:TELecom:ETHernet:FILTer:FRAMing:RATE?
