

Automate. Accelerate. Assure.

Quality services from fiber build and connect to activation, monitoring and troubleshooting

OTDR testing just evolved!

Let's get you ahead of the curve

EXFO's new versatile and future-proof D-series OTDRs lower the cost of ownership thanks to their swap-out connectors and 3-year warranty. Measure power and dark and live fibers on any PON technology from a single port.

Deploy and maintain networks faster and better

Interconnect all parts of your field test ecosystem.

Automate data collection

Increase compliance and efficiency

Optimize equipment utilization

Streamline collaboration with contractors

Powered by EXFO's collaborative software solution:

Automated remote and field test solutions for the full FTTH lifecycle

Spot on, every time

NEW!
Duplex inspection

FIP-500

Single- and multi-fiber inspection scope

Industry's fastest inspection with the most reliable results. Self-contained, fully automated tool to test all day without needing to recharge batteries.

Intelligent and intuitive

PPM1

Service activation PON power meter

Dual-layer tester supporting 1G/10G PON networks: G/E-PON, XGS-PON/10G-EPON, RF-video overlay and RFoG.

Validate. Optimize. Troubleshoot.

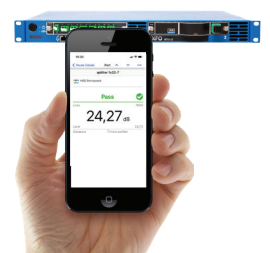

EX10

Multigigabit residential services tester

Validate bandwidth speeds up to full line rate 10 Gigabit Ethernet, test residential WiFi 6E and monitor residential quality of experience.

Build & connect: fast & flawless

RFTM

Remote fiber testing and monitoring

Centrally and remotely managed OTDR instrument for auditing, troubleshooting and continuously monitoring FTTx optical fibers.
