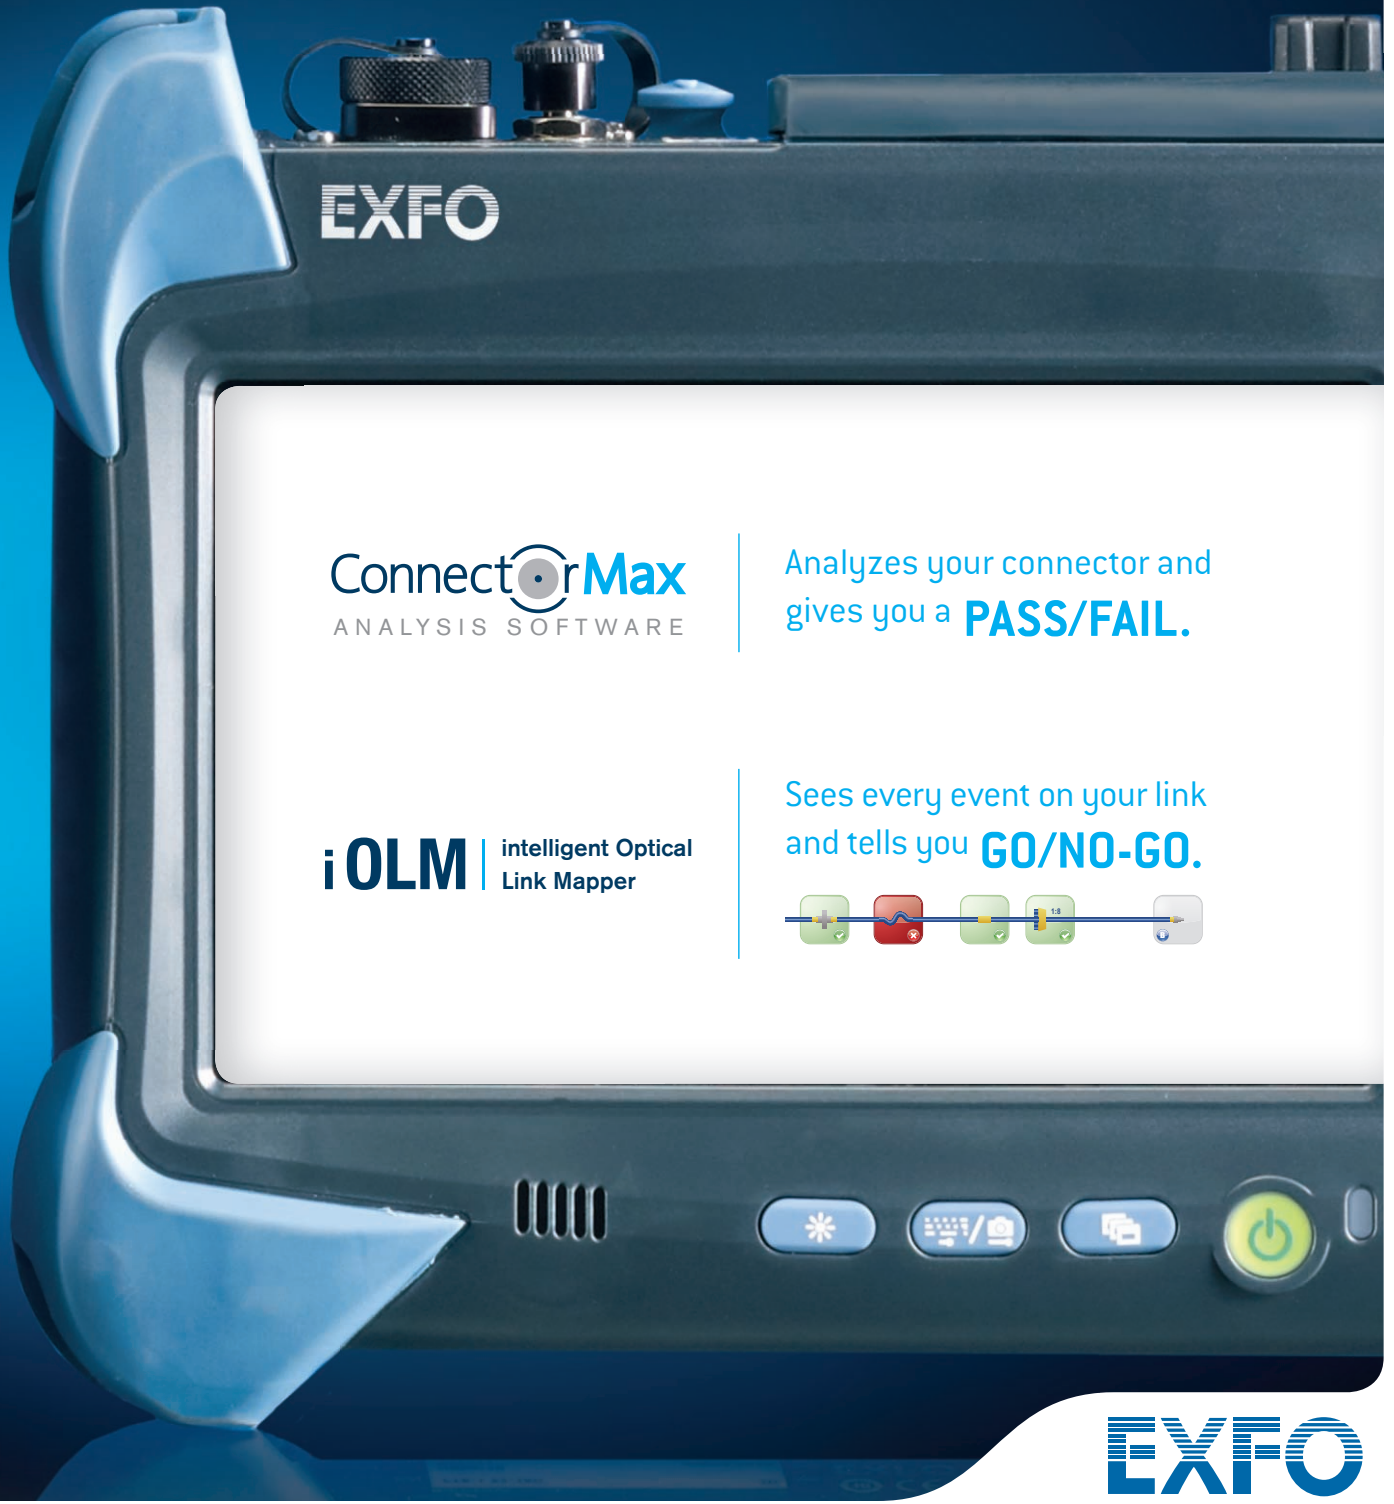
TESTING
FIBER-BASED
FTTA/DAS
DOESN'T
HAVE TO BE
COMPLICATED.



