# Most common connectors types

Each connector needs the appropriate adapter when it comes to fiber inspection. In order to make it as easy as possible for you to use or order the tip adapter that you need to perform your tests, EXFO has put together this quick reference guide. It includes the full array of tips that are available, their associated connectors and respective ordering information.

# Next-gen multifiber connector inspection

## What are tips, nozzles and special adapters and what are they used for?

EXFO's next-gen multifiber inspection solution is versatile and leverages the same tip for all multifiber connectors. To adapt to each specific multifiber connector form factor, just swap the nozzle. This versatile design makes it possible to optimize cost of ownership and ease of use. To inspect Bulkhead (female) and Jumper (male) tips, the solution will either rely on a dedicated nozzle (Q-ODC-12®, OptiTip®) or a single Bulkhead (female MPO) nozzle with a specific adapter to inspect Jumper (male MPO).

## Is my ConnectorMax probe MF-Ready?

EXFO's next-gen multifiber solution is compatible with FIP-400B MF-Ready versions. To verify if it's MF-Ready, check your FIP-400B for the black retaining nut and the MF-Ready engraving.

If your FIP-400B is not MF-Ready, contact EXFO at [isales@exfo.com](mailto:isales@exfo.com) for an upgrade.