ConnectorMax
ANALYSIS SOFTWARE

Analyzes your connector and gives you a **PASS/FAIL.**

iOLM | intelligent Optical Link Mapper

Sees every event on your link and tells you **GO/NO-GO.**

EXFO

ONETECH.

EXFO's FTB-1 solution makes any field technician an expert. The unique combination of innovative and intuitive functionalities found in the FTB-1 gives frontline technicians the ability to accurately turn up and troubleshoot without requiring external intervention. **A true one-tech testing solution.**

ONETOOL.

No other solution in the industry matches the FTB-1 when it comes to deploying or upgrading a large number of connections with limited resources and tight schedules. With this game-changing solution, not only can field technicians characterize a fiber link at the touch of a button, they can also turn up multiple classes of Ethernet services with unprecedented speed and accuracy. **The ultimate testing tool.**

ONETIME.

EXFO's innovative, state-of-the-art testing solution empowers field technicians with easy-to-use, yet powerful, automated test and analysis capabilities that remove the guesswork and deliver 100% accuracy throughout the different testing phases. **Boost productivity while eliminating unnecessary truck rolls.**

Fiber-to-the-Antenna (FTTA) and Distributed Antenna System (DAS) Kit

Eliminate guesswork to ensure successful turn-up

FTB-1 Platform

- Windows OS
- Includes all tools to maximize field testing
- Third-party application compatible

Fiber Inspection Probe

- All types of connector: ODC, LC/SC, and MTP/MPO

ConnectorMax ANALYSIS SOFTWARE

- Automated pass/fail connector analyzer
- One-touch results in less than four seconds
- Compatible with EXFO's FIP-400 Fiber Inspection Probe

iOLM intelligent Optical Link Mapper

- No training required: self-setting device
- Quick and accurate identification of distance-to-fault, end-to-end loss, return loss and more.
